Sentences may contain one or more -tári sentences followed by suru, and those that contain more than one can freely replace suru with dá: Háittari déteri da; Yókattari wárukattari da; Byooki dáttari génki dattari da. This means the representativized sentence has been propredicated (§3.10); the resulting nominal can be adnominalized in regular fashion, with dá changing to nó: Húttari yandári no ténki da 'It is the sort of weather that rains off and on'. Some phrases are sufficiently idiomatic in meaning to justify separate dictionary entries, e.g. nitári yottári (no monó) '(things that are) much of a piece, six of one and half a dozen of the other'. The phrase need not be adnominal, for you can say Minná nitári yottári desu 'They are all much the same'; another example is negáttari kanáttari [da] '[is] just what I have been wishing', though this is often tightened into compound negattari-kanáttari [da]. The predicated representative can go through most of the conversions available for a predicated nominal: Netári ókitari da 'They are lying down and getting up (severally or alternately)' → Netári ókitari zya ná; Netári ókitari de, ...; Netári ókitari ni tigai ná; Netári ókitari ni suginai; Netári ókitari no hazu/tumori da; Netári ókitari ná no da; Netári ókitari zya ná no da; Netári ókitari nagara [mo] ...; etc. A few examples: Kaigyoo si-tate no kóro wa, ma-yónaka ni oosin o tanomaréru to, yodoosi tiryoo ni tokkúndári, kyuukyúu-sya ni doozyoo site byooin ni okuri-kóndari de, itu ka tyóonai no sinrai o atuméru sonzai to nátta 'At the time I had just begun my practice, when asked to make a house call I would (do such things as) wrestle with the treatment all night and accompany patients to the hospital in the ambulance, so that before I knew it I became the being to gather the neighborhood confidence' (SA 2664.26b); Netári ókitari nagara, kíkí wa dás-sitá kara, móo sinpai wa ná 'Though I am up and down (with my illness), I'm past the crisis, so there is nothing to worry about now'; [Sigoto wa kubi ni suru. Taisyók{ú}kin(-) wa yaranai tté.] Sore zya hundári kéttari zya arimasén ka '[They fire me. They say they'll give me no severance pay.] How do you like THAT for stepping all over a person [and kicking him]?!'. Some such sentences seem a bit "hypostatic", as if the phrase were being quoted. Perhaps that is what accounts for the occurrence of the representativized sentences even as subject and, at least for some speakers, as object: Nóndari tábetari [suru kotó] ga óói kara kane ga kakáru 'I do a lot of drinking and eating so it takes money'; Nóndari tábetari [suru kotó] o yameta hóo ga íi zya ná ka 'Wouldn't it be better to give up the drinking and eating?'. We might want to consider all cases of nominalized -tári sentences as abbreviations of the full sentence -tári surú + nó/kotó da, i.e. -tári surú no da or -tári suru kotó da. (We would then say the abbreviation is restricted to sentences containing more than one representativized sentence.) The suggestion has been made that we might do well to consider the representative as elliptical in all cases: ...-tári [SI] ...-tári [SURÚ NO] or the like.

Sometimes the appropriate translation is 'What with (this, that, and the other) ...': Zyanbo-ryokákki ga tobi-kakáttari, hikóo-ki no nottori-zíken ga okóttari, kuukoo-setti-

hantai-úndoo ga áttari de, kuukoo to sono kinoo to iu monó ga, wadai ni náru kotó ga óói ga, ... 'What with jumbo passenger planes bounding about, and anti-airport-construction movements taking place, the airport and its function become frequent topics of discussion, ...' (SA 2678.114a). Compare a series of infinitives followed by dé (p. 904, §14.6) as in Gensoku ári, reigai ári, kyoyoo ári de, ... 'What with rules, with exceptions, with dispensations, ...' (Kaneda in Ōno 1967.276).

The FORMS of the representative are made by attaching to verbals -tári/-dári (with shape adjustments like those for the gerund), to adjectivals -káttari, and to nominals dáttari. Just as we might consider the conditional as the perfect -tá + a particle or extension -ra (occurring nowhere else), we might similarly consider the representative as the perfect -tá + a particle or extension -ri that occurs nowhere else; perhaps this is historically a contraction of the infinitive ári. One bit of evidence for an incorporated ári is that the dummy verb is always surú even when the -tári form is based on an adjective (Sámukattari átukattari suru 'It is cold and hot, off and on'—cf. ári wa/mo suru); the representative makes a kind of verbal noun.

All three of the forms -tá, -tára, and -tári actually come from the gerund -té + á(r)-. And the gerund itself, as explained in §9.2, is the infinitive form of an old auxiliary t(é)- (§9.5) which expressed a perfect or past (usually voluntary); the literary attributive form of that auxiliary is (-i-)túru and the predicative form is (-i-)tú. The literary language uses paired predicates with -tú (directly nominalized, as it were) in the same way that the colloquial language uses pairs with -tári:¹²⁴ Uki-tu() | sizumi-tu() [site] ... 'Floating and sinking ...'; Sási-tu | sasáre-tu | nómu 'Back and forth we pass the saké cup [as we drink]'. For more examples see §9.5. There is another literary form which attaches the suffix -mi to the infinitive (V-i-mi) or to the literary negative infinitive (V-azu-mi) of verbs—only?—to serve as a representative form: kumóri-mi háre-mi = kumóttari háretari 'clouding up and clearing', húri-mi hurazu-mi = húttari huránakattari 'raining/snowing off and on'. The latter cliché, which pops up in húri-mi hurazu-mi no ténki 'unsettled weather' (KKK 25.87a, MKZ⁵) is often reduced to a single phonological word, with the accentuation either of a phrase reduction (húrimi-hurazumi) or of a lexical derivative (hurimihurázumi). Henderson 160 gives an unpaired example of V-i-mi: Yamá no mie-mi miénu wa ... 'the alternate appearance and disappearance of the hills'.

Yet another way of stating alternative or representative events is to juxtapose parallel predicates in the plain infinitive, picking the expression up with the dummy suru: Oozéi itá no ga | hitóri heri | hutari heri (l) sita tokí wa || sabisíkatta ga, || ... 'When the crowd dwindled down ("by ones and twos") I felt lonely, but ...' (Tk 3.35a); Nó ni yuki, || yamá ni yuki (l) suru 'We go to the fields, we go to the mountains'.

Some adverbializations of V₁-tári V₂-tári could be regarded as an ellipsis either of the dummy verb surú or of the pro-predicative dá, but since the latter in a sense stands for the former, the immediate derivation is here unimportant: Káitari kaki-naósitári [de/site] isogasii 'I am busy writing and rewriting'. Similarly, with ... ni náru/surú and ... tó náru/suru we can regard the immediately underlying sentence as coming from a dropped (or converted) ... dá or from a dropped surú or surú no: Háretari | kumóttari || tó || narimasyóo 'The weather will be sunny alternating with cloudy' (R; narimasyóo = náru desyoo).

124. Use of the -tári form for the representative conversion (rather than as predicative perfect) dates from the Kamakura period; cf. Terase 120b.

When the negative, the desiderative, the excessive, the causative, or other conversions are applied to the dummy verb *suru*, reference is usually to the entire paired-representative phrase rather than just to the second member, regardless of the juncture used: V_1 -tári | V_2 -tári *si-tai* means 'I want to do both V_1 and V_2 , one after the other' or the like. (Are there exceptions?)

Given that we have a sentence X_1 o sitári X_2 o sitári *suru* 'does (such things as) X_1 and X_2 ' and a sentence Y_1 o sitári Y_2 o sitári *suru* 'does (such things as) Y_1 and Y_2 ' we may well wonder whether it would be possible to use those two sentences as input for the creation of a conflated sentence of this sort:

X_1 o sitári X_2 o sitári SITÁRI Y_1 o sitári Y_2 o sitári SITÁRI *suru*.

The meaning would be 'does such things as doing such things as X_1 and X_2 (perhaps in alternation) and doing such things as Y_1 and Y_2 (perhaps in alternation)'. Although I have no authentic examples of such a sentence in Japanese—nor, for that matter, of the English equivalent!—the grammar will let us create one: *Hanásitari | kiitári [| sitári] || yóndari | káitári [| sitári ||] simásu* 'We do such things as talk and listen and such things as read and write'; and this seems to be acceptable provided you suppress at least the first *sitári*, letting the major juncture carry the cue to the ellipsis. Moreover, the only block to indefinite recursion, as with the nursery bit "This is the house ... that Jack built", is a feeling of surface clumsiness, which may be strong enough to prevent even the first go-round. A likelier output is the more loosely conjoined sentence with *sí* (§ 17.3): *Hanásitari | kiitári | surú sí || yóndari | káitári | simásu* 'We do such things as talk and listen and we do such things as read and write'. Or, with an optionally dropped gerund *sité*: *Hanásitari | kiitári [| site] || yóndari | káitári | simásu*.

Matters grow even more complicated when you realize that, in general, each element of the expression (i.e. each *-tári* form and each dummy *surú*) may independently select NEGATIVE, PASSIVE, CAUSATIVE, DESIDERATIVE, EXCESSIVE, FACILITATIVE and any of the permitted combinations of these (up to a theoretically infinite number, see §9.1.8); they may also independently select INFINITIVE or GERUND + any of the AUXILIARIES or combinations of auxiliaries (again up to a theoretically infinite number, see §9.1.10 and §9.2.5); and the nuclear FOCUS conversions of §5 (*wá/mó*) can be independently applied to each of the outputs from the independent selections just mentioned as well as to the nuclear elements that underlie them and to each dummy *surú*.

It would take a very long list to cover even the simpler combinations possible. I have checked a few combinations that might be questionable and found them acceptable, as shown below, with examples given only for unusual situations.

- (1) ... *sitári saseru*
 ... *sitári sareru*
 ... *sitári site morau*
 ... *sasetári suru*
 ... *saretári suru*
 ... *site morattári suru*
 ... *sasetári sareru*: *Kono kodomo ni, múri ni undoo sasetári sareru to komáru*
 'It won't do to have you let this child indulge in excessive activity'.
 ... *sasetári site morau*
 ... *sasetári saseru*: (?)*Undoo sasetári kyusoku sasetári sasemáru* 'I will let you have him exercise and rest in alternation'.

- ... saretári saseru: Rejected?
 ... saretári sareru
 ... saretári site morau: ?Benkyoo no zyama saretári site morai-taku náí 'I'm not eager to be interrupted in my work'.
- (2) ... si-takáttari suru
 ... sitári si-tai
- (3) ... si-súgitari suru
 ... sitári si-sugíru
- (4) ... si-yásukattari suru
 ... sitári si-yasúi
- (5) ... sitári site oku
 ... site óitari suru
 ... site óitari site oku
- (6) ... si-hazímétari suru
 ... sitári si-haziméru
 ... si-hazímétari si-haziméru: Áka-tyan ga hanasi-hazímétári aruki-hazímétári si-hazimemásita 'The baby has begun doing such things as starting to talk and starting to walk'.
- (7) ... (X o sinakáttari Y o) sinakáttari suru
 ... (X o sinakáttari Y o) sinakáttari sinai: Rejected? (What about as denial of an assertion: 'It is not true that they do such things as not do X and not do Y'?)
- (8) X o sitári Y o sinakáttari suru 'does such things as doing X and not doing Y'
 X o sitári Y o sinakáttari sinai: Rejected? (Even as denial?)
 X o sitári (X o) sinakáttari suru 'does such things as doing X and not doing X, does X off and on'
 X o sitári (X o) sinakáttari sinai: Rejected? (Even as denial?)

When the representative is made on a passive sentence the semantic reference of the -tári form is to the immediate subject of the passive (i.e. he who suffers) rather than to the underlying agent (he who initiates the action): Heitai ga korosaretári kegá o saseraretári site iru 'Soldiers are getting killed and wounded' tells us that some soldiers are getting killed and others are getting wounded but says nothing about whether the agent that is doing the killing and wounding (presumably 'the enemy') is always the same or whether 'some' (of the enemy) do the killing and 'others' do the wounding. And Ningyoo ga naraberaretári site iru 'The dolls are lined up and the like' is giving us a representative bit of information about the dolls, not about whatever unmentioned agent may have been responsible for lining them up, though the choice of the passive suggests that the dolls didn't line themselves up; cf. Kodomo ga narandári site iru 'The children are lined up and the like' (having done it themselves). Similar considerations lead to the proper interpretation of ... iroiro hínan saretári gokai saretári surú n desu né 'suffers all sorts of criticisms and misunderstandings' (Tk 2.66b). The following sentence gerundizes (dá → dé) a pro-predication (suru → dá) of a representativization of a passive (... sareru → ... saretári) that is a passivization of an unpaired representative + suru (... sitári suru → ... sitári sareru): Tásya kara sukáuto sitari saretári de ... dóko de mo nenkan ni kenkyúu-in no ití-wari ga ryuudoo suru to iu 'What with suffering from [intermittent] scouting from other companies, they say about ten percent of the researchers in each place move in the course of a year' (SA 2661.28c).

9.5. LITERARY PERFECTS: *-I-TÚ/-TÚRU, -I-NÚ/-NÚRU, -Í-KI/-SI*

In modern Japanese the verb gerund *-té* can be followed by the auxiliaries *áru* and *iru* in order to make forms that have, among other interpretations, a perfect-resultative meaning. From a contraction of *-té + ár-* there developed also a perfect form which is *-tá* in modern Japanese but in older Japanese had two forms, *-tári* (predicative) and *-táru* (attributive); and these forms, particularly the latter, turn up in set phrases even today (§ 13.8a).

The gerund itself is the infinitive of an old auxiliary with the forms *-tú* (predicative) and *-túru* (attributive), which attaches to the infinitive. This form is seldom seen today except in quotations from classical literature and a few clichés, such as *nóbe-tu* [makú-nasi ni] ‘uninterruptedly’, or in a paired phrase that means the same thing as paired representatives (*-tári ... -tári*), as mentioned in § 9.4. Additional examples of that usage: *táme-tu* | *sugáme-tu* | (*suru/míru*) ‘(looks) peering and squinting = scrutinizing’; *nadáme-tu* | *sukási-tu*(¹), || ... ‘soothing and humoring = coaxing’ (SA 2652.64d); *Táme-tu* | *sukási-tu*(¹) || *sísai*(¹) ni | *kentoo sita yó* ‘(I) checked in detail, scrutinizing and probing’ (KKK 25.78b); *oi-tu*(¹) | *lowaré-tu*(¹) | *no kyóogi* ‘a neck-and-neck match’; *iki-tu*(¹) [= *yukí-tu*(¹)] | *modóri-tu* | *site iru* ‘is making no progress’; *sási-tu* | *lasáre-tu* | *nómu* ‘keep exchanging sake cups back and forth’; *Móti-tu* | *motáre-tu* | *no aidagara ná no de aru* ‘It is a give-and-take relationship’ (SA 2660.27d); ... *móti-tu* | *motáre-tu* | *no kankei de ...* ‘from the mutual influences’ (SA 2659.133c—the entire example will be found on p. 930, § 15.6). The idiom *kúnzu hogúretu* ‘grappling and separating = repeatedly clashing (as in wrestling or boxing)’ is a reduction of *kúmi-tu hogúre-tu*, and *tótu óitu* ‘hesitantly, reluctantly’ is a reduction of *tóri-tu okí-tu* (= *tóttari oitári*). As we have observed (§ 9.1.4), the literary concurrent *V-i-tútu* is derived from this usage, perhaps by way of reduced iteration *V₁-i-tú* [*V₁-i*]-*tú*.

A very similar auxiliary, with the forms *-nú* (predicative) and *-núru* (attributive) attached to the infinitive, is now found only in quotations from classical literature or in bookish phrases such as this: ... *kore wa mása ni* “eiga-húkkoo”, *kiséki*(¹) *wa okóri-nu*, *de áru* ‘this is truly “a cinema revival”, the miracle hath occurred’ (SA 2689.119b). This auxiliary too was used in pairs with the same meaning as paired representatives today: *ukí-nu* *sizumí-nu* = *uitári sizúndari* ‘floating and sinking’ (quoted in *Meikai kogo jiten* 795b from *Heike-monogatári*). The auxiliary *-nú/-núru* was also used with somewhat the meaning of modern *-te simau* ‘finishes doing’ or ‘ends up doing’; in this usage it was not limited to a past action.¹²⁵ Perhaps that is why, in its infinitive form *-ní*, it enters into sequence with another literary perfect auxiliary to form the structure *V-í-ni-ki* (predicative) alternating with *V-í-ni-si* (attributive). Moreover, the predicative form of THAT complex structure (the predicative being a special use of the infinitive as is true of ALL verb “predicative” forms that end in *-i*, see p. 831) enters into a sequence with the literary perfect-resultative to yield the structure *V-í-ni-k-éeri* (predicative) alternating with

125. There was a tendency to use the auxiliary *-tú(ru)* for voluntary and/or abrupt events, the auxiliary *-nú(ru)* for events that were involuntary, spontaneous, and/or slow-moving. Satō 1.368 describes *V-i-nú* as “subjective” and *V-i-tú* as “objective”; if I were to adopt this dichotomy I would be inclined to reverse the labels, perhaps because I use the terms in a somewhat different sense (as in treating *N ní* as the objective essive and *N tó* as the subjective essive). Satō 1.260-70 cites Kasuga’s study which shows that *-nú* is more common with intransitives and passives, *-tú* with transitives and causatives.

V-í-ni-k-éru (attributive), as described in §9.6. (The predicative-infinitive shape -ki drops its vowel, etymologically the infinitive marker, before the final auxiliary, which already consists of the infinitive -í + ár- with vowel crasis producing /er/.)

The auxiliary -ki/-si is typically found in combinations with one of the other perfect auxiliaries, and the following forms are reported (see also §13.9):

-í-té-ki/-si	-ér(-)i-ki/-si
-í-n(-)i-ki/-si	-í-n(-)i-k-éru/-éru
-i-tár-i-ki/-si < -i-t[é] ár-i-ki/-si	

Adjectival forms are made by contracting -ku ár-:

-kári-ki/si < -k[u] ár-i-ki/-si
-karazári-ki/-si < -k[u] ará-z[u] ár-i-ki/-si

And verbal negatives are contracted from -zu ár- (cf. §8.6):

-(a)zári-ki/-si < -(a)z[u] ár-i-ki/-si

The complex forms may have been differentiated semantically one from another in subtle ways by various authors, but later literary usage leaves all the perfects with much the same meaning; you can translate any of them as 'did' or 'has done', 'was' or 'has been'.

The simple V-í-ki/-si is found in a few relics: (... tó) omói-ki ya, ... 'did one think (that ...?) = (whereupon) unexpectedly enough' with the predicative form before the question particle ya ... 'hazime ni kokóro ári-ki "'In the beginning there was feeling"' (SA 2680.47b); ... árisi-hi 'bygone days' from ári-si hí 'days that existed'; ... idai nári-si híbi no tuisoo 'remiscences of the grand old days' (SA 2676.92b); ... káhwee hanáyaka nari-si kóro, ... 'at the time [in the late 20's] when cafés were flourishing' (SA 2689.115b); "'Kámi no musubi-tamai-si monó"' te na kotó o itte ... 'Saying something like "What God hath joined together ...", ...' (Tk 2.262a). An example with direct nominalization (§14.6) of V-i-si: Sore wa || Okinawa no hitó-tati ni | tótte || kiki-si ni masáru || susamázi-sa datta 'It [= the arrival of the Japanese "economic animal" with the reversion from American control] proved to be even more dreadful for the Okinawans than they had heard (it would be)' (SA 2793.129). The same cliché appears in Kiki-si ni masáru utí(-) da 'The house surpasses its description' (Okitsu 1.264), said sarcastically.^{125a}

There is also a provisional form V-i-séba 'if it had happened'; you will perhaps run across such forms for áru (áriseba 'if it had existed/happened') and náí < náku ári (nakáriseba 'if it had not existed/happened'): Kono onna-kántyoo nakáriseba Nihón no rekisi wa óokiku kaki-kaerarete itá de aroo 'If it had not been for this woman spy, Japan's history would have been greatly rewritten' (KKK 25.86a).

It may strike you as odd that the attributive form is -si and the predicative form is -ki for this perfect ending. Though precisely the opposite pattern yields the literary forms of the adjective-attributive A-ki (wákaki monó 'a young person') and predicative A-si (monó wákasi 'the person is young'), the explanation in both cases may involve a contraction of the two suffixes -ku (now the adjective infinitive) and -sa (now the abstract derived noun) + [ár]-i. See Martin 1967.260-1 (fn. 24).

9.6. THE LITERARY PERFECT-RESULTATIVE: -ÉRI/-ÉRU; [-NI]-K-ÉRI/-ÉRU

The literary language has a morphological category that roughly corresponds to V-te iru 'has done (and continues in the resulting state)' or, sometimes, simply to V-tá 'did'. There

125a. For suru 'does' the forms are attributive sí-ki and predicative *sí-si → sé-si. And consonant bases that end in ...s- are usually given the predicative ...se-si rather than ...si-si: zinsin sétu o tukusési tote zyomei serarén ni wa 'in the event one seeks to be reprieved on the grounds that he has fulfilled his duty as a subject' (Agawa 1.271b, quoting Ogyū Sorai).

are two forms, the predicative (typically sentence-final) and the attributive (adnominal), which are made by attaching *-éri* and *-éru* respectively to consonant bases and to *s-* of *surú* 'does': *yoberi* 'has called', *yoméri* 'has read', *motéru monó* (= *mótte iru monó*) 'things one has' or 'those that have'—cf. *motéru kuni* to *motazáru kuni* 'Have countries and Have-not countries', ...; *sairoku séru búnsyoo* 'the sentence recorded (transcribed)'; *búkko(-) seru Tanaká-si* 'the deceased Mr Tanaka'; *nemuréru sísi* 'a sleeping tiger' (Tk 4.185b, SA 2679.49a), ...¹²⁶ Though the forms are not legitimately made on vowel bases (other than 'do'), sometimes "illegitimate" forms will turn up for those vowel bases that end in /e/; Henderson 248 cites *ukéri* = *úkete iru* and *haziméri* = *hazimete iru*.

In origin the endings appear to be the infinitive *-i* + the auxiliary *ári/áru*. Thus the difference in meaning between *V-i-tári/-táru* and *V-éri/-éru* might be attributed to the presence of the perfect auxiliary *t(é)-* in the former:

$$\begin{aligned} -i-tári/-táru &< -i[]t(é) \text{ári/áru} \\ -éri/-éru &< -i \quad \text{ári/áru} \end{aligned}$$

The literary perfect-resultative forms survive in a number of set phrases such as *itaréri* | *tukuséri no* | *sáabisu* 'complete service' ← *itaréri tukuséri da* 'is complete and leaves nothing to be desired' ← *sáabisu ga itaréri* (= *itatte iru*) 'the service has reached all the way' + *sáabisu o tukuséri* (= *tukúsíte iru*) 'they have exhausted every possible service'. The attributive form turns up in ... *ni okéru(-) N 'N* (located) at/in ... '(the grammatical equivalent of ... *ni oite iru N 'N* which they have put at/in ...'); this is used as a synonym of ... *ni óité no N*, an adnominalization of the predicated gerund of *oku* 'puts'.^{126a}

An example of the predicative in modern prose: ... *wagamamá mo kiwamaréri to itte yói* 'we can say that the extreme of self-indulgence has [hath?] been reached' (Maeda 1962.162). Maeda 1962.35 cites an example with ... *tó^[r] iéru tokoró = tó^[r] itta tokoró* 'a place [that has been] called ...'; cf. *ieru* 'can say' (potential). Additional examples: ... *seizi husin mo kiwamaréri to iu tokoró da* 'it is such that political distrust has reached an extreme' (SA 2672.38b); ... "*nayaméru rezyaa-káikyuu*" 'the "distressed leisure class"' (SA 2673.39e)—note that this is not the literary transitive verb *nayám(e)-* = *nayamás-*, but rather is equivalent to the colloquial *nayánde iru*; "*Ziyúu no* | *tamé ni*" [||] *o* | *hata-zírusi to suru* || *Amerika-sei no* || "*Káku* | *tatakaéri*" || *siki no* | *éiga(-) dé wa* | *nái* 'It is no made-in-America "This is how we fought" type movie that waves the flag [has as its slogan] "for freedom"' (SA 2678.247).

In the preceding section we observed combined sequences of perfect + perfect-resultative (and vice-versa); some of these will turn up in headings, slogans, and clichés borrowed from the literary language:

-i-k-éri: *Sore wa zizyoo ni yori-kéri yó!* 'That depends on the circumstances!' This is to be regarded as a direct nominalization, used idiomatically in the colloquial: *Nedan/hito/ tokí ni yori-kéri da* 'It depends on the price/person/time' (= ... *ni yotte irú no da*); ... *monó ni mo yori-kéri yó* 'It all depends on the thing' (Fn 185a). For *nakáikeri* (accent irregular?), see §8.6.

-i-n-i-k-éri: "*Kamigata*" *wa tooku nari-nikéri* 'The old Kamigata (Kyōto-Ōsaka area) is now distant (in the past)' (SA 2660.161—heading).

126. Some dialects (e.g. Aichi, Zhs 3.458) use *séru* as equivalent to standard *suru* (an abbreviation of *si* [w]oru). Cf. the dialect form *dekéru* = *dekíru*. Some eastern dialects regularize *si-* and *ki-* throughout the paradigm (Zhs 2.18). See p. 371n4.

126a. Like many set phrases, *itaréri* | *tukuséri* also occurs lexicalized: *itareri-tukuséri*.

The idioms *kerí ga túku* '(an affair) comes to a conclusion' and *kerí o tukéru* 'winds up (an affair)' are said (Kotoba no yurai 71) to be from a truncation of *V-i-k-éri*. We are following the generally accepted etymology for the "auxiliary" *-kéri* (usually stated as *-ki + ári*); Satō 1.255 mentions a less plausible theory that would derive it from *kí* 'come' + *ári*.

Although the normal usage of the perfect-resultative corresponds to only one of the meanings of *-te iru*, there may be a temptation to assume that *-éri/-éru* is simply a literary equivalent of *-te iru* in any of its meanings. That would account for the form of *samayoéru* *Yudayá-zin* 'the wandering Jew' and *samayoéru yuurei* 'wandering ghost'. But we might wish to consider *samayoéru* as a special idiomatic case, and list it among the adnouns. Are there similar examples for other verbs?

The literary form *ikéru* 'is alive' (as in *ikéru ga gótosí* 'is life-like') is probably from *ik[i]-éru*, an attributive perfective used with the meaning of *íkite iru* or *íkita* 'living'. It should not be confused with *ikéru* 'keeps (fish etc.) alive; arranges (flowers)' which is, by etymology, a transitive counterpart of *ikíru*, as is also *ikásu* 'revives (etc.)'.

9.7. PHRASAL POSTPOSITIONS

Beyond the logical or grammatical relationships expressed by the case markers, there are a great many specific relationships that are expressed with other devices. For example, various kinds of spatial and temporal relationship are represented by adnominalizing a predicate (often but not always a noun) to some RELATIONAL noun: *tukue no ué* '(on) top of the desk; over the desk', *sensoo no máe* 'before the war', *suwatta migi* '(to) the right of where I was seated', etc. Sometimes the physical nature of the relationship is attenuated: *N no hoka* 'outside of N; other than N'.

For somewhat more abstract relationships, certain stereotyped verbal predicates are used. Typically, the noun—or nominalized sentence—is put in relationship with a predicate through the mediation of an adverbialized verb (in the colloquial usually the gerund) that calls for a particular case-marking on the noun; often, but not always, the result is a phrase of the type *N ni V-te*. Below you will find a list of over two hundred of these stereotyped phrases, which I am calling PHRASAL POSTPOSITIONS. The items in the list vary in the degree of internal cohesiveness that each displays, as well as in versatility and breadth of distribution. Some, such as *N ni túite* 'with respect to N, about N' are rather closeknit and will not permit focus to be placed on the case-marked noun; instead of **N ní mo túite* you must use *N ni túite mo* to translate 'about N also/even', with the focus landing on the gerund. Others, such as *hán-site* 'against, contrary to', will permit the focus on either the case-marked noun (*N ní mo hán-site*) or the gerund (*N ni hán-site mo*); on occasion both may be marked for focus: *N ní wa hán-site mo*.

In written Japanese, especially in formal or literary texts, you will see the infinitive used instead of the gerund; again, you may find the literary gerund, made by attaching *-te* to the infinitive with no change in the shape of the infinitive. According to Lehmann and Faust (81) the gerund is required when "another postposition" (i.e. a restrictive or a marker of focus) is added: *N ni túkite wa* (= colloquial *N ni túite wa*). But when the phrasal postposition stands alone, adverbially, you can use either the infinitive or the gerund: *N ni túki*, *N ni tú[k]ite*.¹²⁷ And you will hear some of the phrasal postpositions

127. But in formal written Japanese after (directly nominalized) verbs "normally *ni tuki* and not *ni tukite* or *ni tuite*" is used (LF 81).

expressed with the polite gerund *V-i-másite*, especially in formal speeches: *N ni tukimásite*. Lehmann and Faust (below referred to as LF) give the fullest treatment of phrasal postpositions (which they call “compound postpositions”) up to the present work, and I have taken their study as a starting point. Yamada 1968c.24 makes a reference to the phrasal postposition as a “gerund preceded by a particle (usually *ní* and *tó*) used as a simple particle”.

Occasionally some other adverbialization (such as *V-réba* or *V-ru tó* or *V-rú ni*) will also be in use, as well as the gerund and/or infinitive. There are also a few literary negative infinitives *V-(a)zu* that form phrasal postpositions, sometimes optionally followed by *ní* or *sité*.

Some of the phrasal postpositions will create phrases that can be used only adverbially, but most will also permit adnominalization. The adnominal form is made either by predicating the gerund, as in *N ni hán-site no N* ‘the N that is against N’, or by using the imperfect (*N ni han-súru N* ‘the N that opposes N’) or the perfect (*N ni hán-sita N* ‘the N that is opposed to N’). The particular adnominalization patterns in use for each phrasal postposition are marked in the list.

Since there is a gradation with respect to internal cohesion and stereotyped usage, it is difficult to give clear criteria for what is, and what is not, a phrasal postposition.¹²⁸ The list below may be overly extensive, yet perhaps I have overlooked a few items that should have been included.¹²⁹

In addition to the phrasal postpositions in the list, there are a number of other types of quasi particles that are somewhat similar:

(1) *N {o} hazime {to si/site}* ‘starting with N at the top/head, from N on down’: *Tooóo-ken [o] hazime [] hyaku^[j] ik-kásyo ni kyóten(¯) o ...* ‘(placing) 101 strategic points, starting with the Eastern European sphere’ (SA 2648.47); *Kaityoo {o} hazime [] kaiin minná^[j] ...* ‘All members of the society from the president on down ...’; ... *séihu o hazime to si, ...* ‘from the government on down’ (SA 2674.128d); *Nomura o hazime to site óote no syooken-gáisya wa ...* ‘The big securities companies, starting with Nomura at the top, ...’ (SA 2679.30b). The adnominalized form is *N o hazime to suru*: *Nomura-syooken o hazime to suru yondai-syookengáisya wa ...* ‘The four big securities firms, beginning with Nomura Securities, ...’ (SA 2679.29a); ... *keiei-konsárutánto o hazime to suru kákusyu no konsárutánto ...* ‘all kinds of consultants starting with economic consultants (on down) ...’ (SA 2684.44b); *Igirisu o hazime to suru rengóo-gun ...* ‘The allied armies with England at the head ...’ (SA 2678.149).

(2) *N o kéiki to site* ‘taking the opportunity of N; with N (as the momentum, as the turning point)’

N o kísó to site ‘on the basis of N, on grounds of N’

N o kityoo to site ‘based on N, on the basis of N, with N as the keynote’

N o mohan to site ‘modeling after N, with N for a model’

N o mokuteki to site ‘with N as one’s aim/goal’

128. I have found an example of the restrictive *daké* after *N ni mukatte*; since *daké* will not ordinarily follow a gerund (see p. 506), this provides a piece of evidence that *ni mukatte* is working as a unit: *Sono kawari zibun ni kati-mé no áru monó ni mukatté daké bóoryoku(¯) o huruu* ‘Instead they display violence only toward those whom they themselves have the odds on’ (SA 2685.118d).

129. E.g.: *N o maziéte* ‘with the addition/inclusion of N, including/counting in N’, *N to muzyun site* ‘in contradiction to N, inconsistent(ly) with N’, *N ni saki-datte* ‘in advance of N’, ...

- N o mokuhyoo to site 'with N as one's aim/goal'
 N o muné to site 'making a point of N'
 N o syúgi to site 'making N a principle, with N as one's principle'
 N o syutai to site 'with N as the subject (or main constituent)'
- (3) N wa betu to/ni site 'aside from N' (cf. N wa betu ni, p. 471)
- (4) N o gisei ni site 'at the sacrifice/cost of N'
 N o kéiki ni [site] 'with N (as the momentum, as the turning point)'
 N o kí ni [site] 'with N as the opportunity/occasion, taking advantage of N'
 N o motó(¯) ni [site] 'with N as basis, on the basis/ground of N, based on N'
 N o sitaziki ni [site] 'on the model of N'
 N o táne ni [site] 'with N as a source'
 N o tángo ni [site] 'with N as a pledge'
 N o teházime ni [site] 'with N for a start(er)'
- (5) N no hoohuku ni site 'in retaliation for N'
- (6) N o táte ni tótte 'on the strength/grounds/pretext of N'
- (7) N ni kéii o arawásite 'out of respect for N, in deference to N'
 N ni syooyun o awásete 'setting one's sights on N'
- (8) N no kyóka o éte 'by permission of N, with the permission of N'
 N no sigeki o úkete 'stimulated by N, under the impetus of N'
 N no eikyo o úkete 'influenced by N, under the influence of N'
 N o kite (haite, kabútte, hamete, túkete, ...) 'wearing N, in an N, in Ns'
- (9) N to kyóotoyo de 'in (literary) collaboration with N; coauthored with N'
 N to kyootuu ni 'in common with N'
 N to nareai de 'in collusion/conspiracy with N'
 N to rentai de 'jointly with N'
- (10) N no motó de/ni 'under (the tutelage, the provisions, ... of) N'
 N no sigeki no motó ni 'under the stimulation/impetus of N'
 N no torinasi de 'through the good offices of N'
 N no moyoosi de 'under the auspices of N'
 N no syookai de 'by introduction from N; introduced by N'
 N no mukui de (= N no mukui to site) 'in compensation for N'
 N no umeawase {no tamé} ni 'to make up for N, by way of compensation for N'
- (11) S to katei site 'on the supposition that S'
- (12) S/N to ié-do mo 'although (it be) S/N; in spite of (being) S/N; even S/N'
- (13) N o iwazu, ... 'to say nothing of N'
 N o kaerimízu {ni} 'despite (regardless of) N'
- (14) N to sasyoo site 'under the assumed name of N'
- (15) N ni sigeki sarete 'under the stimulus of N, spurred by N'
- (16) mikka ni agezu 'every three days or less'

In the list of phrasal postpositions that follows you will find the following columns of information after the serial number of the item:

(1) *-mas-* is marked + if the polite gerund (V-i-másite) is used.

(2) *w/m* indicates whether *wá* and/or *mó* can be used after the case marker, with the usual reductions of $\{wá\}$ *wa* and $\{mó\}$ *mo*. And where *wá* and/or *mó* can be inserted, often other focus and restrictive particles are also possible: *N ni dake yotte*, etc. (But where *wá/mó* are excluded there are no insertions of other particles.)

(3) *-ta -ru -té no* indicates whether the perfect, imperfect, and/or predicated gerund is used for adnominalization by + in the appropriate column(s).

(4) *CASE* lists the case marker(s) called for by the verb. The accusative marker *ó* is often (always?) optional; I have so indicated only when the form without *ó* seems particularly common.

(5) Under *LITERARY* is listed the infinitive and (by bracketing *-te* to the infinitive) the literary gerund when the form(s) may be used.

(6) *COLLOQUIAL* lists the colloquial gerund, even when the form coincides with the literary gerund. I am using "colloquial" in the narrow sense of non-Bungo (non-literary); many of the forms listed here are seen more often than heard and belong to the written style of the colloquial.

(7) *MEANING* suggests a few typical translations of the phrasal postposition. When the phrasal postposition is common in forms other than the infinitive and gerund, the information is carried in the footnotes. For atonic bases, the infinitives and gerunds are cited without the final accent that is morphophonemically basic to the forms; when followed by *wá* or *mó* or *nó*¹³⁰ the forms will be heard as *V-í* and *V(-i)-té*. Exceptionally, the forms *túké*, *túkí*, and *túkete* are listed with two options, though elsewhere we are ignoring the Tōkyō rule that will convert our *túkete* to *tukéte* (etc.) automatically with the unvoicing of the first vowel; when the Tōkyō version of *túké* and *túkí* is pronounced without a following particle the final accent will automatically be suppressed: *tuké*,^[1]
tukí.^[1]

130. At least, when the noun serving as epitheme is separated by juncture from the adnominalized phrasal postposition. On the conditions governing suppression of a final accent before *nó*, see Martin 1970.

PHRASAL POSTPOSITIONS

	CASE +		ADNOMINAL			CASE	LITERARY Inf.[-Ger.]	COLLOQUIAL Gerund	MEANING
	-mas-	wa/mo	-ta	-ru	-té no				
1.	(+)	-/-	-	?-	+	[o]	age [te]	agete	'with all ...; concentrating'
2.	(+)	w?/m	-	-	+	to	ái máti [te]	ái mátte	'coupled/conjoined with, hand in hand with'

16.	+	w/m	+	+	+	to/ni	goodoo si [te]	goodoo site	'in partnership/concert with'
17.	+	-/m	+	+	+	o	háí-si [te] ₁	háí-site ₁	'in obeisance/obedience to'
18.	-	-/m	+	+	+	o	háí-si [te] ₂	háí-site ₂	'pushing aside; in defiance of'

1. The form is arazáru.

19.	+	w/m	+	-	+	to/kara ²	hanáre [te]	hanárete	'separated/distant from'
20.	+	w/m	+	+	+	ni	hankoo si [te]	hankoo si [te]	'in opposition to, in defiance of'
21.	(+)	w/m	+	+	+	ni	hán-si [te]	hán-site	'against, contrary to; in contrast with'
22.	+	w/m	+	+	+	ni	hantai si [te]	hantai site	'in opposition to, against'
23.	+	w/m	+	+	+	ni	hasamári [te]	hasamáte	'(sandwiched/caught) between'
23a.	+	-/-	+	-	+	o	hasámi [te]	hasánde	'separated/broken by; on either side of'
24.	+	w/m	+	+	+	ni	hazure [te]	hazurete	'deviating from, contrary to'
24a.	+	w/m	+	-	+	o	hedáte [te]	hedátete	'on the other side of, across; at an interval of'
25.	+	-/m	+	-	+	o	hé [te]	hété	'through, by way of, via'
25a.	+	-/-	+	-	+	o	hikáe [te]	hikáete	'in anticipation of, with ... just ahead'
26.	+	w/m	+	+	+	to/ni	hikaku si [te]	hikaku site ³	'by comparison with'
27.	+	-/m	+	+	+	o	hikii [te]	hikiite	'at the head of, commanding'
28.	+	-/-	-	-	-	ni ^{3a}	hiki-káe [te]	hiki-káete	'in contrast to'
29.	+	-/m	+	-	+	o	hik-kurúme [te]	hik-kurúmete	'inclusive of, including'
30.	(+)	-/-	+	-	+	ni	hín-si [te]	hín-site	'on the verge of'
31.	+	w/m	+	+	+	ni	hirei si [te]	hirei site	'in proportion to, proportionately with'
32.	-	-/-	-	-	-	ni	hí-si [te]	hí-site ⁴	'in comparison to; proportionately to'
33.	+	w/m	+	-	+	o	hukúme [te]	hukúmete	'inclusive of, including'
34.	-	-?/m	-	-	-	o	hukúmezu ni	hukuménai de	'exclusive of, excluding'
35.	+	w/m	+	+	+	ni	hún-si [te]	hún-site	'cast as, in the role of; under the guise of, disguised as'
36.	+	w/m	+	-	+	ni	hure [te]	hurete	'touching upon, concerning'
37.	(+)	-/m	-	-	+	o	húu-si [te]	húu-site	'alluding to'
38.	+	w/m	+	+	+	ni	ihan si [te]	ihan site	'in violation of, against'
39.	+	w/m	+	+	+	o	ire [te]	irete	'including'

2. Or the literary synonym *yóri*. And *ó* can substitute for the *kará*: ... *sigái-ti o tyót-to hanáreta* ... [N] '[N] which is slightly separated from the city streets' (see full sentence under 169, *sotte*, in the list of examples).

3. Also *hikaku suréba*. 3a. KKK 43.677: *ni/o*.

4. Also *hi-súreba*.

40.	—	—/m	—	—	—	o	irezu ni		'excluding'
41.	+	—/m	+	+	+	ni	itári[te](⁻)	itátte(⁻)	'(reaching) up to'
42.	+?	—/—	—	—	—	ni		itátté wa	'as for, as to; when it comes to'
43.	+ ⁵	w/m	—	—	—	ni	kagírazu		'not just ... but'
44.	+	—/—	—	—	+	ni	kagiri[te]	kagítte	'in particular, only; of all ...'
45.	+	—/—	+	—	+	o	kái-si[te]	kái-site	'through (the medium of)'
46.	+	—/m?	+	—?	+	o	kakáe[te](⁻)	kakáete(⁻)	'with ... (in one's arms, on one's hands, under one's care'
47.	+	—/m	+	+	+	ni	kakári[te]	kakátte ⁶	'depending on'
48.	(+) ⁷	w/m	—	—	—	ni	kakawárazu(⁻)		'irrespective of, in spite of' ⁸
49.	+	—/—	—	—	+	ni	káke[te]	kákete	'(extending) through' (cf. watátte)
50.	+	—/—	—	—	+	ni		kákete wa/(mo)	'in the matter of, with respect to, as regards, as far as ... is concerned'
51.	+	w/m	+	+	+	ni	kakotuke[te]	kakotukete	'under pretext/pretense of'
52.	+	—/m	+	+	+	o	kakomi[te]	kakonde	'around, surrounding'
53.	+	w/m	+	+	+	ni	kakomare[te]	kakomarete	'surrounded by'
54.	+	—/m	+	+	+	o	káne[te]	kánete	'combining (for a dual purpose)'
55.	(+)	—/m?	—	—	+	ni	kangámi[te]	kangámite	'in view of, in the light of, taking a lesson from'
56.	—	w/m	—	—	—	to/ni	kankei-náku		'regardless/irrespective of'
57.	+	w/m	+	+	+	ni/to	kanren si[te]	kanren site	'in connection with, pertaining to'
58.	+	w/m	+	+	+	ni	kansan si[te]	kansan site	'calculated in terms of, converted to'
59.	+	—/m	+	+	+	ni	kán-si[te]	kán-site wa/mo	'with respect to, as regards; about, concerning, having to do with'—ni kán-site daké wa 'only with respect to'

5. The form is kagirimasézu.

6. But apparently only the infinitive is used with S ya ína ya ni kakári 'depending on whether or not S' (LF 82); cf. Seikoo surú ya ína ya wa KONO TEN ni kakátte ... 'Whether one succeeds or fails depends upon this point and ...'.

7. The form is kakawarimasézu.

8. According to LF 83, when mó is inserted the reference is past and/or certain while without mó it is future and/or uncertain, but the distinction is occasionally disregarded.

60.	—	w/m	—	—	—	ni	kan-sézu		'unconcerned with'
61.	+	w/m	+	+	+	ni	kata-dóri[te]	kata-dótte	'(modeling/patterning) after the manner of, in imitation of'
62.	+	w/m	+	+	+	ni	kata-múki[te]	kata-múite	'inclining/leaning to'
63.	+	-/m	+	+	+	o	katúgi[te]	katúide	'with ... on one's shoulder, shouldering; with ... at its head (as its president, etc.)'
64.	+	w/m	+	+	+	ni	kawari[te]	kawatte	'for = in place of, on behalf of; in succession to'
65.	+	w/m	+	—	—	to	kawari[te]	kawatte	'differing from'
66.	(+)	-/m	+	+	+	o	kisói[te]	kisótte	'in competition for'
67.	+	w/m	—	+	+	to	kisói[te]	kisótte	'in competition with'
68.	+	-/m	+	+	+	o	kitai si[te]	kitai site	'in expectation/hope of'
69.	+	-/m	+	+	+	o	ki-zukái[te]	ki-zukátte	'for/in fear of'
70.	+	-/m	+	+	+	o	koe[te]	koete	'across; exceeding'
71.	+	w?/m	+	+	+	[o]	kóme[te]	kómete	'inclusive of, including'
72.	+	w/m	+	+	+	ni/to	ko'oo si[te]	ko'oo site	'in agreement with; in response to'
73.	+	w/m	—	—	—	ni	koodei sezu ni	koodei sinái de	'independently of; irrespective of'
74.	(+)	-/m	+	+	—	o	kosi[te]	kosite	'over, exceeding, surpassing'
75.	+	w/m	+	+	+	ni	kotáe[te]	kotáete	'in response/answer to'
76.	—	-/m	—	—	+	ni	koto-kaki[te]	koto-kaite	'of all the possibilities of/to ...' (cf. § 14.6.5)
77.	+	w/m	+	+	+	to	koto-nári[te]	koto-nátte	'unlike'
78.	+	-/m?	+	-?	+	ni	koto-yóse[te]	koto-yósete	'under the pretense of' (cf. yosete)
79.	+	w/m	+	+	+	to	kumi-ái[te](⁻)	kumi-átte(⁻)	'in partnership/association with'
80.	+	-/m	+	+	+	o	kumi-awáse(⁻)	kumi-awásete(⁻)	'combining, joining, associating, pairing'
81.	+	w/m	+	+	+	to	kúmi	kúnde	'in league/conspiracy with'
82.	+	w/m	+	+	+	ni/to	kurabe[te]	kurabete ⁹	'as compared with, in comparison with; for'

9. Also kuraberéba and kuraberu tó.

83.	+	w/m	+	+	+	[o]	kurúme[te]	kurúmete	'inclusive of, including'
84.	-	w/m	-	-	-	ni	kus-sézu(-) [ni]	kus-sínái de	'in defiance of'
85.	+	-/m	+	+	+	o	kuwáe[te] (-)	kuwáete(-)	'including, inclusive of, adding/counting in'
86.	+	-/-	+	+	+	ni	kuwáe[te] (-)	kuwáete(-)	'in addition to'
87.	+	-/m	+	+	+	o	kuwae[te]	kuwaete	'with ... in one's mouth'
88.	+	w/m	+	+	+	to	kyooboo si[te]	kyooboo site	'in conspiracy with'
89.	+	w/m	+	+	+	to	kyoodoo si[te]	kyoodoo site	'(con)jointly with, in combination with'
90.	+	w/m	+	+	+	to	kyooryoku si[te]	kyooryoku site	'in cooperation with'
91.	+	w/m	+	+	+	to	kyootyoo si[te]	kyootyoo site	'in cooperation/unison/concert with'
92.	+	w/m	+	+	+	ni	makáse[te]	makásete	'leaving matters to ...; disregarding'
93.	+	-/m	+	+	+	o	mane[te]	manete	'in imitation of, after the fashion/model of; aping'
94.	-	-/m	-	-	+?	ni	masi[te]	masite	'more than'; cf. adverb másite(-)
95.	-	-/-	-	-	+	ni	méde[te]	médete	'in consideration/appreciation of, in reward for'
96.	+	-?/m	+	+	+	o	megáke[te]	megákete	'aiming at; toward'
97.	-	-/m	-	-	-	ni	mégezu	megénai de	'undaunted by'
98.	-	-/-	-	+	+	o	meguri[te]	megutte	'surrounding, around; centering on, concerning'
99.	+	w/m	+	+	+?	ni	mén-si[te]	mén-site	'facing, fronting on, abutting'
100.	+	w/m	-	-	+	ni	mén-zi[te] (-)	mén-zite(-)	'out of consideration/respect for'
101.	+	w/m	+	+	+	ni	mezáme[te]	mezámete	'(being) awake to, conscious of'
102.	+	w/m	+	+	+	[o]	mezási[te]	mezásite	'(destined) for, aiming at'
103.	+	-?/m	+	+	+	o	mikomi[te]	mikonde	'in expectation/anticipation of; counting/ relying on'
104.	+	-/m	+	-	+	o	mi-kósi[te] (-)	mi-kósite(-)	'in expectation/anticipation of'
105.	+	-?/-	+	-?	+	kara	mí	míte	'considered as'
106.	+	-/m	+	+	+	o	mokurómi[te]	mokurónde	'with ... in mind; contemplating'

136.	+ ¹³	-/-	-	- ¹⁴	+	ni	oki[te] ¹⁵	óite(-)	'at, in (= dé); in the matter of, with respect to (= ni kán-site); on the part of (= no hoo de, gá); by [ANIMATE AGENT IN PASSIVE]' ¹⁶
137.	+	-/m	+	+	+	o	omoi-dási[te](-)	omoi-dásite(-)	'at the thought of'

13. The form is okimásite.

14. The form used is okéru(-), the literary attributive of the perfect-resultative (§9.6).

15. I follow my informants, despite LF 81 "ni oki or ni okite are never used". An example of ni oki will be found in Kgg 82.112a6: sorézore no náibu ni oki 'within them individually'.

16. See LF 84. Two other uses to observe: [mósi] ... ni óité wa 'if ...'; ... ni oite/okarete/okaserarete [wa] 'as'— "This usage is especially common with words meaning 'believe, think, able to, etc.'" (LF 84), the passives being reserved for reference to the emperor and other exalted dignitaries.

138.	+	w/m	+	+	+	ni	óo-zi[te](-)	óo-zite(-)	'according to, corresponding to, proportional to; in answer/response to; in compliance with, in obedience to'
139.	+ ¹⁷	w/m	-	-	-	ni	oo-zézu(-) ni	oo-zínáí de	'not according to; not in compliance with'
140.	+	-/m	+	(+)	+	o	osi-táte[te]	osi-tátete	'with (banners etc.) raised, displaying (in front)'
141.	+	-/m	+	+	+	o	osóre[te]	osórete	'for fear of'
142.	+	-/m	+	+	+	o	oi[te]	otte	'bearing'
143.	-?	-/m	+	+	-?	ni	oi[te]	otte	'owing to; due to'
144.	+	-/m	+	+	+	ni	oyobi[te]	oyonde ^{17a}	'extending to; waiting till'; cf. conjunction óyobi
145.	+	w/m	+	+	+	to	rengoo si[te]	rengoo site	'in league/concert with'
146.	+	w/m	+	+	+	to	renkei si[te]	renkei site	'in cooperation/concert with'
147.	+	w/m	+	+	+	to	renmei si[te]	renmei site	'in league/union with'
148.	+	w/m	+	+	+	o	riyoo si[te]	riyoo site	'taking advantage of, making use of'
149.	(+)	-/m	+	+	+	o	rón-zi[te](-)	rón-zite(-)	'dealing with, treating of; considering'
150.	-	-/m	-	-	-	o	ron-zézu(-)		'irrespective of, regardless of, without distinction of'
151.	+	-/m	+	+	+	o	ságe[te]	ságete	'with ... in (= dangling from) one's hand, carrying (a bucket etc.)'
152.	+	w/m	+	+	+	ni	sái-si[te]	sái-site	'on (the) occasion of, at (the) time of, when, in case of'
153.	+	w/m	+	+	+	ni	sakanobóri[te]	sakanobótte	'retroactive(ly) to'
154.	+	w/m	+	+	+	ni	sakarái[te]	sakarátte	'against, in defiance of'
155.	+	-/m?	+	+	+	o	sási[te]	sásite	'aiming/heading toward; aiming at, referring to, meaning'
156.	+	-/m?	+	+	+	ni	sés-si[te](-)	sés-site(-)	'on receipt of; ? adjacent to, abutting on'

17. The form is oo-zimasézu ni.

17a. Hamako Chaplin accentuates ... ni oyónde.

157.	+	-/m	+	+	+	o	sitagáe[te](-)	sitagáete(-)	'attended by, followed/accompanied by'
158.	+	w/m	-	-	+	ni	sitagái[te](-)	sitagátte(-) ¹⁸	'in accordance with, conforming to. in compliance with; (= ni turete) accordingly as, in proportion to/as, as'
159.	-	-/-	-	-	-	o	-	site	SEE p. 293 [underlying agent in a causative, but note the omission of the causative in example in LF 87]
	+	-/-	?	?	?	o	-	mótte site	SEE p. 488
	+	-/-	?	?	?	kara	-	site	SEE p. 487
	+	-/-	(-) ¹⁹	+	+	to	- ^{18a}	site	'as, in the capacity of; by way of, purporting to be; considered as; as token of'; ~ wa 'as far as ... is concerned; for, as'; SEE pp. 229, 1018
	+	-/-	-	?	?	ni	- ^{18a}	site	'being; is and', ²⁰ ~ wa 'considering (that it is); for'; SEE pp. 229, 487
160.	+	-/m	+	+	+	o	soe[te]	soete	'as an appendage to, along with'
161.	+	-/-	+	-	+	ni	sokú-si[te]	sokú-site	'in conformity with; conforming to; based/founded on'
162.	+	-/m?	+	+	+	ni	sokuoo si[te]	sokuoo site	'in conformity with, in response to'
163.	+	w/m	+	+	+	ni	somúki[te]	somúite	'running counter to; in violation of'
164.	+	-?/m	+	+	+	ni	sonáe[te]	sonáete	'making provision for/against'
165.	+	-/m	+	+	+	o	sonkei si[te]	sonkei site	'out of deference to; out of respect for'
166.	+	-/m	+	+	+	o	sontyoo si[te]	sontyoo site	'out of deference to; out of respect for'
167.	+	w/m	+	+	+	ni	sootoo si[te]	sootoo site	'corresponding to; proportionate to; meriting'
168.	+	-/m?	+	+	+	o	soróe[te]	soróete	'arranging, completing'

18. Also sitagáeba. 18a. Written examples of N to/ni si are condemned; cf. Kazama 206-7.

19. Except under special idiomatic circumstances, e.g. Watasi to sita kotó ga dóo site konna matigái o sitá ka moosi-wake gozaimasén 'I just don't know how I could have done such a thing, but I hope you will forgive me' (to sita kotó here meaning something like *to iu monó* 'a humble person who is ...').

20. Cf. LF 113: ... ni site V-ru mono 'those which are ... and which V', ... to site V-ru mono 'those which V as ...'.

169.	+	-/m	+	+?	+	ni	soi[te] ₁	sotte ₁ , soote	'along(side), hugging, parallel to, by'
170.	+	-/m	+	+	+	ni	soi[te] ₂	sotte ₂	'complying with, satisfying'
171.	+	-/m	+	-?	+	o	sukasi[te] ₁	sukasite ₁	'(peering) through'
172.	+	-/m	+	+	+	o	sukasi[te] ₂	sukasite ₂	'by coaxing/persuading'
173.	+	-/m	+	+	+	ni/to	syoogoo si[te]	syoogoo site	'compared/checked/tallied with'

212. *Eziputo-séihu ni yoru únga no sessyuu ...* 'Seizure of the canal by the Egyptian government ...'; *Dóno kuni ga sukí ka to iu kotó wa kózin no konómí ni mo yotte tiguaú ga ...* 'Which country one prefers varies with the individual's tastes, too, but ...' (Nakane 61).

10 FAVORS

To speak of giving or receiving a favor, you use the verbal gerund *V-té* (§9.2) or its negative *V-(a)nái de* (§8) followed by a verb of giving (*yaru/ageru* 'gives others', *kureru/kudasáru* 'gives us') or of receiving (*morau/itadaku*). *V-te ageru* can abbreviate to *V-t' ageru* (= *V-t[ɛ] ageru*) as in *Tótt' ageru* 'I'll take it'; *Yónd' ageru* 'I'll read it'; *Gakuhi mo dásit' ageru* 'I'll even pay your school expenses' (SA 2674.122e); *Kikasit' agemásu* = *Kikasete agemásu* 'I'll let you hear it'. You may also run across the contraction *-t[e y]aru* = */-taru/*, not to be confused with the literary perfect attributive ending *V-i-tári/-táru* derived from a historical contraction of *V-i-t[e] ár-i/ár-u* (§13.8a, §11) nor with the synchronic contraction in dialect speech of modern *V-t[e] áru*, as described in §9.2.4.(4). An example: *Ore n[o] tókó ni asobi ni kói ya; omosirói asobi mo osietaru* (= *osiet[e y]aru*) 'Come visit my place; I'll show you some good fun' (SA 2648.117—speaking is a young man on the Noto Peninsula). A somewhat literary synonym of *V-te yaru/ageru* is *V-te tukawasu* as in *Kanben site tukawasu* 'I will forgive you' (Hayashi 126). Yoshida says this and the related *V-te tukawasaru* are dialect relics of an older usage "now old-fashioned"; as a command form *V-te tukaasai* (= *V-te kudasái*) is used in *Kōchi*, *Kagawa*, *Hiroshima*, and *Yamaguchi* (Y 565–6). On *V-te yokósu*, see §6.5.

The marking of the adjuncts of the favor given are the same as when a gift is given:

A ga B ni X o *yaru/ageru* (or: *kureru/kudasáru*) 'A gives X to B'.

A ga B ni X o site *yaru/ageru* (or: *kureru/kudasáru*) 'A does X for B'.

But there is a slight difference in the marking of adjuncts that appear in the receiving of gifts and the receiving of favors:

B ga A [ni/]kara X o *morau/itadaku* 'B gets X from A'.

B ga A ni [kara] X o site *morau/itadaku* 'B gets A to do X—B receives the favor of A doing X for him'.

When you receive THINGS, the preference is to mark the source with *kará* (though *ní* is sometimes used); when you receive FAVORS, the preference is to mark the source (which is identical with the subject of the verb) with *ní*, though occasionally *kará* may turn up, as in *Niigata* (Shibata 1965.174–5) and *Tsushima* (Zhs 9.29). A favor received: *Bóku(ˉ) wa, anáta ni kooñii o ogotte moratta kotó ga áru n desu yó, íma kara zat-tó¹ sanzyúu-nen mo mukasi no hanasí* 'You know, I once got treated to coffee by you, going back a good thirty years ago' (Tk 4.41).

If the subject or object is to be exalted, the exaltation will carry over intact from the underlying sentence, regardless of switches in the surface subject of the converted sentence. From an underlying sentence *Senséi ga/wa matigái o o-naosi ni náru* 'The teacher corrects the mistakes' we can obtain *Senséi ga/wa [watasi ni] matigái o o-naosi ni nátte kureru/kudasáru* 'The teacher corrects the mistakes for me'. But with causatives and pseudo causatives, the exaltation in a favor will sometimes spill over both subject and object, making certain otherwise grammatical sentences sound odd, as explained in §30; informants balk even at (?) *Watasi ga/wa senséi ni matigái o o-naosi ni nátte morau/itadaku* 'I am favored to have the teacher correct the mistakes for me'. It is difficult to find good examples of a favor conversion made on a conversion of object exaltation, since the point in choosing the latter in the first place is usually to express a favor to a superior.

The report of the favor given or received (the new sentence) enters fairly freely into further conversions, such as negative, desiderative, various adverbializations, etc. Either the gerund or the auxiliary of giving/receiving (or both) can be subject to the subsequent conversions (cf. §9.2.4); for example, with the negative: *site kurenai* 'doesn't do it for me';¹ *sinái de kureru* 'as a favor to me avoids/stops doing it'; *sinái de kurenai* 'does not do me the favor of not doing it'; *site morawanai* 'doesn't get the favor/kindness of [their] doing it'; *sinái de morau* 'gets the favor of [their] not doing it'; *sinái de morawanai* 'doesn't get the favor of [their] not doing it'.

As with other gerund-auxiliary conversions, the giving and receiving of favors is theoretically recursive: you can favor your friend by doing something for his brother, and the friend can receive the benefit of your favoring his brother. Examples: *Oyá ni sono musuko ni uti^[r] (-) no musumé o moratte yatte itadakenai tó ka tanón da* 'I asked the father whether we might not receive the favor of his [indulging his son by] letting the boy receive our daughter [in marriage]'; *Tó-ni-kaku, byoositu kara déte itte moratte kudasái* 'Anyway, get her to leave my hospital room' (Endō 143); *Kono syasin-ya ga umái n desu ga, iti-dó^[r] káre no tokoró e itte syasin o utúsíte moratte yatte kudasaimasén ka* 'This photographer is good; won't you sometime (do me a favor and) go to his place to give him the favor of letting him take your picture?' (K in Ōno 1967.36); *Senpoo no matigái da kara watasí ga hanásíte senpoo ni ayamátte moratte yaroo* 'Since it was the other fellow's mistake I will speak up and see to it that you get apologized to'; *Ueki-ya ni o-tya o nomásete yatte morai-tai* 'I want to have you kindly let them serve the gardener tea'.

For the desiderativized favor receipt, instead of *V-te morai-tai* '(I) would like to have it done' you will sometimes hear *V-te hosii*.² This usage seems to be coming in from Kansai dialects (cf. Hōgen-gaku gaisetsu 403); the expression was unknown in the Edo of 150 years ago (according to SA 2642.31b). An example with a negative: *Kore kara hanásu kotó wa koosiki da tó wa omowánai de hosii* 'What I am about to speak now I want you not to take as official' (SA 2677.149b). An impersonal 'we would like to have it done, it would be desirable to have it done' is often expressed by the simple passive desiderative: *sare-tai*. Notice the interesting example given by Ishigaki (23): *Zyokyúu-táti kara omosirói másutaa da to omoware-tái* '(I) want to be thought a pleasant master by the women helpers'.

With weather phenomena a specific "giver" is not needed: *Hárete kuretára ...* 'If only it would (be kind enough to) clear up for us = I wish it would clear up'. A rather special case is the desiderativized causative in *Áme o hurase-táku náí mon desu né* 'We surely don't want to let/have it rain, do we' = 'I sure hope it won't rain'.

1. *V-te kurenai* sometimes turns up as *V-te kunnai* (Y 573). Other unusual variants for which Yoshida cites examples include *V-te kun ro {yo}* for *V-te kure ro {yo}*, *V-te kunsai/kunse/kussai/kusse* for *V-te kure-nasái*, and *V-te kere {yo}* for *V-te kure {yo}*; there is also an example of the spelling "kureu" (presumably pronounced /kuryoo/) for (*V-te*) *kureyoo* = *kurerú daroo* (Y 573-4). Command forms reported include *V-te o-kure* ('old-fashioned, popular in Edo days'), *V-te o-kure yo*, *V-t'okure*, and Ōsaka *V-tookure* and *V-t[e] o-ku[n]nahare* (Y 576-7).

2. *Dóo site hosii desu ka* is ambiguously (1) 'What do you want me/him to do?' (= *dóo* + *site morai-tái desu ka*) or (2) 'Why do you want it?' (= *dóo site* + [*sore ga*] *hosii desu ka*); with a casual ellipsis it can also mean (3) 'Why do you want to have it done?' (= *Dóo site* + [*site*] *hosii desu ka*?). An example of the first meaning is found in this sentence: *Anáta no otto ya koibito ga séntyoo dattara, dóo site hosii desu ka* 'If your husband or lover were captain of a ship [about to sink], what would you want him to do?' (SA 2664.32d).

Favor-receiving expressions are often used to express wishes, hopes, or advice: *Soo site itadakenákute wa (itadakenai to, itadakenákereba) komarímásu* 'It will be too bad (a shame) if we can't have it done for us'; *Soo site itadakenákattara komáru desyóo* 'It would be too bad (a shame) if we couldn't have it done for us'. A favor conversion is sometimes made on a causative to bring out the nuance of permission rather than coercion; *saseru* means 'makes/lets one do' but *sasete kureru* (or *sasete ageru*) means only 'lets one do, permits one to do': *Ikasete kudasái* 'Let me go', *Áto de yomásete agemásu kara* 'I'll let you read it later', *Mata kosásete kurenái ka* 'Won't you let me come again?'. A polite way to request or assume permission, especially common in western Japan, is to use *V-(s)asete itadaku* 'I will receive the exalted favor of your letting me (do V) ...':

Yomásete itadakimásu 'Let me read it'; *Otootó o turete kosásete itadakemasén ka (= ... turete kíte ii ka)* 'May I bring my little brother along?'; *Syusseki sasete itadakimásu* 'I will (take the liberty to) be in attendance'; *Watakusi mo sitúrei sasete itadakimásu* 'I will take my leave, too, if you will excuse me' (KKK 3.249). Such forms are spreading, though sometimes criticized for being obsequious (Y 87). Among friends *morau* may replace *itadaku*: *Tikáku mesí de mo kuwánai ka. Ogorasite [= ogorasete] morau yó.* *Izure renraku suru* 'How about eating [with me] sometime soon? Let me treat you. I'll get in touch with you before long' (SA 2674.108c). Notice that the agent of the causative favor-receipt turns out to be the same as that of the underlying simplex: N_1 *ga sasete morau* = N_1 *ga suru*. (The ping-pong ball has bounced across and back again.) An example: *Koo iu gakuséi-táti wa hotóndo ga ókusan ni tabesásete moratte imásu* 'Almost all such students are being supported by their wives'. Perhaps that is the reason the expression *Itadakasete itadakimásu* (considered servile by Tsujimura 45) seems to be an unnecessarily fancy way of saying simple *Itadakimásu*.

In such expressions as *o-home itadaku* 'I receive praise from you' and *o-ide itadaku* 'I receive the favor of your going/coming/staying' there would seem to be ellipsis of ... *ni nátte ...* (or of ... *nasátte ...*); cf. the common ellipsis of ... *sité^[j] ...* (§9.1.12 and elsewhere).³ Expressions of this sort—with ellipsis not of *sité* but of *ni nátte*—encounter disapproval from some of the grammarians, but they seem to be spreading rapidly and are frequent on radio and television commercials: ... *go-riyoo itadakimásu* 'Please use ... (our product)'; ... *to o-kikase itadakenái desyoo ka* 'Won't you be kind enough to tell me ...?'; *Tyót-to o-mati itadakemásu ka* 'Will you wait a moment, please?' The usage is attributed by KKK 23.28(d) to a syntactic blend of the honorific infinitive + *kudasái* with the form *V-te itadakimásu*. But cases of the honorific infinitive + *kudasái* are themselves to be regarded as containing an ellipsis of *ni nátte* or of *nasátte*: *go-riyoo kudasái* means *go-riyoo nasátte kudasái* 'please use it' and *o-ide kudasái* is to be regarded as *o-ide [ni nátte] kudasái* because there is no **o-ide suru* so it could not be an ellipsis of **o-ide [site] kudasái*.

A favor is generally an act of volition, so that involuntary verbs will not ordinarily occur except by semantic extension—as when no "giver" is implied, e.g. the weather phenomena mentioned earlier ("IT favors us with a clear sky") and perhaps acts of God.⁴ The giving

3. O'Neill calls our attention to the optional ellipsis possible in such expressions as *Tyót-to haiken [sasete [itadakimásu]]* 'I'll take the liberty of looking at it' and suggests that *V-te tyoodái* 'please V' (= *V-te kudasái*) is elliptical for *V-te tyoodai [sasete [itadakimásu]]*. The accent on *tyoodái* 'please' is irregular (perhaps borrowed from *kudasái*?); as a verbal noun the word is atonic, *tyoodai suru*.

4. But *N de átte hosíi* 'I would like to have it be N' (= *N de ari-tái*) is found: *Atasí mo né, Nihón wa tyan-tó sita dokuritú-koku de átte hosíi desu yó* 'I too, you see, would like to have Japan be a fully

of favors (BENEFACTION) and the receiving of favors (BENEFIT) are opposite views of the same situation. An opposite situation would be that of DISFAVOR: 'He did me the disfavor of ..., He disfavored me by ...'—not, of course, the same thing as 'He did not do me the favor of ...' or 'He failed to favor me by ...'. Disfavor RECEIPT can be expressed by the adversative passive (§4.2) but it is not clear whether there is any simple way to express the INFLICTING of a disfavor. Some uses of the causative are perhaps close, e.g. *kodomo o sinaseru* in the sense 'lets another's child die' vs. *kodomo ni sinareru* in the sense 'has one's own child die'. But the use of *-te simau* to indicate displeasure, as described in §9.2.4.(4), is not what we are looking for, since the displeasure there is that of the SPEAKER and the gerund is not limited to voluntary verbs. Occasionally what looks like a favor expression (usually *V-te yaru*) will be used where no favor is really intended; cf. Hayashi 160: *Nán to ka site tori-agate yaroo* 'I'll get that from you by hook or by crook!'; *Yattaro ka [= Yatte yaroo ka]* 'I'll sock it to you! I'll let you have it (with my fists)!' (Ōsaka). Cf. p. 453.

This may explain the *Kyūshū* forms *V-tyar-* = *V-te yar-* in these examples: ... *nāka e háittyaro ka to, iroiro kangáeta* 'I kept wondering whether I should enter' (Tk 4.322b); ... *móttö zyootoo nó o kootyare (= katte yare) to omóote (= omótte)*, ... 'thinking one should buy better ones' (Tk 4.323b). The speaker in both examples is from Ōita prefecture.

In modern written Japanese (KKK 25.78b) the in-giving favors said with *V-te kureru/kudasáru* are five times more frequent than the out-going favors said with *V-te yaru/ageru*; and favor receipt expressed with *V-te morau/itadaku* occurs only about a fourth as often as all forms of favor giving combined.

As with other auxiliary conversions, it is possible to apply focus, restriction, etc., either to the gerund or to the auxiliary (i.e., to the conversion itself).

APPLIED TO GERUND: *Hituyoo na kane o | okutté DAKÉ | yaréba, || mondai wa | arimasén* 'If I just send him the necessary money, there will be no problem'; *Tízu o || káite DAKÉ | moráeba || hitóri de | ikemásu* 'If I can just have a map drawn, I'll be able to go alone'; *Tetudátte BĀKARI (|) yaru to || kodomo no || ziritú-sin ga | naku-naru* 'If one keeps helping him all the time, a child will lose his independence'; *Hito ni (|) tetudátte BĀKARI | moratte || zibun dé wa | náni mo simasén* 'If he keeps getting helped all the time, he will do nothing himself'; *Tetudátte KOSO yare || tetudátte | moratta kotó wa | náí* 'I always precisely give the help and never receive any' (*yaré*, §9.3); *Senséi wa || kotáé o || osieté NĀDO/NĀNKA/NĀNTE | kurenai* 'The teacher never gives us the answers or anything'; *Káre no tamé ni || hataraité NĀDO/NĀNKA/NĀNTE | yaru món ka* 'Why should I work for his sake?!'; *Káre wa || bóku() ni || hón o | kasité DAKÉ WA | kuremásita* 'He was nice enough to actually lend me a book'; *Kono hón wa || is-satú sika | náí kara || kasité WA | yarú ga || yuzuru kotó wa | dekinai* 'I only have this one book, so while I WILL lend it to you, I can't let you keep it'; *Komáru toki wa | o-tagai dá kara || kane o (|) kasité MO | yarú si || monó o || megúnde MO | yarú ga || ítu made mo || ate ni sarerú no wa |*

independent country' (Tk); ... *Tookyoo-ben ni zyuubún té o ireta monó de atte hosii* 'would like to have those with adequately corrected Tōkyō dialect' (Shibata 1965.56). Can you say *N de átte kureru* 'favors us by being N'?

meiwaku da 'Being hard up is something that can happen to me as well as to you, so I am willing both to lend you money and to provide you with things, but it is a nuisance to be the one counted on all the time'; Ano otokó ni wa || heyá o (I) atae || mesí o || kuwásete SAE || yareba || gekkyuu o yaru hituyoo wa náí 'If you just provide him with a room and feed him his meals, there's no need to give him a salary'; Ano otokó wa || tatta hyaku-en no kane o kasité SURA || kurenai || hidói || yátu da 'He is a mean sonofabitch who won't even lend me a measly hundred yen'.

APPLIED TO AUXILIARY: Tabesásete || yari WA || surú ga || sore -'igai wa || go-men da 'I will see that they get fed, but beyond that, no thank you (= count me out)'; Tama ní wa || tabesásete || agé MO || surú ga || sonna kotó wa || méta ni || náí n desu 'Occasionally (as a favor) I see that they get fed but such occasions are infrequent'; Tegami o káite || agé SAE || sureba || go-ansin nasáru desyoo 'If I just write you a letter you will surely put your mind at ease'; Kono akanboo wa || utá o || utatte yari SAE || sureba || súgu || nemurimásu 'If you just sing this baby a song, he goes right to sleep'; Utá o || utatte morai SAE || sureba || súgu || nemuru || ii || akanboo désu 'He's a good baby who will fall right asleep if he just has a song sung to him'; Asobi ni kíte || morai WA || site mo || tetudái ni || kíte || morattári wa || kessite simasén yó 'I have people come and visit, but I never had them come to help out' (Or: ... kíte morai wa || ... kíte morattári wa || ...); Tama ní wa || kíte || morai MO || surú ga, || betu ni || náka ga (i) || tomodati to iu wáke zya || náí n da 'Occasionally I do indeed have him come around, but that doesn't mean he's a particularly good friend' (Or: ... kíte morai mo || ...).

It is possible to apply the causative, the passive, and so on, either to the gerund or to the auxiliary, depending on the reference: Zotyuu o || misé e (I) yatte || uketori o káite || morawasemasyoo ka 'Shall I send the maid to the store and have her get a receipt written?'; Káno-zyo ni || watasi no warúguti o || kodomo no tokoró e || káite yararete || komátta 'I was distressed at having her write such bad things about me to my son('s place)'; Mā[a] || Konkóru do ga || demonsutoreesyon-híkoo de || koo-site || Nippón e || kíte 'ru toki (i) ni || kono ziko ga || ókita || to iu kotó wa || yahári || wareware ni || soo itta monó o || kangaesásete kureru || tyánsu de (i) mo || átta n de wa || náí ka || to iu yoo (i) na || ki ga itasimásu || ... 'Well, for this accident to have happened at a time when the Concorde is here in Japan for a demonstration flight, after all, it makes me feel as though perhaps it has provided us with the chance to (let us) think about such things ...' (R).

In the following examples a temporal ablative is applied to a gerund made on a favor conversion: Tegami o káite || moratté kara || dási ni || ikimásita 'After having the letter written for me I went to mail it'; Go-byoonin ni || góhan o || tabesásete || ageté kara || uti(-) e (I) kaerimásu 'After seeing to it that the patient gets fed, I will go home'; Kodomo ni || góhan o || tabesásete || yatté kara, || térebi o || mimásita 'After feeding the children, I watched television'.

A rather unusual type of nominalization conversion can be made on the infinitive of a sentence with V-te kureru by attaching the suffix -te '(hand =) one, person'; apparently this is always followed by a denial of existence: ... aité ni || site kure-te ga nákatte 'there was no one who would be my partner' (Y 577); Moratte kure-te ga arimasén wa, || ... 'There's none who will marry me' (Y 577). Compare the various conversions described in §9.1.7 and N ni nari-te (§3.8a). There is no *V-te morai-te 'one who will receive the favor', though morai-te 'receiver' itself is common enough.

The noun mitekure 'appearance' is derived from a favor sentence, either the imperative Míte kure 'Look at it!' or—more likely—the infinitive míte kure '(to) look at it for us'.

11 THE PERFECT

Almost any sentence¹ can be made perfect ("perfectivized") by replacing the imperfect endings with the appropriate perfect endings: verbs attach the ending -*tá*/-*dá* (with the same changes in shape as the gerund -*té*/-*dé*), adjectives attach the ending -*katta* (a contraction of -*kú átta* < -*kú ári-ta*), and nouns add the copula in its perfectivized form *datta* (a contraction of *dé átta* < *ní-te ári-ta*):

Yobu 'He calls (or will call)'.

Ookii 'It is big'.

Hón da 'It is a book'.

Yonda 'He called (or has called)'.

Ookikatta 'It was big'.

Hón datta 'It was a book'.

Since all negativized sentences are adjectival, they attach the endings appropriate to adjectives:

Yobanai 'He does/will not call'.²

Ookiku nai 'It is not big'.

Hón zya nai 'It is not a book'.

Yobanákatta 'He did not call'.³

Ookiku nákatta 'It was not big'.

Hón zya nákatta 'It was not a book'.

Like its imperfect counterpart, the perfectivized sentence can be converted to Tentative (§ 12.1) and it can be Adnominalized (§ 13), Nominalized (§ 14), Sentence-Extended (§ 15), Conjunctivalized (§ 17), Hearsay-Reported (§ 18), Semblativized (§ 19), Quoted (§ 21), and Stylized (§ 22). Although the perfectivized sentence cannot be adverbialized (nor built on an adverbialized sentence), there is some correlation of use between the conditional -*tára* and the perfect -*tá* as contrasted with the provisional -*reba* and the imperfect -*ru*. (And we have considered—but rejected—the suggestion that the gerund -*té* might be regarded as sometimes derived from a perfect -*tá*.)

The option to choose perfect or imperfect is limited in various ways. Although you can say *suru áto kara* (or, in downtown Tōkyō, *suru sóba kara*) 'from after the time it will happen = right after it happens' you cannot say **suru áto* [de] 'after it happens', for that must be expressed as *sita áto* [de] 'after it has happened'. And you cannot say **sita máe* [ni] 'before it happened', for that is said as *suru máe* [ni] 'before it happens'. When the main sentence that follows is perfectivized, you can say either *site iru aida* or *site ita aida* with much the same meaning '(happened) while doing', but if what follows is not perfectivized then *site iru aida* alone is appropriate; *suru aida* is also used, but **sita aida* does not occur. Thus *Góhan o tábete iru/ita aida* [ni] *damátte ita* 'I was silent while eating my meal' but only *Góhan o tábete iru aida* [ni] *damátte iru* 'I am (or will be) silent while eating' and *Góhan o tábete iru aida* [ni] *damátte i-nasái* 'Be silent while you are eating'. With *toki* [ni] there is often a difference of meaning: *Nihón e itta toki ni aimásu* means 'I will see him when I get to Japan' but *Nihón e iku toki ni aimásu* means 'I will see him when I go (= on

1. But Mikami 1963a.35 points out that a sentence like *Áyu wa sio-yáki(ˉ) ni kagíru* 'The only way to have brook trout is salt-broiled' will not convert to ... *kagitta*. According to Kuno 1973.137 the unmarked, imperfect form is interpreted as present time with STATIVE predicates; with others it is generic (*Ningen ga sinu* 'Man is mortal'), future (*Ore mo sinu* 'I too will die'), or habitual (*Máiasa(ˉ) okíru* 'I get up every morning').

2. Or 'has not yet called'. See below.

3. For the tonic consonant verbs (at least) there is a variant -*ánkatta* = -*ánʃaʃkatta*, listed by MKZ 919b as dialect; I have run across *naránkatta* = *naránakatta* in print. The ending -(á)nda, as in *naránda* = *naránakatta*, is widely used for the perfect negative in western Japan. See § 8.4.

my way) to Japan'. In some situations the difference is slight; in other cases only one or the other form is appropriate to the context: *Itiba ni itta toki ni kaimasyōo* 'Let's buy it when we go to the market'. Compare *Āru hazu da* 'I'm sure there is one', *Ātta hazu da* 'I'm sure there was one'; *Āru hazu datta* 'I was sure there was one', *Ātta hazu datta* 'I was sure there WAS (= had been) one'.

When a question is in the perfect (*Mōo itta ka* 'Has he already gone?') an affirmative reply will also be perfect (*Mōo itta* 'He has') but a negative reply will often be imperfect (*Ikanai* 'He has not' or *Māda* 'Not yet'). This point is well illustrated by the following exchange: *Amerika de mati no naka o o-aruki ni narimāsita ka?—Arukimasēn* 'Did you walk round the city streets (while) in America?—(No,) I didn't' (Tk 2.142a). The following examples use the simple imperfect negative where English would lead us to expect a perfect: *Sono rekōodo ga ureta ka urenai ka wa yōku siranai ga, ...* 'I don't rightly know whether that record sold or not, but ...' (SA 2650.59a); *Yōru, osokū made, matte ta kedo, kōnai n da* 'I stayed up late at night waiting, but he [= Santa Claus] never came' (SA 2658.117a); *... bōku() no kitaku sinai no o sitte ...* 'finding out that I have not returned home' (SA); *Tatami wa sinanai* 'The traditional Japanese floor mat is not dead' (SA 2669.72). The last sentence could, of course, be taken as 'will not die' but in the text the following sentence (*Sinasite wa naranai* 'We must not let it die') suggests that what is being denied is *Tatami wa sinde iru* (or *sinda*) 'The mat has died' = 'The mat is dead'. On V-te iru vs. V-ta, see pp. 520–1.

Sometimes the perfect is used more for politeness than for time reference: *Anata wa donata desita = O-namae wa nan to ossyaimāsita ka* 'What did you say your name was?' (when the person has actually not yet said); *Hankō o o-moti desita ne* 'You have your chop (= signature-seal) with you, I presume'. In addition to this usage, Mikami 1963a.17 describes a use of the perfect with future meaning, citing these examples: *Sōo sōo, tugi no nitiyoo wa yakusoku ga arimāsita* 'Yes, yes, I have [made] an appointment for next Sunday'; *Kōndo no pāt'ii ni wa A san ga kite kureta ne* 'At the next party Mr A [has said that he] will be present'—in isolation this sounds strange. In these sentences, the perfect has perhaps been transferred from some unexpressed thought as shown in brackets in the English translation. But this is probably to be included with the usage that Alfonso 892 describes as marking a sudden realization, recognition, or acknowledgment of a present situation: *Kore desita ka* 'Oh, so THIS is the one!'

Mikami 1963a.21 gives an example where the perfect *-ta* is equivalent to a tentative perfect *-ta* [da]rōo (and perhaps is to be taken as an ellipsis of that?) with the meaning 'would have done': *Isōgeba ma ni itta ga, totyuu de dannen sita. (Zizitu wa, ma ni awanakatta)* 'If I'd hurried I would have been in time, but I gave up along the way. (The fact is I didn't make it in time)'.

The literary perfect differentiates a predicative (typically sentence-final) form *-tari*, source of the colloquial representative, from an attributive (typically adnominal) form *-taru*, preserved in certain clichés in the colloquial (cf. § 13.9). The literary language also has a perfect provisional (i.e. provisionalized perfect) *-tareba* and a perfect hypothetical (i.e. hypotheticalized perfect) *-taraba*, which is the source of the colloquial conditional; in addition there is a perfect concessive (or concessivized perfect) *-tare[-do]*. For these forms, see § 9.3. The earliest uses of *-ta* in place of the literary *-tari/-taru* are said to be attested around the eleventh century (Satō 1.275).

On the use of the perfect *-ta* for certain verbs as semantically equivalent to V-te iru

under adnominalization (*onná ga hutótte iru* 'the woman is fat' yielding *hutótta onná* or *hutótte iru onná* 'the fat woman'), see pp. 277-8.

In eastern Japan a doubled suffix *-tatta* is often used to mark the perfect (Zhs 2.18); in Chiba you may hear *áttatta* for Tōkyō *átta* 'I had it' or 'I've got it' (Zhs 2.198). Cf. the Tōkyō use of *-tyatta* for a vivid past, p. 534.

The adverb *suttámonda* 'wrangling', as in *suttámonda no ageku* 'as the upshot of all the quarreling' and *suttámonda suru* 'wrangles away', comes from the perfectivized forms of two transitive verbs, *sútta* 'rubbed' < *súru* and *monda* 'pounded' < *momu*. Nouns derived from direct nominalization of the perfect are discussed in §14.6. See also the discussion of the perfect used for commands in §16.2.

12 TENTATIVES AND HORTATIVES

Among the inflected forms of Japanese morphology there is one that is often labeled the “tentative” or “presumptive”; this turns out to represent two different categories of colloquial Japanese: (1) the TENTATIVE ‘probably, I think’, made by adding *daróo* after the plain imperfect (with ... *dá* obligatorily dropping in the nominal sentences) or after the plain perfect (with optional ellipsis of {*da*}*róo* = ‘*róo*’);¹ and (2) the HORTATIVE ‘let’s; let me, I think I will’ made by attaching, to verbals only, the ending *-[y]oo*. The hortative ending is *-oo* after consonant verbs, *-yoo* after vowel verbs; the long *oo* is often shortened, especially in dialects: *ikoo* → *iko* ‘let’s go’, *kore daróo* → *kore daro* ‘it must be this’.² The ending derives from the literary *-a[m]u*, by way of contraction and vowel crasis, with the *-y-* intercalated automatically after a front vowel (*i* or *e*): *si-amu* > *si-a’u* > *siya’u* > *siyoo* ‘let’s do it’ (cf. p. 613 n.15). But *koyóo* ‘let’s come’ is irregular. The formal differentiation of the tentative (*surú daroo*) from the hortative is attested from the early part of the nineteenth century (Gekkan-Bumpō 1/8.66).

12.1. THE TENTATIVE; *DARÓO*

Forms of the tentative are easily made by adding *daróo*—or | *daróo*³—‘probably, I think’ to the imperfect (but *N dá* obligatorily drops the *dá*):

- Yobu. Yobú *daroo* (or: Yobu *daróo*) ‘I think [someone] calls, will call’.
Ookii. Ookii *daroo* (or: Ookii *daróo*) ‘It must/would be big (I think)’.
Hón da. Hón *daroo* (or: Hón *daróo*) ‘It must be a book; I think/bet it is a book’.

1. But *daróo* and its polite form *desyóo* often shorten the final vowel (*daró*, *desyó*), as do the dialect versions *zyaró[o]* and *yaró[o]*. An example of the latter: *Ittai, dónai sitára ée yaró ka* (= *dónna ni sitára ii daroo ka*) ‘Just what should we do?’ (SA 2663.22e—seeking advice is Kōmei-tō Secretary Yano). The shortening is also common in the abbreviated tentative perfect *-tá ‘ró[o]* as in this example: *Iyara-sii ko to omóttá ‘ro?* ‘You must’ve thought me a dreadful boy?’ (SA 2639.44a). Instead of *daróo* a number of dialects use simple *ro* after *V-ru* and *A-i*; Hōgen-gaku *gaisetsu* 405 mentions central Echigo (Niigata).

2. Since base-final *w* disappears except before the vowel *a*, sequences of three vowels are found in the forms for certain verbs: *kaoo* ‘let’s buy’, *ioo* ‘let’s say’, *kuóo* ‘let’s eat’, *kayoóo* ‘let’s commute’, *hirooo* ‘let’s pick it up’ (*hiroóo ka* ‘shall we pick it up?’). In the Hepburn romanization, the last two are to be spelled *kayoō* and *hiroō*. The distinction between *iyoo* ‘let’s stay’ and *ioo* ‘let’s say’ is neutralized in rapid speech by many speakers.

3. See remarks on p. 608 for the difference that the juncture can signal for many speakers. Certain dialects will replace *daróo* with *zyaróo* or *yaró[o]* (Y 367). In written Japanese you will sometimes find ... *de aróo* used for ... *daróo* (cf. Y 359–66): *Inokiti ozi wa máda nán-nen mo ikiru de aróo* ‘Uncle Inokichi will surely stay alive for some years yet’ (Ig 1965.82); *Dé wa, Eigo nádo de wa, koo iu baai ni dónna hyoogén() o tóru de aróo ka* ‘Well, in such situations what kind of expressions would they take in English, say?; ... *akiraka ni, Igirisu-éiga no tugí no zidai o seúu ituzai de ároo* ‘clearly he [= Ken Russell] is a man of talent on whose shoulders will ride the next era of English cinema’ (SA 2681.108b). For the polite *desyóo* you will also come across *de arimasyóo*: *Konna katte na musuko ga kono-yó() ni áru de arimasyóo ka* ‘Could there exist in this world such a selfish son as I?’ (SA 2684.138c). According to Nagano (1970.224–38) the form [kit-tó...] *V-ru de aroo* can express CERTAINTY or ASSURANCE (‘will’), particularly in prophecy or assertions by gods, feudal lords, and the like; perhaps this is because the ‘I think’ of gods and lords carries a certain weight of authority absent from lesser beings.

The tentative perfect (i.e. the tentativized perfect) is made by adding *daróo*—or | *daróo*—to the perfect (V-*tá*, A-*káttá*, N *dáttá*); the first syllable of *daróo* optionally drops:⁴

Yobu.	Yonda.	Yondá [da]roo (or: Yonda [da]róo) 'He probably called.'
Ookii.	Oókikatta.	Oókikatta [da]roo (or: Oókikatta [da]róo) 'It probably was big'.
Hón da.	Hón datta.	Hón datta [da]roo (or: Hón datta [da]róo) 'It probably was a book'.

The usual polite stylization will simply replace *daróo* by *desyóo*; the nominal sentences can be made more polite by replacing N *desyóo* with N *de gozaimasyóo* (or N *de gozaimásu desyoo*). If the noun is to be exalted, the polite form is N *de irassyáru desyoo* and the hyperpolite form is N *de irassyaimasyóo* (or N *de irassyaimásu desyoo*). See § 22.

Tentatives can be made on negativized sentences as you would expect:

Yobu.	Yobanai.	Yobanáí daroo (or: Yobanai daróo).
Ookii.	Oókiku náí.	Oókiku náí daroo (or: Oókiku náí daróo).
Hón da.	Hón zya náí.	Hón zya náí daroo (or: Hón zya náí daróo).

But, especially in written Japanese, you will often find the forms *Yobanakaróo*, *Oókiku nakaróo*, and *Hón de/zya nakaróo* used instead of the expected forms. In speech these are generally considered "dialect", but I have heard them used in *Tōkyō*, apparently by people from surrounding areas, where the forms are indigenous—see § 12.3. The verbal tentative permits still another variant for its negative:

Yobu. (→ Yobanai.) → Yobu *ˉmái* 'He probably doesn't/won't call'.

When this variant is chosen for vowel verbs, *-ru* will optionally drop:

Tabéru. (→ Tabénai.) → Tabé[ru] *ˉmái* = /taberumái/ or /tabemái/ 'He probably doesn't/won't eat'.

Míru. (→ Mínai.) → Mí[ru] *ˉmái* = /mirumái/ or /mimái/ 'He probably doesn't/won't look'.

The form for *suru* is *su[rú] ˉmái* = /surumái/ or /sumái/ and for *kúru* it is *kú[rú] ˉmái* = /kurumái/ or /kumái/, as expected, but the variants *si-mái* and *ki-mái* are more common in written texts and there are dialect forms *ko-mái* and *se-mái*.⁵ This variant is more often written than spoken, so that we can include it with *aróo*, A-*karóo*, etc., as the LITERARY TENTATIVE (§ 12.3).⁶ These forms with *ˉmái* are also used as the negative hortative

4. These forms are often treated as a separate conjugational category ("taroo" etc.), but that fails to account for the minor juncture which can set *róo* off from *'ta*. It should be noted, however, that *-ta 'róo* includes N *désita 'róo* for which I doubt there will be an unabbreviated N *désita daróo*: *Ítu o-hanasi kudasaimásita?—Sáa, gógatu desita 'róo ka* 'When did you say it?—Well, it must have been May, I guess' (Y 232).

5. Perhaps because they are fairly new, forms such as *kúru ˉmái* and *suru ˉmái* are sometimes regarded with suspicion; thus SA 2658.39ab condemns not only *kúru ˉmái* for *ki-mái*, but also *míru ˉmái* for *mi-mái* and *iru ˉmái* for *i-mái*. (See § 15.12a for further discussion.) But Hayashi 149 says that *ko-mái* and *si-mái* are not very popular and that *kúru/suru ˉmái* should not be regarded as mistakes. He observes that none of the forms is much in use "except for limited phrases such as *áru ˉmái*" (and even for that, *naí daroo* is much more in evidence), but that the potential is apt to turn up: *ie-mái*, *korare-mái*. (What about *ieru ˉmái* = *ienáí daroo* and *kor[ar]éru ˉmái* = *ko[ra]rénai daroo*?) I suspect that disapproval of the longer *-ru ˉmái* forms for vowel verbs is stronger when the form is used as TENTATIVE rather than as HORTATIVE. The word *mái*, also heard as *mé[e]* in eastern dialects, is an abbreviation of the literary postverbal auxiliary adjective *mázi[-ki]* 'probably not' (§ 8.6).

6. The relative frequency of the three versions of the negative tentative in modern written Japanese can be computed from the study in KKK 25.163:

(‘let’s not’)—often in quotations; see below (§ 12.2). They can be stylized: V-i-^(t)masú ^(t)maí (§ 22.1) = V-i-masén desyóo, V-(a)nái desyóo.

The tentative perfect negatives are made as expected:

Yobu. → Yobanai. → Yobanákat^(t)a. → Yobanákat^(t)a [da]róo ‘He probably didn’t call’.

Ookii. → Óokiku náí. → Óokiku nákat^(t)a. → Óokiku nákat^(t)a [da]róo ‘It probably wasn’t big’.

Hón da. → Hón zya náí. → Hón zya nákat^(t)a. → Hón zya nákat^(t)a [da]róo ‘It probably wasn’t a book’.

When the tentative conversion is applied to a nominal sentence with a focused nucleus (N dé wa/mo áru), younger speakers will use the form (N dé wa/mo) áru daroo but older speakers sometimes use aróo: Muzukasii(̄) mondai dé wa aróo ga = Muzukasii(̄) mondai dé wa áru daroo ga ‘It must be a difficult problem, but ...’. The corresponding literary form from N ní wa/mo ári, focused version of N nári, is N ní wa/mo ará[m]u (with the contracted form ará’u pronounced aróo) or N ní wa/mo arán (by reduction from arám[u]). The negative for the colloquial will be (N dé wa/mo) náí daroo—or nakaróo—but older speakers sometimes use (N dé wa/mo) áru ^(t)maí; the polite versions are (N dé wa/mo) náí/ arimasén desyóo and (N dé wa/mo) arimásu ^(t)maí. The literary negative forms will be (N ní wa/mo) arazarámu/arazarán or (N ní wa/mo) arázi.

Focused adjectives make the tentative on the auxiliary áru: A-kú wa/mo áru will form the tentative A-kú wa/mo áru daroo and older speakers sometimes use A-kú wa/mo aróo. The negative forms are A-kú wa/mo náí daroo—or nakaróo—and older speakers will sometimes use A-kú wa/mo áru ^(t)maí. Focused verbs make the tentative on the auxiliary suru: V-í wa/mo surú daroo; the negative is sinái daroo—or sinakaróo—and older speakers sometimes use suru ^(t)maí.

The colloquial tentative does not adnominalize,⁷ but you will find adnominalization of literary tentatives, especially in writing, and particularly before postadnominals; see § 13.3.

Mio (161–3) observes that among the various kinds of sentence interpolations—or self-interruptions—the tentative ...[nó] daróo is especially common, citing a number of good examples. Perhaps his remarks tie in with the observation made by Mikami (1963a.78) that | daróo/desyóo is often equivalent to | né[e] ‘don’t you know/agree?, you see, n’est-ce pas?’: Watasi wa Méizi ^(t)umare desyóo, dá kara ... ‘I was born in the Meiji period, you see, so ...’; Kimi wa iku daróo ‘You’re going, aren’t you’; Kora, úmaku itta ^(t)róo ‘Now this has gone well, hasn’t it’; O-wasure desyóo ‘You’ve forgotten, haven’t you’. (These sentences would commonly be said with the final rise of intonation that signals a question. And an

FORM	OCCURRENCES	RATIO
...nakaroo	7	.0761
...nai daroo	45	.4891
...maí	<u>40</u>	<u>.4348</u>
	92	1.0000

But polite forms such as simásu ^(t)maí occur only twice, versus 20 instances of forms such as sinái desyoo. One fourth of the instances of ...maí are for the verb áru: nine of áru ^(t)maí and one of arimásu ^(t)maí. (It is unclear how many of the occurrences of ...maí in this study may represent the negative hortative rather than the negative tentative.)

7. And this accounts for the fact that you do not hear *... daróo no de or *... daróo mon [da kara], despite the acceptability of ... daróo kara ‘because probably’. Cf. Nagano 1970.305.

underlying juncture sets off the tentative marker at the end, as explained below.) On sentence-final *daróo/desyóo ni*, see §17.8. On exclamatory uses such as *Dónna ni (Nán to) ... daróo!* 'How [much] ... it must be!', see Y 356.

It is possible to use juncture to differentiate two meanings of the tentative: 'I think that ...' (a subjective rather than an objective way of stating what is presumed to be true) and 'perhaps, maybe' (allowing for some doubt of one's own, rather like ... *ká mo sirenai*). The former meaning is usually expressed with no juncture between the verb and *daróo/desyóo*, so that the latter automatically loses its accent. The 'maybe' meaning is expressed by inserting an underlying minor juncture which preserves the accent of *daróo* or *desyóo*, removing the final accent that is basic to the imperfect and perfect forms of "atonic" imperfects; the accent of *daróo* or *desyóo* is automatically reduced to "secondary" (some-what lower) after the imperfect and perfect forms of the tonic verbs:⁸

Usi o *káu desyoo* '(I think) he'll raise cattle'.

Usi o *káu | desyóo* 'Maybe he'll raise cattle'.

Toti o *káu desyoo* '(I think) he'll buy land'.

Toti o *kau desyóo* 'Maybe he'll buy land'.

Usi o *kátta desyoo* '(I think) he raised cattle'.

Usi o *kátta | desyóo* 'Maybe he raised cattle'.

Toti o *kattá desyoo* '(I think) he bought land'.

Toti o *katta desyóo* 'Maybe he bought land'.

The distinction can be explained in terms of constituency: the 'I think' version applies the tentative to the predicate, the 'maybe' version applies the tentative to the larger sentence—which in the examples cited above is cut back by ellipsis so that it is superficially identical with the predicate; cf. the remarks in §9.3.3 on conjoining a conditionalized sentence. Not all speakers make the distinction here described; for some the juncture is optional, with no difference in meaning. If the noun is atonic, an imperfect nominal sentence neutralizes the distinction: *Kodomo daróo* can represent the imperfect of either *Kodomo dátta daroo* or *Kodomo dátta | daróo*. You will find *Daróo* 'I guess (so)' (Fn 338b) used all alone as a sentence, perhaps to be regarded as an ellipsis of [Sore] *daróo* or the like.

Certain adverbs and adverbial phrases typically anticipate a tentative: *kit-tó, tábun, osóroku, ookata, sá-zo(-kasi); mósi ka sitara* (or *mósi ka suru to*), *hyót-to suru to; arúi-wa; ...* And certain adverbs—notably *másaka* and *yómo ya* 'surely (not)'—anticipate a tentative AND a negative, but not necessarily applied to the same word. See Hayashi 149–50 for examples.

Many of the dialects of eastern Japan form the tentative by using a reduction of the literary adjective *ṽbé-ki* (attributive) or *ṽbé-si* (predicative), which functions as a kind of postadnominal, though the literary language prefers to attach it to the predicative forms of all verbs⁹ so that the literary language has *su ṽbé-ki/-si* where the colloquial language will use *suru ṽbéki da*, with *béki* functioning as an ordinary postadnominal.

8. Martin 1962.432n was wrong in assuming that this subtle distinction is limited to atonic verbs.

9. With the apparent exception of *ór-, ár-*, and derivatives, which here use their true predicative

In the literary language *˘bé-ki/-si* has a wide range of meanings: future, probable, potential, obliged, requested, promised, But in the standard colloquial it now means 'ought to' or 'must' (the obligational meaning only). In the dialect versions you find the regular dropping of *-k-* that is familiar from the standard imperfect *A-[k]i* and the Kansai infinitive *A-[k]u*: *˘bé[k]i* becomes *˘béi* and that is pronounced *bée* (by assimilation) and sometimes *bé* (by shortening). But some dialects use *˘ppé* instead of *bé[e]*, and others introduce a nasal¹⁰ *˘nbé[e]*, especially after *dá* or *-tá*. Though some dialects are said to use these forms as hortatives, the common usage is as a tentative 'probably': *Sore [w]a átta ˘ppé ná* = *Sore wa átta [da]róo ná* 'That must have happened' (Ibaragi, Zhs 2.36).

Here is a chart of forms, showing several dialect versions:

VERSION 1	VERSION 2	VERSION 3	STANDARD
V-rú ˘bé[e]	V-rú ˘nbé[e]	V-rú ˘ppé	V-rú daróo ⁽ⁱ⁾
V-tá ˘bé[e]	V-tá ˘nbé[e]	V-tá ˘ppé	V-tá daróo ⁽ⁱ⁾

In place of *áru ˘[n]bé[e]* or *áru ˘ppé* you will usually hear *anbé[e]* or *appé*, and that is the origin of the adjective forms in *-kanbé[e]* and *-kappé* (by way of abbreviation from *-ku a-...*):

A-kanbé[e]	A-kappé	= A-í daróo ⁽ⁱ⁾
A-kattanbé[e]	A-kattappé	= A'katta [da]róo ⁽ⁱ⁾
V-(a)nakanbé[e]	V-(a)nakappé	= V-(a)nái daróo ⁽ⁱ⁾
V-(a)nakattanbé[e]	V-(a)nakattappé	= V-(a)nákatta [da]róo ⁽ⁱ⁾

An example: *Senséi to kakeai dé mo yarasitára, omosirokanbée ná* 'It would be fun to have him maybe exchange wit with you, Master' (Tk 3.141b). But in many of the dialects that use the *-kappé* form, the old Japanese *-k-* is automatically voiced between vowels, so that the forms will sound like *-gappé* (with nonnasal *g*), as in *yogappé = ii daroo* 'will be all right, I guess' (Ibaragi, Zhs 2.51).

For *N daróo* you will hear *N danbé[e]* or *N dappé*. Where the standard language would have *S n[ó] daroo* you will find *S danbé[e]* or *S dappé*. The Tochigi form *án danbe* is equivalent to *áru n[o] daroo*, and the Chiba form *ikú danbe* is equivalent to *ikú n[o] daroo*—and that of course is close to the meaning of *ikú ˘nbé[e]* = *ikú daroo* 'probably will go'.

Just as the standard language will sometimes use *V-rú ˘mái* instead of *V-(a)nái daroo*, these dialects will sometimes use *V-rú ˘mé[e]* instead of *V-(a)nakanbé[e]* or *V-(a)nakappé*; where the standard language will use *áru ˘mái* for *nái daroo* (or *nakaróo*) you will hear *án ˘mé[e]* used for *nakanbé[e]* or *nakappé*.

There is a dialect form *S zura* used as a tentative equivalent of *S daroo*: *ikú zura = ikú daroo* (MKZ 448a). This is from a literary word *zuran*, added for emphasis to the literary tentative *-an* (< *-amu*); *arán zuran = áru daroo* 'probably is' may derive from something

forms *óru, áru*, etc. (identical with the attributive) rather than the infinitive form which so often elsewhere substitutes for the predicative.

10. Or, more accurately, preserve the nasality that was originally present before the ancestors of the voiced consonants of modern standard Japanese.

like arámu t^[j] suramu 'I will suppose that it will be', though the normal literary tentative for suru is sen < semu, so that the likelier historical origin would be arámu [t^[j]] su[ru] arámu, in form roughly analogous to *aróo t^[j] surú [no de] aróo.

But there are dialects in Shizuoka (and in Nagano, Yamanashi, Mikawa—Zhs 3.18) which permit an option of S zura or S ra for the affirmative tentative; the difference between the two forms is apparently rather like that signaled by the underlying juncture before dároo/desyóo for some Tōkyō speakers: iku zura = ikú daroo 'will probably go', iku ra = iku daróo 'will go, maybe'. What is more (Zhs 3.19), these dialects use -(a)zu and -(a)mai as affirmative hortatives: ikazu or (more forcefully) ikamai = ikoo 'let's go'. These must be relics of old forms something like -(a)mu t^[j]su and -(a)mu wá í (= yó). There are dialect speakers who pronounce -azura as -(a)tura, and the hortative -(a)zu turns up as -(a)su in some areas; thus in eastern Yamanashi (Zhs 2.22-3) we find ikasu ka = ikóo ka 'shall we go' and ikat to omóu (with assimilation of -s t- to -t t-) = ikoo to omóu 'I think I'll go'.

In Ōsaka speech (Maeda 1961.108-9) the tentative forms are made with yaro, the local version of daró[o], for the negative as well as the affirmative, but this is said to be a modern innovation; the older forms for the negative tentative were made by attaching mai after -(y)o = -(y)oo < -a[m]u. These -(y)o mai forms are now largely limited to use as the negative hortative: iko mai 'let's not go', okiyo mai 'let's not get up'. But aro mai can only be an older way to say arahen yaro (or nai yaro) = náí daroo 'probably does not exist'; and iro mai means ira[he]n yaro = iranai daroo 'probably does not need'. There are also polite forms -massyaro (= -másu desyoo), déssyaro and dássyaro (= desyóo), made by adding yaro to -mas[u] and des[u]/das[u] with gemination of the sibilant; cf. § 22.1. The Kyūshū forms nán dairo and dóo-site dairo (Y 358) are perhaps to be explained as da + i and ro used as particles.

12.2. THE HORTATIVE; THE LITERARY HORTATIVE

Most verbal sentences can be turned into a hortative form to express an invitation or a proposal meaning 'let's do it' or, sometimes, 'let me do it' or 'I think I'll do it'—not to be confused with 'I think HE'll do it', which is expressed by the tentative surú daróo. The ending for the hortative is -(y)oo; it attaches as -oo or -óo to consonant bases, as -yoo or -yóo to vowel bases. For kúru 'comes' the form is koyóo, for suru 'does' siyoo; in traditional Ōsaka speech these shorten to kó[o] and syo[o] respectively (Maeda 1961.217, cf. Y 154), and the variant kiyóo (said to be an Edo relic, Y 154) turns up in such Meiji writers as Natsume Sōseki. The traditional accentuation is determined by that of the base: yoboo 'let's call' is unaccented because yob- is atonic, tabeyóo 'let's eat' is accented because tábe- is tonic. But some speakers put an accent on the suffix, regardless of the base; for them the ending is -[y]óo. Even speakers who—with us—distinguish Usi o kaoo 'Let's buy cattle' from Usi o kaóo 'Let's raise cattle'¹¹ may lose the distinction before the

11. It may be questioned whether any speaker will keep these apart in isolation, since we would expect a final accent (even on a long vowel) to be suppressed before a juncture; but some speakers, at least, treat certain accented long vowels as not oxytonic—and that would correspond to the earlier form -á[m]u for tonic verbs.

particle *tó*, since there are two traditions of accentuating S *tó*: we follow the version that implies an underlying juncture which will suppress the final accent of an atonic form (*kaú* | *tó* → *kau* *tó*) but some speakers attach the particle with no underlying juncture (*kaú* *tó* → *kaú* *to*), and for such speakers *Usi o kaóo to omóu* could mean either 'I think I'll raise cattle' or (equivalent to our *Usi o kaoo to omóu*) 'I think I'll buy cattle'.

Certain verbals are not used in the hortative. Although *iyoo* 'let's stay' is made from *iru*, there is no hortative made from *áru* (*aróo* always functions as the literary tentative); nor are there hortatives for potentials (*V-e-yóo* and *dekiyóo* are literary tentatives) or, except under special circumstances, for verbs expressing actions outside human control. Normally *wakáru* 'understands' would be precluded from conversion to a hortative (especially if the underlying object is expressed), but embedded in larger structures you will find *Yóku wakaróo to site go-ran nasái* 'Try to understand a little better'; ... *wakaróo to dóryoku(=) site kuremasu né* 'they kindly try to understand' (SA 2671.120c). *Suguréru* 'excels' is similar: *Hito ni sugureyóo to sitára ...* 'If you would [= wish to] surpass others ...'. Verbs which will not readily make hortatives will not readily make imperatives (or any command forms), either.

Passives are not ordinarily made hortative, but occasional examples may turn up: *Homerareyóo (= Homerare-tái) to site sore o sita* 'He did that with the idea of getting praised for it'; *Íi kotó o site sensei ni homerareyóo* 'I want to do something nice to get praised by the teacher'; *Urayamasi-garaseyóo to site ...* '... with the idea of exciting envy'; *Ame ni hurareyóo* 'Let's get rained on (get ourselves wet with the rain)'. Aside from such restrictions, semantic incongruity is the only block to making hortatives freely out of other conversions. *Yobareyoo* 'Let's get invited'¹² sounds all right but *Tabesugiyoo* 'Let's overeat' may seem odd.

Since hortatives can be made only from verbals, all negatives are excluded. To say 'let's not do it' you have to say something like 'let's decide not to do it' (*Ikanai kotó/yóo ni siyoo* 'Let's not go') or 'let's give up (the idea of) doing' (*Ikú no o yameyoo* 'Let's not go'), your choice depending on whether the proposition is a rejection of an earlier idea or not. When rejection is expressed, the object (the nominalized verb that represents the action) is often left out, since it is understood from earlier discussion: *Yameyoo* 'Let's not [do it]'. To mean 'let's not' or 'I think I won't' you can also use the *V-ru* *~mái* variant of the tentative (§12.1): *Sikási, íma ya yo-nó-naka ga sukkári kawattá no da kara, kúdo-kudo iu ~mái* 'But now that the world HAS changed completely, let's not grumble about it' (SA 2660.41b). You will run across this more often in quotational structures: *Iku ~mái to omótta* 'I thought I wouldn't go' (= *Ikanai yóo ni siyoo to omótta*; *Ikú no o yameyoo to omótta*); *Ano kotó o iu ~mái to omótta kedo ...* 'I didn't mean to say that but ...'. We can treat this *V-ru* *~mái* form as the NEGATIVE HORTATIVE. A literary equivalent of the negative hortative (but occasionally used also for the negative tentative) is made with the suffix *V-(á)zi*; see §8.6 for examples. In colloquial speech the simple imperfect negative will be used where one might expect a negative hortative; cf. *Gekkan-Bumpō* 1/8.71 which suggests that *sinai yó* is adequate to express *suru ~mái*.

The hortative can be extended (§15) with *né[e]*, *ká*, *ká né*, *ká sira*, *yó*,¹³ *zé*; but there

12. *Yobaremasyóo* is used as an old-fashioned equivalent of *Itadakimásu* 'I accept (food/drink)' as in *Sore dé wa sekkakú desu kara hitótu yobaremasyóo ka* 'Well since you are so persuasive perhaps I'll just have one'.

13. And its synonym *yá*: *Kón'ya wa bihuteki o tabeyóo yá* 'Tonight let's have steak!' (SA

is no *V-[y]oo wá/zó or *V-[y]oo ká mo sirenai; nor, except in dialects, *V-[y]oo sá. You can add *zya náí* [ka/no] (§15.16): *Yameyóo zya náí ka* 'Let's stop, OK?'

The difference between the two meanings of the hortative—invitation versus statement of intention—can be brought out by context, as in these examples of Kazama: *Sáa háyaku ikimasyóo* 'Come let's go quickly'; *Sore wa bóku(-) ga yarimasyóo* 'I'll take care of that matter'. The statement of intention is often quoted with *tó*^[l] *omóu* 'I think/feel that', as is the desiderative: *Kaeróo to omóu* 'I think I'll leave (for home)', *Kaeri-tái to omóu* 'I feel like leaving (for home)'—either sentence will sometimes correspond to English 'I want to leave (for home)'; *Rentá-kaa de simá o doráibu siyoo to omótte* 'masu 'I'm thinking of driving (or: that I'd like to drive) around the island [of Guam] in a rental car' (SA 2664.97b). The intention can be diffused or deprecated with *nádo* or *nánte*: ... *zénbu o yomóo nádo*^[o] *to kangáénai de ...* 'wasn't thinking of reading all of it, exactly, but ...' (SA 2657.104b); *Ryuukoo-go o tukuróo nánte*^[o] *ito wa, zenzen náí n desu* 'We [cartoonists] haven't the least intention of deliberately creating fashionable slang' (SA 2661.43a).

Although the subject referred to by a hortative is normally first person (singular or plural),¹⁴ there are various nouns that can be pressed into temporary duty as substitutes, as in the sentence *Ningen ga kikái o doogú to site tukau to iu kotó wa, kikái ni wa dekin[u] kotó o ningen ga yaroo to iu wáke desu* 'Man's use of machines as tools means that man is to do the thing that machines cannot do', in which 'man' is the equivalent of 'we men'.

The idiom *náni o kakusóo* 'what would I hide?' = 'To be quite frank with you ...', 'To tell you the truth ...'—always followed by major juncture—is used as a sentence-opener somewhat like *Zitú wa ...* 'In fact ...', and both expressions may be used together: *Zitú wa, ll náni o kakusóo ll sumóo-tóri no (l) na da* 'Actually, to be quite frank, it's the name of a wrestler' (Okitsu 1.151). For expressions with *V-(y)óo ní mo*, see §17.7.

The hortative can be followed by *tó* + *suru* (§21.4) to mean 'is about to do' or 'is planning/intending to do' or 'starts/attempt to do'; *Watasi wa hitogomi o wámete zimú-syo no náka e hairóo to sita* 'I started to enter the office, making my way through the crowd' (Ig 38); *Dáre mo kuti o hirakóo to sinákatta* 'Nobody tried to open his mouth' (Ig 38); *Minato no urayama kara tukí ga agaroo to site iru* 'The moon is about to come up from the hill behind' (Ig 38); *Káre wa utá o utatte miyóo to sita* 'He attempted a song' (Ig 38); *Zimú-syo no denki-dókei wa sán-zi o sugiyóo to site iru* 'The electric clock in the office is about to go past three o'clock' (Ig 38); *Kimi ga kawá o tobi-koeyóo to sita tokí*^[l], *hoori-dásite ittá no wa bóku(-) no inú da yó* 'When you were about to leap over the river it was my dog that drove you away' (KKK 3.274). With the negative (*sinai*) this expression shows reluctance or apparent unwillingness: *Básu wa tomaroo to sinákatta* 'The bus was not about to stop = The bus showed no signs of stopping' (Ig 1962.84); *Kodomó-táti wa Yosíharu no kao o miyóo to mo sinai* 'The children are reluctant to look Yoshiharu in the face' (Ig 38).

2662.51c). An example of *yó*: *Dóko ka tookú no toti e itte, hutari daké no seikatu o simasyóo yó* 'Let's go to some distant land and make a life together just the two of us!' (SA 2642.37c).

14. The claim by Inoue (93) that *V-[y]óo* is singular and *V-[y]óo ká/né* is plural is unsubstantiated in the speech of a number of speakers I have checked. Hirayama (1968.59) observes that *V-masyóo* is used as a mild command in Nagano prefecture.

Sometimes V-(y)oo tó is followed by other verbs, perhaps with ellipsis of site^[1] or omótte: Munagurusii náka de, Sáeki(¯) wa túma no geta no otó o kikoo to (? {site}) aséttá ga, muda na dóryoku datta 'From the depths of his heavy-heartedness Saeki strained to hear the sound of his wife's clogs, but the effort was in vain' (Ig 1962.105); ... utukusii huzin o túma ni siyoo to (? {omótte}) oi-kakéru '... chases after a beautiful woman wanting to make her his wife' (Ōno 1966.46); ... úmi no soko no sinzyu o toróo to (? {omótte}, ? {site}) mizu ni mogúru 'they dive in the water to get pearls from the bottom of the sea' (Ōno 1966.48). And hortative + tó^[1] iu toki ni or + tó^[1] ú no ni can mean just 'when about/ready/fixing to do', § 21.1.(23).

The literary equivalent of -[y]oo is -(a)mu, and that is where the shape -oo comes from, by way of the contraction -a'u = -a[m]u, as indicated by historical spellings such as "kakau" = kaká'u = kakóo 'let's write'.¹⁵ In modern writings -(a)mu sometimes appears in the reduced form -(a)n,¹⁶ homonymous with the common abbreviation of the literary (and Kansai) negative ending -(a)nu: ikan may be a short form for either ikamu = ikoo 'let's go' or for ikanu = ikanai 'does/will not go'. And in place of siyoo 'let's do it' in written Japanese you will sometimes find the form sen, an abbreviation of semu that is homonymous with the abbreviation of senu = sinai 'does/will not do it': VN sen ga tamé ni = VN [siyoo to] suru tamé ni 'in order to do (VN)', § 14.6. The adverb ikán-sen 'to one's regret' derives from iká-ni semu and thus is parallel in structure to the modern dóo siyoo 'what to do?'. There is also said to be a dialect form seu (= se'u < se[m]u) that can be pronounced syoo; compare the polite hortative -masyóo and its historical spelling -maseu (= masé'u < -masému), which parallels the polite negative -masén < -masén[u]. The adverb arán-kágiri (= áru kágiri) 'to the utmost' is derived from arámu kágiri, which is formally equivalent to modern aróo + kágiri. In the phrase iwan-kata náki késiki 'indescribable scenery' we find a reduction of iwamu katá = ioo katá 'way to say' + the literary attributive of ná; the colloquial parallel would be ii-yoo ga ná 'lacks a way to tell'. The predicative and infinitive forms also occur: iwan-kata nási 'is unutterable, indescribable', iwan-kata náku 'indescribably'.

The literary hortative is sometimes used with a tentative meaning; the "literary tentative" described in the following section is a development from that usage. A more

15. But the shape that attaches to the vowel verbs (-yoo) came about in the following way: the shape -a[m]u was attached and a palatal glide [y] was inserted between the front vowel (e or i) at the end of the base and the back vowel of the ending: ...i/e-[y]a[m]u > ... i/e-yoo. From the historical spelling of ...eu for this ending on certain of the vowel verbs (and the polite auxiliary "-maseu" = -masyóo), we can assume an interim stage at which the low vowel partially assimilated to the palatal: ...i/e-ye'u. NOTE: This description rounds out the explanation in Martin 1967.269 (n.33) but may still not be the whole story. Perhaps the forms are all made on the incorporated auxiliary si- 'do': si-amu > semu (crasis) > se'u. (The spelling "seu", traditionally pronounced /syoo/, is an archaism, Y 154). Siyoo itself would then be explained as si[-i]s[e'u] > si[y]e'u > siyoo (mutual assimilation of vowels), and koyóo as kó[í]s[e'u] > kó[y]e'u > kóyoo with only the accent amiss.

16. The following forms may be puzzling at first sight: kón = kómu = koyóo 'come'; [i]dén = [i]dému = deyóo 'emerge'; én = ému = eyóo 'get'; hén = hému = heyóo 'pass'; hín = hímu = hiyóo 'dry'; ín = ímu = iyóo 'shoot' or 'cast (metal)'; mín = mímu = miyóo 'see'; in = imu = iyoo 'be, stay'; kin = kimu = kiyo 'wear'; nin = nimu = niyoo 'boil' or 'resemble'; sen = semu = siyoo 'do'. These could also represent shortenings of -nu, but in written texts -nu is usually spelled out and -n will represent the literary hortative unless the text is unusually colloquial.

consistent name would perhaps be "SEMI-literary tentative", since the literary hortative V-(a)mu also has the tentative meaning, but I have omitted the "semi-" for convenience.

Examples of -(a)n < -(a)mu turn up in modern prose: Wareware wa sono senkú-sya TARAN to suru iki-gómi(¯) de yaru tumori ná n desu 'We intend to work with the ambition to become the pioneers in that [= the export from Japan of computer software]' (SA 2635.38) — tarán = tarámu = t[ó] áru daroo; ... kásyu TARAN to kokorozásita no wa ... 'your setting your aim on becoming a singer ...' (Tk 4.139a). Another use will be found in § 15.6a: iwán ya < iwamú ya. See also -(a)zarán < -(a)zu arámu, § 8.6. You may also run across a perfect tentative V-i-kén < V-i-kému < V-i-ki-ámu, equivalent to the colloquial V-tá daroo, as in the expression náni o omói-ken 'what was [one] thinking of, what could one be thinking of = of all things' (Endō 149) interpolated judgmentally in a narrative. For another use of the perfect tentative, see V-i-kémáku on p. 839.

There is a construction ...-(a)n bákari 'all but (doing); on the verge of (happening)', which some people assume to come from -(a)mu bákari, presumably analogous to a modern V-[y]oo TÓ^[1] {site/omótte} bákari,¹⁷ while others take it to represent -(a)nu bákari = -(a)nai bákari. Yuzawa thought the form originated as -(a)mu bákari and got reinterpreted as -(a)nu bákari in Edo times, but Yoshida cites examples showing that -(a)nu bákari goes back to Heian days (Y 172) and says modern uncertainties about the form seem to be the result of the convergence of older -(a)mu and -(a)nu by contraction into modern -(a)n. KKK 3.202 cautiously notes that "the form -(a)nu seems to be sometimes used"; Henderson 54 comes down squarely in favor of the interpretation as a negative and actually gives an example with -(a)nai bákari. We find examples of -(a)nai bákari in the prose of Kubota Mantarō: ... nakanai bákari ni 'all but weeping'; Atarimae na kotó da to iwanai bákari ni Sensi wa itta 'Senshi spoke as if almost to say "Only proper"'. And a vaudeville example: Hónoo o hukánee [= hukánai] bákari de, ... '[The cat's eyes] nearly came ablaze ...' (Okitsu 1.164). Four examples from Meiji fiction are cited in Y 191; see also Gekkan-Bumpō 1/8.64 (1969).

Examples of S tó^[1] iwan bákari ni/no 'as if almost to say' (etc.) will be found in Alfonso 719. Here are some examples of that verb and of others: Aité wa kubi o katamúkete, makoto ni husigi na o-tazune da to iwan bákari no kao o suru 'The other fellow cocked his head and the look on his face all but said "It's truly a strange request"' (KKK 3.202); Anáta no kénri na n da kara to iwaren bákari desu 'You might almost say it was your right' (Tsukagoshi 246)—presumably the subject-exalting use of the passive form rather than the potential (= ien); Tatami ni hitai o suri-tuke suri-tuke, gookyuu sen bákari no wabi-kata dátta 'It was an apology in which he kept groveling on the floor (mat) and all but wailed' (KKK 3.202); ... Ziburarutaru-káikyoo o hasánde neppuu no Ahurika-táiriku to hotóndo hure-awán bákari no íti ni áru 'it is in a position of all but virtually touching the hot-winded African continent across the Straits of Gibraltar' (SA 2677.154b); ... áru kákudo de huri-aogu to, ussoo to sita Árupusu no kurói mori ga nosi-kakaran bákari ni site sobiète irú no ga míeta 'when we looked up at a certain angle we could see how the dense black forests of the Alps towered, almost bending right over us' (SA 2672.96a); Odoróita no wa, éiga(¯) no marason no tokoró ni náru to, gekizyoo ga waren bákari no nekkyyoo désita yó 'What surprised me was when the film got to the marathon part, the theater

17. Ellipsis of the quotative tó is common in many dialects, as we have mentioned in § 2.2a.

almost burst with frenzy' (Tk 3.76a); *Sosite káre wa, damátte kangae-tuzukete iru bóku* (o tyót-to nagámete, túi ni huki-dasan bákari ni site itta 'Then he looked at me for a while, as I kept on silently thinking, and finally he spoke, barely suppressing a burst of laughter' (CK 985.390)—ni site = dé.

12.3. THE LITERARY TENTATIVE

The following verbs are frequently used in modern writings with the hortative ending but tentative meaning: *aróo* = *áru daroo* 'probably is/has', *dekiyóo* = *dekiru daroo* 'probably can', *ieyoo* = *ieru daroo* 'probably can say' (potential §4.4). Perhaps we can say that *-(y)oo* is freely written for *-ru daroo* in the case of any verb for which the hortative meaning is normally precluded, such as *áru*, potentials,¹⁸ and actions outside human control. That would account for broadcast weather reports that say *Áme ga hurimasyóo* 'It will probably rain', *Kumorimasyóo* 'It will probably be cloudy', etc.—a style largely abandoned in the 1960s by NHK announcers in favor of the colloquial tentative (*kumóru desyoo* etc.).¹⁹ The honorific stylization of *áru* (→ *gozaimásu* §22.2) is regularly used with the hortative ending for the tentative so that the honorific form corresponding to *áru daroo*/*desyoo* is either *gozaimasyóo* or *gozaimásu desyoo*. And some speakers will find *arimasyóo* more elegant than *áru desyoo* for the polite tentative of *áru*: *To iú no wa, kyoogén ni wa arayúru omosirói monó ga arimasyóo?* 'What I mean is, there are surely all sorts of amusing things among the *kyōgen* farces, don't you think?' (SA 2659.49c—speaking is Nomura Manzō, born in Tōkyō 1898); *Iroiro go-human mo arimasyóo ga, soko o hitótu ...* 'I am sure you must have various dissatisfactions; ... one of them ...'.

For the adjective, in place of *A-í daroo* many dialects—including some that infiltrate the Tōkyō area—use *A-karóo*, a contraction of *A-k[ú] aróo*. So we find *ookikaróo* = *ookii daroo*, *sukunakaróo* = *sukunái daroo*, *omokaróo* = *omói daroo*—as well as the negatives mentioned earlier (*nakaróo* = *nái daroo*, *yobanakaróo* = *yobanái daroo*—cf. Y 203-4) and other conversions that yield adjectivals such as the desiderative (*yobi-takaróo* = *yobi-tái daroo*) and the facilitative (*tabe-yasukaróo* = *tabe-yasúi daroo*).

In §21.5 we describe a usage of the literary tentative + the particle *tó*. For the literary tentative + particles *gá* and *ní*, see §17.6. Such sentences as *Nihon-séihin wa yasukaróo warukaróo* [to iu kotó/wáke] *de hyooban no yóku nákatta monó de aru* 'Japanese goods used to have a bad reputation as (likely to be) cheap and poor in quality' might be regarded as including an ellipsis of something like *yasukaróo {ga} = yasúi daroo ga*. We are including the variant negative tentative *V-ru ~mái* = *V-(a)nái daroo* as a literary tentative (§12.1); it can be followed by the particle *yó*, §15.3.

There is an older literary tentative—apparently only for verbs—that is made by adding *faɽrámu* or its contraction *faɽrán* to the predicative forms, including the genuine predicative forms for *áru* and related verbs (i.e. *áru*, not *ári*). Although *rámu* and *rán* are reductions of a form *arámu* that is the origin of the modern (semi-literary) *aróo*, in this usage they function like modern *daroo* when it follows a verb. Cf. Henderson 237-8.

18. So that *sareyoo* might be either the colloquial 'I'd like to have it done (to me)' (passive) or the literary 'I think it can be done' (potential). But the "potential" *sareru* is normally replaced by *dekiru*.

19. Yet I can report hearing the following on the NHK TV weather report of 9 p.m. 25 August 1968: ... *niwaka-áme ga arimasyóo* 'there will likely be showers'; *Nittyuu tokidoki haremasyóo* 'During the day there will probably be sunny periods'.

13 ADNOMINALIZATIONS; TYPICALLY ADNOMINAL AND ADVERBIAL WORDS

It is possible to adnominalize almost any perfect or imperfect Japanese sentence, simplex or complex or converted,¹ merely by putting it in front of the noun of a nominal sentence, which—whatever its source—serves as the EPITHEME² (the target) of the adnominalization. The nominal sentence can then be subjected to any of the processes open to a simple nominal sentence (serving either as proredication or as identification, §3.10), including use as a noun phrase for one of the adjuncts of some further sentence. By “noun” we refer to a PURE noun, one that can be marked by *gá* as subject or by *ó* as object; generally excluded are precopular nouns (§13.8), adjectival nouns (§13.5a), and adverbs (§13.7)—but those restrictives that yield adverbial phrases (such as *daké*, *gúrai*, *kágiri*, [*k*] *kirí*, etc., §2.4) and the postadnominals *yóo* and *mítai*, which have the grammar of adjectival nouns, will serve as epithemes. Pronouns, proper nouns, and deictics can appear as targets of adnominalization: *Sono kóro no bóku(¯) wa ...* ‘(The me of that period =) In those days I ...’; *Nagái aida koko ni sún-de iru Tanaka senséi wa ...* ‘Professor Tanaka, who has lived here for a long time, ...’; *Tookyoo no dóko ga itiban nigiyaka desu ka* ‘Where in Tōkyō is the liveliest?’; *Anáta ga ryokoo sita dóko ga itiban omosírókatta desyoo ka* ‘Which of the places you travelled did you find most interesting?’; *Iti-nen ¯zyuu no itu ga itiban sukí desu ka* ‘What time in the year do you like best?’; *Kimi ga Amerika ni sún-de ita itu ga itiban tanosíkatta* ‘What time while you were living in America was the most pleasant?’; *Dóko-soko no dáre ga ...* ‘Who from such-and-such place ...’; *Kore wa máta(¯) Hónkón de tábeta náni yori mo oisíkatta* ‘This was, moreover, (better than anything [else] I ate =) the best thing I ate in Hongkong’ (SA 2666.110c).

Both verbal and adjectival sentences—and all negative and perfect sentences—adnominalize with no change in form:³ *Kodomo ga warau* (*waratta*, *warawanai*, *warawanákatta*) ‘The child laughs (laughed, doesn’t laugh, didn’t laugh)’ → *Warau* (*Waratta*, *Warawanai*, *Warawanákatta*) *kodomo dá* ‘[That] is the child who laughs (laughed, doesn’t laugh, didn’t laugh)’; *Kodomo ga tiisái* (*tiisakatta*, *tiisaku nái*, *tiisaku nákatta*) → *Tiisái* (*Tiisakatta*, *Tiisaku nái*, *Tiisaku nákatta*) *kodomo dá* ‘[That] is the child who is little (was little, isn’t

1. Even S ga S: *Tiisái ga syareta zyuutaku* ‘[It was] a small but stylish residence’ (SA 2642.37d); ... *sono sasáyaka da ga kityoo na hina ...* ‘those humble yet precious dolls’ (SA 2670.140d); *Takái ga, umái komé o kai-tai syoohi-sya mo irú no da* ‘There are also, you see, consumers who wish to buy rice that is expensive but tastes good’ (SA 2684.20c). Mikami 1963.106 says conjunctions (or sentence-adverbs) and conjunctivalizations are avoided in adnominalized sentences. But here is an example of adnominalization of parallel sentences conjoined with the provisional (§9.3.2): *Syokúryoo(¯) mo tarinákeraba koogyoo-génryoo mo tarinai kono kuni de, ...* ‘In this country which lacks both foodstuffs and industrial raw materials ...’ (Tk 2.143b).

2. On the term, see p. 621.

3. This is true of the colloquial language. In the literary language the adjectives have an attributive form A-ki that is different from the predicative form A-si; vowel verbs of more than one syllable (dropping the *i* or *e* found in the infinitive, the negative, etc.) add -uru for the attributive but -u for the predicative; the consonant verbs *áru*, *náru* = *ni áru* (copula—but not *náru* ‘becomes’), *táru* = *tó áru* (subjective copula), *óru*, and *habér-u* (polite or humble auxiliary) are all irregular in that they use the infinitive (*ári*, *nári*, *tári*, *óri*, *habéri*) in place of the predicative form in most of the predicative functions; the consonant verb *sin-* ‘die’ has the irregular attributive *sinuru*. The auxiliaries used to form perfects also have distinctive endings for the attributive and the predicative. See §9.5, §9.6, §13.9.

little, wasn't little)'; *Kodomo ga byooki dátta* (*byooki zya nákatta*) 'The child was ill (was not ill)' → *Byooki dátta* (*Byooki zya nákatta*) *kodomo dá* '[That] is the child who was ill (who was not ill)'

But nominal sentences that are imperfect replace *dá* by either *nó* or *ná* depending on (1) the kind of noun being adnominalized, and (2) the kind of noun to which it is adnominalized. If the noun to be adnominalized is what we are calling an ADJECTIVAL NOUN (replacing Bloch's term "copular noun"), *dá* will always adnominalize as *ná*, regardless of the following noun; but a number of words are ambivalently treated as either adjectival nouns or as precopular nouns (*iroiro na/no monó* 'various things').⁴ Other nouns, including precopular nouns, convert *dá* to *nó* before most nouns, but before certain post-adnominals they too use *ná*: *bákari*, *daké*, *dókoró*, *gúrai*, *hodó*, *ígai*, *ízyoo*, *kágiri*, *máde*, *?monó₁*, *monó₂*, *wáke*, and the nominalizations with *nó* (in its several meanings, see § 14.2) and with *kotó₁* (§ 14.1).⁵

Instead of *nó* or *ná* you will sometimes find *de áru*, the formal equivalent of *dá* that is often used in speeches and the like; it adnominalizes without change: *Watasi ga kánzi de*

4. Both adjectival and precopular nouns typically translate as English adjectives; the semantic emphasis of the former is on QUALITIES, while the precopular noun points to QUANTITIES or STATES, though the distinction is not always clearcut. We even find antonyms that differ in their grammar such as the well-known pair *génki* and *byooki*: *Anó-hito ga byooki da* 'He is ill' → *Byooki no hitó da* 'It is an ill person' but *Anó-hito ga génki da* 'He is well' → *Génki na hitó da* 'It is a well person'. There is some flux in usage of *ná* or *nó* after certain adjectival nouns. Thus, though normally *muda* 'futile' would be followed by *ná* in all adnominalizations, before the postadnominal *yóo* speakers optionally use *nó*; Mio 146 says this is true also of *mendóo* 'troublesome', *o-kinodoku* 'pitiful', and perhaps many others. (Examples of *suki no yóo* will be found on p. 766.) Is this because *yóo* is itself adnominalized with *ná*? Alfonso 1047 presents the pattern AN *na/no yóo da* and N *no yóo da*; it is unclear whether this is intended to hold for *yóo na/ni* as well as for *yóo da*. (Alfonso 1055 has *hituyoo NA yóo NI*.) Hamako Chaplin suggests that AN *na yóo* is more colloquial, AN *no yóo* more formal. More examples:

Káre no kentiku wa kiwámete dokusoo-teki no yóo de ite, dóozí(¯) ni watási-táti, tooyóo-zin no konpon-teki na muzyóo-kan o humáete iru 'His architecture continues to look extremely original, yet at the same time it is based on the fundamental feeling of impermanence that we orientals have' (SA 2645.46c); *Nozima san wa éaku kantan no yóo ni ittá keredo ...* 'Mr Nojima spoke with admirable simplicity but ...' (SA). (An example of ... *ii-ta-ge no yóo de aru* will be found on p. 994, § 20.) Although *hu-hítúyoo* 'unnecessary' is normally an adjectival noun, it is listed also as "noun" (presumably our "precopular noun" rather than "pure noun") in MKZ, and that would seem to be justified by the following example: *Siréi-syo(¯) no yóo na gyoogyoosii monó ga hu-hítúyoo NO baai wa, syookái-bun(¯) o káku meisi no búnsyoo de sore-to-náku renraku suru* 'When such a fancy thing as a formal directive is not required, they communicate indirectly, with the sentences of personal introduction on a calling card' (SA 2659.44a). But one speaker (Kurokawa) will use only *hu-hítúyoo NA monó* 'an unnecessary thing' while accepting either ... *NA/NO baai* 'a situation in which it is unnecessary'; I presume that 'an unnecessary situation' (with *baai* extruded from the subject rather than intruded as a summational or transitional epitheme) would be only ... *NA baai*.

5. Although *ná* is called for in *S₁ kotó wa S₁ ga* (p. 843), after a pure noun or a precopular noun you may run across an inappropriately formal *nó* instead: *Yuumei na gakusya no [= na] kotó wa yuumei na gakusya désu ga* 'He is a famous scholar, to be sure, but'; *Byooki no [= na] kotó wa byooki dá ga* 'He is sick, of course, but'. In the following example the precopular noun *dooyoo* is followed by *ná* before *kotó₂*: *motiron dooyoo NA kotó ga ieru* 'of course the same sort of thing can be said' (Tsuji'mura 70)—cf. ... *máe no zyo-tén'in to dooyoo NO ayamári* 'the same kind of mistake as/that the lady clerk mentioned earlier' (id. 69). Both N *no kotó o sitte iru* 'knows that it is N' and N *no hazu da* 'is likely to be N' are standard usage, but N *na kotó o sitte iru* and N *na hazu da* appear to be gaining in popularity (cf. Kazama 231). *Aomori* replaces *ná* with *dá*: *rippa da é = rippa na é* 'a splendid picture', *byoogi da nó = byooki ná no* 'a sick one' (but *byoogi no go = byooki no ko* 'a sick child'), cited from Kobayashi (UM 75-24, 207) 95n88.

áru kotó [= kánzi na/no kotó] o ukkári wasureru tokoró datta 'I was forgetting that I am the supervisor' (Mikami 1960.14); Watasi, Kurísutyán da kedo, géndai ni oite, Kurísutyán de aru kotó ga hazukasii gúrai 'I am a Christian, but in these modern days I am almost ashamed of being a Christian' (SA 2676.36c). In semi-literary writings you will find náru, the attributive (= adnominal) form of the literary copula nári < ní ári, used as the equivalent of ná in Zetudai náru go-kitai o ... 'Please await with great anticipation ...' and as the equivalent of nó in tugí naru syooten/toosoo 'the next focus/struggle' (SA 2686.30b/e); sometimes this form is used where the colloquial would have the quotational quasi-copula made up of tó + iu, as in Hokkáidoo naru tihóo = Hokkáidoo to iu tihóo 'the district of Hokkaidō'—cf. the literary use of nári to report a sentence as hearsay—equivalent to colloquial sóo da (§18). You will also find táru, the attributive form of the literary subjective copula tári < tó ári, where you might expect tó site iru, as in doodóo(¯) táru méiga 'a splendid masterpiece of a film'. (Only a very few of these ... táru forms have survived as clichés in the colloquial and they may well be regarded as lexical adnouns. See §13.5.) The literary language uses tári more widely, and you will run across it in modern written passages from time to time; see §13.9 and KKK 3.260 for examples. In N₁ táru N₂, a particular usage that survives in the colloquial, the second noun is often a generalized class term such as hitó or monó 'person': isya táru monó 'a person who is [to be thought of as] a doctor; a real doctor; a doctor worthy of the name; all doctors'. The negative for this usage (and for doodóo(¯) táru) is tarazáru, the literary negative attributive form; apparently (*)taránu is never used. Kenkyusha's examples of titi táru no miti 'the duty of a father' and gakusei táru no hónbun(¯) 'one's duty as a student' can be explained as adnominalization of a direct nominalization (§14.6) or as ellipsis ... táru [monó] no

The literary perfect-resultative -éri (< í ári, §9.6) adnominalizes as -éru, so that VN séri (= VN site iru as resultative) will turn up as VN séru N (= VN site iru N or VN sita N). The literary negative of verbs, V-(a)nu but senu for suru, is often used adnominally, as in kore ni hoka-naránu monó 'a thing that is none other than this', siran[u] kao 'an indifferent air' (often treated as a compound noun sirán-kao), In written Japanese there is also an attributive negative V-(a)záru (< -zu áru) with the same meanings: VN sezáru N = VN senu N = VN sinai N. Cf. the remarks on tarazáru, just above.

The imperfect NEGATIVE of a nominal sentence remains unchanged by adnominalization: Kodomo ga Nihon-zín zya náí 'The child is not a Japanese' → Nihon-zín zya náí kodomo da '[That] is the child who is not a Japanese'. (The formal equivalent of zya náí is de náí, and that is more often seen in print, where zya náí may represent zyáa náí = dé wa náí.)

The new nominal sentence, with its embedded adnominalization, can be converted to perfect, tentative, negative, etc., quite independently of the conversions that may be incorporated into the adnominalized sentence. And that can lead to the multiple negatives mentioned in §8: Yobanákatá hitó zya nákatá 'It wasn't the man we had neglected to call'.

The tentative is not ordinarily adnominalized, but the literary tentative (§12.3) is common before postadnominals, especially in written Japanese: Aróo kotó ka áru ¯mái kotó ... 'The matter of whether there probably is or not ...'; Sonna kotó ga aróo hazu ga náí 'There is no reason for such things to happen'; Wasuré de mo siyoo monó nara syooti sinai 'I won't forgive you if you should forget'. In the last example, siyoo cannot be replaced by the imperfect suru, so that V-[y]oo monó nara is best treated as a special

conversion with about the same meaning as *V-tára* 'if one should': see §13.3.

There are certain kinds of words which occur adnominalized in attributive position perhaps more typically than they are found in predicative position: adjectival nouns (§13.5a) and precopular or quasi-adjectival nouns (§13.8). Certain words appear typically or exclusively as adnominal modification (adnouns, §13.5); others as adverbial modification (adverbs, §13.7) or as sentential connectors (conjunctions, §13.7a). Quantity nominals ("numbers") are used to count or measure particular nouns through a relationship that is essentially attributive, but the basically adnominal grammar is often obscured by various common conversions, such as adverbialization and thematization, as explained in §13.6. The reason for grouping these rather disparate parts of speech in adjacent sections of this study is the overlapping problems the classes share with respect to adnominalization, at the one extreme; and to sentential adverbializations, at the other.

13.1. ADNOMINALIZATION GRAMMAR

To understand the grammar of adnominalization we must consider several things: the source of the noun to which the sentence is adnominalized, i.e. the target of the adnominalization, here called the EPITHEME (§13.1.1-5); the possibility of focus within the adnominalized sentence (§13.1.6); the particular constraints on the various non-extruded epithemes (the postadnominals of §13.2); and special classes of adnominal elements taken up in following sections.

The noun to which the sentence is adnominalized, the epitheme, will often prove to be EXTRUDED from the sentence itself; a noun phrase referring to the time (when), the place (where), the agent (who or by whom), the object (that or which is affected), the beneficiary (for whom), the reciprocal (with/against whom), the instrumental (with which), the ablative (from what/whom), etc., is pulled out to be embedded as an adjunct to a new predicate. The source of the extruded epitheme may be a simple sentence or it may be one which has undergone one or more—any number?—of the other conversions prior to the adnominalization.

But not all epithemes are extruded. Some come from outside the adnominalized sentence. These "intruded" epithemes seem to fall into three types: SUMMATIONAL (or "synoptic"), RESULTATIVE (or "creational"—perhaps "propredicative"?) and TRANSITIONAL (or "relational" or "conjunctive"). The summational epithemes refer to a situation, a fact, a report, an experience, an instance, a portrayal, a performance, an appearance, a similarity, a likelihood, a necessity, an attitude, a value (unless this is resultative), a plan, a hope, a thought, a dream, a sense, a feeling, etc.; the situation or fact (etc.) is elaborated in the adnominalized sentence. The resultative epithemes refer to a RESULTANT thing⁶ or state, a product, an emanation, a percept (as in the examples *gásu ga moréru NIOI* 'the smell of gas escaping'—Mikami 1960.94; *áme ga hütte iru OTÓ* 'the sound of the rain falling' and *tukí ga úmi ni hikátte iru KÉSIKI* 'the view of the moon shining on the sea'—Alfonso 375), a reaction or impression (*Watakusi ga kono ronbun o yónda INSYOO dé wa ...* 'As the impression I got from reading this treatise ...'—SA 2651.22d; *yuusyoo sita YOROKÓBI(-)* 'the joy of having won'—Mikami 1960.94), etc.; the adnominalized sentence is the creative (or perceptive) process from which the result stems. Some other

6. As in *kippu o katta O-TURI* 'the change from buying one's ticket' (Nagano 1968.189).

resultative epithemes (from examples in V 133-4): *takigi no moeru kemuri* 'the smoke from the firewood's burning', *gásu no moeru hí* 'the fire from the burning gas', *S mánzoku* 'the satisfaction that S', *S hukái* 'the displeasure that S', *S mezurási-sa* 'the curiosity/wonder that S' (this can also be taken as summational).⁷ Here is a resultative epitheme ('flavor cooked') used as a subdued theme extruded from the dative ('for flavor'): *Sikási, ryóori sita AZI wa, sore-gurai no ooki-sa nó ga itiban íi to sarete iru* 'But for flavor [that results when] cooked, the ones [= pike] of about that size are considered best'. Vardul suggests the possibility that we regard all resultative epithemes as ellipsis of S [tamé no] N, citing such examples as *yuube^[1] nenákatta [tamé no] tukaré ga déte* 'there appeared a weariness from not having slept the night before' (V 133) and *hito no tóoru [tamé no] monoóto* 'the sound of people going by' (V 134).

The transitional epithemes refer to relative time or place; to cause or reason; to purpose; to manner; to extent or range or degree or frequency; etc. They serve to embed the adnominalized sentence into the target sentence (= the matrix) with an adverbial specification.

Examples of transitional epithemes of place (from V 142): *Káre-ra no ié wa, matinami ga negi-bátake ni utúru TIKÁKU ni átta* 'Their house was in the vicinity of where the rows of houses shift to onion fields'; ... *seito no kao ga muragátte i-soo na ÁTARI e seruróido no ningyoo o hoori-nágeta* '[He] threw the celluloid doll to (the area) where the (faces of the) students were about to gather'. Vardul suggests we account for these structures as an ellipsis of S [tokoró no] PLACENOUN. He observes another type which he feels is better derived as a kind of stylistic inversion of a paraphrase: *Suzúkake(-) no ha no sigétta SITÁ o káre wa isógazu ni yokogítte itta* 'He unhurriedly crossed below where the plane-tree leaves were dense' ← *Suzúkake(-) no sigétta ha no SITÁ o káre wa isógazu ni yokogítte itta* 'He crossed under the dense leaves of the plane trees'. But it is quite possible to account for the epitheme in such a sentence in the same way we would account for other transitional epithemes, including those which would not—for one reason or another—permit such paraphrases.

Transitional epithemes of time might be derived from S [tokí no] TIMENOUN, following the lead suggested by those of place. In the following examples (from V 140-1) observe how, unlike the English translations, the choice of perfect or imperfect for the adnominalized predicate is determined by its relationship with the epitheme, not by the following predicate (which is perfect for all "...") sentences, here omitted): ... *nyuuin sita tábun HUTUKA -MÉ ka ni ...* 'on perhaps the second day she was in the hospital ...'; *Watasi ga gakkoo o déta YOKUNEN (= YOKUTOSI) ni, ...* 'In the year after I left school ...'; *Narita ni okutte moratta AKURU-ÁSA, ...* 'On the next morning after being seen home by Narita, ...'; ... *sono náka e háitta NOTÍ^[1], ...* 'after getting inside ...'; *Bóku-ra ga Tumagome o tátu [ZENSEKI =] ZÉN'YA(-), ...* 'The night before we left (were to leave) Tsumagome ...'; *Sisatu ga áru ZENZITU, ...* 'On the day before the inspection took (was to take) place ...'; *Watasi no umareru hantosi hodo MÁE ni mittú de sinda áni ga áru* 'I have an older brother who died at the age of three, about a half year before I was born'.

7. It is possible to insert either [tamé no] or [to iu] before the epitheme in the example *Káre wa kókyoo no tuti o humu [] MEZURÁSI-SA no uti(-) ni íssyu no sabisi-mí sae kan-zita* 'In the midst of the wonder at stepping on his native soil he actually felt a kind of melancholy' (V 133). A similar example: ... *gohuzyoo e háitte, syagande iru tokoró o akerareta HAZUKÁSI-SA ...* 'the (shame =) embarrassment at having someone open the door on one squatting at the toilet' (R).

There are also sentences using place nouns as transitional epithemes of time (V 143): ... miti o migi ni órete si-goken arúita HIDARI-GAWA ni ... 'on the left when you have walked along the road for three or four *ken* after turning right ...'; Syootiku-za ˉmáe no suzi-múkoo no rózi o háitta KÁDO ni áru Sina-mesiya no kotó desu 'It's a matter of [= It happened in] a Chinese restaurant that is located on the corner after you've entered the alley that is diagonally across from the Shōchiku Theater' (the modern word for a Chinese restaurant is *tyuukaryoori-ten*).

At least some instances of transitional epithemes of cause or reason and of purpose could be explained as ellipsis of S [tamé no] NOUN. Transitional epithemes of extent or range or degree or frequency can, at least in some instances, be explained as ellipsis of S [hodó no] NOUN: ... zyuugó-hun de oohuku no dekiru [] TIKÁ-SA de nái kara ... 'because it is not so near you can get there and back in fifteen minutes' (V 136); Inúkai san wa kutibiru kara awá o tobasu [] IKIÓI de benzi-táteta 'Mr Inukai pleaded with fervor enough to bring foam to his lips' (V 136); Hiroshima ... ni káette míru to, zibun no íp-pon no migu-ude wa mondai ni naránu [] HÍGEKI ga okótte ita 'When he got back to [his home in] Hiroshima he discovered that a tragedy had occurred that made what had happened to his right arm seem insignificant' (V 136); Sigoto ni déru [] GÉNKI ga naku-natte ... 'Losing the energy to go to work ...' (Takahashi 176); San-nín no kázoku de gézyo hutarí tukau [] MÍBUN ... 'a status such as to employ two maids in a family of three persons' (Takahashi 172). In these examples, it appears to be possible to quotationalize optionally with or without *hodó no*: S {to iu} epitheme, S {to iu hodó no} epitheme, S {hodó no} epitheme.

Summational epithemes will usually permit quotationalization of the adnominalized sentence, and some require it. Yet in other instances quotationalization seems awkward, if not ungrammatical; you would be unlikely to insert [to iu] before the summational epitheme in this sentence: ... mukóo(ˉ) de o-hairi to iu máde, damátte kadóguti ni tátte ita KOKKEI mo átta 'There were also comic incidents of standing without a word at the entrance until they would say to come in' (V 130).

The epitheme, which always comes after its partner, bears a striking similarity to the THEME (§3.9), which always precedes its partner; and that is the reason for choosing similar names for the two phenomena. Themes are typically extruded, to be sure, but there are also instances of intruded themes, such as the "loose" themes which would seem to be reductions from largely unexpressed sentences—and perhaps S *hóo ga* (pp. 231–2). When used as sentence introducers, some of the adverbs and conjunctions of §13.7 and §13.7a—in particular, the coordinative, sequential, and adversative conjunctions—and certain thematized time nouns (*áto wa* 'afterward', *yokuzitu mo* 'the next day too') can be regarded as parallel to the transitional epithemes (S *áto*, S *yokuzitu*, etc.). The resultative epithemes are, to some extent, paralleled by the consequential conjunctions and some of the adverbs of logical relation. Corresponding to the summational epithemes we find the explanatory conjunctions (*sunáwati* 'id est', *túmari* 'in short') and some of the adverbs of logical or sentential relation (*motíron* 'undoubtedly', *naru-hodo* 'truly enough'). To summarize:

THEMES	EPITHEMES
1. extruded	extruded
2. explanatory conjunctions, adverbs of logical or sentential relation	summational

- | | |
|---|--------------|
| 3. consequential conjunctions, adverbs of logical relation | resultative |
| 4. coordinative, sequential, and adversative conjunctions;
thematized time nouns | transitional |

The theme, thus, is something like a prolog; the epitheme is rather like an epilog which at the same time serves as a catapult into a new or larger situation. The extruded epitheme is a way of starting a new scene with an old character or an old piece of setting; the extruded theme puts the character or setting on the billboard to whet your interest in watching the scene. This view takes a discourse-sized look at the epitheme and reveals something rather interesting. What looks like a "theme" at the beginning of a sentence may actually be a reprise of something in the preceding sentence(s)—something that we would call an "epitheme" if the earlier sentence(s) had been adnominalized to the later sentence, with obligatory omission of the element that was catapulted out to serve as epitheme. The same situation might be covered in two scenes (= sentences) with a repeat of a character or setting from the first as the theme of the second; or, alternatively, it might be wrapped up into an integrated double scene by an adnominalization which epithematizes (catapults) the character or setting: Ore ga sinbun o katta. [Sono] sinbun (wa)—dare ga [sore o] sutetá ka 'I bought a newspaper. That newspaper—who threw it away?' Ore ga katta [sono] sinbun (wa)—dare ga [sore o] sutetá ka 'That newspaper I bought—who threw it away?' → Ore ga katta sinbun o dare ga sutetá ka (with subduing of the theme: Ore ga katta sinbun wa dare ga sutetá ka) 'Who threw away the newspaper I bought?'

Independently, and for quite different reasons, Kuno has also observed the similarity of themes to epithemes; he explains epithematization (of an extruded adjunct) by assuming that the extruded adjunct is first thematized and then made target of the adnominalization. One argument in favor of his theory is that certain epithemes are assignable to more than one adjunct in the underlying sentence, just as a theme might be. In the following example, the epitheme could have been extruded from the object of (kakuryoo o) hoori-dásite mo 'even if you throw (the ministers out)' or from the subject of (kakuryoo ga) mónku o iwanai 'they won't complain'—or from both: Mattaku^[j] kónda no náikaku wa, itu hoori-dásite mo mónku o iwanai KAKURYOO bákarī, yóku mo atúmeta né 'I must say, this present cabinet has collected an incredible bunch of ministers who won't complain whenever we throw them out' (Tk 3.279b)—kónda = kóndo.

There are a number of questions with respect to theme and epitheme that call for further consideration. Is it possible to have both a theme and an epitheme with the same sentence (rather than the theme being for the larger sentence)? In general, the answer is no. Some of the postadnominals may seem to permit a theme, but in such cases (e.g. with ... yóo da, ... hazu da, etc.) we are probably misconstruing what is actually a theme for the larger sentence. Can you have more than one theme? Probably not, at least not more than one theme of the same type; two or more conjunctions or sentence adverbs, to be sure, will appear at the beginning of a sentence, but it is not clear that such cases are to be treated as multiple themes. It is certainly doubtful that more than one extruded theme will be heard in a simplex sentence.^{7a} This does not mean that it is in any way unusual to have more than one wá-marked phrase; focus and thematization are independent processes, as we have observed, even though it is true that the theme will often be given the subdued focus of wá. And we are here disregarding the break-up of a normally structured sentence into juncture-marked chunks in certain special styles that often insert né[e] or

7a. Yet see p. 227 for a purported example.

wá né[e] or sá after every adjunct, as when telephoning or shouting a message or when seeking reassurance or striving for vividness.

The theme allows for anaphoric reprise within the simplex: *Sinbun {wa/mo}, sore o ...*. The epitheme does not normally permit cataphoric anticipation: (**sore o katta [sono] sinbun* ‘*the newspaper that I bought it’ sounds almost as strange in Japanese as in English. (For an acceptable example, however, see p. 231, §3.9.) But a synoptic anaphora is possible with epithematization: *katta sono sinbun* ‘that newspaper that I bought’. This provides a technique for making your reference explicitly definite; *katta sinbun* is unspecified with respect to definiteness and it can be interpreted either as ‘the newspaper I bought’ or ‘a newspaper I bought’—as well as ‘(the) newspaper(s) I bought’, since plurality is also unspecified. It may be that all deictic elements imply a theme, since otherwise there should be no such reference as *sore* ‘that’ within the simplex. This would be true of situational as well as anaphoric deictics; the situation pointed to would constitute the theme.

In English we have a difference between what are called “restrictive”⁸ and “nonrestrictive” (or “explicative”) relative clauses; that is, some adnominalized sentences serve to define a noun and are interpreted (and sometimes marked) differently from those that merely describe or comment on a noun. The distinction can sometimes be drawn in Japanese by marking the epitheme with *sono* ‘that’ in the “restrictive” situation and by giving up adnominalization altogether in the other situation, loosely conjoining the sentences instead. ‘My friend, who is (= happens to be) Japanese, is very fond of *sushi*’ can be translated as *Tomodati wa Nihon-zin de súsi ga dái-suki desu* ‘My friend is Japanese and he is very fond of *sushi*’ (or: ‘My friend, being Japanese, is very fond ...’ with or without a consequential meaning) and ‘My friend who is Japanese (= My Japanese friend) is very fond of *sushi* [unlike my Chinese friend]’ can be translated as *Nihon-zin no sono tomodati wa súsi ga dái-suki desu*. But *Nihon-zin no tomodati wa súsi ga dái-suki desu* can be taken either way—to say nothing of a third possibility ‘the friend of the Japanese’, stemming from the ambiguity that arises from multiple derivations of *nó*, one of which is genitive.

Japanese authors often make skillful use of adnominalizations to carry along their narrative, where the English translator would prefer conjunctions. Observe the free translation of the following passage: *Tábata kara dénsya(¯) ni notte Ueno de órita san-nin wa soko de mata Asakusa máde tika-tétudoo ni notta* ‘The three men took the train from Tabata to Ueno and then rode the subway to Asakusa’ (Kb 191b). A sentence starting off *Uti(¯) e káetta Tároo ga ...* (or the like) is often to be translated ‘When he got home, Taro ...’ or ‘Once home, Taro ...’ instead of ‘Taro, who had got home ...’.

Vardul 143 calls our attention to certain kinds of pseudo adnominalizations in which the formally adnominalized sentence is intended to be interpreted as if it were adverbialized: ... *anáta ni áu made no watasi wa, ... = anáta ni áu made, watasi wa ...* ‘until I met you, I ...’; *Sensoo ga owatté kara no, kodomó-táti no asobi-buri ga sukkári kawatta ... = Sensoo ga owatté kara, kodomó-táti no asobi-buri ga sukkári kawatta* ‘After the war ended, there came a complete change in the way children play’; ... *ni-syúukan bákari táta do-yóobi no gógo kara, ... = ni-syúukan bákari tátu to do-yóobi no gógo kara* ‘starting on a

8. Do not confuse the adjective “restrictive” used here (to mean a defining adnominalization) with the noun “restrictive” used to label a class of Japanese postnouns in § 2.4, also called “delimiters”. What is here called adnominalization covers much of what is sometimes called “relativization” (i.e. the formation of “relative clauses”) in the writing of linguists treating the grammar of English.

Saturday afternoon when two weeks have passed ...'. These are each susceptible to a more literal explanation; in the last example, with a slightly tighter interpretation, 'Saturday afternoon' could be taken as a resultative epitheme (the Saturday resulting from the passage of the two weeks) or even as an extruded time-locative (on that Saturday two weeks had passed).

13.1.1. Extruded Adjuncts as Epithemes

Under epithematization an extruded adjunct loses its case marker, and the relationship between the adnominalized sentence and the epitheme is often obscured, so that grammatical ambiguities abound. One way to dispel the ambiguities is the explicit mention of all parties to the situation; by not omitting any of the adjuncts, you let the listener know which character is missing, which role is left to be filled. *Háha ga kodomo o yobu* 'The mother calls the child' can be converted into *Kodomo o yobu háha* 'The mother who calls the child' and into *Háha ga yobu kodomo* 'The child whom the mother calls'; but if you choose the ever-available option of omitting adjuncts and say *Yobu háha* (or *Yobu kodomo*) it is quite unclear, without situational context, who is calling whom. Since a verb of movement includes both motion TO and motion FROM, an ambiguity seems inevitable when the PLACE is extruded: *itta tokoró* can mean either 'the place that I went to' (*sono tokoró e itta*) or 'the place that I went from' (*sono tokoró kara itta*)—and, if *tokoró* is taken as the postadnominal 'situation' or 'time when', it can also mean 'the moment that I went' (with "place to/from" as well as "I" omitted). The number of ambiguities is increased by the fact that a traversal object can be extruded: *itta miti* can mean 'the path I went along' (*sono miti o itta*) as well as 'the path I went to' (*sono miti e itta*) or 'the path I went from' (*sono miti kara itta*)—or, conceivably, 'the way [= method by which] I went'. Similar problems of ambiguity with place references in the simplex will arise when you apply the facilitative (§9.1.8) and choose the option of subjectifying the adjuncts of place: *Dóko ga iki-yasúi* 'Where is it easy to go (to/from/along)?'.

But it is not safe to assume that ANY adjunct of what seems to be a simplex sentence can be extruded to serve as an epitheme to which the remainder can be adnominalized. Time adjuncts with *máde* would appear to be excluded, since *Sono zikan máde tuzuku* 'It continues till that time' (or, *mutatis mutandis*, *Sono zikan máde tuzukeru* 'We continue it till that time') will not lead to *Tuzuku zikan da*; that sentence, to be sure, is quite acceptable but its meaning is not our intended 'It is the time that it continues till', rather it means 'It is the time which continues' and derives from [*Sono*] *zikan ga tuzuku* 'The time continues' ([*Sono*] *zikan o tuzukeru* 'We continue the time') with the noun referring to time in the role of subject (or object). Similar restrictions obtain for TIME + *kará* 'from'.

It is easy to extrude and epithematize the subject, the object, or the indirect object. *Háha ga kodomo ni o-kási o watasita* 'The mother handed the child sweets' will yield these three forms: (1) *Kodomo ni o-kási o watasita háha ...* 'The mother who handed the child sweets ...'; (2) *Háha ga kodomo ni watasita o-kási ...* 'The sweets that the mother handed the child ...'; (3) *Háha ga o-kási o watasita kodomo ...* 'The child whom the mother handed the sweets to ...'. But some subjects and objects are idiomatically tied to the predicate in such a way that extrusion is awkward or impossible: *ki ga hayái* 'is short of temper' does not convert to **hayái ki* 'a short temper'—though *hayái ki* = *hayái kimoti* 'a feeling of being fast' with a summational epitheme is quite acceptable; and *ki o tukéru* 'gives heed (to)' does

not convert to *tukéru ki 'the heed given', nor does ki ni kakáru 'weighs on one's mind' convert to *kakáru ki 'the weighed-on mind'. (The noun ki is singularly rich in idiomatic phrases, but there are many other such examples, e.g. with té 'hand' and mé 'eye', as well as more highly restricted nouns.)

On the other hand, certain sentences will not make sense without the adnominalization (KKK 23.70): Kono kikái wa bótan(⁻) o osu daké de ugóku sikumi desu 'This machine is so contrived that it moves at the push of a button', (*Kono kikái wa sikumi desu; Káre wa ookíi té desu 'He has large hands', (*Káre wa té desu—not acceptable as propredication for ookíi té da but acceptable in other situations such as 'Him—it's his HAND [that he injured in the accident where she hurt her foot]'.)

Examples of epithematized SUBJECTS: ... soo óoku náí PEEZÍ-SUU no náka ni ... 'in pages not so very numerous' (SA 2650.91e) ← peezí-suu ga soo óoku náí 'the number of pages is not so many'; ... hiyáyaka na, kéredo mo, hagesíi KÓE de ... 'in a voice that was cool, yet severe' (KKK 25.76a) ← kóe ga hiyáyaka da, kéredo mo [kóe ga] hagesíi 'the voice is cool yet [it] is severe'; Kátta AMERIKA dé sae mo, zibún-táti ga itiban mízime da tte itte imásu. Maketa KUNI o minná^[l] tabesasénakya ikenai tte iú n desu né 'Even America which won claims that they themselves are the most miserable. They complain they have to feed the countries that lost' (Tk 2.319b) ← Amerika ga kátta 'America won'; [sono] kuni ga maketa 'the countries lost'.

Examples of epithematized OBJECTS: Sono toki^[l] míte kíta gaikoku no YÓTTO ... 'A foreign yacht that we had gone to see at that time' (SA 2650.59a) ← [watásí-táti ga] sono toki^[l] gaikoku no yótto o míte kíta '[we] went to see a foreign yacht at that time'; Dáre^[l] mo siranai ZÍN BUTU da ga, ... 'He is a person no one knows, but ...' (SA 2676.110a) ← dáre^[l] mo [ga] [sono] zínbutu o siranai 'no one knows the person'; ... bóku(⁻) no ima-máde keiken sita kotó no náí óoki na ZÍKEN datta 'It was a big event that I had not experienced before' (SA 2647.63c) ← bóku(⁻) ga ima-máde [sono] óoki na ziken o keiken sita kotó ga náí 'there lacks any instance that I have up till now experienced [that] big event'; ... onsen ga waita to sitte, ... katta TOTI ... 'the land that they bought upon learning that a hot spring had emerged' (SA) ← [káre-ra ga soko ni] onsen ga waita to sitte ... toti o katta '[they] bought the land upon learning that a hot spring had emerged [there]'.)

Written Japanese has a special device to mark an extruded epitheme—most often the object of a transitive verb: N o VT → VT tokoró no N. This makes a sort of quasi passive, but it does not affect the subject in the adnominalized sentence: "Tegami" || wa || Húzita | Tasio [ga] tukúru | tokoró no || ... baráado de aru "The Letter" is a ballad ... composed by Fujita Tashio' (SA 2650.61b); Íma ya || Ikeda | ookura-dáizin no | iu tokoró no || "d'isuinhure-yósan" to wa, || ... 'What Treasury Minister Ikeda is now calling a "disinflationary budget" ...' (KKK 3.166); ... súbete no | hitóbito ga || kyuukyoku ni óite(⁻) || motómete iru | tokoró no | monó kara, || ... 'from the things that are demanded by everyone in the last analysis' (KKK 3.166). And the device sometimes occurs with an intransitive verb, marking an extruded subject (N ga VI → VI tokoró no N): Iwáyúru || puroretaria-dókusai to | musubi-túita | tokoró no | kyoosan-syúgi wa || ... minsyu-syúgi to wa || hizyoo ni tigatta seikaku o mótte iru 'The communism that is linked with the so-called dictatorship of the proletariat has an extremely different character from democracy' (KKK 3.166). Less commonly this device, a kind of relative pronoun manqué, is seen before the epithematized subject of a transitive verb: Sono eikyoo o ukéru | tokoró no | kodomó-táti ... 'Children affected by its influence ...'.

In addition to subjects and objects, other case-marked adjuncts can be extruded and epithematized; the examples below are arranged according to various subtypes found in §3 ff.

(1) ablatives—

(1a) *kará*: *Watasi ga garasu o hazusita MÁDO* ‘the window that I removed the glass from’ ← *Watasi ga [sono] mádo kara garasu o hazusita* ‘I removed the glass from the window’; *Doroboo ga kane o nusúnda GINKOO* ‘the bank that the thief stole the money from’ ← *Doroboo ga [sono] ginkoo kara kane o nusúnda* ‘The thief stole the money from the bank’; *Húzi-san no miéru MATÚBARA de hitóri no kookóo-sei ga zisatu o hakátta* ‘In a pine grove from which Mt Fuji could be seen a high school student contemplated suicide’ (SA 2648.116) ← *Matúbara kara Húzi-san ga miéru* ‘From the pine grove Mt Fuji can be seen’.

(1b) *kará/ní*: *Kodomo ga kane o moratta OZÍISAN* ‘the grandfather from whom the boy got money’ ← *Kodomo ga oziisan kara/ni kane o moratta* ‘The child got money from the grandfather’; *Eikyoo o ukeráreta NO wa, Tézuka(¯) san to ...* ‘Those whose influence you were affected by are Mr Tezuka and ...’ ← *[Anáta ga] HITO kara/ni eikyoo o ukeráreta* ‘[You] received influence from PEOPLE’—note that the passive is subject-exalting. On the cleft-sentence type, see §14.2.4.

(1c) *kará/dé*: *Kimono ga dekiru KINÚ* ‘silk that clothes are made from’ ← *[Sono] kinú kara/de kimono ga dekiru* ‘Clothes are made from the silk’; *Kodomo ga hako o tukúru KÍ* ‘wood for children to make boxes from’ ← *Kodomo ga [sono] kí kara/de hako o tukúru* ‘Children will make boxes from the wood’.

(1d) *kará/ó*: *Okyakusan ga déta HEYÁ* ‘the room that the guest has left’ ← *Okyakusan ga [sono] heyá kara/o déta* ‘The guest left the room’; *Dénsya(¯) ga syuppatu sita ÉKI* ‘the station the train departed from’ ← *Dénsya(¯) ga [sono] éki kara syuppatu sita* ‘The train departed from the station’.

(1e) *kará/ní/tó*: *Kodomo ga hagúreta TOMODATI* ‘the friend that the child has strayed from’ ← *Kodomo ga [sono] tomodati kara/ni(/to) hagúreta* ‘The child has strayed from his friend’; *Káno-zyo ga sibetu sita OTTO* ‘the husband that she has been separated from by death’ ← *Káno-zyo ga [sono] otto (kara/ni(/to) sibetu sita* ‘She has been separated from her husband by death’.

(1f) *kará/tó*: *Oyá ga kodomo o (hiki-)hanásita ASOBI-TÓMODATI* ‘the playmate that the father separated his child from’ ← *Oyá ga [sono] asobi-tómodati kara/to kodomo o (hiki-)hanásita* ‘The father separated his child from that playmate’.

(2) instrumental *dé*: *Ore ga pán o kítta NÁIHU* ‘the knife I cut the bread with’ ← *Ore ga [sono] náihu de pán o kítta* ‘I cut the bread with the knife’; *Tyósya ga genkoo o káita PÉN* ‘the pen with which the author wrote the manuscript’ ← *Tyósya ga [sono] pén de genkoo o káita* ‘The author wrote the manuscript with the pen’; ... *okámi kara kane ga korogari-kónde kúru SIKAKE ...* ‘a device by which money comes rolling in from the government’ (SA 2670.31a) ← *[sono] sikake de ... kane ga korogari-kónde kúru* ‘by that device money comes rolling in’; *Suu-nen máe ni wá-ga kuni no áru seirigákusya wa atamá no yóku náru KUSURI* to site *suisyoo sareta monó de atta* ‘A few years ago a certain Japanese biologist was recommending it [= MSG] as a drug with which the brain would improve’ (SA 2651.20a) ← ... *[sono] kusuri de atamá ga yóku náru* ‘with the drug the head will improve’—*sareta* is a passive used for subject-exaltation, here perhaps with sarcastic intent (for *V-ta monó da* ‘used to do’, see §13.2.1).

(3) communicational instrumental *dé*: Ore ga sore o yón¹da SINBUN 'the newspaper I read that in' ← Ore ga [sono] sinbun de sore o yón¹da 'I read that in the newspaper'; Ore ga sono kotobá o káita KANA 'the kana with which I wrote that word' ← Ore ga kana de sono kotobá o káita 'I wrote that word in kana'.

(4) causal instrumental *dé*: Kodomo ga gakkoo o yasúnda BYOOKI 'the illness with which the child stayed home from school' ← Kodomo ga [sono] byooki de gakkoo o yasúnda 'The child stayed home from school with (the) illness'.

(5) vehicular instrumental *dé*: Watási-táti ga itta KURUMA 'the car we went in' ← Watási-táti ga [sono] kuruma de itta 'We went in that car'.

(5a) causal instrumental/dative *dé/ni*: Watasi ga komátta MONÓ 'the one that I was embarrassed for/over' ← Watasi ga [sono monó =] sore ni/de komátta 'I was embarrassed for/over that one'.

(6) allative *é/ni*: Toosáreta HEYÁ wa wasitu de ... 'The room I was ushered to was Japanese style and ...' (SA 2659.131d) ← [Watasi ga] heyá e toosáreta '[I] was ushered to the room'; Yooróppa de mo, sono áto itta NYUU-YÓOKU de mo, mákisi ^[1] ságata no hitó wa takusan mimásita 'Both in Europe and in New York, where I went afterward, I saw lots of women in maxi-skirts' (SA 2665.104e) ← sono áto [watasi ga] Nyuu-Yóoku e itta 'afterward I went to New York'; Hazímete yatte kíta TOTI de zizyoo o siranái no de ... 'As they know nothing of the conditions in a place they have come to for the first time ...' (SA 2679.36b) ← [sono] toti e hazímete yatte kíta 'they have come to that place for the first time'.

(7) mutative-locative *ní* (for other locatives, see p. 629 and §13.1.3): Ore ga kane o ireta HAKO 'the box I put money in' ← Ore ga [sono] hako ni kane o ireta 'I put money in the box'; Ore ga notta KURUMA 'the car I got into' ← Ore ga [sono] kuruma ni notta 'I got into/onto the car'; Abunai bussitu o ténka(⁻) sita SYOKUHIN ga de-mawarú no wa ... 'The marketing of foodstuffs to which dangerous substances have been added' (SA 2664.93a) ← [sono] syokuhin ni abunai bussitu o ténka(⁻) sita 'they added dangerous substances to the foodstuffs'.

(8) dative of reference *ní* [tótte]: Kore ga tiisa-sugiru ANÁTA da kara 'Since it is you, for whom this is too small, ...' ← Kore ga anáta ni tiisa-sugiru 'This is too small for you'.

(9) miscellaneous datives and pseudo-datives *ní*:⁹ Motíron sukí de sánka(⁻) sita SIGOTO dá si ... 'Of course it was a job I participated in because I liked it ...' (SA 2651.67a) ← [watasi ga] ... [sono] sigoto ni sánka(⁻) sita '[I] participated in the job'; ... watasi no zoku-súru GURÚUPU de wa ... 'in the group that I belong to' (SA 2653.38d) ← watasi ga [sono] gurúupu ni zoku-súru 'I belong to the group'; ... murásaki no husá no túita takái MÁKURA ... 'a high pillow with purple tassels attached (to it)' ← ... husá ga [sono] ... mákura ni túita (or: túite iru) '... tassels are attached to the ... pillow'.

(10) dative of confrontation *ní* [tái-site]: Ore ga kátta AITÉ 'the partner I won from' ← Ore ga [sono] aité ni kátta 'I won from that partner'; Káre ga horeta ONNÁ 'the woman he fell in love with' ← Káre ga [sono] onná ni horeta 'He fell in love with the

9. An epithematized dative that has been pronominalized to serve as a (specificative-)genitive theme: Genkin ga irú NO wa, tippu ^[1] gúrai no monó ka to omótte itára, resutoran ya kúrabu de no tippu wa, káado de oo-kée 'What you might think you'd need cash for is tips at least but tips at restaurants and night clubs are OK [to be put] on your credit card' (SA 2660.25). The immediate source is SORE (= tippu) ni genkin ga iru 'cash is needed for IT (= tips)'.

woman'; Tóku ni sono syuyoo na kuni wa, Nihon-séihu ga yowái AMERIKA de áru 'Particularly prominent among those countries is America, toward which the Japanese government is particularly partial' (SA 2685.24c) ← Nihon-séihu ga Amerika ni [tái-site] yowái 'the Japanese government is partial to ("soft on") America'; Tái-site túyoku mo náí SAKE o ... nomi-sugosite simatta ... '(He) ended up drinking too much rice wine, which he was not particularly good at holding ...' (SA 2793.96b).

(10) reciprocal-dative *tó/ni* (cf. p. 000): Gaikoku de watasi ga átta HITÓ-TATI ... 'The people I met abroad' (SA 2658.61a) ← . . . [sono] hitó-tati to/ni átta 'I met those people'; ... átte ma-mo-náí KIMI 'you whom I met not long ago' (or, with the epitheme taken as extruded subject: 'you who met [me] not long ago') (R) ← [Bóku(°) ga] kimi to/ni átte ma-mo-náí 'It is not long since I met you'; ... watasi zísín ga hure-átta GUNZÍN-TÁTI wa ... 'the military men that I came in contact with' (SA 2688.108c) ← ... [sono] gunzín-táti to/ni átta 'I came in contact with [the] military men'; Watasi ga Tároo o syookai sita TOMODATI 'the friend to whom I introduced Taro' ← Watasi ga [sono] tomodati (to/ni) Tároo o syookai sita 'I introduced Taro to my friend'; Sensei ga Tároo o kurabeta KODOMO 'the child that the teacher compared Taro with/to' ← Sensei ga [sono] kodomo to/ni Tároo o kurabeta 'The teacher compared Taro with/to that child'; Zibun ga kankei sita OTOKO no kázu sae mo wakaránai no da kara '(It's) because she doesn't even know the number of men she has had relations with' (SA 2650.105e) ← zibun ga [sono] otokó to/ni kankei sita '[she] herself has had relations with [the] men'; ... sityóo no kankei suru GINKOO kara ... 'from a bank that the mayor was connected with' (SA 2647.135c) ← Sityóo ga [sono] ginkoo to/ni kankei suru 'The mayor is connected with the bank'.

(11) reciprocal *tó*: ... káre ga tatakau AITÉ mo ... 'the very adversaries that he fights (with) ...' (SA 2679.104a) ← Káre ga [sono] aité to tatakau 'He fights (with) the adversary'; Nán ⁽⁶⁾ de mo hanásí ⁽⁷⁾ no dekiru YUUZIN ... 'a friend that he can talk about anything with' (SA 2645.103c) ← [káre ga] yuuzin to ... hanásí ga dekiru '[he] can talk ... with the friend' ← [káre ga] yuuzin to hanásu '[he] talks with the friend' (on the reciprocal valence with the derived noun *hanásí*, see §3.8a); Tomodati ga kekkon sita ONNÁ 'the woman my friend married' ← Tomodati ga [sono] onná to kekkon sita 'My friend married the woman'; Káre ga kenka sita TOMODATI 'the friend he quarreled with' ← Káre ga [sono] tomodati to kenka sita 'He quarreled with his friend'; Ore ga issyo ni gakkoo e itta GAKUSEI 'a student who(m) I went to school with' ← Ore ga [sono] gakusei to issyo ni gakkoo e itta 'I went to school with the student'; Hahaoya mo gek{;}koo sita. Kyoosi-nákama de ári, dóosi de mo átta GABURÍÉRU ga ... 'The mother was indignant (too). Gabrielle with whom she [the mother] was a fellow teacher and a [Party] comrade ...' (SA 2649.105) ← [Hahaoya ga] Gaburiéru to kyoosi-nákama de ári, dóosi de mo átta '[The mother] was a fellow teacher and a comrade with Gabrielle'. An alternative interpretation ('Gabrielle who was ... with her [the mother]') would treat Gabrielle as an extruded subject, with the reciprocal phrase ('with her') elliptically suppressed.

An epithematized REASON usually involves a summational or transitional epitheme such as *riyuu* 'reason': Anáta ga katyoo ni nari-nikúku nátta RIYUU wa, máda áru 'There are still more reasons why it has become difficult for you to become a section head' (SA 2668.22c) ← [sono] riyuu de anáta ga ... 'for [those] reasons you ...'. An epithematized PURPOSE is similar: Watási-táti ga sinkon-ryókoo ni Oosutorária o eránda MOKUTEKI wa iroiro arimásita ga, ... 'We had various aims in selecting Australia for our

honeymoon, and ...' (SA 2676.106c) ← [sono] mokuteki de watási-táti ga ... 'with [those] aims we ...'.

It is awkward to epithematize an adjunct whose relationship to the rest of the sentence is incongruous without the particle. From A ga B to naka-ii 'A is on good terms with B' you would expect to get A ga naka-ii B 'B whom A is on good terms with', but that is usually replaced by A ga náka no ii B. From A ga B to onazi da 'A is the same as B' you expect to get both (1) A ga onazi no B 'B that A is the same as' and (2) B to onazi [no] A 'A that is the same as B', but in the latter case the version without nó is preferred.

The following examples of epithematized TIME locatives include some time nouns that are directly adverbialized (unmarked by ní) in the underlying sentence: Otona ni nátta ima mo ... 'Even now that I've become an adult ...' ← ima otona ni nátta 'I've now become an adult'; Kessei-táikai ga átta kúgatu ituká(¯) gógo ní-zi yonzíp-pun ¯góro, ... 'At 2:40 p.m., the fifth of September, when they had the inaugural session ...' ← kúgatu ... ¯góro [ni] kessei-táikai ga átta 'at ... of September they had the inaugural session'; ... kóoto o núgu kisétu ni nátte ... 'when it gets to be the season to take off your coat' (SA 2679.37b) ← [sono] kisétu ni kóoto o núgu 'in that season you take off your coat'; Sibai ga en-zirárete(¯) iru ittei no zikan ni ... 'During the set time that the play is being performed ...' (SA 2689.121d) ← Ittei no zikan ni sibai ga en-zirárete(¯) iru 'The play is being performed at (or: for/during) a set time'. The epithematized time locative may serve any noun function in the larger sentence, but frequently it serves again as a time locative: Ogyáa to umareta hí ni sutáato site ... 'Starting on the day of whimpering birth ...' (SA 2685.112c) ← [sono] hí ni ogyaa to umareta 'was born with a whimper on that day'; Orinpíkku no átta Syóowa(¯) sánzyuu kyúu-nen ni génzai no bénri na séido ga dékita n desu ga ... 'In 1964 when the Olympics took place the present convenient system was set up but ...'; Óotani [Takezíroo] san, Amerika kara hikóo-ki de o-kaeri ni nátta sono ban ni "Yookihi" o go-ran ni nátte ... 'The night that Mr [Takejirō] Ōtani returned from America by plane he saw the play "Yang Kuei Fei" ...' (Tk 3.328b) ← sono ban [ni] o-kaeri ni nátta 'returned that evening'. In these sentences the ní is new, not carried over from the adnominalized sentence, since all case marking is suppressed when a noun is epithematized.

Examples of epithematized PLACE locatives: ... páat'ii no átta koyá(¯) 'the cottage at which they had the party' (SA 2637.26d) ← [sono] koyá(¯) de páat'ii ga átta [= okótta, okonawareta] 'they had a party at the cottage'; Kusá no háeta basyo o ... 'a place where grass had grown' (Takahashi 173) ← [sono] basyo ni kusá ga háeta; Ningen ga ikíru kono-yó(¯) ni meikai na kotáé nádo ari-úru hazu ga náí 'In this world that man lives in we can't expect to be able to have clearcut answers' (SA 2649.108b) ← ningen ga kono-yó(¯) ni ikíru 'man lives in this world'.

Not every epitheme that refers to a time has been extruded from the time-locative of the simplex. In Sore kara nízyúu-nen tátta 1970-nen [sén kyúuhyaku sitizyúu-nen] ... '1970 when twenty years had passed since then ...' (SA 2685.17d) the year designation is either a resultative epitheme (the particular year resulting from the passage of twenty years) or, possibly, a transitional epitheme—specifying tokí 'time when [twenty years had passed]'. The epitheme zyun or zyunban '(one's) turn' must be treated as either summational or transitional in examples of this sort: ... yome o morau ZYUN no watasi ga, ... 'I whose turn it was to receive a bride [= get married]' (SA 2684.138c).

The source of an extruded epitheme is not always obvious. The phrase Watasi no míru/míta tokoró de wa ... 'In my view ...' (= Watasi no kangáe de wa ...) is apparently derived

from [sono] tokoró O míru 'sees the situation' (tokoró here meaning zyootai 'situation' or mondai 'question') rather than from [sono] tokoró KARA míru 'sees [it] from that place (= position)' with tokoró interpreted as tatibá 'standpoint'. In the sentence Bírú o nómu to tóire ni iku KAI-SÚU ga óoku náru 'When one drinks beer the number of trips to the toilet increases' (Endō 111) the epitheme is a noun extruded from an adverbialized expression of frequency [áru] kai-súu de tóire ni iku 'goes to the toilet with [a certain] frequency'.

13.1.2. Epithematization of Adjuncts Extruded from Converted Sentences.

In general it is possible to extrude any adjunct from a converted sentence and epithematize it as the target of the adnominalization and as the point of embedding (i.e. as the shared word) in a larger sentence. Of particular interest are the various marking switches with VOICE conversions (§4) and with FAVORS (§10); subjectification of various adjuncts with DESIDERATIVES (§7.1), FACILITATIVES and PROPENSIVES (§9.1.8), and INTRANSITIVIZING RESULTATIVES (§9.2.4.(2)); and adjunct markings with the MUTATIVE, PUTATIVE, and EVALUATIVE conversions of §9.1.11. Separate sections treat the epithematization of adjuncts in existential, locative, and possessive sentences (§13.1.3) and in identificational and proredicative sentences (§13.1.5).

Notice that the "comitative" N *tó* amounts to the reciprocal *tó* + an adverbialization *issyó/tómo*(~) ni 'together' that is optionally omissible, as explained in §3.6. It is possible to extrude and epithematize the reciprocal provided the adverbial is NOT omitted: *Kodomo ga ane to fissyó ni neru* 'The child sleeps with the sister' → *Kodomo ga issyo ni neru ane* 'The sister that the child sleeps with', but not **Kodomo ga neru ane* 'The sister that the child sleeps []' since there is nothing left to hint at the reciprocal valence.

Here is an epitheme extruded from a reciprocal-dative in a sentence that is embedded in an experiential possessive conversion (§14.1.1); observe how this conversion permits the *sika*-related negative to skip over to the verb of possession (cf. pp. 76-7): ... *sono hwán wa ni-sankai sika átta kotó no náí HITÓ de*, ... 'the fans were people he had only seen two or three times' (SA) ← ... *ni-sankai sika [soré-ra no] hito (to/)ni átta kotó ga náí* 'has met the people only two or three times'. A similar example without the *sika*: *Hatoyama san nánte, átta kotó mo náí HITÓ da keredo mo*, ... 'Mr Hatoyama is someone I have never even met but ...' (Tk 2.159b). An epitheme extruded from the direct object of a sentence embedded in an experiential possessive conversion: *Dóko ka de míta kotó ga áru KAO dá to omóttara, watasi ga yóku miti de áu kuriiningu-ya no wakamonó*(~) *ni nite iru* 'Just as I thought it was a face that I had once seen somewhere I realized that it resembles [that of] a boy from the cleaners that I often see on the street' (SA 2684.41c) ← *Dóko ka de [sono] kao o míta kotó ga áru* 'I had seen the face somewhere'.

In the following example the epitheme is extruded from the subject of a sentence adnominalized to *hazu da*: *Tyoosý-sya tte no wa, yonaká ni ókite benkyoo site iru hazu no HITÓ ga syutai na wáke desyo* 'It must mean that the [radio] audience is mostly comprised of people who are presumably up studying late at night' (SA 2684.115a) ← *hito ga ... benkyoo site iru hazu da* 'people are presumably studying'. An example with the epitheme extruded from the object of a transitive verb adnominalized to the postadnominal *wáke* in the expression *wáke ni ikanai* 'it doesn't stand to reason that': ... *úmi o ume-táte yamá o kezutté mo yooi ni huyásu wáke ni ikanai TOTI*, ... 'land that you can't expect to expand very easily even filling in the sea or cutting into the mountains' (Tanigawa 155).

And in this example the epitheme is extruded from the object of a sentence adnominalized to *tumori da*: Zibun de suru tumori dáttá TÉSUTO ... 'The test I had planned to do myself ...' ← [sono] tésuto o zibun de suru tumori dáttá 'I had planned to do the test myself'.

In the following example the object ('operation') has been extruded from a highlighted negative gerund ('even not performing') to serve as the epitheme for an expression of permission: ... sinákute mo ii SYÚZYUTU o sareru baai mo áru 'sometimes one undergoes operations that would be as well unperformed' (Tk 4.3a) ← [sono] syúzyutu o sinákute mo ii 'it would be all right not to perform the operations'. (The epitheme, with its adnominalization, is then used as the direct object of an adversative passive and THAT sentence in turn is adnominalized to the summational epitheme baai 'situation' which serves as the subject—here highlighted—of the verb áru 'there exists'.)

On epithemes extruded from adverbializations, see Kuno 1973.237–8, who gives such examples as sindá no de minná^[1] ga kanasínda HITÓ 'a person by whose death all were saddened' (← sonó-hito ga sindá no de ...) and hara-íppai tábetara geri o site simatta O-KÁSI 'sweets that I got diarrhea from eating a bellyful of' (← [sono] o-kási o tábetara ...); Kuno also gives examples of epithemes extruded from adnominalized sentences.

To explain the sentence ... damátte wa irarenai hitótu no mondai ga áru 'there is one matter that I can not be silent about' (Grootaers 178) we must assume an underlying hitótu no mondai NI TÚITE damátte wa irarenai 'about one matter I can not remain silent'. Notice that warúi kotó o kangaeraré^[1]nai hitó is susceptible to two interpretations (at least): 'a person who can think nothing bad' (← [sonó-]hito ni/ga warúi kotó o kangaeraré^[1]nai) and 'a person whom one can think nothing bad of' (← [sonó-]hito ni túite [N ni/ga] warúi kotó o kangaeraré^[1]nai). Can epithemes be extruded from phrases marked by others among the many phrasal postpositions listed in §9.7 (shedding the postposition as if it were merely a case marker)?

It is difficult to account for the epitheme in the following example until you realize that ellipsis has deprived the verbal noun seturitu of the predicating auxiliary gerund site^[1]: ... seturitu ma-mo-nái NATI-TOO to sessyoku sita káre wa ... 'He who had made contact with the Nazi party not long after its formation' (SA 2674.105c—the free translation will be 'having made contact ... he ...') ← Nati-too ga seturitu site ma-mo-nái 'The Nazi party is established and then it is not long = It is not long since the Nazi party was formed'. The epitheme is the extruded subject of the intransitive verbal noun in an adverbialized sentence; the nature of the adverbialization is somewhat obscured by the ellipsis.

The reader is cautioned that the "concocted examples" (and some of the translations) provided in the following several sections are for the most part quite artificial and are presented only to illustrate the grammatical structures in question, for which it is assumed that more natural examples can eventually be found. It is difficult to find good basic situations in which both subject and object are animate (since typically PEOPLE manipulate THINGS); and it is not always easy to apply conversions freely to particular sentences, even when the sentences themselves are fairly natural to begin with. I hope those who use this book will be alert for authentic examples to illustrate each of the grammatical structures for which I have had to rely on concocted examples. (An AUTHENTIC example is one not created by or for a linguist but actually used in a communicative situation.)

13.1.2. (1). *Epithemes extruded from voice-converted sentences.* From the description presented in §4 we can expect epithematization to yield 25 types of adjunct extrusion from the valences of a simple underlying transitive verb (N_1 ga N_2 o VT)¹⁰ and these are displayed in the following chart with constructed examples; similar examples for intransitive verbs—with fewer valences, hence fewer types—can easily be made up according to the patterns given. The translations that accompany the examples are intended to be suggestive rather than smooth: in general all adjuncts are translated as singular and definite; 'that' is used to introduce adnominalizations even when 'who' or 'where' or 'when' would produce better English; and the ambiguous English auxiliary 'have' is used for both passive and causative—and later for favor receipt, as well. Most of the constructed examples are given in the perfect since that makes it easier to visualize situations that might lead to their creation. It is difficult to find adequate examples from real texts because the adjuncts are so often omitted—or neutralized with focus—and the intention of the writer or speaker is not always clear from what remains. But I have started compiling a list of authentic examples that will be found at the end of the chart; bear in mind that few of these examples contain ALL adjuncts appropriate to the formulas they illustrate. Notice also that the formulas in the chart illustrate only TRANSITIVE verbs; formulas for the intransitives (found in some of the examples) are the same but without the direct object.

A ga B o VT

tomodati ga kodomo o yonda
'the friend called the child'

1 *A ga VT B*

tomodati ga yonda kodomo
'the child that the friend called'

2 *B o VT A*

kodomo o yonda tomodati
'the friend that called the child'

CAUSATIVE

C ga A ni B o VT-c

háha ga tomodati ni kodomo o yobaseta
'the mother had the friend call the child'

3 *C ga(?/no) A ni VT-c B*

háha ga(?/no) tomodati ni yobaseta kodomo
'the child that the mother had the friend call'

4 *C ga(?/no) B o VT-c A*

háha ga(?/no) kodomo o yobaseta tomodati
'the friend that the mother had call the child'

5 *A ni B o VT-c C*

tomodati ni kodomo o yobaseta háha
'the mother who had the friend call the child'

PURE PASSIVE

B ga A ni VT-p

kodomo ga tomodati ni yobareta
'the child got called by the friend'

6 *A ni VT-p B*

tomodati ni yobareta kodomo
'the child that got called by the friend'

7 *?^a B ga(?/no) VT-p A*

kodomo ga(?/no) yobareta tomodati
'the friend that the child got called by'

10. But for those verbs that have additional valences, such as the motion verbs, the number of types will increase. Reciprocal, instrumental, ablative, and allative-or-dative epithematizations are not shown in the 25 types; examples are included among the sentences at the end.

ADVERSATIVE PASSIVE

- C ga A ni B o VT-p*
háha ga tomodati ni kodomo o yobareta
'(unfortunately) the mother had the
friend call the child'
- 8 *C ga(?/no) A ni VT-p B*
háha ga(?/no) tomodati ni yobareta kodomo
'the child that (unfortunately) the mother
had the friend call'
- 9 ? *C ga(?/no) B o VT-p A* [Okutsu 1974.149 rejects.]
háha ga(?/no) kodomo o yobareta tomodati
'the friend that (unfortunately) the mother
had call the child'
- 10 *A ni B o VT-p C*
tomodati ni kodomo yobareta háha
'the mother that (unfortunately) had the
friend call the child'

(PASSIVE-) POTENTIAL

- A ni/ga B ga(/o) VT-p*
tomodati ni/ga kodomo ga(/o)
yob[ar]eru
'the friend can call the child'
- 11 *A ni/ga/no VT-p B*
tomodati ni/ga/no yob[ar]eru kodomo
'the child that the friend can call'
- 12 *A ga(/o/no) VT-p A*
kodomo ga(/o/no) yob[ar]eru tomodati^b
'the friend that can call the child'

PURE PASSIVE-CAUSATIVE

- A ga C ni B o VT-c-p*
tomodati ga háha ni kodomo o
yobas[er]areta
'the friend was had call the child by
the mother'
- 13 *A ga(?/no) C ni VT-c-p B*
tomodati ga háha ni yobas[er]areta
kodomo
'the child that the friend was had to call
by the mother'
- 14 *C ni B o VT-c-p A*
háha ni kodomo o yobas[er]areta tomodati
'the friend that was had to call the child
by the mother'
- 15 *A ga(?/no) B o VT-c-p C*
tomodati ga kodomo o yobas[er]areta
háha
'the mother that the friend was had to call
the child by'

SWITCHED (PURE) PASSIVE-CAUSATIVE^c

- B ga A ni, C ni VT-c-p*
kodomo ga tomodati ni, háha ni
yobas[er]areta
'the child was called by the friend at
the mother's instigation'
- 16 *A ni, C ni VT-c-p B*
tomodati ni, háha ni yobas[er]areta
kodomo
'the child that was called by the friend at
the mother's instigation'

- 17 *B ga(?/no) C ni VT-c-p A*
 kodomo ga(?/no) háha ni yobas[er]areta
 tomodati
 'the friend that the child was called by at
 the mother's instigation'
- 18 *B ga(?/no) A ni VT-c-p C*
 kodomo ga(?/no) tomodati ni
 yobas[er]areta háha
 'the mother at whose instigation the child
 was called by the friend'

ADVERSATIVE PASSIVE-CAUSATIVE^d

- D ga C ni, A ni B o VT-c-p*
 titi ga háha ni, tomodati ni kodomo
 o yobas[er]areta
 '(unfortunately) the father had the
 mother have the child called by the
 friend'
- 19 *D ga(?/no) C ni, A ni VT-c-p B*
 titi ga(?/no) háha ni, tomodati ni
 yobas[er]areta kodomo
 'the child that (unfortunately) the father
 had the mother have the friend
 call'
- 20 *D ga(?/no) C ni, B o VT-c-p A*
 titi ga(?/no) háha ni, kodomo o
 yobas[er]areta tomodati
 'the friend that (unfortunately) the father
 had the mother have the child called by'
- 21 *D ga(?/no) A ni B o VT-c-p C*
 titi ga(?/no) tomodati ni kodomo o
 yobas[er]areta háha
 'the mother that (unfortunately) the
 father had have the child called by the
 friend'
- 22 *C ni, A ni B o VT-c-p D*
 háha ni, tomodati ni kodomo o
 yobas[er]areta titi
 'the father that (unfortunately) had his
 wife have the friend call the child'

POTENTIAL CAUSATIVE

- C ni/ga A ni B ga(/o) VT-c-p*
 háha ni/ga tomodati ni kodomo
 ga(/o) yobaser[ar]eru
 'the mother can have the friend
 call the child'
- 23 *C ni/ga(?/no) A ni VT-c-p B*
 háha ni/ga(?/no) tomodati ni
 yobaser[ar]eru kodomo
 'the child that the mother can have the
 friend call'
- 24 *A ni B ga(/o) VT-c-p C*
 háha ni/ga(?/no) kodomo ga(/o)
 yobaser[ar]eru tomodati
 'the friend that the mother can have call
 the child'

25 *A ni B ga(/o) VT-c-p C*

tomodati ni kodomo ga(/o) yobaser[ar]eru
 háha
 'the mother that can have the friend call
 the child'

^a An example has been suggested to validate the grammar: *Watasi ga/no yobaretá no wa ano senseí da* 'The one I got called by was that teacher'. See also Okutsu 1974.149.

^b *Kodomo no yoberu tomodati* and *Tomodati no yoberu kodomo* are both ambiguous. For authentic examples, see list.

^c But most speakers will reject this conversion and the resulting adnominalizations (16-18).

^d But many speakers will reject this conversion and the resulting adnominalizations (19-21).

EXAMPLES OF EPITHEMATIZATIONS FROM VOICE-
 CONVERTED SENTENCES

(listed by type)

...

5. ... *zibun no kodomo o sensi saseta WATÁSI-TÁTI HAHAOYA ni tótte* ... 'for us mothers who let our sons die in the war' (SA 2793.133c).

6. *Muné no soko-kásiko ni miraréru HÉNKA no náka de* ... 'Among the changes seen here and there in the chest ...' (SA 2651.21d); *Amerika syokuminti-kyóokai ga okutta ziyuukókuzin-tati ni yotte 1847'-nen [sén happyakú] yónzyuu siti'-nen* ni kenkoku sareta kono KUNI wa ... 'This country [of Liberia] that was established in 1847 by free blacks sent by the American Colony Society ...' (SA 2664.44c); *Kát[u]te tyúugaku o déte kootoo-gákoo kara daigaku e sumumu tamé ni wa, erabáreta SYUUSAI ígai ni wa semái món de atta* 'Formerly it was a narrow gate to go on to college from high school after leaving middle school, except for selected prodigies' (KKK 3.284); *Gógatu sue ni hirakaréru Nikkyóo-so ZENKOKU-TÁIKAI wa* ... 'The national convention of the Japan Teachers Union to be held at the end of May ...' (KKK 3.284); *Konó-goro(-) tokai de tukawareru MÍSO wa* ... 'The *miso* used in cities these days ...' (Kotoba no yurai 160); *Nónde {wa} ikenai to sarete iru TOTI NO MIZU o, ukkári nónde simatta áto* ... 'After one has inadvertently drunk local water that is considered unfit for drinking ...' (SA 2689.122d); *Gízyutu daké ni sáyuu sareru SUPÓOTU nara,* ... 'If it's a sport that is controlled by skill alone ...' (Tk 3.217a).

8. ... *yuu-síkáku no kangó-hu de sae mo kin-zirárete(-) iru KÓOI na no da* 'It is conduct that even qualified nurses have forbidden to them' (SA 2666.113)—from *kangó-hu ga kóoi o kin-zirárete(-) iru*, in turn from [*dáre ka ga*] *kangó-hu ni kóoi o kin-zíru(-)* '[someone] forbids the conduct to the nurses'.

10. ... *kubi o kiráreta OTOKÓ* 'a man who had his head cut off' (Ōno 1966.80). With intransitive verb: ... *túma ni naku-narareta TYUUNEN-ÓTOKO ga syuzínkoo de atte,* ... 'the hero is a middle-aged man who has lost his wife' (SA 2687.108d).

11. *Wasurerarenai AZI* 'Unforgettable tastes' (SA); *Tanin ní wa dasénai AZI désu kara né* 'It is a flavor that others can not produce, that's why' (SA 2661.44d)—from *Tanin ní/ga azi o/ga daséru* 'Others can produce the flavor' from *Tanin ga azi o dásu* 'Others produce the flavor'; ... *bóku-táti ga issyo ni kuraseru HÍ ga* ... 'the days we could spend together' (SA)—from *bóku-táti ni/ga* ... *hi o/ga kuraseru* 'we can spend days' from *bóku-táti ga hi o kurasu* 'we spend days'; ... *otona no tanosiméru SIBAI o miséru* 'they

show a play that an adult can enjoy' (SA 2688.109a)—from *otona ga ...* (§ 13.1.6) = *otona ni/ga sibai o/ga tanosiméru* 'adults can enjoy the play' from *otona ga sibai o tanosímu* 'adults enjoy the play'. But in *Hará o kakáete(-)* *waraeru SIBAI o* 'A play that you can laugh your head off at' (SA 2688.109ab, heading—with nuclear ellipsis at the end) the epitheme is perhaps better taken as extruded cause (*sibai DE warau* 'laughs because of the play') rather than object (*sibai O warau* 'laughs at [= ridicules] the play').

12. ... *zí no yoméru KO wa ...* 'the child who can read characters' (SA 2677.54c) ← *ko ni/ga zí ga yoméru* ← *ko ni/ga zí ga/o yoméru* 'the child can read characters' ← *ko ga zí o yómu* 'the child reads characters'.

14. With intransitive verb: ... *baisyun saserarete iru ONNÁ-TATI wa ...* 'women forced into prostitution' (KKK 3.248) ← [*hito ni*] *onná-tati ga baisyun saserareru* 'the women are forced [by people] into prostitution' ← [*hito ga*] *onná-tati o baisyun saseru* '[people] force the women to engage in prostitution' ← *onná-tati ga baisyun suru* 'the women engage in prostitution'.

...

Pure passive with TIME epithematized: *Nan-to-náku hadasámu-sa no kan-zirareru ÁSA desita* 'It was a morning in which something of a chill was felt' (KKK 3.282) ← *ása* {*ni*} [*hito ga*] *hadasámu-sa o kan-ziru* '[people] feel a chill in the morning'.

Pure passive with ALLATIVE epithematized: *Toosáreta HEYÁ wa wasitu dé ...* 'The room I was ushered to was Japanese style and ...' (SA 2659.131d) ← [*watasi ga*] *heyá e toosáreta* 'I was ushered to the room' ← [*hito ga watasi o*] *heyá e toosita* '[they] ushered me to the room'.

Pure passive with DATIVE epithematized: *Ráhu no hukusei o miseráreta OKAMOTO KÁNOKO ga ...* 'Kanoko Okamoto who has been shown a reproduction of a nude ...' (Ōno 1966.19)—or was this intended as an adversative passive? (Note the object-marking!)

Pure passive with PLACE-LOCATIVE epithematized: *Zinken no omon-zirárete(-)* *iru KUNI dé wa ...* 'In a country where human rights are prized ...' (SA 2647.25e)—with personification this could be taken as an extruded agent ('prized by the country').

Pure passive with MUTATIVE-LOCATIVE epithematized: *Sono tóki, kéeki no okareta TEEBURU no sǔgu sóba ni ita ... gurúpu ...* 'At that time the group that was right next to the table (where the cakes were put =) laden with cakes' (CK) ← *teeburu ni kéeki ga okareta* 'onto the table the cakes were put' ← [*hito ga*] *teeburu ni kéeki o oita* '[someone] put the cakes on the table'; *Ningen wa, tokaku zibun no okareta ÍTI o hyoozyun ni site, tentai-génsyoo názo o kangáeru n desu* 'Man is apt to think about celestial phenomena and the like by taking as his standard the position that he himself has been placed in' (Tk 3.159a); *Onná ga sei-teki ni isyuku site simáu no wa, hamerarete ita WAKU no séi na n desu né* 'It's the fault of the [framework of] restrictions they have been hemmed in with that women wither sexually' (Tk 3.109a).

Potential with INSTRUMENTAL epithematized: *Asoberu ÓBUZYE* 'Objets [d'art] you can play with' (SA 2680.3) ← [*sono*] *óbuzye de asoberu* 'you can play with the objets'.

Potential with PLACE-LOCATIVE epithematized: ... *ano hen dé wa yúitsu no óyogéru BASYO da ...* 'it is the only place in the vicinity where you can swim' (SA 2689.126b)—the immediate sources are *ano hen dé wa yúitsu no basyo da* 'it's the only place in that vicinity' and [*sono*] *basyo de oyogéru* 'you can swim in [that] place'.

Evidentialized potential with underlying OBJECT epithematized: *Zibun de kake-sóo na monó ...* 'something that looks as though you could draw it yourself' (Tk 3.258a).

13.1.2.(2). *Epithemes extruded from favors*. For the giving and getting of FAVORS (§10) we expect epithematization to yield six types of extruded adjuncts for an underlying transitive verb, and these are shown in the following chart with constructed examples:

A ga C ni B o VT-te GIVE
 tomodati ga háha ni kodomo o
 yonde ageta
 'the friend called the child
 for the mother'

1 *A ga(?/no) C ni VT-te GIVE B*
 tomodati ga(?/no) háha ni
 yonde ageta kodomo
 'the child that the friend called
 for the mother'

2 *C ni B o VT-te GIVE A*
 háha ni kodomo o yonde ageta
 tomodati
 'the friend that called the child
 for the mother'

3 *A ga(?/no) B o VT-te GIVE C*
 tomodati ga(?/no) kodomo o
 yonde ageta háha
 'the mother for whom the friend
 called the child'

C ga A ni B o VT-te GET
 háha ga tomodati ni kodomo o
 yonde moratta
 'the mother had the child
 called by the friend'

4 *C ga(?/no) A ni VT-te GET B*
 háha ga(?/no) tomodati ni yonde
 moratta kodomo
 'the child that the mother had
 called by the friend'

5 *A ni B o VT-te GET C*
 tomodati ni kodomo o yonde
 moratta háha
 'the mother that had the child
 called by the friend'

6 *C ga(?/no) B o VT-te GET A*
 háha ga(?/no) kodomo o yonde
 moratta tomodati
 'the friend that the mother had
 the child called by'

And we can add four more types by doubling the favor conversion:

*D ga A ni [wa] C ni B o VT-te
 GIVE-te GET*
 titi ga tomodati ní [wa] háha ni
 kodomo o yonde agete moratta
 'the father had the friend call
 the child for the mother'

7 *D ga(?/no) A ni [wa] C ni VT-te
 GIVE-te GET B*
 titi ga(?/no) tomodati ní [wa] háha ni
 yonde agete moratta kodomo
 'the child that the father had the
 friend call for the mother'

- 78 *D ga(?/no) A ní [wa] B o VT-te*
GIVE-te GET C
 tití ga(?/no) tomodati ní [wa] háha ni
 kodomo o yonde agete moratta háha
 'the mother that the father had the friend
 call the child for'
- 9 *D ga(?/no) C ni B o VT-te*
GIVE-te GET A
 tití ga(?/no) háha ni kodomo o yonde
 agete moratta tomodati
 'the friend that the father had call the
 child for the mother'
- 10 *A ni [wa] C ni B o VT-te*
GIVE-te GET D
 tomodati ní [wa] háha ni kodomo o
 yonde agete moratta tití
 'the father who had the friend call
 the child for the mother'

We would expect more types to result if we continued reapplying the favor conversions, but it would be difficult—if not impossible—to find real examples, since even a doubling of the above sort (7-10), receiving the favor of someone's doing it for another, is uncommon.

Authentic examples for a few of the types:

(1) ... Gankiti no hidari-úde no, okáasan ga motásete kureta tokei ga kyou ni ziriziritto nari-dasimásita 'The watch on Gankichi's left (arm =) wrist that his mother had let him have suddenly started to buzz impatiently' (KKK 3.84) ← okáasan ga [G. ni] tokei o motásete kureta 'the mother kindly let him [G.] have the watch' ← okáasan ga [G. ni] tokei o motáseta 'the mother let him [G.] have the watch' ← [G. ga] tokei o mótta '[G.] got the watch'.

(2) Bira(¯) o goman-mai mo máite senden site kureta SYUSÁI-SYA ni, honto ni kinodókú na kotósimásita yó 'I really did a pitiful thing to the promoter who had distributed over fifty thousand handbills to advertise me' (Tk 3.105a) ← syusái-sya ga [watakusi ni [koogi(¯) o]] senden site kureta 'the promoter kindly advertised [[the lecture] for me]'; ... koko máde itte kureru dansei mo inákatta si, ... 'there wasn't a male present would go this far (in what he said)' (R); ... unde kureta okáasan ... '... Mother who gave birth to me ...' (R). In the example ... unde kureta bókú(¯) ... 'me whom she (kindly) gave birth to' (R)—the epitheme is both the object and the recipient of the favor.

(6) ... túuyaku o site morau hitó ga hosíi n desu 'we want a person who will do translation for us' (BJ 2.300) ← [watási-táti ga sonó-]hito ni túuyaku o site morau 'we have the person do translation for us' ← [sonó-]hito ga túuyaku o suru 'the person does translation'.

In the following two examples the desiderative is made on a favor conversion and the result is then turned into a negative (in the first example) and an evidential (in the second) before extruding the epitheme—which ultimately comes from an underlying object (yátu o utúsu 'photographs a guy'): ... utúsíte morai-taku náí yátu ... utúsíte morai-ta-soo na yátu ... 'a guy who doesn't want to have himself photographed ... a guy who looks as though he wants to have himself photographed ...' (Tk 3.274a).

Additional types will also appear with the application of both VOICE and FAVOR, e.g. such an improbably constructed sentence as (?)Obáasan ga tití ni tomodati ni háha ni kodomo o yonde agete morawaseta (or morawareta) 'The grandmother let/had the father have the friend call the child for the mother' or even (!)Oziisan ga obáasan ni tití ni tomodati ni háha ni kodomo o yonde agete morawasereta '(Unfortunately) the grandfather had the grandmother let the father have the friend call the child for the mother'. But it is highly unlikely that any speaker would want to embed such a complicated sentence into a larger sentence—if, indeed, he would be willing to put it together in the first place.

13.1.2.(3). *Epithemes extruded from desiderative and quasi-desiderative sentences.*

The interesting question with respect to desiderative and quasi-desiderative predicates is the surface marking of the underlying cathectic object—representing the role of the "desired" (or "undesired"). The chart below shows the expected epithematizations of (1) a desiderativized transitive verb; of (2) the quasi-desiderative predicates *kowái* 'fears' and *sukí da* 'likes' (for which we could substitute either of the two other quasi-desiderative adjectival nouns *kirai dá* and *iyá da* 'dislikes'); and of (3) *hosii* 'desires', the suppletive realization of (*)*ari-tái* 'wants to have'. Some of the surface sentences are, of course, ambiguous; but I have kept the roles constant, so that only a single interpretation is given: "A" is the cathectic subject (the emotionally affected), "B" is the cathectic object (toward which the emotion is directed).

A ga B ga/o VT-i-tai

háha ga kodomo ga/o yobi-tai

1 A ga(?/no) VT-i-tai B

háha ga/no yobi-tai kodomo

'the child that the mother wants to call'

2 B ga/no/o yobi-tai háha

kodomo ga/no/o yobi-tai háha

'the mother that wants to call the child'

A ga B ga(/o) kowái (sukí da)

háha ga kodomo ga kowái

'the mother fears the child'

3 A ga/no kowái (sukí na) B

háha ga/no kowái kodomo

'the child that the mother fears'

háha ga kodomo ga(/o) sukí da

'the mother likes the child'

háha ga/no sukí na kodomo

'the child that the mother likes'

4 B ga/no (/o) kowái (sukí na) A

kodomo ga/no kowái háha

'the mother that fears the child'

kodomo ga/no(/o) sukí na háha

'the mother that likes the child'

A (?ni/)/ga B ga(?/o) hosii

háha (?ni/)/ga kodomo ga(?/o) hosii

5 A (?ni/)/ga/no hosii B

háha (?ni/)/ga/no hosii kodomo

'the child that the mother wants'

B ga/no(?/o) hosii A

kodomo ga/no(?/o) hosii háha

'the mother that wants a child'

Examples:

(1) ... o-mimi ni ire-tai KOTÓ ga arimásite ... 'I have something I want to tell you' (KKK 3.259); SÓO só, ánta ni age-tai MONÓ ga áru no 'Yes, yes, there's something I want

to give you' (KKK 3.259); *Káre wa zibun no yomi-tái MONÓ o yóndari, kaki-tái KOTÓ o káitari, kangae-tái MONDAI o kangáetari si-tákatta* 'He wanted to read the things HE wanted read, write of what HE wanted to write, and give thought to the problems HE wanted to give thought to' (Y 294).

(2) *O-tya no nomi-tái HITÓ wa imasén ka* 'Isn't there anyone who wants to drink tea?' (KKK 3.168); *Takái ga, umái komé o kai-tái SYOOHÍ-SYA mo irú no da* 'There are also, you see, consumers who wish to buy rice that is expensive but tastes good' (SA 2684.20c).

...

(4) *Sake no sukí na KÁRE TO BÓKU(-)* wa *yóku yóru no matí o nomi-aruita* 'He and I, fond of liquor, often made the rounds of the night-time city' (SA 2647.62a); ... *myúuzikaru no sukí na SYÁÍN-TÁTI* wa ... 'the employees who like music' (SA 2647.62c); ... *úmi o sukí na HITÓ* ... 'a person who likes the sea' (SA 2650.58c); *Iinuke no tákumi(-) na HYOORON-KA* ... 'a critic clever at evasion' (KKK 3.168) ← *hyooron-ka ga iinuke ga tákumi(-) dá* 'the critic is clever at evasion'.

Other adjuncts can be epithematized: *Iki-tái TOKORÓ ga takusañ áru no* 'There's lots of places I want to go' (R) ← [sono] *tokoró e iki-tai* 'I want to go to the place(s)'; *Anáta ga sumi-tái TÓSI* 'The city you'd like to live in ...?' (SA 2792.31b) ← *Anáta ga [sono] tósi ni/de sumi-tái?* 'You'd like to live in the city?'

13.1.2.(4). *Epithemes extruded from facilitative-propensive sentences.* Facilitative-propensive sentences apparently permit the optional subjectification (i.e. *gá*-marking) of nearly any adjunct in the simplex—somewhat as any adjunct can be extruded for thematization or epithematization. We accordingly expect the extrusion of the subjectified adjuncts as shown below, even though in many examples the result would coincide with extrusion of the adjunct without prior subjectification and, of course, in such instances the simpler derivation is to be preferred. There seems to be uncertainty with respect to the acceptability of facilitative-propensive sentences with more than two surface-subjects (despite the examples concocted in §9.1.8), so we will confine our attempts to those with only one subjectification. Even some of these are questionable, especially in the highly artificial sentences concocted here; but we can hope that better examples will eventually be found.

OBJECT SUBJECTIFICATION (*ó* → *gá*)

A ga B o/ga VT-f

háha ga kodomo o/ga yobi-yasúi
'it is easy/likely for the mother
to call the child'

A ga/no VT-f B

háha ga/no yobi-yasúi kodomo (1)
'the child that it is easy/likely
for the mother to call'

B ga(?/no)/o VT-f A

kodomo ga(?/no)/o yobi-yasúi háha (2)
'the mother that it is easy/likely
for her to call the child'

DATIVE SUBJECTIFICATION (*ní* → *gá*)^a

A ga B ni/?ga V-f

kodomo ga háha ni/?ga amae-yasúi
'it is easy/likely for the child to
make up to the mother'

A ga/no V-f B

kodomo ga/no amae-yasúi háha (3)
'the mother that it is easy/likely for
the child to make up to'

B ni/?ga/?no V-f A

háha ni/?ga/?no amae-yasúi kodomo (4)
 'the child that it is easy/likely for
 it to make up to the mother'

PLACE SUBJECTIFICATION (*dé/ní* → *gá*)

P de/ga (or ni/ga) A ga V-f

kooen de/ga kodomo ga asobi-yasúi
 'the park is easy/likely for the
 child to play in'

kooen ni/ga kodomo ga i-yasúi

háha no/ga wakare-nikúi
 kodomo (19)
 'the child that it is hard for the
 mother to part from/with'

B kara/ni/to/?ga/?no V-f A
 kodomo kara/ni/to/?ga/?no wakare-
 nikúi háha (20)
 'the mother for whom the child is
 hard to part from/with'

TIME SUBJECTIFICATION (*ní/φ* → *gá*)

A ga T {ni}/ga V-f *A ga/no V-f T*
 kodomo ga háru {ni}/ga asobi-yasúi kodomo ga/no asobi-yasúi háru (21)
 'spring is easy for children to 'spring when it is easy for the
 play in' children to play'

T {ni}/ga/?no V-f A
 háru {ni}/ga/?no asobi-yasúi kodomo (22)
 'children for whom spring is easy to
 play in'

RECIPROCAL SUBJECTIFICATION 1 (*tó ?* → *gá*)

A ga B to/?ga V-f *A ga/no V-f B*
 kodomo ga tomodati to/?ga kodomo ga/no kenka si-yasúi
 kenka si-yasúi tomodati (23)
 'the friend is easy/likely for the 'the friend that is easy/likely for
 child to quarrel with' the child to quarrel with'

B to/?ga/?no V-f A
 tomodati to/?ga/?no kenka si-yasúi
 kodomo (24)
 'the child for whom the friend is
 easy/likely to quarrel with'

RECIPROCAL SUBJECTIFICATION 2 (*tó/ní ?* → *gá*)

A ga B to/ni/?ga V-f *A ga/no V-f B*
 kodomo ga tomodati to/ni/?ga ai-yasúi kodomo ga/no ai-yasúi tomodati (25)
 'the friend is easy/likely for the 'the friend that is easy/likely for
 child to meet' the child to meet'

MUTATIVE-COMPLEMENT SUBJECTIFICATION (*ní* → *gá*)

A ga B ni/?ga Vm-f *?A ga/no Vm-f B*
 kodomo ga tomodati ni/?ga nari-yasúi ?kodomo ga/no nari-yasúi tomodati (26)
 'a friend (it) is easy/likely for the 'the friend that it is easy/likely
 child to become' for the child to become'

B ni/?ga/?no Vm-f A
 tomodati ni/?ga/?no nari-yasúi
 kodomo
 'the child for whom it is easy/likely
 to become a friend'

^aOr perhaps *ní* [tái-site] → *gá*, since the subjectification appears to be limited to datives of confrontation.

A few examples:

(1—with traversal object) ... koré-ra no sanmyaku wa tobi-kosi-gatái SYOOHEKI dátta si, ... 'these mountain ranges were barriers difficult to leap over' (R).

(1) ... keisi si-gatái zyuuyoo na ÍGI o mótu 'has an important significance that it is difficult to take lightly' (Gekkan-Bumpō 2/11.49b).

(2—with intransitive) Kore wa nagái byooki de, naori-nikúí BYOOKI ná n de [su] 'This was a long illness and one difficult to get over' (R).

(3) ... ningen-kánkei ni óite(-), sitasimi-yasúí PAASONÁRIT'II o mótte iru to ka ... 'in human relationships, to have a personality that is easy to get close to' (R); sitasimi-nikúí KAO 'a forbidding face' (Kenkyusha).

...

(21) Natú wa ityoo no yowáru zíkí {de}, tabémónó no itami-yasúí KISÉTU desu 'Summer is the time when the digestive organs weaken and the season when food is apt to spoil' (SA).

There are other types of epithemes from facilitative-propensive sentences, e.g. one taken from an underlying subject: Tóku ni, kyoosán-ken no iu kotó o sin'yoo si-yasúí NIHON-ZÍN wa náó no kotó daroo 'In particular, it will be all the more true of Japanese, who are apt to trust what the Communist bloc says' (SA 2793.60a). From the underlying object of a passive (or potential?): ... sízi sare-yasúí ... 'views that can easily be supported' (Gekkan-Bumpō 2/11.49b).

And it might be questioned whether suwari-yasúí isu 'a chair that is easy to sit on (to seat oneself on)' should be derived from [sono] isu ga suwari-yasúí 'that chair is easy to sit on' by way of subjectification, or directly from the underlying mutative-locative in [sono] isu ni suwari-yasúí 'it is easy (for one) to sit on the chair'.

13.1.2.(5). *Epithemes extruded from intransitivizing-resultative sentences.* From the sentence [Hito ga] dóa o síméru '[Someone] closes the door' we can derive the intransitivizing-resultative sentence Dóa ga símete áru 'The door is closed', converting the underlying object to the marking of a surface subject, §9.2.4.(2). If now we extrude the surface subject and epithematize it, the resulting phrase will coincide with what we get by extruding the OBJECT of [Hito ga] dóa o símete áru '[Someone] has closed the door—(1) to be ready, (2) and has that in his experience, (3) and the result confronts him':

(1-2-3) Dóa o símete áru } → Símete áru dóa 'the door is closed'.
 (4) Dóa ga símete áru }

It is not clear whether the epithematization actually retains all four meanings:

- (1) 'the door that is closed (by someone)—so as to be ready'.
- (2) 'the door that is closed (by someone)—so that he has that in his experience'.
- (3) 'the door that is closed (by someone)—so that the result confronts him'.
- (4) 'the door that is closed—so that the result confronts one/us'.

But in any event it will probably be necessary to recognize the two separate derivations in order to account for the difference between the total suppression of agent with the intransitivizing resultative and the casual omission of a specifiable agent with the other resultatives.

Examples: ... Wakasite átta HÚRÓ ni háitte ... 'getting into the bath which had been heated' (Y 512); Táku(-) no ué ni oite áru HÓN ga áru no de, nán daroo to omótte té ni tótte míta 'There was a book set on the table; wondering what it was, I picked it up to

see' (Y 511); ... heyá ni sonae-tukete áru ANNÁI-SYÓ(¯) o yónde kudasai 'Read the guide book provided in your room ...' (Tsukagoshi 141a); Sákki moratta síhen(¯) ni káite áru BANGÓO o táyori ni, hitotu-hitótu sirábete míru ga tootei mi-ataranai 'With the aid of the number written on the scrap of paper that I had been given earlier I checked them [the graves] one after another but I just couldn't find it [= the tombstone I was looking for]' (Esuperanto 52.342b). In ... zí no káite áru KAMÍ wa ... 'paper with characters written on it' (Tk 3.228a) the epitheme is extruded from a mutative-locative.

13.1.2.(6). *Epithemes extruded from mutative, putative, and evaluative sentences.* In §9.1.11 we examined six conversions of adjectivals and nominals: (1) the mutatives (intransitive/transitive) with náru/suru and similar verbs referring to a change of state; (2) the subject-adverbial; (3) the nuclear-adverbial; (4) the evaluative, which blends a statement or evaluation predicted by an adjective or an adjectival noun with a sentence that uses the evaluated as direct object; (5) the transitive putative; (6) the intransitive putative. Since there are no adjunct-marker switches for the second and third types, epithematization is no different from that found in any other sentence: the subject and objects (if any) can be extruded freely. For the other conversions, we would expect epithematizations of the following sorts:

MUTATIVE

(1) mizíkáku katta kamí 'hair cut short' ← kamí o mizíkáku katta 'cut the hair short' (← kamí ga mizikái 'the hair is short')

(2) akaku nátta kao 'the face that had turned red' ← kao ga akaku nátta 'the face turned red' (← kao ga akai 'the face is red')

(3) sikái-sya ni sita otokó 'the man made master-of-ceremonies' ← otokó o sikái-sya ni sita 'they made the man master-of-ceremonies' (← otokó ga sikái-sya da 'the man is master-of-ceremonies')

(4) sikái-sya ni nátta otokó 'the man that became master-of-ceremonies' ← otokó ga sikái-sya ni nátta 'the man became master-of-ceremonies' (← otokó ga sikái-sya da 'the man is master-of-ceremonies')¹¹

?(5) ?*otokó o sita sikái-sya 'the master-of-ceremonies that the man was made (into)' ← otokó o sikái-sya ni sita 'they made the man master-of-ceremonies' (← otokó ga sikái-sya da 'the man is master-of-ceremonies')

(6) otokó ga nátta sikái-sya 'the master-of-ceremonies that the man became' ← otokó ga sikái-sya ni nátta 'the man became master-of-ceremonies' (← otokó ga sikái-sya da)¹²

EVALUATIVE

(7) utukúsiku káita zí 'beautifully written characters' ← zí o utukúsiku káita 'wrote the characters beautifully' (← zí ga utukúsi 'the characters are beautiful')

(8) yásuku katta zitén-sya(¯) 'a cheaply bought bike' ← zitén-sya(¯) o yásuku katta 'bought the bike cheap' (← zitén-sya(¯) ga yasúi 'the bike is cheap')

11. In ... daihyóo-sya no hitóri ni nátte oraréru Maeda-san kara ... 'from Mr Maeda who (has become =) is one of the representatives' (Tk 3.204a) the mutative sentence has been converted to the resultative (-te iru) and then given subject-exaltation (-te oraréru) before epithematizing the subject.

12. This type is more natural with kará replacing gá: sensei ga/kara nátta heitai 'the soldier that the teacher turned into' ← sensei ga/kara heitai ni nátta 'the teacher turned into a soldier' (or 'out of the teacher there became a soldier' if we wish to capture the flavor of the kará).

?(9) ?*wáruku iu tanin no kotó 'things ill said of others' ← tanin no kotó o wáruku iu 'says ill of others' (← tanin [ni túite] no kotó ga warúi)

TRANSITIVE PUTATIVE

(10) yasaki omótta siken-móndai 'the exam questions that I thought easy' ← siken-móndai o yasaki omótta 'I thought the exam questions easy' (← siken-móndai ga yasasii 'the exam questions are easy')

(11) husigi ni omótta kotobá 'the word I thought strange' ← kotobá o husigi ni omótta 'I thought the word strange' (← kotobá ga husigi dá 'the word is strange')

INTRANSITIVE PUTATIVE

(12) nágaku míeta kao 'the face that looked long' ← kao ga nágaku míeta 'the face looked long' (← kao ga nagái 'the face is long')

(13) Síngo ni [wa] keihaku ni omóeta hutarí no musumé 'the two girls who seemed flippant to Shingo' ← Síngo ni [wa] hutarí no musumé ga keihaku ni omóeta 'the two girls seemed flippant to Shingo' (← hutarí no musumé ga keihaku dá 'the two girls are flippant')

These are distinct from the QUOTATIVE putatives with S *tó* + putative verb, which can be adnominalized in similar ways: Nizyuu-méetoru mo aróo ka to omowaréru takái ténmaku [= ténto] no TEPPÉN de wa ... 'at the top of a tent that seems perhaps twenty meters high' (KKK 3.287); ... mattaku^[t] hu-hitúyoo to omowaréru hánnin no syussín-ti to ízoku no zyúusyo símei nenrei máde kuwásiku sirusi, ... 'write down in detail the birth-place of the culprit and even the addresses, names, and ages of his survivors—[details] that are felt to be totally unnecessary ...' (KKK 3.287); Kantoku ga arawasi-tái to omóu SEIKAKU o sono mamá^[t] engi de simésite(¯) kureru haiyuu de nákeriya, ikura kírei de mo damé na n desu yó 'Unless you are an actor who can show in your performance the very character that the director wants to have portrayed, it's no good however pretty you are' (Tk 3.199b) ← Kantoku ga SEIKAKU o arawasi-tái to omóu 'The director considers the character as desirable to have portrayed' (← [seikaku ga] arawasi-tái ← [seikaku o] arawásu)—an alternative interpretation 'The director thinks he would like to have the character portrayed' would take seikaku *ó* as the un-subjectified underlying object of arawasi-tái. Other elements in these converted sentences can be epithematized, e.g. the instrumental in this example: Suu-nen máe ni wá-ga kuni no áru seirigákusya wa atamá no yóku náru KUSURI to site suisyoo sareta monó de atta 'A few years ago a certain Japanese biologist was recommending it [= MSG] as a drug with which the brain would improve' (SA 2651.20a) ← [sono] kusuri de atamá ga yóku náru 'with [that] drug the head gets good/better' ← atamá ga yói 'the head is good/better'.

13.1.3. *Existential, Locative, and Possessive Adnominalizations; Epithemes Extruded from Multiparous Sentences.*

Existential and locational sentences with áru and iru (etc.) can undergo the expected adnominalizations:

A/X ga P ni iru/áru → (1) P ni iru/áru A/X da 'It is the A/X that is at P';

(2) A/X $\left\{ \begin{array}{l} \text{ga} \\ \text{no} \end{array} \right\}$ iru/áru P da 'It is the P where A/X is'.

Examples: Kono rihátú-ten ga áru SITAMATI dé wa ... 'In the downtown area where this

barber shop is located ...' (SA 2661.105b) ← Kono rihátú-ten ga sitamati ni áru 'This barber shop is in the downtown area'; Báakuree wa ... Karihworunia-dáigaku no áru MATÍ da 'Berkeley is the city where the University of California is' (SA 2664.43b) ← ...-dáigaku ga [sono] matí ni áru 'The University ... is in [that] city'—extruded-locative epitheme used as Identifier; Totu-zen, káno-zyo wa sootyo no hito ga hitóri mo inai Aóyama no MITI o hasiri-dasita 'Suddenly, she dashed down an early-morning Aoyama street without a single person on it' (SA 2650.61c) ← Hito ga hitóri mo [sono] miti ni inai 'Not one person is on [that] street'—extruded-locative epitheme used as traversal object; Íma no Karúizawa ni takusān áru BESSÓO(⁻) ga ... 'The many summer houses that are in the Karuizawa of today ...' (SA 2642.43c) ← Bessóo(⁻) ga íma no Karúizawa ni takusān áru 'Lots of summer houses are in the Karuizawa of today'—the located is extruded as epitheme to be used as subject. The last example might be regarded as simple existence rather than location—with the locative phrase taken as peripheral information, as the meaning would appear to demand for the following example: Uran-Báatoru ni hitótu ̀daké áru RAMA-DERA wa, hakubutú-kan to site hozon site áru n da sóo desu 'The only lamasery existing in Ulan Baator [Mongolia] is being preserved as a museum, I am told' (SA 2666.110c) ← Uran-Báatoru ni rama-dera ga hitótu ̀daké áru 'In Ulan Baator there exists only one lamasery'. An example of an epithematized mutative-locative (used as Identified): Dá kara dóo-sité mo syútó o oku KUNI wa Nihón da 'So by all means the country where the capital [of a United States of Asia] is to be put is Japan' (Tk 3.26b) ← syútó o [sono] kuni ni oku 'puts the capital in [that] country'.

But there are difficulties, as noted earlier (§ 3.11.2), when the meaning of the verbs is clearly that of possession:

A ga/ni B/X ga áru 'A has B/X' → (1) B/X ga áru A 'The A who has B/X';

(2) A ni áru B/X (da) 'It is the B/X that A has';

but not (3) *A ga áru B/X da (except where this is a role

reversal of the first type: 'It is the B/X that has A').

Let us examine two examples, the first with a possessed person, the second with a possessed thing. (1) Ootoót ga/ni kodomo ga áru 'The younger brother has a child' will convert to Kodomo ga áru ootoót (da) '(It is) the younger brother who has a child'. But informants find the sentence Ootoót ni áru kodomo da 'It is the child who belongs to the younger brother' strange, for there would normally be a replacement by the possessive nó: Ootoót no kodomo da 'It is the younger brother's child'. Yet the grammatically parallel sentence Doroboo ni áru te-sitá (da) '(It is) an underling of/to a thief' may be acceptable to some speakers, because underlings can be changed (i.e. are alienable possessions) whereas, in the normal course of events, one is stuck with the relatives one has. (2) Ootoót ga/ni náihu ga áru (náí) 'The younger brother has (lacks) a knife' will convert into Náihu ga áru (náí) ootoót da 'It is the younger brother who has (lacks) a knife' and also into Ootoót ni áru (náí) náihu da 'It is the knife that the younger brother has (lacks)'. Perhaps we can state a rule something like this: a sentence with áru or náí carries with it the direct subject (i.e. the possessed = the underlying object of possession), so that N ga áru/náí is equivalent in meaning to N o mótu/motánai; in an adnominalized sentence the indirect subject (the possessor) can be marked only by ní (or, with ellipsis of áru, by nó—constituting genitivation § 3.1.3), though gá is optionally permitted—for inalienable possession even REQUIRED?—in sentences that are not adnominalized.

Below are some constructed examples (using 'woman' and 'child'—other good ingredients

would be *tomodati* 'friend', *aité* 'partner', *o-tétudai-san* 'cleaning lady', etc.) that will serve to illustrate the types of extruded epithematizations we expect with possessive sentences.¹³

- (1) *kodomo ga/no* { $\begin{smallmatrix} \text{áru} \\ \text{nái} \end{smallmatrix}$ } *onná* 'the woman that { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } a child'
- (2) *onná ni/ga/no* { $\begin{smallmatrix} \text{áru} \\ \text{nái} \end{smallmatrix}$ } *kodomo* → *onná ni áru kodomo* / *onná no kodomo* 'the child that the woman has'
→ *onná ni nái kodomo* [ONLY!] 'the child that the woman lacks'
- (3) *kodomo ga/no* { $\begin{smallmatrix} \text{iru/óru} \\ \text{inai/oránai} \end{smallmatrix}$ } *onná* 'the woman that { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } a child'
- (4) ? *onná ni/ga/no* { $\begin{smallmatrix} \text{iru/óru} \\ \text{inai/oránai} \end{smallmatrix}$ } *kodomo* 'the child that the woman { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ }' (→ ?)
- (5) *okosan ga/no* { $\begin{smallmatrix} \text{irassyáru} / *o\text{-ide ni náru} / *o\text{-ide no} \\ \text{irassyaránai} / *o\text{-ide ni naránai} / *o\text{-ide de nai} \end{smallmatrix}$ } *ókusama*
'the lady that { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } a child'
- (6) ? *ókusama ni/ga/no* { $\begin{smallmatrix} \text{irassyáru} / *o\text{-ide ni náru} / *o\text{-ide no} \\ \text{irassyaránai} / *o\text{-ide ni naránai} / *o\text{-ide de nái} \end{smallmatrix}$ } *okosan*
'the child that the lady { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ }'
- (7) *okosan ga/no* { $\begin{smallmatrix} o\text{-ari ni náru} / o\text{-ari no} / (\text{gozaimásu}) \\ o\text{-ari ni naránai} / \quad / (\text{gozaimasén}) \end{smallmatrix}$ } *ókusama*
'the lady that { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } a child'
- (8) ? *ókusama ni/ga/no* { $\begin{smallmatrix} o\text{-ari ni náru} / o\text{-ari no} / (\text{gozaimásu}) \\ o\text{-ari ni naránai} / \quad / (\text{gozaimasén}) \end{smallmatrix}$ } *okosan*
'the child that the lady { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ }'
- (9) *kodomo ga/no* { $\begin{smallmatrix} \text{arimásu} \\ \text{arimasén} \end{smallmatrix}$ } *onná* 'the woman that { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } a child'
- (10) ? *onná ni/ga/no* { $\begin{smallmatrix} \text{arimásu} \\ \text{arimasén} \end{smallmatrix}$ } *kodomo* → *onná ni* { $\begin{smallmatrix} \text{arimásu} \\ \text{arimasén} \end{smallmatrix}$ } *kodomo*
'the child that the woman { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ }'
- (11) *kodomo ga/no* { $\begin{smallmatrix} \text{ari-sugiru} \\ \text{nasa-sugiru} \end{smallmatrix}$ } *onná* 'the woman that { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } too many children'
- (12) ? *onná ni/ga/no* { $\begin{smallmatrix} \text{ari-sugiru} \\ \text{nasa-sugiru} \end{smallmatrix}$ } *kodomo* → *onná ni* { $\begin{smallmatrix} \text{ari-sugiru} \\ \text{nasa-sugiru} \end{smallmatrix}$ } *kodomo* [ONLY]
'the children that the woman { $\begin{smallmatrix} \text{has} \\ \text{lacks} \end{smallmatrix}$ } too many of'

13. When there is an arrow, at least some of the formula in front of the arrow will produce ungrammatical structures; the structures to the right of the arrow are presumed to be the only permissible outputs. Appropriate situations of "having" or "lacking" a person are not all easily found; the concocted examples may be difficult for the native speaker to construe out of context.

And, with quasi-possessives:

- háha ni/ga kodomo ga wakátta 'the mother recognized the child'
 haha ni/ga/(?no) wakátta kodomo 'the child that the mother recognized'
 kodomo ga/no wakátta háha 'the mother that recognized the child'
 háha ni/ga kodomo ga miéta 'the child was visible to the mother'
 haha ni/ga/(?no) miéta kodomo 'the child that was visible to the mother'
 kodomo ga/no miéta háha 'the mother that the child was visible to'

Possessive sentences are adnominalized not only to extruded epithemes of possessor and possessed (etc.) but also to intruded epithemes, such as the summational kotó 'fact': Hutarí no kodomo no áru kotó ga Kúniko o sokubaku sita 'Having the two children kept Kuniko tied down' (lg 1962.87) ← [Kúniko ni/ga] hutarí no kodomo ga áru 'Kuniko has two children'; Húkuko ni zikan no kánnen no náí kotó ga Masúnaga o tyúutyó saseru 'The fact that Fukuko has no concept of time makes Masunaga hesitate' (lg 1962.87) ← Húkuko ni/ga zikan no kánnen ga náí 'Hukuko has no concept of time'. The epitheme of Tízuko no inai zínsei wa ... 'Life without Chizuko' could be interpreted as a personified possessor (káre no zínsei ni/ga Tízuko ga inai 'His life lacks Chizuko') or as an extruded locative of time—or figuratively of place: Tízuko ga [káre no] zínsei ni inai 'Chizuko is not in his life'. Another interpretation would epithematize a dative of reference: [Káre no] zínsei ni {tótte} Tízuko ga inai 'For his life Chizuko does not exist'.

Examples of epithematized possessor: Motomoto sáinoo(¯) no áru KÁRE wa, ... 'He who had talent by nature ...' (SA 2665.113a) ← Káre ni/ga ... sáinoo(¯) ga áru 'He has talent ...'—the epitheme is used as a subdued thematization (of a subject); Túma to kawaií kodomo ga iru KÁRE ga, dóo site baisyún-hu o korositá no ka 'Why did he who had a wife and lovely child kill a prostitute?' (SA 2647.112d) ← Káre ni/ga túma to kawaií kodomo ga iru 'He has a wife and lovely child'—the epitheme is used as subject of a verb; ... ootoót ya imootó no náí WATASI wa ... 'I who have no younger brother or sister' (Endō 137) ← Watasi ni/ga (→ Watasi {ni} wa) ootoót ya imootó ga náí 'I have no younger brother or sister'; ... san-nín no óoki na magó no iru OBÁA-TYAN ... 'a granny who has three big grandchildren' (SA 2684.140c); ... sinryoo no zituryoku no áru ZYÓSYU ga ... 'the assistant who has the capability to examine and treat (patients)' (SA 2685.61e); Nán dé mo hanasi no dekíru yuuzin ga iru HITÓ, ... 'A person who has a friend whom he can talk about anything with' (SA 2645.103c) ← [Sonó-]hito ni/ga ... yuuzin ga iru '[that] person has a friend'; Kubiwa no áru INÚ daké ni ikíru kénri ga ataerarete iru 'The right to live is bestowed only upon collared dogs' (V 1972.165); ... asobi-ba no náí TOSÍ-KKO ni yumé o ataeru monó ... 'something to give dreams to city children who have no playgrounds' (SA 2670.107d) ← Tosi-kko ni/ga asobi-ba ga náí 'The city children have no playgrounds'—the epitheme is used as a dative; ... soroban no náí OTOKÓ da ... 'the man doesn't have an abacus' (Tk 3.306b); ... hahaoya no náí KO de ... 'is a motherless child' (Kb 215b); ... kodomo no iru KATEI dé wa ... 'in a family that has children' (SA 2649.97c). ← [sono] katei ni/ga kodomo ga iru '[that] family has children'—I am taking katei 'family', a synonym of uti(¯), as personified. Examples where the epithematized possessor is inanimate: Hei no náí SYOONÉN-IN mo óói 'There are many reformatories that have no walls' (SA 2688.26c); Si ga náí TÓSI da ga, nání ka no miriyoku(¯) wa áru 'It is a city that lacks poetry, but it does have a certain charm' (SA 2793.61d); ... sekinin to kengén no áru PÓSUTO wa ... 'posts with responsibility and authority'

(SA 2685.61c); *Zíntai ni gáí no áru NOOYAKU wa tukatté wa ikan [= ikenai]* ‘Pesticides harmful to the human body must not be used’ (SA 2684.62a)—the first phrase is a dative of confrontation (*zíntai ni táí-site*) or of reference (*zíntai ni tótte*) and *nooyaku ni gáí ga áru* ‘the pesticide has bad effects’ could be treated as a figurative locative instead of a possessive. The following sentence contains animate and inanimate possessors, both epithematized: *Hontoo ni nóoryoku(̄) no áru HITÓ ga sekinin no áru PÓSUTO ni túíte inái no desu* ‘People that really have ability are not assigned to the posts that carry responsibility’ (SA 2685.61c). And, with quasi-possessives: *Nihon-go no seisitu no yóku o-wakari no KÁTÁ ...* ‘Those [esteemed] persons who have a good understanding of the characteristics of the Japanese language ...’ ← *[Sono] kátá ni/ga Nihon-go no seisitu ga yóku o-wakari dá* ‘[Those] esteemed persons have a good understanding ...’. (For potentials, see p. 633.) The following example once caught my eye in an advertisement for a single establishment boasting two names: *Sáuna no áru hóteru—hóteru no áru sáuna : Ueno-kankoo-hóteru—Ueno-Sauna-Onsen-Káikan* ‘The hotel that has a sauna—the sauna that has a hotel : Ueno Tourist Hotel—Ueno Sauna Bath Center’. Apparently the epithematized noun is to be taken as possessor rather than possessed, though it would make little difference here, since the sentence is an equational identification, and that is part of its charm.

In the following examples the possessor is extruded from its position within a multiparous sentence (where it was incorporated by the ellipsis of the possession verb as explained in §3.11.2): ... *teki ga óói HITÓ datta* ‘He was a man who had many enemies ...’ (SA 2642.39a) ← *[Sono-]hito ga f́áruʒ teki ga óói* ‘He has many enemies’ ‘The enemies he has are many’—the epitheme is used as a descriptive Identifier; ... *atamá^[a] no yosa-sóo na OZYÓOSAN de aru* ‘She is a young lady with a seemingly good head on her shoulders’ ← *Ozyóosan ga f́áruʒ atamá ga yosa-sóo da* ‘She appears to have a good head’ < ‘The head that she has appears to be good’—the epitheme is used as a descriptive Identifier; *Kenri-ísiki no tuyói ima no KODOMO no kimoti ga, wakátte imasén né* ‘They don’t understand the feelings of the child of today, who has a strong awareness of his rights’ (SA 2665.127d) ← ... *kodomo ga f́áruʒ kenri-ísiki ga tuyói* ‘The awareness of rights possessed by the child ... is strong’—the epitheme is used as the possessor in a genitivization *Kodomo no [áru] kimoti* ‘the feelings that the child has’ of the possessive sentence *Kodomo ni/ga kimoti ga áru* ‘The child has feelings’. Here is an example with a convergence of two possessors extruded to function as a single epitheme (‘Japan’)—used as a dative of reference: *Sizen-sígen ga sukúnáku, sono taigai-i^{s/}zón-do ga takái NIHÓN ni tótte, ...* ‘For Japan, who has few natural resources and who has a high degree of dependence on countries abroad for them, ...’ (SA 2648.45a) ← *Nihón ni/ga sizen-sígen ga sukúnáku, sono taigai-i^{s/}zón-do ga takái* ‘Japan has few natural resources and high dependence for them on countries abroad’ ← *Nihón ni/ga [áru] sizen-sígen ga sukunái* ‘The natural resources that Japan has are few’ + *Nihón ni/ga [áru] sono [= sizen-sígen no] taigai-i^{s/}zón-do ga takái* ‘The dependence of Japan on countries abroad for them [= natural resources] is high’.

A more complicated explanation is needed for this sentence: *Mattakú^[j], itimán nisen-en no gekkyuu tó wa omoénai husigi na ZÍNBUTU datta* ‘He was an odd character whom [in view of his extravagance] you simply couldn’t conceive of as having a monthly salary of [only] twelve thousand yen’ (SA 2642.54b). The entire sentence is a stranded Identifier based on an epitheme that is the (attributee-)subject of the adjectival noun—*[Sono] zínbutu ga husigi dá* ‘The character is odd’—and also is the subject in a propositive

sentence [Sono] zínbutu ga ... gekkyuu {dá} that represents a possessive sentence [Sono] zínbutu ni/ga ... gekkyuu ga áru 'The character has a salary'. The propredicative sentence, however, has been incorporated in a quotational putative ... gekkyuu {dá} to omoéru 'is conceived of as [being] a salary ...' that is negativized with subdued focus ... gekkyuu {dá} tó wa omoénai and then adnominalized to the extruded epitheme. In Nán no kotó wa náí, ookii daké ga torié {dá} to iu ringo de áru 'It is an apple of no consequence whose only claim to fame is its size (SA 2647.17d), the stranded Identifier 'apple' has been extruded both as possessor (Ringo ni/ga nán no kotó^[r] ga náí 'The apple has no consequence') and as genitive (ringo no torié 'the claim to fame of the apple' from a possessive sentence Ringo ni/ga torié ga áru 'The apple has a claim to fame'). The sentence Ookii daké ga [ringo no] torié da is equivalent to [Ringo no] torié wa ookii daké da 'The claim to fame [of the apple] is just that it is big', since gá marks the Identifier.

With quasi-possessives, it is possible to epithematize the (quasi-)POSSESSED, even though it can not be genitivized: Séihu ga zenryoo kai-agéru syokkan-séido [= syokuryoo-kánri no séido] o aratáme, kokumin ga hituyoo na SAITÉI-GEN daké séihu ga mendóo o míru 'They revise the food controls system that has the government buying up everything so that the government will take care of only the minimum that the people need' (SA 2684.20c) ← kokumin ni/ga [sono] saitéi-gen ga hituyoo dá 'the people need [that] minimum'.

13.1.4. Extruded Genitives as Epithemes.

Once the genitive is created by reduction from a possessive sentence, it stands ready to be extruded like any other adjunct. With genuine possession of the sort that can be expressed in a multiparous sentence (§ 3.11) it would be possible to take the extruded noun back to gá-marking in the immediately underlying sentence rather than assume that the phrase has been reduced to a nó-marked genitive, as in this sample of inalienable possession: kamí ga nagái kodomo 'a child with long hair' ← kodomo ga kamí ga nagái 'the child has hair that is long'; or ← kodomo no kamí ga nagái 'the hair of the child is long'.

But the LOCATIVE genitive, such as ié no 'of the house' in ié no máe [ni] '[in] front of the house', must be taken as the immediately underlying source of the epitheme in these adnominalizations: MÁE ni kuruma ga tomatte iru ANO IÉ 'that house that has a car parked in front of it' ← ANO IÉ NO MÁE ni kuruma ga tomatte iru 'In front of that house a car is parked'; Hikóo-ki ga UE o tonda YAMÁ 'the mountain that the plane flew over' ← Hikóo-ki ga YAMÁ NO UE o tonda 'The plane flew over the mountain'; Dénsya(-) ga SITA o tóotta HASÍ 'the bridge that the train passed under' ← Dénsya(-) ga HASÍ NO SITÁ o tóotta 'The train passed under a bridge'; MAWARI ni kankóo-kyaku ga atumátte iru DAIBUTÚ(-) 'The Big Buddha with tourists gathered around it' ← DAIBUTÚ(-) NO MAWARI ni kankóo-kyaku ga atumátte iru 'Around the Big Buddha tourists are gathered'.

Examples of various other kinds of genitives that have been epithematized:

(1) Partitive: MÁDO kara hakabá^[r] no miéru BÁA ga áru 'There is a bar from the window of which you can see a graveyard' (SA 2641.10) ← BÁA NO MÁDO kara hakabá ga miéru 'From the window of the bar you can see a graveyard'; ... ATAMÁ^[r] no okási na [= okásii] HITÓ ... 'a person with a funny head' (Endō 138) ← [Sonó-] HITO NO ATAMÁ ga okásii 'The person's head is funny'; ... bóku(-) ga SINÁRIO(-) o káita ÉIGA(-) ... 'a film that I wrote the scenario for' (Tk 3.194a) ← Bóku(-) ga ÉIGA(-) NO SINÁRIO(-) o káita 'I wrote the scenario of the film'.

(2) Underived attributive: ... KÁZU sukunái ZIKKEN-DÉETA 'scanty experimental data' (SA 2678.18b) ← ZIKKEN-DÉETA NO KÁZU [ga] sukunái 'The number of experimental data is scant'; ... monó o káku kotó ga SYOKÚGYOO de áru HITÓ-TATI ... 'people whose occupation is writing things' (Shibata 1965.204) ← monó o káku kotó ga HITÓ-TATI NO SYOKÚGYOO de áru 'Writing things is people's occupation', the genitive deriving from hitó-tati no ǵáruǵ syokúgyoo 'the occupation that people have' ← Hitó-tati ni/ga [sono] syokúgyoo ga áru 'People have the occupation' (an unnatural sentence as it stands); SAKAKUSE ga wáruku náí WATASI mo ... 'I whose drinking posture is not troublesome = who am not a rowdy drunk' (Endō 92) ← WATASI NO SAKAKUSE ga wáruku náí; kono sóhuto (ǵ) ga áreba, BUKKA ga báí(ǵ) no SINGATA ni kiri-kaeru hituyoo ga naku-narú no da kara, IBM [ai-bii-ému] ga kono sóhuto-úea o kai-ta-gatte irú no mo toozen dá 'Since with this softwear you eliminate the necessity to change over to a new model that costs double, it is only natural that IBM is eager to buy [this softwear =] it' (SA 2635.39a) ← SINGATA NO BUKKA ga báí(ǵ) dá 'The cost of the new model is double'.

(3) Partitive?, Underived attributive?: Keibatu-syúgi ga KIHON de áru KÉI-HOO ... 'criminal law which has the principle of punishment as its basis' (SA 2688.28d) ← KÉI-HOO NO KIHON 'the basis of criminal law'; ... zínruí no tyoowa ga TÉEMA no BANKOKU-HAKU 'the international exposition of which the theme is the harmony of mankind' (SA 2688.35d) ← BANKOKU-HAKU NO TÉEMA 'the theme of the international exposition'.

(4) Partitive?, Place-locative?: ... hituyoo na KÍZI ga hitó-me de wakáru génzai no SINBUN ... 'the modern newspaper whose essential articles are understood at a glance' (SA 2647.137e) ← ... SINBUN NO ... KÍZI ga ... wakáru 'the ... articles of the ... newspaper are understood ...'.

(5) Place-locative?: Dá ga watasi wa, Nihón ǵúrai heikin site, tabéru MONÓ⁽²⁾ no oisii KUNI wa náí yóo⁽¹⁾ ni omóu 'But I feel that there is no country where the things you eat taste so good on the average as [they do in] Japan' ← KUNI NO ... MONÓ ga oisii 'In the country things that you eat are delicious' or KUNI DE tabéru ... oisii 'Things that you eat in the country are delicious'.

13.1.5. The Adnominalization of Propredications and Identifications.

As we saw in § 3.10 it is possible to prune a sentence by substituting the essive ní that underlies the copula dá—either for the nucleus alone or for the nucleus together with any number of its adjuncts, provided that at least one adjunct remains to pick up the otherwise stranded essive, for forms of the copula can stand alone only in a few elliptical phrases where *sore* 'that' or *sóo* 'like that' have been omitted. It is this sort of cutting back from the core of the sentence, called "propredication", that we have treated as the source of the multiple ambiguities that lead the nominal sentence to border on total vagueness: *Kodomo dá* 'It's [...] a child' can have as many intended meanings as there are sentences with *kodomo* (or *kodomo* + marker) as an adjunct. Perhaps the meaning of the ordinary nominal sentence is the SUM of all these meanings (or the element that is common to them?); or so we might speculate if indeed we assume that such a sentence can exist independently both of the propredications and of the identificational sentence.

It is from the adnominalization of partial propredications that a number of the interpretations of N nó N must stem. The examples in Alfonso 390 are to be explained—for

the particular meanings intended—as follows:¹⁴ Boosi no hitó ‘the person with the hat (on)’ ← [sonó-]hito ga boosi [o kabútte iru no] da ‘the person—it’s a hat [he’s wearing]’ ← [sonó-]hito ga boosi o kabútte iru ‘the person is wearing a hat’—a similar example is mégane no hitó ‘the person wearing glasses’, to be derived from [sonó-]hito ga mégane o kámete iru; Ano kádo no o-máwari-san ‘the policeman on the corner’ ← o-máwari-san ga ano kádo [ni tátte iru no] da ‘the policeman—it’s that corner [he’s standing on]’ ← o-máwari-san ga ano kádo ni tátte iru ‘the policeman is standing on that corner’; Ano zidóo-sya(⁻) no hitó ‘the person in that car’ ← [sonó-]hito ga ano zidóo-sya(⁻) [ni notte irú no] da ‘the person—it’s that car [he’s riding in]’ ← [sonó-]hito ga ano zidóo-sya(⁻) ni notte iru ‘the person is riding in that car’; Mukóo(⁻) no simá ‘the island [that appears] over there’ ← [sono] simá ga mukóo(⁻) [ni miéru no] da ‘the island—it’s over there [that it appears]’ ← [sono] simá ga mukóo(⁻) ni miéru ‘the island appears over there’; Teeburu no ué no koppu ‘the cup on the table’ ← koppu ga teeburu no ué [ni (oite) áru no] da ‘the cup—it’s on the table’ ← koppu ga teeburu no ué ni (oite) áru ‘the cup is (placed) on the table’; Syoo-wíndoo no omótya ‘toys [lined up] in the store window’ ← omótya ga syoo-wíndoo [ni narande irú no] da ‘the toys—it’s in the show window [they are lined up]’ ← omótya ga syoo-wíndoo ni narande iru ‘the toys are lined up in the show window’; Kínzyo no gaizin ‘a foreigner [living] in the neighborhood’ ← gaizin ga kínzyo [ni súde irú no] da ‘a foreigner—it’s the neighborhood [he’s living in]’ ← gaizin ga kínzyo ni súde iru ‘a foreigner is living in the neighborhood’; Tosyó-kan no hón ‘books from the library’ ← hón ga tosyó-kan [kara] da ‘the books are [from] the library’ ← hón ga tosyó-kan kara [karite áru no] da ‘the books—it’s the library that they are [borrowed] from’ ← hón o tosyó-kan kara karita ‘[someone] borrowed the books from the library’. In the sense ‘books that belong to the library’ the same phrase would be given a different derivation, one of the genitives (locative?, possessive?, partitive?) that are explained in § 3.11.2.

But when the phrase N nó can be taken as the subject of an omitted verb (with nó substituting for gá under the option explained in § 13.1.6), a better explanation is simple ellipsis: Pikáso no é ‘a picture by Picasso’ can be derived directly from Pikáso no [káita] é, in turn coming from Pikáso ga/no káita é ‘a picture that Picasso painted’—with an epitheme extruded from the object of the sentence Pikáso ga é o káita ‘Picasso painted the picture’. In the meaning ‘a picture that belongs to Picasso’, the structure is explained as a POSSESSIVE GENITIVE; and only in the meaning ‘a picture of (i.e. portraying) Picasso’ will the propredicative adnominalization be required as an explanation, with the derivation assuming an ellipsis something like É ga Pikáso [o utúsu no] da ‘The picture is [one that portrays] Picasso’. The expression kasiya no kookoku ‘an ad for a house to rent’ is perhaps best taken as adnominalized propredication of an ellipsis: kasiya [ni túite] no kookoku ‘an ad about a house for rent’. Perhaps a similar explanation will account for méusi(⁻) ka óusi(⁻) ká no kúbetu ‘the distinction of whether it is a cow or a bull’.

The examples most clearly showing that a propredication has taken place before the adnominalization are those that contain structures of the type N₁ ó N₂ nó N₃, in which the nó is replacing a verbal element, apparently always surú—with or without a preceding marker, depending on whether the N₂ is a transitive verbal noun, for that calls for an ó that is obligatorily suppressed when the direct object is explicitly realized as N₁ ó.

14. Other interpretations are possible for most of the sentences; they would be explained in similar ways, choosing other predicates to put in the brackets.

Examples: *Ameriká-zin o aité no misé ga narande iru* 'Shops aiming at American customers line the streets' ← *Ameriká-zin o aité ni/to sita misé ...* 'Shops that have taken Americans as their customers ...' (the sentence with the adnominalized proredication can be tightened by turning the adnominalization into a compound noun: *Amerikazin-áite no misé ...*); *Éki no minami-guti ni tikákute, komámono(⁀) o senmon no misé wa arimasén ka* 'Isn't there a store that is at the station (and) near the south entrance and specializes in haberdashery?' ← ... *komámono(⁀) o senmon ni site iru misé ...* (Mikami 1963.103); ... *yasúi no o daisen no gyuuniku-ya dáta* 'it was a beef eatery that was mainly noted for being cheap' (Kb 244b—*daisen* 'a title label to paste on a book') ← ... *yasúi no o daisen ni sita* 'had made being cheap its label'; *Asú^[u] no ensoku wa, zé-hi, suitoo o yooi no kotó* 'Be sure to provide yourself with a water flask for tomorrow's picnic' (Morishige 299) ← ... *suitoo o yooi suru kotó [da]* 'One is to provide oneself with a water flask ...'. The telltale case-marker need not be *ó*: ... *syokuhin-gáisyá ni kínmu no go-syúzin to ...* 'with her husband, who is employed by a food company, ...' (SA 2816.32a) derives from *go-syúzin ga syokuhin-gáisyá ni kínmu suru* 'her husband is employed by a food company'.

Proredication is one way to explain the phrases that consist of case marker + *nó*, such as *asú E NO kagaku* 'science (aimed at=) for tomorrow', *Okinawa DÉ NO ziken* 'an incident on Okinawa', *soko DÉ NO seikatu* 'life in that place' (SA 2649.92a), *máiniti(⁀) no seikatu DÉ NO hu-yúkai na kotó* 'the unpleasant things in everyday life' (SA 2645.--), *otokó TO NO kankei* 'relations with men', *háha KARA NO tegami* 'a letter from mother', etc. In some situations the proredication represents the auxiliary *suru*, e.g. with verbal nouns: *Káre TO NO intábyuu* 'the interview with him' means *káre to suru/sita intábyuu* 'the interview conducted with him (as the reciprocal-counterpart)', and we might think to derive it directly from that sentence without going back to the proredicative finite sentence *Intábyuu ga/wa káre TO DA* 'The interview is with him'. But in the sentence ... "*roodoo kará no kaihoó*" to *iu ími DE NO nikutai-ansokú-bi o dandán huyásite kita* 'we have gradually increased the days of physical rest in the sense of "liberation from work"' (SA 2645.47c) the adnominalization will have to be taken back to an underlying statement *Nikutai-ansokú-bi ga(/wa) "roodoo kará no kaihoó" to iu ími DE DA* 'The days of physical rest are in the sense of "liberation from work"' with a surface juxtaposition of two copula forms, the gerund *dé* followed by the imperfect *dá*, which form represents the proredication of something like ... to *iu ími DE [wakáru no] DA* 'it is [understood] by being (= in) the meaning of ...'. (Ultimately the gerund is also perhaps a proredication from ... to *iu ími [ga áru no] da* 'it has the meaning ...'.) When identifications are adnominalized, the adnominalized copula (*ná/nó*) can be replaced by the more formal *de áru*, but apparently this is not true when proredications are adnominalized, perhaps because of the particularly colloquial nature of proredication to begin with. In general, proredications are more common in the adnominalized form with *nó* than in the underlying form with *dá* that we are assuming to be basic.

The IDENTIFICATIONAL sentence contains something given, the Identified (Id), and something new, the Identifier (Ir). The Identified is an unknown variable, like the *x* in algebra, for which the value is supplied by the Identifier—the solution to the equation $x = ?$. Difficulty in understanding the structure of the Japanese identificational sentence arises from problems of focus and thematization; the most common version appears with the Identified as a subdued theme *Id wa Ir (da)*, but there are good reasons to assume that this common (and hence semantically neutral) version is the result of operations applied

to a less common version that can be said to underlie it: *Ir ga Id da*.¹⁵ In terms of variable and value the sentence *Kane ga mondai da* 'MONEY is the question' (*Ir ga Id da*) says the same thing as *Mondai wa kane da* 'The question (–it) is MONEY' (*Id wa Ir da*); and the sentence *Kane wa mondai da* 'The money (–it) is a QUESTION' (*Id wa Ir da*) says the same thing as *Mondai ga kane da* 'A QUESTION is the money' (*Ir ga Id da*). Under adnominalization (without extrusion) we find both (1) *kane ga mondai no tokí* 'a time when MONEY is the question' (*Ir ga Id no N*) and (2) *kane no mondai no tokí* 'a time when money is the QUESTION' (*Ir no Id no N*)—if my attempt at interpreting the replacement of *gá* by *nó* in § 13.1.6 is correct; otherwise both sentences will translate alike. We expect to find equivalent adnominalizations for the other pair, and *mondai ga kane no tokí* 'a time when a QUESTION is the money' (*Ir ga Id no N*) seems to be acceptable, but doubt is expressed about the acceptability of (?)*mondai no kane no tokí* 'a time when a question is the MONEY' (?)*Ir no Id no N*).

Examples of what I take to be *Ir ga Id no*: *Séihu ga supónsaa no purozyékuto da* 'It is a project that the GOVERNMENT is the sponsor of' (SA 2661.29c) ← *Séihu ga supónsaa da* = *Supónsaa wa séihu da* 'The sponsor is the government'—the epitheme is an extruded genitive 'project's sponsor'; ... *eyoo-syóogai ga gen'in no baai ga óói* ... 'There are many cases where the cause is a nutritional deficiency' (SA 2650.97c) ← *Eiyoo-syóogai ga gen'in da* = *Gen'in wa eyoo-syóogai da* 'The cause is a nutritional deficiency'—the epitheme is summational 'cases such that'; *Síkási, kore wa motomoto ziyuu-boeeki-syúgi ga hata-zírusi no Beikoku ni tótte, mattakú rikutu no tooránu hanaší [da]* 'But for (= coming from) America, which has always had free trade as its banner [= slogan], this is talk that makes no sense' (SA 2661.126b) ← *Ziyuu-boeeki-syúgi ga hata-zírusi da* = *Hata-zírusi wa ziyuu-boeeki-syúgi da* 'The banner is free trade'—the epitheme is an extruded genitive 'America's banner'; *Kénnai de gyuunyu ga gen'in no tyuudoku-zíken ga ókita* 'Within the province there occurred poisoning cases with milk as the cause' (SA 2678.19c); ... "Kookoku to Séi" no tyósyá de seisin-búnseki ga senmon no Huzisaki Sooití-si 'Mr Fujisaka Sōichi, who is the author of "Advertising and Sex" and whose specialty is psychoanalysis' (SA 2677.46a).

With the uncontracted copula, *Ir ga Id de áru N*: *Keibatu-syúgi ga kihon de áru kái-hoo* ... 'criminal law which has the principle of punishment as its basis' (SA 2688.28d); *Ótani san ga syatyoo de áru Syootiku-Kínema kara gekkyuu o moratte ita* 'I was receiving a salary from Shōchiku Cinema, of which Mr Ōtani (is =) was the president' (Tk 4.299); ... *zínruí no tyoowa ga téema no bankoku-haku* 'the international exposition of which the theme is harmony of mankind' (SA 2688.35d); ... *katei ga syokubá(-) de áru watasi zísín no sasáyaka na bunpitu-séikatu wa* ... 'my own little literary life as one whose home is his workshop (= whose workshop is at home)' ← *katei ga watasi no syokubá(-) de áru* = *watasi*

15. One piece of evidence for this "counterintuitive" interpretation of the "marked" form as basic is the ellipsis (or direct nominalization) that must be assumed in the following sentence: *Kabu no gensoku wa, yásuku katte tákaku uréba mookáru [no da]* = *Yásuku katte tákaku uréba mookáru no ga kabu no gensoku da* 'The principle of stocks is [that] you make money if you buy cheap and sell dear' (SA 2684.48a). However, it can be argued that under certain conversions (in subordinate clauses and under adnominalization to intruded epithemes) *N ga* represents the Identified—or perhaps the distinction between *Id* and *Ir* is neutralized, with *Kane ga mondai nára* ... and *Mondai ga kane nára* ... differing only by emphasis. A number of subtleties that I have overlooked are examined by Kuno.

no syokubá(¯) wa katei de áru 'my workshop is home'—for the apposition of *watasi* (along with the entire adnominalization) to *zisin* 'self', see § 25.

If we extrude an epitheme from within the identification, our choice is limited to the Identified: *Ir ga Id da* (= *Id wa Ir da*) → *Ir no Id*.¹⁶ Thus *kane no mondai* 'a question of money' is to be derived only from *mondai ga kane da* (= *kane wa mondai da*) 'money is a question' and *mondai no kane* 'the money in question' is to be derived only from *kane ga mondai da* (= *mondai wa kane da*) 'the question is money'.

From what we have said, it follows that only the Identified (and never the Identifier) can serve as either THEME (*Id wa Ir da*) or as EPITHEME (*Ir no Id*). What is confusing is the disappearance of the marker *gá* when the Identified gets extruded:

$$\text{Id wa Ir da} \leftarrow \text{Ir [ga Id] da} \leftarrow \text{Ir ga Id da} \rightarrow \text{Ir [ga Id] da} \rightarrow \text{Ir no Id}$$
Thematization
Epithematization

The THEME of an identificational sentence, since it derives from the Identified, can not be marked by a case particle and it will sound naked without focus, but the focus need not be limited to *wá*, for both of the following sentences are possible: *Kane mo mondai da* 'The money too (—it) is a question', *Mondai mo kane da* 'The question itself is money' (both *Id mo Ir da*). (Thematization, here as elsewhere, can be signalled by the underlying juncture, but the signal is easily suppressed when the theme is short and atonic.) The essive *ní* can not stand as a theme-marker—and thus differs from the CASE markers *gá*, *ó*, and (the etymological identical) *ní*—but a pseudo thematization can be had by ringing various conversions on the copula (made up of the essive *ní* + the auxiliary *ár-* in various manifestations): *Kane dá to* (Kane *nára*) *mondai da* 'If it's money, that's a question' and *Mondai dá to* (Mondai *nára*, *Mondai da to iu to*) *kane da* 'If it's a matter of the question, it's money', etc.

As examples of *Ir no Id* we can cite such phrases¹⁷ as *Zyosei no anáta ga ...* 'You who are a woman', *Onná no watakusi ga ...* 'I who am a woman ...', *Namakemónó(¯) no bóku(¯) ga ...* 'Lazy me; I who am a lazybones', and the following sentences—from KKK 3.166 unless otherwise noted—in which the adnominalized copula (equivalent to *de áru*) is printed in capital letters: ... *kono kodomo ga ókíte iru aida wa, hahaoya NO watakusi wa ókíte inákutya ikenai* 'While this child is awake, I who am his mother must stay up' (SA 2640.20c); *Soko ni go-syúzin NO Teiraa-gúnsoo ga háitte kíta* 'Then Sergeant Taylor, her husband, came in'; *Sono tamé ni Súuzan no booi-huréndo NO Zyérii no ki o wáruku sasetári sita* 'For that reason it would sometimes put Susan's boyfriend Jerry in a bad mood'; *Kantoku NO Aavingu-Ráisu wa sinzin de ...* 'Irving Rice, the director, is a newcomer and ...'; ... *şikaku-móndai o, saibán-kan, kensatú-kan óyobi(¯) bengó-si NO sánsya ni kyootuu site kangáereba ...* 'if we think of the qualifications question as being common to the three—judge, prosecutor, and lawyer—'; *Seiyoo-húzin no boosi no genryóo NO nagái himo ni nátte ...* 'Becoming long long ribbon that is the material for western ladies' hats ...'; ... *takái ténmaku*

16. Instead of *nó* or *de áru*, you will sometimes see *náru*, the literary attributive form of the copula: *Háha naru hitó ga déte kite, ...* 'A woman who would be the mother came out and ...' (Fn 408).

17. And also *otokó no katá* 'male person' and *onná no katá* 'female person' despite the lexicalized *otokó-no-hito* and *onná-no-hito*; *otokó no o-ko-san* '[your] male child' and *onná no o-ko-san* '[your] female child' despite the lexicalized *otokó-no-ko* and *onná-no-ko*; cf. *anó-ko* 'that child' but *ano o-ko-san* 'that esteemed child', *anó-hito* 'that person' but *ano katá* 'that [esteemed] person'. (This information differs slightly from that in BJ 1.151.)

[=ténto] no teppén de wa hasigó-nori(¯) NO kyokúgei(¯) ga hazimatte iru 'At the top of the tall tent the ladder-climb act is beginning'; ... kootoo-saiban-syo tyookan máta-wa hánzi NO syokú(¯) ni átta monó o mo kuwaéru(¯) ¯béku, ... 'To be added are those who have been in the position of high-court judge or of justice ...'; ... doozi-kánsoku o okonaéba ... "ataranai tenki-yóhoo" NO akuhyoo o nozoku kotó mo tán-naru yumé de wa áru ¯mái 'If we perform simultaneous observations ... it will not be a mere dream to avoid the bad reputation of "inaccurate weather forecasts"'; Ittai kono yóo na mondai wa, dótira ga yói ka to iu mondai dé wa náku, sizen-zyóoken ya tá no saibai-zyóoken nádo no saibai-kánkyyoo ni tá-si dótira ga tekioo surú ka NO mondai de áru 'This sort of problem is not a problem of which is better but of just which is to be applied toward the cultivation circumstances of natural conditions and other cultivations, etc.'; ... 12725 NO bangóo o te-gákari ni ... 'With the number 12725 as a clue ...'; ... yosán-men ni wa, kono hokyúu-kin(¯) NO katati dé nomi déte ita '... on the budget sheet it appeared only in the form of this subsidy'; Sore nára-ba, syoosetu-ka NO na ni óite(¯), arúi-wa zissen-ka NO na ni óite(¯), géndo o siranu hihyoo-séisin no ué ni danzai no óno o huruu kotó wa ... 'That being so, in the name of "novelist" or in the name of "practical person" the flourishing of a decapitating ax on the critical spirit that knows no limit ...'; Sore kóso wa, ippan-sangyóokai ni óite(¯) góku syoosúu no kyodai-dokusen-síhon nomi no kyuusai no tamé "syuutyyu-séisan" to "kigyoo-goorika" NO na no motó ni kyookoo si-tútu áru tokoró no ... '... that are being forced under the name of "intensive production" and "logicalization of industry" for the purpose of saving just a few large monopoly capitalist enterprises'; ... seikatu-hozyóhi NO meimoku de múri-yari(¯) osi-tukeráreta syoogaku no syakúzai(¯) ni ... 'small-scale loans that have been forcefully pushed under the heading of living subsidies'; Zyuuni-tubo NO híro-sa da ga, ... 'It's a width of twelve *tsubo*, but ...' (SA); Iti-niti ¯zyuu utí(¯) ni ite kázoku no sewá o surú no ga sigoto NO okáa-san ni wa ... 'For your mother, whose job it is to stay home all day taking care of the family, ...' (SA 2838.105c). And examples of the more formal *Ir de áru Id*: Kigeki-sákusya DE ARU watakusi wa, taidan no saisyo wa warai kara hazime-tákatta 'I who am a writer of comedy wanted to begin my [series of] interviews with laughter' (SA 2659.48); Syúhu de ari, tíisa na kodomo no hahaoya DE ÁRU watakusi ni tótte, ... 'For me who am a housewife, and am the mother of small child(ren) ...' (SA 2688.146); Seménto no genryóo DE ARU sekkái-seki ... 'Limestone which is the raw material for cement ...' (SA 2688.23a). The copula can be perfect, *Ir dátta Id* (or *Ir de átta Id*): ... hon-no kodomo DÁTTA watasi ní mo ... 'even to me who was a mere child' (SA 2676.107b). Sometimes the epithematized *Id* has been extruded from an identificational sentence adnominalized to a postmodifier such as *hazu*. Thus ... "teki" no *hazu* no Bateto-Ráo daihyóo-bu ga ... 'the representatives of the Pathet Lao who are supposed to be the "Enemy"' (SA 2688.4) comes from "teki" ga daihyóo-bu no *hazu* da = daihyóo-bu wa "teki" no *hazu* da 'the representatives are supposed to be the "Enemy"' ← "teki" ga daihyóo-bu da = daihyóo-bu wa "teki" da 'the representatives are the "Enemy"'.

Identifications and propredications can be embedded within other identifications and propredications; when the result is a string of *nó*-linked noun phrases, you may be puzzled as to the intended constituency. The phrase *watasi no siriai no Kánsái(¯) no áru zassi no hensyúu-sya wa* ... (Fukuda in Ōno 1967.187) might be taken either as 'the editor of a certain Kansai magazine who is an acquaintance of mine' or as 'the Kansai editor of a certain magazine who is an acquaintance of mine'. The phrase *Gakkoo no sensei ga siboo de kyookú-gaku senkoo no Árisón wa* ... 'Alison, majoring in education with the aspiration

to become a school teacher, ...' (SA 2680.22e) has an epitheme (Árison 'Alison') that can be taken as extruded from both embedded clauses: Gakkoo no sensei ga Árison no siboo da = Árison no siboo wa gakkoo no sensei da 'Alison's aspiration is (to be a) school teacher' is converted into a gerund to represent the CAUSE of kyooikú-gaku [ga] Árison no senkoo da = Árison no senkoo wa kyooikú-gaku da 'Alison's major is education'. In the following example kodomo NO muttú NO tokí represents kodomo GA muttú DE ARU/ATTA tokí 'the time when the child was six years old': Saisyō no kánai ga naku-nattá no ga, kodomo no muttú no tokí datta kara né, kyōo nízuyū-nen tatte 'ru wáke da ná 'Since my first wife's passing away was when the child was six, (it means) today twenty years have passed, I guess' (Tk 3.35b).

Some identificational sentences that represent DESCRIPTIVE identifications—the Identifier typically a noun modified by adnominalized description—will permit the structure *Id ga Ir da* when adnominalized to a summational epitheme:¹⁸ Watási-tái wa, Kindáiti GA sugúreta Ainugo-gákusya DE ARU kotó o sitte iru bákari de náku, konó-hito ga Áinu no hitóbito ni hukái aizyoo o mótte itá ni tigai ná to omóu 'Not only is it well known to us that Kindaichi is an outstanding scholar of the Ainu language, but I feel that this man surely held the Ainu people in great affection' (SA 2679.103c). Here *gá* (optionally replaceable by *nó*) marks the Identified, which would be required to undergo subdued thematization if it were not adnominalized: Kindáiti WA sugúreta Ainugo-gákusya de aru 'Kindaichi is an outstanding scholar of the Ainu language'. A similar example: Sore ga úso DE ARU syooko ni, sono kao ga pat-to akaku nátte iru 'As proof it's a lie, his face has suddenly turned red' (SA 2814.24e).

Sentences of the type Sakana wa táí da 'The only (= best) fish is sea bream (= red snapper); Sea bream is THE fish' (cf. p. 251) and Aité ga aité da 'Such is the opponent' (p. 664) can be freely adnominalized to various epithemes, unchanged except for the form of the copula:

Sakana wa táí NA no da.	Sakana wa táí NO Nihón nara, ...
NO yóo da.	NA kotó wa (dare de mo sitte iru).
NO hazu da.	NO tamé, ... (= Sakana wa táí da kara).
Aité ga aité NA no da.	
NA kotó wa (dare de mo sitte iru).	
NO tamé, ... (= Aité ga aité da kara, ...)	
NO torihiki nára ...	

Cf. Kuruma wa VW no Dóitu 'Germany where THE car is the VW' = VW ga kuruma no Dóitu 'Germany where the VW is THE car'.

In certain sentences it is necessary to assume ellipsis of the adnominalized copula in order to account for the structure indicated by the other elements present: Mondai ga mondai [na] daké ni ... 'Just because the problem is a problem ...' (KKK 25.78a); Byoonin ga byoonin [na] daké ni ... 'Just because patients are patients ...'; Basyo ga basyo [na] daké ni ... 'Just because it is the place it is ...'; Genkín ga || zyuuman-en mímán [de aru] | máde wa, || risoku wa || saikoo || nén || ní-wari, || ... 'Up to where the principal is under ¥100 000, the interest is at a maximum twenty percent a year, and ...' (SA 2689.123b)—ellipsis is also indicated in ... saikoo [de] nén [ni] ní-wari [de]. Cf. ellipsis of *ná* with

18. Compare the earlier note on possible neutralization of the distinction between *Id* and *Ir* in subordinate clauses and adnominalized sentences.

adjectival nouns, § 13.5a; that will account for Mondai ga sinri-teki [na] daké ni ... 'Just because the problem is psychological ...'.

In written Japanese you will often come across an ellipsis *N [nó] N* which leaves two nouns juxtaposed as if they formed a compound noun. (Cf. Martin 1970, where there are listed additional ellipses that yield *NN*; see also § 25.) Usually the *nó* is best regarded as adnominalized proredication, regardless of the ultimate origins—which may be diverse. How do we know that *N + N* is not to be taken as a noun compound? If the first noun is tonic, there will normally be a juncture (or its traces) left behind from the ellipsis of the *nó*; if the second noun is tonic you will hear a reduced version of its accent: ... *zyósi* {no} | puro-resu ni ... 'in women's wrestling' (SA 2678.138a); *Bánkoku* {no} | yuubinrengoo-zyóoyaku 'The Universal Postal Union Treaty'. On the other hand, a compound noun that is made up of two free nouns (as *yuubin-réngoo* 'Postal Union' + *zyóoyaku* (ˉ) 'treaty' or *yuubin* 'postal service' + *rengoo* 'union') accentuates the first syllable of the second noun, unless that is mesotonic or has already acquired a new accent pattern by the addition of a suffix (for such patterns persist in larger compounds so that you can not tell from the accentuation whether a suffix is to be taken with the compound as a whole or with the second member); cf. p. 19. Nonce formations sometimes allow either treatment: *Kyóoto* [no] | sitén-tyoo 'the branch head in Kyōto (= the head of the Kyōto branch)' can be tightened into the compound *Kyooto-siténtyoo* 'the Kyōto branch head'; *Bánkoku* | *Hakurán-kai* 'International Exposition' readily tightens into *Bankoku-Hakuránkai*, and that is easily abbreviated to *Bankoku-haku* and *Ban-paku* 'Expo'. And *nízyúu-nen* | *kinzoku* | *hyoosyoo-médaru* 'a badge-medal for twenty years of continuous service' (SA 2660.57a) can be said as *nizyuunenkinzoku-hyoosyoomédaru* 'a twenty-years service medal'.

Elsewhere (Martin 1970.441) I have treated the juxtaposition of the object noun with a transitive verbal noun as ellipsis of a deeper structure *N [ó] VN [surú no]*. But we will need to account for *N no VN*, in any event, so that the immediate ellipsis can be from an adnominalized proredication; *zinken* [[*nó*] |] *zyuurin* 'violation of human rights' will eventually derive from something like *zinken o zyuurin surú no da* 'it is violating human rights'. Cf. § 14.3. Other examples of this: *kokki* [[*no*] |] *keiyoo* 'raising [of] the flag'; *úntin* [no] (|) *neage ga* ... 'the hiking of the fares' (from *úntin o neage suru* 'hikes the fares'); ...

You may be puzzled by written phrases that have an unwanted *nó* (as if the opposite of the situation described above): *A-kí no N* and *V-rú no N* or the like (cf. § 14.6: p. 903). This is an exceptional kind of adnominalization which dates from the 1300s (according to Ishigaki Kenji 192-3) and seems to have been particularly popular in texts of the Meiji period.^{18a} The input sentence (A or V) is directly nominalized—*A-kí* [no] *de aru*, *V-rú* [no] *de aru*—and the copula is converted to its adnominal form *nó*, so that the underlying structure is something like *A-kí* [no] *no N* and *V-rú* [no] *no N*, in which the dropped *nó* is the nominalizer and the expressed *nó* is the copula: *Motiron*, *o-tagai ni aité* no *okúgata* (ˉ) *ni tái-site wa*, *ki-húzin ni tai-súru NO réi o mótte hanásu no de aru* '[Being old friends we were relaxed in our talk, but] when it came to speaking of each other's wives, we talked with the etiquette appropriate when referring to [honored] ladies' (Tk 3.31).

13.1.6. Subject Marking and Focus in Adnominalized Sentences.

In § 2.3 we found that any adjunct can be subdued by adding the particle *wá*—thereby

^{18a} The earliest example I have seen is late-Heian: *haku no kinu* 'a garment to wear' (Ruiju - Myōgi-shō, ?1081 A.D.).

removing the possibility of specifying the subject-object relationship because *gá* and *ó* are incompatible with *wá*. Something a bit similar can happen to the SUBJECT of an adnominalized sentence: the particle *gá* can be replaced by *nó*. Observe that sentences are normally adnominalized without subduing the subject, going directly from A *ga* B *o* ... rather than from A *wa* B *o* ... or B *wa* A *ga* So the reduction of *gá* to *nó* is direct, not by way of a sentence with *wá*, and it preserves the specification of the subject intact. You are more likely to mark the subject of an adnominalized sentence with *gá* when the sentence is short and the noun selected for epithematization is the object of the sentence underlying the adnominalization. And you are unlikely to change *gá* to *nó* if there is the possibility of misinterpreting the *nó* as a genitive.

The above remarks were written with the notion that *gá* → *nó* (or ~~*gá*~~ *nó*) in an adnominalized sentence serves essentially the same function as *gá* → *wá* (or ~~*gá*~~ *wá*) in an unadnominalized sentence, i.e. that it subdues the subject. (This idea was first presented, I believe, in *Essential Japanese* and I have since repeated it elsewhere.) But it appears that this description may not be accurate.¹⁹ Some speakers feel that the choice of *gá* or *nó* in an adnominalized sentence is nothing more than a stylistic option, with *gá* the more colloquial. So let us consider a somewhat different description:

The surface-subject marker *gá* is optionally replaced by *nó* when the sentence is adnominalized. The option is chosen more often in writing than in speaking; it is less common when the adnominalized sentence is long and consequently contains a number of adjuncts: Harada found that younger Tōkyō speakers reject the *nó*-option when the resulting sentence has an intervening constituent between the subject and the verb and older speakers reject the option when there is more than one intervening phrase. The option is generally avoided when a danger is recognized that *nó* might be misinterpreted as the genitive (which may be derived from a reduction of an adnominalized possessive sentence in which *gá/nó* marks the possessor), although the spoken versions can disambiguate the two by juncture. The origins of the surface subject are irrelevant, it would seem; and if there is more than one surface subject, it is possible to exercise the option for any or each of them. Thus *Káre ga supóoto ga hetá na kotó nara ...* 'If it's the case that he is clumsy at sports' can be said with *nó* for either or both instances of *gá*.

The kind of epitheme is also, in general, irrelevant; all types occur, including the resultative, as in these examples: *Kodomo ga/no kirei ni káita ZÍ* 'a character nicely written by the child'; *Gásu ga/no hídoku moréru NIÓI* 'the smell of gas leaking terribly'; *Sénsyu ga/no rippa ni yuusyo sita YOROKÓBÍ(¯)* 'the delight that the champion has won'; *Senséi ga/no watasi no ronbun o yónda INSYOO* 'the teacher's impression on reading my thesis'; *Kókku ga/no sore o ryóori sita AZI* 'the flavor when the cook has cooked it'.

Even the all-purpose postadnominal (or general pronoun) *nó* will permit the replacement: ... *aite⁽²⁾ NO osóí no o hínan si-tai* 'wants to criticize a partner for being late (a partner's being late)²⁰ (Ōno 1966.126); *Watasi wa Biéntyan no hikoo-zyoo de renrák [u]-ki*

19. On the other hand, the notion of *nó* as a subdued version of *gá* may have merit; Tanaka Humio (in *Kokugo-bumpō no mondai-ten* 352-8) gives examples in which it is difficult to replace *gá* by *nó* because the noun carries intrinsic emphasis. And Yoshida clearly supports the notion, saying that in *Bóku(¯) no katta sebiro* 'The suit I bought' the emphasis is on *sebiro* 'suit' but in *Bóku(¯) ga katta sebiro* the emphasis is on *bóku(¯)* 'I' (Y 299-300).

20. Or, §14.2.3, 'wants to criticize whichever partner is late'.

NO *déru* no o *mátta* 'I waited at the Vientiane airport for the liaison plane to appear (SA 2673.22e); Masagó-zusi no ozisan NO *sindá* no o sitte *irú* ka i 'Did you know that the man at the Masago Sushi place is dead?'²¹ (Kb 16a); Sore kara, *kutikazu ga sukunái* no to, *kuti* no kiki-kata NO *sízuka* na no ga tokutyoo *dátta* 'And then, she had the special quality of being sparing of words and quiet in speech' (KKK 3.168) = Tokutyoo wa *kutikazu ga sukunái* no to *kuti* no kiki-kata GA *sízuka* na no *datta*'. And even direct nominalizations with ellipsis of *nó* can take the option: *Dandān yó* NO *hukéru* [no] ni turete *nemúku* wa *náru*, *hará* wa heru, *sae-agatté* wa *kúru* 'As the night gradually wears on I get sleepy, I get hungry, I start sobering up' (Kb 106b). But one avoids replacing *nó* *gá*^[1] by *nó* *nó*^[2], so that you are unlikely to hear (*)*doobutu o míru* no no *sukí* na kodomo for *doobutu o míru* no ga *sukí* na kodomo 'a child who likes to look at animals'; cf. *doobutu o míru kotó ga/no sukí* na kodomo. And the option is not normally permitted for certain epithemes that have been reduced to the status of what Fujioka calls "clause auxiliaries":

N ga S + *bákari*

daké [de *náku*], *nómi-nárazu*

tamé {ni} 'because'

(*kará*, *món* [da *kara*] 'because')²²

monó da 'it is natural that'

kusé ni

dógoro [ka]

nó da 'the fact is that'

nó de 'because of the fact that'

nó ni 'despite the fact that'

kotó ga áru 'ever'

yóo da [But see below.]

mitai da

(*sóo da*)²³

hazu dá [But see below.]

Yotei and *tumori* will permit the option, but not in the common meaning 'I intend ...'; in that meaning they belong in the list above.

Although *nó da/de/ni* block the option in the meanings given, other uses of *nó* meaning 'fact' as well as 'the one' will permit the option, as will most uses of *kotó*, the only exception being the experiential possessive expressions ('ever') and perhaps a few similar usages(?).

Though *yóo da* will preclude *gá* → *nó*, the option is permitted when the resulting sentence is itself adnominalized (... *yóo* na N) or adverbialized (... *yóo* ni):²⁴ *Áme no huránai yóo* na hí ... 'A day when it doesn't rain ...'; *Mi no sukúmu*(¹) *yóo* na *sabísi-sa ga átta* 'There was the kind of loneliness that one's body cowers at' (Kb 83ab); ... *gátén*(¹) no *ikanai yóo* ni, ... 'as if in doubt' (Kb 140b); *Gokai no ná* *yóo* ni *ari-tái monó da* 'We want to keep it so there are no misunderstandings'. This is true also for evidentializations with -*soo da*; the option is permitted only for the adnominalization (... -*soo* na N) and the adverbialization (... -*soo* ni): *Ki no nasa-sóo* na kao o site *iru* 'He looks uninterested'; ... ki

21. Or, § 14.2.3, 'You know the man at the Masago Sushi place who died?'

22. But S with these is not an adnominalization: N *dá* *kara/mon*. See § 17.1.

23. But S with this is not an adnominalization: N *dá sóo da*. See § 18.

24. *Gótoku* and *gótoki* follow the same rules: *kimi* NO *siru gótoki* ... *oyá* ... 'the parent who is as you know' (Kb 327b = *kimi* no sitte *iru yóo* na ... *oyá* ...).

no nasa-sóo ni, ... 'looking uninterested' (Kb 44b); ... omoide no huka-sóo ni ... 'as if deep in memory' (Kb 50a)—more commonly said omoide [] huka-sóo ni. But only ki GA nasa-sóo + dá, dé, nára, ni miéru.

Similarly, hazu dá will not normally permit the option, but gá → nó will be possible when the resulting sentence itself is adnominalized (N ga/no suru hazu no N) and also when the sentence appears in larger structures of the type Kúru hazu [da/datta] ga kónakatta 'He was supposed to come but he didn't': Óyama san to Koizumi san NO miéru hazu ga tóotoo o-mie ni narimasén desita 'Óyama and Koizumi were supposed to appear but in the end they didn't' (Kb 39a.7). Cf. p. 980.

In the following examples nó replaces gá with various postadnominals: ... kore to iu yóo NO náí kágiri, ... 'so long as there is no business in particular to be done' (Kb 122b); ... kikái(¯) NO áru góto ni, ... 'every time the opportunity is available' (Kb 118a); O-nóbu wa hanási(¯) NO kíreta mamá ni daidokoro e tátta 'O-nobu went out to the kitchen without another word' (Kb 34b); ... kankei NO áru to iu kotó ga ... 'The fact that there is a relationship' (Kotoba no uchū 27a); ... Wakámiya-kun ni sonna monó NO átta to iu hanási d'atte atasya [= watasi wa] siranai yó 'I didn't even know that Wakamiya had such things' (Kb 185b); Hi NO kureru máde wa ... 'Until the day draws to a close ...'; Háha NO káeru máde ... 'Until/Before mother comes back ...'; Háha NO kaeránai utí(¯)/saki ni ... 'Before mother gets back ...'.

An adnominalized sentence that is a close-knit phrase will sometimes omit the subject marker entirely: ... zúnoo(¯) [ga/no] meiseki na Míeko san da kara yókatta kedo mo 'Fortunately Mieko is clear-headed, so it will be all right' (Tk 2.95a)—epithematic identification. The following example would appear to omit both the subject marker and the specific subject, leaving the adnominalized genitive to carry the burden: Zibun no utí(¯) ya I sinseki no [utí(¯) ga/no] átta tokoró, || arúite I mimásu to || nán da ka || Yósiwara to wa || omoénaí n desu 'When I walk around where our house and my relatives' [house] used to be, somehow it just doesn't seem like the Yoshiwara' (Tk 2.269-70)—the juncture represented by the comma signals ellipsis of the particle ó, called for by the traversal object tokoró, which is an epitheme extruded from a locative [sono] tokoró ni ... átta '(houses) were in [that] place'.

Throughout the history of Japanese the two particles gá and nó have shared functions with each other, and the actual distribution of the functions today varies from dialect to dialect; cf. Martin, *Journal of Asian Studies* 16.148-50 (1956). Thus we are prepared to find both of these markers used for the genitive, gá in the literary language and nó in the standard colloquial; some dialects, notably in the Ryūkyūs, use the local reflex of nó (pronounced nu) not only to mark the subject of an adnominalized sentence (an option in standard Japanese) but also to mark the subject of an unadnominalized sentence, and for those dialects nó and gá can be thought of as suppletive alternants of a single marker, the distribution depending on the nature of the preceding noun. Marking the subject of unadnominalized sentences with nó is common in western Kyūshū, too (H 1968.107, Zhs 6.24). In certain dialects an even more surprising phenomenon turns up: the pronominal function of nó 'the one/fact/act' is also carried by gá; see p. 48. The distribution of gá and nó in the older literary language has been explained in three ways (according to Kinoshita 19): (1) Yamada Yoshio says gá emphasizes the preceding noun, nó emphasizes the following noun; (2) Jugaku Akiko says nó shows respect, where gá shows intimacy or humility or dislike; (3) some say the selection is arbitrarily set with particular words. In conversational

passages of light fiction of the early 19th century, *nó* marked the subject of adnominalized sentences in preference to *gá* by a ratio of .88 to .12, according to Gekkan-Bumpō 2/11 (1970).

In §2.3 we observed that highlighting with *mó* is possible on any adjunct in the adnominalized sentence. It is also possible to highlight the adnominalized nucleus itself as can be seen from these examples: ... *tóozī no | hitóbito no || yosoo MO sinákatta | katati de ...* 'in a form unanticipated by people of that time' (R); *Hídeko no sonzai wa, || zibun no || nágaku MO | náí | syóogai(¯) ni, || kakegae no náí | ígi o | mótte | itá ni | tigai náí* 'Undoubtedly Hideko's existence held a precious meaning in his own none-too-long life' (lg 1962.86).²⁵ We suggested that except for cases where two contrasting sentences are conjoined before adnominalization (as in *Otokó wa nómu ga onná wa nománai sake* 'liquor that the man drinks but the woman does not'), a subdued focus could be placed only on the SUBJECT of an adnominalized sentence—and this done by changing *gá* to *nó*. But (aside from other objections) that statement seems to be incorrect, for the following examples display a variety of situations in which *wá* is used to subdue adjuncts within an adnominalized simplex: ... *tatóe(¯) || huku-kénzi no | syussin de, || syuusýúu-sei no syuusýúu WA || oezáru | monó ni | túite mo ...* 'even with respect to those who have come up from assistant prosecutor but have NOT completed the procuratorial training ...' (KKK 3.186) ← ... *syuusýúu O oezáru monó ...; Moo iti-dó, || máe yori WA || óoki na | kóe de | yobimásu to ...* 'Upon calling again, with a voice LOUDER than before ...' (KKK 3.191) ← ... *máe yori [] ...* (directly adverbial); *Nihón no mondai ga || yagaté WA || kokusái-kan no | mondai to náru hí ga | áru kotó o | omói, ...* 'Thinking that there will be a day when Japan's problem at last becomes an INTERNATIONAL problem ...' (KKK 3.191) ← ... *ga yagaté [] ...; Ima-máde || yosán-men ni | arawasárete | inákatta || "enzyo-síkin" ga || kóndo WA || yosán-men ni || hakkíri || sógata o | arawásita | kotó de aru* 'The "aid fund" that has not appeared on the budget page up till now is a matter that this time IS clearly shown on the budget page' (KKK 3.191) ← ... *ga kóndo [] ...; Sin-náikaku wa || "sensoo-náikaku" de | átte, || Tyuukyoo tó WA || tettei-teki ni tatakau kétúí de áru* 'The new cabinet is a "war cabinet" and is resolved to an all-out FIGHT with the Chinese Communists' (KKK 3.191) ← ... *Tyuukyoo tó ...; Sikási, || rakuda ní WA || kórite iru | hutarí ...* 'But the couple who have learned a lesson from a camel ...' (KKK 3.190) ← ... *rakuda ni ...; ... tasyoo tó mo || búngaku ni | kokóro no | áru | hitó ni WA || tae-gatái | búnsyoo da ga* 'It is a sentence that is INTOLERABLE to a person with the least sensitivity to literature (but ...)' (KKK 3.188) ← ... *hitó ni ...*

The following examples of subdued adjuncts within adnominalizations were noticed in the expository text in the cited pages of Sakakura: ... *kore wa, || bunpoo-teki ní WA || toriatukai-nikúí | monó de aru ...* 'this is something difficult to HANDLE grammatically' (164); ... *bunpoo-teki na mondai tó WA || kangaerarenai no ga | hutuu de áru* 'the USUAL ones are those that can NOT be thought of as grammatical problems' (172); *Kono gó wa, || kátute, || génzai to WA || kánari | koto-nátta | ími o | mótte || moti-irarete ita to omowaréru* 'This word is thought to have been used earlier with a meaning rather DIFFERENT from

25. From *Watasi mo tegami o káita* 'I too wrote a letter' you can produce *Watasi mo káita tegami* 'the letter that I too wrote'; it is possible to say *Watasi nó mo káita tegami* but only as the result of an ellipsis of a pronominalized genitive *Watasi nó* ≠ *no* ≠ *mo káita tegami* 'the letter written by mine too' in which what is dropped is equivalent to *monó* 'the one' or *kodomo* 'child' or the like.

[the one it has] at present' (187); ... to iú no mo, || hukugoo-dóosi to | sité WA || kangae-nikúí | monó de, || ... 'the very expression ... is something hard to CONCEIVE of as a compound verb' (187); ... no gótoki | kootai WA || mitome-nikúí | kotó o, || wareware wa sitte iru 'We are well AWARE that it is DIFFICULT to recognize alternations like ...' (187).

There is an interesting expression *Tookyoo wa Kanda no umare* '(being) born in Tōkyō [right] in KANDA = born in Kanda the heart of Tōkyō' (MKZ 911a). This appears to be the adnominalization of an identificational sentence²⁶ *Tookyoo wa Kanda dá* = *Kanda ga Tookyoo dá* meaning something like 'Kanda IS Tōkyō' (or 'Tōkyō IS Kanda' for the two English sentences can be taken as identical in nonthematic content), and the example may turn out to be the answer to our question of subdued focus in adnominalized identificational sentences, left unresolved in the preceding section. Notice, however, that here we have a rather special kind of identificational sentence, one which identifies by citing a prime example of the identified—a literary device now largely limited to set phrases and advertising slogans. See also pp. 251, 658. Another special kind of identificational sentence is that exemplified by *Aité ga aité da* 'The adversary is THAT adversary' or 'Such is the adversary' (Kb 165a). Sentences of this type (N_1 ga N_1 dá) are specificatory: *Kuruma ga kuruma dá kara* ... 'My car being the car that it is ...'. Cf. N_1 wa N_1 dé [mo], pp. 244-5; N_1 ga N_2 dé mo, pp. 249-50; N_1 mo N_1 [dé], p. 246.

Here is a clearcut example of an adnominalized identification in which the Identified (*N wa in N wa X dá*) is marked with *nó*: *Oziisan NO || koo-dánsi na no ni | odoróita* 'I was surprised at the fact that the old man was a handsome gentleman' (Shibata 1965.191). To be sure, the epitheme is the summational postadnominal *nó* 'fact' and the noun is a compound containing a semantically "adjectival" prefix: *koo*- 'good' + *dánsi* 'gentleman'.

13.2. POSTADNOMINALS

A number of noun-like words occur either typically or exclusively with adnominal modification; some of these have been called by various Japanese grammarians "adhesives" (*kyuutyaku-go*) or "formal nouns" (*keisiki-méisi*) and "formal adverbs" (*keisiki-húkusi*), but I will call them POSTADNOMINALS. Some of the words in question are used fairly widely as ordinary nouns (*baai* 'situation', *wáke* 'reason', ...); others occur now and then without adnominal modification but under circumstances that invite us to think of them as shortenings of *sono* ..., as in [*sono*] *máe* 'before [that]'. You will find this true for most of the words referring to time or place in the list below, together with a few other words such as *hoka*. The assumed ellipsis can probably be justified not only by history but by statistics, in that the use WITHOUT something like *sono* ... is probably less frequent than would be the case for ordinary nouns, such as *teeburu* 'table' or *haná* 'flower'. (A different point of view would assume that ANY occurrence of an unmodified noun involves ellipsis of some adnominal element—minimally *sono* 'that' or *áru* 'a certain' or the like. I do not take that approach because I would like to derive adnominal elements from the adnominali-

26. Or a propredicational sentence standing for a genitive structure related to *Tookyoo no Kanda* 'Kanda which is in Tōkyō'. That interpretation would put the expression in the same category with the highlighted phrase in *Áru áki mo sue no samúí yóru no kotó*, ... 'One cold night at the very end of autumn, ...' (Takeda 1970.112) and *Kúgatu mo sue no, yóru no siti-zi ~sugi de atta* 'roo 'It must have been after seven o'clock one evening at the very end of September' (SA 2831.68d). Cf. p. 65.

zation of sentences so far as possible, despite the small residue of intractable cases that are taken up in § 13.5.)

Some postadnominals are always preceded by an adnominalization or by an adnoun: *dán*, *gurúrí*(⁻), *hazu*, *hóo*, *ippóo*, *kátá*, *katawará*(⁻), *múki*, *sái*, *samá*, *séi*, *tóori*, *wari*, *yóo*, The list that follows includes a number of words that are also treated as restrictives (§ 2.4): *bákari*, *daké*, *dógoro*, *góto*, *gúrai*, *hodó*, *ígai*, *ízen*, *ízyoo*, *kágiri*, *máde*, Before these restrictives the copula that marks a nominal sentence (*dá*) does not appear as *nó* (as it will before most of the other postadnominals) but instead either changes to *ná* (as it does before a few postadnominals) or drops, permitting the noun to be joined directly to the restrictive. Moreover, unlike most postadnominals, the restrictives do not occur after adnouns such as *sono*—with the exception of *hodó* and *kúrai/gúrai*, and combinations with those are perhaps best treated as lexical compounds, as we suggest elsewhere (§ 29). One of the items included below, *kará*, is treated as a conjunctivalization (§ 17.1) because before it a nominal retains the predicating *dá* intact (contrast *byooki dá kara* ‘because I am ill’ with the synonymous *byooki no tamé*); the only reason for including *kará* here is to remind us that it can be followed by the copula infinitive *ní* (usually subdued *ní wa*) and is similar in meaning to *tamé*. *Kará* is also treated as a case marker, as is *máde*; *máde*, in addition, is a restrictive.

When a sentence—whether verbal, adjectival, or nominal—is adnominalized to the postadnominal, the new sentence created has its own grammar; this is sometimes the grammar of an adverb, sometimes of a precopular noun, and most often that of a pure noun. In all three instances, further adnominalization will require the copula (*dá*) to appear in the shape *nó*; but there are also a few postadnominals which behave like adjectival nouns, and after them the shape of the adnominalized copula is *ná*: *mítai*, *yóo*, ..., and optionally *gúrai*. Although most postadnominals can occur in the imperfect (... *dá*) many of them are more commonly found in the infinitive (... *ní*) or gerund (... *dé*) or are directly adverbialized (cf. § 9.1.13, § 14.6).

If the epitheme is a noun which might be either an extruded adjunct or a postadnominal that is not extruded, a given adnominalization can be ambiguous. *Warúi rikutu* could be derived from *Rikutu ga warúi* ‘The reason is bad’ and given the interpretation ‘a bad reason’ or it could be derived from [*Sore ga*] *warúi* ‘[That] is bad’ adnominalized to a transitional epitheme and given the interpretation ‘(for) the reason that it is bad’; Chamberlain 60 was mistaken in allowing only the second interpretation. It might be thought that the expression could be disambiguated by including the adjunct; yet *kodomo ga/no warúi rikutu* is also ambiguous, for it could be taken either as ‘the reason that the child is bad’ or ‘the child’s bad reason’ and the latter interpretation (genitive) is possible for the version with *kodomo gá* not only in the literary language (where it would be equivalent to the colloquial *kodomo nó*) but also in the spoken language if properly derived from *Rikutu ga/(wa)—kodomo ga [= kodomo nó ga] warúi*, that sentence in turn deriving from a permutation and thematization of *Kodomo ga [áru] rikutu ga warúi* ‘The reason possessed by the child is bad’.

An example of ambiguity is cited by Shibata 1966.189: *súbete no gen’in* can mean either ‘all the reasons’ (presumably from *gen’in ga súbete da* ‘the reasons are all’) or ‘the reason for everything’ (from *súbete ga/no áru gen’in*). Couldn’t this also be taken as [*sore ga*] *súbete da* adnominalized to a transitional epitheme and given the meaning ‘the reason [that/why] it is everything’?

Some postadnominals permit or require an adnominalized sentence to be marked as if quoted: *S to iu ...*²⁷ Extruded epithemes can also be marked as if quoted, provided the reference is not directly to the speaker. An actual quotation can itself be adnominalized, so that the surface versions of most of the sentences that can be said with the purely formal “quotationalization” are ambiguous: *omosirói to iu kotó* can be understood either as ‘the matter of [someone’s] saying it is fun’ (with genuine quotation) or as ‘the matter of [its] being fun’ (with quotationalization). Just as you may quote a quotation (*Omosirói to iu to iu* ‘Someone says that someone says that it is fun’)—and in theory, at least, even quote the quotation of a quotation, the device being recursive—it is also possible to quotationalize a quotation. Thus *omosirói to iu to iu kotó* means either (1) ‘the matter of [someone’s] saying that it is fun’ or (2) ‘the matter of saying that they say it is fun’. (Authentic examples, to be sure, will usually identify explicitly one or more of the sayers.) Unlike the genuine quotation, quotationalization is NOT recursive and it will occur only once before a given epitheme; if, by some odd chance, you should run across anything so weird as *omosirói to iu to iu to iu kotó*, you will know that the first two *to iu* phrases must be genuine quotations, while the last may be either a further quotation (‘THEY SAY that they say that they say that ...’) or a purely formal quotationalization, since that is permitted by the summational epitheme *kotó*.

The following list is a rough collection of postadnominals that have come to my attention, with what information I have been able to find about each, together with a good many examples. Further investigation will, in many instances, lead to corrections and modifications of the information given. There are undoubtedly a large number of additional words that should be included; with all synonyms the list might expand to over a thousand items. But I believe I have caught the common and important ones, especially those requiring extensive discussion, as well as a few that are not so common. Certain of the items are treated individually in the following sections (§ 13.2.1-9); the selection for more extensive description is in part arbitrary and certain other items should perhaps have been accorded equal coverage (e.g. *hóo*, *séi*, *hodó*, *daké*, *bákari*).

The list contains six columns of information. First, the epitheme type(s): *e*(xtruded), *s*(ummational), *r*(esultative), *t*(ransitional). Next an attempt to indicate other uses, if any, of the word: N means the word is freely used as an ordinary pure noun (if less freely the N is parenthesized), AN as an adjectival noun, PcN as a precopular noun, Adv as an adverb, R as a restrictive, etc. *N_{pj}* stands for place noun, *N_{tm}* for time noun, *N_{ab}* for abstract noun, *N_{ac}* for action noun. The third column indicates what type(s) of grammar the phrase *S* + postadnominal displays—most often this is N, but sometimes Adv or other. The fourth column attempts to indicate the kind of adnominalized sentences most commonly (or exclusively) taken by the postadnominal; where there is no indication, it means I am unaware of any particular restrictions or preferences. In the notations of Column 4 “-ru” means the imperfect of any type of sentence, “-ta” the perfect, unless further specified by V before the hyphen. The fifth column lists “Q” for those postadnominals that require the adnominalized sentence (if not *N no* or *siyoo to suru*) to be linked by quotationalization, “[Q]” for those optionally permitting such linkage, and “*Q” for those which will not permit

27. Or, sometimes, *S tte ...* or *S to itta ...*; but only these versions of marking quotation can be used for quotationalization.

quotationalization. (Before the latter *S to iu* could only be used as a genuine quotation of someone's words.) The last column lists the postadnominals in alphabetical order, with their principal meanings and uses, together with examples of the more interesting items. Those nominal sentences other than adjectival nouns will normally adnominalize *N dá* → *N nó*, but the following postadnominals will usually require *N ná* of all nominals: *bákari*, *daké*, *dókoró*, *hodó*, *ígai*, *ízyoo*, *kágiri*, *kotó*,²⁸ *máde*, *monó*,²⁹ *nó*, *wáke*.³⁰ (Instead of choosing *ná* or *nó* it is always possible to use *N de áru*, with the formal uncontracted form of the copula.) And those postadnominals that are also restrictives will more often be attached directly to the noun with no intervening copula, since the difference in meaning is usually slight unless the noun has more than one kind of grammar.

40. The final accentuation of sitá 'below', ué 'above', utí 'midst; home', hitó 'person', hí 'day', and tokoró 'place' holds only when these words are modified by an adnominal element present in the surface structure; otherwise they are atonic. But Hamako Chaplin treats sitá as always atonic; for that reason, here I have marked it with the optional accent cancellation (¯). And utí(¯) is always atonic for certain speakers; others make it oxytonic when modified; but for some speakers the word is oxytonic even when unmodified.

- s N N [Q] zyooseki 'rules, formula': Sentyaku-zyun ni hito o ireru {to iu} zyooseki ˉdóori ni kónkai mo soo sita 'This time, too, we did it according to the formula of letting people in by order of arrival'.
- s N N [Q] zyootai '(static) situation, condition, state of things, aspect': Máiniti(⁻) sensí-sya no déru zyootai de, nayánde iru 'We are suffering under a situation of daily (war) casualties'; Arasótte iru zyootai dátta ryóok/goku wa kyuusen no zyootai (= kyuusen-zyóotai) ni nátte iru 'At present the two countries, which were in conflict, are in a state of armistice'.
- s N N V-ru [Q] zyun 'one's turn (to V)': ... yome o morau zyun no VN no watasi ga, ... 'I whose turn it was to receive a bride (= get married) ...' (SA 2684.138c). Cf. bán, zyunban.
- s N N V-ru [Q] zyúnbi 'preparation, arrangements (to V)': Tuki-ryókoo ˉyoo ni rokétto nádo o tukúru {to iu} zyúnbi ni wa bakudai na o-kane ga kakáru sóo da 'I understand they are spending an enormous amount of money to build the rocket and all for the moon shot'. Cf. sitaku, yóoi.
- s N N V-ru [Q] zyúnzyo 'the order (of doing)': kuruma ni nori-kómu VN no zyúnzyo 'the order of getting into a car' (Tsukagoshi 126).

13.2.1. *Monó*.

The noun *monó* means ‘thing’, typically an object, a commodity, or a possession. Like English “something” it can also refer to the substance of an abstraction: *monó o iu* ‘says something, talks’. And, like English “something” or “somebody”, it can refer to a person of substance—a success: *monó ni náru* ‘amounts to something, becomes somebody, makes a success, proves successful’; this often appears in the negative (*monó ni naránai* ‘does/will not amount to anything’) and it can refer to actions, plans, works of art, and so on, as well as to people. One more meaning is ‘reason’ as in *monó ga wakáru* ‘understands (the reasons for) things, has good sense’; cf. the use of *S monó da = S kará da* ‘because’ (§ 17.1). *Monó* will often substitute for a noun extruded as an epitheme; in this use, it is sometimes equivalent to the use of *nó* as a general pronoun ‘the one (that ...)', referring to a thing or a person.

In this section we are concerned with *monó* as a summational epitheme with meanings that center on “the regular (natural, to-be-expected) thing that ...”; in these uses the word is often shortened to *món*. Some types of sentence to consider:

(1) Imperfect *S + monó da* ‘It is only natural (appropriate) that ...’, ‘It is in the nature of things that ...’, ‘It stands to reason that (naturally) ...’, ‘You can expect that ...’, ‘All ...’, ‘... always ...’: *Áka-tyan wa | naku monó da* ‘You have to expect babies to cry’; *Yasúi | monó nara, || situ ga yóku | náí m⁽ⁿ⁾ da to | omóe* ‘If it’s cheap stuff, be aware that it’s likely to be of poor quality’; *Inú wa || yóku | hoéru | m⁽ⁿ⁾ desu* ‘Dogs (just naturally) do a lot of barking’; *Dáre ni mo, || it-tyoo | it-tan wa | áru monó da* ‘Everybody has strong points and weak points’ (MJW); *Tíisa na kodomo wall tokaku || byooki si-gati na m⁽ⁿ⁾ desu | né* ‘Young children are always getting sick, you know’.

(2) Imperfect *S + monó da* ‘really *S*, terribly *S*’: *Dóo-site, || nakanaka (|) rippa na monó desu* ‘How very splendid’ (Hayashi 156); *Dóo-mo, || kágaku no | sínpo wa || erái m⁽ⁿ⁾ da | yó* ‘Why, I tell you the progress of science is really something’ (Tk 3.308b); *Suppon no súupu | to iú no wa || umái m⁽ⁿ⁾ desu | né* ‘How delicious turtle soup is!’; *Mi-tái m⁽ⁿ⁾ da* ‘I’m terribly eager to see it’.

(3) *V-ru monó da* ‘The thing to do is *V*, I urge you to *V* (as a regular thing), you should make it a practice to *V*’: *Tosiyóri no | iu kotó wa || kiite oku monó da* ‘You should pay attention to what an old person says’ (Hayashi 136); *Hito no benkyoo no zyama wall sinai monó desu* ‘You shouldn’t bother me when I’m working’ (Hayashi 136).

(4) *V-ru monó de wa náí* ‘It is not the thing to do to *V*, It is not proper to *V*, You should not (make it a practice to) *V*’: *Dénsya(¯) no (|) náka de || tabako o suu monó de wa | náí* ‘People shouldn’t smoke on the train’.

(5) Perfect *S + monó da* ‘It used to be that ..., It would often happen that ...’: *Syatyoo wa || minná^[J] (|) otokó datta | monó desu ga, || konó-goro(¯) wa || onná ga | syatyoo ni náru | kotó mo | áru n desu* ‘It used to be that companies were headed by men, but lately women sometimes become heads of companies, too’; *Inaka ni súde ita | tokí ni wa, || mái-asa || zúibun || háyaku | ókita | m⁽ⁿ⁾ desu* ‘When I was living in the country I used to get up very early every morning’; *Kodomo no kóro wall amai monó ga || dáí-suki datta | m⁽ⁿ⁾ desu ga, || íma wa || hotóndo || tabe-tái to | omowánaí* ‘When I was a child I was very fond of sweets, but now I hardly ever have the urge to eat them’; *Móto wa || anmari || térebi o | minakatta | m⁽ⁿ⁾ desu ga, || koko sibáruku wa || máiban(¯) no yóo ni | míte imasu* ‘I didn’t use to watch television very much, but for some time now I’ve been watching it practically every night’.

(6) Potential + *monó nara* 'If it's the case that (one can) then (of course) ...': *Kantan ni ikareru monó nara* || *konna ni sinpai sinai* 'If it's easy to go, then I'll not worry so much about it'; *Dekíru* | *monó nara*, || *íma* || *súgu* || *site age-tái keredo ...* 'If it's possible, I want to do it for you right away, but ...'. (See also Alfonso 1024.)

(7) V-[y]oo *monó nara*: see § 13.3.

(8) S *monó* 'because S', S *monó da kara* 'It is because (of the reason that)': see § 17.1.

(9) S₁ + *monó ka* S₂ 'I guess it must be because S₁ is the case that S₂'—very close to the meaning of S₁ *nó ka* S₂ 'perhaps it's that/because S₁ that S₂; I wonder if it isn't because of S₁ that S₂', p. 928.

(10) S + *monó ka* 'how can it be (the case) that ...?!' = 'surely it isn't (the case) that ...!': see p. 926 (§ 15.6).

(11) TIME + *to iu monó*: see § 21.1.(4b).

For *mono-no* (+ NUMBER), see p. 746 (§ 13.5). For S + *mono-no*, *monó[-o]*, see § 17.4.

As a prefix attached to a few adjectives and adjectival nouns *mono-* functions as an intensifier: *mono-sabíshii* 'dreary, lonely'; *mono-sugói* 'swell', *mono-súgoku* 'very'; *monó-sízuka* 'quiet, serene'; As a suffix, usually written in hiragana, *-mono* attaches freely to make nouns meaning 'stuff, things, goods', as in *kaityuu-mono* 'what you have in your pocket(s)' and the expressions *kokunai-mono* 'domestic goods', *yasúi yunyuu-mono* 'cheap import goods', *Kankoku-mono* 'Korean goods' (all three SA 2687.140e), It is also used in categorizing a type of creative work, such as a novel, a film, or a song: *kaizyuu-mono* 'films about monsters', *hunpan-mono* 'bellyslappers (= film comedies)' (SA 2793.44c), *burusu-mono* 'a blues piece', *Kurosawa-mono* 'a Kurosawa film (= a film directed by Kurosawa)', *zidai-mono* 'a period piece (historical play)', Also: ... *sibai de*, *Meizi-mono nádo o yarímásu tokí ni wa ...* 'when I do plays about the Meiji era ...' (R). And even *Edozidai-mono o káku* 'writes Edo period pieces' (Tk 3.185a), though that is unusual. *Saihooei-monó(-)* 'a rerun (of a TV film)' from the verbal noun *sai-hóoei* 'rerunning (a film)' is an example of the more general use mentioned above.

There are more literal uses of the suffix to mean: (1) PERSON—*inaka-mono* 'a rustic', *ganko-mono* 'a stubborn person', *ranboo-mono* 'a roughneck', *rikoo-mono* 'a clever person', *dokusin-mono* = *hitori-mónó(-)* 'an unmarried person'; (2) THING—*nomi-mono* 'beverage', *gohan-mono* 'rice dishes', *nori-mono* 'vehicle', *ki-mono* 'garment'; and (3) ACT—*kai-mono* 'shopping', *arai-mono* 'washing'. In some words the meaning is 'merchandising items (for ...)' or, more specifically, 'things (= garments) for': *otoko-mono* 'menswear', *kodomo-mono* 'children's things/clothing', And sometimes the suffix resembles English *-er* in making nouns that mean 'one characterized by ...' or the like: *sanzippondo-mono* 'a thirty-pounder (= thirty-pound fish)' (SA 2669.91b). With the exception of certain fixed lexical items, the suffix usually creates atonic nouns, regardless of the accent of the noun to which it attaches: *gaikoku-búngaku* 'foreign literature(s)' but *gaikokubungaku-mono* 'items (= books etc.) on foreign literature(s)'. However, there is considerable fluctuation in the accent of compounds made with the suffix *-mono* when it is attached to tonic verb infinitives, as in *nomi-mono* 'beverage', *moti-mono* 'possessions', *tabé-mónó* 'food', *taté-mónó* 'building', *kangae-mónó(-)* 'puzzle(r), question', For 'something dropped; dropping something' NHK has *otosi-mónó(-)* with three accentuations, and to Hamako Chaplin a fourth version *otosi-mono* also sounds natural. Yet all sources agree that *wasure-mono*

'something forgotten; forgetting something' is atonic; apparently every compound that results from attaching -mono to the infinitive of an atonic verb will also be atonic: nori-mono, uri-mono, kai-mono, arai-mono,

13.2.2. Tokoró.

The noun tokoró (which has the short form tókó⁴¹) means 'place' but this meaning is often extended to 'situation', 'stage', 'point (in time)', 'moment', or 'occasion'—as in tokoro mo aróo ni 'of all occasions'; the final accent is present only when tokoró is modified by an adnominal element. Sometimes the meaning is very close to that of the nominalizers kotó and nó: kiku tokoró ni yoru to 'from what I hear' (SA 2674.107b); ... ikkoo mitomeyoo to sinai tokoró ga omosirói 'It is [an interesting feature =] interesting that he is quite unwilling to recognize ...' (SA 2685.105b). There are idiomatic uses with quotationalization in Kíkí | ippatú to iu tokoró de | tasúkete moratta 'I got saved by a hair' and Moo íp-pun tte | tókó de | nori-okúreta 'I missed the train by a bare minute'. From uses as a summational epitheme ('the situation such that ..., the point where ...') there come a number of uses to show a transition 'when; whereupon' and to mark loose conjunction between sentences 'but; and'.

For S-ta tokoró ga 'but (nonetheless)', see § 17.5. In that meaning ('but') the gá can not drop. But there is another use of S-ta tokoró with OPTIONAL gá;⁴² the meaning is roughly equivalent to S-tára 'when; if' or S-ru tó 'whereupon': Zibikí de | sirábeta (l) tokoró {ga} || déte ita 'When I looked in the dictionary there it was'. The interpretation 'I looked in the dictionary but there it was' would seem odd; on the other hand, Zibikí de sirábeta tokoró ga, déte inákatta can be interpreted either as 'I looked in the dictionary but it wasn't there' or (= Zibikí de sirábeta tokoró déte inákatta) 'When I looked in the dictionary it wasn't there'. Examples of the optional gá: Súgu | utí(-) e (l) káetta | tokoró {ga} || oo-sáwagi ga | moti-agatte ita 'I came home right away, where I found much astir'; Motáseta | tokoró {ga} || taihen yorokónda 'I let him have it and he was delighted'; Tyokusetu hanásita | tokoró {ga} || kantan ni (l) matomatta 'I talked to them directly, whereupon we reached an agreement easily'.

A perfect sentence (S-ta) + tokoró de means 'even though', roughly the same as S-té mo, anticipating some disagreeable consequence or frustration (Alfonso 1004): Íma | deketata tokoró de, || ma ni awánai desyoo 'Even if you left now, I'm afraid you'd be too late'; Íkura densi-keisánki no | yusyutu wa || kinsi sarete iru to itte || yamete míta | tokoró de, || Amerika-kei no Huransu no kaisya ga || Huransu to Sóren no | yuukoo-kánkei o | motó ni || yusyutu o kyóka site | irú no de | áreba || nán to iu kotó wa náí 'However much they may try stopping the export of electronic computers [to the Soviet Union] by saying it is prohibited, so long as the American-affiliated French company is permitted to export them on the basis of friendly relations between France and the Soviet Union, it doesn't mean a thing' (SA 2664.44c). Although the meaning of the copula gerund in such

41. Usable in most situations where tokoró is appropriate; tókó must be modified, however, and there is no *Tókó-ga = Tokoró-ga 'But' or *Tókó-de = Tokoró-de 'Well; Then'. And tokoro-dókoró 'sporadically' is a fixed form. The abbreviation has an accent (optionally on either syllable): this will permit the distinction of Ore n[o] tókó da 'It's my place' from Ore n[o] toko dá 'It's my bed', though the latter expression is not in use.

42. When gá is omitted, the juncture before tokoró will usually be suppressed: S-ta tokoró,

expressions is 'even its being (the situation that)', it sounds unnatural to add *mó* (cf. Alfonso 1005). More examples will be found in KKK 3.122, Terase 117a, Alfonso 1003. From the examples in textbooks, one might assume that the perfect sentence adnominalized to *tokoró de* must be verbal, but that is untrue, as the following examples attest: *Dónna ní | tákakatta | tokoró de || sirete 'ru* 'It's certainly not much, to be so terribly expensive!'; *Suugaku ní | mutyuu dáta | tokoró de || nagatúzuki sinai* 'He may be enthusiastic about mathematics, but it won't last'; *Sitúrei (na | kotó) datta | tokoró de || tái-sita mondai ní⁽¹⁾ wa | náru mái* 'Rude though it may be, it's no big issue'; *Tatóe(⁻) || supái da to sita | tokoró de || sikéi(⁻) ní wa | naránai daroo* 'Even as a spy you won't be sentenced to death'. Intended with this meaning, an adjectival or nominal sentence in the imperfect should be converted to the perfect. But imperfects can occur before *tokoró + dé* in various other meanings.

According to Tsuruoka 1972 *tokoró ga* began to be used in the 1770s to express a conjunctive or adversative established condition, being extended to cover an adversative hypothetical condition in the 1810s; in the latter meaning *tokoró ga* came to be used with introductory adverbs *tatóe(⁻)*, *íkura*, etc., in the 1830s, but this usage declined after the 1920s; *tokoró de* came to express a hypothetical condition in the 1880s, and at the same time started being used with *tatóe(⁻)* etc., this usage having survived down to the present day.

As an impersonal nominal sentence, *S + tokoró da* can be used to set the relative time in a piece of discourse:

suru tokoró da 'is about to (just going to) do'

suru tokoró datta 'was about to (just going to) do'

site iru tokoró da 'is just doing'

site iru tokoró datta 'was just doing'

sita tokoró da 'has just done'

sita tokoró datta 'had just done'

site iru tokoró da 'has just been doing'

site ita tokoró datta 'had just been doing'

siyoo to site iru tokoró da 'is just about to do, is just on the point of doing'

siyoo to site iru tokoró datta 'was just about to do, was just on the point of doing'

This device permits more precise timing than what is made available by the simple dichotomy of perfect vs. imperfect. It also permits a punctual verb to be considered as if durative; though *káette iru* normally means only 'is back', *káette iru tokoró da* means 'is just returning'; cf. BJ 2.204. With ...-(a)*nákattara*, *V-ru tokoró datta* can translate 'if it hadn't been for/that ... (I) would have done V': *Ane ga itte kurenákattara, || wasureru tokoró desita* 'If my (older) sister hadn't told me I would have forgotten'; *Kimi ga kónakattara || denwa o kakéru | tokoró datta* 'If you hadn't come I was going to call you (would have called you)'. And *moo sukósi de V-ru tokoró datta* is a good way to translate '(I) almost did V'.

By dropping the *dá* and marking the nominal with *é* or *ní* you can use the expression to state the point of time at which an event (expressed by the following predicate) occurs, often interrupting or frustrating the situation expressed by *tokoró*: *Syáwaa o | abiyoo to site iru tokoró e | denwa ga átta* 'Just as I was about to step into the shower there was a phone call'; *Úto-uto site ita | tokoró e || hén na | otó ga | sita* 'Just as I had dozed off, there was an odd sound'. Another use of *S tokoró e* is to mean 'S and in addition to that' or 'S and what is more (and on top of that)', suggesting further misfortune or disaster (adding to

the distress implied by the first S). Alfonso 1003-4 gives some lively examples of this and observes that the second misfortune is sometimes introduced by *sára ni* 'furthermore' or *motté-kite* 'bringing it along [to that situation]'; he says these double-disaster expressions are usually parts of a larger context ('... and therefore') or left dangling, with the larger context implied. Here is a nice example from Tanizaki: *Kyóo wa hi ga yói no de kekkon ga óói tokoró e motté-kite, totu-zen no áme de, kuruma ga nakanaka kíte kurenákatta món desu kara* 'You see, there were a lot of weddings today because the day was propitious and on top of that there was a sudden rain, so that it took a long time before a taxi would come' (Y 545). Another example: *Tono-sama wa, umarete hazímete sanma o mesi-agarimásita ga, kuuhuku no tokoró e motté-kite, syún no sanma desu kara, taisoo gyó-i(-) ni kanátte, ...* 'The lord was eating mackerel for the first time in his life, and not only was he hungry but it was mackerel at the height of its season, so it pleased him very much ...' (Okitsu 1.373); the "disasters" here are hyperbolic.

An imperfect sentence + *tokoró* can be used as the object of a verb of perception, discovery, or seizure (cf. §14.2.3): *Káno-zyo ga kooen o sanpo site iru tokoró o mita* 'I saw her (just as she was) walking in the park; ... *óyazi(-) ga ire-ba o aratte iru tokoró o mita kotó ga áru ka i* 'have you ever seen father wash(ing) his false teeth?' (Ariyoshi 111); *Ákiko wa kán no tátta amari ni isya ga ansitu kara déte kíta tokoró o tukamáete, ikinari kiita* 'Akiko, overwrought, caught the doctor just as he emerged from the darkroom, and asked him' (id. 65). And sometimes this can be the object of other kinds of verbs (Kenkyusha gives *yake-sinu tokoró o tasukéru* 'rescues someone from the flames' and *abunai tokoró o tasukéru* 'delivers one from danger') or of an ellipsis: *O-isogasii tokoró o [] arigatoo gozaimásita* 'Thank you for taking time for me (from your busy schedule)'. Notice that *tokoró* as an extruded epitheme can represent an actual location; *O-kási o tukútte iru tokoró e kimásita* can mean 'I came to a place where they were making sweets' as well as 'I came just as they were making sweets'.

In formal written Japanese, *tokoró* sometimes functions like an English semicolon to show major breaks within a long passage; see LF 94. See §13.1.1 for the use of *tokoró no* to link a verb to an extruded epitheme, sometimes forming a quasi passive, as in *kónniti iu tokoró no teinei-go* 'what is called polite language today' (Tsuji-mura 102).

The restrictive *-dókoró* (§2.4) is derived from *tokoró*; for its use as a postadnominal, see §15.6. As a suffix *-dókoró* attaches to several verb infinitives to yield atonic nouns with somewhat specialized meanings:

kiki-dókoró '(the part) worth listening to, deserving to be heard'.

mi-dókoró 'something to be looked at or to' (*Koko ga sono sibai no mi-dókoró desu* 'This is the best part of the play'); 'merit, promise' (*Mi-dókoró no áru sákka(-) da* 'He is a writer of promise').

iki-dókoró (ga nái) '(lacks) a place to go'.

motte-iki-dókoró (ga nái) '(lacks) a place to take it = an outlet': *ikari no motte-iki-dókoró ga nái* 'has no outlet for one's anger'.

de-dókoró 'source': *Sonna o-kane no de-dókoró wa arimasén* 'We don't have any place to get such a sum of money'; *Sono zyoohoo no de-dókoró wa dare mo siranai* 'No one knows who supplies the information'.

yoridókoró 'something to rely upon, support, evidence'.

si-dókoró 'what ought to be done'—apparently limited to *sían no*^[v]~ : ... *kore kará ga sían no si-dókoró [da]* 'what happens next is the thing to be thought about' (SA 2663.117a).

i-dokoro 'one's whereabouts, location, address'.⁴³

Notice also tati-dókoró(τ) ni 'instantly, on the spot', an adverb of time. A number of the adverbs listed in §13.7 (ima-no-tokoro, mókka-no-tokoro, ...) derive from phrases with ... nō^[τ] tokorō^[τ].

13.2.3. Toki.

The noun *toki* 'time' has several uses. It can serve as the equivalent of *zikan* '(amount/interval) of time' as in *toki ga tátu* 'time passes/elapsed',⁴⁴ it can substitute for *hima* 'unoccupied time, leisure' as in *toki ga áru/nái* 'has/lacks the time'; it can mean 'opportunity, chance' (= *kikái*(τ)) as in *toki o mátu* 'bides one's time, awaits one's chance'; it can refer to 'the contemporary period' (= *tóozí*) as in *toki no hitó/mondai* 'the man/question of the hour' and *toki no wadai* 'topics of the day'.

As a postadnominal, *toki*⁴⁵ means either 'the occasion (when ...)' as a SUMMATIIONAL epitheme or '(at) the time (that ...), when ...' as a TRANSITIONAL epitheme. In the summational usage, *toki* may be used like *kotó* 'experience' (*Háyaku káeru toki/kotó mo áru* 'I sometimes leave early') or like *baai* 'situation', which—either directly adverbialized or marked with *ní*—often means 'in the event/case that = if' (cf. §9.3): *Mósi ll sunpoo ga ooki-sugiru toki wa ll hasami de lkireba l yói* 'In the event that the measurements should be too large, you can cut it with scissors' (SA 2650.98b); *Mósi ll soo'on no lonryoo-sókutei o site l morai-tai toki^[τ], ...* 'In the event that you wish to have a volume measurement on the noise, ...' (SA 2687.119c). Sometimes the implication is 'whenever, on every occasion that ...': *Taikin o kasu toki ni wa ll syoomon o kakáseta hoo ga l li* 'When lending large sums of money, one had best have a note signed' (MJW); *Kókka o l utau toki ni wa ll kiritu simásu* 'We stand up when we sing the national anthem'.

When *toki* is used as a transitional epitheme, the connection with the embedding sentence—marked either by direct adverbialization or by *ní*—is fairly tight, and the choice of perfect or imperfect for the adnominalized sentence is determined by the relative timing of the two sentences involved, taking into account the inherent aspect of the verb. There are a number of subtleties, especially when the second sentence is perfect; see §11 and Josephs 1972.118-9, 125.

The basic final accent of *toki*, like other final accents, will be heard only when there is a particle or copula following; under direct adverbialization the accent will vanish: *Rokuzyúu no (l)⁴⁶ toki^[τ], ll tyoonán ni ll hazimete no l magó ga l umareta* 'When he was sixty

43. Tokoro by itself sometimes translates as 'address': *Tokoro ga káite arimásu ka* 'Is the address written?'—cf. *Tokoró-ga, káite arimásu ka* 'But, is it written?'—and even *Tokoró-ga, tokoro ga káite arimásu ka* 'But, is the address written?'; *O-tokoro wa?* 'The address?' A written address is *tokoro-gaki* or (with name) *atena*; *zyúusyo* means '(place of) residence', *todoke-saki* means 'receiver's address, address to which it is to be delivered', and *ate-saki* means 'destination'. What is written on the outside of an envelope (etc.) is called *uwagaki*, and that is often the equivalent of 'address'.

44. But (despite Kenkyusha's example) *toki* is awkward as a substitute for *zikan* in *zikan ga kakáru* 'it takes time'.

45. Or *tóki*. As a postadnominal the word is frequently accentuated *tóki*; in the examples of this book I have usually given only the conservative accentuation (*toki*). Regardless of the accentuation chosen, *tóki* often loses its juncture (and thus its accent) after a tonic phrase: ... *go-tugoo no ii toki^[τ]* ni 'when it is convenient for you' (BJ 2.159.4).

46. Speakers closely following the rules will voice the final vowel of *toki* when this juncture is suppressed; if the vowel is voiced, the juncture is probably present. Both versions have been recorded.

years old his first grandchild was born to his eldest son' (MJW). But some speakers prefer to accentuate the FIRST syllable whenever the word is preceded by modification, saying sono tóki ni rather than sono tokí ni 'at that time' (but only tokí ga tátu for 'time passes'), and that is what accounts for the accentuation in these examples: Kodomo no tóki, || yóku | kagaku-hakubutúkan e | itta 'When I was a child I often went to the Science Museum' (MJW); Anpo-zýóoyaku | kaitei no tóki, || Kísi san ga | syusyoo dátta 'Mr Kishi was Prime Minister at the time of the revision of the Security Treaty' (MJW).

Like other nouns and adverbs of time, tokí can be marked as a temporal allative ('up to when, until the time that') with máde and as a temporal ablative ('from/since the time when') with kará: Kodomo ga (l) sotugyoo suru tokí made || gakkoo no tikáku ni | súnide ita 'Up till the time my child graduated we lived near the school'; Kodomo no tokí kara | kiite imásu ga || ... 'I've heard it since (the time when) I was a child, but ...' (R).

13.2.4. Yóo.

The word yóo is an adjectival noun that is always used as a summational epitheme⁴⁷ with the basic meaning of 'appearance' or 'likeness'. The morpheme, which comes from the Chinese word yàng = yàngzi (borrowed into Japanese as yoosu 'appearance'), also attaches to verb infinitives to make abstract nominalizations, as explained in §14.8.

A sentence + yóo da makes an impersonal sentence with the meaning 'It appears/looks/seems that S': Dénnya(¯) ga (l) okureru yóo datta 'It appeared that the train would be late'; Máda || dare mo kónai | yóo desu ga ... 'It appears that no one has come yet, but ...'; Iroiro || o-honeori dátta | yóo desu ga, ... 'You seem to have gone to a lot of trouble, ...' (Tk 3.209a); Áme ga | yanda yóo desu | né 'It looks as though the rain has let up'; Kodomo ga | iki-tai yóo desu kedo 'My boy seems to want to go, (but) ...'. The subject can be epithematized: okureru yóo na dénya(¯) 'a train that it appears will be late', iki-tai yóo na kodomo 'a child who seems to want to go'. And the sentence can be adnominalized to other epithemes: kodomo ga/no iki-tai yóo na tokoró 'a place that children seem to want to go to', etc. Examples of adnominalized yóo: Syasin no yóo na | syazitu-teki na é nara || wakarimásu ga ... 'I can understand realistic paintings that are like photographs, but ...' (MJW); Daimyóo no | yóo na | seikatu o site iru 'He is living like a feudal lord' (MJW);⁴⁸ Sin-zirarénaí yóo na | hanasí desu ga || zituwa da sóo desu 'It may be hard to believe, but I hear it is a true story' (MJW). As the last example illustrates, yóo will optionally lose its accent after a tonic phrase; in rapid speech, the intervening juncture is frequently dropped, especially in short phrases, and that is what cancels the accent on yóo when there is an earlier accent in the resulting phrase.

S yóo ni (including N no yóo ni) can have three somewhat different interpretations: (1) 'in a way as if S is/were so' (~ miéru 'it seems as if ...', §9.1.11); (2) 'in a way so that S will be so'; and (3) 'in a way which agrees with or corresponds to S'. The third meaning is found in Suki na yóo ni | saset' oku | sá 'We'll let 'em do as they like' (SA 2684.119c), Saki-hodo itta yóo ni ... 'As was said a while ago ...', Go-syooti no yóo ni ... 'As you know ...', and Koko ni kaíte áru yóo ni site kudasáí 'Do as is written here'. V-ru yóo ni suru (V-anai yóo ni suru) means 'arranges it so that V will (will not) happen', 'sees to it that ...';

47. Or preceded by certain of the adnouns: kono yóo na monó 'a thing of this sort', onazi yóo na monó 'one of the same sort', ...

48. Also read as Daimyóo no yóo na | seikatu o site iru.

sometimes the best translation is 'tries to (not to) V': Okurenai yóo ni | site kudasái 'Try not to fall behind'; Kaze o hikanai yóo ni | ki o tuke-nasái 'Take care not to catch a cold'; Kuni ga sakáe, || kokumin no seikatu ga | yútaka ni | náru yóo ni | dóryoku suru 'We work so that the country may flourish and the livelihood of the people will be enriched' (MJW). The meaning 'so that' can also appear with the adnominalized form yóo na: Saisan ga toréru yóo na | keiei o sinákereba | naránai 'One must operate a business so that it makes a profit' (MJW); Hito no kokóro o | mayowásu yóo na | hoosoo o sité wa | likenai 'One must not make broadcasts which mislead public sentiment' (MJW); ... zyúu-nin 'ízyoo mo | tukau yóo na | misé o | tukuróo 'Let's set up a shop that will (be so large as to) employ over ten people' (SA 2793.105b); Kore wa || mi-ageru yóo na | lookii | tatémóno da 'This is a towering building (a building so large you look up at it)' (SM 2796.128a).

This is the source of the warning O-wasuremono no náí yóo [ni] | go-tyúui kudasái 'Please do not leave any of your belongings behind'. Wasurenai yóo ni + V means either 'does so as not to forget' or 'does not forget to do' (from the notion 'does in a way that shows one has not forgotten'); Wasurenai yóo ni káite oite kudasái means either 'Write it down so you won't forget it' or 'Please don't forget to write it down', though the latter meaning is usually said as Wasurenái de káite oite kudasái.

See p. 998 (§21) for the use of V-ru yóo [ní [tó]] in the indirect quotation of commands. V-ru (or V-anai) yóo ni náru means 'gets so that ..., reaches the point where ...', as in Zyoozú ni dekíru yóo ni náta 'I got to the point where I could do it quite well' and Arukénai yóo ni náta 'I got to the point where I couldn't walk'. Instead of V-(a)nai yóo ni náru you can use the option V-(a)naku náru (§9.1.11) with much the same meaning: Arukénaku náta 'I got so I couldn't walk'.

A noun phrase + no yóo da means '(it) looks to be N' or 'looks like N', and N₁ no yóo na N₂ often translates as 'an N₂ that is like N₁'; the pattern is used for exemplification: Tookyoo no yóo na | dai-tókai de mo ... 'Even in great metropolises like (such as) Tōkyō ...'; Kyóo no yóo na | akibare no hí wa || kimoti ga ii monó da 'You are bound to feel good on such a fine autumn day as today' (MJW); Niti-yóobi ka | saizitu no yóo na | hí ni wa ... 'On days like Sunday or a holiday ...'. To make the comparison explicit you can use the pattern N₁ to onazi yóo na N₂ 'an N₂ that is just like N₁': óyazi(̄) to onazi yóo na hitó 'a person who is just like my father', kore to onazi yóo na kimono 'a kimono that is just like this one'.

When adverbialized (with ní, or directly—by ellipsis of ní) the word yóo often translates as 'like': Méizi | sanzyuu-néndai | suisei no yóo ni | arawáreta | tensai-gáka no || geizyutu to || syógai o | tuzurimásu 'It tells the art and life of a talented artist who appeared like a comet in the third decade of the Meiji period' (R).

S ká no yóo {ni} means 'as if S (were true)': ... Zén wa, Nihon-búnka no daihyoo de áru ka no yóo ni kangaerárete iru rasii 'Zen appears to be thought of as if it were representative of Japanese culture' (ISJ 2.8.76, 2.7.75). In 1912 Mori Ōgai published a story called "Ká no yóo ni" about a young man whose thoughts are constantly cast in the frame of 'As If'. Cf. Y 328-9, 332.

Comparisons of equality 'is as A as N' can be said with *N no yóo ni A* or *N to onazi yóo ni A*, as well as with *N ̄gúrai A*: Kono kodomo wa sono kodomo no yóo ni (sono kodomo to onazi yóo ni, sono kodomo ̄gúrai) sé ga takái 'This child is as tall as that child'. The predicate need not be an adjective: Kono kodomo wa sono kodomo no yóo ni (sono kodomo to onazi yóo ni, sono kodomo ̄gúrai) benkyoo suru 'This child studies as much as that child'.

Just as the English word 'like' may get thrust into a sentence with very little meaning, Japanese will often attenuate a noun with *yóo*: *máiniti*(⁻) *no yóo ni* 'nearly every day' means practically the same thing as *máiniti*(⁻) 'every day' and *renzitu no yóo ni* 'for days on end' says little more than *renzitu* by itself. In expressions such as *watakusi no yóo na monó* 'a person like me', *yóo* is a way of expressing modesty or humility; cf. Y 330. In such expressions as {*mósi*} ... *yóo na kotó ga áreba* 'if by any chance it should happen that' the *yóo* merely attenuates the condition. And in the example ... *to iu yóo na zyootai de né* ... 'under a situation where, you see, ...' (R) both the quotation and the *yóo na* may be semantically vacuous. It seems to be particularly common to attenuate a statement of feelings with *yóo*: *Sore o iwareta tokí wa || naki-tai yóo na |ki[moti] ga sita* 'When told that, I felt like crying'; ... *hizyoo ni* (l) *natukasii yóo na, || sabisii yóo na, || myóo na |kanzi ga surú n desu* 'I get an odd kind of nostalgic-like, lonesome-like feeling' (Tk 3.236b).

The meaning of S *yóo da* overlaps with that of the evidential (V-i-soo da, etc., §20) and that of the semblative (*rasii*, §19); the differences in meaning are discussed on p. 988. Notice that S *yóo da* is rather general in meaning; it can be used, for example, instead of S *sóo da* (§18) to report hearsay. An evidential or semblative sentence can apparently add *yóo da*: ... *suzusii |rasii yóo na |kóe o |dasánakuttya |naránai* 'you must put out a voice that seems cool-like' (Tk 3.247a). It is possible to put the *yóo da* sentence into a putative conversion: *Muda na yóo ni |miemásu ga, || kessite || muda dé wa |arimasén* 'It looks as though it were useless, but it's not (useless) at all'. Introductory adverbs such as *maru-de* 'quite', *tyoodo* 'just', and *átaka-mo* 'as it were', sometimes anticipate ... *yóo da*.

Notice that the following expressions all mean virtually the same thing: *sono yóo na kotó*, *sonna yóo na kotó*, *soo iu yóo na kotó*, *soo iu kotó*, *sonna kotó*. See p. 1005 (§21.1) for ... *tó iu yóo na*, ... *[t]te yóo na*, ... *[t]té[e] na* and ... *tó iu yóo ni*, *[t]te yóo ni*. Notice also the various uses of *mítai* (§2.12).

The postadnominal *tóori* is used as a virtual synonym of *yóo* (Y 350), but it adnominalizes as a precopular noun: ... *késa |míta |tóori no |iró* 'a color like that seen this morning' (= *míta yóo na iró*). The postadnominal *húu* is similar in meaning; here is an example with S *yóo na húu*: *Maru-dell byooki o |ríkon*(⁻) *no koozitu to sitell tanosinde iru |yóo na |húu de átta* 'It was (for) all the world like enjoying the illness as an excuse for divorce' (Y 338). Yoshida says the use of *húu* dates from Edo times; in Y 347-8 there are a number of examples. Literary equivalents of *yóo* are *gótosi* = *yóo da*, *gótoki* = *yóo na*, *gótoku* {*ni*} = *yóo* {*ni*}; cf. §14.4. Neither S *húu da* nor S *yóo da* will be comfortably used in the tentative (*S *húu/yóo daroo*); cf. Y 347-8. But you may find S *yóo/húu || desyó[o]*? 'It appears that S, don't you think?'

Adnominalized or adverbialized *yóo*-sentences are much more frequent than the unconverted predicates. In one novel, Yoshida found the frequency to be .50 *yóo na*, and .45 *yóo ni*, with less than .05 for *yóo da/datta/de* (Y 336). An example of S *yóo de*: *Káhuu wa byoozyaku no [= na] yóo de zitú wa karada mo ganken desu* '[Nagai] Kafū may look sickly, yet he's really in ruddy good health' (Endō 88).

13.2.5. Wake.

The noun *wáke* has a number of meanings: 'sense, meaning; reason, cause; circumstance, case'. It usually occurs as a summational epitheme: ... *káre no |naku wáke o |tazúneta*

'they asked why he was crying' (V 139). The question *Dóo iu wáke desu ka* asks 'What do you mean (by that, by what you are saying)?', and explanations frequently end with ... *tó iu wáke desu*, which may add as little to the sentence as a final 'I mean' adds in English. The rather empty use of *S wáke da* 'It's [the case] that S' (virtually equivalent to *S nó da*) is particularly common in the speech of the Kantō area (Zhs 2.19), and you will hear it a lot in Tōkyō: *Iroi-ro kawatta késiki mo, go-ran ni náta wáke desyoo né* 'I guess you must have seen all sorts of unusual scenery, too?' (Tk 3.317a); *Inzei wa péezi wari de kureru wáke da ga, Sibáku mátte kudasaí* 't te liú n desu né' 'They [are supposed to] pay royalties by the page, but they tell you "Please wait a bit", you see' (Tk 3.97a); *Túmari ano bangumí(-) wa, syóohin(-) no méekaa noll sénpei na wáke iyó* 'After all, you see, that program is [supposed to be] the spearhead for the maker of the product (tied in by promotion)' (SA 2793.46a).

S wáke de wa/mo náí 'I don't (exactly) mean that S' is a way to disclaim an assertion and NEGATIVE + *wáke de wa/mo náí* 'I don't mean that not S' or 'It isn't the case that not S' is a way of admitting a possibility: *Kono yóo na kangae-káta wa, nádo ni molla ukagaenai wáke de wa arimasén ga, ...* 'It isn't that we can't (= We can, of course,) study this sort of thinking in ... and other works, but ...' (Tsuchimura 101).

S wáke ga/wa [hitótu mo] náí means 'It doesn't stand to reason that ...' or 'There is no reason (to think) that ...' or 'I can't think/believe that ...': *Íma látte hanásita bakari da kara byooki na wáke wa náí* 'He can't be sick, for I have just seen and talked with him'; *Hitóro de míttatte, omosirói wáke ga náí* 'I can't think it would be any fun to see it all alone' (Hayashi 141); *Watasi ga (I) ayamáru wáke wa náí* 'I have no reason to apologize'.

V-ru wáke ni {wa/mo} ikanai (or, to be more polite, *mairimasén*) means 'there is no cause/justification for V-ing' or 'circumstances prevent V = can hardly V, cannot (very well) V' as in *Soo kantan ni setumei suru wáke ni wa ikanái n desu* 'One can not so easily explain it', and *V-(a)nai wáke ni {wa/mo} ikanai* (or *mairimasén*) means 'there is no cause/justification not to V' or 'circumstances force V = cannot very well not V, must V', approaching the meaning of *V-(a)nákereba naránai*, *V-(a)nákute wa ikanai*, and other expressions of obligation: *Okoránai wáke ni wa ikanai* 'I can't help getting angry'.

In most uses you have the option of quotationalizing the sentence in front of *wáke*: *S to iu wáke ...*. Nominal sentences change *dá* to *ná* when adnominalized to *wáke*, but *nó* can be used when there is no ambiguity: *Soo iu kotó wa heiki no [= na] wáke desu iyó* 'Such things matter not, you see' (Tanigawa 43). In Tōkyō speech you may not hear the initial *w-* when the preceding juncture is dropped: ... *ikenai [w]áke desu* 'it won't do, I mean' (R). Many Tōkyō speakers use *-w-* nondistinctively before the vowel *a* when a vowel precedes (cf. *bawai = baai* 'situation'), maintaining no distinction between underlying *Va* and *Vwa*, so that you can not be sure from spoken forms whether *-w-* is called for historically or not: *O-ari desu ka* 'Have you got it?' may be pronounced the same as *Owari desu ka* 'Is it the end?' What is more, after a front vowel (*i* or *e*) an epenthetic *-y-* is often nondistinctively intruded before *a*⁴⁹ (cf. *ki[y]ámete = kiwámete* 'extremely') so that you may think you have heard ... *ikenai [y]áke desu*, as if the noun before *desu* were *yáke* 'despair'; cf. the common pronunciation *ni[y]aka-áme* for *niwaka-áme* 'sudden shower'.

A passage with three examples of *wáke*: *Syosai ni komótte hón o hirogerú ga, kanarazú-*

49. And, for some speakers, before *o*, making *ioo* 'let's say' sound like *iyoo* 'let's stay' and *Uti ni orimásu* 'I am at home' difficult to distinguish from *Uti ni yorimásu* 'I will drop in at home'.

símo yónde iru wáke de wa náí. Genkoo-yóosi ni mukaú ga, kanarazú-símo zí o káku wáke de wa náí. Zibun ̄yoo no térebi o túkete bon'yári míte iru ga, honki de míte iru wáke de mo náí no da 'I hole up in my study and open a book, but I don't necessarily read. I face the empty squares of manuscript paper, but I don't necessarily write anything. I turn on my personal TV set and idly watch, but I don't always pay real attention to it, either' (Endō 84).

13.2.6. Mamá, manmá.

The noun *mamá*, with its lively variant *manmá*, normally appears as a summational epitheme or after certain adnouns such as *sono* 'that', as in *Dóo-zo | sono mamá^[r]* 'Please stay as you are (don't disturb yourself, don't bother to move over, etc.)' and *Sono mamá^[r] o-mati kudasái* 'Hang on (for a minute), Hold the line' (on the telephone), or *kono* 'this' in *kono mamá^[r] ikéba* 'if it goes on (continues) like this'. In idiomatic expressions, *mamá* may appear without adnominal modification: {*Ukíyo*(-) *ga*} *mamá^[r] ni náru nara*[-ba] 'If I had my wishes'; *Mamá^[r] no kawá* = *Mamá^[r] no kawa-záihu* 'Let's let nature take its course' [rare?]; *Mamá^[r] yó!* 'I'll have to leave that to fate!'.

The usual meaning of *mamá* is '(continuing in) the same state' and the translation will sometimes be 'unchanged, untouched, undisturbed, intact; as [it] is (or was, or has/had been), as things are (or have/had been)': *Genkoo mo || kaki-kake no mamá^[r] || tukue no ué ni lokarete ita* 'And a manuscript was there on his desk half-written' (SA 2792.26); ... *ókusan ni || gekkyuu o || hukuró^[r] no mamá^[r] || watasite simá^[r] n desu* 'turns his salary over to his wife with the envelope unopened' (ISJ 8.3b.104); *Yoko o muita mamá^[r], || hitó-koto mo hanasánakatta* 'With his head turned aside, he spoke not a word' (MJW); *Omóu mamá^[r] | asonda* 'We played as we liked'; *Isógu mamá^[r], | áisatu mo sezu ni | kitaku sita* 'In a hurry as I was, I went home without saying good-bye'; *Mata || Nihón de wa, || kuruma ni notta mamá^[r] (l) miti o kíkú no ga | sitúrei na | kotó da to | sarete irú no desu ga, ...* 'And in Japan it is thought discourteous to ask directions without getting out of your vehicle, but ...' (Tsukagoshi 210).

Most often you will find S *mamá* used as a direct adverbial (automatically losing its final accent), but the expression can be marked by *ní* or *dé*; Alfonso 1076 says that *dé* is an option if the preceding act is voluntary (subject to the actor's control), and *ní* is an option if it is not: *Nán da i, || ói, || kuti ni yoozi o ireta mamá^[r] de | syabéru na | yó* 'What—hey, don't talk with a toothpick in your mouth!' (Okitsu 1.55); *Suwatta mamá^[r] de || yorosii desyóo ka* 'May I stay seated [while speaking]?'; *Kutú o | haita mamá^[r] de | uti(-) ni agatta* 'He came into the house without removing his shoes'; *Óobaa o | kita mamá^[r] de | iru* 'He's leaving his overcoat on'; *Hudán-gí no | mamá^[r] de | iku* 'I'll go in my everyday clothes (without dressing up)'; *Náhi mo siranai mamá^[r] ni ...* 'Ignorant as I was ...' (R); *Yo-nó-naka wa || kokóro^[r] no (l) mamá^[r] ni | ikanai monó da* 'The world is not at one's command'.

In addition to the adverbializations with *dé* and *ní*, the finite forms of the copula can be used to predicate *mamá*: *Kono heyá wa || tukawanaku nátta | mamá^[r] desu* 'This room is no longer used (= continues in disuse)'; *Waisyatu wa || yogoreta mamá^[r] desita* 'The shirt remained soiled (= had not been laundered)'; *Sigezoo wa || mé o | tózita | mamá^[r] datta ga ...* 'Shigezō's eyes remained closed ...' (Ariyoshi 307). The predicated S *mamá* da can be adnominalized: ... *kitanái | reinkóoto o | kite, || boosi o kabútta | manmá no | syasín-han ga ...* 'the gang of photographers with their dirty raincoats and hats unremoved from their

heads ...' (Tk 3.274b). And other forms of the copula will occur: *Kono mamá de líi desu* 'Things are all right as they are'; *Móto no |mamá ni |site óite kudasáí* 'Leave it undisturbed' (mutative conversion); *Kodomo no iu mamá ni |saseru oyá mo |iru* 'Some parents let their children do what the children say' (causativized mutative conversion), *Hutuka mo nemutta mamá nara, || isya ni míte |moratta hóo ga líi zya náí desyoo ka* 'If you go on unable to sleep, wouldn't you be well advised to see a doctor?' Occasionally S *mamá* will be followed by a case marker: *Omóttá |mamá o |litta* 'I said what was on my mind; I spoke my feelings'; *Míta |mamá o || syoozíkí ni |hanásita* 'I quite honestly told just what I had seen'. See p. 895 (§14.6) for direct nominalization + *ga mamá* (*surú ga mamá*).

In some expressions the meaning of *mamá* is very close to that of *gótoku* (or *yóo ni*) and that of *tóori* 'way, like'. Sometimes the meaning is 'in accordance with, as': *omóu mamá ni yaru* 'does as one wishes'; *hito no iu mamá ni náru* 'is at another's beck and call'; *meirei saretá (mei-ziráreta(-)) mamá ni sigoto o yameru* 'stops work as ordered'; *Oose no mamá ni itasimasyóo* 'I will do as you say'; *yó no hukéru mamá ni* 'as the night advances'.

V-ta *mamá* can be the equivalent of V-ta [k]kirí 'did it and that was that, did it and left matters there; did it and that was the end of it all': ... *yaoya e |kaimono ni yuku to itte (|) déta mamá || káette |kónakatta no de aru* 'went out saying she was going to the grocery store shopping and never came back' (SA 2668.122a); ... *onaka o kowásita manmá |naoránaí de ...* 'my stomach trouble stayed with me (and wouldn't get better)' (R); *Gó-zi -sugí ni |sigoto kara káette, || iki-tuke no syokudoo ni dekaketa mamá || káette |kimasén desita* 'He returned from work sometime after five, went off to his favorite restaurant and never came back' (SA 2676.133a).

Wagamámá 'selfish(ness)', both an abstract noun and an adjectival noun, is derived from the literary *wá-ga mamá* 'my own way'; *kimama* (from *ki no/ga mamá*^[u]) is a synonym. *Omoi-no-mamá* is a closeknit phrase derived from *omóí no mamá* 'as one pleases'; *ari-no-mamá* 'as it is' (*Ari-no-mamá o ie* 'Tell it like it is') is derived from a direct nominalization of literary *ári*, and it is the equivalent of *áru ga mamá* (§14.6). In the epistolary style characteristic of old-fashioned letterwriting (§22.3) *mamá* is used as a particle, often after V-i *sooróo*, to mean 'due/owing to, because, as since', corresponding to the colloquial S *kará* or S *nó de*. For more examples of *mamá*, see Alfonso 1075-6, Kenkyusha 1057b, and Terase 208b.

13.2.7. *Hazu*.

The word *hazu* originally meant 'the (bowstring) notch of a bow' and later 'the notch of an arrow' (now usually *ya-hazu*); the notion of 'notch matching the bowstring' has been extended to create the postadnominal found in S *hazu da* with the meaning '(what matches) the general expectation', 'what one has every reason to think', 'what ought naturally to be true', 'what stands to reason', '(what is known to be) likely, the likelihood', 'what one would normally assume/presume', 'I assume/presume', 'I feel sure that'.⁵⁰

Hazu is commonly predicated with the copula as an affirmative impersonal statement S *hazu dá* 'presumably S', 'It would normally be assumed that S', 'I feel sure that S', 'It is supposed to be that S': *Uti no Kén-tyan wa || rainen no sángatu |sotugyoo suru hazu désu*

50. A similarly colorful figure of speech lies behind the American expression 'it is a (lead-pipe) cinch', meaning 'a sure thing'.

ga ... 'Our son Ken should graduate in March of next year'; Sore dé wa | káre ga | okóru hazu da 'No wonder he got mad'; Gunkan wa || sán-zi ni | nyuukoo suru/no hazu de áru 'The warship is expected to enter port at three o'clock'; Otóosan wa | móo || káette iru | hazu dá kara ... 'Father should be home by now, so— ...'; Sore wa || tíisa na | kodomo dé sae | sitte iru hazu no kotó da 'That is something that even a small child can be presumed to know'; Ninniku ni yowái hazu no | Nihon-zín ga, || tikágoro wa || Tyoosen-ryóori de || sita-túzumi o | útte iru 'The Japanese, who (= though they) are supposed to be down on garlic, are smacking their lips over Korean cookery these days'; Tegami o ireta hazu no huutoo o akete míte || bikkúri simáshita 'When he opened the envelope that he naturally supposed had a letter inside, he was startled'; Yama-óku da kara || denwa ga náí (l) hazu desu ga ... 'It's way back in the mountains so we can expect them not to have a phone

This use with the copula, however, is a propredication of S hazu [ga áru no] ða 'It is [that there is] the normal expectation that S', and that is why the expression is usually negated as S hazu ga/wa náí 'There is little/no likelihood that S = It is hardly possible that S', 'I don't see that S = I don't see how/why one can expect that S': Namámete | ité wa || káre wa | seikoo suru hazu ga náí 'If he is lazy I don't see how he can have any success'; Sonna hazu wa || náí to | omoimásu ga ... 'That's not what I was expecting'; Ténki ga | warúi kara, || Hánako ga | kúru hazu wa | náí 'The weather is so bad that Hanako surely won't come' (= ... kit-tó kónai)—cf. Ténki ga | warúi kara, || Hánako ga | kónai hazu da 'The weather is bad, so Hanako is likely not to come'; ... kusuri ga háitte iru | hazu mo náí yóo na | tya-dansu no itiban sitá no | hikidasi máde || ... sagasite ita 'she searched even the bottom drawer of a chest that was hardly likely to have medicines in it' (Ariyoshi 42). A negation of the propredicative expression S hazu de/zya náí, though unusual, is not entirely ruled out; Kenkyusha carries the example Sonna hazu dé wa | nákatta ga 'I did not bargain for that'. The adnominalized sentence can itself be negative: Sui-yóobi wa || yasumí zya náí (l) hazu desu ga 'Of a Wednesday they're surely not on holiday ...'.

With a double negative S-(a)nai hazu ga/wa náí, the meaning is 'There is little likelihood (it seems impossible) that not S' = 'It is bound to be that S': O-ténki ga | íi kara, || Hánako ga || asobi ni kónai hazu wa | náí 'The weather is so nice, Hanako is bound to come for a visit'; O-kane ga náí hazu wa | arimasén 'You surely must have money'; Íma || sugu | dekakerú nara, || ma ni awánai hazu wa | arimasén | yó 'If we leave right now there's no reason for us to be late'.

The meaning of S hazu dá sometimes approaches that of S ni tigai náí 'surely' or 'there is (can be) no doubt that S' and sometimes it approaches that of S tumori dá 'I intend/presume/feel/hope that': Kinóo || sore o suru hazu desita 'I should have done that yesterday'—Kinóo || sore o suru tumori desita 'I intended to do that yesterday'; Kinóo || sore o sita hazu desu | yó 'But I thought I did that yesterday'—Kinóo || sore o sita tumori desu | yó 'I tried to do that yesterday' or 'I have the feeling I did that yesterday'; Háa, || simeta | hazu ná n desu kedo, || yappári || tyót-to || aite 'másu | née 'Yes, I thought I had closed it, but it's still open a bit, I see' (ISJ 11.1b.268); Bóku(-) wa || tásika || soo itta hazu desu | yó 'I am sure (=confident) I said so'; ... soo itta ni || tigai náí desu | yó 'There can be no doubt that I said so [—just ask the others who were there]'; Anáta wa móo anó-hito ni átta hazu desu 'Surely you must have seen him by now (or: before)'.

Observe that the following sentence can mean much the same thing regardless of whether the subordinated predicates are converted to the perfect or not:

Kúru hazu { dáтта } hitó ga { kónai } kara, taihen komarimásita 'We were much embarrassed because the people who were supposed to come didn't (come)'. (All combinations occur. And, with a different nuance, the sentences can begin with Kíta hazu ... '... the people who were supposed to be here ...'.) On the unusual ellipsis in Senséi ga/no kúru hazu [dá/datta] ga kónakatta 'The teacher was expected to come but he didn't', see p. 980 (§17.5).

Sometimes the sentence adnominalized to *hazu* is framed as an expression of permission S-té {mo} ii 'might as well S, might well S'. Móo ll káette ite ll ii (l) hazu ná⁽ⁱ⁾ no ni ... is a somewhat stronger way of saying Móo ll káette iru (l) hazu ná⁽ⁱ⁾ no ni ... 'He really ought to be back by now, but [he isn't]'. Wakátte (l) ite {mo} ll ii hazu desu means 'He ought to (really should) understand'; cf. léba ll wakáru hazu desu 'If you say it he's bound to understand'.

13.2.8. Tumori.

Unlike *hazu*, which makes IMPERSONAL expressions, the postadnominal *tumori* refers to what is in a person's head—his intention, hope, meaning, supposition, impression, or belief.⁵¹ Statements such as S *tumori dá* 'It is my intention/impression that S', will usually refer to the first person as the underlying subject; questions, such as S *tumori desu ka* 'Is it your intention/impression that S?', will usually refer to the second person, and the honorific prefix *o-* is sometimes attached to *tumori*: Nágaku l irassyáru l o-tumori desu ka 'Do you plan to stay long?' Since the reference is personal, you will occasionally hear *de irassyáru* used for the copula: Senséi wa ll dóo iu l o-tumori de irassyaimásu ka 'What do you have in mind, sir?' The intention can be negative: Sore wa l iwanai tumori desu 'I plan not to say that'. The statement of intention can itself be denied: Sore wa l iu tumori zya arimasén 'It is not my intention to say that'. And a negative intention can be denied: Sore wa l iwanai tumori zya arimasén 'It is not my intention not to say that'. But it is more common to say S *tumori ga/wa náí* 'has no mind (intention) to ...', does not have it in mind that S': Sore o suru tumori wa arimasén 'I have no intention of doing that'; Sore o suru tumori ga ll náí de mo l náí kedo ... 'Not that I have no intention of doing that but ...' or 'I have half a mind to do that, but ...'.

One common pattern is ... *tumori dé* 'with the intention/idea/notion ...': Dóo iu (l) tumori de l soo iú n desu ka 'What do you have in mind by (saying) that?'; Zyoodán no (l) tumori de l ittá n desu kedo ... 'I intended it as a joke ...'; Warúi (l) tumori de l ittá no de wa l arimasén 'I meant no harm by my remarks'; Kyóoko wa ll hankoo no tumori de, ll sore-daké itta 'This was all Kyōko said by way of protest' (Kawabata: Suigetsu); Miti ga warúi kara ll sono tumori de ll—(ki o túkete kudasái⁽ⁱ⁾) 'The road is bad, so bear that in mind (—and be careful)'; Kono sitagaki wa ll máda l naosánai kara ll sono tumori de—(yónde kudasái⁽ⁱ⁾) 'This draft I haven't corrected yet so read it with that in mind'.

The translation of S *tumori dá* will sometimes be 'I trust/believe/hope that'; when the intention is put in the perfect the translation is sometimes 'tried to' or 'did my best to': Kírei ni l káita l tumori desu ga ... 'I hope I have written neatly (enough)'; Kírei ni l káita l

51. The meaning is usually intention if what precedes is a voluntary verb in the imperfect (V-ru *tumori dá*, V-anai *tumori dá*). When the meaning of the adnominalized predicate will not easily allow the translation 'intend to', the appropriate translation will express belief or impression. Surmised, however, is expressed by *hazu*: Komakái o-kane ga átta hazu desu ga ... 'I *thought* I had some small change, but ...' (BJ 2.25).

tumori désita ga ... 'I was under the impression that I had written neatly (enough)'; Kírei ni | káku | tumori désita ga ... 'I tried to write neatly'. When the subject is clearly a third person, the meaning is often 'is under the impression that; thinks that; has the idea that': Hánako san wa || máda || wakái | tumori désu kedo ... 'Hanako is under the impression that she is still young ...'; Ano gakusei wa || seikoo sita tumori désu 'That student fancies (feels, believes) that he has been successful'. Instead of V-ru tumori dá (or V-ru tumori de iru) you will sometimes find V-ru tumori o site iru: ... tosi o | tóttara || kyóori ni | káeru | tumori o site iru 'she has it in mind to return to her home town when she gets old' (SM 2796.146e).

The underlying subject of the adnominalized sentence will be the same as that of the person whose intention or impression is described.

Quotationalization is optional for tumori: Asitá made ni | sumaséru {to iu} tumori de | hazimeta sigoto désu ga ... 'It is a job I started with the intention of being able to finish it by tomorrow, but ...'. But flat statements of one's own intentions do not allow the vacuous quotation; the rather unnatural sentence Watakusi wa iku to iu tumori désu could only mean 'I intend to say that I will go', not 'I intend to go'. With other persons, ambiguity is possible: Kimi wa sore o kau to iu tumori ka can mean either 'Do you intend to say you will buy it?' or (= Kimi wa sore o kau tumori ka) 'Do you intend to buy it?'

Tumori is a noun 'estimate (of oneself)' derived from the infinitive of tumóru(=) 'accumulates' or, as here, 'estimates' (= mi-tumoru); it is, however, little used except as a post-adnominal.

13.2.9. *Tamé*.

The postadnominal *tamé* usually serves as a transitional epitheme and the resulting structure typically appears as an adverb or as a precopular noun (that is, with or without *ni* when adverbialized). In the expression *tamé ni náru/naránai* 'is/isn't beneficial', the word appears without an adnominal element; it can also begin a sentence with the implied omission of [Sono]: [Sono] *tamé ni*, ... 'Therefore ...; As a result [of that] ...'; ... kore máde | antei-teki de átta | hiyoo o | kyuu ni (l) age, || *tamé ni* || kákaku(=) wa | agatte yuku '... it suddenly raises the expenses, which have been stable up to this point, and as a result prices start rising' (SA 2684.137). Very occasionally, *tamé* will appear as a pure noun with a case marker: Kimi no *tamé o* | kangáete || ... 'Thinking of your benefit (your own good) ...'.

We can summarize the uses of *tamé* under three categories:⁵²

(1) *N no tamé* means '(for) the sake/benefit/good of N': Kodomo no *tamé da* kara || ^(v) ^(v) *nán de* mo simásu 'Since it is for my child, I will do anything'; Kokumin no *tamé* {ni} || kono seisaku o kettei sita 'This policy was decided upon for the good of the people'; Bókoku/Sókoku no | *tamé ni* | tatakatta 'I fought for my motherland/fatherland'; Gaikokú-zin no | *tamé no* | gakkoo o mookéru 'We will establish a school for foreigners'; Zidoo no | *tamé no* || yói | yomimóno ga | hosii 'I want some good reading material for children'.

(2) *V-ru tamé {ni}* is a rough equivalent of *V-rú no ni* 'in order to V', or of *V-ru yóo {ni}* 'so as to V'; *VN no tamé {ni}* means 'for the purpose (with the aim) of VN': Ryugaku suru/no *tamé ni* || kane o tamete imásu 'I am saving my money in order to go

52. The minor juncture before *tamé* will usually not be heard after an atonic adnominal element (following the usual pattern of letting atonic phrases attach smoothly to a following phrase); after a tonic adnominal element the juncture often optionally drops, as seen in a number of the examples given below.

abroad to study'; Hasamí wa || kírú | tamé no | monó da 'Scissors are for cutting (things with)'; Rakudai sinai tamé {ni} || tetuya site benkyoo suru 'I will study all night long so as not to fail'; Rikírýoo(-)/Nóoryoku o | tamésu tamé, || sikén o | úketa 'I took an examination to test my ability' (MJW); Ketuin o | logináu | tamé ni, || saiýoo-sikén o | sinákereba | naránai 'We have to give an employment examination in order to fill a vacancy' (MJW); Yútaka na | syákai o | kensetu suru tamé ni || dóryoku(-) suru 'We strive to establish a wealthy society' (MJW); Syokuyoku o | mitásu | tamé ni, || syokuzi o | suru 'We eat in order to satisfy our appetites' (MJW); Gaikoku-zíyoo o | sirabéru | tamé ni, || sisetú-dan o | okuru 'We will send a mission to study conditions in foreign countries' (MJW); Karada o | zyoobu ni suru tamé ni, || supóoto o | suru 'You play sports to put your body into shape' (MJW); lé o | tatéru | tamé ni || zaimoku o | kau 'I will purchase lumber to build a house'; Kokumin o | hógó suru | tamé ni, || hooritu ga áru 'To protect the people, we have laws'.

In *Kimono no tamé ni, iti-nitan eránde kudasai* 'Choose a roll or two of cloth for a kimono' (MJW) the first two words represent an adnominalized propredication of something like *Kimono [o tukúru no] da* → *Kimono [] no ...* and the meaning is the same as that of *Kimono o tukúru tamé ni ...*

(3) *S tamé {ni}* means 'owing to (the fact that ...), because of'—a somewhat formal equivalent of *S kará*⁵³—or (= séi) 'as a result/consequence of ...': ... *nagaré ga | hayái | tamé ni | hiroenákkata* 'because the current was so swift he couldn't pick it (= his dropped rifle) up' (Shibata 1961.223); *Syukketu taryoo no tamé, || zetumei sita* 'He died from an excessive loss of blood' (MJW); *Byooki no/dátta (I) tamé {ni} | syusseki dekinákatta* 'I could not attend because I was ill'. According to Nagano (1966.187) *S tamé {ni}* and *S kará* are not usually followed by a request or a command, unlike the looser *S nó de* 'since it is the case that S', but that distinction may be breaking down.

13.3. TENTATIVE AND HORTATIVE ADNOMINALS;

-[y]oo monó/món nara

In written Japanese you sometimes see an adnominalized hortative, tentative, or literary tentative—often before a postadnominal:

(1) HORTATIVE: ... *urá o kakóo sitagógoro* 'the intention to frustrate'.

(2) TENTATIVE: ... *kentóo mo tukánakatta* 'r^{oo}o zíken 'a matter that will likely not have been noticed'; ... *sono yóo na meisyoo sono-mónó no hassei ga kui-tomerarerú daroo kotó mo kitai sarerú no de aru* 'It is expected even that the generation of such names themselves can be blocked' (Shibata 1966.194); *Motíron, wá-ga kuni no hosyu-teki búnsi no aida ni senryoo-tóokyoku ni tai-súru hankan ga hikaku-teki tuyói de aróo kotó wa nanpito mo yooi ni kore o soozoo si-úru* 'Of course, that the opposition to the Occupation authorities is comparatively high among the conservative elements of our country, this can easily be surmised by anyone' (KKK 3.243); ... *káno-zyo wa zibun o mátte iru daroo háha ... no kotó o omoi-tuzuketa* 'she kept thinking of her mother who must be waiting for her' (Y 352); *Tatami ni sitára hyakú-mai sikerú daroo sitú wa ...* 'The room, which would probably take a hundred mats if carpeted with *tatami*, ...' (Y 352).

(3) LITERARY TENTATIVE: ... *naróo kotó nara* 'if it should become ...'; ... *sabisikaróo muné no utí(-)* 'in a breast that must be lonely'.

53. N no tamé {ni} = N dá kara.

Yoshida (351) says these forms smack of translation style and are not very comfortable.

The expression V-[y]oo monó/món nara⁵⁴ means 'if it is a question/matter of ...; should it be a case of ...; if it were to happen that ...; if one were to (happen to) ...' or just 'if' or 'whenever': Kemuri dé mo suoo monó nara kotira ga seki-konde simaimásu 'I get to coughing if I breathe in smoke or anything' (Matsuda 59); Sono hanasí mo móttomo na kotó da si, ukkári kotowaróo mono nara aité o okorásite simai-soo na ikigómí(¯) na no de Kitami no ozisan wa kokoro-yóku sono kóoi o uke-tottá no de atta 'What was said was reasonable and the enthusiasm was such as to make it appear that one would offend the other party if one were to decline, so he (? Uncle) Kitami cheerfully accepted the favor' (KKK 3.243); Ukkári Kókki san ni kuti o kikoo monó nara áto de Úme tyan ni hidói mé ni áu kara, ki o tuke-nasái yó 'You be careful now, Ume, because if you should happen to take matters up with Mr Kokki you'll be in trouble later' (KKK 3.243); Yosyuu sinái de koyóo mon nara, súgu sikararerú n da kara, iyá n[i] náttýau 'If you come without having prepared your lesson you get scolded right away, so it's no fun'; Ukkári warúkuti de mo ioo món nara, tatimati ii-tukeraretyaimásu yó 'One inadvertent bit of foul talk and you get told on immediately'; Tyót-to amai kao dé mo siyoo món nara, súgu ni tuke-agaru 'All I have to do is show a bit of indulgence and I'm taken advantage of at once'. The "if" clause refers to an UNDESIRABLE condition: 'if [something bad] should happen'. Terase 220a gives examples of the potential imperfect -éru + monó nara with the same meaning, e.g. Katéru monó nara, kátte kói 'If you (think you) can beat me, just try!' Cf. MKZ^s 1107b: Ikeru monó nara itte mítai 'If I were able to go I'd like to'; Yareru monó nara yatte mí ro 'If (you think) you can do it, go ahead and try (= I'd just like to see you do what I think you can't!)'.

The expressions can omit monó, abbreviating to -[y]óo nara: Otokó-no-ko no átari ni yurete iru akai hikarí o yomóo nara "Kíyoko" to yoméru 'If one were to read the red glow flickering about the boy it would read "Kiyoko"' (Y 436). For -masyóo mon nara (and other polite stylizations of adnominals), see Mio 299. For N tó mo aróo monó 'one of the standing of N', see §21.1.(13). For -[y]óo ni, see §17.7. For -[y]óo zya nái ka, see §15.16. Cf. -rú/-tá nara, §17.9.

13.4. POSSESSIVE NOMINALS

We originally set up three nuclear sentence types: verbal, adjectival, and nominal. But adnominalization forces us to divide the nominal into three types:

nominal proper:

pure noun Gakusei no hazu dá 'It must be the student'.

precopular noun Byooki no hazu dá 'He must be sick'.

adjectival nominal Génki na hazu dá 'He must be well'.

possessive nominal Gakusei nó no hazu dá 'It must be the student's'.

Ordinarily when Gakusei nó da 'It is the student's' is adnominalized, the copula dá drops:⁵⁵

54. Usually pronounced with no juncture before monó/món, so that the accent of the postadnominal will not be heard unless the V-[y]oo form is from an atonic verb; and many speakers (differing from our conservative version) make all V-[y]oo forms tonic, saying siyóo mono nara for our siyoo monó nara.

55. This is, however, putting the matter backwards. Gakusei nó da 'It is the student's' is itself a reduction of Gakusei nó [[mo]nó] da 'It is the one of the student', and that structure is far from simple (cf. §3.11.2).

Gakusei no itóko 'the student's cousin', identical in form with 'the cousin who is a student' from Gakusei dá 'It's a student'. So we must set up not only this special class of possessive nominal (NOUN + nó + copula), but also a special small class of postadnominals before which the imperfect copula changes to nó instead of dropping as would be expected: hazu, yóo, tumori, hoka, This means that we can make a difference between Gakusei no hazu/yóo da (from Gakusei dá) and Gakusei nó no hazu/yóo da (from Gakusei nó da); the difference fails to hold when the sentences are adnominalized before other nouns, for they neutralize the distinction: Gakusei no itóko da (from either Gakusei dá or Gakusei nó da) 'It is the student cousin' or 'It is the student's cousin'. Other examples: Gakusei nó no tumori dá 'I mean it for the student (to be the student's)', Gakusei no tumori dá 'I take it to be the student'.

13.5. RESTRICTED NOMINALS; ADNOUNS (=PRENOUNS)

A number of what we broadly call "nominals" are restricted in their distribution. In addition to adverbs of various sorts (§13.7), the following types are found.

(1) Five deictic words occur before the copula dá in its various forms including the infinitive ní used adverbially; they also occur directly adnominal, modifying a noun with no marker between:

(1a) konná 'like this', sonná 'like that', anná 'like that (remote)', dónna 'like what'.⁵⁶ The adverbialized konna/sonna/anna ní are equivalent to the Kansai dialect forms konai, sonai, and anai. Ōsaka uses the form dónai for dónna ni or for dóo 'how' (and dónai site for dóo yatte 'how'—in Tōkyō dóo site usually is taken to mean 'how come = why'), but dóo is used in Kyōto, according to Zhs 4.20. You will find Kyōto examples of konai (Zhs 4.265), sonai (4.262, 266); a variant of the latter, hunai, appears in Zhs 4.266. Ōsaka forms with -nn- are also reported: dónnai (Zhs 4.193), sonnai (4.196). Examples: Yóo máa, konai uresi-sóo ni waraeta món ya 'What a lot of delightful laughs (like this =) this is!' (SA 2654.134d); Kore kara dónai site, syóobai tuzukerú ka, kentóo mo tukimasén 'I have no idea how I can stay in business from now on' (SA 2678.130b—Ōsaka); ... nán de anai iwarerú n yaro ka to omoimásu né 'I wonder why I was talked to that way' (Tk 3.289b—Ōsaka) = náze anna ni iwarerú n daroo ka These Kansai forms result from reducing the -nn- to -n- and dropping the initial nasal of ní: ko[n]na [n]i etc.⁵⁷ There are, in a number of dialects, other examples of [n]i that occur sporadically, especially after high vowels (*i* and *u*); these are from Ōsaka: tabí [n]i dé[t]e 'leaving on a trip' (Zhs 4.227), otumu [n]i 'on one's head' (4.202), saki [n]i 'ahead' (4.221).

56. The basically oxytonic accentuation of the non-interrogatives (konná, sonná, anná) appears before dá, dé, and other forms of the copula; also before nó (konná no wa/dá). But before ní, for unknown reasons (perhaps an ellipted {yóo}?), the accent drops: konna ní, sonna ní, anna ní. When the word is modifying a noun, the final accent is automatically canceled by the underlying juncture appropriate to adnominalizations (which often then disappears): konna kotó. These matters are taken up elsewhere. Dónna has an elegant synonym iká-ga: Kore wa iká-ga na monó de gozaimasyóo 'What sort of thing would this be?' (Tk 4.324b). This is an unusual formation, an attributive adjectival noun (=adnoun) built on the adverb iká-ga, which is derived from an abbreviation of iká ni ka; iká is a literary adjectival noun, and the appropriate literary equivalent of dónna is iká naru.

57. But some would derive konai (etc.) from kono yóo; cf. anai na monó = ano yóo na monó (Inokuchi 276). Such a derivation would presumably explain the uses of konai for konna ni as direct adverbialization, the equivalent of kono yóo [ni]. (The -a- in the second syllable remains unexplained.)

As adnominals, these words are synonyms of other expressions, derived (by semantic specialization) from quotational constructions, both imperfect (2d below) and perfect (2f below):

English	Adnoun	Synonym 1	Synonym 2	Synonym 3
'this sort of'	konná	koo iú	koo ittá	koo sitá
'that sort of'	sonná	soo iú	soo ittá	soo sitá
'that sort of'	anná	aa iú	aa ittá	aa sitá
'what sort of'	dónna	dóo iu	?dóo itta	?dóo sita
cf. (2g)	nán taru	nán to iu	nán to itta	?nán to sita

The adnouns of this set are to be distinguished from the expressions *kóo na/no* (etc.) adnominalized from the adverb *kóo da* 'it is [happening] this way' (etc.—*sóo, áa, dóo*). There is a contrast between *kóo na no wa* 'the one that is/does thus' and *konná no wa* 'one that is like this'; between *Kóo da sóo da* 'They say it is/does thus' and *Konná da sóo da* 'They say it is like this', between *Sóo na no ka* 'Is that right?' and *Sonná no ka* 'Is it one of that kind?' Examples: *Dóo site áa na no ka to omótte, bóku(¯) wa kanasiku narimásita* 'Wondering why it is like that, I grew sad' (SA 2673.48b); ... *to iu wáke wa, kóo na no da* 'The explanation of ... is as follows' (SA 2679.30b); *Okyaku wa résubian tte dóonna n daroo* 'The customers—lesbians—I wonder what they're like' (SA 2684.42c). The compound in *sonna-kóonná de (isogásikute ...)* '(is busy) with this sort and that sort = with all sorts of things' seems to be a derived noun: *sonna-kóonná no isogási-sa* 'busyness with all sorts of things'; *Sonna-kóonná ni tori-magirete yakusoku o wasuretyatta* 'I was so wrapped up in this and that, I forgot my appointment'; *Sonna-kóonná ga átte kara, ...* 'After this and that had happened = After all sorts of vicissitudes' (Fn 184a).

Hayashi 77 notes that each of these words will stand alone as a sentence; an ellipsis of the copula is involved: *Sonná [da]!* 'Such a thing!'; *Dónna [da]?* 'Of what sort?' Of course, the phrases with *dá* and *ní* might themselves be regarded as elliptical: *sonná [l] yóo/monó] da* and *sonná [l] yóo ni > sonna [yóo] ni*. In origin these words are apparently contractions of *kono yóo na* (etc.), but the etymology does not prevent them from entering into new constructions with ... *yóo (da/na/ni)*: *Ée, sonna yóo na ki ga simásu* 'Yes, I get that sort of feeling' (SA 2654.46b). The Kansai variants described above are to be accounted for as similar contractions, probably made at a time when *yóo* was pronounced *yáu*, as attested by the historical spelling.

(1b) *onazi* 'the same'—also *onnazi* and *onnasi*.⁵⁸ In the literary language this is a special kind of adjective with the forms *onazi-ki* for attributive and *onazi け-し* for predicative, following a rule of haplology that obligatorily reduces *-si-si* and *-si-si (= -zi-si)* in adjective predicative forms. If you run across *onazi-ku*, it is a somewhat formal or semi-literary usage for *onazi {yóo} ni*; and *onazi-i*, from *onazi-[k]i*, is a pseudo-literary form for *onazi (+N)*. Although *onazi yóo ni* is more common, *onazi ní* also occurs: *Kango o Nihon-go to onazi ni tukatte iru* 'We use Chinese loanwords the same way as Japanese words'; ... *minsyuu ga onazi ni kyooiku o úke, onazi ni syakai-teki kúnren o úke, onazi ni syuusyoku suru* 'the masses will receive education the same way, will receive social training the same way, will find employment the same way' (Tk 3.111a). The word *onazi*

58. Not limited to Tōkyō speakers; an example from a Kyōto speaker: *onnasi ya ná (= onazi da ná)* 'it's the same, you see' (Tk 4.262b).

carries with it the reciprocal valence (§3.6) even when it is used as a directly adnominal prenoun: *kyóo to onazi tokí* 'the same time as today'; *Tyoodo bóku(ˉ) to onazi désuku ni narandé 'ta* 'He was placed at just the same desk (= post) as I' (Tk 3.48b). And it can also carry its subject even when the sentence is adnominalized (N_1 ga/no onazi N_2): *Náni ka otó no onazi {no} hoka no kotobá ga ...* 'Some other word of the same sound ...' (Fukuda in Ōno 1967.195). As shown by the brackets, the copula (*dá* → *nó*) is optional when the adnominalization carries the subject with it; it is also optional when the reciprocal adjunct is present: N_1 *tó* {no} onazi N_2 'the N_2 (that is) identical with N_1 '. But if no adjunct accompanies *onazi*, the copula must be suppressed: *onazi {no} N* 'the same N'. The pronominal *nó* 'the one which (etc.)' is subject to optional ellipsis by certain speakers at least, and that option will leave *onazi* standing before *gá* or *ó* as if it were a pure noun: *Are to onazi {nó} ga hosíi* 'I want one the same as that'. The modern trend is to replace *onazi dá/ní* with *onazi yóo da/ni*, according to *Gekkan-Bumpō* 1/8.50a (1969).

NOTE: Since all the words of Type 1 (*konná*, *sonná*, *anná*, *dónna*; *onazi*) can occur predicatively before *dá*, it is possible to adnominalize the resulting sentences instead of using the words as adnouns. Such adnominalizations appear to be used mostly before certain postadnominals; sometimes the meaning is somewhat different from the direct adnominal use. Most common is the use of the adnominalization before the postadnominal *nó* as a summational or transitional epitheme in ... *nó da*, ... *nó de*, and ... *nó ni*: *Hanasí ga sonná na no de sugu kaette kíta* 'The talk being such, I left at once'; *Áme ga konná na no ni déte ikimásu ka* 'Are you going out despite the rain being such as it is?'; *Onazi ná no da* 'It happens to be the same'.

There is some hesitation about accepting such adnominalizations before the pronominal *nó* that represents an extruded epitheme ('the one that ...'); one speaker finds no objection to *Onazi ná no ga hutatú to áru ka* 'Can there exist two that are identical ones?' but is reluctant to accept (?) *Dónna na no ga íi n desu ka* 'Ones that are of what sort would be preferable?', perhaps only because it seems clumsy. Words of Type 1 can be directly adnominal or adnominalized through predication (*konna ...* or *konná na ...*, *onazi ...* or *onazi na ...*) before at least these postadnominal expressions: *bákari (de)*, *daké (ni/átte)*, *hazu (dá)*, *hodó (ni wa miénai)*, *ippóo (= katawará(ˉ))*, *ízyoo*, *kanoo-sei (ga áru)*, *kekka*, *kúrai/gúrai*, *kusé ni*, *mamá*, *món/monó ka*, *séi ka*, *tamé*, *tokí*, *tokoró (= baai)*, *ué (ni/wa)*, *wáke (da)*, *yóo da*. A difference of meaning is felt with *Sonna kanoo-sei ga áru* 'There is such a possibility' and *Sonná na kanoo-sei ga áru* 'There is the possibility that it is such'. *Onazi kotó* means 'the same fact'; *onazi na kotó* means 'the fact that it is the same'. We also find the following: *Sonná da sóo da* 'They say it is such' but not **Sonna sóo da*; *Onazi da sóo da* 'They say it is the same' but not **Onazi sóo da*; *Sonna rasíi* 'it is such-looking' or 'It seems to be such' but not **Sonna na rasíi*; *Onazi rasíi* 'It is identical-looking' or 'It seems to be identical' but not **Onazi na rasíi*. Words of Type 1 can also be converted into mutatives with *náru/suru* (§9.1.11)—unlike most of the predicable adverbs: ... *móo zyúu-nen máe desita né*.—*Sonna ní wa narimasén yó* 'It was ten years ago, wasn't it.—Not so long as that' (Tk 2.95a). Since *suru* not only is a mutative verb but also can be used as a general verb 'do', a sentence such as *Sonna ni suru* is ambiguous: one meaning is 'makes it to be such' (mutative) and the other is 'does it in such a way' (adverbial of manner). But *Sonna ni náru* will only have the mutative meaning 'gets to be (becomes) such'; and *Sonna ni nómu* 'drinks in such a way' (often implying 'drinks so much') will not have the meaning 'drinks it so that it will be such (= converts it into such by drinking it)', since *nómu* is not normally used as a mutative verb.

(2) Certain words do not appear except when directly adnominal; these are called ADNOUNS (or prenouns). Most are fixed reductions of attributive nuclei, and they are grouped below according to their pedigrees:

(2a) *hyónna* 'strange, awkward' < *hén na*; *ironná* 'various' < *iroiro ná* (the final accent appears only in such contexts as *Ironná no ga áru kedo* 'There are various ones but' since **ironná da* and **ironná ni* are both impossible); *méssóo-na* = *méssóo(-)* *mo ná* 'absurd'.

(2b) *kono* 'this', *sono* 'that', *ano* and literary *káno* 'that (remote)', *dóno* 'what'.⁵⁹ These are to be distinguished from *kore nó* etc. either as possessive nominals 'of this one' (< *kore ni/ga áru* §3.11.2) or as adnominalizations of *kore dá* '(that) it is this' etc. In older Japanese *kó* and *só* occurred as free demonstratives, equivalent to modern *ko-re* and *so-re*, which have picked up a suffix. The literary *káno* is sometimes used in modern Japanese to mean 'that well-known' or 'THE': *káno yuumei na Doobaa-sóoru o ...* 'THE famous Dover sole ...' (SA 2689.126c). (*Ano* is used in the same way; *are*, *asoko*, and *ano* are used as "ostensible taboo" references similar to English "you-know-what" etc. See §29.)

(2c) *hon-no* 'just, mere' < 'basically, really' (*hontoo no*);⁶⁰ *tóo-no* 'the said ..., the ... at issue (or under consideration)'—cf. *réi no* 'the ... in question; the usual/customary ...' < *réi da*; *syóhan-no* 'all (and sundry), the various'; *kison-no* 'existing'; *tén'yo-no* 'heavensent', *saiai-no* (*ko*) 'most beloved (child)'—binoms of Chinese origin; *íkuta-no* 'numerous, various'; *kúdan-no* 'the aforesaid; the usual' < *kudari* 'item in a series' < *kudari* 'procession < going down'; *tott[e]oki-no* 'reserved, spare' < infinitive of *tótte oku* 'reserves'; [literary] *nokon-no* (*yuki*) 'the remaining (snow)' < *nokorí* 'remainder' < *nokóri* 'remain'; *moyori-no* 'adjacent, nearby, the nearest' < *mo* 'most' + *yori* 'approach'; *nága-no* 'long, for ever' (from the adjective *nága-* 'be long'); *áka-no* (*tanin*) 'an utter (stranger)' (from *áka* 'red', cf. *áka-tyan* 'baby'); *zúbu-no* 'out-and-out, utter, rank' (as in *zúbu-no siróoto* 'a rank amateur')—from a slang adverb, perhaps to be connected with *zubári*; *kússi-no(-)* 'leading, prominent' (from an otherwise unused Chinese binom 'bending fingers [to count]'). But *sin* no 'true' is the adnominalized form of the precopular noun *sin* 'true', forming pseudo compounds in which the juncture before the modified noun is suppressed along with the accent of the noun: *sin no tómó* → *sin no tomo* 'a true friend', *sin no yamí* → *sin no yami* 'utter darkness' (often carried as a lexical entry in dictionaries). Similar are *múhi/múni* no 'peerless' (as in *múni no sin'yuu* 'one's best friend'), *kissui* no 'pure', and *syussyoku* no 'prominent, excellent' (Tk 4.216a); but the predicative forms are little used, particularly (?*) *múni da*, though we find *Múni mo múni* ㄝㄉㄝㄝ, *tatta hitóri no sin'yuu dátta* 'Best of best, he was my one and only friend'. (For the emphatic iterative with *mó*, see p. 758.) Perhaps we should also add *náke-nasi(-)* no (*kane/tié*) 'what little (money/wisdom) one

59. Before *t*, *d*, or *n* the final *o* may drop, especially in *sono*: *son[o] tókí* 'at that time', *son[o] náka* 'in the midst of that'. The literary version of *dóno* is *izure no*. For reasons of accent we treat *anó-ko* (*sonó-ko*, *konó-ko*) and *anó-hito* (*sonó-hito*, *konó-hito*) as lexical items; for more information on the accent of these and similar words, see §29.

60. The English translation may sometimes make this seem like an adverb modifying an adjective, but it is actually modifying the entire noun phrase as a unit: *hon-no mizikái zikan* 'but a brief time', *hon-no tumaránai monó* 'merely a worthless thing'; *Sore kara, hon-no ma-mo-nái kotó de atta* 'After that it was only a short time' (Fn 61a). Cf. *hon-no o-sirusi désu kedo* 'this is a mere token, but [my thanks go with it]'.

has', from the predicative of a literary adjective said to be derived from ná-ke 'feeling of lack'+ the intensive suffix -na-. And mono-no ... 'about, a matter of' is a prenumerary adverb (p. 792). See also ... ̀kitté-no N 'the most N of all ...' (§2.4). The word arikitari 'commonplace' is apparently limited to adnominalized usage (arikitari no N), but unlike the words with hyphenated "-no" above it will permit the reduction of nó+ no 'one which is' to a single nó: Arikitari nó wa irimasén 'I don't want an ordinary one' (=Arikitari no monó wa irimasén) but not *tóo-no wa—and even tóo-no no wa (= tóo-no monó wa) is peculiar, perhaps because the vagueness of the pronominal nó is incompatible with these specificatory adnouns. Mízu-sirazu no tanin 'an utter stranger' contains an adnominalized precopular noun (mízu-sirazu da kara ...). Other words which seem to be usually or exclusively adnominalized (with nó) include umi no (háha) '(mother) of birth, real (mother)', hitókado no (zínbutu) '(a personage) of consequence; considerable; competent', moromoro no (túmi) 'all sorts of, a catalog of (crimes)', yubiorí(̀) no = kússi-no(̀) 'leading, prominent', yuusuu no 'foremost', enrai no (otó/kyaku) '(a sound/guest) from afar', kóoko no (réi/aité) 'a likely (example/partner), an excellent', hatú no (syusya) 'the first (to report to the office)'; ití-ru no (nozomí(̀)) 'a ray of (hope)', ik-kiku no 'a scoop (hand-dip) of ...' (~ námida 'a few tears'), ik-kai no (búnsi) 'a mere/miserable/poor (scribbler)', iti-matu no (huan/kemuri) 'a touch/tinge of (uneasiness/smoke)'; dái no (otokó) 'a full-sized (man = a grown man)'; syáhan no (zizyoo/mondai) 'such (circumstances/problems)' [literary]; zenpuku no (sínrai) 'fullest/utmost (confidence)' (but there is also zenpuku-teki ni 'fully'), sasyoo no 'petty' (but also sasyoo dé wa, sasyoo nágara); misou no (dekígótó) 'unprecedented (event)'; mi-sósiki no 'unorganized'; ... In this group belong a number of words derived from NOUN + ADJECTIVE, e.g. tuba-biro no (boosi) 'broad-billed (cap)' (Tsunagoshi 48)—meaning tuba no hirói (boosi). The expression tyóttó-ya-sotto 'ordinary, humdrum, unexceptional' seems to be an adverbial-lacking precopular noun: Tyóttó-ya-sotto no hitó de wa bunseki dekíru monó de wa náí 'It is unlikely that an ordinary person could analyze it' (SA 2669.44b); Tyóttó-ya-sotto de, naóru monó de wa náí no de aru 'It is unlikely to be cured by ordinary means' (SA 2681.37d)—the copula gerund is used with instrumental meaning; Tyóttó-ya-sotto zya o-me ni kakarénei siromono de áru kotó wa matigái náí 'It surely is a thing you can't come across very often' (SA 2672.119ab). Sotto is a phonetic play on tyót-to 'a bit' (and tyotto-sita 'not much [etc.]'); compare the opposite sort of play in the diminutive -tyan for -san. In Nagano 1966.175 the word is spelled in katakana except for hiragana -ya-. A variant version is found in Títtó-ya-sotto de wa damé desu né 'Humdrum measures won't do, you see' (Fukuda in Ōno 1967.229).

(2d) koo iú 'this sort of', soo iú 'that sort of', aa iú 'that sort of', dóo iu 'what sort of'. These are to be distinguished from the homonymous expressions that mean '(... who/that) says thus (etc.)' in the same way that the quasi copula ... tó^[i] iu (N) '(N) that is [or: is called] ...' (§21.1) is to be distinguished from the homonymous expression that means '(N who—or N that someone) says ...'. All these expressions also occur in the same meanings with the quotational verb perfectivized: koo ittá 'this sort of' (or 'said thus'), soo ittá 'that sort of' (or 'said that'), aa ittá 'that sort of' (or 'said that'), dóo itta 'what sort of' (or 'said what'); ... tó^[i] itta (N) '(N) that is [or: is called] ...'. When the expressions are used as more-or-less genuine quotations, it is possible to have intervening words—the adverbial element can be focused with wá or mó, the person being quoted can be mentioned as subject, etc.—and the quotation verb is subject to all conversions appropriate to

a verbal sentence (e.g. it can be negativized). The DESCRIPTIVE use of these expressions is limited to the adnominalized imperfect and perfect affirmatives, and nothing can intervene between the two elements—not even juncture. For this reason the descriptive usage of the imperfect, a restricted specialization derived from the quotations, is often romanized with a hyphen: *koo-iu*, *to-iu*, etc. But if we were to write hyphens for the imperfect versions, consistency would require us to write hyphens for the perfects (*koo-itta*, *to-itta*, etc.) and also for the synonymous perfects *koo sita*, *soo sita*, *aa sita*, and *dóo sita*, as well as for the expressions *dóo site* ‘how come = why’ and *dóo yatte* ‘how’ and perhaps ... *tó* *sité* and other expressions listed as phrasal postpositions (§ 9.7). So I have come to the conclusion that it is better to write spaces in all these set phrases, with no overt spelling mark to show the specialization in meaning.

(2e) *óoki-na* (and downtown Tōkyō variant *ókki-na* = *okkii*) ‘large’ (but see p. 787 for *óoki ni* and below 3c for *óoi-naru*), *tiisa-na* (and downtown Tōkyō variant *tittya-na* = *tittyái*) ‘small’, *okási-na* ‘funny’; *í-na* ‘strange’ (though the noun *í* occurs—marginally); [elegant or old-fashioned] *kokó-na*(~) ‘this, the ... here’, *sokó-na*(~) ‘that, the ... there’. The first three are stylistic options in place of the regularly adnominalized *ookii*, *tiisái*, and *okásii*; the option is normally available only if the epitheme is extruded: *óoki na hako* ‘a big box’ but not **óoki-na hazu da* ‘ought to be big’.⁶¹ (Apparently **tiisa ni* and **okási ni* never occur.) Japanese grammarians sometimes list *atátaka na* ‘warm’ and *kómaka na* ‘fine, detailed’ with these words, but they are ordinary adjectival nouns and have all the expected forms (... *ni*, ... *da*, etc.); the peculiarity of such words is that they belong to a modest group of bases that can be used either as regular adjectives (*ataakái*, *komakái*) or as adjectival nouns, but they are not limited to attributive position. Where there is an option of this sort, speakers in western Japan are said to prefer the adjective, those in eastern Japan the adjectival noun or the adnoun (*Kōgo-bumpō no mondai-ten* 163).

(2f) *tái-sita* ‘immense, important, serious, very’, cf. adverb *tái-site*—these being the only forms of what would appear to be a defective durative-stative verb(al noun) **tai-suru* ‘looms large’; *tyotto-sita* ‘not much; fairly nice, decent, respectable’—this is a tonic since it comes from *tyot-tó* | *sitá*, cf. *tyót-to sita* ‘did it a bit (or a little while)’; *koo ittá/sitá* ‘this sort of’, *soo ittá/sitá* ‘that sort of’, *aa ittá/sitá* ‘that sort of’, *dóo itta/sita* ‘what sort of’ (see the discussion under 1a and 2d); *mótte-umareta* (*seisitu*) ‘natural-born (disposition)’; *dai-sóreta* ‘inordinate, outrageous’; *miageta* ‘admirable’; *omo-dátta* ‘principal, prominent’; *tonda* ‘surprising, extraordinary, serious’ < *tondá* ‘flown’, cf. *tondemonái* ‘absurd, unexpected, strange’ < *tondé mo nái* ‘even flying there is none’; *tatta* ‘only, just’—or is this to be treated as an adverb? The words *bakágeta* ‘foolish’, *gébita* ‘vulgar’, *akiretá* ‘disgusting’, and *kawattá* ‘different, unusual’ are common one-word epithets derived from intransitive verbal predicates; such epithets need not be separately listed as adnouns. The use of the perfect of *ugátu* ‘pierces, penetrates’ (*ugátta*) to mean ‘trenchant, penetrating, witty’ probably needs no separate listing, either. There are a small number of compound verbs made with *V-i-hurus-* ‘does to the point of it getting old’ that are largely limited to use as adnominalized perfects (*V-i-hurusita* N) or as adnominalized precopular nouns derived from the infinitive (*V-i-hurusi no* N): *tukai-hurusita hude* = *tukaihurusi no hude* ‘a (well-)worn brush’, *ki-hurusita kimono* = *kihurusi no kimono* ‘(well-)worn clothing’, *haki-hurusita kutú* = *hakihurusi no kutú* ‘(well-)worn shoes’; *yomihurusi no zassi* ‘a

61. But apparently *okási-na* is somewhat freer; cf. remarks at the end of this section.

magazine well worn (from reading); ... kiki-hurúsita "Butoo é no kan'yuu" o hiitára ... 'when he played the all too familiar "Invitation to the Dance" ...' (Tk 3.281a). Kenkyusha lists both ii-hurúsita syare 'a stale joke' and ii-hurusáreta hanasí 'a timeworn story'; it also cites Mukasi kara ... to ii-hurusárete iru 'It is proverbially said that ...'.

(2ff) *sásitaru* (N + NEGATIVE) '(no) special/particular'—from the literary attributive perfect (§13.9) of *sásu* 'points to', cf. *sásite* '(not) particularly' (§13.7); ... (A literary synonym is *saséru*, the perfect-resultative of *sásu*.)

(2g) *{to-}áru* 'a certain', *sáru*₁ 'the last/past (time)', *sáru*₂ < *sá-áru* 'such; a certain'; *kakáru* 'such, this sort of' < *káku-áru*; *arayúru* (variants *araéru*, *arairu*), *ári* to *arayúru* 'all sorts of'; *{yó(-) ni}* *iwayúru* = *yó(-) ni iu* 'so-called, what is called (known as)'; *akuru* 'the next (day/morning/year)';⁶² *ataru* or *kitáru* 'the forthcoming, next' (+ date or day of week); *búkko(-) seru* ... 'the late (deceased) ...'; *saséru* = *sásitaru* (2ff).⁶³ The adnoun *áru* 'a certain' is to be distinguished from its source *áru* 'exists', as can be seen from the following pairs of sentences: *Áru kotó ga wakátta* 'I understood a certain thing' ≠ *Áru {to iu} kotó ga wakátta* 'I realized that it exists'; *Áru kotó ni ki ga tukimásita* 'I noticed a certain thing' ≠ [*Ginkoo no o-kane ga*] *áru kotó ni ki ga tukimásita* 'I noticed that there was [money in the bank]'. And *sáru* is to be distinguished from its source, the verb *sáru* 'departs' as in [*yó(-) o*] *sáru hí* 'the day one departs (this earth)'. For *tán naru* 'a plain, a mere ...', literary equivalent of *táda no*, see §13.7.(4). The adnominalized form of the subjective copula *táru* (< *tó áru*) can, like the objective copula (for which the adnominalized forms are literary *náru*, colloquial *de áru* or *nó*), connect two nouns in much the same way as ... *tó iu*: ... *Nihón no kindai-syóosetu no syuryuu táru si-syóosetu ya sinkyoo-syóosetu o mitomenai* 'does not recognize the first-person novels and psychological novels that are the mainstream of modern Japanese fiction' (SA 2685.105b). The expression *nán taru* = *nán to iu* 'what (sort of) a ...!' may express disapproval as in *Nán taru kakkoo dá, tó máyu o sikaméru(-) kotó wa náí* 'There's no need to knit your brows and think "What an awful appearance!" (SA 2684.119c). But in *nán taru ka* = *náni de aru ka*, the expected meaning obtains; an example is on p. 1002.

(2gg) *yama-násu* 'mountain-high, a mountain of (work etc.)'—from *yamá o násu* 'forms a mountain'.

(2h) *hoka-naránu* 'none other than, nothing but'—as in *Hoka-naránu anáta no kotó da kara, dekíru -daké no kotó wa itasimasyóo* 'Seeing it has to do with none other than you, I will do what I can'—equivalent to *hoka dé mo náí*; *toki-naránu* 'unseasonable, inopportune; sudden, unexpected'; *mama-naránu* 'not to one's wishes, unsatisfactory'; *muri-karánu* 'natural, not unreasonable'; *aránu* 'different, wrong; false; unexpected'; *sa-aránu* (*téi de*) '(with an) unconcerned (air)'; *tukánu* (*kotó*) 'abrupt (event)'. Here too probably we should list *omowánu* 'unexpected'—as in ... *omowánu Pári no kyuzitu o tanosinda* 'enjoyed an unexpected holiday in Paris' (SA 2663.101a), *iranu* 'unneeded, unnecessary', *ukanu* (*kao/omómoti(-)*) 'gloomy (face/countenance)' < 'not

62. But the following are often listed as lexical entries: *akuru-ása* 'next morning', *akuru-hi(-)* 'next day', *akuru-tosi* 'next year'. Only the last clearly requires (for reasons of accentuation) to be treated as a lexical unit. In *akuru sángatu tooka* 'the coming 10th of March' the word is obviously serving as an adnoun.

63. And with these perfect-resultative attributives (§9.6) perhaps also the idiomatic *íki to si* | *ikéru monó* 'everything alive' (in which the first part displays a literary use of the emphatic particle *si*).

floating'; kázu-naranu 'insignificant'—as in kázu-naranu mi nágara 'humble though this body be (= though I am)'; yokaránu 'bad, evil'—as in yokaránu kotó o site kíta yátu da 'is a guy who has been up to no good' (Tk 2.288b); kázu-sirenu 'innumerable'; And perhaps so-siránu kao = sosiranu-kao 'feigned ignorance'; so-siránu hurí o site 'feigning ignorance' (Takeda 1970.70). The epithet hitokata-naránu—as in Kaisya to sité wa, hitokata-naránu tikará(̄) no ire-yoo da 'It is an unusual effort for a company to put in' (SA 2665.18b)—is paired with the adverb hitokata-nárazu 'exceedingly, unusually'. And naminami naránu ... dá 'is an extraordinary ...' can be paraphrased as naminami no ... zya náí: Naminami naránu syúunen(̄) da 'It is an extraordinary tenacity' = Naminami no syúunen(̄) dé wa náí 'It is no ordinary tenacity (of purpose)'.

(2i) háe-áru 'glorious' < háé [ga] áru with an otherwise unused noun háé 'glory' derived from the intransitive infinitive háé 'shining'.

(2j) náki 'the deceased ..., the late ...'; yangoto-náki 'noble, august' < yamu kotó [ga] ná-si 'it is never-ending'—as in ... káno-zyo ga sáru yangoto-náki suzyoo no musumé de aru kotó ga hakkaku [site] ... 'it came to light that she is a young woman of a certain noble lineage' (SA 2657.118c); These are fixed epithets made from the literary attributive of adjectives. The literary adjective matá(-) > mattá(-) 'perfect, complete' has the attributive form matta-ki and that is used as a fixed epithet in the colloquial language. The infinitive matta-kú is also used, but only as an adverb 'completely'. In its Kansai abbreviated form matta-'u (matta-[k]u) = mattoo, the infinitive is used with suru as a transitive mutative to mean 'completes, accomplishes' (as if a transitive bound verbal noun) and it is also used as an adjectival noun to mean 'complete, perfect' as in Mattóo(-) na íryoo(-) no bízyon wa ... 'The vision of complete medical care ...' (SA 2664.30e).

(2jj) aru-máziki/-mazii 'unbecoming, unlikely'—see §8.6.

(2k) wá-ga 'our', literary genitive from the old pronoun wa[nu] = wa-re = wata{ku}si; óno-ga 'one's own' (= zibun no), literary genitive from óno = ono-re 'oneself', as in Óno-ga mimi o utagatta 'She doubted her own ears' (Fn 352b). The literary sizu-ga 'humble, lowly' (~ ya 'a hovel', ~ husé-ya 'a humble cottage') is treated as a prefix by Hamako Chaplin, who accentuates the two occurrences as compound nouns: sizugá-ya, sizugahusé-ya.

(3) Distributionally limited adjectival nouns:

(3a) adverbial + tó, adnominal + táru < tó^[r] áru (= tó^[r] sita): doodóo(-) 'imposing', kakusyaku 'hale, hearty', kookotu 'being enraptured', kooryoo 'bleak', menmén(-) 'un-ceasing', santán(-) 'tragic, horrible', sassoo 'gallant', tootoo 'copious, fluent', yuuyuu 'deliberate', These SUBJECTIVE adjectival nouns (with tó, tári/táru) are more common in the literary language; the colloquial prefers the OBJECTIVE adjectival nouns (with ní, dá/ná—literary ní, nári/náru). See §13.5a. Kazama 142 observes that these words (or some of them?) can appear at the end of a phrase or sentence, unmarked, where we would expect tári in the literary equivalents: Táidoo mo doodóo(-), syuumoku o atúmeta súgata mo sassoo 'Not only is his attitude impressive but his attention-drawing figure is dashing, too'. We might regard this as the result of ellipsis, with ... tó^[r] site (iru) dropping. Notice also syú in syú(-)táru, a literary equivalent of ómo na 'main', and in syú(-)tó site 'mainly'.

(3b) adnominal + táru only: sái 'utmost, extreme'; byóo (taru iti-syóotoo) 'a tiny (speck of an island)'; zyun-zen 'pure, sheer, out-and-out'; káku 'reliable, certain'—as in Yoo-súru ni Yúnku mo, káku taru hoohóo-ron o mótte inai 'In short, Jungk [sic] himself has no reliable methodology' (SA 2677.158c);

At least some of the *táru* words can underlie a pseudo-literary causative that is limited to use as an attributive: *tarasimé-ru*. The causative is "pseudo"-literary because the genuine literary attributive form would be *tarasim-úru*, as we have noted elsewhere. An example is *kookotu(-)tarasiméru* 'enrapturing'.⁶⁴ But as the following example shows, *tarasiméru* is also used with regular nouns, functioning as a causative for the subjective copula—notice the quotation marks: *Otokó o "dánsi" tarasiméru monó ...* 'What makes a man into a "gentleman" ...' (SA 2642.104a). And, in this use, forms other than the attributive also occur: ... *Kyōto o site Nihón no búnka no tyuusin tarasiménakya ikan* 'we must make Kyōto the center of Japan's culture' (Tk 2.310a).

(3c) One word is uniquely adnominal + literary attributive *náru* only: *óoi(-)* 'large, great' as in *óoi-naru gimon* 'a great doubt' (SA 2672.127b), *mattakú^[1]óoi-naru "gosan"* 'a perfectly huge "miscalculation"' (SA 2680.116e). This derives from *óo[k]i* as in *óoki-na* (2e above) and *óo[k]i ni* (§13.7.(3)).

(4) At least one word is directly adnominal and also directly adverbial—i.e., by class overlap both adnoun and adverb: *atara* 'regrettable (to say)', ... (?). Not to be confused with this type are those adverbs which are, sometimes or always, used to modify numbers or relational nouns; see p. 792.

(5) See the adverbial/adnominal types under §13.7: (2) *kánete* (no), etc.; (5) *métta na/ni*, etc.

There are also a few pseudo adnouns. Most of these are Chinese prefixes like *sín(-)* 'new' and *kyúu(-)* 'old', which are given a separate accent—i.e., form an accent phrase followed by minor juncture⁶⁵—to show that they modify a longer structure: *kyúu | syokumín-ti zídai* 'the old colonial period', cf. *kyuu-syokumínti zídai* 'the old-colony period'; *sín | kénpoo zídai* 'the new era of the constitution', cf. *sin-kénpoo zídai* 'the era of the new constitution'. These are special cases of derived phrases, similar to the pseudo postnouns such as *-tai* 'versus; by [a score of] ... to ...', *-ken* 'additionally', titles, and the like. A representative list of pseudo adnouns:⁶⁶

Béi(-) 'America(n)': *Béi Karihworunia-dáigaku no gakusei-demo-tai ga ...* 'student demonstrators at the University of California in America' (SA 2670.137a); ...

dái(-) 'number; -th': *dái | sánzyuu | sán-ka* 'Lesson 33'; *dái | ní-zi-teki ni narimáshu* 'becomes secondary' (R)—notice that the constituency would appear to defy the juncture; ...

64. Traditionally a subjective adjectival noun, *kookotu* was effectively used as an abstract (or precopular?) noun by Ariyoshi Sawako in the title of her recent book *Kookotu no Hitó* 'The Ecstatic One', which has given this word current vogue as a euphemism for 'senile'; cf. *kookotu-róozin* 'the elderly' (SA 2816.151).

65. The minor juncture may get promoted to major for purposes of emphasis, as in the following reading by a radio announcer: *káku | kokumin || káku || mínzoku no [|] aida ni* 'between each people, between each—race, ...'. The lack of juncture after *mei-* 'famous' indicates that it is a prefix: *mei-tóosyuu* 'famous pitcher', *mei-kyóozyuu* 'famous professor', *mei-tenooru-kásyuu* 'famous tenor singer' (Tk 3.188a).

66. The following items are sometimes treated as pseudo adnouns, but more often they are attached as prefixes: *hán(-)* 'anti-', *hí(-)* 'un-, non-', *tyóo(-)* 'ultra-, super-, sur-', *zén(-)* 'all-, pan-'. An example: *hán | kigyoo-teki na (|) undoo to iu monó ga ...* 'an anti-business movement' (R). Before an atonic nominal sometimes the juncture will drop, leaving behind the initial accent: *hí † | † ningen-teki na | kanri-syákai ga || ...* 'the un-humanlike managerial society' (R); this can also be said as *hiningenteki na*.

When a simple numeral follows, it loses its accent, forming a syntactic reduction that we will write with a hyphen: *dái-yon* | *hyoogá-ki* ni wa 'in the fourth glacial period' (R).

dóo(-) 'the said, the same': *dóo* | *súzi* ni yoru to 'according to the same sources' (R).

gén(-) 'the present': *gén* minamibetonamu-*séihu* wa 'the present South Vietnamese government' (minami-Bétonamu 'South Vietnam' + *séihu* 'government', minami 'south' + Bétonamu 'Vietnam');

hóo(-) 'square': *hóo* | *sanzyuu-máiru* '30 square miles', *hóo* | *zyúu-ri* '10 square ri';

káku(-) 'each': *káku* | *teeburu* ni 'on every table' (Tk 2.96a); *káku* | *kakuryoo* 'each minister of the cabinet'; *káku* | *ménbaa* 'each member' (R); *káku* | *bún'ya* *góto* ni 'in every field' (K 1966.209); *Nihón* *zyuu* no || *káku* | *hoomén* no | *senmon-ka* || *yáku* || *yonsen-nin* || ... 'about four thousand specialists from all parts of Japan' (R); *kaku* | *tihoo-tihoo* no | *zituzyoo* 'actual conditions in each of the localities' (R);

kín(-) 'a sum of; in money': *kín* | *gozyúu-en* 'a sum of fifty yen';

kó(-) 'the late, deceased' (= *kózin* no): *kó* Kobayasi Yosihiko sensei 'the late Dr Yoshihiko Kobayashi'.

?*mán(-)* 'fully': *Okosan* wa o-*ikutu désu ka*.—*Mán* hutatú *desu* 'How old is your child?—Two full years' (Tk 2.98a). But perhaps *mán* belongs with its synonym *maru* 'fully' as a prenumery adverb like *yáku* 'approximately' (see §13.7).

?*syóo(-)* 'exactly (... o'clock)': *syóo* | *hatí-zi* 'exactly eight o'clock';

Or is this a prenumery adverb?

zyún(-) 'pure' (do not confuse with *zyun-* 'semi-, quasi-'): *zyún* *Nihon-siki* no *ié* 'a pure Japanese style house' (cf. *zyun-Nihonsiki* no *ié* 'a quasi-Japanese style house'); *zyún* *naitimai* 'one-hundred percent Japan-grown rice' (cf. *zyun-naitimai* 'Japan-type rice imported from Formosa or Korea'); *zyún* *keizai-móndai* 'a purely economic question' (cf. *zyun-keizaimóndai* 'a quasi-economic question');

In some instances the pseudo adnoun might be regarded as an appositive N + N or as an Adverb + N: *kéi* 'total' (= *gookei*) as in *kéi* *hatizíp-pun* no *hoosoo* 'a total eighty minutes of broadcasting'; *myóo(-)* 'next year' (= *myoonen*) or 'tomorrow' (= *myóoniti*) as in *myóo(-)* *tooká* 'tomorrow the 10th'; *yóku(-)* 'the ensuing/next-day, season, year, etc.' as in *yóku(-)* *syóowa(-)* *sánzyuu kú-nen* no *háru* 'the ensuing spring of Shōwa 39 (= 1964);⁶⁷ *zóku* 'a sequel to; a continuation of; second series' (= *zokuhen*)—followed by the title of a book (or collection), a film, etc., as in *Zóku Sáru* no *Eisei* 'Beneath the Planet of the Apes' (SA 2688.107e—printed with a raised dot after *zóku*); *zén* 'former' as in ... *zén* *Toohoku-dai kyóozyu(-)* *Yamada Takaó-si* no ... 'by Mr Takao Yamada, former professor at Tōhoku University' (K 1966.59). A synonym⁶⁸ of the last item is *móto* 'former(ly)' as in *Níkuson móto* *huku-daitóoryoo* 'former Vice President Nixon', *Ikeda móto* *soori-dáizin* 'former Prime Minister Ikeda', *Kísi móto* *soori-dáizin* 'former Prime Minister Kishi'; this could be taken as ellipsis, *móto* [no = de aru] | N; cf. §28. Quite similar is the precopular noun *husyoo* 'incapable, unworthy' as used in formal speech to deprecate one's own name: *husyoo* [de áru] | *Sátóo Eisuke* ga ... 'unworthy I, Eisuke Satō, ...'. The word *móto* is not

67. Notice that *yóku(-)* can incorporate the time unit in its meaning: *yóku(-)* *hutuka* 'the 2d which is/was the following DAY' = *yokuzitu* no *hutuka*. *Yoku-* is a bound form (not an adnoun) in *yokuzitu* mo *yokuyokú-zitu(-)* mo 'both next day and the day after that' (Fn 71a).

68. But *zén* is more recently 'former' than *móto*, according to MKZ⁵. *Móto* means 'at one time', 'a sometime ...', 'a former ...' (as compared with 'the former/preceding ...').

of Chinese origin; it is a native noun/adverb that is a synonym of the Chinese binom *izen* and used in such expressions as *móto kara* 'from the first, originally', *móto wa* 'formerly, originally', *móto no yoo ni* 'as it used to be', etc. There are also a number of English elements—prefixes, titles, Japan-made truncations, epithets ("mánmosu" tyuusya-zyyo 'a "mammoth" parking facility'), etc.—that sometimes are treated as pseudo adnouns in modern Japanese, though in most instances all foreignisms are accentuated as compound nouns. An interesting example, in this connection, is the pseudo prefix *za(-)* 'the', as discussed in this passage: ... *kookoo-sei atari wa, sonsyoo no "za" o tükete "za-huronto" to yobi-dásita* 'the high school students started calling it "The Front" with the honorific "the" attached' (SA 2686.29b). Cf. the political slogan *Sutoppu-za-Sátoo* 'Stop [that] Satō!' Surely we are not faced with the gestation of yet another "honorific" prefix? The older honorific prefixes have something of the feel of our pseudo adnouns, and an occasional stilted formation gets created with more than one prefix and then is given the appropriate phrasing for a pseudo adnoun, e.g. *ón | go-téinei na ...* 'the exaltedly honoredly polite ...'. There is also the pseudo prefix *óoru(-)* 'all, total(ly)' as in *sono ooru-musyozoku-giin ga ...* 'those totally unaffiliated Diet members' (Tk 4.16a).

For pseudo adnouns of a somewhat different type, resulting from obvious ellipsis, see *sasuga {no} N* (p. 788) and *iroiro {na/no} N* (p. 826). These are similar to the "un-completed" compounds of the type *dán-zyo [|] kyoogaku* 'co-education' and *dán-zyo [|] dooken* 'equal rights for men and women'. In the following example we might treat *suitei* 'estimate; estimating' as a pseudo adnoun, but it appears better to consider it stranded from the ellipsis of a provisionalized predicate (given in brackets): ... *suitei {o | sureba} || sén | rokuzyuu san-nin no | siboo-sya ...* 'an estimated 1063 deaths' (SA 2689.48a).

In addition to the clearcut types listed above, there are a number of quasi adnouns that are reduced from sentences such as *N ga áru* 'has N, is with N' and *N ga náí* 'lacks N, is without N' by dropping the marker *gá* and (sometimes optionally) suppressing the juncture before the predicate: *kén'i aru | súzi* 'authoritative sources' ← *kén'i ga | áru | súzi* 'sources that have authority'; *kokoro aru | sákka(-)* or *kokoro áru | sákka(-)* 'sensitive authors' (SA 2685.115d) ← *kokoro ga | áru | sákka(-)* 'authors who have heart'; *kyoomi aru | mondai* or *kyoomi áru | mondai* 'an interesting problem' ← *kyoomi ga | áru | mondai* 'a problem that has interest'; *ryoosiki áru | toná-táti* 'conscientious grownups' (SA 2685.115d) ← *ryoosiki ga [|] áru | toná-táti* 'grownups who have conscience'; *kázu aru | zí* 'numerous characters' ← *kázu ga | áru | zí* 'characters that have number'. The accentuation tells us that we are dealing with a syntactic reduction rather than a lexical derivative, though there is no such clue when the noun is atonic or oxytonic. The sentences *kázu ga | sukunái* 'the number are few' and *kázu ga | óói* 'the number are many' yield both the syntactic reductions *kázu sukunai/ooi* and the lexical derivatives *kazu-sukunái/-óói*.⁶⁹ These expressions compete with a casual version of the underlying sentences in which the marker *gá* is omitted but the juncture (together with the original accentuation) is retained. Thus there are three possible ways to read the relevant part of the following example: *Sono kóro kara, Satie to iu namae wa kázu sukunái (kázu sukunai, kazu-sukunái) no ka sira to ...* 'Wondering whether perhaps the name Sachie has become uncommon since those days ...' (SA 2672.149).

Certain set phrases with the literary attributive form *ná-ki* (§13.9) are to be explained

69. The adverbialized *kázu óoku* is also said as *kazu-óoku*; but there is no **kazu-sukúnáku*, only *kázu sukúnáku*. See §9.1.

as quasi adnouns, e.g. *kóe naki kóe* 'a voice lacking voice = a silent voice' ← *kóe ga | náki | kóe* 'a voice that lacks voice' as in this example: *Símin no náka no kóe naki kóe o wasureté wa ikemasén* 'We must not forget the silent voices among the citizens' (SA 2688.24e). Compare Type (2j) above, where this would belong except for its accentuation.

Adnouns are like adjectival nouns, precopular nouns, and adverbs in that they can not be modified by an adnominal phrase; also, unlike some adverbs, they can not even be modified by an adverbial phrase (with rare exceptions as noted at the end of this section). An underlying minor juncture separates the adnoun from the noun it modifies, but the juncture may drop in set phrases, which sometimes sound as if they were single lexical items: *wá-ga kuni* 'our country' (*wágakuni*), *wá-ga tomo* 'my/our friend' (*wágatomo*), *wá-ga syá* 'our company, our newspaper' (*wágaşya*), *wá-ga too* 'our party' (*wágatoo*), *wá-ga gún* 'our army' (*wágagun*), ...; *áru hi* no *ko^[r]tó* 'one day' (*áruhinokoto*); ...

Although the appropriate place for an adnoun is directly in front of the noun or noun phrase that it modifies, other adnominal modification can precede the noun; unless a major juncture (the result of some sort of ellipsis) signals that the adnoun is intended to go only with the noun, it is to be assumed that the constituents are ADNOUN + (ADNOMINAL + NOUN), but often the decision will make no apparent difference. It is possible to get two or more adnouns, provided their meanings are not in conflict; an example is *onazi kono Sinbírúsuku* ... 'this same Simbirsk' (SA 2685.137b), which in Japanese is readily reversible to *kono onazi* though the English order is fixed.

Certain adnouns are fairly restricted with respect to the kinds of noun they can modify; others are used more widely. We would expect it to be difficult for an adnoun to modify certain of the postadnominals that serve as summational or transitional epithemes. I have made a rough check on acceptable combinations of adnoun + *nó* (*wa*), *ko^{tó} wa*, *wáke wa*, *hazu da*, *tumori da*, *yóo da*, *hóo ga*, and *tamé*. (It should be borne in mind that all except *hazu*, *yóo*, and *hóo* can also serve as extruded epithemes, and that is the way *nó* is here taken.) Adnouns such as *sonná*, *onazi*, *ironná*, *sono*, *soo iú/ittá* (those of classes 1a-b, 2a-d) freely modify the postadnominals mentioned, with the following exceptions: **sono nó wa* is rejected, as are **ironna hóo ga* and **ironna tamé*. The adnouns of Type 2c (*hon-no*, *kúdan-no*, *moyori-no*, etc.) will not modify any postadnominal; *kúdan-no ko^{tó}* 'the said matter' contains the ordinary noun *ko^{tó}*. *Okási-na* and *tái-sita* are quite free (occurring before *yóo da*, *nó wa*, etc.), but **tái-sita hazu/tumori da* are rejected, as are **tái-sita hóo ga* and **tái-sita tamé*. *Tonda*, *tatta*, *arayúru*, and *iwayúru* seldom, if ever, modify a postadnominal, and most of the others in the list are also unacceptable modifiers for postadnominals, with a few exceptions: *hoka-naránu no wa*, *muri-karánu no wa*, *sái-taru no wa*, and perhaps *ooi-náru no wa*; *hazu dá* and *yóo da* are permitted after *hoka-naránu*, *muri-karánu*, *aru-mázi[k]i*, *sái-taru*, and *zyunzen-táru*. (As ordinary nouns *ko^{tó}* and *wáke* occur with all of these as well as with a few of the other, more highly restricted adnouns.) Most of the adnouns can modify conjoined noun phrases (*onazi háha to kodomo* 'the same mother and child') as well as noun phrases that include adnominal elements; but certain of the less versatile items in the lists are probably subject to restrictions that have not been explored.

A few adnouns will surprisingly permit modification or carry adjuncts, as remarked in *Kōgo-bumpō no mondai-ten* (175): *karada no zitú ni óoki-na hitó* 'a person truly large of

body', hitogoto ní mo aránu kotó 'an affair unexpected even of others', riron-teki ni arayúru gensyoo 'phenomena of theoretically all kinds'. The example *karada ga óoki-na sóo da* (id. 178) is a shortening of *óoki-na {no da} sóo da* if used at all, and (?)*karada no óoki-na no ni* (ibid.) seems strange even as a shortening of *karada no óoki-na {no ná} no ni*. A few adnouns can be modified by adverbs: ... *kinóo to mattaku^[1] onazi sùgata de kao o dásita* 'presented himself in exactly the same garb as yesterday' (Ariyoshi 303).

13.5a. ADJECTIVAL NOUNS

In traditional Japanese grammar the adjectival nouns are called *keiyoo-dóosi* 'adjectival verbs', with the notion that they are "conjugated" just as adjectives and verbs are. But the conjugational endings for the adjectival noun are nothing more than forms of the copula, and even the copula is suppressed in various constructions as we will see below. Thus on the surface the adjectival noun—and its near-twin the precopular noun—will appear much like an abstract noun, differing only in that it can not serve as an epitheme (i.e. be modified by an adnominalization or an adnoun)⁷⁰ and can not be used as a subject or object directly (*AN ga/o) but first must be converted to an adnominalized form (AN na kotó ga/o) or lexicalized as an abstract nominalization (AN-sa). Thus it is hardly surprising that a number of words serve both as adjectival noun and as abstract noun. *Téinei* as an adjectival noun means 'polite' and as a pure noun means 'politeness', roughly equivalent to *téinei-sa*—as in *Téinei ga dáiti* 'Politeness first', *Téinei mo taisetú* 'Politeness is important (too)', *Téinei o mamóre* 'Observe politeness', so that *téinei ni sugíru* 'exceeds in politeness' means much the same as *teinei-sugíru* 'is overly polite'.

In Literary Japanese the adjectival nouns are divided into two classes, according to whether the appropriate predicator is the OBJECTIVE copula *nári = ní^[1]ári* 'it is' or the SUBJECTIVE copula *tári = tó^[1]ári* 'it is seen/heard/thought/felt/said to be (or: as)'. The latter type we can call "subjective adjectival nouns"; the former (and more common) type we will refer to as "objective adjectival nouns" or simply "adjectival nouns".

Subjective adjectival nouns are little used in the modern language outside of somewhat bookish clichés. You will run across such words used adverbially (AN *tó*) with various verbal predicates or used with *suru* 'does = produces a sensation' to form phrases that function as durative-stative verbs (with a grammar like that of *suguréru* 'excels'—see §3.12); these phrases typically appear as the predicative AN *tó site iru* or as the adnominal AN *tó sita N* (with the semantically "empty" perfect), but you will also find the adverbialized AN *tó site^[1]*, sometimes equivalent to simple AN *tó*, and occasionally other forms will turn up. A number of the subjective adjectival nouns occur in the adnominal form AN *táru N*, as if forming phrasal adnouns; usually these can be paraphrased less stiffly as AN *tó sita N*.⁷¹

70. But a few adjectival nouns (such as *yóo* and *mítai*) are postadnominals and thus, as intruded epithemes, will carry adnominal modification. The AN grammar belongs to the postadnominal conversion as a whole.

71. Some have only the forms AN *tó site iru* and AN *tó sita^[1]*: *kakkoo wa ryúu to site iru* 'the looks are fashionable', *ryúu to sita* (**ryúu taru*) *kakkoo* 'fashionable looks'. And *gán* 'stubborn' appears only in the form *gán to site* 'stubbornly'; cf. *gán-ko*, an objective adjectival noun 'stubborn' and an abstract noun 'stubbornness'. *Yóo to site* 'dim(ly); not at all'—as in *Yóo to site yukue ga sirenai* 'Nothing much is known of his whereabouts'—is from a bound Chinese subjectival AN which lacks the *táru* form.

And you may run across the causative *tarasiméru* as in *a-zen tarasiméru* 'dumbfounds, takes one aback' and *kookotu tarasiméru* 'enrapturing' (cf. p. 750).

The stock of subjective adjectival nouns displays several types of lexical formation:

(1) Reduplicated monosyllables and dissyllables from classical Chinese, where many (but not all) functioned as mimetics: *bibi* 'petty'—*bibi taru riéki* 'petty profits' (SA 2681.26c); *ii* 'easy' (do not confuse with *ii* = *yói* 'is good' > V-i-ii = V-i-yasúi 'is easy to V')—*ii taru kotó* 'an easy matter'; *kúku* 'various; petty, trivial'; *sása* 'trivial'; *títí* 'tardy'; *doodóo*(-) 'splendid'—*doodóo*(-) *táru taikaku* 'a splendid physique', *doodóo*(-) *to susumu* 'advances grandly'; *moomóo*(-) 'thick, dense, murky'; *tootoo* 'eloquent'—*tootoo to hanásu* 'speaks eloquently'; *yuuyuu* 'deliberate'; *keikéi*(-) 'penetrating, glaring'; *aiái*(-) 'harmonious'; *in'in*(-)₁ 'boundless'; *in'in*(-)₂ 'lonely'; *manmán*(-)₁ 'boundless'; *manmán*(-)₂ 'brimming full'—Kenkyusha's examples with *dá* are perhaps to be explained as propredication *manmán*(-) {to site *irú no* } *da*; *tantan*₁ 'indifferent, disinterested; plain, light'; *tantan*₂ 'level, peaceful'; *tantan*₃ 'overflowing, brimming'; *sinsin*₁ 'brimming'—*Kyóomí sinsin táru monó ga áru* 'There are things full of interest' (Tk 2.309b); *sinsin*₂ 'deep'; *sinsin*₃ 'rapid'; *menmén*(-) 'unceasing'; *konkon*₁ 'earnest(ly), repeated(ly), serious(ly)'; *konkon*₂ 'sound asleep, unconscious'; *konkon*₃ 'gushing'; *hunpun* 'scattered, pellmell'; *baku-baku* 'vast'; *syaku-syaku* 'ample, leisurely; deliberate'; *kak-kaku* 'bright, brilliant' (automatically reduced from *kaku-kaku*); *setu-setu* 'pressed, rushed; courteous, kind'—the reduplication apparently saves this word from automatic reduction to **sessetu* as we would normally expect of a Chinese binom (yet, note the preceding item).

(2) A few unsuffixed single morphemes of Chinese origin: *sán* 'brilliant'; *gén* 'severe' (also abstract noun 'severity'); *syú* 'principal' (also noun)—Kenkyusha gives the example *syú naru mokuteki* 'principal aim' but there is no **syú na/no/ni*, so we can treat the form as a misreading—or variant—of *ómo na*[ru].

(3) Some binoms of Chinese origin, three or four moras in length: *zizyaku* 'serene'; *sassoo* 'gallant'; *ussoo* 'luxuriant'; *booyoo* 'boundless'; *kooryoo* 'bleak'; *sookoo* 'hasty'; *taitoo* 'mild, genial (weather)'; *santán*(-) 'horrible'; *sanran* 'resplendent'; *ranman* 'glorious, in full bloom'; *antan* 'dismal, gloomy'—*Zitú ni antan táru kimoti ni nátta né* 'I got to feeling really gloomy, you see' (Tk 2.102a); *kenran* 'dazzling, gorgeous, brilliant'—*kenran táru misemónó no aida ni* 'among the dazzling shows' (Tk 4.67a); *haturatu* 'lively, perky'; *kakusyaku* 'hale, hearty'; *sekibaku* 'lonely, desolate' (also abstract noun 'desolateness').

(4) A monosyllable or dissyllable, borrowed from classical Chinese, that carries the Chinese suffix *-zen* 'like': *a-zen* 'dumbfounded'; *bu-zen* 'dejected'—*Syookén-man tati wa bu-zen táru hyoozyóo*(-) *de udegúmi site ita* 'The securities men had their arms folded with an air of dejection' (SA 2679.27); *ki-zen*₁ 'dauntless'; *ki-zen*₂ 'dejected'; *goo-zen* 'proud, haughty, arrogant'; *syoo-zen* 'dejected'; *hei-zen* 'composed, nonchalant'; *sei-zen* 'orderly, regular'; *tai-zen* 'imperturbable'; *hon-zen* 'sudden' (not to be confused with *honzen*, an older version of the precopular noun that is now usually *honnen* 'natural, innate'); *an-zen* 'gloomy, doleful'; *kan-zen* 'bold' (also pure adverb = *kan-zen to* {site} 'boldly'); *san-zen* 'radiant'; *ketu-zen* 'resolute, determined'—*ketu-zen táru táido* 'a determined attitude'; *zatu-zen* 'jumbled'; *reki-zen* 'clear, manifest'; *seki-zen* 'lonely'; *saku-zen* 'dry, dull'; *syuku-zen* 'solemn'—*syuku-zen to sita kao o site* 'with a solemn face' (SA 2681.45a). But not all candidates for this class actually belong to it. *Totu-zen* 'abrupt, sudden' is a precopular noun and a pure adverb, as is *guu-zen* 'accidental'.^{71a} *Hitu-zen* 'inevitable' is a precopular noun: *hitu-zen no kotó* 'an inevitable event', *hitu-zen ni*

71a. Also a pure noun (abstract): *rekisi-teki na guu-zen ni yotte* 'depending on historical accident'.

okóru 'arises inevitably'. I-zen 'as ever/before' serves both as subjective adjectival noun and (= i-zen to site) as adverb. And zyun-zen 'pure' has only the adnominal form zyun-zen táru.

(5) A free noun, usually of Chinese origin, with ... ˉzén 'like' attached as a kind of postnoun or pseudo restrictive: táika ˉzén = taika-zén 'like a great family; like an illustrious master'; gakusya ˉzén = gakusya-zén 'like a scholar'; sínsi ˉzén = sínsi-zén 'like a gentleman'. Notice that in the following example the postnoun is to be taken with the entire phrase: ... "táike no go-reízoo(ˉ)" ˉzén to site ite, ... 'she has the appearance of a "daughter of a wealthy family"' (SA 2673.152). In pronunciation, however, the word ˉzén is attached directly to the noun (= goreizoozén), which is preceded by a minor juncture. Another example: ... iká-ni mo, ído no náka no kaeru ˉzén to, ki-mama ni kurasite iru 'chooses to live very much like a frog in a well' (SA 2831.96b). In ... kogane dé mo kasite iru go-inkyo-sámá ˉzén taru hitó datta ... 'he was a person of the retired-gentleman sort who would lend a bit of money at least' (Fn 221a), the adnominalized description can be interpreted as going either with hitó or with the noun before ˉzén. A similar example: ... Ákiko no yóo^(ˉ) na syokugyoo-húzin ˉzén to sita táipu de wa nákat^(ˉ)ta 'she was not the type of "very much the business woman" like Akiko' (Ariyoshi 220).

(6) A few Chinese loanwords that carry the Chinese suffix -ko '-like': kák-ko 'firm, resolute'; róo-ko 'steadfast'; zyún-ko 'pure, unadulterated, unalloyed'. But gán-ko 'stubborn' is an objective adjectival noun and also an abstract noun 'stubbornness'. I have seen the expression boozén-ko taru omói 'a distracted thought', but the addition of -ko to a word that already contains -zen would appear to be hyper-Sinophilic.

(7) Mimetic and quasi-mimetic words of Japanese origin such as tyan-tó 'tidy, in good condition, perfect(ly)' etc.; see §21.7.

Sometimes two subjective adjectival nouns will be directly conjoined. Thus kuukúu(ˉ) 'vacant(-minded)' can be directly followed by zyaku-zyaku 'silent' to form the phrase kuukúu(ˉ) zyaku-zyaku 'absent-minded' and by baku-baku 'vast' to form the phrase kuukúu(ˉ) baku-baku 'vast and vacant'. Similar phrases are kúku hunpun táru monó 'small scattered things' and tai-zen zizyaku 'composed and serene'. Some words appear to be used only in such formations, e.g. the first of the two in the phrase seisei(ˉ) doodóo(ˉ) 'fair and square'. Each of these phrases contains an underlying minor juncture but this will be suppressed if the first word is atonic. In ... heihei bonbon táru || hutuu no | onná de atta 'she was a plain and ordinary woman' (R) we find an expression roughly equivalent to the simple heibon na 'ordinary'.

The OBJECTIVE adjectival noun is usually followed by some form of the objective copula dá = de áru. But under adnominalization, where the copula will take the shape nó after a pure noun or a precopular noun (unless itself followed by certain postadnominals such as the pronominal nó, gúrai, etc.), the shape of the copula is normally ná after an adjectival noun. Those several words that permit either nó or ná, often with a subtle difference of meaning, belong to two classes: adjectival noun and precopular noun. Instead of AN na N, you may run across the more formal AN de áru N, just as you will find N de áru N for N no N (when the latter is an identification or prepredication only, of course); but is also common to use the literary attributive náru instead of the shorter ná, especially in written clichés: "Karei náru sitizyuu-néndai" "'The Splendid Seventies'" (SA 2660.42 heading); ... "sízuka naru otokó" ... 'a "quiet man"' (SA 2680.19d); ... yáya kookyuu

náru hwán wa ... 'slightly higher-class [film] fans' (Tk 3.197a); ... kyokután ni tín naru kumiawase o site 'rú keredo né' ... they had formed an extremely curious assemblage, all right' (CK 985.382). The adjectival noun in the last example is rather uncommon and usually will appear in the form tín naru N, rather than tín na N; perhaps we should put it with the adnouns as tín-naru. Other, more common, adjectival nouns of one syllable (with one or two moras) take ná freely: hén na kumiawase 'a queer assemblage'.

The negative of the objective copula is de/zya náí, and this can be freely adnominalized: sízuka de/zya náí hitó 'a person who is not quiet'. But under adnominalization the negative attributive of the literary copula often turns up in print: ... huan na "sádaka naranu kiken" 'the disturbing "uncertain danger"' (SA 2661.32a).

Under certain circumstances, an adjectival noun (or a precopular noun) can occur without the copula:

(1) As an exclamation: Kírei! 'Pretty!'; Yáa, mígoto! 'Bravo!' (Hozaka 295). This is simple ellipsis of dá. Hayashi 76 observes that an adjectival noun can appear as an exclamation also in adnominal and adverbial form, giving the examples Sitúrei na! 'How rude!' and Kawaisóo ni! 'Pitiful!' That will explain this example: Maa, kyuu na 'Well, that's sudden!' (Fn 400b).

But we must assume ellipsis [da] ná (= né) for Nán taru sitúrei ná 'What discourtesy!' since sitúrei, with its adnominal modification, is functioning as a pure noun; we must assume the ellipsis also for ... kínzyo no inú yori tuyói no da sóo ná 'is stronger than the neighborhood dog, they say' (Fn 474a) since S sóo da does not normally adnominalize. Cf. the use of the adjective base as an exclamation (§ 9.1): Oo kówa! 'Oh frightful!' (Fn 54a).

(2) Optional ellipsis of some copula form such as dé or nára in certain sentence joinings such as N₁ mo AN {nara} N₂ mo AN dá: Kore mo kirei {nara}, sore mo kirei da 'This is pretty and so is that'; Udé mo tassya {nara} kangáe mo tásika da 'I am both strong of arm and sure of thought' (Hozaka 295).

(3) Obligatory or optional ellipsis of dá in certain sentence conversions (as with pure nouns): Tásika rasií 'It appears to be sure'; Tásika sá! 'It's sure, I tell you'; Tásika {da} né 'It's sure, you see'; Tásika {da} ka 'Is it sure?'; Tásika {da} ka sira 'I wonder if it's sure'. Tásika {da} yara 'I wonder if it's sure'. Tásika {da} yó 'Mind you, it's sure'.

(4) Optional ellipsis of ná before -dókoró: Sízuka {na} -dókoró ka, tote-mo yakamasii tokoró desu yó 'Far from [being] quiet, it is a very noisy place, I tell you'.

(5) Direct nominalization and paratactic conjoining A-i [nó to] AN [ná no to]: Zya, umái, hetá wa kankei arimasén ka 'Well doesn't it depend on whether you are skillful or clumsy?' (SA 2684.48a).

(5a) Direct nominalization and insertion into the scoffing pattern ... mo kusó/hetima/hé mo náí (or: mo áru mon ka, mo ári wa sinai) 'is neither (a matter of being) ... nor shit/snakegourd/fart' = 'is a far cry from ...' (§ 14.6): Kore dé wa hyoon-teki mo kusó mo ári wa simasén 'This is a far cry from "phonetic" [writing]' (Fukuda in Ōno 1967.187).

(6) Ellipsis of dá with certain uses of quotation:

(6a) AN [da] to iéba 'as for being AN': Seitoo-teki to iéba ... 'As for being legitimate ...' (SA 2671.98d).

(6b) AN₁ [da] to iéba AN₁ na N: see § 21.1.(19).

(6c) AN {da} to itté mo 'even being AN': Sízuka to itté mo ... 'Even if it's quiet ...' (Shibata 1965.190).

(6d) AN {da} to iu kotó wa $\left\{ \begin{array}{l} \text{motíron desu (ga)} \\ \text{iu máde mo náí (ga)} \end{array} \right\}$ 'Of course it is AN₁ (but)'.

(7) Paratactic conjoining of two adjectival nouns (cf. §2.8) AN₁ [dé] AN₂ dá— usually adnominalized to ná or adverbialized to ní:⁷² ... yuumoo kákan(¯) na toósi 'a brave and daring warrior' (Tk 2.203a); ... seikaku kanmei na hyoogén(¯) 'precise succinct expressions' (Ōno 1967.266); ... kikái-teki, goori-teki na kámera to hwírumu no genkai ni tyoosen suru 'defies the mechanical, rational limits of camera and film' (SA 2666.86a); ... tyuusyo-teki, zusiki-teki ni ... 'abstractly, (and) diagrammatically'; ... oogara [dé], zyuukoo [dé], seiren na tokoró mo dénka to wa kánari tigau '... and in (the respects of) being large of stature, sedate, and upright, he is also quite different from the Prince' (SA 2680.19d). Either, or both, of the conjoined elements can be a precopular noun; in zyooyoo {dé} heii na mózi 'easy characters in common use' (Ōno 1967.271) the first element is a precopular noun (zyooyoo no mózi 'characters in common use'). This construction is the origin of kíkai-kaikai, as in ~ na sibai 'a fantastic play' (Tk 2.331a), the second element being a variant of kíkái 'weird' that does not otherwise occur.

(8) Like the preceding, but with a conjunction (kátu 'and', arúi-wa 'or', ...?): Izure mo taihen hukuzatu [dé] kátu kónnan de, sono ué tagai ni irikúnda mondai de áru 'They are all problems that are very complicated and difficult, and moreover are intertwined with one another' (SA 2673.97c). But ... gaibu-teki arúi-wa naibu-teki na gen'in de ... 'from external or internal causes' (Kotoba no yurai 204a) must be from gaibu-teki [[dá] ka] or from gaibu-teki [ná]; the latter turns up in the example ... sei-teki na, arúi-wa zankoku na bámen(¯) ... 'scenes of sex or violence' (Nagano 1968.165).

(8a) Paratactic conjoining of an adjectival noun with an adverb AN [ní] Adv [tó]: Kírei sappári {to} wasureta 'I clean forgot completely'. Are there other examples, or should we treat kírei sappári {to} as an idiom?

(9) Directly adnominal, like an adnoun, through optional ellipsis of ná:⁷³

(9a) followed by any noun: ... syoosai na gizyutu-teki {na} déeta o happyoo suru kotó wa ... 'publishing detailed technical data' (SA 2678.136c).

(9b) followed by the adverbialized postadnominal daké ni: ... attoo-teki {na} daké ni 'just by being overwhelming' (SA 2670.25c).

Is this sort of ellipsis limited to adjectival nouns bearing the suffix -teki?

(9c) Two paratactically conjoined adjectival nouns that are directly adnominal: senzai-teki kisetu-teki [na] situgyóo-sya 'hidden and seasonal unemployed' (R).

(10) Emphatic iterations with ellipsis of [na kotó]:

(10a) AN₁ mo AN₁ {dá} 'is really AN' ← AN₁ [na kotó] mo AN₁ dá: Hadé mo hadé {da} 'It is terribly gaudy'.

72. In some examples a more elaborate ellipsis may be indicated: ... syakai-teki, seizi-teki na kankei o kekka suru 'results in social and/or political effects' (Nakane 152) is perhaps best analyzed as syakai-teki [na [kankei ya]] seizi-teki na kankei. And what is omitted in tyokusetu [] kasetu ni 'directly or indirectly' must be máta-wa 'or else', ká 'or', or possibly óyobi 'and', marking a similar kind of reduction. Additional examples: ... kokka-teki [] syakai-teki ni mo, kozin-teki [] ningen-teki ni mo, mata seiri-teki [] igaku-teki ni mo, ... 'both nationally and societally, both individually and personally, and both physiologically and medically' (Ariyoshi 236).

73. Also in the structure exemplified by Gán-ko [] no nán no tté 'What's all this stubbornness?'; see §14.2.3.

(10b) An extended version AN₁ mo AN₁ [de], INTENSIFIER (taihen or zúibun or hizyoo ni) AN₁ dá: Hadé mo hadé^[f] hizyoo ni hadé da 'Gaudy, it's really gaudy!' (Similar examples can be constructed with byooki, wázuka, takusan, sukósi, ...)

(10c) AN₁ wa AN₁ dá (ga) 'is AN all right (but)' ← AN₁ [na kotó] wa AN₁ dá: Hadé wa hadé desu ga ... 'It's gaudy all right, but ...'; Kono hen wa sízuka wa sízuka da ga, húben na tokoró da 'It's quiet around here, all right, but it is an inconvenient location'; Kinodókú wa kinodókú desu kedo 'Sad it is, to be sure, but ...'.

(11) AN₁ to itte kore ̄izyoo no AN₁ wa náí 'is the most AN possible': Tanzyun to itte kore ̄izyoo no tanzyun wa náku, ... 'Nothing could be simpler (than this), and ...' (Maeda 1962.98).

(12) Quasi-appositional uses (cf. §25):

(12a) AN | sono-mónó da 'is AN itself, is the quintessence of AN': "Gendáihan ukiyo-búro" wa, hissóri to sízuka sono-mónó da 'This "Modern Edition of the Sensual Baths" is hush personified' (SA).

(12b) AN | kono-ue-[mo]-náí 'is most AN, is the most AN in the world': ... gehín kono-ue-mo-náí gó ... 'the most vulgar of words' (Maeda 1962.98); Kawatta kotó áreba, kékkoo kono-ue-mo-náí kotó de, go-dookei no itarí(̄) de áru 'If they HAVE changed, it's simply splendid, and I offer my hearty congratulations' (Id. 104); ... syóonin ni tótte wa mattakú húziyuu kono-ue-mo-náí sékái de atta wáke desu 'for the merchant it was the most uncomfortable world imaginable, you see' (R).

(12c) AN | kiwamari náí 'is ever so AN; is AN no end (is no-end AN)': Sono kotoba-zúkai ga yúubi kiwamari náku, téinei kono-ue-mo-nákute ... 'Their use of language is of the utmost elegance and the highest courtesy' (Maeda 1962.169); ... o-sómatu kiwamari náí monó de ... 'being something ever so plain/coarse' (SA 2664.25b); Hinzyaku kiwamari náí ié ni súde iru 'I am living in a house that is ever so poor'; Sitúrei kiwamari náí yátu da 'He is the rudest so-and-so in the world'; Hukuzatu kiwamari náí kikái da 'It is the most complicated machine you can think of'; Karei kiwamari náí tatémóno da 'It is the most splendid building imaginable'.

I assume that this construction derives from something like AN [ná no ni] kiwamari [ga] náí 'The (being) AN lacks any extremity'. An alternative view might assume AN [dé] kiwamari [ga] náí 'It is AN and it lacks a limit'.

(13) AN | kiwamáru 'is AN in the extreme; is extremely AN': Keihaku kiwamáru monó ... 'An extremely fickle person ...'; Túmari, o-kane tee yátu wa, tame-kónde ugokasánakattara mu-ími kiwamáru 'In short, when it comes to money if one were to pile it up and not put it to work that would be senseless in the extreme' (Tk 4.226b).

(14) The example kírei ̄zúkume no ... zidái-geki 'a period movie ... all prettified up' (SA 2670.110a—the intention is uncomplimentary, as I have tried to suggest with 'up' in the translation) would suggest that an adjectival noun can be followed by restrictives, but it appears that kírei ̄zúkume = kirei-zúkume is a unique lexical item that should be entered in the dictionary.

The adjectival noun, like the raw adjective base (cf. remarks in §9.1), enters directly into the following conversions:

AN-sugiru 'is overly AN' (the excessive, §9.1.9);

AN-soo da 'looks (to be) AN' (the evidential, §20);

AN-sa 'AN-ness' (the adjective abstract nominalization, §14.7).

Most of the remarks made above will apply to precopular nouns as well as adjectival nouns.

The following kinds of lexical formation will be found in the stock of objective adjectival nouns:

(1) Basic native elements from various sources, often carrying some sort of etymological suffix:

(1a) *-ka*: *óro-ka* 'stupid', *háru-ka* 'distant', *nódo-ka* 'tranquil', *tási-ka* 'sure', *mádo-ka* 'round; quiet', *kásu-ka* 'faint', *hóno-ka* 'vague', *ooma-ka* 'generous', *asáha-ka* 'shallow',⁷⁴ *hukúyo-ka* 'plump',⁷⁵ *niwa-ka* 'sudden',⁷⁶ *sizu-ka* 'quiet',⁷⁷ ...

(1b) *-ya-ka*: *sá-ya-ka* 'clear, bright'; *haná-ya-ka* 'showy', *hadé-ya-ka* 'flashy', *hisó-ya-ka* 'quiet, stealthy', *nigi-ya-ka* 'lively', *komá-ya-ka* 'fine, minute, deep', *nagó-ya-ka* 'congenial', *sitó-ya-ka* 'genteel', *sukó-ya-ka* 'healthy, sound', *taó-ya-ka* 'graceful', *sawá-ya-ka* 'refreshing', *hiyá-ya-ka* 'cold, cool', *siná-ya-ka* 'supple, pliant', *simé-ya-ka* 'quiet, funereal', *sasá-ya-ka* 'humble', *karú-ya-ka* 'light, easy', *yurú-ya-ka* 'loose, lenient'; *tutumasí-ya-ka* 'modest', *makotosí-ya-ka* 'spacious', ...

(1c) *-ra-ka*: *akí-ra-ka* 'obvious', *tai-rá-ka*(-) 'smooth, peaceful, pleased', *namé-ra-ka* 'smooth', *kiyó-ra-ka* 'clear', *hogá-ra-ka* 'cheerful', *yasú-ra-ka* 'restful', *nadá-ra-ka* 'gentle, smooth', *taká-ra-ka* 'loud'; *oó-ra-ka* 'magnanimous'; *tumabí-ra-ka* 'detailed', ...

(1d) *-ra*: *túbu-ra*(-) 'rotund'.

(1e) Other native or quasi-native words: *árata* 'new', *árawa*(-) 'open, public', *iki* 'stylish', *mígoto* 'splendid', *sukeébee* 'lewd, sexy', *saiwai* 'fortunate', *siawase* 'happy, lucky', *uwaki* 'fickle', *hesotya* 'comical', *itaike*(-) 'innocent, helpless, young', *kénage*(-) 'gallant', *nengoro* 'polite', *ibitu* 'warped, distorted', *mame* 'honest, diligent, healthy', *mazime* 'sincere', *hadé* 'gaudy', *matomo* 'honest', *mabara* 'sparse, sporadic', *yántya* 'naughty', *mídara*(-) 'licentious', *katakuna* 'stubborn', *yokosima* 'wicked, evil', *bukkíráboo* 'rambunctious', *iyátiko*(-) 'remarkable, miraculous', *hitamuki* 'earnest, single-minded', *tákumi*(-) 'adroit', *yatara* 'indiscriminate', *sakan* 'flourishing',⁷⁸ *sukí* 'liked',⁷⁹ *kirai* 'disliked',⁸⁰ *iyá* 'disliked, disgusting',⁸¹ *zimiti* 'honest, sober, steady',⁸² *oo-azi* 'insipid, unsubtle (in flavor)', *petyánko*(-)/*pesyánko*(-) 'flat', *hana-petya* 'flat-nosed'; *dái-suki* 'much liked', *dái-kirai* 'much disliked'; *zákku* (-) *baran* 'frank';⁸³ ...

(1f) Noun + adjective base: *izí-wáru* 'mean', *te-ara* 'harsh(-handed)', *te-mizika* 'short, brief'; *kotoba-súkuna* 'unwordy, curt' (~ *na áísatu*, ~ *ni iu*); [with *nigori*] *te-garu* 'easy, plain', *iro-ziro* 'fair-complexioned'; ...

(1g) Noun + adjectival noun: [with *nigori*] *mi-gírei* 'dapper', ...

(1h) Verb (or compound verb) infinitive: *sukí* 'liked', *kirai* 'disliked', *nageyari*

74. But this may be a false etymology.

75. Perhaps assimilated from (?)*hukú-ya-ka*.

76. The etymology is uncertain.

77. The adjectival noun *sizu-ka* has a unique irregularity in attaching the abstract nominalization suffix *-sa*: *sizuké-sa* 'stillness'. But recently *sizuká-sa* has come into vogue—among automobile advertisers, at least. In *Sizuka no Umi* 'Sea of Tranquillity [on the moon]' the word is treated as an abstract noun. Cf. §14.7: p. 910.

78. Said to be from the infinitive *sakári*, ultimately related to *sak-* 'bloom'.

79. From the infinitive *súki* 'liking'.

80. Also a noun 'dislike', both from the infinitive *kirai* 'disliking'.

81. From the interjection *iya* 'no!'; often shortened to *yá* (*na/ni*).

82. From a noun 'jog trot'.

83. Sometimes pronounced with juncture, as in this example: *Tyót-to, zákku baran na hanasí o si-sugitaimásita ga né* 'I ended up overdoing the frankness a bit' (Tk 4.212a). An example of *zákku* | *baran ni* || can be heard from the lips of a highschool girl on Tape 8b of NHK's *Anaansu Kyōshitsu*.

'negligent, slovenly', (Cf. §14.5.) But *dasinuke* 'sudden, unexpected' and *mukidasi* 'bare; frank' are usually treated as precopular nouns, adnominalizing with *nó*.

(1i) Other phrasal derivatives: *oo-gákari* 'large scale' (adjective base + *nigori* ed noun derived from verb infinitive *kakári* 'undertaking'); *karu-házumi* 'rash' (adjective base + noun derived from verb infinitive *hazumi* 'bouncing'); *ii-ki* 'easy-going; conceited'; *ii-kagen* 'moderate' (adjective imperfect + noun); *huu-gáwari* 'changeable', *mimi-záwari* 'jarring, discordant' (noun + *nigori* ed verb infinitive); *mimiyori* (*na hanasí*) 'welcome, encouraging (word)' (noun + verb infinitive); *hito-sáwagase* 'sensational' (noun + causative infinitive); *nen-íri*(⁻) 'scrupulous' (noun + intransitive infinitive); *kiréi-zukí*(⁻) 'tidy, neat, cleanly'; *zyoosiki-házure na seikatu ni* 'in a life removed from commonsense' (SA 2648.59c);

NOTE: The following adjectival nouns also form adjectives, as shown: *kómá-ká*, *komakái* 'fine'; *atátá-ka*, *atacakái* 'warm'; *yawa-rá-ka*, *yawarakái* 'soft'; *batu*, *batuí*(⁻) 'thick'; *teara*, *teará*(⁻) 'rough'; *hiyowa*, *hiyowái*(⁻) '(physically) weak, delicate'; *manmáru*(⁻), *manmaruí*(⁻) 'round'; *makkúro*, *makkurói* 'jet black'; *massíro*, *massirói* 'snow white'; *okási*(-)*na*, *okasíi* 'comical', *tiisa*(-)*na*, *tiisái* 'small', *óoki*(-)*na*, *ookíi* 'large'—the last three adjectival nouns are highly defective. Also found: *tebaya*, *tebayái* 'nimble',

(2) Certain sentence conversions:

(2a) *V-i-soo* 'looking/about to V'; *V-i-gé*(⁻), *A-soo/ge*, *AN-soo* 'looking'—the evidential, §20.

(2b) *V-i-gati* 'tending to V' (§9.1.5); but sometimes treated as a precopular noun.

(3) Various reduplications of native elements: *yobo-yobo* 'unsteady, shaky' (from the mimetic adverb *yóbo-yobo* [*suru/to*] 'unsteadily, staggering'); *kona-gona* 'in(to) fragments' (from the noun *koná* 'flour, meal'); *tígu-hagu*(⁻) 'ill-assorted';

(4) Basic Chinese loanwords (and words made up in Japan of Chinese loanmorphs):

(4a) Of one morpheme: *myóo* 'odd', *kyyu* 'sudden', *kúu* 'empty', *hén* 'queer'; *rakú* 'comfortable', *gyaku* 'opposite', *toku* 'profitable', *kókú* 'harsh'; (S) *yóo* 'appearing that (S)'. (*Betu na/no* ... 'different, separate, another' is optionally adjectival or precopular noun, apparently with no difference of meaning.)

(4b) Of two morphemes: *muda* 'futile'; *ígai*(⁻) 'unexpected', *rikoo* 'clever', *zyáken* 'cruel', *góoka* 'deluxe, gorgeous', *zyoobu* 'sturdy', *onwa* 'mild', *génki* 'healthy', *rippa* 'splendid', *sísso* 'frugal'; *anzen* 'safe', *kanzen* 'perfect', *kinben* 'diligent', *kantan* 'simple', *néssín* 'zealous', *yuukan* 'brave', *bussóo* 'unsafe, unsettled'; *suteki* 'splendid'; *syoozíkí* 'honest', *meihaku* 'evident', *seimitu* 'precise, minute', *sottyoku* 'candid'; *hukuzatu* 'complicated', *gekiretu* 'violent';

(4c) Of more than two morphemes: *dai-zyóobu* 'safe, OK'; *zi-dáranku* 'slovenly'; *yuu-ígi* 'significant'; *koo-hán'i* 'extensive';

(5) Basic foreign loanwords (mostly from English); here listed by number of syllables, subordered by mora structure:

ONE SYLLABLE: none?⁸⁴

TWO SYLLABLES: *húru* 'full' (~ *ni tukau* 'uses fully'), *táhu* 'tough, rugged'; *puréen* 'plain' (or is this three syllables?);

84. Perhaps *hái* 'high = intoxicated' as in *kibun ga hái ni náttiyatte* 'feeling high, getting a high'. *Róo* 'low' and *nyúu* 'new' appear to be limited to word formation; women's slang has *o-nyúu na séetaa* 'a new sweater'. And, quite recently, in comes *náu na onná-no-ko* 'the Now girl' (SA 2839.5a).

THREE SYLLABLES: haikara 'fashionable' (from "high-collar"); sīnpuru 'simple', yunīiku 'unique', naīibu 'naive', sumúuzu 'smooth', huréssyu 'fresh', bibiddo (Tanigawa 123) or vividdo 'vivid' (Kotoba no uchū 1967/12.41b), pópuyuraa 'popular', tyáamingu 'charming', nánsensu 'nonsensical',

FOUR SYLLABLES: rázikaru 'radical'; yúumorasu 'humorous', dérikéeto 'delicate', puráibéeto 'private', kurásikku 'classic',

FIVE SYLLABLES: gurotésuku 'grotesque', kurásikaru 'classical', rízumikaru 'rhythmical'; hisuteríkku 'hysterical', atorándamu 'at random, random' (atorándamu ni 'randomly' SA 2670.51a), sentiméntaru 'sentimental',

(6) Words made with the suffix *-teki* '-type, -ic, -ical' (a Chinese loanmorph):

(6a) Attached to one-morpheme Chinese elements: si-teki₁ 'private', si-teki₂ 'poetic'; byoo-teki 'morbid, abnormal', doo-teki 'dynamic', koo-teki₁ 'public, official', koo-teki₂ 'ideal' (as in koo-teki na basyo 'an ideal place'), gai-teki 'external, extrinsic', nai-teki 'internal, intrinsic', tan-teki 'frank' (tan-teki ni iéba 'speaking frankly'), ryoo-teki 'quantitative', situ-teki 'qualitative' (not *sit-teki because sitú is a free noun), but-teki 'material, physical' (not *butu-teki because BUTU is a bound morpheme), sei-teki 'sexual', geki-teki 'dramatic',

(6b) Attached to two-morpheme Chinese words (usually free binoms): ito-teki 'intentional', risoo-teki 'ideal', zyosei-teki 'feminine', sekai-teki 'worldwide', kozin-teki 'individual, private', goori-teki 'rational, logical', sinpo-teki 'progressive', Nihon-teki 'Japanesey, typically Japanese'; kagaku-teki 'scientific'; genzitu-teki 'real, actual', sekkyoku-teki 'positive, constructive, progressive', syookyoku-teki 'negative, destructive, conservative'; kokusai-teki 'international';⁸⁵

(6c) Attached to a Chinese reduplicated morpheme: daidai-teki 'grand'.

(6d) Attached to native Japanese structures from various sources: heturai-teki na kotobá 'a flattering word'; kotowaza-teki na monó 'proverb-type things'; hanasikotoba-teki 'colloquial, spoken-language type'; sakigake-teki na ayumí 'a pioneering step' (SA 2662.19e)—from saki [ni] káke 'run ahead'; "tukue no ue₁ no kangae-kata"-teki de áru 'is "armchair speculation"-ish' (Y 136); Ikeda-teki na amari Ikeda-teki na Ookurá-syoo 'an Ikeda-type Finance Minister who is all too Ikeda-type';

(6e) Attached to words borrowed in modern times from foreign languages (often English): Amerika-teki '(typically) American, American-type', Huransu-teki 'French-type, Frenchy'; insutanto-teki 'instant-type'; karisuma-teki 'charismatic'; Suparuta-teki 'Spartan(-like)' (R); Don-Hwan-teki zinbutu 'Don Juan-type (donjuanesque) characters' (Tk 2.99b); konpyuutaa-teki na yóoso ga áru 'there are computer-like elements to it' (SA 2793.44b);

(6f) Attached to a compound noun: ... hanahada taisyuu-syoosetu-teki de áru ga ... 'it is very popular-novelish but ...' (Tk 4.41);

(6g) Attached to a phrase containing an adnoun: daí ni-zi-teki na mondai 'a secondary problem', daí iti-zi-teki ni 'primarily';

With the optional ellipsis of ná, words that end in *-teki* will sometimes precede a noun directly, as if they were adnouns. These words are all atonic, so the minor juncture is usually suppressed; and when ná drops also, you may wonder whether what results is not

85. Both kansetu-teki na N and kansetu no N mean 'indirect N', but 'direct N' is only tyokusetu no N.

a compound noun. But the accentuation of the noun stays firm, so you know that what you are hearing is a syntactic construction rather than a lexical compound: *keizai-teki* {*na*} *mondai* 'economic problems' (not **keizaiteki-móndai!*). We are unable to tell from the accent alone, however, that an expression such as *kokusai-teki* {*na*} *gímu* 'international obligation' is not to be taken as a compound noun *kokusaiteki*{*na*}-*gímu*, since *gímu* is prototonic to begin with; what decides the question is the parallelism with the clearcut examples. Notice that the optional ellipsis of *ná* is possible before words of native and European origin as well as before Chinese loanwords: ... *kono matí no óoki na keizai-teki sasáé(ˉ) tó mo nátte iru* 'also forms the big economic support for this town' (SA 2647.117d); ... *goiron-teki tatibá no mondai* ... 'a problem from the lexicological standpoint'. Nor does the source of the *-teki* word make any difference:

Amerika-teki {*na*} *sutáiru/bunmei* 'American-type styles/civilization';

Huransu-teki {*na*} *heasutáiru* 'French-type hairstyle';

ideorogii-teki {*na*} *sooi* 'ideological differences';

hahaoya-teki {*na*} *aizyoo* 'mother(-type) love';

monogatari-teki génzai 'the "narrative" present' (KgKbg 389.27b);

Korya, amari dansei-teki {*na*} *sinri zya ná ga né.*—*Baasan-teki sinri da ná* 'This isn't a very masculine psychology, is it.—It's old-ladyish psychology' (Tk 3.39a). The expected juncture will resurface with conversions that expand the copula, such as focus, negativization, etc.: *keizai-teki de/zya ná | mondái-ten* 'non-economic points in question'. A pair of paratactically conjoined adjectival nouns can directly precede the modified noun: *kiso-teki zissai-teki kenkyuu* 'fundamental realistic research' (Kaneda in Ōno 1967.280)—a raised dot separates the two adjectival nouns in the text, but the noun is not set off by punctuation; *wá-ga kokumin no seisin-teki bunka-teki kósei(ˉ) o sokonáu* 'losing the spiritual and cultural individuality of our people' (id. 279—no internal punctuation). In written Japanese you will sometimes see the literary copula in the attributive form *náru* and the negative attributive *narazáru*, which is usually preferred—for some reason—to the alternate form *naránu* that is more common after pure nouns: *keizai-teki náru mondai* to *keizai-teki narazáru mondai* 'problems that are economic and problems that are not economic'. Do not be dismayed to run across *-teki NÓ* in print; some find that form more congenial: ... *itizi-teki no deki-gotó* 'a temporary event' (Kaneda in Ōno 1967.301); ... *zinsyu-teki no henken* ... 'racial prejudice' (Tk 2.113b); ... *sono sensei wa ... sore wa zettai-teki no monó de aru* 'for that scholar ... it is something absolute' (Ōno 1967.159); ... *yappári senmon-teki no syúuren o tumanákya naránai kara né* 'since after all you gotta accumulate professional practice' (Tk 4.286a). In Tk 2.156a in successive sentences the same speaker uses first *syukan-teki NO mondai* and then *syukan-teki NA mondai* 'subjective question'. The adjectival noun *hikaku-teki* 'comparative' can be directly adverbialized in that *ní* is optional: *hikaku-teki* {*ni*} *yooi ni* (or: *yasasiku*) *zikkoo sareru* 'is accomplished comparatively easily', *hikaku-teki* {*ni*} *honsitu-teki na mondai* 'a relatively essential question' (Ishigaki Kenji 1). This may be due to the influence of the synonymous *wariai* {*ni*} 'comparatively, rather'.

(7) Most of the adjectival nouns that end in the suffix *-teki* will form antonyms that are also adjectival nouns by attaching the prefix *hi-* 'un-, in-, not (being)'. These words remain atonic, since the atonicizing suffix *-teki* has used up the single option allowed to mark a compound by accentuation: *hi-syakaiteki* 'antisocial', *hi-syakooteki* 'unsociable', *hi-eiseiteki* 'unhygienic', *hi-rironteki* 'illogical', *hi-minsyuteki* 'undemocratic', *hi-seisanteki*

'unproductive', *hi-yuugiteki* 'unfriendly, unamicable', *hi-genzituteki* 'unrealistic, impractical', *hi-rikkenteki* 'unconstitutional', There are a few other adjectival nouns made by attaching *hi-* to a Chinese binom, such as *hi-góohoo* 'illegal'. But it is more common for *hi-* + NOUN to yield a noun: *hi-kumiáin* 'a non-union member', *hi-kókumin* 'a non-patriot, an unpatriotic person', *hi-sentóoin* 'a noncombatant', The verbal noun *higunzi-ka(-)* 'demilitarization' is derived from such a noun (*hi-gúnzi*), but the noun is used little (if at all) except in the derivative. There are perhaps a few precopular nouns made by attaching *hi-* to a noun, e.g. *hi-tóosei* 'uncontrolled'. Cf. §8.8.

(8) Very recently, the suffix *-tikku* '-tic' has been detached from such foreignisms as *ekuzo-tikku* 'exotic', *roman-tikku* 'romantic', and *dorama-tikku* 'dramatic', and attached to non-foreign nouns as well: *yakuza-tikku na ningen* 'a gangsterish person' (SA 2677.153ab); *Zúibun manga-tikku da* 'It's very cartoonish' (SA 2677.153e). Nor do Japanese hesitate to create innovative foreignisms such as *poruno-tikku* 'pornographic' (SA 2838.47a).

(9) The negative prefix *hu-* 'not' (§8.8) attaches to a number of elements to yield adjectival nouns:

(9a) To native Japanese words of various sorts: *hu-tásika* 'uncertain', *hu-tégiwa* 'clumsy', *hu-táme* 'disadvantageous', *hu-níai* 'unbecoming', *hu-mímoti* 'profligate', *hu-sídara* 'slovenly' (cf. *darasi-nái*);

(9b) To free Chinese binoms that are mostly pure nouns (abstract): *hu-kéizai* 'uneconomical', *hu-nínzyoo* 'inhuman', *hu-kéiki* 'unprosperous, dismal', *hu-kíritu* 'disorderly', *hu-kínsin* 'imprudent', *hu-tyúuzitu* 'disloyal', *hu-tókusaku* 'inexpedient', *hu-kíryoo₁* 'uncomely', *hu-kíryoo₂* 'incompetent'; *hu-néssin* 'unzealous', *hu-syóoziki* 'dishonest', *hu-yúkai* 'unpleasant'; *hu-bénkyoo* 'unstudious'; *hu-símatu* 'wasteful' (as abstract noun 'irregularity, misconduct');

(9c) To a number of single morphemes of Chinese origin, the resulting adjectival noun being best treated as a primitive lexical item: *húri* 'disadvantageous', *huan* 'uneasy', *húben* 'inconvenient', *humei* 'unclear, unknown', *husei* 'unjust', *huyoo₁* 'useless', *huyoo₂* 'unused, waste',

Although most words made with the prefix *hu-* are adjectival nouns, a few are pure nouns (abstract), e.g. *hu-sánsei* 'disapproval'; and some of the adjectival nouns listed above are also used as abstract nouns. There are also a number of precopular nouns that have *hu-* attached: (a) to a nigoried native Japanese noun (derived from an infinitive): *hu-zóroi* 'uniform, scraggly'; (b) to a free Chinese binom: *hu-góokaku* 'disqualified', *hu-kín'itu* 'unequal, uneven', (... *ni*) *hu-ánnai* 'unfamiliar (with), ignorant (of)'; (c) to a single morpheme of Chinese origin, with the resulting precopular noun best treated as a primitive lexical item: *hudoo* 'unmovable', *hukyuu* 'immortal, imperishable', *huryoo* 'inferior, delinquent', *husin* 'faithless'; *hutei₃* 'rebellious' (cf. *hutei₁* 'uncertain', *hutei₂* 'unchaste'—both adjectival nouns);

(10) Most words with the prefix *mu-* 'without, lacking, -less' (§8.8) appear to be precopular nouns, but there are a number of adjectival nouns that have *mu-* attached:

(10a) To Chinese binoms that are mostly pure nouns (abstract): *mu-kyóoiku* 'uneducated', *mu-ígi* 'senseless', *mu-ími* 'meaningless', *mu-zóosa* 'artless', *mu-sínkei* 'insensible', *mu-séigen* 'unrestricted, unlimited',

(10b) To a single morpheme of Chinese origin, the resulting adjectival noun being best treated as a primitive lexical item: *múri* 'unreasonable, excessive', *muhoo*

'unlawful', munoo 'incompetent', muboo 'reckless', múyoku 'free of avarice', múryoku 'powerless; incompetent',

(10c) To a native Japanese noun: múkuti 'taciturn',?

For examples of *mu-* forming precopular nouns, see §13.8.

(11) An alternant reading of *hu-* in the sense 'not being' is *bu-₁*; an alternant reading of *mu-* 'lacking' is *bu-₂*. (But, as noted below, the native orthography is unreliable on the historic identification.)

(11a) *Bu-₁* attaches to adjectival nouns to yield adjectival nouns: bu-tyóohoo 'impolite; awkward; unaccustomed (to tobacco/liquor)', bu-kíyoo 'clumsy', bu-iki 'unrefined',

(11b) *Bu-₂* attaches to abstract nouns to yield adjectival nouns: bu-énryoo 'unrestrained, unceremonious', bu-sáhoo 'ill-mannered', bú-kímí(¯) 'uncanny', bu-áísoo 'unsociable', bu-áísatu 'uncivil, impolite', bu-húuryuu 'inelegant' (since húuryuu is also an adjectival noun this word is sometimes treated as having *bu-₁*),

(11c) But there are a few words which are both abstract noun and adjectival noun, the result of attaching *bu-* to an abstract noun. This ought to be *bu-₂* (= *mu-*) 'without' but orthographic traditions are muddled and it appears to have become customary to write many of the words with the character for *bu-₁* (= *hu-*): bu-kíryoo '(being) uncomely, (being) incompetent', bu-yóozin '(being) unsafe', bu-^S/_Záiku '(being) clumsy', bu-kákko = bú-zama(¯) '(being) unshapely, ungainly', bu-sítuke '(being) illbred',

(11d) And *bu-₂* (though often written *bu-₁*) attaches to a number of single morphemes of Chinese origin, mostly bound, to yield adjectival nouns that can for the most part also serve as abstract nouns; these are best treated as primitive lexical items: buzi '(being) safe, secure', bukotu '(being) boorish', búrei '(being) rude', busyóo '(being) indolent', busúii(¯) '(being) unpolished', buryoo '(being) tedious',

(12) Almost all words with the prefix *mi-* 'not yet (...-en)' (§8.8) are precopular nouns. The prefix typically attaches to a transitive verbal noun, and the object of the verbal noun becomes the subject of the precopular noun: mondai o kaiketu suru 'solves the problem' → mondai ga mi-káiketu da 'the problem is unsolved'; kenkyuu o kansei suru 'completes the research' → kenkyuu ga mi-kánsei da 'the research is incomplete'. Other examples include mi-sósiki 'unorganized', mi-kéiken 'unexperienced', mi-háitoo 'undistributed', There is at least one intransitive verbal noun that takes *mi-*: heitai ga hukuin suru 'a soldier gets demobilized' → heitai ga mi-húkúin da 'a soldier is undemobilized'. And there is at least one pure noun—deriving, as it happens, from a Chinese verbal expression ('coming of age'): seinen 'an adult' underlies mi-seinen '(being) underage, minor', a precopular noun. *Mi-* also attaches to single morphemes of Chinese origin, mostly bound in Japanese; the morphemes have a verbal meaning and will usually be found elsewhere as part of a free verbal noun. The resulting precopular nouns are best treated as primitive lexical items in Japanese: mikai 'uncivilized', mikan₁ 'unpublished', mikan₂ 'incomplete', miketu 'undecided', mikon 'unmarried', míman 'not exceeding', mímei(¯) {ni} '(while) not yet light', minoo 'unpaid', miryoo 'unexecuted', misai 'unsettled (account)', misetu 'uninstalled', misyoo 'unidentified', misui 'unconsummated, attempted', míti 'unknown', mityaku 'unarrived', mizen {ni} 'before anything happens' (= mihatu), A few such words are used as nouns: mirai 'the future', míren 'lingering affection; cowardice', And mízyuku(¯) 'unripe' is usually treated as an adjectival noun. Mibóo-zin 'widow' contains a bound noun 'undeceased'; mimon 'unheard of' appears only in the phrase zéndai mimon 'unprecedented'.

The categories of adjectival noun and precopular (or “quasi-adjectival”) noun are not easy to keep apart. Where you would expect to hear *AN na N* you may instead find, especially in written Japanese, *AN no N*. The latter, somewhat stiffer, version appears to enjoy particular favor when the AN is a binom of Chinese origin modifying another Chinese binom and the two words are either optionally combinable into a compound noun (by dropping the copula *nó/ná* together with its juncture and applying the proper accentuation) or look as if they might easily so combine. But there are a number of examples where *ná* is replaced by *nó* under other circumstances, such as those given earlier for *-teki* and the following examples: *Watasi wa tabako no hoo ga sukí de, sake wa anmari sukí NO hoo de ná* ‘I rather like tobacco, but I’m not too fond of alcohol’ (Tk 2.250a), *Hontoo ni Nihon ga o-suki no yoo ni kan-zimasita* ‘I felt she [Helen Keller] really liked Japan’ (Tk 2.266a); *Óngaku mo nakanaka o-suki no yoo desu ná* ‘You appear to like music quite a lot, too’ (Tk 2.206a); ... *o-suki no yoo da* ‘you seem to like it’ (SA 2688.21b); ... *máda, itaíke(¯) no koro, ...* ‘when she was still quite young’ (Fn 247b); ... *kónniti no syakai-séikatu ni hu-káketu no monó de, ...* ‘is something indispensable to today’s social life’ (Kaneda in Ōno 1967.300). And in Tk 2.316 the same speaker within a few lines uses both *musin NO kodomó-táti* and *musin NA kodomó-táti* ‘innocent children’. As a result it is sometimes difficult for a speaker to decide how he would classify a given word. Apparently *muboo₁* ‘hatless’ is better treated as a precopular noun, since *muboo₁ no N* is the only adnominalized form in use; but the homonymous *muboo₂* ‘reckless’ is an adjectival noun and usually adnominalizes as *muboo₂ na N*, though *muboo₂ no N* may also be found, especially if the N is a Chinese binom. *Huyoo* ‘useless’ and *húhúyoo* ‘unnecessary’ are like ‘reckless’ in preferring *ná*, but *múyoo(¯)* ‘needless’ is like ‘hatless’ in preferring *nó*. (Of these several words, only ‘reckless’ would appear to convert to the adverbial *ní*; the *ní* forms of the other words will occur only in the mutative conversions with *náru/suru* or the like, and that categorizes them as adverbial-lacking.) *Kentoo-tígai na (kotó/kangáe/hanasi)* ‘mistaken (fact/idea/tale)’ is used as an adjectival noun, but it is also an intransitive verbal noun *kentoo-tígai suru* ‘guesses wrong’ and that, by predication, could account for the adnominalization *kentoo-tígai no N* in Kenkyusha’s examples.

13.6. QUANTITY NOMINALS

A number of simple lexical items refer to quantities: *takusán, óoku, ámata* ‘lots’; *sukósi* or *syóosyoo* ‘a little, a few’; *súbeté, zénbu, minná* ‘all’; *hotóndo* ‘almost all’; *dai-búbun* ‘most, the overwhelming majority’; *tasúu* ‘a large number, a majority’; *syoosúu* ‘a small number, a minority’; *zyakkan* ‘a certain number/amount, some’, There are also words we will call NUMBERS, which can be thought of as consisting of two parts: a NUMERAL and a COUNTER. By “numeral” we refer not only to the basic morphemes for the digits (such as *ití* 1, *ní* 2, *san* 3, *sí* or *yón* 4, *gó(¯)* 5, *rokú* 6, *sití* or *nána* 7, *hatí* 8, *kyúu* or *kú(¯)* 9, *zyúu* 10) and higher figures (such as those made with digit + *-zyuu* for the tens, + *-hyaku* for the hundreds, + *-sen* for the thousands, + *-man* for the ten-thousands, + *-oku* for the hundred-millions), the words for ‘zero’ (*réi*,⁸⁶ *zéro, maru*) and ‘half’ (*hán*—as in *han-kánen* ‘half a

86. As in *kú-zi reiréi-hun* ‘9:00 o’clock’.

year'), *súu-* 'several', and so on,⁸⁷ but also the interrogative *nán-* 'how many' and its less common synonym *íku-*.⁸⁸

A number of the restrictives (§2.4) function to quantify, in a rough manner, ordinary nouns as well as numbers—notably *ṅúrai* 'at least, as much as', *hodó* 'to the full extent of, (not) so much as', *ṅaké* 'only; exactly', *ṅákari* 'only; approximately'. (From the viewpoint of "logical quantification" such focus particles as *mó*, *sáe*, and *sika* are also used to quantify.) The phrases that result from applying these restrictives can freely function as quantity nominals; they commonly turn up as adverbial or adnominal, though they can be used as pure nouns followed by such case markers as *gá* and *ó*.

The numerals in Japanese are free words only when counting off or in the technical formulas of arithmetic or as "names" for the numerals or the characters that represent them, as in giving scores such as *San 'tai ní de katta* 'We won by three to two'. (On the quasi-restrictive 'tai' 'versus', see p. 124.)⁸⁹

There are two underlying systems of numerals, one native and the other borrowed from Chinese; counters of native origin will typically prefer the numerals of the native system.⁹⁰ (A still newer system, borrowed from English, is limited to certain modern contexts such as sports, where you will hear *wán*, *túu*, *súrii* ... 'one, two, three ...' etc. We will ignore that system here.) With a few lexical exceptions, the native system is now used only up to '10'; above '10' even those counters which prefer the native numerals must use the Chinese set. The entire set of ten native numerals (*hitó-* 1, *huta-* 2, *mi-* 3, *yo-* 4, *itu-* 5, *mu-* 6, *naná-* 7,

87. The "and so on" includes ... *ṅó* 'more than, (somewhat) over ...', a cover term for the numerals one to ten in higher figures: ... *kyúuzuu yó ni oyonde iru* 'amounts to over 90 of them' (Tk 3.52). (On *ṅó* 'more than' see p. 134, §2.4.) Decimal fractions are read with 'ten' 'point' attached to the whole number and the numerals after the decimal point are read in compound groups of two, with the accent on the second member and lengthening of the vowel in the one-mora numerals *ní* and *gó*([~]) when they appear last: *sánzuyu san* 'ten (= *sán*-ten) *san-nii iti-yón gó* '33.32145'. Everyday fractions are said as DENOMINATOR *ṅun* no NUMERATOR: *ní* 'ṅun no *iti* 'one half' (= *han-bún* 'half'), *san* 'ṅun no *ní* 'two thirds', *si* 'ṅun no *san* (or *yón* 'ṅun no *san*) 'three fourths', *siti* 'ṅun no *yón* (seldom *si*) or *naná* 'ṅun no *yón* 'four sevenths', *kyúu* 'ṅun no *ní* 'two ninths', *zyúu* 'ṅun no *siti* (or *naná*) 'seven tenths'. The numerator attaches directly to a counter: *san* 'ṅun no *íp-pai* 'one third of a cup(full)'. For other uses of *ṅun* see §2.4. (Cf. Hirayama 1960.897, BJ 2.336.)

88. Do not confuse *nán-* (= *íku-*) with *náni* 'what', a word optionally (but in speech usually) shortened to *nán* when followed in the same basic phrase with a word that begins with *d*, *t*, *n*, or (occasionally) *s*, *z*, or *r*. Uncontracted *nani-* is used with a variety of words, mostly free nouns, in asking 'what': *nani-daigaku* 'what university', *nani-sinbun* 'what newspaper'; *nani-iro* 'what color' (= *dónna iro*), *nani-zin* 'what nationality', *nani-ku* 'what ward', *nani-mati* 'what town', ... (Regular compound-noun accentuation.) *Íku-zi* for *nán-zi* 'what o'clock, what time' seems to be a Tōkyō expression; but other uses of *íku-* ... for *nán-* ... are widespread throughout the country.

89. Above 'eleven', as explained below, the primary set of numerals—borrowed from Chinese, but with non-Chinese *yón* '4' and *naná* '7' often substituting for *si* and *siti*—are used alone to represent numbers with the underlying structure NUMERAL + *-tú* (a general counter and a counter for years of age): *nízuyu gó* 'twenty-five (things, or years old)'. A different way of looking at this is to forget about the historical morpheme *-tú* and say that numbers such as *hitótu*, *hutátú*, ... , *tóo*, *zyuuiti*, ... *nízuyu gó*, ... , (etc.) are basic "cardinal" numbers, used whenever you do not wish to make a more specific reference; the forms *hito-*, *huta-*, etc., can then be treated as truncated allomorphs of the numbers, functioning as numerals. This gets us around the problem of accounting for the fact that *tóo* 'ten' does not include the counter *-tú* in its form.

90. Among the counters taking the "Chinese" set of numerals we find several that are of native origin: *-wari* 'ten-percents', *-wa* (also *-pa*, *-ba*) 'birds', *-hiki* 'nonhuman animates (animals, fish, insects)'. And *-ban* 'nights' is of Chinese origin but takes the native numerals.

ya- 8, kokóno- 9, and to- or too- 10) are appropriate with the general counter -tú, but the counter itself is omitted with 'ten' and it normally doubles its initial consonant with one-syllable numerals so that the resulting forms are hitó-tu, huta-tú, mi-ttú, yo-ttú, itú-tu, mu-ttú, naná-tu, ya-ttú, kokóno-tu, and too. With more specific counters that call for the native numerals—such as -kumi 'sets', -ma 'rooms', -kire 'slices, strips'—some speakers feel uncomfortable beyond a certain point (perhaps '4', perhaps '5', perhaps '7') and will either switch to Chinese numerals (go-hako for itu-hako 'five boxfuls') or avoid the problem in some other way, such as substituting the general counter -tú (itú-tu for itu-hako). The general counter is also used to count years of age, equivalent to the more formal counter 'sai used with the Chinese numerals;⁹¹ íku-tu means 'how many' or (= nán-sai) 'how many years old' (in both meanings the honorific form is o-ikutu), kokóno-tu means 'nine (things)' or 'nine years old', too means 'ten (things)' or 'ten years old', and zyuuití means 'eleven (things)' or 'eleven years old', etc. But nízyuu will usually mean only 'twenty (things)' because there is a special word for 'twenty years old'—hátati, a remnant of the earlier system of counting.⁹² In asking 'how many' you can either use nán- (or íku-) attached to the specific counter, or you can use the general íku-tu; you will choose to be specific when expecting a particular counter in the reply. Íku-ra (honorific o-ikura) is a word which asks 'how much' (quantity or price), to be answered with the appropriate measure; the somewhat literary synonym nán{í}-ra is now little used except as an indefinite '(not) any, some'. Notice that -ra in these words is NOT the collectivizer rá of §2.7, though they are probably identical in origin.

There are a good many complications in putting together the proper shapes of numeral and counter. These are described in considerable detail in the textbooks; here I will only call your attention to certain features that are not obvious from readily available sources. The counters are rather like quasi-restrictives in being somewhat free syntactically, yet very much bound phonologically to the immediately preceding numeral. Though the counter is firmly stuck onto that numeral, its domain often covers a long numerical phrase, with junctures separating the elements. The numbers from eleven to nineteen are best treated as single words even though they are made up of the numeral '10' suffixed by the numerals '1' to '9': zyuuití 11, zyuuní 12, zyuúsan 13, zyuuyón or zyuusí 14, zyúugo 15, zyuurokú 16, zyuunána or zyuusití 17, zyuuhatí 18, zyúuku (occasionally zyuukyúu) 19. The "tens" are made up in the opposite way, with the smaller numerals prefixed to the following '10', and they too are best treated as single words: nízyuu 20, sánzyuu 30, yónzyuu (or sizyúu) 40, gozyúu 50, rokuzyúu 60, nanázyuu (or sitizyúu) 70, hatizyúu 80, kyúuzzyuu (occasionally kuzyúu) 90; súu-zyuu 'several tens'.⁹³ This is because the teens

91. Hyakusái 'one hundred years old' is irregularly accentuated; but it is more natural to say hyakú.

92. Ages can be counted in months and, on occasion, even in weeks: rok-kágetu is-syúukan desu 'is six months and one week old'. (For animals, shorter spans can be counted: hutuka no ko-néko 'a two-day old kitten'. The usual way to express the age of infants is exemplified by Kyóo de hutuka/nisyúukan desu 'Today is its second day/week'.) From hitótu hán 'one and a half' to kokónotu hán 'nine and a half' it is possible to use 'and a half'; for higher ages you can only add the 'half' by choosing the more formal structure with 'sai: nízi-sai rok-kágetu is the way to say 'twenty and a half years old', not *hátati hán. To say 'over (an age)' you add sugi: hátati sugi 'over/past twenty'. The antonym is miman: hátati miman 'under twenty'.

93. There are also "approximate numbers" that are compounds of two successive tens; these have fixed shapes that do not permit the variants yon- for si- or nana- for siti-: ni-sanzzyuu '20 or 30', san-sizzyuu '30 or 40', si-gozyuu '40 or 50', go-rokuzyuu '50 or 60', roku-sitizzyuu '60 or 70', siti-hatizzyuu

and the tens function as single phrase units in larger structures, with underlying junctures which preserve the basic accentuations. The same sort of thing is true of the HUNDREDS (hyakú or ippyakú 100, nihyakú 200, sánbyaku 300, yónhyaku [rarely sihyakú] 400, gohyakú 500, roppyakú 600, nanáhyaku [rarely sitihiyakú] 700, happyakú 800, kyúuhyaku 900), of the THOUSANDS (sén⁹⁴ or issén 1000, nisén 2000, sanzén 3000, yonsén 4000, gosén 5000, rokusén 6000, nanasén [rarely sitisén] 7000, hassén 8000, kyuusén 9000), and of the TEN-THOUSANDS (itimán 10 000, nimán 20 000, sanmán 30 000, yonmán 40 000, gomán 50 000, rokumán 60 000, nanamán or sitimán 70 000, hatimán 80 000, kyúuman [occasionally kumán] 90 000). From zyuumán 100 000 to hyakumán 'a million' the numbers use -zyúumán as if a counter: ní-zyúumán 200 000, sán-zyúumán 300 000, yón-zyúumán or si-zyúumán 400 000, go-zyúumán 500 000, roku-zyúumán 600 000, siti-zyúumán or naná-zyúumán 700 000, hati-zyúumán 800 000, kyúu-zyúumán 900 000. And similarly with -hyakúmán for the millions, -sénmán for the ten millions (sán-zénmán 'thirty million'). Hundred millions are counted with 'oku, American-count billions with -zyúuoku (a hundred million is óku or ití-oku, a thousand million = a billion is zyúu-oku), American-count trillions with 'tyóo (a trillion is tyóo or ít-tyóo). Each of these higher 'counter'-like numbers can be preceded by nán- or íku- 'how many (hundreds, thousands, etc.)' and by súu- 'several (hundreds, thousands, etc.)': nán-byaku or íku-hyaku 'how many hundreds', nán-zén or íku-sén 'how many thousands', nán-mán or íku-mán 'how many tens of thousands'; súu-hyaku 'several hundred', súu-sén 'several thousands', súu-mán 'several tens of thousands'. The accentuation of some of these compounds fluctuates; the newer pattern prefers the accent on nán- and súu-. When one of the tens (or hundreds, or thousands, etc.) is followed by a digit from one to nine, the appropriate numeral is set off by an underlying juncture, and the numeral will form a single word with whatever counter may be stuck onto it. Should you ever want to count 33 333 pencils, you will use the expression sanmán sanzén sánbyaku sánzyuu sán-bon, the counter -hon (here in the shape -bon) making a single phonological word with only the last element in the long numerical phrase. Numbers can be followed by various restrictives and quasi-restrictives which attach to the last word in the expression; notice in particular ʔhán 'and a half' and the ordinalizer ʔmé '...-th' as in sanmán sanzén sánbyaku sán-bon ʔmé (= sanbonmé) no enpitu 'the thirty-three thousand three hundred and third pencil'. In referring to numbers themselves you use the counter -ban 'number (in a series)', so that the ordinal for san-ban 'number 3' is san-ban ʔmé = sanbanmé 'the third (number)'; cf. mittú ʔmé = mittumé 'the third one/thing'. For 'first', in place of hitó-tu ʔmé (nó N) etc., it is quite common to use hazime (nó N) 'the beginning (N)'. The quasi adnoun dáí (§ 13.5) makes an ordinal that is more formal: dáí(-)ni = dáí ní-ban {ʔmé} 'second'. (Tugí no ... 'The following/next ...' is sometimes said for 'the second ...')

The unhappy distinction between the primary set of numerals (those borrowed from

70 or 80', hak-kuzyuu '80 or 90'. Apparently these are usually treated as atonic when used as numbers alone; as numerals they attach counters with the same shape changes as the simple tens (e.g. ni-sanzippon), but often treat the result as atonic: sanzýuu-mai '30 (sheets)' but ni-sanzýuu-mai '20 or 30 (sheets)'.
94. The accent on sén is often suppressed (along with the following juncture) when it is the first element in a longer numerical expression: Sen^[1] nihyakú-en desita 'It was ¥ 1200' (BJ 1.28.16) = Sén | nihyakú-en desita.

Chinese) and the secondary or native set is further confused by the following peculiarities:⁹⁵

(1) It is now so common to substitute *yón* for *sí* 'four' and *nána* (*naná-*) for *siti* 'seven' that these can be considered part of the primary set of numerals. When attached to counters that begin with a voiced sound, *yón* often (but not always) drops the final -n: *yó-en* '4 yen', *yo-nen* '4 years', *yo-nín* '4 people', *yo-ninmae* '4 portions', *yó-zi* '4 o'clock' (also '4 letters'), *yo-zíkan* '4 hours', *yo-zyóo* '4-mat (size)', *yó-ri* '4 leagues'; *yon-bai* or *yo-bai* '4 times (as much)', *yón-mai* or *yo-mai* '4 sheets', *yón-do* or *yo-dó* '4 times' (also '4 degrees'), *yón-ban* or *yo-ban* 'number 4', *yón-dai* or *yo-dai* '4 vehicles'.⁹⁶ Certain fixed expressions will occur ONLY with *si-* and *siti-*: *sigatú* 'April', *sitigatú* 'July'; *si-go...* 'four or five', *roku-siti...* 'six or seven', *siti-hati...* 'seven or eight'.⁹⁷ But *si-* will never be heard with most of the common counters: *yó-zi* '4 o'clock', *yo-zíkan* '4 hours', *yón-pun* '4 minutes', *yo-nen* '4 years', *yon-kágetu* '4 months', *yón-ko* '4 small artifacts', Yet you will hear either *yón-hiki* or *sí-hiki* for '4 nonhuman animates' and *yón-hon* or *sí-hon* for '4 slender objects'; and the approximate numerals are fixed, as cited above, regardless of the counter to which they attach. 'Seven o'clock' is usually said as *siti-zi* but *naná-zi* is sometimes used for clarity, as in a public announcement. 'Fourteen years old' is usually said as *zyuusí* (rather than *zyuuyón*) and *zyuuyón-sai* (rather than **zyuusí-sai*), but 'seventeen years old' is either *zyuusiti* or *zyuunána* and *zyuusiti-sai* or *zyuunána-sai*; similar habits prevail for '24, 34, ...' and '27, 37, ...'.

(2) The numeral for '9' is *kú*(¹) but it is usually pronounced *kyúu*. In the higher combinations you will usually hear only *kyúu*: *kyúuzyuu* (occasionally *kuzyúu*) '90', *kyúuhyaku* '900', *kyuusén* '9000', *kyuumán* (occasionally *kumán*) '90 000'. Yet certain fixed expressions occur only with *ku-*: *kugatú* 'September', *kú-zi* '9 o'clock' (but either *ku-zíkan* or *kyuu-zíkan* '9 hours'), *hak-ku-* '8 or 9' (there is no similar form for '9 or 10', which can only be said periphrastically). 'Nineteen years old' is usually *zyúuku* but *zyuukyúu-sai*; *sizyúu kú-sai* (= *yónzyuu kyúu-sai* '49') is taken as a pun of *sizyuu kusái* 'is always smelly'.

(3) Under certain circumstances (e.g. stock-market quotations) you will sometimes hear *huta-* substituting for *ni-* 'two': *huta-mán* *huta-sén* *hutá-hyaku* *hutá-zyuu* *huta-en* '22 222 yen'.

95. We hit only the high points; more data will be found in 96-9 of the supplement to NHK, 891-906 of H, and 56-61 of the supplement to Dictionary of Basic Japanese Usage for Foreigners. Despite this array of useful information, we lack an explicit and comprehensive survey of the variant forms as actually used today.

96. For clarity, people will occasionally substitute *yón-* even where *yo-* is the norm: *yón-nen*, etc.

97. Also *zyuusi-go-* '14 or 15', *zyuuroku-siti-* '16 or 17', *zyuusiti-hati-* '17 or 18'; *zyuuhak-ku-* '18 or 19'. The expression *sán-yokka*(¹) '3 or 4 days' is exceptional, as are *zyuusan-yokka* '13 or 14 days' and *nizyuu sán-yokka*(¹) '23 or 24 days'; cf. *ní-sánniti*(¹) '2 or 3 days', *sí-goniti*(¹) '4 or 5 days', *gó-rokuniti*(¹) '5 or 6 days', *roku-sitiniti* '6 or 7 days', *siti-hatiniti* '7 or 8 days', *hak-kuniti* '8 or 9 days'. Notice that '4 (pencils)' is *yón-hon*, never **si-hon*, but '3 or 4 (pencils)' is *san-sihon*, never **san-yónhon*. You can assume that '3 or 4' is *san-si-* except in these words: *san-yobai* '3 or 4 times', *san-yóen* '3 or 4 yen', *san-yoman* 'thirty or forty thousand', *san-yonin* '3 or 4 people', *san-yoninmae* '3 or 4 portions', *san-yózi* '3 or 4 o'clock', and *san-yozikan* '3 or 4 hours'. Observe the following approximate numbers in the higher sets: *ni-sanbyaku* 'two or three hundred', *san-sihyaku* 'three or four hundred', *si-gohyaku* 'four or five hundred', *go-roppyaku* 'five or six hundred', *roku-sitihyaku* 'six or seven hundred', *siti-happyaku* 'seven or eight hundred', *hak-kuhyaku* 'eight or nine hundred'; *ni-sanzen* '2-3000', *san-sisen* '3-4000', *si-gosen* '4-5000', *go-rokusen* '5-6000', *roku-sitisen* '6-7000', *siti-hassen* '7-8000', *hak-kusen* '8-9000'; and so on, with ...-yo(n)- and ...-nana- never used. (We choose to write the hyphen after the first numeral because of the phonetic changes that obtain between the second and the counter.) Notice also *san-sizyuu* '30 or 40', *si-gozyuu* '40 or 50'.

(4) In reciting the last part of a telephone number 'ten' may be said either *zyúu-ban* or *tóo-ban*; 'two' is either *ní-ban* or *hutá-ban*. Cf. BJ 1.195-6.

(5) As a rule, *iti-* '1' and *hati-* '8' (but never *siti-* '7') will lose the final vowel and assimilate to a following voiceless consonant (*ik-kágetu*, *hak-kágetu*;⁹⁸ *is-sénti*, *has-sénti*); *zyuu-* '10' will reduce to *ziC-* (or *zyuC-*) under similar circumstances (*zik-kágetu* or *zyuk-kágetu*; *zis-sénti* or *zyus-sénti*); *roku-* '6' and *hyaku-* '100' will reduce to *roC-* and *hyaC-* before *k-* or *p-* (which is often a reflex of *h-*): *rok-kágetu*, *róp-pon*, *hyáp-pon*. But before certain counters the full forms are often heard: *iti-kiro* or *ík-kiro* 'one kilo', *hati-paasénto* or *hap-paasénto* '8 percent', *zyuu-síisii* or *zis-síisii* (or *zyus-síisii*) '10 cc's', *zyuuiti-póndo* or *zyuuiip-póndo* '11 pounds', *hati-syásen* or *has-syásen* '8 lanes (of traffic)', *zyuuroku-paasénto* or *zyuurop-paasénto* '16 percent', *roku-kiroméetoru* or *rok-kiroméetoru* '6 kilometers', *roku-kóonen* or *rok-kóonen* '6 light years', *hyaku-paasénto* or *hyap-paasénto* 'one hundred percent', *hyaku-péezi* or *hyap-péezi* '100 pages, page 100'. The preceding remarks about *iti-*, *hati-*, *roku-*, and *hyaku-* will also apply to *zyuuiti-* '11', *zyuuhati-* '18', *zyuuroku-* '16', and the hundreds (*nihyaku-* '200', *sanbyaku-* '300', ...).

(6) Counters which begin with *h-* generally have an initial *p-* when not immediately preceded by a vowel (or juncture): *ní-hun* '2 minutes' but *sán-pun* '3 minutes', *yón-pun* '4 minutes', *róp-pun* '6 minutes', *zip-pun* (or *zyúp-pun*) '10 minutes'. But after *yon-* '4', the following counters retain *h-*: *-hon* 'slender objects' (*yón-hon*), *-hiki* 'animals' (*yón-hiki*), *-hyoo* 'votes' (*yón-hyoo*), *-haku* 'overnights' (*yón-haku*), ...; cf. *yónhyaku* '400'.

(7) After *nán-* 'how many', *san-* 'three', *sen-* 'thousand', *man-* 'ten thousand' (but never after *yon-* 'four') certain counters will replace their voiceless initials with voiced counterparts: *-kai* 'stories, floors'⁹⁹ (*san-gai* '3rd floor'—cf. *san-kái* '3rd time'), *-ken* 'buildings' (*sán-gen* '3 buildings'); *-hon* 'slender objects' (*sán-bon* '3 slender objects'), *-hai* 'cupfuls' (*sán-bai* '3 cupfuls'), *-hiki* 'animals' (*sán-biki* '3 animals'), *-hen* 'times' (*san-bén* '3 times'); *-soku* 'paired footwear' (*sán-zoku* '3 pairs'), *-syaku* 'unit of measure' (*sán-zyaku* '3 *shaku*'), ...

(8) People and days are counted in a somewhat irregular fashion. *PEOPLE* are counted with *'nin*, but *hitó-ri* and *huta-ri* take the place of *iti-nin* 'one person' and *ní-nin* 'two persons', respectively, except in fixed compounds or when part of a larger number: *zyuuiti-nin* '11 people', *zyuuni-nin* '12 people', *nízyuu iti-nin* '21 people', *nízyuu ní-nin* '22 people', *hyakú^[j] iti-nin* '101 people', *hyakú^[j] ní-nin* '102 people'. The basic count for people includes 3 *san-nin*, 4 *yo-nin* (or old-fashioned *yottari*), 5 *go-nin*, 6 *rokú-nin*, 7 *siti-nin* (less commonly *naná-nin*), 8 *hati-nin*, 9 *kyúu-nin* (less commonly *ku-nin*), 10 *zyúu-nin*; 100 *hyakú-nin*; 1000 *sén-nin*(⁻), 10 000 *mán-nin*(⁻). By hundreds people are counted 100 *hyakú-nin*, 200 *nihyakú-nin*, 300 *sánbyakú-nin*, 400 *yónhakú-nin*, 500 *gohyakú-nin*, 600 *roppyakú-nin*, 700 *nanáhyakú-nin* (or *sitihyakú-nin*), 800 *happyakú-nin*, 900 *kyúuhyakú-nin*. For the thousands and higher round numbers, an atonic accentuation is recommended: *hassen-nin* '8000 people', *zyuuman-nin* '100 000 people'; cf. *sanman-mai* '30 000 sheets'. 'How many people' is *nán-nin* or *íku-nin*; 'several people' is *súu-nin*(⁻).

98. But sometimes also *hati-kágetu*, though you will apparently never hear **iti-kágetu* for *ik-kágetu*. Both *háp-pon* and *hati-hon* are used for '8 slender objects' (as noted in BJ 1.62). NHK 1962 recommends that announcers use *hati-* before *-hiki*, *-hon*, and *-kai* ('times'); K lists *hati-hon* and *hati-kái*, also *hati-kai* '8th floor'.

99. But both *nán-gai*(⁻) and *nán-kai*(⁻) are reported for 'how many floors, which floor'; K lists only the atonic version, H gives both.

'Several hundred people' is *súuhyakú-nin*, 'several thousand people' is *suusen-nin*, 'several tens of thousands of people' is *suuman-nin*. DAYS are counted by attaching *-niti*¹⁰⁰ to the appropriate primary numerals, but from 2 through 10 the counter *-ka* is attached to the native numerals, with a few irregularities of shape: 2 *hutu-ka*, 3 *mi-kka*, 4 *yo-kka*, 5 *ituká(̄)*, 6 *mui-ka*, 7 *nano-ká(̄)* or *nanu-ká(̄)*, 8 *yoo-ka*, 9 *kokono-ká(̄)*, 10 *too-ka*. Of the higher numbers only those with '...4' obligatorily preserve the *-ka* form:¹⁰¹ 11 *zyuuiti-niti*, 12 *zyuuni-niti*, 13 *zyúúsán-niti*, 14 *zyúuyo-kka*, 15 *zyúugo-niti*, 16 *zyuuroku-niti*, 17 *zyuusiti-niti*, 18 *zyuuhati-niti*, 19 *zyúuku-niti*; 21 *nízyuu iti-niti*, 22 *nízyuu ni-niti*, 23 *nízyuu sán-niti*, 24 *nízyuu yo-kka*, 25 *nízyuu gó-niti*, 26 *nízyuu roku-niti*, 27 *nízyuu siti-niti*, 28 *nízyuu hati-niti*, 29 *nízyuu kú-niti*, 30 *sánzyúu-niti*, 31 *sánzyuu iti-niti*, '34 days' is *sánzyuu yo-kka*, '104 days' is *hyakú yo-kka*, '114 days' is *hyakú zyúuyo-kka*, and so on. From 2 through 31 the day count is also used to name the days of the month (and, formerly at least, the days of the year) and above 31 the day count is (or was) sometimes used to name the day of the year, so that *nán-niti* (or *íku-niti*) means both 'how many days' and 'which day of the month (or year)'; but nowadays *iti-niti* usually means only 'one day', the first of the month being designated by *tuitati*—a word derived from the expression *tu[k]í [ga] táti* 'the moon rises', though sometimes the word *itizitu* (etymologically identical with *iti-niti*) is used, and in older texts or in dialects you may run across *iti-niti* with that meaning, too. There is a special word for '20 days' or '20th of the month/year', *hatu-ka*. For numbers above 100 you may find *zyúu-niti* and *nízyúu-niti* used as a less common option, in COUNTING only: *sánbyaku zyúu-niti* '310 days', *sánbyaku {to} too-ka* '310 days' or '310th day'; *sánbyaku nízyúu-niti* '320 days', *sánbyaku {to} hatu-ka* '320 days' or '320th day'. (The expression *nihyakú too-ka* '210th day of the year' is used as an idiomatic reference to the yearly typhoon expected around that time.)

The accentuation of numeral-counter compounds is difficult to describe, to say nothing of master, for there are many odd irregularities and variant patterns. (The description in Martin 1952 has largely been superseded by the material in Hirayama 1960 and in NHK 1966. If you learn the principal pattern types, paying special attention to the counters in most common use, you can probably finesse unexpected combinations without embarrassment.)

Counters of three or more syllables generally carry the accent on the third syllable from the end, regardless of the numeral to which they are attached:¹⁰² *-gúramu* 'grams', *-kirogúramu* 'kilograms', *-rítтору* 'liters', *-kágetu* 'months', *-syúukan* 'weeks', *-péizi* 'pages', etc. A few counters consistently make atonic numbers: *-bai* 'times (as much)', *-kai* 'floor, story', *-soo* 'layer', *-syuu* 'weeks', *-toori* 'ways', A large number of the shorter counters will put the accent on the preceding syllable, the last syllable of the

100. In rapid speech this is often reduced to *-nti* or, after *n*, just *-ti*: *ní-sán[ni]ti* 'two or three days'.

101. And similarly *dái ni-niti* '2d day' (= *hutu-ka mé*), *dái sán-niti* '3d day' (= *mi-kka mé*), and so on, but *dái yo-kka* '4th day'. For '1st day' there is a special word *syoniti*.

102. But those derived from verb infinitives will usually be preaccentuated, regardless of the length: *hitó-nigiri* 'one (hand-grasped thing)', *hitó-katazuke* 'one tidying'; *Dáre ka sake [o] kai ni hitó-ppasiri [= hitó-hasiri] itte kíte kurenée ka* 'Won't somebody go (run the errand to) buy some rice wine for us?' (Okitsu 1.348). (For some reason *hitó-kátamari* 'one (lump)' has two variant patterns.) And longer native counters that are not infinitives also seem to be preaccentuated: *hitó-kusari* 'a chain, a section of a sequence'—as in ... *mandan o hitó-kusari hazimerú ga* ... 'he starts a section (a bit) of his comic patter' (SA 2664.52c) and *utá o hitó-kusari utau* 'sings a song' (Kenkyusha).

numeral, and you can regard this as the regular productive pattern: 'ko 'small artifacts', 'hun 'minutes', 'zi 'o'clock', 'sai 'years of age', 'wari 'ten-percents', 'kiro 'kilos', 'doru 'dollars', etc.

The counter *-zyóo* 'mat(-sized area)' consistently maintains its own accent, regardless of the numeral to which it attaches. Various other counters are peculiar in maintaining their accents after some but not all numerals; typically, for them, the accent shifts back when the numeral ends in *n* (*sán-*, *yón-*) or a long vowel (*kyúu-*), but we find a fair amount of inconsistency and variation. Following one set of data, we discover mixed patterns such as these:

(1) *-kái* 'times' but 'kai after *yón-* 4, *naná-* 7, *kyúu-* 9, *nán-*, and numbers above 10.

(2) *-dó* 'times' after 1, 2, and 5 (*iti-dó*, *ni-dó*, *go-dó*) but 'do elsewhere (except *yo-dó* = *yón-do*).

(3) *-satú* 'bound volumes' after 1, 6, 7, 8, 10 (*is-satú*, *roku-satú*, *nana-satú*, *has-satú*, *zis-satú*) but 'satu elsewhere.

(4) *-gatú* 'month (names)' but 'gatu after 3, 5, 9, *nán-*: *sángatu* 'March', *gógatu* 'May', *kúgatu* 'September', *nán-gatu* 'what month'.

(5) *-kyokú* 'tunes' after 1, 6, 8, 10 (*ik-kyokú*, *rok-kyokú*, *hak-kyokú*, *zik-kyokú*) but 'kyoku elsewhere.

(6) *-sún* 'inches' but 'sun after 3 (*sán-zun*), 4 (*yón-sun*), 7 (*naná-sun*), 9 (*kyúu-sun*), *nán-* (*nán-zun*), and numbers above 10.

(7) *-sén* 'sen, cents' but 'sen after 4 (*yón-sen*), 9 (*kyúu-sen*), *nán-* (*nán-sen*), and numbers above 10.

The counter for YEN tends to be preaccentuated (...*'en*) but the following numbers are atonic:¹⁰³ *iti-en* '¥1', *ni-en* '¥2', *san-en* '¥3', *roku-en* '¥6', *siti-en* (= *naná-en*) '¥7', *hati-en* '¥8', *zyuu-en* '¥10'; *hyaku-en* '¥100'; *sen-en* (or *sén-en*) = *issen-en* '¥1000' and the thousands; *itiman-en* '¥10 000' and the ten-thousands (*hyakuman-en* 'a million yen'). The remaining numbers regularly put the accent on the syllable before the counter (*itiokú-en* 'a hundred million yen'), but some speakers will instead retain the accent of a number that by itself has an initial accent, saying *nízyuu-en* for *nizyúu-en* '¥20', *sánzyuu-en* for *sanzyúu-en* '¥30', *sánbyaku-en* for *sanbyakú-en* '¥300', *yónhyaku-en* for *yonhyakú-en* '¥400', *nanáhyaku-en* for *nanahyakú-en* '¥700', *kyúuhyaku-en* for *kyuuhyakú-en* '¥900', and *súhyaku-en* for *suuhyakú-en* 'several hundred yen'. In the examples just cited Hamako Chaplin uses the second version (preaccentuated), but she prefers *zyúuyo-en* rather than *zyuuyó-en* '¥14' (cf. *zyúuyo-nen* '14 years', *zyúuyo-kka* '14 days'—but *zyuuyón* '14') and *zyúugo-en* rather than *zyuugó-en* '¥15'. In her speech *'en* is preaccentuated with the approximate counters for the tens (*nisanzyúu-en* '¥20-30', *sansizyúu-en* '¥30-40', *sigozyúu-en* '¥40-50', ... *hakkuzyúu-en* '¥80-90'), but she treats the approximate hundreds and thousands and ten-thousands as atonic: *nisanbyaku-en* '¥200-300', *sansihyaku-en* '¥300-400', ...; *nisanzen-en* '¥2-3000', *sansisen-en* '¥3-4000', ...; *nisanman-en* '¥20-30 000'. Notice the following: *nán-en* 'how many yen', *nanzýúu-en* 'how many tens of yen', *nánbyakú-en* 'how many hundreds of yen'; *nanzen-en* 'how many thousands of yen', *nanman-en* 'how many tens of thousands of yen', *nan'oku-en* 'how many hundreds of millions of yen'. Also: *súzyúu-en* 'some tens of

103. But 1, 2, 3, 6, 7, and 8 are preaccentuated when the last part of a numerical phrase is: *nízyuu* *iti-en* '¥21', *yónzyuu* *ni-en* '¥42' (BJ 1.27), *gozyúu* *sán-en* '¥53', *hyaku* *roku-en* '¥106', *sánbyaku* *hati-en* '¥308'. 'Ten' is always atonic: *hyakú* *zyuu-en* '¥110'.

yen', *súuhyakú-en* 'hundreds of yen'; *suusen-en* 'thousands of yen', *suuman-en* 'tens of thousands of yen', *suuoku-en* 'hundreds of millions of yen'.

The counter for YEARS is preaccentuated *'nen* everywhere except after 3, 4, 5, and 9, where it is atonicizing *-nen*: *san-nen*, *yo-nen*, *go-nen*, *ku-nen* (but also *kyúu-nen*). Traditionally the even thousands and ten-thousands are also atonic but newer usage allows *sen-nen* and *mán-nen* as well as *sen-nen* and *man-nen*. 'Several years' is *súu-nen*(⁻), the newer usage favoring the tonic version. 'How many years' is *nán-nen* (or *íku-nen*); 'how many hundreds of years' is *nánbyakú-nen*, 'how many thousands of years' *nanzen-nen*, and 'how many tens of thousands of years' is *nanman-nen*. The accent is on the numeral in *zyúuyo-nen* '14 years', *zyúugo-nen* '15 years', and *zyúuku-nen* '19 years' (but also *zyuukyúu-nen*); '13 years', however, is *zyuusán-nen*. For 'one half year' there is a special word *han-tosí*. Centuries are counted *hyakú-nen*, *nihyakú-nen*, *sánbyakú-nen*, *yónhyakú-nen*, *gohyakú-nen*, *roppyakú-nen*, *nanáhyakú-nen*, *happyakú-nen*, *kyúuhyakú-nen*.

A couple of other points about accentuation. Although younger speakers seem to treat in the same way all numbers made by attaching a numeral to a preaccentuated counter (such as *'mai* or *'sai*), for many of the older speakers the accent of the numerals *nízyuu* '20', *sánzyuu* '30', *yónzyuu* '40', *nanázyuu* '70', and *kyúuzyyuu* '90' will dominate the accent of the normally preaccentuated counters (either obligatorily or optionally) when the numeral appears in its reduced form *...ziq-* or *...zyuq-* as in *nízís-sai* (*nízyús-sai*) '20 years of age' and *sánzíp-pun* '30 minutes' but not when it appears in its full form, as in *nizyúu-mai* '20 sheets (of paper)'; other speakers will allow the accent of the numeral to dominate even in the full-form compounds, and so we will write *nízyúu-mai* '20 sheets of paper', *sánzyúu-nen* '30 years', *yónzyúu-byoo* '40 seconds', *nanázyúu-doru* '70 dollars', and *kyúuzyyúu-nin* '90 people'. There is usually an accent on *nán-* 'how many, which' before shorter counters; exceptions are *nan-bai* 'how many multiples' (cf. *nán-bai* 'how many cupfuls'), *nan-doki* 'what hour', *nán-kai*(⁻) or *nán-gai*(⁻) 'how many floors, what floor' (only atonic in K), *nán-zén* 'how many thousands', *nán-mán* 'how many tens of thousands', *nan-zyóo* 'what mat-size'. Longer counters retain their accents: *nan-kágetu*, *nan-kásyo*, *nan-kánen*, *nan-zíkan*, *nan-bánti*, *nan-gúramu*, Notice also *nánzyúu-en/-nen/-nin*; *nánbyakú-en/-nen/-nin*; *nanzen-en/-nen/-nin*; *nanman-en/-nen/-nin*. A highlighted singular number often has its accent suppressed when followed by a negative: *hitótu mo náí* 'lacks even one', *ití-mai mo minái* 'doesn't see a single sheet'.

When writing *go-rokusai* '5 or 6 years old' in the usual orthography it is common to put a comma between the juxtaposed Chinese numerals for 5 and 6, so that they will not be misread as *gozyúu rokú-sai* '56 years old' (cf. the comparable use of the hyphen in '5-6 years'), for it is quite common to juxtapose Chinese numerals as if they were Arabic figures: *Nihon-Rínsyoo no 68-nen* (= *rokuzyúu hati-nen*) *gogatú-goo ni, de aru* 'It is in the May '68 issue of Japan Physician' (SA 2679.138a—the comma before the copula is purely visual, hence the suppression of accent on *áru*).

Unexpected abbreviations are occasionally encountered, as in *Kyónen no zyúu, zyuitigatú*, ... = *Kyónen no zyugatú, zyuitigatú*, ... 'October and November of last year ...'. And you may now and then see an odd ellipsis such as this: *sigatú nízyuu yok-ka, nízyuu go[-nítí] ryóo-zitu* 'the two days of the 24th and the 25th of April' (SA 2679.19a).

Some numbers contain a complete reference within themselves. For example, there

are those in which the noun being counted serves as the counter: *huta-iró* 'two colors', *ní-zi* 'two characters (letters)', *go-kákoku* 'five countries', *suu-kásyó* 'several places', *hitó-natu o kurasita* 'spent a summer', ...¹⁰⁴ And then there are measures of certain abstract entities, such as money (*hyaku-en* 'a hundred yen', *gozyúu-doru* 'fifty dollars') or time (*san-zíkan* 'three hours', *zyúu-byoo* '10 seconds') or linearity (*zyuu-méetoru* '10 meters—high, long, distant'). There are "ordinal counters" such as 'zi 'o'clock', *-kai* '...-th floor', 'sai 'year of age', *-gatú* '...-th month (of the year—as a name)', *-pézi* '...-th page', *-too* '...-th grade/class', *-gakúnen* '...-th year of school', etc.; these are rather like names, designating particular entities in a series. And the quasi-restrictive *-mé* can be added to virtually any of the other kinds of numbers to make ordinal versions.

Counters which count something outside themselves are either MEASURES or UNIT COUNTERS (sometimes called classifiers). Measures include CONTAINER measures (*hitó-hako* 'a boxful', *ní-hai* 'two cupfuls',¹⁰⁵ ...) and ARBITRARY measures of weight (*hyaku-gúramu* 'a hundred grams') or volume (*iti-rítтору* 'one liter') or the like.

Unit counters or "classifiers" have been divided into three types: taxonomy-specific, shape, and process. The taxonomy-specific classifiers refer to sets of nouns according to shared semantic features in the folk categorization. Living things, for example, are counted with *-nin* if human, with *-hiki* if not; but a further breakdown of the nonhuman category gives special counters for fish (*-bi*), for birds (*-wa*), for deer (*-tei*), for large domestic animals (*-too*), and for dead animals (*-tai*).¹⁰⁶ The process classifiers specify something about the process by which the item was made or achieved its shape; Sanches lists *-ren* 'strung', *kátamari* 'lumped', *-hari* 'stretched over a frame', *nigiri* 'grasped', *kire* 'cut', *tumami* 'pinched'.

The shape classifiers are analyzed by Sanches into the following hierarchic categories:¹⁰⁷

‘hon length predominating:

‘hon three-dimensional.

‘suzi two-dimensional.

‘mai length and breadth predominating:

‘men two-dimensional.

‘mai three-dimensional.

‘mai regular shape.

‘hén irregular shape.

104. But *hitó-tokoro* 'one place' = *hitótu-tokoro* (SA 2670.142) = *hitót-tokoro* is idiomatic. There seems to be no **hutá-tokoro* or **hutát[u]-tokoro*. Notice that *iti-* 'one' is sometimes prefixed to a noun to mean 'a certain' (= *áru*) or just 'a': *iti-róozin* 'a certain old man', *iti-Nihonzin* 'a (certain) Japanese', *iti-kénsiki* 'an opinion, one view'; *sono iti-tyóokoo desu né* 'is a symptom of that' (Tanigawa 17).

105. But *hai* can be used to count "loads" in any container: *hikóo-ki ni íp-pai ka ní-hai zútu* 'a plane/ful or two each' or 'a load or two in each plane' (Tk 2.321b). The precopular noun *ippai* 'full' and the quasi-restrictive *-ippai* (§2.4) are derived from *íp-pai* 'one cupful'; the three words are easily confused by the foreign learner.

106. Few speakers will observe all the niceties of such hierarchical breakdowns. For those who do, *it-too no inú* will be a more impressive (and probably, but not necessarily, a larger) dog than *íp-piki no inú* but it will often be referred to with the same term, nonetheless.

107. Notice that some classifiers have both a more-inclusive and a more-specific meaning. All those listed here take the primary numerals except *‘suzi* (*hitó-suzi*) and *‘tubu* (*hitó-tubu*).

‘ko length, breadth, and depth (all equally prominent):

‘tyoo square.

-‘kai irregular surface.

‘ko round:

‘kyuu larger.

--- smaller:

‘tubu solid.

-teki liquid.

In her valuable study Sanches reveals the following trends in present-day usage of counters: (1) Numeral-classifier forms are being dropped in favor of the “cardinal numbers” (hitó-tu—tóo, zyuuití, zyuuní, ...). Nearly half the time people will choose to count hasigo ‘ladders’, for example, with hitó-tu etc. rather than seeking more specific counters. (2) There is a slight increase in the use of shape classifiers at the expense of the taxonomy-specific forms. When ladders are not counted with hitó-tu etc., about half the time they will be counted with -hon (“slender object”). The shape-referring íp-pon no hasigo ‘one ladder’ is as common as all three of the taxonomic references put together: ití-dai (“relatively large artifact”), ik-kyakú (“legged implement”), and ík-ko (“relatively small artifact”). In counting a coin, such as the ten-yen piece (zyuuen-dóoka or zyuuen-dama), ití-mai seems to be more common than ík-ko, and hitó-tu is widely substituted; incidentally, in speech there is no general word for ‘coin’ (kóoka is a written word), instead you specify by the denomination: hyakuen-dama ‘a hundred-yen coin’. Sanches discovered that the references of taxonomy-specified classifiers seem to be learned by the native speaker as a list of particular nouns, being extended to new concepts only when covering a wide semantic range such as “human” (-nin) or “nonhuman animate” (-hiki). When the speaker comes across a noun he has never heard counted, unless it falls into some very obvious group he tends to class it by shape or simply uses the general counter. A list of some 150 nouns with appropriate counters will be found in the appendix of MKZ; it is the longest list of its kind I have seen, yet it does not tell you how to count many common things, for example “bridges”.¹⁰⁸

It should be borne in mind that the choice of a more specific counter for a noun is semantically determined; whether a given noun is classified in one way or another depends on how you are looking at it. In Bóku(¯) wa Rúoo o ití-mai kaimásita ‘I bought a Rouault’ (Tk 3.259b) the reference is to a picture painted by the French artist, and that is why the counter chosen refers to something flat.

In addition to the numbers that count nouns, there are also numbers for counting specific actions, somewhat as -kái and -dó ‘times’ count frequency, but often limited to ‘one’. These are taken from verb infinitives which may or may not be the same as the predicate: ... o-nándo o hitó-katazuke katazúketa ‘gave the storeroom a tidying’ (Fn 401a); Áse o kákeba syáwaa o hitó-abi [suru] ‘When you sweat you have a shower’ (SA 2660.13a); ... róoraa de ue kara hitó-nade gasat-to yaru ‘you give it a firm press from above with the roller’ (SA 2660.26c); Hitó-huri mata ki-sóo na kurai sóra ... ‘A dark sky

108. The usual way to count bridges seems to be the general counter: huta-tú no hasí ‘two bridges’. If the description of the classifiers is correct (and it undoubtedly needs further study and refinement), I would expect *ni-hon no hasi and *ni-dai no hasi to be acceptable, but they are rejected. Perhaps a technical classifier can be supplied by some engineer—a graduate, say, of Hitotubasi-dáigaku?

about to pour again at any moment ...' (Kb 223b); Tokúi(¯) no hóra o hitó-huki húite taizyoo sita 'He left after giving his own trumpet a big blow (= bragging)'. Some of these structures of numeral + infinitive are used as verbal nouns: *matí o hitó-mawari suru* 'makes a tour of the town'. In (*tabako o*) *ip-pukú^[1] suu* 'has a puff on a cigarette = has a cigarette' it might be argued that *ip-pukú* somehow measures the cigarette rather than the act of inhaling, but in *utí(¯) kara ip-po mo deraré^[1]nai* 'can't leave the house for a moment' the word *ip-po* 'one step' (losing its accent before *mó* + negative, as explained on p. 52) is clearly measuring the action itself. A similar example: *hitó-ppuro* (= *hitó-huro*) *o abite* 'taking a bath' (Okitsu 1.348).

Within a sentence the number can be used as a pure noun, followed by a case marker such as *gá* or *ó* or predicated by some form of the copula; by conversion of the copula to *nó*, the number can be adnominalized; and it can be directly adverbialized—i.e. used as an adverb—with or without focus (*mó*, *wá*, etc.) or restrictive (*¯gúrai*, *¯daké*, etc.) or similar element (*¯zútu* 'each').

When the noun being counted is separately present in the sentence, there are a number of possible structures. It is not clear that any one of these need be regarded as basic, but we will take the adnominalized form as our point of departure, since it puts the number clearly in a modifying relationship with the noun. Then we can describe four of the possible structures by the terms used below:

(1) Basic (Number predicated and adnominalized to Noun):

Ní-mai no | irógami o | tótta 'I took two (or the two) pieces of colored paper'.

(2) Inverted apposition (Number [*nó*] | N → N | Number):

Irógami | ní-mai o | tótta 'I took two (or the two) pieces of colored paper'.

(3) Adverbialization (N *gá/ó* | Number):

Irógami o | ní-mai | tótta 'I took two (or the two) pieces of colored paper'.

(4) Preposed adverbialization (N *gá/ó* | Number → Number || N *gá/ó*):

Ní-mai || irógami o | tótta 'I took two (or the two) pieces of colored paper'.

But there is a fifth possibility:

(5) Appositional ellipsis:¹⁰⁹

Irógami no | ní-mai o | tótta 'I took two of the pieces of colored paper'.

We will explain this as a reduction of *Irógami no ní-mai [no [irógami]] o tótta* 'I took two sheets [of paper] of the paper ...' because you can say *Hyakú-mai no irógami no ní-mai o tótta* 'I took two of the hundred pieces of colored paper'. At least sometimes it is possible to drop the *nó*:

(6) Reduced appositional ellipsis:

?*Irógami [no] | ní-mai o | tótta* 'I took two of the pieces of colored paper'.

The surface form of the reduction is the same as that of inverted apposition (2), and there may be doubts about the grammaticality of the derivation. I believe the following may be an authentic example: *Sono hi^[1] ití-nítí ¯daké de ...* 'Just on that one day ...' (SA 2689.42a).

For Types (1) to (4) I have given the option of translating 'two' or 'the two'. It is sometimes held that the number can be definite only when it precedes the noun, but this does

109. A tag term, referring to an ellipsis that omits the head (and the preceding adnominalized copula) of a predicated apposition. Cf. §14.2.3 ("post-appositional *nó*"), of which this can be regarded as a subtype.

not seem to be true. Let us examine the sentences with *ano* 'that' and *anna* 'that kind of' (for which we could substitute *kírei na* 'pretty' or 'clean', etc.):¹¹⁰

(1a) *Ano ní-mai no | irógami o | tótta.*
Anna

(2a) *Ano irógami | ní-mai o | tótta.*
Anna

(3a) *Ano irógami o | ní-mai | tótta.*
Anna

(4a) **Ano ní-mai || irógami o | tótta.*
*Anna

(5a) *Ano irógami no | ní-mai o | tótta.*
Anna

(6a) *Ano irógami [no] | ní-mai o | tótta.*
Anna

The only difficulties arise with preposed adverbialization, and that is because an adverb can not be modified by an adnominal phrase. If we move the adnominal to the other side of the juncture, the sentence is acceptable:

(4b) *Ní-mai || ^{ano} irógami o | tótta.*
anna

In fact, *ano* and *anna* can directly precede the noun in any of the sentences, but they can precede the number only when it is functioning as a pure noun:

(1b) *Ní-mai no | ^{ano} irógami o | tótta.*
anna

(2b) ?*Irógami | ^{ano} ní-mai o | tótta.*
anna

(3b) **Irógami o | ^{ano} ní-mai | tótta.*
anna

(5b) *Irógami no | ^{ano} ní-mai o | tótta.*
anna

(6b) ?*Irógami [no] | ^{ano} ní-mai o | tótta.*
anna

} 'I took {the} two pieces
of that
that kind of colored paper'.

For some of the sentences it will be possible to modify both the noun and the number with adnominal phrases, but it is unlikely that both will be identical phrases, nor that the second will be definite unless inverted. Some sentences that result ('I took those two sheets of pretty colored paper'):

(1c) *Ano ní-mai no | kírei na | irógami o | tótta.*

(2c) ?*Kírei na | irógami | ano ní-mai o | tótta.*

(3c) **Ano irógami o | kírei na | ní-mai | tótta.*

(4c) **Ano ní-mai || kírei na | irógami o | tótta.*

(5c) *Ano irógami no | kírei na | ní-mai o | tótta.*¹¹¹

(6c) ?*Ano irógami [no] | kírei na | ní-mai o | tótta.*

110. Although there is a basic juncture after the adnominal, it disappears after the atonic adnouns *ano* and *anna* (←*anná*). You will hear the juncture with *Kírei na* | ... 'Pretty/Clean ...' or with *Réi no* | ... 'The said ...'.

111. With the same meaning as (1c). If the first juncture is raised to major, thus emphasizing *kírei*, the meaning will be 'I took the pretty two of those pieces of colored paper'. Throughout I am ignoring

It is sometimes held that adverbialization of the number is possible only when the noun is marked by *gá* or *ó*, but this is not quite true; “N *kará/tó/ní/é* | Number” are infrequent in print but they occur in conversation. All of the following examples with the mutative-locative are acceptable:

- (1d) *Ní-mai no | irógami ni | zí o | káita.*
 (2d) *Irógami | ní-mai ni | zí o | káita.*
 (3d) *Irógami ni | ní-mai | zí o | káita.*
 (4d) *Ní-mai || irógami ni | zí o | káita.*
 (5d) *Irógami no | ní-mai ni | zí o | káita.*
 (6d) *?Irógami [no] | ní-mai ni | zí o | káita.*

The types with adverbialization (3 and 4),¹¹² will permit the indefinite adnominal modifications of the noun (*anna irógami*) but not the definite (*ano irógami*). Unlike the other types, they seem to mean ‘I wrote characters on two of the pieces of paper’ and not ‘I wrote characters on {the} two pieces of paper’. This accords with such statements as “the distinction between definite (Number *nó* N *gá/ó*) and indefinite (N *gá/ó* Number) is possible only when the noun is marked as subject or object”.

When a count expression is predicated as a nominal (... *dá*), it is impossible to have the number adverbialized, there being nothing in the structure for the adverbial phrase to modify:

- (1e) *Ní-mai no | irógami datta.*
 (2e) *Irógami | ní-mai datta.*
 (3e) **Irógami [ga/o] | ní-mai datta.¹¹³*
 (4e) **Ní-mai || irógami [ga/o] datta.¹¹⁴*
 (5e) *Irógami no | ní-mai datta.*
 (6e) *?Irógami [no] | ní-mai datta.*

On the difference between *Iroiro mondai ga áru*, which has the two sources *Mondai ga iroiro áru* and *Iroiro {no/ná} mondai ga áru*, and *Takusán mondai ga áru* with only the one source *Mondai ga takusán áru*, see p. 826 (§ 13.8). When a number is adnominalized to the noun it is counting, the phrase NUMBER *nó* | NOUN will not permit the dropping of the adnominalized copula *nó*; whenever a number immediately precedes the noun it is counting, that structure must be the result of preposed adverbialization (and a major juncture is called for). In the example ... *ni-pézi mi-hiraki no kookoku o pat-to dásita* ‘splashed right out with an ad in a two-page spread (= on two facing pages)’ (Tk 3.237b) we can take *ni-pézi* either as an adverbial modification of the adnominalized precopular noun *mi-hiraki* ‘spread-out face-to-face [to the extent of two pages]’ or as a reduction of *ni-pézi no kookoku*

or rejecting surface forms that result from sloppy omissions of particles and poorly planned attempts at structures, as well as special emphasis and loose thematizations. In the kind of English I speak, paper is counted either as sheets or as pieces, though the latter has a more general meaning which would include irregular shapes.

112. These types have been rejected as ungrammatical by some of the linguists who have looked at the question, e.g. Sugita 1969. Students are advised to avoid N *kará/tó/ní/é* | Number, despite acceptable examples such as *Tomodati ni go-rokunin aimásita* ‘I met five or six friends’.

113. Considered as simple predication, with the same meaning as (1): ‘It was {the} two pieces of colored paper’. Under propredication (i.e. with ellipsis of a verb) such forms as this are possible: *Irógami o | ní-mai [| tóttá no] da* ‘[I took] two pieces of colored paper’.

114. But (?) *Ní-mai || irógami o [] da* might be acceptable with propredication of the sort suggested in the preceding note.

'a two-page advertisement' in which *ni-péézi* is an epithet of size, rather than a counting of advertisements, for that would be simply *hutatu* no *kookoku*.

A few examples, arranged by type:

(1) *Watakusi no háha de arimáshu ga, san-nín no otokó-no-ko o unde, nízyuu hatí de syúzin o naku-site, ...* 'My mother—she bore three boys, and at the age of 28 lost her husband, ...' (R).

(2) *Máa, watakusi ga kyóodai siti-nin no yón-ban mé de otokó to iú no wa watakusi hitóri datta n desu* 'Well, I was the fourth of seven children, and the only boy' (R); ... *biirú-bako muttú ga ...* 'six cases of beer' (SA 2665.116a); *Atasi wa sono-bá(¯) ni i-awáseta hitó hutarí kara kiité 'ta kara, ...* 'Since I had heard it from two of the people who happened to be in that place ...' (Tk 3.119a); *Tookyoo-tihoo-kensatú-tyoo wa ll seipan-gyóosya kara ll sén ll nihyakuman-en o ll damasi-totta l kin'yuu-burókaa l san-nín o ll kyóo ll sági no utagai de l táiho simásita* 'The Tōkyō Area Public Procurator's Office today arrested on suspicion of fraud three finance brokers who had swindled two million yen from the operator of a bakery' (R); *Óogázumu de mo kóe ga dasénai nante iú no mo, husúma(¯) hitótu hedátete yaru to iu zyuutaku-zízyoo da kara [de áru]* 'The business of not being able to use one's voice even in orgasm is because of the housing situation where you are doing it on the other side of a single opaque paper door' (SA 2792.44c).

(3) *Hanagami ga iti-mai mo náí* 'We're out of Kleenex' (MJW); *Watasi wa áru kaiga-tenran-káizyoo no issitú(¯) de, tíisa na aburá-e o iti-mai hakken sita* 'I discovered a little oil painting in one room of a certain painting exhibition hall' (V 1967a.99); *Anmari náí ga, kodomo no tokí, Kónme(¯) no turibori de húna o san-sihiki tutta kotó ga áru* 'I haven't fished much but when I was a child I caught a few carp in the Komme fish pond' (V 1967a.99).

(4) *Háha wa ... ko no té e yo-tubu bákari sore o noseta* 'The mother put four pieces of it [the candy] in the child's hand' (V 1967a.99); ... *óoki na issitú(¯) ni nízyuu mo sindai ga narande ita* 'in one big room were lined up all of twenty beds' (V 1967a.98), with high-lighting focus; ... *soo iu siten kara míru to ll né ll hutatú syúruí l arimásite ll né ll ...* 'seen from such a viewpoint, you see, there are two varieties, you see, ...' (R)—the relevant phrase, pronounced with voiceless /tu/, is a surface reduction from *hutatu ll syúruí {ga} ← syúruí ga l hutatú*; ... *moo hitótu gimón ni omóu kotó wa dóko ni áru ka* 'where is the other thing you feel to be in doubt?' (Fukuda in Ōno 1967.187). The last example could also be taken as Type 6, since *nó* can be inserted after *hitótu*; either way, *hitótu* refers to the entire phrase *gimón ni omóu kotó*, not *gimón*.

(5) Examples sought.

(6) ... *syoogákúsei no musumé hutarí wa ...* 'my two daughters who are in primary school' (SA 2666.108c); *Toránpu l gozyúú ní-mai kara ll iti-mai o l nukidásu tokí ni ...* 'when you draw one out of the 52 cards in the deck' (R); ... *zyookyaku hitóri ga kowáreta mado-gárasu no hahen de tooká-kan no kegá o sita to iu kotó desu* 'one of the passengers, it is said, was injured by a piece of glass from the broken window and will require ten days treatment' (R); ... *otona yo-nín ni kodomo hutarí ...* 'four adults and two children'; ... *senmon-teki tísiki o mótta hitó-tati súu-nin(¯) o atúmete ...* 'bringing together a number of people with specialized knowledge' (Kotoba no yurai 197); (?)... *zyuuhatí-nin tyuu yo-nín ga ...* 'four of the eighteen persons' (SA 2672.117b).

Such examples as *Kántoo itien(¯) ni watatte* 'extending all over Kantō', *murá itien(¯) ni* 'through the whole village', *syúui súbete ga* 'the entire surroundings', etc., may be examples of the reduced appositional ellipsis (6). Cf. p. 1049.

With the noun omitted, an adverbialized number can be ambiguous: *Go-nin mīta* can mean either 'Five people saw [it]' (= *Hito ga go-nin mīta*) or '[I] saw five people' (= *Hito o go-nin mīta*); *Minnā mōtte imasu ka* can mean either (= *minnā ga*) 'Does everyone have [it]?' or (= *minnā o*) 'Does [one] have everything?' Like degree adverbs, an adverbialized number can modify a relational noun: *Watakushi no || siti-nen || koohai de ātta* 'He was seven years my junior' (Tk 3.73).

Quantity nouns that are not "numbers" (as the category is defined here) share the same syntax, in general, that we have described for the numbers. A word like *takusān* 'lots', for example, will typically be found adverbialized or adnominalized to the noun it is quantifying. The word *ryōo* 'quantity' itself is a quantity noun and it behaves in the same way, especially when further specified. The immediately underlying structure of ... *sore to onazi ryōo no tuti ...* 'the same quantity of earth as that (= the mud that has been dredged up)' (Tk 3.194b) is an adnominalization of *Sore to onazi ryōo da* 'It is the same quantity as that', a nominal sentence that contains an adnominalization (*sore to onazi ...*) with the underlying structure *Sore [no ryōo] to onazi dá* 'It is the same as [the quantity of] that'. A few of the predicable adverbs are sometimes used in ways similar to the adverbialized and adnominalized uses of such quantity nouns as *hotōndo* 'almost (all)', e.g. *taitei* 'mostly; usually; nearly' as in *taitei no byooki* 'most illnesses' or 'the usual illness'.

In §2.8 we mentioned the variety of ways quantified nouns can be conjoined. If we link the expressions with *tō* 'and', for example, and mark the conjoined phrase with a case marker such as *o*, it is possible to make various combinations of number phrases before the case marker is attached:

(1) *tō (1) o*: *Ni-mai no irōgami to íp-pon no iro-énpitu o tōtta* 'I took {the} two pieces of colored paper and {the} one crayon'.¹¹⁵

{2} *tō (2) o*: *Irōgami ni-mai to iro-énpitu íp-pon o tōtta* 'I took {the} two pieces of colored paper and {the} one crayon'.

(1) *tō (2) o*: *Ni-mai no irōgami to iro-énpitu íp-pon o tōtta* 'I took {the} two pieces of colored paper and {the} one crayon'.

(2) *tō (1) o*: *Irōgami ni-mai to íp-pon no iro-énpitu o tōtta* 'I took {the} two pieces of colored paper and {the} one crayon'.

(5) *tō (5) o*:¹¹⁶ *Irōgami no ni-mai to iro-énpitu no íp-pon o tōtta* 'I took two of the pieces of colored paper and one of the crayons'.

(1) *tō (5) o*: *Ni-mai no irōgami to iro-énpitu no íp-pon o tōtta* 'I took {the} two pieces of colored paper and one of the crayons'.

(5) *tō (1) o*: *Irōgami no ni-mai to íp-pon no iro-énpitu o tōtta* 'I took two of the pieces of colored paper and one of the crayons'.

{2} *tō (5) o*: *Irōgami ni-mai to iro-énpitu no íp-pon o tōtta* 'I took {the} two pieces of colored paper and one of the crayons'.

115. Or 'coloring pencil' or 'colored pencil', though the latter term is not unambiguous in my kind of English. (But, again, in my English 'crayon' is perhaps too specific for the Japanese expression.)

116. Since appositional ellipsis (5) implies a larger universe for the noun, a speaker may feel uncomfortable with such sentences unless they are overtly modified by some adnominal element in front of the verb; any sentences balked at can be rescued by putting *kinoo* 'yesterday' in front of the first instance of (5) in each conjoining.

(5) *tó* (2) *ó*: *Irógami no ní-mai to iro-énpitu íp-pon o tótta* 'I took two of the pieces of colored paper and {the} one crayon'.

Since each of these combinations represents a conjoining of two noun phrases (before case marking), there is nothing particularly surprising about their acceptability. But somewhat unexpected is the acceptability of joining phrases that consist of two case-marked nouns counted by adverbialized numbers:

(3) *tó* (3): *Irógami o ní-mai to iro-énpitu o íp-pon tótta* 'I took {the} two pieces of colored paper and {the} one crayon'.

Moreover, it is possible to join an inverted apposition, unmarked for case, with a case-marked noun counted by an adverbialized number:

(2) *tó* (3): *Irógami ní-mai to iro-énpitu o íp-pon tótta* 'I took {the} two pieces of colored paper and {the} one crayon'.

(3) *tó* (2): *Irógami o ní-mai to iro-énpitu íp-pon o tótta* 'I took {the} two pieces of colored paper and {the} one crayon'.

Apparently, so long as the case marker comes AFTER both nouns have been expressed, you are free to conjoin:

(5) *tó* (3): *Irógami no ní-mai to iro-énpitu o íp-pon tótta* 'I took two of the pieces of colored paper and {the} one crayon'.

What you are not allowed to do is conjoin case-marked phrases with *tó*:

**Ní-mai no irógami o to íp-pon no iro-énpitu o [to] tótta*.

**Ní-mai no irógami o to iro-énpitu o [to] tótta*.

**Irógami ní-mai o to iro-énpitu íp-pon o [to] tótta*.

It is not required that both nouns be quantified: ... *hagaki o ní-mai to enpitu o dásite* ... 'taking out two postcards and [a] pencil' (V 1967a.99).

Two numbers that count the same noun can be conjoined with *ká* 'or':¹¹⁷ *Sono setomono o tóo ka nízyuu narabete* ... 'Lining up ten or twenty pieces of the pottery ...' (Tk 3.280a).

When the numbers are large and share a ten, a hundred, a thousand, or the like, what is shared need not be repeated: *Tó wa iu monó-no, ití-nen de gozyúu ní-mei ka sán-mei sika katazukánai* 'However, I only manage to take care of (interviewing) fifty-two or [fifty]-three persons a year' (Tk 3). It is sometimes possible to conjoin two slightly different numbers either directly or with *tó*, as in *ní-sai suu-kágetu no kodomo* 'a child of two years and some months' and *Rokú-sai to rok-kágetu kara narátta Nihon-bútoo* ... 'Japanese dance which she studied "from the age of six years and six months"' (SA 2678.152); in these uses the conjoined phrase is not counting the noun, but describing it. Similarly, such structures as *NUMBER₁ mo NUMBER₂ mó da* are possible: *hutuu no seihin no san-bai mo go-bai mó no nedan* 'a price that is as much as three to five times that of the usual product'. Cf. *ni-bai ka san-bai no nedan* 'a price that is two or three times as much', *ni-bai ya san-bai no nedan* 'prices that are two and three times as much' (presumably an abbreviation of *ni-bai no nedan ya san-bai no nedan*).

13.7. ADVERBS

Certain nominals are never specified as subject (N *gá*) or as direct object (N *ó*), nor are they marked as indirect object with the particle *ní*, though some of them can be adverbialized

117. Conjoined numbers will not necessarily have the same counter, since some things (e.g. time) can be counted with different-size units: *is-syúukan ka tooka* 'a week or ten days' (Tk 2.180b).

optionally with the *ní* that is the copula infinitive (or essive): *súgu* {*ni*} 'directly', *koko kara súgu no tokoró* 'a place immediate to here', *Móo súgu da* 'It's immediately ahead'. Certain others must be directly adverbialized: from *sibároku da* 'it's a while' there is only *sibároku* 'for a while', not **sibároku ní*. These typically adverbial nominals that do not normally become subject or object we will call ADVERBS. Those that are directly adverbial (without *ní*) are either PURE adverbs (i.e. always adverbial) or PREDICABLE adverbs, the latter allowing the predicative *dá* and the adnominal *nó*. Those requiring *ní* are adverbialized ADJECTIVAL or PRECOPULAR (quasi-adjectival) NOUNS, occasionally defective in that they lack certain of the other forms of the copula. Some words belong optionally to more than one type; see §3.¹¹⁸ (In hypostatic discourse, as when quoting, an adverb may temporarily suspend its grammar and appear—by a kind of direct nominalization—as a subject, object, etc.: "Tokidoki" *ga ii to omóu* 'I think "sometimes" might be all right'.)

The majority of adverbs occur freely as nominal sentences predicated with ... *dá* in its various forms; even in such a case as that of *másaka* 'surely (not)' (usually anticipating tentative and negative) we need to assume (?*) *másaka da* to account for *másaka no baai/tokí* 'in the unlikely event, in time of need' and similar forms. It should be borne in mind that some words frequently used adverbially are QUANTITY nouns: *hotóndo* [ga/o] 'almost (all)', *óoku* [ga/o] 'lots'. The pure adverb *itiban* 'most' (always atonic) is derived from *iti-ban* 'number one'; a synonym *móttó-mo* is derived from the highlighted form of the adverb *móttó* (= *mót-to*, § 21.7), as is the (sometimes identically accentuated) predicable adverb *móttó-mo* = *toozen* 'natural', often used as a sentence-introducing conjunction 'of course' or 'but'.^{118a} Other words that are frequently used adverbially turn out to be directly adverbialized PLACE NOUNS (*hóoboo* 'all directions, everywhere', ...) or TIME NOUNS: *háru* 'spring' or 'in spring', *syunkan* 'an instant' or 'for an instant', *izen* 'former times' or 'formerly',¹¹⁹ etc.—cf. § 9.1.13. Among the words which are adverbs as here defined are *mata* 'again, likewise', *zenzen* 'completely, utterly', *sunáwati* 'namely' or (= *masásiku*, *torimo-naósazu*) 'precisely, nothing but', *sasuga* 'as may be expected, nonetheless', *tú₁* 'finally', *yattó* 'finally, after much trouble' [= *yat-tó*, § 21.7], *itioo* 'once; at first; in general; tentatively', *náo-sara* (̄) 'all the more/less', *náo* 'still (more/less)', *náo-nao* 'still; additionally', ...

Adverbs with a basic final accent (*yagaté* 'before long', *sassokú* 'at once', *sekkakú* 'especially', etc.) will drop the accent unless followed by a particle (such as *wá* or *mó*) or some form of the copula (*dá*, *ní*, *nó*, etc.), and that together with historical considerations is why dictionaries often—perhaps unwisely—list the forms as atonic; similar are oxytonic time nouns such as *kinóo* 'yesterday', *natú* 'summer', *asitá* 'tomorrow', etc., and quantity nouns such as *iti-dó* 'one time', all of which drop their accent when used adverbially without a following particle or copula form. This accent suppression is the result of a juncture that must be assumed to terminate a direct adverbialization even though often the juncture

118. In summary: Adv *tó* = subjective adverb; Adv {*tó*} optionally subjective/objective adverb; Adv {*ní*} = ordinary adverb that is optionally an adverbialized adjectival (or precopular) noun, which may lack other parts of the paradigm; Adv {*tó/ní*} = subjective/objective adverb that is optionally an adverbialized adjectival (or precopular) noun; ... *ní* = adverbialized adjectival noun or precopular (quasi-adjectival) noun, which may lack other parts of the paradigm.

118a. But the traditional etymology derives *móttó-mo* from *moto-moto*.

119. And even *syóogai* 'life(time)': *Gó wa SYÓOGAI yame ró tte iu yóo na kotó o iu hitó ga áru keredo mo ...* 'There are those who tell me to give up playing *gó* for the rest of my life, but ...' (Tk 2.198a).

itself is later suppressed. A less obvious case of the same sort is to be found with the set of deictic-anaphoric manner adverbs *kóo* 'thus', *sóo* 'so', *áa* 'so [remote]', which—being monosyllabic—could be regarded as either prototonic or oxytonic; the loss of accent under unfocused adverbialization¹²⁰ shows them to be oxytonic—the result of the history of the forms, as shown by *kóo* < *ka*-[k]ú,¹²¹ in contrast with *dóo* 'how' which retains its prototonic accent under adverbialization (*dóo* *suru*). A similar juncture-induced loss of final accent accounts for the adnominalized forms of *konná*, *sonná*, and *anná*: adnominalization is marked by an initial juncture that suppresses a final accent (*sonná* | *kotó* → *sonna* | *kotó*) and then often disappears itself (→ *sonna* *kotó*). The interrogative accent overrides such restrictions, since it is an INITIAL accent, as shown by *dónna*; hence the accent of *dóo*, unlike that of *kóo*, is not basically oxytonic but prototonic.

The following classes of restricted distribution and semantic anticipation are found among the adverbs:

(1) Words which usually occur as direct adverbials and rarely, if ever, occur predicated as nuclear nominal sentences (... *dá*) or as adnominals (... *nó*):

(1a) anticipating a negative: *manzara* '(not) wholly', *kessite* '(not) ever' [< gerund of KETU-*suru* = *kes-súru*(^u) §9.2.1], *maru*-[k]kiri = *maru-de* = *ten-de* '(not) at all', *túi-zo* '(not) at all, (not) ever', *dánzite*(^u) 'absolutely (not)' [< gerund of DAN-*ziru* = *danzúru*(^u) 'concludes, judges' §9.2.1]; *betudan* '(not) especially' (usually without *ni*); *konrínzai* (= -"sai) '(not) under any circumstances'; *ikkoo* [*ni*] '(not) in the least' (with affirmative 'absolutely, quite'); *mootoo* (... *nái*) '(has none) at all', *náni-mo*(^u) '(not) in any way', *kanarazú-símo* '(not) always/necessarily'; cf. (below) *métta ni* + NEGATIVE 'rarely', ... *sika* + NEGATIVE 'only' (§2.3.3). Also anticipating a negative are these adverbializations: *betu ni* '(not) particularly, (nothing) in particular', ...; and, often, *sukósi mo* = *tittó mo* '(not) in the least', *tote-mo* 'quite', *zettai ní* 'absolutely', *zenzen* '(not) at all', *hotóndo* '(not) quite, hardly', ...; cf. *hitó-tu mo* (etc.) + NEGATIVE. See §8.7.

(1b) anticipating a tentative: *osóroku* 'probably',¹²² *sázo*(-kasi) 'likely', *tábun* 'probably', *ookata* 'in all probability', *kit-tó* 'undoubtedly, surely'; ...

120. *Koo suru* 'We do it this way', *Sóo wa sinai* 'We don't do it that way'; ... ^[u] *tó ii-nagara, kóo mo iú no de aru* 'while we say ... we also say as follows' (Shūkan-Shinchō 1972/5/27.36e).

121. The modern Tōkyō accentuation of the literary adverb is *káku* (prototonic), but that is an innovation—or borrowing; the Kyōto form has an accentuation that would be cognate with Tōkyō **kakú*, which we assume as the direct source of the colloquial *kóo*. I would presume that *sóo* comes from a form **sa-kú*, but that form is unattested and Japanese dictionaries assume a contraction from *siká-ku*, the literary equivalent, with a dialect form *siká-'u* = *siko*[o] that appears in *sikóo site* = *siká site* = modern *so*[o] *site* 'thus; then'. Note, however, the elegant adjectival nouns *kayoo* and *sayoo*, made by attaching the Chinese loanmorph *yóo* < *yáu* (< Chinese *yāng*) 'appearance' to *ka*- and to *sa*;- perhaps *kóo* and *sóo* are directly contracted from these.

122. But the semantic anticipations are not always realized formally. We would expect *osóroku* to be followed by *surú daroo* 'it will probably happen'—or *suru to omowaréru* 'it appears that it will happen' or the like—but it has come to be used also with the unmarked form (the imperfect), as noted in SA 2649.110b, where the following example is cited: *Osóroku kotosi* 'Tyuu ni kokkai wa kaisan suru' 'Probably the Diet will be dissolved within the year'. *Másaka* and *yómo ya* 'surely (not)' anticipate both tentative and negative, not necessarily in the same form: *Kimi ni aóo to wa omowanakatta* 'I didn't think I would run into you' (Hayashi 150). When the tentative is anticipated by *mósi ka sitára*, *mósi ka suru to*, *hyót-to suru to*, or *arúi-wa* the meaning is more like that of *ká mo sirenai* 'maybe', according to Hayashi 149.

(1c) anticipating a conditional (or some equivalent way of stating a condition): *mósi* [mo], *tatóe*($\bar{\quad}$), *mán-iti*, *yósi* ya 'if'.

(1d) anticipating a request: *dóo-zo*, *dóo-ka*, *nani-tozo* 'please'; anticipating a request or desire: *zé-hi* 'by all means, for sure'.

(1e) [LITERARY] anticipating ... $\bar{\quad}$ *béki/bési* 'ought': *subekároku* 'by all means, necessarily' (< *su' béku*).

(1f) anticipating a simile (such as ... *yóo da*): *átákamo* [semi-literary] = *tyoodo* = *maru-de* 'just (... like)'; *dóo-mo* 'somehow' (also 'very')—as in *Sore wa dóo-mo seikaku de náí yóo da* 'That somehow seems incorrect' (SA 2660.41b); *sá-mo* 'just (as if)'.

(1g) anticipating an identifier: *sunáwati* 'in other words', *túmari* 'id est', *kekkyókú* 'in the last analysis'; *táká-ga* 'merely, only'; maybe *takádáka*($\bar{\quad}$) 'at highest/most', *séizei* 'at the outside', *giri-giri* 'at the lowest (limit)'; ...; *hito-yonde* 'what is called, what people call'—as in *hito-yonde "keieisya-orinpíkkú"* 'it is known as the "executives olympics"' (SA 2653.136) and *Sáeki*($\bar{\quad}$)-*si wa hito-yonde "hansen-bóozu"* [da] 'Mr Saeki is known as the "anti-war bonze"' (SA 2647.60a)—but this is a simple reduction of *hito ga yonde* 'when people call it [it is ...]' (gerund of condition, §9.2) and that phrase can carry adjuncts, as in ... *zoku ni hito ga yonde Ésasi no Hanzíroo to iu otokó ga ita* 'There was a man ... popularly called Hanjirō of Esashi' (Shibata 1961.25).

(1h) the three words for 'very' *taihen*, *táisoo*, and *zúibun*, if we dissociate them from the adjectival nouns from which they come by direct adverbialization.

(1i) *góku*, *góku-goku*($\bar{\quad}$) 'extremely'; *hanahada* 'extremely', *tote-mo* 'quite, indeed, (not) at all', *hóbo* 'nearly', *tyoodo* 'just, exactly' (a time reference must be in round figures: *tyoodo sán-zi zíp-pun* 'just 3:10' is fine but not **tyoodo sán-zi zyuusán-pun* 'just 3:13'), *suutoo* = *zutto* (= *zut-to*) 'by far', *yahári* 'also, nonetheless', *moo* 'more', *móo*($\bar{\quad}$) 'already', *túí*₂ 'unintentionally', *sémete* [< vt. gerund] 'at least/ most', *éte*($\bar{\quad}$) [site] [perhaps from the gerund of vt. *é* 'get'] 'often, frequently (= *yóku*); apt/prone/liable to (= *yáya* [to] *mo suréba*), *káette* [< vi. gerund] 'on the contrary, rather', *músiro* 'rather', *tóotoo* 'at last', *yagaté* 'before long', *tái-site* 'greatly' (cf. *tái-sita* 'great, much' §13.5), *gái-site* 'in general', *sore yúé* 'therefore' [< *sore ga yúé ni* 'with that for a reason'], *sá-te* 'well, now', *sunáwati* 'namely' (see above), *túmari* [< vi. infinitive *tumári*] 'after all, in brief, id est' (see above), *syosen* = *kekkyókú/kekkyoku-no-tokoró* = *tootei* 'after all', *séizei* 'to/at the utmost', *sadáme-si* [? v. infinitive + emphatic particle] = *sadámete* 'presumably', *sígeku* 'profusely, lots' and *asi-sígeku* '(visiting) frequently' [< *síge-ku* infinitive of the literary adjective *síge-* 'be profuse']; *narubéku*($\bar{\quad}$) 'as possible' [< *náru* $\bar{\quad}$ *béku* 'so that it ought to become']—*narubeku nára* 'if possible' can be treated as propredication or ellipsis; *míngoto* (? = *míngoto ni*) 'admirably', ...

All these words (under 1) might be called adverbs par excellence, and in a number of cases they border on being (or are) CONJUNCTIONS; see §13.7a, §24.

(2) Words which occur as direct adverbials and also as adnominals (*nó* ← *dá*) but lack the nominal sentence (*... *dá*) from which the adnominal should be derived; these are DEFECTIVE PREDICABLE ADVERBS: *kánete* 'previously', *kánete no* 'previous'; *mókka* 'at present', *mókka no* 'current'; *tátte*($\bar{\quad}$) 'insistently', *tátte*($\bar{\quad}$) no 'insistent'; *zyúurai* 'hitherto', *zyúurai no* 'former, existing'; *sási-mo*($\bar{\quad}$) 'such (a), as he/it is'—as in *Sási-mo*($\bar{\quad}$) *óoki na kuzira mo tóotoo tukamatta* 'Big as he was the whale was finally caught', *sási-mo*($\bar{\quad}$) no 'such a; that he/it is'—as in *sási-mo*($\bar{\quad}$) no *yúusya mo* 'brave man that he is' and *sási-mo*($\bar{\quad}$) no *watakusi mo* 'even I such as I am'; (Do *nakanaka* and *itioo* belong here? Perhaps

also *isso* 'rather' unless *isso-no-koto* is treated as a single lexical item.) The defective predicable adverb *kórai* 'from of old' is sometimes preceded by a (junctured) noun, presumably with ellipsis of *nó*: ... *mínzoku kórai no géngo o kokugo to site*, ... 'treating as the national language the language traditional to the people' (Ōno 1967.278). A number word can be modified directly by the adverb *tatta* 'merely, only, just' as in *tatta rokú-nin* 'only six persons' or it can be modified by the adnominalized *tatta* ^[ó] as in ... *atumátta no wa tatta no rokú-nin* 'there were only six people gathered' (SA 2674.26c). These defective predicable adverbs could perhaps be regarded as belonging simultaneously to the class of pure adverbs and the class of adnouns, with a suffix *-nó* marking the latter. The word *ippasi* 'like other people, like a proper person' seems to be a defective predicable adverb: *ippasi yakú ni tátu* 'is useful enough', *ippasi no otona-átukai de* 'treated like a regular grownup' (SA 2666.32a), but not **ippasi dá*. In some expressions, however, the adnominalized form is treated as if an adjectival noun: *ippasi na kuti o kiku* 'talks as eloquently as anyone else'.

(3) Adjectival nouns which are highly defective, occurring only in the infinitive with *ní* (i.e. with the objective essive): *tóku ni* 'especially'; *ítigai ni* 'all-out, sweepingly'; *musyoo ní* 'inordinately'; *tádati ni* 'directly, immediately'; *massígura ni* 'impetuously, at full speed'; *omomuro ni* 'slowly, quietly, patiently'; *mása ni*¹²³ 'precisely, just', (+ *-y*)*oo to suru* 'about to'; *móro ni* 'completely, thoroughly; in a jumble'; *yaniwa ni* 'suddenly'; *tómi ni* 'suddenly; exceedingly'; *sú[n]de ni* 'already' [*< súnde < súmi-te*, vi. gerund 'ending']; *óoi ni* (= *óo[k]i ni*) 'greatly' (see 5 below); *tínami(-) ní* 'by the way' [*< tinamí* derived noun *< tinámi*, vi. 'being related']; *narabi ní* 'and, additionally, both together' [*< 'in a row' derived noun < vi. 'standing in a row'*]; *hitori-de ní* 'spontaneously' [presumably from *hitori de* 'being alone'—but *hitori"-té* 'alone-hand' would be another possible etymology]; *tende{n} ní* 'separately, respectively, each'; *hikkirí-nási ni* 'without letup'; *tokkú(-) ní* 'long since' [but see p. 803], *múge ni* 'bluntly, flatly' (but *múge* has wider uses as an adjectival noun in the literary language), *ái-tomo ni* = *tómo(-) ní* 'together'; *tutó ni* 'early, long ago'; *gén ni* 'actually', *án ni* 'tacitly, implicitly', *gé ni* (= *zítú ni*) 'truly', *kóto ni* 'especially', *túi ni* 'at last'; *zyózyo ni* 'little by little, gradually'; *issei ní* 'unanimously'; *génka ni* 'promptly, at once'; *mídari ni* [literary] 'rashly; without good reason (or permission); excessively'; *túbusa ni* [literary] 'in detail, fully', *yúu ni* [literary] 'gently, amply'; *nokke ní* (= *aonoke/aomuke ní*) 'facing upward', (= *nokke kará* = *hazime kará*) 'from the start'; These are usually listed in dictionaries as lexical adverbs, and the *ní* is often hyphenated in the romanization. Cf. also the direct nominalizations (§ 14.6) *yoo-súru ni* 'in brief', For *iká(-)ni* 'how', see p. 1069.

(4) Mimetic adjectival nouns which are defective in that they occur only with the subjective essive *tó* (and not with the subjective copula *tári/táru*): *dén-to(-)* 'conspicuously (placed)', *kit-tó* 'surely; sternly', *tón-to(-)* 'entirely; (not) at all', *tyót-to* 'a bit', etc.—see § 21.7. Other subjective adjectival nouns that are similarly defective seem to be at the same time members of other classes: *iroiro {tó}*- is also an adverb and an objective adjectival (or precopular) noun; *dandán {to}* is also a predicable adverb (*dandán da/ni/no*) and a pure adverb—which, like all basic oxytones, loses its final accent before the underlying juncture that marks direct adverbialization. *Zubári {to}* 'boldly' is a predicable adverb: *enryoo no náí zubári no situmon* = ... *zubári to sita situmon* 'a bold and unabashed question',

123. Cf. *másaka* 'surely [not]' *< *mása {da} ka* 'is it exact?'

Mása ni sono-mónó^[1] zubári desu 'You said it! You hit the nail on the head!' = Mása ni zubári sono-mónó^[1] desu. And occasionally it seems to be used as an (objective) adjectival noun: sono-mónó^[1] zubári na ii-kata = zubári sono mónó^[1] no ii-kata 'calling a spade a spade'. (On sono-mónó, see §25.) Zóku-zoku(-) 'repeatedly, successively' is a predicable adverb but very occasionally (e.g. Tk 4.277) you will find it used with the subjective essive *tó*. Nakanaka 'ever so', ordinarily a pure adverb, sometimes is used as a defective subjective adjectival noun: Kono "motíron" ni wa nakanaka TO hukumí ga arimásu ... 'In this "of course" there is quite a lot of hidden meaning ...' (Tk 4.159).

(5) Adjectival nouns which occur only in the adnominal (... ná) and the infinitive (... ní) but lack the predicative form, i.e. a nuclear sentence (*... dá) from which they can be derived: métta na 'rash', métta ni + NEGATIVE 'rarely'—but in some varieties of Tōkyō speech métta is also used as a pure adverb without ní (an example will be found in Kb 31b); sétu na 'earnest', sétu ni 'earnestly'; yatara ná 'indiscriminate, random', yatara ní 'indiscriminately' (yatara *tó* is also reported); roku ná 'satisfactory', roku ní 'satisfactorily'; óoki(-) na 'large', óoki ni (= óoi ni) 'greatly';¹²⁴ ? ómo na 'principal', ómo ni 'principally' (but K lists *ómo da*). A special case: tán naru—with the LITERARY attributive (= adnominal) form of the copula instead of the colloquial ná—'a plain, a mere' (= *táda no*), tán ni 'simply, merely' (= *táda*). Kyuu 'sudden, urgent' belongs with this group but it is also a pure noun (abstract) meaning 'emergency, urgent need'. Several adjectival nouns seldom (if ever) appear in the predicative *dá* form, or in such conversions as *nára*, and have other limitations in distribution. Uturo 'hollow' usually appears adnominalized (uturo na *mé* 'hollow eyes') or adverbialized (uturo ni *mi-hiraita mé* 'eyes wide-open hollowly'), but uturo *dá* seems to be acceptable. Uron 'suspicious, questionable, shady' is usually adnominalized (*táido no uron na otokó* 'a man of questionable attitude') or adverbialized (uron ni *omowaréru* 'seems shady'), and the forms with *dá* or *nára* are probably not in use; but evidential forms (uron-ge ní, uron-soo ní) are found; the same distribution characterizes *kegen* 'dubious'. Although *árata* is most commonly adnominalized (*árata na* 'new, fresh') or adverbialized (*árata ni* 'newly, freshly'), such forms as *árata da* and *árata nara* seem to be acceptable.

(6) Precopular nouns which are defective in that they occur in the adnominal (... nó) and the infinitive (... ní) but lack the predicative form (*... dá): *sára* 'new, anew'; ? *kakubetu* 'individual(ly)', ? *betudan* 'special(ly)'—*betudan ní* usually anticipates a negative; *tokaku* 'this or that = (what with) one thing and another'—*tokaku no* 'various', *tokaku suru utí(-)* ni 'meanwhile what with one thing and another', *tokaku suru to* 'at any moment', *Hutyúui na hitó wa tokaku ziko o okosi-yasúi* (or *okosi-gati da*) 'A careless person is apt to cause accidents'; But *tokaku* belongs with defective predicable adverbs (p. 785).

The word *sasuga*¹²⁵ is a pure adverb and at the same time a defective precopular noun that lacks the predicative form; *sasuga* is also a pseudo adnoun, since *Sasuga FBI wa sin-*

124. *Óoki ni* is a dialect form 'much(ly), very' and is well-known as the Kansai equivalent of *dóomo* 'ever so much' used as a short form of 'Thank you very much'; both uses are also found in Iwate prefecture (Zhs 1.97, 101; 106) and probably other areas. Since the standard language lacks the form (and the derived *óoi ni* is hardly very colloquial), it is appropriate to write a hyphen in *óoki-na*, as we do for *okási-na* and *tíisa-na*. But for dialects that have *óoki ni*, a spaced spelling *óoki na* would be consistent with our other spellings.

125. *Sasuga* appears to come from something like *s[ik]a su[rú] ga* 'is so but'. (The traditional characters RYUUSEKI 'flowing stones' were arbitrarily borrowed from an uncertain literary allusion.)

hánnin o tukamaeta can have two meanings: Sasuga {no} FBI wa sin-hánnin o tukamaeta 'The FBI being what they are caught the real culprit'; Sasuga {ni} FBI wa sin-hánnin o tukamaeta 'As we might expect, however, the FBI caught the real culprit'. Cf. the remarks on iroiro {no} mondai, p. 826.

The word sizyoo '(in) history' seems to be a defective place noun. It can be used with the mutative-locative ní (sizyoo ni na o todoméru 'leaves one's name in history' and, by extension, sizyoo ni réi o minai '[sees =] has no parallel in history'); it can be adnominalized (sizyoo no zínbutu 'a character in history'); and it can be directly adverbialized: sizyoo saikoo no dai-hóosaku 'the highest bumper crop in history' (SA 2687.140a)—to be read with a major juncture before the last noun and no other surface junctures, though a suppressed juncture is assumed after sizyoo since the accentuation tells us that we are not confronted with a compound noun *sizyoo-sáikoo 'history-highest'. Some of the many other words ending in -zyoo 'on, in' are likely to be similar in their behavior, as are some of those ending in -ka 'under, below'. A number of nouns and noun phrases can be pressed into duty as temporary adverbs of this sort, especially with expressions of order: ... zínruí || hatú no | zinkoo-éisei kara ... 'from mankind's first artificial satellite' (SA 2672.11)—the major juncture probably signals an ellipsis of {dé [wa]}; ... wá-ga kuni hatú no tennensyoku-éiga ... 'the first color movie in our country' (Tk 2.196b); Sékái hatú no ... 'The first ... in the world'; Rekisi-zyoo hatú no ... 'The first ... in history'; ... sékái | go-ban ʹmé no | hoyúu-koku 'the fifth nation in the world to possess them [nuclear weapons]' (R); ... sékái daisán-i to iwareru kesyooihin-méekaa Sisei-doo ní wa ... 'for Shiseido, cosmetic maker said to be third in the world, ...' (SA 2688.18c); ... ooki-sa dé wa sékái dái-ni 'second in the world in size' (Tk 4.189a); Sékái saityoo no únga ... 'The longest canal in the world ...'; ... sono tíiki saidai no dansu-hóoru ... 'the biggest dance hall in the area' (Tk 2.115b); ... tóozii || sékái || saidai no | tokai désita 'it was the largest city in the world at that time' (R); ... sékái kyootuu no tenzi no gakuhu 'musical scores in a braille notation common to the whole world' (Tk 2.178a); ... bánkoku kyootuu no keisokú-hoo(ʹ) ni yoru kóosu ... 'a track in accord with standard international measure' (Tk 3.80b). When the temporary adverb is modifying ití [no] 'the most/best in ...' or ití^[1] A-i 'the most A in ...' (of a rather large place), the expression is sometimes tightened into a single word, a predicable adverb made by attaching ití as a regular preaccentuated suffix: Tookyóo-iti takái 'is the tallest in Tōkyō', sékái-iti ookíi 'the largest in the world', etc. But in general, and especially with longer (or less common) placenames, a juncture will intervene: Sékái ití no dai-tókai 'the biggest city in the world'; Higasi-Yooróppa ití no nagái únga 'the longest canal in eastern Europe'; Nisi-Dóitu ití no kesyooihin-méekaa 'the ranking cosmetic maker in West Germany'; Tóoyoo ití no koogyoo-títai 'the prime industrial belt of the Orient'; Nágoya ití no koogyoo-gínkoo 'the ranking industrial bank in Nagoya'. In the following example the surface markings make the 'most' phrases look as if they were pure nouns, rather than predicable adverbs, but that is due to the ellipsis of a quotative element, as shown in brackets: Tookyóo-iti [to iú no] to Nippón-iti [to iú no] o kyatti-huréezu ni suru wari ni, ... 'To the extent that they turn "number one in Tōkyō" and "number one in Japan" into catch-phrases' (SA 2688.37b). Somewhat similar cases involve the juxtaposition of a noun (to be taken as a location or a time) with some quantitative reference such as ití-men '(over) the entire surface' in Sóra ití-men ni hosi ga déte iru 'The sky is full of stars' and also phrases like koko zyúu-nen 'these past ten years', but I have treated all these as apposition (§ 25) since each phrase as a whole functions as a noun—for example, it can be

epithematized: *keizai-teki ni hukyoo dátta koko zyúu-nen* 'these past ten years that have been economically depressed'.

Adverbs come from various sources. Some are derived from nouns or from other adverbs by phonetic or accentual modifications; some are reductions (overt or covert) from set phrases; some are direct adverbializations of nouns—as when *syógai* 'life(time)' is used to mean 'for life; for all one's life; for the rest of one's life'. The relational noun *saki* 'ahead; future' underlies *sákki* and *saki-hodo* 'a little while ago'—used as a direct adverb, adnominalized with ... *nó*, or (like many time adverbs) turned into a temporal ablative (*sákki kara* 'from a little while ago')—as well as the precopular noun *sáki* 'previous(ly)', which is defective in that it lacks the predicative form **sáki da* 'it is previous', having only the adverbial *sáki ni* and the adnominal *sáki no*. In addition to *saki-hodo*, a number of expressions that end in ...-*hodo* are listed by dictionaries as "adverbs", apparently for reasons of accentual peculiarities or meaning divergences: *ika-hodo* = *náni-hodo*(⁻) = *dóre-hodo*(⁻) 'how much', *ka-hodo* = *kore-hodo* 'this much', *sa-hodo* = *sore-hodo* 'that much', *are-hodo* 'that much'; *noti-hodo* 'later on' from *noti*(⁻) 'later'; *naru-hodo* 'sure enough'; These adverbs ending in ...-*hodo* overlap in meaning with the corresponding members of the following set (on the oxytonic accents of which there is some question): *dóre-dake*(⁻) 'how much/many', *kore-daké* 'this much/many', *sore-daké* 'that much/many', *are-daké* 'that much/many'. In dialects (at least) there are variants *dón-dake*(⁻), *kon-daké*, *son-daké* (and *hon-daké*)—but not **an-daké* (Makimura 266b): *Aa, ore wa kon-daké ka sira* 'Mmh, I wonder if this is all there is for me' (Tk 4.274a—speaking is the writer Niwa Fumio). We also find *koi-dake* and *soi-dake*, but apparently not **ai-dake* or **dói-dake*(⁻). (In the meaning 'just, only, nothing but', equivalent to one use of *bákari*, we find *daké* following *kore/sore/are* but not *dóre*.) There would seem to be no accentual reason to treat *kore/sore/are* *bákari* as adverbs rather than as directly adverbialized restrictive-marked nominals; dictionaries, however, often do so, perhaps in consideration of such variants as *kore-ppákari/ppákasi/-ppati* and *korenbákari* 'just this much': *Ore wa titioya no o-kage ní wa korenbákari mo nátte wa inái no da si, ...* 'I am not all this much indebted to my father ...' (Fn 8b). Nor is there any accentual reason to treat *kore/sore/are-kiri* (or *-kkiri* or *-giri*)¹²⁶ as adverbs rather than phrases, but (cf. §2.3.3) we will follow the dictionaries on this: *Móo zyuu-súunen mukasi no hanasi*. *Sore-kiri*^[1] *awánakatta* 'It's over ten years ago now. Since then I haven't seen him at all' (Tk 2.71).

A similar group of words are made with ...-*kurai*, ...-*kkurai*, or ...-*gurai*: *dóno-kurai*(⁻) 'how much/far/long' (also *-gurai*?), *kono-kurai* (also *-gurai*?) and *kore-kurai/-gurai/-kkurai*¹²⁷ 'this much'; *sono-kurai/-gurai* and *sore-kurai/-gurai* 'that much', *ano-kurai* (also *-gurai*?) and *are-kurai/-gurai/-kkurai*¹²⁸ 'that much', *ikura-gúrai* 'how much', *onazi-kúrai*(⁻)/*-gúrai*(⁻) 'to the same extent'; but there is no **dore-kurai/-gurai*. The accent dictionaries list *ikurá-ka* 'some; somewhat, partially' and *íkurá-mo* 'ever so many/much; (not) very many/much' and NHK alone lists *íktu-mo* 'ever so many' (with regular accentuation); K and H both

126. The final accent will be heard only when *dá*, *dé*, or some other form of the copula follows; but the adnominalized copula *nó* will normally cancel the final accent, as will the underlying juncture appropriate to the directly adverbial use.

127. An example: ... *moo kore-kkurai no món desyo?* 'it's already this much of a thing, you know' (Tk 2.188a).

128. *Híyo* [= *hiyó-dori*(⁻)] *to wa tyót-to tigua ga, are-kkurai no tori de, hai-iro no yátu né* 'It is a little different from the bulbul but it is a bird of about that size and is gray' (Tk 4.295ab).

list *náni-mo*([~]) '(not) anything; (not) in any way' and most dictionaries list *dóo-mo* 'somehow; very' (probably because the expected meaning of the highlighted adverb is expressed as *dóo ni mo*) and *dóo-ka* 'please', since 'somehow, anyhow' is usually said as *dóo ni ka*. The expressions *dóo-ni-mo* and *dóo-ni-ka* are also often listed as single lexical items, as is *náni-ka* 'something'. In some of these apparent lexicalizations, it is unclear whether the expected regular syntactic formations also occur (*kore ̀gúrai* 'as much as this, at least this') and whether there may be some surface results that are ambiguous. A more rigorous investigation is called for. (Cf. §29.)

On adverbs converted from the infinitives of adjectives (A-*kú*, as *háyaku* 'early, fast') and of adjectival nouns (AN *ní*, as *kyokután ni* 'extremely'), see §9.1.11. The adverbs *síge-ku* 'in profusion, lots' or (= *asi-sígeku*) 'frequently' and *syúuné-ku* 'persistently' are the only modern forms of two of the few literary adjective bases that end in *e* (no colloquial adjective base ends in *e*); *syúuné-* is from the Chinese loanword *syúunen*([~]) 'persistence'. A few adverbs are derived by attaching the suffix *-kú* to something other than an adjective base: *mósi-ku* [*wa*] 'or else' < *mósi* 'if'; *yooya-ku* 'finally' < *yau-ya* < *yáya* 'slightly'; *kotogóto-ku* 'all' < *koto-góto* [*ni*] '[in] everything' < reduplicated noun *kotó*; *ká-ku* (= *kóo*) 'thus'; *siká-ku* (= *sóo*) 'so'; Notice also the old-fashioned *Negáwaku* *wa* ... 'Prithee ...', *Osimúráku wa* ... 'It is to be regretted that ...', and *N ga/no íwaku* = *N no hanasí de* 'according to what N says' or 'N says:' from a structure *V-r[u] aku* (§13.9).¹²⁹ Some of the literary negative infinitives are used as adverbs in the modern language, as we remarked in §8.5: *nokórazu* 'all, entirely', *táezu* 'constantly', ...; *tookárazu* 'in the near future, before very long' (< 'not being distant', §8.6), As observed in §9.1, a few adverbs derive from verb infinitives: *túmari* 'after all; in short', *toriwake* (= *toriwakete*) 'especially', The adverb *ne-kósogi*([~]) 'entirely; root and branch' is a variant of the dialect version *ne-kósoge*, derived from the verbal sentence *né o kosóge* 'scraping the root'. A number of adverbs are derived from gerunds; to the lists in §9.2 we can add *tikátte*([~]) and *kami-kárete* (both 'vowing') as synonyms of *kanarazu* 'unfailingly' and the literary *sásite* '(not) particularly', said to be from [*kore zo to*] *sásite* 'indicating it to be precisely this'—cf. the literary attributive perfect *sásitaru* NOUN + NEGATIVE 'no special/particular N'. Various adverbializations are often listed as lexical adverbs or conjunctions; in addition to the adverbializations with *ní* from adjectival or precopular nouns, you will also find *omóeba* 'come to think of it, in retrospect, on reflection', There are a few adverbs which derive from ablativized noun phrases: *atamá-[k]kara* 'from the start; categorically; (not) at all', *ne-kkara* '(not) at all, (not) in the least',

There are at least seven adverbs derived from iterated imperfect verb forms: *míru-míru* 'in the twinkling of an eye', *masú-masu* 'more and more', *núru-nuru* (= *núra-nura*) 'slippery, clammy' (from the literary predicative equivalent to *nureru*), *ózu-ozu* 'fearfully' (from the literary predicative equivalent to *ozíru*), *naku-naku* 'in tears'; *osoru-óoru* 'in fear, hesitant' (as in *osoru-óoru no mooside* 'a hesitantly made proposal'), and *kawaru-gáwaru* 'in turns, one after another'. The first five—iterated dissyllables—are the result of a dropped juncture; the other two have acquired new accentuation of the type appropriate to noun compounds.

129. Well known from *Koosi ga íwaku* 'Confucius say[s]'; there is also a noun *íwaku*([~]) 'reason; tale'. The pure noun *omówaku*([~]) is sometimes written with the Chinese character found in the second loanmorph of *méiwaku* 'trouble, bother', but that is a false etymology. *Omoéraku* 'what (I) think, methinks' is the *V-r[u] aku* form of the literary perfect (§9.6) *omoéri* 'has thought'.

To this list we can add the adverbs *tuku-zúku* (= *tuku-*"*tuku*) *{to}* 'thoroughly, earnestly' and *misu-misu* 'before one's eyes', derived from a variant of the verb *mésu* (probably < *mí-a-s-*), an old subject-exalting form of *mí-ru* 'sees, looks'. Perhaps *hikú-hiku* 'jerking, gasping, nervous' (whence eventually *bikkúri* 'surprised') and *súru-suru* 'smoothly' also belong here. On iterated adjective bases and other similar derivations, see pp. 799–800.

Some adverbs are reduced from phrases; the reduction is often marked by accentual or other divergences from the source: *ima-n{to}-toko{ro}* 'for the present, for the time being, as yet' < *ima no tokoró* 'the present place/situation', *káre-kore* 'around, approximately' < *káre* (= are) *ya kore* 'that and this'; *míru-ma ni* 'in the twinkling of an eye, in an instant'; *asana-ásana* = *ása-na ása-na* 'morning after morning, every morning', *asana-yúuna* = *ása-na yuu-na* = *ása-na yúu-na* '(every) morning and evening'—the *-na* in these expressions is probably a contraction of *ní wa*; *iyademo-óodemo* = *iyá de mo óo de mo*^{129a} 'whether yea or nay' = 'willy-nilly'; *koto-nó-hoka*([~]) 'exceedingly; unexpectedly'; *tódo-no-tumari* = *kekkyókú* 'in the end' (also an abstract noun 'the upshot, the final consequence'); *múyami-yatara ni* 'rashly'; *noruka-sóruka* = *norú ka sóru ka* 'sink or swim', *itika-bátika* = *ití ka batí ka* 'sink or swim' (~ *no dai-syóobu desu yó* (SA 2793.129b));

Often listed as a prefix, the quasi adverb *ái* is separated from the verb it modifies by a minor juncture: *ái | arasóu*, *ái | tatakau*, *ái | kataráu*, *ái | imasiméru*([~]), etc. The adverb, derived from the infinitive *ái* 'meet', has two meanings: one is a synonym of *ái-tomo ni* = *tómo*([~]) *ní* 'together, jointly' and the other is a synonym of *tagai ní* 'mutually, reciprocally, each other'. In the latter sense, *ái V* carries the same meaning as *V-i-au* (see §9.1.10); but *ái míru* can mean 'look at it together' (only?) whereas *mi-au* means only 'look at each other, exchange glances'. Kenkyusha gives 'together' examples of *ái yorokóbu* 'share joy' and *ái narande iku* 'go side by side'; the 'reciprocally' examples given are *ái mukatte suwaru* 'sit face to face' and *ái tuide* 'successively, one after another'.¹³⁰ The quasi adverb *ái* is well known in the set phrase *ái zéngo site* 'though not simultaneously = while differing in time' as in this example: *Tyósyá wa ái zéngo site "Gendai-búngaku no sintai" ... to iu hyoorón-syuu mo hakkoo sitá ga, ...* 'The author also published, though not at the same time, a collection of critical articles called "The course of modern literature", and ...' (SA 2687.109c). The quasi adverb *ái* is typically followed by a verb (*ái ogináu* 'complement each other', *ái nite iru* 'are mutually resemblant'), or a verbal noun predicated by *suru* (*ái itti suru* 'mutually accord', *ái muzyun suru* 'are mutually contradictory', *ái tekioo suru* 'are mutually accommodating') or a bound verbal noun predicated by *-su* or *-ziru* (*ái tuu-ziru* 'communicate with each other'); but occasionally other kinds of predicates are found: *ái hitosíi* 'are mutually equivalent', ...; *ái irenai* 'are inconsistent with each other'. Sometimes the "mutuality" is reinforced by adverbial expressions of similar meaning: ... *sorézore o-tagai ni ái oginátte, ...* 'they mutually complement each other respectively' (Nakane 83). I have confirmed the acceptability of *ái* with *ses-súru* 'get together', *kasamaru* 'mutually accumulate',

129a. Or *iyaga-óodemo* = *iyá ga óo de mo*.

130. More examples: ... *ái tonari-átta hutatú no kuni de ...* 'in two countries neighboring each other' (Kotoba no uchū 1967/4.15a); ... *hutatú no séiryoku ga ái tairitu suru sékai de, ...* 'in a world where two powers stand opposed to each other' (MJW); *ái koto-nátta génri no monó* 'those mutually responsive with ...' (Y 359); *hotóndo ái kikkoo suru gúrai ni tukawarete iru* 'are used virtually as if in mutual rivalry' (Mabuchi 210); *ái hisyoo suru* 'checks them against each other' (Gekkan-Bumpō 2/11.52b); A word of caution: what looks in print as though it might be **ái tai-súru* is in fact *aitai*([~]) *suru* 'face each other', a verbal noun—cf. *aitai*([~]) *zúkú*([~]) 'by (mutual) agreement'; the hyphenation in Kenkyusha is misleading. Cf. *ái han-súru* 'run counter to each other'.

hakáru 'plan together', maziwáru 'associate with each other', tudóu 'gather together', ...; also ái tazusáete 'hand in hand with each other', Notice too the derived nouns ai-moti 'mutual dependence, common possession' and ai-nori 'riding together'. In the epistolary style (§ 22.3) ái is rather freely prefixed to verbs with no special meaning, other than elegance, and that is the source of such expressions as Ai-sumimasén 'I'm very sorry/grateful; ai-kawarazu '(in good health) as always', and ái-naru-beku-wa 'if possible; if it's all right'.

Adverbs are like adjectival nouns and precopular nouns in that, unlike pure nouns, they can not be modified by an adnominal element, whether a prenoun or an adnominalized sentence. To be an epitheme (the target of an adnominalization) a word must be capable of playing a major role such as subject or object in the larger sentence, with a few special exceptions; see § 13.1 for a more detailed discussion. Predicable adverbs can undergo most of the conversions appropriate to a nominal sentence (... dá), but they generally resist the mutative conversions of § 9.1.11, though individual exceptions can be found: sibáruku ni náru 'gets to be a while' is acceptable but *sibáruku ni suru 'makes it a while' is not. The deictic-anaphoric correlatives kóo 'like this', sóo 'like that', áa 'like that', and dóo 'how' occur directly before náru/suru in the mutative conversions (*kóo ni náru/suru → koo náru/suru), with all but dóo losing their accents, as is usual when they are followed by anything other than the copula or a particle. This direct use before náru/suru is to be attributed to the fact that the derivation includes the morpheme -kú (kóo < ka-ú < ka-kú),¹³¹ used (as the adjective infinitive) both for the adverbial conversion and for the mutatives, as explained in § 9.1.11.

Certain of the adverbs of degree will modify nouns or noun phrases which are RELATIONAL, their meaning deriving from relative location in time, space, etc., with respect to some other noun, specified or understood: Súgu sóba da 'It is right nearby'; Sukósi migi desu 'It is a bit to the right'; Háruka saki ni ... 'Way ahead ...'; Móttö nanpoo no úmi ... 'seas farther south' (SA 2677.70c). Adverbialized quantity nouns can modify relational nouns in the same way, as we see in sono sán-yokka áto, ... 'three or four days after that' (SA 2689.126d), in which the entire phrase is directly adverbialized, but only after the noun phrase sán-yokka áto has been adnominally modified by the adnoun sono 'that'.

There are also adverbs which modify numbers or numerical phrases: maru 'fully' as in maru sánzyuu rokú-sai 'fully 36 years old'; asikake 'including the first and last (year), a full (number of years)'; syóomi 'just, clear, full, net' as in ... syáin(¯) to site hataraitá no wa syóomi han-tukí na n desu 'I have worked as an employee for a full fortnight' (Tk 3.184a); mono-no 'about, a matter of' as in mono-no sán-pun to kakaránakatta 'it didn't take three minutes' (SA 2639.106), mono-no san-yonzíppun mo iku to ... 'when I had walked for a matter of thirty or forty minutes' (SA 2642.35a); yáku 'approximately'; púrasu(¯) 'plus, over (count), up' and mainasu 'minus, under (count), short, down'—see § 13.7a. It is not clear, however, whether we need to differentiate these "prenumerary adverbs" from such adnouns as hon-no 'mere'.

Dictionaries sometimes treat mattakú 'complete(ly)' as if it belonged to two classes, pure adverb (mattakú^[1] siranai 'is completely ignorant', mattakú^[1] urusái 'is quite vexing') and defective precopular noun (Mattakú^[1] dá 'True',¹³² mattakú no úso 'an utter fabrication')

131. Corresponding to the accentually aberrant káku used as a semi-literary equivalent of kóo in the modern standard language. (See p. 784.)

132. But the accentuation given here implies an adverbial use with propredicative ellipsis such as Mattakú^[1] [(l) sóo] da. Unless it can be shown that (?)Mattakú da occurs, the proper assignment would

which lacks the adverbialized form with ... ní. From the distribution alone it would be sufficient to call *mattakú* a predicable adverb (*mattakú da/no, mattakú*); apparently the double classification is justified only by the meanings and by limitations on the kinds of nouns that can be modified by *mattakú no*, as in this example: *Mórita-si ga syoogákkoo o sotogyoo sita kóro, Tumagoi-mura wa zidoosya-dóoro mo tóotte inai mattakú no sanson dátta* 'When Mr Morita graduated from primary school Tsumagoi was an utter mountain village without even an automobile road running through it' (SA 2684.63e). When the adjectival noun *tásika* 'certain' is directly adverbialized it serves as a sentential adverb that is used to open a sentence as a transitional theme or conjunction with the meaning 'I think' or 'clearly (if I am not mistaken)'; cf. the adverbialization *tásika ni*, which usually modifies (and directly precedes) a predicate nucleus.

Adverbs seem to be highly idiosyncratic with respect to FOCUS; some adverbs take *wá* or *mó* freely, others take only *wá* or only *mó*, and quite a number occur with neither. Those that do not focus freely should be subcategorized, listed, and so marked in the lexicon. Some adverbial phrases already contain focus as given (i.e. do not appear except with the focus particle attached, or optionally attach/drop the particle):

MO: *matá-site-mo, matá-mo, matá-mo-ya* = *matá-mata*(⁻) 'repeatedly; once again'; *átáka-mo, ádáka-mo* 'just (as if)'; *iyásiku-mo* 'even slightly'; *imíziku-mo* 'aptly, admirably'; *tote-mo* 'absolutely, utterly, quite'; *sá-mo* 'evidently, so'; *siká-mo* 'moreover'; *kuregure-mo* 'repeatedly', *móttó-mo* 'most'; *iyaga-uénimo* (also *iyá ga ué ni mo, iyá ga ue ní mo*) 'even more, all the more'.

WA: *arúi-wa* 'maybe; or; some/others'; *mósiku-wa* 'or; otherwise'; *mátá-wa* 'or else, and(/or)'; *hiité-wa* 'and by extension, furthermore, moreover'; (Often listed is *zítu wa* = *zítu ni* 'in truth', but *zítu* is a pure noun.)

SI-MO: *kanarazú-sí-mo* '(not) necessarily'; *orí-si-mo* 'just then'; *tokí-si-mo* 'just then'; *máda-si-mo* 'preferable, rather'—as in *Zyuutaku wa syataku ga áreba máda-si-mo da ga, ...* 'For housing it's better to have a company house, but ...' (SA 2674.113a); (But *sási-mo* does not belong here; see p. 501.)

{MO}: *kéredo {mo}* 'but'; *náo {mo}* 'furthermore' (SA 2689.119a); *mósi {mo}* 'if, perchance';

{WA}: *túmari {wa}* 'in brief; after all' (SA 2678.116d); *osóraku {wa}* 'probably'; *mázu {wa}* 'about, nearly, on the whole', as in ... *mázu wa tyuu-kíbo no kokusai-gákkai* 'it is an international scholarly conference of about middle size' (SA 2677.158a); *sasuga {wa}* 'as expected';

Similarly, with various interjectional particles (from § 15):

{YA}: *sázo-kasi {ya}* 'likely', *matá-mo {ya}* 'yet again', *íma {ya}* 'now(adays)', *kanarazu* = *kanarazú ya* 'for sure', *másite*(⁻) = *másite ya* 'much more/less'; *yómo {ya}* 'surely (not)'; On *yá*, see p. 933.

{YA/KA}: *mósi {ya/ka}* 'if (perchance)'; ?

ZO: *túi-zo* '(not) at all, ever', *dóo-zo* 'please';

Some adverbs can optionally be followed by either *wá* or *mó*. Usually the focus will carry a difference of meaning (and translation): *sá-te* 'well, now', *sá-te wa* 'so then, besides',

seem to be that of a defective adverb lacking the predicate form. If so, it differs from the adverb *sassokú* 'sudden': *Sassokú desu ga ...* and *Sassokú* [¹] *desu ga ...* 'It is sudden, but ...' are both used; cf. Martin 1970, fn. 1.

sá-te mo = sáte-sate 'indeed, how very', sá-te koso 'that is why'; Predicable adverbs can take other markers of focus and restriction; sika can be applied both to adverbs and to adverbial phrases (such as those made with the postadnominal hodó): ... tokitama SIKÁ kao o dasánaku nátta 'got so he only seldom showed his face' (Kb 125a); ... kanzýoo suru hodó SIKÁ nori-te ga arimasén 'there are barely enough passengers to count' (Kb 125a). Examples of adverbs followed by various markers of focus, restriction, etc.: Ukkári WA sin'yoo dekinai (= Ukkári sin'yoo wa dekinai) 'You can't absentmindedly trust them'; Hitodoori mo máda, tirahora SIKÁ nákatta 'There was still pedestrian traffic only here and there' (Kb 251b); ... sugu ni DE MO ... 'right away, say, ...' (Kb 274b); Tikáku ni súde irú no ni tokitama SÚRA aemasén 'Though he lives nearby, I don't get to see him even occasionally'; Saikin KÓSO kono hen mo ié ga óoku nátta ga, sore máde wa zooki-báyasi bákari desita 'It is just lately that houses have sprung up around here (too), but up to then it was nothing but woods'; Anó-hito ni wa tokitama NÁDO/NÁNKA zya náku, máiniti(⁻) ai-tái n desu 'Him I want to see every day, not just once in a while or something'; Máiniti(⁻) zya náku, tokitama ṬGÚRAI nara awásete yaroo 'I'll let you see him if not every day at least once in a while'; Kúyo-kuyo BÁKARI sinákutt'atte [= sinákute mo] súmu wáke zyaa náí ka, nání-mo(⁻)? 'Can't you get along without worrying all the time?' (Kb 285b); Ano otokó wa saikin BÁKARI de mo si-gokai toonan ni átte iru sóo da 'He's been robbed four or five times just lately'; Tokitama DAKÉ de mo íi kara ai-tái monó da 'I want to see him even if it's only once in a while'; Aéru nara, tokitama D'ÁTTE kamaimasén 'If I can see him I don't mind if it is even once in a while'; Saikin HODÓ de wa náí ga, ano hen wa móto kara yóozin no warúi tokoró desita 'That's always been a place where the security (= police protection) was bad, though not as bad as recently'. (Anó-hito wa sendatté MADE kono gakkoo ni tutómete imá⁽¹⁾sita 'He was working in this school up till the other day' applies a temporal allative to a time adverb. See § 3.7.)

Dictionaries sometimes list as lexical items certain adverbial phrases of the type N [gá] A-kú, especially those with obligatory ellipsis of the subject marker.¹³³ When the noun is atonic, the juncture will drop with the case-marker, leaving a single phonological word: keiki ɛga | ɛ yóku 'in a lively way', kimae ɛga | ɛ yóku 'generously', tugoo ɛga | ɛ yóku 'conveniently'. When the noun is tonic, in many phrases the juncture persists, letting you hear two accent phrases: ikiói ɛgaɛ | yóku 'vigorously, forcefully', (On kázu óoku/sukúnáku and kazu-óoku, see § 13.5, § 9.1.) Oxytonic nouns behave like atonic nouns, leaving no overt indication of the juncture: tegiwá ɛga | ɛ yóku → tegiwá^[1] yóku 'skillfully'; orí ɛga | ɛ yóku → orí^[1] yóku 'opportunistically, fortunately'. But in other instances, the accentuation clearly tells us that the phrase has been reduced to a lexical compound: otí-naku 'without omission' < otí ɛga | ɛ náku; yamú-naku 'unavoidably' < yamú ɛ[no] ga | ɛ náku 'without any stopping' (or perhaps < yamú [[no] o | é-]naku 'being unable to stop?'); cf. p. 374. For 'unluckily' you will hear both ún wáruku with minor juncture and ún (-) waruku with the juncture dropped but the accentuation remaining phrasal (not *un-wáruku); yet 'luckily' seems to be said only as ún (-) yoku with no juncture, perhaps because it is a syllable shorter. The expressions derive from ún ga wáruku/yóku 'luck being bad/good'. A similar problem is the reduction of téi ga yóku 'appearance being good',

133. And those based on an otherwise unused noun, such as that found in kokoro-oki náku 'with-out reservation; hesitancy; easy in mind; heartily'. Notice that expressions such as kakúsu kotó náku 'concealing nothing' require the suppression of gá, even though the noun (kotó) is modified (here by the adnominalized verb kakúsu 'hides it').

which is said either as *tei-yóku* (by Hamako Chaplin) or as *téi (-) yoku* (by H) and means 'decently, gracefully'; MKZ^s lists both versions. (There is no **téi-wárukú*; the closest antonym is *bu-kiyoo ni* 'clumsily'.)

On the derivation of *ítu-no-má-ní-ka* 'before one is aware, unnoticed' from an interrogativized propredication *ítu no l ma ní [da] ka* 'is it (happening) in the interval of when/sometime/anytime', see p. 923. The adverb *sikáru-ni {máta(-)}* 'however' is derived from *siká áru {no}* 'though it be thus' with the literary adverb *siká = siká-ku = sóo*. Cf. *sikási* 'however' from *siká + si* (particle or infinitive, cf. 487); *siká-mo* 'moreover'.

Although *orí-kara* 'just then' and *onozukara (= onozu-to)* 'by itself, of its own accord' are adverbs, *mízukara* 'oneself, itself' is a pure noun (subclassed as a pronoun) as is the synonym *zibun*, since *mízukara ga/o* can be heard; but *mízukara* is sometimes directly adverbialized to mean 'by oneself, by one's own efforts'. Though often used as adverbs, the four words *sorézore*, *meiméi*, *menmén*, and *onóono* 'each, respectively' are also pure nouns: *kono onóono wa* 'each of these'; *meiméi ga* (SA 2724.29b). *O-tagai* 'each other' is sometimes used as a noun: *o-tagai o rikai(-) si-áu* 'mutually understand each other'; ... *o-tagai ga masúmasu kiken na róohi(-) o suru to iu zyookyoo* ... 'both sides making more and more dangerous extravagances' (Tanigawa 24).

It is possible for one adverbial phrase to modify another; the first is often an adverbial of degree: *túi saikin* 'quite recently, just lately', *túi saki-hodo* 'just a while back'; *mattakú totu-zen {ni}* 'quite suddenly'; *Sono hayasí ga, osorósiku nágaku tuzuita* 'That forest stretched an awfully long way' (SA 2642.34a). When there are two adverbials of degree they are usually to be taken together either (1) as independent modifications of the predicate, or (2) as a structure comprising the second adverb and the predicate that is modified as a whole by the first adverb: *Sore ní mo másite ikenai kotó wa ...* 'And even worse (than that) ...' (*sore ní* 'on top of that, besides' = *sono ue {ni}*); *ángai(-) tote-mo ii monó da* 'it is an unexpectedly very good thing' (CK 985.379); *Míte ótte, hanahada dóo-mo hu-yú kai desita né, mótto zibun wa, rippa na hazu dá to omótte* 'Looking at it, I was very unhappy indeed thinking I ought to be a better person' (Tk 2.140a); Usually only one order will be possible; as Sakuma (46) observes, you can say *móttö zut-to karúi* 'far lighter' but not **zut-to móttö karúi*. A string of two or more adverbial phrases not involving degree usually represents independent modifications of the predicate or sentence: TIME + TIME: *Mázu hazime/saisyo/dáiti ni, ...* 'First, to start with, ...';¹³⁴ TIME + SPEED: *Áru-hi totu-zen ...* 'One day suddenly' or 'Suddenly one day'; LOGICAL + LOGICAL: *Arúi-wa máta(-)* 'Or yet again'. An example with three adverbial phrases: *Watasi to Amerika tyoohoo-kíkan to no sessyoku wa, áru ása, mattakú totu-zen ni okótta* 'The contact between me and the American spy organization took place one morning quite suddenly' (SA 2641.17). Sometimes there will be a potential ambiguity that can be cleared up by the juncture: *ása | háyaku | ókite* will be understood only as 'rises early-in-the-morning' but *ása || háyaku | ókite* will be taken either as 'in the morning rises early/earlier' or 'in the morning rises hastily' (= *isóide ókite*).

It is also possible to modify a descriptive adverbial phrase by an evaluative adverbial: *iyá ni hanáyaka ni* 'disgustingly gaudily'. Sometimes a manner adverbial is used to modify

134. But in *Séngo ma-mó-naku no kóro ni ...* 'At a time not long after the war ...' the directly adverbialized time noun *séngo* modifies the adverb *ma-mó-naku* 'soon' to form an adverbial phrase that is predicated and adnominalized to *kóro* 'time'. In *Séngo(-) ma-mó-naku no áru-ban, ...* 'One evening shortly after the war ...' (Tk 3.253) we find further adverbialization of the resulting structure—also with predication and adnominalization.

another descriptive adverbial: *reitán ni hiniku ni* 'coolly cynically'. But the proper explanation for these types is an adverbialization (§ 9.1.11) of a descriptive sentence that has been modified by a manner adverbial: *iyá ni hanáyaka da* 'it is disgustingly gaudy', *reitán ni hiniku dá* 'it is coolly cynical'. The manner adverbials in question take on a tinge of "degree"; in some cases they are to be regarded as degree adverbs: *súgoku* 'terribly',¹³⁵ *hídoku* 'hideously', *osorósiku* 'frightfully', etc. By using one or more degree adverbs it is possible to inflate the structures given above: *súgoku reitán ni hiniku ni* 'in a terribly coolly cynical way', *hizyoo ni osorósiku iyá ni hanáyaka ni* 'in a very terribly disgustingly gaudy way'. But such efforts, like their English counterparts, seem more and more overdrawn with each addition. It is unclear whether such a phrase as *san-nin sorótte* 'in a group of three' (or 'in groups of three') should be taken as containing quantitative modification of an adverb derived from a gerund, or—more likely—as an adverbialization of a sentence *san-nin [no hitó ga] soróu* 'three people form a group'. The latter explanation is supported by such phrases as *go-húuhu [ga] o-soroi de* 'husband and wife together'. Some double adverbs have been phonologically consolidated into single lexical items and are so carried by dictionaries: *íma-nao* 'even now, still today',¹³⁶ *náo-sara(-)* 'all the more', *náo-mata*, 'moreover', *náo-nao* 'more and more, still more', Other double adverbs are clichés: *kírei sappári suteru* 'throws it clean away' (or *kírei sappári*, Tsukagoshi 38).

We have spoken before of the use of degree adverbs to modify relational nouns: *móo(-)* *daibu máe {ni}* 'now quite some time ago'; *moo tyót-to saki ni* 'a little farther ahead'; *Kooban no túi sóba da* 'It is right next to the police box'; *Kono sukósi sitá no Purinsu-Hóteru no áru hukín ni, ...* 'In the neighborhood a little below here where the Prince Hotel is ...' (SA 2642.42b); Other kinds of adverbs and adverbial phrases also sometimes occur as modifications of relational nouns: *sono súgu áto [de/ni]* 'immediately after that [in time/order]', *sono súgu tonari dé wa* 'right next door to that'; ... *kara saki ga tigau* 'from ... on it's different' (Maeda 1961.172); *Sono mata ué no tentyoo [= misé no tyóo]* *wa zyoomu-torisimari-yaku na n desu* 'The store manager still one above THAT is the executive director' (SA 2672.62c). Comparator phrases will be found: *sore yóri mo higasi(-)* 'more east than that, further east yet'; *Koko yóri mo hitótu kawa-simo no murá de wa* 'in a village one down the river from here'; *Anáta yori yohodo ue desu yó* 'I am much older than you' (Tk 2.135a). And adverbialized quantity nouns (numbers or quantifiers) are quite common: *hitóri saki ni déru* 'leaves one person ahead of others', *yottú tosi-ue no káno-zyo wa* 'she who is four years older' (SA 2635.59b); *mittú tosi-ue no ane wa* 'her sister who was three years older' (SA 2635.107d); Quantificational modification of relational time nouns is common; the modification is set off by a basic minor juncture: *ni-kágetu máe* 'two months ago/earlier/before', *sono san-nen notí ni* 'three years after that', The quantity can be focused or restricted: *yónhyakú-nen gúrai máe* 'some four hundred years ago', *nihyakú-nen ámari mo máe ni* 'over two hundred years earlier' (Ōno 1966.89); *Móo(-)* *nizyúu-nen mo mukasi no kotó ni náru ga* 'It was all of twenty years ago (but/and) ...'.

135. There is a contemporary use of the adjective *sugói* as equivalent to the degree adverb (mono-) *súgoku* 'very', according to *Kōgo-bumpō no mondai-ten* 275. An example recorded from 1972 television: *Sugói || hukuzatu ná n desu || née* 'It's real complicated, isn't it!' And *erái = eraku*, KKK 44.149.

136. But the following sentence will not permit the reading *íma-nao*, since we need *íma* as a directly adverbialized time noun to serve as epitheme for the adnominalized sentence ending *tátta*: ... *kansei gó(-)* *hutá-tuki ámari tátta íma náo kōokai sarezu ni iru ...* 'that is still not being shown to the public when over two months have passed now since it was completed' (SA 2640.103a).

The quantity may be an adverbialized sentence: *ík-ken oite tonari dá* 'it is two doors removed/away'. Sometimes an unexpected word turns out to be a relational noun: *Kamakurá(¯) ¯zidai no góku hazime o sakái* to site ... 'Taking the very beginning of the Kamakura period as a boundary, ...' (Ōno 1966.96); ... *góku syóki no kóro*, ... 'in the very early days' (Tk 4.323b); ... *syoogákkoo no góku syokyuu kara*, ... '(starting) from the most elementary class in primary school' (Ōno 1967.179); ... *taihen enpóo(¯) kara kíta* 'has come from quite far away'; *Móttö zyooryuu no hóo ga ii desyoo* 'Farther upstream would be better'. And sometimes the adverbial modification is *mata* 'again' interpolated between adnoun and noun: *sono mata o-kage de* 'thanks to that again' (Maeda 1962.170); *sono mata tugí wa* 'next after THAT (again)'; *sono mata usiro ni* 'and behind THAT (again)'; Degree adverbs can also modify nonspecific quantifiers, which resemble relational nouns in this respect: *Sihón-kin(¯) no KÁNARI óoku o Amerika kara úkete iru* 'We are getting fairly much capital from America' (*óoku* here is a noun derived from the infinitive *óoku* 'being much', not the infinitive itself); *Gakusei no HIZYOO NI óoku ga sensoo hantai da* 'Quite many of the students are opposed to the war'; *ZÚIBUN syooryóo(¯) o ireru to, kóoka ga áru* 'There is an effect when you put in a very small quantity'; *GÓKU ití-bu no hokusén-kei no hitó ga kageki ná n desu* 'It's only a very small part (= number) of the people of North Korean ancestry who are radical' (Tk 3.5a).

To say 'more interesting' or 'smaller' or 'cheaper' or the like, you can modify the adjective (or the adjectival/precopular noun) with the adverb *móttö* 'more'; you can supply the basis for the comparison by prefacing your description with *N yóri* 'than N', which will make *móttö* redundant but not unacceptable. When the basis for comparison is not specified, instead of *móttö* you will sometimes find *yóri(¯)* directly preceding the descriptive word: *Yori omosirói* 'It is more interesting'; *Yori ánka na gesyuku o motoméru* 'I seek more inexpensive lodgings'. This modern usage, more common in writing than in speech, is believed to have originated as an attempt to translate the English comparative '-er'. It is somewhat debatable whether this prefaced *yóri(¯)* is to be considered as a full-fledged adverb (following the treatment in MKZ⁵) or whether it should be called a prefix or, at most, a bound adverb. Notice the following characteristics of the structure: (1) Nothing, not even *wá* or *mó* or *ká*, can intervene between *yóri(¯)* and the descriptive word; (2) The resulting phrase can not be preceded by any modification, nor can the domain of *yóri(¯)* extend beyond the immediately following expression; (3) The presence of *yóri(¯)* does not serve to block the optional ellipsis of {*ná*} after an adjectival noun marked by the suffix *-teki* when another noun follows: ... *yori tyokusetu-teki [] hyoogén(¯)* ... 'more direct expressions' (Ishigaki Kenji 219); (4) Although we will follow H and K in listing this synonym of *móttö* as *yóri(¯)* with optional accent, most speakers seem to treat the word as atonic except for oratorical or reading pronunciations, when you may hear such versions as *Yóri | túyoku* ... 'More powerfully ...' (R). For the phrase *yóri(¯) óoki na yorokóbí(¯)* 'a greater joy' the pronunciation *yóri ooki na yorokobi* is given by H, as if the juncture were dropped. Speakers who use the atonic pronunciation (such as Hamako Chaplin) will usually attach *yori* to the following word without juncture: *yori sízuka na | tokoró de* 'in a quieter place', *yori kyooryoku na monó* 'more powerful things', *yori omoi sekinin* 'a heavier responsibility'. But in certain contexts a minor juncture is inserted: ... *seikatu o | yori | maemuki ni sasaeru(¯) { | } tamé ni ll* ... 'in order to support a livelihood with more foresight' (SA 2793.125a); *Zyúgyoo o | yori | omosiróku suru { | } tamé ni ll* ... 'in order to make the teaching more interesting ...'. We might account for the

prefaced *yóri*(-) as an ellipsis of [N] *yóri* that strands the comparator of § 2.6 after omission of the unspecified noun. The atonic version could be regarded as what we would expect to remain behind if some tonic noun (as in *náni ka yori* 'than something') were omitted; the tonic version would be expected from the omission of some atonic noun (as in *sore yóri* 'than that'). But it seems more likely that the atonic version is due to the somewhat artificial feel of the structure.

To say things like 'exactly nine o'clock', several devices are available: (1) pseudo adnoun + time noun: *syóo | kú-zi*; (2) adverb + time noun: *tyoodo [l] kú-zi, kittíri | kú-zi, kakkíri | kú-zi*; (3) time noun + adverb: *kú-zi | kakkíri*. The last form—a stylistic inversion?—is not used by all speakers. In place of *kakkíri* there are possibly speakers who use *kókkíri*, apparently a "downtown" Tōkyō dialect form. But from the data in dictionaries this word appears to be a restrictive ... *˘kókkíri* used as a synonym of one meaning of *˘daké* 'exactly': *iti-dó/ip-pén ˘kókkíri* 'exactly once', *hitótu ˘kókkíri* 'exactly one', *hyaku-en ˘kókkíri* 'exactly a hundred yen' (= *kakkíri hyaku-en*). Shimmura carries a variant with voiced initial *˘gókkíri*. See § 2.4.

In addition to specific collocational restrictions, certain adverbs such as *háyaku* 'fast' or *súra-sura* 'smoothly' will normally modify only verbal predicates; *súgoku* 'awfully', on the other hand, freely occurs with adjectives and also with at least some verbal predicates (*hasír-u, isógu, benkyoo suru, ...*). A few adverbs are so limited as to be bound intensifiers; thus *ippúu*(-) seems to occur only in *ippúu*(-) *kawatte iru* = *ippúu*(-) *tigau* 'is eccentric, unconventional'. *Hyakú mo* 'even a hundred' functions as an adverb idiomatically bound to the phrase *hyakú mo syooti da* 'knows full well'. The literary adverb *izukúnzo* (from *iduku n[i] = dóko ni + zo*) is usually followed by *siran* = *siramu* to represent the meaning 'How should we/I know?' The adverb *ryoo-ryoo* 'both (mutually)' appears to be always followed by the quasi adverb *ái*: *Sóren daihyoo, Béi daihyoo, ryoo-ryoo ái táizi site yuzurazu, koosyoo wa kuretu ni itátta*(-) 'The Soviet representative and the American representative were unyielding on both sides and the negotiations reached the breaking point'. But *ryoo-ryoo* is peculiar in that, unlike other adverbs, it will permit adnominal modification, as if it were a noun like *sóhoo* or *ryoohóo*(-) 'both'; yet, it is unlike *sóhoo* in that it can not be marked by *gá* or *ó*, and thus is an adverb rather than a noun: *Seisan husoku to zyuyoo no ryoo-ryoo ái mátte, itizirusii kákaku*(-) *no kootoo o manéita* 'With both insufficiency of production and growth of demand mutually interdependent, they invited a marked jump in prices'.

There are a number of adverbs with special shapes (many reduplicative) that refer for the most part to emotional affect; we will call them AFFECTIVE ADVERBS. By shape and origin we can distinguish the following types:

(1) Reduplicated dissyllables such as *níko-níko* 'smiling' that coexist with the non-reduplicated dissyllable in a discontinuous structure of the pattern $C_1 V_1 q/n C_2 V_2$ 'ri (thus *nikkóri* 'smiling'): *háki-háki* : *hakkíri* 'brisk, clear(cut)'; *méki-meki* : *mekkíri* 'remarkably, noticeably'; *úka-uka* : *ukkári* 'inattentively, absentmindedly'; *bíku-bíku* : *bikkúri* 'startled'; *yuku-yuku* ('as one goes' >) 'by and by, eventually, in the future' : *yukkúri* 'slowly'; *nobi-nobi* : *nonbíri* 'carefree'; *bóya-bóya* : *bon'yári* 'vague'. *With nigori*: *simi-zími* 'thoroughly, seriously'; *simíri* 'seriously, quietly'. *Without -q/n-*: *súra-sura* 'smoothly, easily' : *súrari* 'smoothly; slender'.

(2) Similar morphemes that occur only in the *-q/n*'ri form: *assári* 'simple, plain'

(but Shimmura lists *asa-asa* 'simply, lightly'); *dossári* 'ever so many/much'; *dossíri* 'massive; dignified' (*dósi-dosi* 'rapidly; constantly; in large numbers'); *pokkúri* 'suddenly, all at once' (*póka-poka* 'warm; repeatedly drubbing'); *sukkári* 'completely, totally'; *sokkúri* 'entirely; exactly; intact'—as precopular/adjectival noun (p. 1051) 'just like'.

(3) Similar morphemes that occur only in the reduplicated form: *dósi-dosi* 'rapidly; constantly; in large numbers'; *kóro-koro* 'rolling, chirping'; *séka-seka* 'fidgety, restless'; *úzya-uzya* 'in swarms'; *zóku-zoku* 'feeling chilled/thrilled'. *Two-mora monosyllables*: *gún-gun* 'steadily (progressing), vigorously'; *dón-don* 'boom-boom; rapidly, steadily'.

(4) Disparate dissyllables: *téki-paki* 'briskly, speedily'; *tíra-hora* 'sporadically'.

(5) Iterated verb imperfects (see p. 790): *kawaru-gáwaru* 'in turns, one after another'; *masú-masu* 'more and more'; *miru-miru* 'in the twinkling of an eye'; *misu-misu* 'before one's eyes'; *naku-naku* 'in tears'; *núru-nuru* 'slippery, clammy'; *osoru-ósoru* 'in fear; hesitant'; *ózu-ozu* 'fearfully'; *tuku-zúku* 'thoroughly, earnestly'.

(6) Iterated verb infinitives (see p. 411): (a) *vni./?adv.:* *aki-áki* 'growing weary'; *kori-kóri*, *kori-góri* 'learning to one's sorrow'; *músi-musi* 'being muggy, steamy'; *ózi-ozí* 'fearfully, timorously'; *súbe-subé* 'growing smooth, sleek'; *úne-une* 'undulating'. (b) adverb: *kawari-gáwari* 'in turns'; *kasane-gásane* 'repeatedly; wholeheartedly'; *naki-naki(=)* 'in tears'; *oi-ói(=)* 'gradually, by and by' (nonpredicable). (c) subjective adverb with optional *tó*: *ari-ári* 'vividly'; *hare-báre* 'unclouded; cheerfully'; *hie-bíe* 'cold'; *hore-bóre* 'fondly; enchanting, fascinating';¹³⁷ *iki-íki* 'vivid'; *kare-gare* 'about to wither'; *nobi-nóbi₁* 'feeling relieved'; (?) *nóme-nome*, *óme-ome* 'shamelessly'; *sae-záe* 'refreshingly, cheerfully'; *simi-zími* 'thoroughly' (see above); *úki-úki* 'lighthearted, jaunty'. Other iterated verb infinitives are precopular nouns (*nobi-nobi₂* 'with delay after delay', ...) and there is one derived adjective, *nare-naré-si-* 'intimate'.

(7) Iterated adjective bases (sometimes with attenuated meanings) that can be subgrouped according to privileges of occurrence as follows:

SUBGROUP	Adv + V	+ <i>tó</i>	+ { <i>to</i> } site iru { <i>to</i> } sita N	+ <i>dá</i> no N
(a) <i>gótu-gotu</i> 'rough, stiff' (also adjectival noun)	+	+	+	+
<i>nóro-noro</i> 'sluggish'	+	+	+	(+)
<i>yuru-yúru</i> 'loose, slow'	+	+	+	+
(b) <i>ao-áo</i> 'verdant'	+	+	+	—
<i>hoso-bóso</i> 'slender'	+	+	+	—
<i>kúdo-kudo</i> 'tedious'	+	+	+	—
<i>maru-máru</i> 'plump'	+	+	+	—
<i>naga-nága(=)</i> 'long'	+	+	+	—
<i>núku-nuku</i> 'warm'	+	+	+	—
<i>súgo-sugo</i> 'dejected'	+	+	+	—
<i>úto-uto</i> 'drowsy'	+	+	+	—
(c) <i>hiro-bíro</i> 'wide open'	—	+	+	—
<i>samu-zámu</i> 'cold'	—	+	+	—
<i>siro-zíro</i> 'white'	—	+	+	—

137. Guromúiko ga enzetu suru toki,^[7] *míte* 'te *hore-bóre simásu né* 'When Gromyko gives a talk, it's fascinating to watch' (Tk 2.119b).

SUBGROUP	Adv + V	+ tó	+ {to} site iru {to} sita N	+ dá no N
(d) kowa-gówa(¯) 'timid'	+	+	—	(+)
síbu-sibu(¯) 'reluctant'	+	+	—	(+)
tiká-zika(¯) 'near; soon'	+	+	—	(+) ¹³⁸
usu-usu 'faint, slight' ¹³⁹	+	+	—	(+)
(e) haya-báya 'early; prompt'	+	+	—	—
karu-gáru 'light; easy'	+	+	—	—
taka-dáka 'high' (cf. takádáka(¯) 'at most')	+	+	—	—
yasu-yásu 'easy'	+	+	—	—
úma-úma 'neatly, proficiently' (= mánmá-to)	+	+	—	—
(f) (ínoti) kara-gara 'barely'	+	—	—	+
(g) atu-atu 'heated; passionate' ¹⁴⁰	—	—	—	+

But the last item, a newish word, would appear to be a precopular noun, probably defective (since there is no *atu-atu ni 'heatedly'); a straightforward example: ... atu-atu no tokoró o tabéru no dá ga ... 'They are eaten when they are piping hot' (SA 2680.124d). The words in Subgroup (c) are like subjective adjectival nouns, but the táru form does not occur; tíma-tima 'small and round' (? < tí[isákute] ma[rui]) seems to belong here, but there is no adjective tima-. The one word in Subgroup (f), kara-gara, is a predicable adverb. The remaining subgroups are at the same time ordinary (i.e. objective) adverbs and SUBJECTIVE adverbs, in that they enjoy the option of taking the subjective essive tó. With a few exceptions (as noted above) these are not predicable; they are pure adverbs. The word akaáka-to with its obligatory tó is a subjective adverb; so, usually, are hukábúka-to 'deeply' and dékadeka-to 'in large letters = conspicuously'. Other subjective adverbs will be found among the mimetic and quasi-mimetic words of § 21.7. The adverbs in Subgroups (a), (b), and (c) are used alone with suru as if they were intransitive verbal nouns (and they are so noted in MKZ); we might regard this as an extension of the intransitive use of suru as seen in such expressions as otó ga suru 'a sound is made', níoi ga suru 'it smells', kanzi/ki ga suru 'has the feeling that', etc., but I believe it is better to think of them as the result of optional suppression of the subjective essive, i.e. as ellipsis Adv {to} site iru. The aspect class of the resulting phrase is, like that of suguréru, DURATIVE-STATIVE.

There are dialects that use the iterated adjective base as a regular form of the adjective paradigm (for example, on the island of Miyako in the Ryūkyūs); perhaps the forms listed above are relics of a similar process. There is one additional group of affective adverbs—with the grammar ADV {to}, ADV {to} site iru, ADV {to} sita N—that are made by placing compound-noun accentuation on an iterated noun: musume-músume 'girl-like, girlish(ly)', kodomo-kódomo 'childlike, childish(ly)', etc. Examples: ... sonna byoonin-byóonin sita kaotuki dé wa nákatá 'didn't have such a terribly sick(man) look' (Fn 210ab); ... monzén(¯)

138. In the temporal meaning 'soon' (also ~ ni).

139. And asa-asa is apparently used as a synonym by some; I recall seeing asa-asa to haréru '(the weather) slightly clears' in Kb.

140. And the derivative oo-átuatu(?) in oo-átuatu no sáiyuu de atta 'were in the midst of a passionate love affair'.

ni iru o-boosan ga syoobai-syóobai site ite hu-yúkai datta monó⁽ⁱ⁾ desu kara ... 'I was displeased at the commercialism of the monks in front of the temple gate' (Shiba 48).

Under the heading "affective adverbs" we have put together a number of different kinds of words, some of which are not—by our criteria—adverbs at all. The iterated verb infinitives of Subgroup 6a above are probably to be taken as bound verbal nouns (intransitive). You may occasionally run across the subjective *tó* where the scheme above would fail to sanction it, e.g. with *oi-ói(⁀)* in this example: ... *oi-ói(⁀)* to tuyói aityaku o kanzi-dásita 'gradually started to feel a strong attachment' (SA 2661.33d). You will also find *oi-ói(⁀)* ni and *kasane-gásane ni*, as if these were precopular nouns rather than—or as well as—adverbs.

The following list of Japanese adverbs is extensive but not exhaustive.¹⁴¹ The items are arranged to display semantically similar sets in a rough sort of way. The major subgroups are:

(1) adverbs of TIME—but excluding most adverbializations of time nouns like *íma*, *zén'ya*, *kóngo(⁀)*, *konó-sái*, *kon[o]aidá*, *konó-goro(⁀)*, *kono-saki*, *konókata*, *sákkon(⁀)*; *mímei(⁀)* {ni} 'early in the morning'; *seizén* {ni} 'while still alive, before (one's) death', *sígo* {ni} 'after (one's) death'; *gózitu(⁀)* 'some future date, later'; *áru-hi* 'one day, once (upon a time)—cf. *Sonna áru-hi*, ... 'On one such day' (Endō 91), *áru-ban* 'one evening', *áru-toki* 'one time', *áru-tuki áru-hi* 'a certain day of a certain month' (R), etc.

(2) adverbs of DURATION—but excluding many time and quantity nouns.

(3) adverbs of SPEED—but excluding such conversions of adjectives and adjectival nouns as *háyaku* and *níwaka ni*.

(4) adverbs of FREQUENCY—but excluding *sikiri ni/to* 'frequently', and numeral + *-dó*, *-kái*, *-tabi*, and *máiniti(⁀)*, *maisyun*, *maigetu* = *mai-tuki*, *mainen* = *mai-tosi*, ...

(5) adverbs combining TIME + FREQUENCY.

(6) adverbs of PLACE or ORDER—but excluding place nouns and relational nouns such as *koko*, *tikáku*, *sóba*, *tokorodókoru*, etc.

(7) adverbs of DEGREE (and QUANTITY)—but excluding quantity nouns.

(8) adverbs of MANNER—but excluding many infinitive conversions of adjectives (*-kú*) and adjectival nouns (*ní*) such as *itízu ni* 'wholeheartedly' (cf. *itízu na kangáe/hitó*) and *gooin ni* 'by brute force'.

(9) adverbs of EVALUATION.

(10) adverbs of LOGICAL RELATION—such as reason, source, contrast, concession, reaffirmation, commonality, addition, option, etc.

(11) adverbs of SENTENTIAL RELATION or modality—such as assertion (and prediction), prohibition or refusal, doubt, conjecture, desire, supposition, comparison.

141. Not included, for example, are the deictic adverbs *kóo*, *sóo*, *áa*, and *dóo*; *to-kaku*; ...; many of the direct adverbializations of §9.1.13; and idiomatic phrases such as *kono bún tóe/ni* 'at this rate' (§13.2), *kúru hi mo | kúru hi mo* 'day after day, day in day out' (§27), *hi iti-niti to* 'every day' (= *hi-bi ni*), *toki ni* 'on occasion; at the time; by the way' and *toki to site {wa}* (= *toki to suru to*) 'sometimes'. Also missing are directional adverbs. Japanese adverbial phrases of direction are typically made up of relational place noun in the allative (N *ní/é/máde*); when an adverbialized adjective (or, perhaps, directly adverbialized noun derived from an adverbialized adjective?) is used to express direction—as in *Migi no hóo e tooku isí o nageru* 'throws the stone far to the right'—it is probably best treated as a mutative use of the adjective infinitive. MKZ is said to carry some 1555 entries labeled "adverb" (Kōgo-bumpō no mondai-ten 185).

(12) adverbs with MULTIPLE MEANINGS from the above groups.

Preceding each item are four notes on distribution: w means wá can follow; m means mó can follow; d means dá and/or dé and/or nára can follow; and n means nó can follow (to adnominalize the adverb). When the adverb is cited with optional {ní} or {tó} the information on distribution is intended to apply to the raw adverb unless otherwise stated; in general, when tó or ní is added, the adverb will enjoy greater freedom with respect to focus.

LIST OF ADVERBS

(1) Adverbs of TIME

—	—	—	n	mókka 'at present': Mókka no kyúumu da 'It is a pressing matter of the moment'.
w	m	d	(n)	mókka-no-tokoro 'for the time being'
w	m	d	n	ima-n{o}-toko{ro} 'for the present, for the time being, as yet'
—	—	—	(n)	sénpan 'recently'
—	—	—	(n)	káhan 'recently'
w	m	—	n	kázitu 'the other day, recently'
w	—	—	n	kono-tokoró 'lately' (cf. saikin {ni}, a time noun)
w	m	d	n	kokontokó, kokontokoró 'recently, lately, of late': Atasi mo kokontokó ^[i] wázuka san-yonen no aida ni, syoogi tte monó ga ún-tó ^[i] túyoku nátta 'I've improved my chess game a lot of late, just within the past three or four years' (Tk 3.140b).
w	m	d	n	sendatté 'the other day, recently' (for Hamako Chaplin atonic everywhere)
w	m	(d)	n	senzítú(¯) 'the other day, recently'
—	—	—	n	sasizume '(for/at) present'
(w)	—	—	n	sasiatari, sasiatatte '(for/at) the present'
w	—	d	n	sasiatari-no-tokoró '(for/at) the present'
—	—	—	—	ikken {sita tokoró} 'at first glance; seemingly' (ikken is also a transitive verbal noun 'glance at')
—	—	—	(n)	orí-kara 'just then'
—	—	—	(n)	arakazime 'in advance': Arakazime no utiawase ga átta (¯)rasíi 'Apparently there were arrangements in advance'.
—	—	—	—	móo(¯) 'already; now'
—	—	—	—	háya, móhaya 'already; now; so soon'
w	m	—	n	senkoku 'a little while ago; already'
w	m	d	n	sákki 'a while back'
w	m	d	n	saki-hodo 'a while back'; ~ ¯rai (§2.4) = ~ kara 'since/from a while back'
w	m	—	—	sáki(¯) ní (= ízen) 'earlier, previously'; as a noun saki is always atonic: saki ni iku 'goes first (in advance)'.
—	—	—	n	kánete 'previously': kánete no nozomí(¯)/keikaku 'a desire/plan of prior standing', kánete kara 'for some time past'.
w	m	—	n	kátute, kátte 'at one time (in the past), formerly'
w	m	—	n	zyúurai 'hitherto' (cf. zyúurai ¯dóori 'as in the past, as before')

—	—	—	—	i-zen {to site} 'as ever/before'
(w)	—	—	(n)	yagaté 'before long': yagaté ^[1] no kotó ni 'before long', yagaté wa (KKK 3.191, SA 2655.29d)
—	—	—	—	hodó-náku 'before long, soon'
—	—	d	(n)	ma-mó-naku 'soon': sore kara ~ no zyuuni-gatú ^[1] nízyuu gó-niti 'the 25th of December, which was soon after that' (Agawa 1:171b).
—	—	d	(n)	tookárazu 'in the near future, before very long'
w	m	—	(n)	yuku-yuku 'by and by, eventually, in the future'
—	—	—	—	sooban 'sooner or later'
w	—	—	—	túi ni 'finally'
—	—	—	n	yooyaku 'finally'
—	—	—	—	súde ni {site} 'finally'
—	—	—	—	súnde ni
—	—	—	—	súndé-no-kotó {ni/de} } 'any moment (now/then); very nearly'
—	—	—	—	sunde-no-tokoró {de} }
—	—	—	—	tóotoo 'at last'
—	—	—	—	tódo 'at last' [literary] ¹⁴²
w	—	—	—	tódo-no-tumari 'in the end, as the final outcome' (~ wa, Fn 2.182b)
w	m	d	—	sáigo ni 'lastly, finally'
w	m	d	—	saisyo ní 'first'
w	m	d	—	hazime ní 'first'
w	—	d	—	dáiti ni 'first'
—	—	—	—	túide(¯) 'next, secondly'
—	—	(d)	—	tutó ni 'early, long ago'
w	m	d	n	sén, moo-sén 'before': sén no wáihu ni 'by my former wife' (Tk 2.104b); sén wa hizyoo ni yóku kita 'before, they used to come quite often' (Tk 4.295a). But is sén {ni} a time noun? sen-no-uti wa = móto wa 'originally, formerly' (Tk 3.189b) ≠ sén no uti(¯) wa 'my former home'
—	—	d	—	tokkú(¯) ní } 'long since' ¹⁴³
—	—	—	—	tóo ni }
—	—	d	n	ítu-no-má-ní-ka 'before one knows it'
w	—	(d)	—	mizen ní 'before it happens (forestalling)'
—	—	d	(—)	noti-hodo 'later on' (but noti is a time noun)
—	—	—	(n)	kóonen(¯) 'in later years; later on, afterwards'
w	(m)	?	n	syóorai 'in future' (also a noun 'the future')
—	—	—	—	íza 'at the (critical) moment'

(2) Adverbs of DURATION

w	—	d	n	sibároku 'for a while'
w	—	—	n	toobun 'for the time being, temporarily; for the present'
w	—	?	(n)	zánzi 'for a short time' [literary]—also noun?

142. From *tódo* 'a fully grown grey mullet (*bora*)', because the fish is called different names at different stages of growth.

143. But there is also *tokkú no mukasi* 'long ago'; these expressions are variants of *tóku* 'early' (the infinitive of a literary adjective *tó-* 'quick' < 'sharp').

w	m	d	n	ittokí(¯)	'for a while'—or is this a noun?
w	m	—	—	katatokí(¯)	'(not) even for a moment'—or is this a noun?
w	—	—	(n)	hitómazu	'for a while, for the time being, temporarily'
—	—	—	n	naga-nen {ni watatte}	'for a long time'
—	—	—	(n)	nagáruku	'for a long time'
—	—	—	—	hisásiku	'for a long time' (NOTE: Like its synonym hisasiburi ní/dé, hisábisa ni/de 'after a long interval' is a precopular noun.)
w	m	d	—	nágaku	'for a long time, lengthily' (§9.1.11)
—	—	—	n	nénrai(¯)	'for some years now': nénrai(¯) no nozomí(¯) 'a hope held for some years now'
—	—	—	(n)	tosígoro	'for some years now'—≠ tosi-goro 'age (of/when)'
(w)	—	—	n	senpán-rai	'for some time now/past'
—	—	—	n	kahán-rai	'for some time now/past'
—	—	—	n	TIME QUANTITY + ¯rai	'for ... now': suu-kágetu ¯rai = suukagetú-rai 'for some months now', etc.
—	—	—	n	TIME + ¯zyuu	'all through': kyóo ¯zyuu 'all through today', hitó-ban ¯zyuu 'all through the night' ¹⁴⁴
w	—	d	n	nénzyuu	'all through the year'
w	m	d	n	nengara-nénzyuu, nén-gara nénzyuu	'all year around'
(—)	—	(d)	n	syuuzitu(-syúuya)	'all day (and all night)'
—	—	—	n	syúuya	'all night long' (also atonic?)
w	—	d	n	yodoosi	'all night long'
—	—	d	n	yoppité(¯)	'all night long' [< yoppitói < yó hitó-yo 'one night of night']
(w)	—	d	n	yomosugara	'all night long' [literary]
w	m	d	n	tunézúne(¯)	'all the time, always' ¹⁴⁵
w	—	d	—	hikkirí-nási ni	'without letup'
—	—	—	—	nóbetu {ni}, nóbetara(¯), nóbetu-makúnasi ni	'continuously, uninterruptedly'
—	—	—	—	táezu	'constantly'
w	?	d	—	tuzuite	'continuously'
w	?	d	n	tuzukete	'continuously'
w	m	d	n	húdan {ni}	'constantly; usually, customarily, habitually'
(3) Adverbs of SPEED					
w	—	d	n	sassokú	'at once'; Sassokú ni mo (*Sassokú mo/ni) sirábeta mimasyóo 'Let's check right away'.
—	—	d	n	sokkoku	'instantly, this instant' (also sokkoku ní wa)
w	—	d	—	tádati ni	'immediately'
(w)	—	(d)	—	sássá to	'at once, as quickly as possible'

144. But PLACE + ¯zyuu yields a place noun (sékái ¯zyuu o ryokoo sita 'traveled the world over') and TIME + ¯tyuu yields a time noun (kotosi ¯tyuu {ni} 'at some time during the year').

145. Also used as a time noun, a synonym of túne: Tunézúne(¯) ga taisetu da, Tunézúne(¯) o taisetu ni suru.

—	—	—	—	tóttó-to 'at once, as quickly as possible' (< tóku to tóku to 'sharply sharply > quickly quickly')
w	(-)	(d)	—	tati-dókoró(¯) ní 'instantly, on the spot'
w	—	—	—	génka ni 'promptly, at once'
—	—	d	n	tatimati {ni} 'instantly, in an instant'
—	—	—	(-)	iti-háyaku 'promptly, quickly'
—	—	d	—	massígura ni 'impetuously, at full speed'
w	—	d	n	ikinari 'abruptly'
—	—	d	—	míru-ma ni 'in the twinkling of an eye, in an instant'
—	—	(...)	(n)	kyúukyo 'hastily, hurriedly'
w	—	d	—	yaniwa ní 'suddenly'
—	—	d	n	totu-zen {ni} 'suddenly'
—	—	—	—	ga-zen 'suddenly'
w	m	d	—	kyuu ní 'suddenly'
w?	—	d	?	hyoi tó 'suddenly, unexpectedly'
—	—	—	—	sát-to(¯) 'suddenly'
—	—	—	—	dót-to(¯) 'bursting out suddenly; stampeding'
w	—	—	—	ói-sore-to 'readily; on short notice'
w	m	d	n	yukkúri {to} 'slowly, taking one's time'
—	—	—	—	dandán {ni/to} 'gradually'
w	—	(-)	—	zyózyo ni 'a little at a time, gradually'

(4) Adverbs of FREQUENCY

w	—	—	—	ittan '(just) once'
—	—	—	—	issai 'once or twice'
w	m	d	n	itido-nárazu 'more than once'
—	—	—	n?	maremare {ni} 'seldom, rarely' (cf. mare(¯), adjectival noun)
w	—	d	n	síba-siba 'often'
w	m	d	n	asi-sígeku 'often, frequently'
—	—	—	—	oo'oo {ni site} 'frequently, not seldom'
—	—	—	—	dósi-dosi 'in rapid succession; in large numbers'
(-)	(-)	—	—	zóku-zoku(¯) {tó} 'repeatedly, successively' (~ tó, Tk 4.277)
—	—	—	—	kasanete 'repeatedly'; hi o kasanete 'over a period of many days'
w	—	d	(n)	hutatabi 'again, twice'
w	m	d	n	koto-aratámete 'again'
—	(-)	d	n	mata 'again' (= hutatabi); cf. mata 'what is more, at the same time', máta(¯) 'and/or', máta-wa 'or else, and/or' (CONJUNCTIONS); máta-no-hi 'tomorrow; another (later) day' (TIME NOUN).
—	—	—	—	mátá-mo{-ya} 'again (undesirably)'
—	—	—	—	mátá-mata(¯) 'again, repeatedly' (= kasanete)
—	—	—	—	matazoro(¯) = mátá-site-mo 'yet again (gratuitously)'
w	m	d	(-)	tyóku-tyoku, tyói-tyoi 'now and then; often'
w	—	d	n	yori-yori 'from time to time'
w	—	d	n	tokidoki 'sometimes'

w	—	d	n	tokíori(¯) 'sometimes, off and on'
w	?	d	n	tokitama 'occasionally'
w	—	(d)	n	oríori(¯) {ní} 'occasionally, on occasion'
—	—	—	—	éte {site} 'often'
w	m	d	—	sígésige {to} 'frequently, often'—where you expect *sígésige no hoomon you find sígésige {to} sita hoomon 'frequent visits'.
w	—	d	n	tabitabi 'often'
—	—	—	—	máma 'often' (as in máma áru 'it often happens')
—	—	d	n	saisan 'over and over'
w	(—)	d	n	saisan-sáisi 'over and over again'
w	(—)	d	n	saisai 'often'
w	(—)	d	n	(nennen-)saisai 'year after year'
—	—	—	—	asana-yúuna 'morning and evening' (= ása-na yúu-na)
—	—	—	—	ašana-ásana 'morning after morning' (= ása-na ása-na)
—	—	—	—	híni-hini(¯) 'day after day, every day'
—	—	—	—	yóna-yona(¯) 'night after night'
—	—	—	—	hínimasi(¯) = himasí(¯) ni '(more) by the day, daily'
w	—	—	—	métta ni '(not) rashly = (seldom)'
—	—	d	n	zúizi 'at any time, at all times; from time to time, on occasion' [literary]
(5) Adverbs combining TIME + FREQUENCY				
—	—	d	n	kanégáne(¯) 'often before'
—	—	d	—	sára ni 'anew'
(6) Adverbs of PLACE or ORDER				
—	—	d	(n)	harúbáru {to} 'afar; at a distance'
—	—	d	n	tugítugi {to/ní} 'one after another; in succession'
w	(—)	d	n	hitotu-hitótu, hitotu-bítotu 'one by one; individually'
w	—	d	(n)	ití-iti 'one by one; separately; in detail'
—	—	(—)	n	kawaru-gáwaru, komógomo [literary] 'one after another, by turns'
—	—	—	(—)	tikúzi 'one after another, in order, successively' [literary]
—	—	d	n	zyun-gúri(¯) {ní} 'in order'
(7) Adverbs of DEGREE (and QUANTITY)				
—	—	d	n	íssái 'absolutely; wholly' (also noun)
—	—	d	—	sukkári 'wholly'
—	—	d	n	súbete 'wholly, generally' (also noun)
—	—	d	(n)	nokórazu 'all, entirely'
—	—	d	—	nóbe 'in all, in toto': nóbe hyakú-nin no gakusya 'a hundred scholars in all'.
w	—	d	n	kotogótoku 'all, completely'
w	—	—	n	arakata 'mostly, on the whole, for the most part'
(—)	(—)	?	n	arittake 'all there is, the whole thing' (followed by ó only as the result of ellipsis: ínóti no arittake [no monó] o katamukéru 'devotes one's whole life').

w	(m)	—	—	sémete 'at most/least: just' (sémete mo N; sémete wa, Tk 2.240a)
—	—	d	(n)	kyokúryoku(¯) 'to the utmost, as best/most one can'
—	—	(-)	n	koto-nó-hoka(¯) 'exceedingly, exceptionally; unexpectedly'
—	—	d	—	mekkíri 'remarkably'
—	—	d	n	amari {ní}, anmari 'overly' ¹⁴⁶
w	(m)	—	—	húndan ni 'lavishly, lots'
w	—	d	—	yokei {ní} 'much; too much'—also yoke: Yoke uraná n desu yó 'We don't sell much of it!' (Tk 4.73b); yokei is both an adverb and an adjectival noun (yokei na kotó 'an uncalled-for remark').
(-)	(-)	—	—	wánsa to, wánsa-wánsa to 'in droves' (cf. wansa-gáaru 'chorus girls')
—	—	—	—	taráhuku(¯) '(eats) one's belly full' (= manpuku, hara-íppai)
—	—	—	—	táta 'lots; many; more and more' [literary]
—	—	—	(n)	issoo 'all the more, still more'
w	m	(-)	(-)	tan-tó 'lots; [dialect] a little'
—	—	—	—	sikotama 'quite a lot'
—	—	—	—	tanmári {to} 'quite a lot'
—	—	—	(n)	kánari 'fairly; quite'—also adjectival/precopular noun (~ na/no N).
—	—	—	—	kékkoo 'quite (a lot)' (~ omosirói 'quite interesting')—also adjectival noun 'splendid; satisfactory'.
—	—	—	—	sukunakarazu 'quite a lot' (N ga ~ áru 'has quite a few N')—but óoku 'much, many' is a pure noun.
—	—	—	—	wariai {ní} 'comparatively, rather'
—	—	—	—	híkaku-teki {ní} 'comparatively, rather'
—	—	—	—	sígoku 'exceedingly'
—	—	—	(n)	zu[ba]-núkete 'extraordinarily'
—	—	—	—	sukóburu 'extraordinarily, most'
—	—	—	—	kiwámete 'extremely'
—	—	—	—	góku 'extremely'
—	—	—	—	góku-goku(¯) 'extremely'
—	—	—	—	hanahada 'extremely' (= hanahadásiku: ~ wa, Nagano 1966.89)
w	m	—	—	kyokután ni 'extremely'
w	m	d	n	yoku-yoku 'extremely much; thorough(ly)'
—	—	d	n	daibu 'mostly'
—	—	d	—	táisoo 'very'—also adjectival noun.
—	—	d	—	taihen 'very'—also adjectival noun.
—	—	d	—	zúibun {to} 'very'—also adjectival noun; Zúibun to osoi hanasí

146. This follows the data in MKZ⁵; NHK appears to give a[n]mari for the adverb and anmari for the adjectival noun, K has anmári for the adjectival noun. Since the word comes from the noun amari 'surplus', derived from the infinitive amari 'be too much', we could treat the "atonic" adverb as having an automatically cancelled final accent (in the absence of *~ wa/mo). But if amari ni/na is atonic, the basic form of the adverb must be atonic, too. Cf. [~]amari, §2.4.

				da 'It's a [tale =] situation much delayed (in coming about)' (SA 2672.60).
—	—	—	—	óoi ni 'greatly'
—	—	—	—	tái-site 'greatly'
w	—	—	(n)	gái-site 'in general'
w	—	—	—	ittai ní 'in general'—cf. ittai (LOGICAL RELATION)
—	—	—	n	tote-mo 'utterly; quite'
—	—	—	—	tón-to(¯) 'entirely; (not) at all'
—	—	—	—	zettai ni 'absolutely (not)'
—	—	—	—	zenzen 'completely, utterly'
—	—	—	—	ikkoo {ni} ' (not) at all; absolutely, quite' (also under 12 below)
—	—	—	—	hóbo 'nearly'
—	—	d	n	hotóndo 'almost; nearly' (also quantity noun = hotóndo zénbu 'almost all')
—	—	—	—	káre-kore 'around, about, nearly' (from '[while saying] this and that')
—	—	—	—	yáku 'almost, about'
—	—	—	—	múryo 'no less than, as many as, approximately'
w	m	d	n	aramasi 'almost, about' (also noun 'gist, summary')
w	—	d	—	zat-tó 'roughly, approximately; briefly, sketchily'
w	—	d	n	ooyoso 'almost, about'
w	—	d	n	oyoso 'almost, about'
—	—	(d)	—	kokoromoti 'slightly, a little' (d = nára)
w	m	d	n	isásaka 'slightly, a bit'
w	m	d	n	sukósi 'a little' (quantity noun)
w	—	d	n	íkura-ka 'somewhat'—cf. íkura ka 'some amount' (quantity noun).
w	—	d	n	ikubun {ká} 'in part'—also quantity noun 'some'.
—	—	—	—	yáya 'slightly'
w	m	—	—	itigai ni 'all-out, sweepingly'
(w)	—	d	n	ne-kósogi(¯) 'entirely': ne-kósogi(¯) ní wa.
w	?	d	n	aráizárai(¯) 'every last thing'
—	—	—	—	moo '(some) more' (+ quantity), '(continuing) some more' (+ affirmative), '(not continuing) any more' (+ negative); cf. móo(¯) 'already; now'
—	—	d	—	móttö 'more'
—	—	—	(n)	masúmasu 'more and more'
—	—	—	—	másite(¯) = másite ya 'much more/less'
—	—	—	—	móttö-mo 'most' (cf. móttö-mo 'of course')
—	—	d	n	itiban 'most' (cf. iti-ban 'number one')
—	—	—	—	simizími {to} 'keenly; fully'
—	—	d	n	heikin {site} 'on the average'
—	m	—	(n)	náo 'still (more/less)'
—	—	d	(n)	náo-sara(¯) 'all the more/less'
w	(-)	d	n	hitotoori 'cursorily, roughly, briefly; (as) usual; (tentatively) all'

See also the words for 'especially; merely; at most' etc. under LOGICAL RELATION.

(8) Adverbs of MANNER

w	(m)	d	n	sot-tó 'softly, stealthily'
—	—	d	n	nainái(¯) {ni} 'privately, by oneself, quietly, secretly' (≠ nainái suru 'all gone, finish, put away' [babytalk])
w	(m)	d	—	gún-gun {to} 'steadily forward'
(w)	(m)	d	—	kossóri {to} 'stealthily' (w: kossóri to wa hanasánai)
w	—	(d)	n	omote-muki 'openly, publicly'
—	—	—	—	dén-to(¯) 'conspicuously (placed)'
(w)	(m)	d	—	kóro-koro {to} 'rolling; chirping'
(w)	(m)	d	—	sóyo-soyo 'gently' (w: sóyo-soyo to wa hukánai)
(w)	(—)	—	—	kitin-to 'accurately, punctually, neatly'
w	(m)	—	—	hakkíri {to} 'clearly, exactly' (m: hakkíri mo kikanákatta)
w	(—)	—	—	tyan-tó 'perfectly, neatly'
—	—	—	—	hira-hira {to} 'fluttering'
—	—	—	—	kát-to(¯) 'suddenly arising, opening up'
—	—	d	—	kan-zen {tó} 'boldly'
—	—	—	—	sut-to 'straight (out), up quickly; relieved'
—	—	d	—	séka-seka {to} 'restlessly'
w	(—)	—	—	átahuta {to} 'in a hurry' (said to be from awate-hutaméku 'fluster oneself')
—	—	—	(n)	hitásura(¯) {ni} 'intently, wholeheartedly'—pure adverb and also adjectival noun, as in hitásura(¯) na táido 'an intent attitude'.
w	—	d	—	wáza-to 'on purpose, deliberately'
w	—	d	(n)	wáza-waza 'on purpose, deliberately'
(?)	?	d	n	husyoo-búsyoo {ni} 'reluctantly, unwilling'—both adverb and precopular noun: husyoo-búsyoo {ni} haráu 'pays reluctantly', husyoo-búsyoo no táido 'a reluctant attitude'.
w	m	—	—	kúyo-kuyo 'worrying, moping' (~ suru, ~ sinpai suru)
w	—	d	—	hitori-de ní 'spontaneously'
—	—	—	—	sozoro {ní} 'somehow in spite of oneself'
w	—	—	—	zit-tó 'fixedly'
—	—	—	—	hakárázu-mo 'by accident'
—	—	—	—	hyót-to 'by chance'
—	—	d	n	guu-zen 'by chance'
w	m	d	—	guu-zen ní 'by chance'
—	—	—	—	sétu ni 'earnestly'
—	—	—	n	tátte(¯) 'insistently'
w	m	d	—	múge ni 'bluntly, flatly'
—	—	—	—	rúru {to} 'minutely, in detail; continuously'
w	m	(d)	—	túbusa ni 'in detail, fully'
(w)	—	(d)	n	tikuiti 'in detail, item by item'
—	—	—	—	yúu ni 'gently; amply'
w	(m)	—	—	syúuné-ku 'persistently'
—	—	—	—	ákuseku {to} 'sedulously' (also intransitive verbal noun, N ni ákuseku suru 'worries about N; is eager for N')

—	—	d	(—)	zubáři {to} 'boldly'
—	—	d	n	namazi[i], namazi-kka 'rashly; imperfectly'—also namazii {ní}, namazi-kka {ní}, adverb and precopular noun.
w	—	d	(n)	siite 'forcibly, by force'
w	m	d	—	túyoku 'hard, vigorously' (§ 9.1.11)
—	—	—	—	mitimiti 'while on the way, while walking (= aruki-nágara)' ¹⁴⁷
—	—	—	—	sitátaka 'heavily (beating, drinking, scolding ...), hard'
w	—	d	—	tukétuke {to} '(speaking) harshly'—instead of the adnominal with nó you will find tukétuke {to} sita ii-kata 'harsh man- ner of speaking'.
(w)	(m)	—	—	zóku-zoku {to} 'feeling chilled/thrilled'
(—)	—	—	—	suttámonda 'wrangling' (~ suru, ~ no ageku/sáwagi; ~ fsuru kotó} wa go-men dá)
?	—	—	—	yassa-móssa 'in disorder/trouble; helter-skelter' (~ to, ~ suru)

(9) Adverbs of EVALUATION

—	—	—	—	iyá ni, 'yá ni 'disgustingly; strangely (= myóo ni); terribly (= báka ni)'
—	—	d	—	osorósiku 'terribly, frightfully'
w	m	d	—	(mono-)súgoku 'awfully, terribly' (also DEGREE)
w	m	d	—	mezurásiku 'unusually, exceptionally'
w	m	d	—	subarásiku 'wonderfully, gloriously' (shades into DEGREE)
—	—	—	n	tobikiri 'most, best' (shades into DEGREE)
w	m	d	—	hagésiku 'violently; passionately'
w	m	d	—	yasasiku 'nicely'
—	—	—	(n)	isso 'rather; preferably'
—	—	—	—	móro ni 'completely, thoroughly; in a jumble'
—	—	—	—	roku ni '(not) satisfactorily'
—	—	d	n	máda-si-mo 'preferably, rather'
w	—	—	—	mídari ni 'rashly; without good reason (or permission); excessively'
w	(m)	d	—	múri ni 'forcibly; unreasonably; excessively' (also MANNER?)
(w)	—	(—)	(n)	múriyari(¯) {ni} 'forcibly'
w	—	(d)	—	múyami ni 'rashly; excessively' (also MANNER?)
w	—	(d)	—	yatara ní 'indiscriminately; excessively'
w	—	(d)	—	múyami-yatara ni 'rashly'
w	—	(d)	—	musyoo ní 'inordinately'
—	—	—	—	sanzan {ní}, sanza(-ppara) 'severely, harshly' (sanzan is also an adjectival noun)
—	—	—	n	ippasi '(properly) enough, like other people, just as good/much as everyone else'
w	(m)	d	n	úmaku 'happily, successfully, nicely, smoothly; adroitly'

147. Like totyuu and aida ¯zyuu, this can also serve as a postadnominal, directly adverbialized as a predicable adverb; in that usage, mitimiti can be followed by dá, nó, mó, and perhaps wá. An example with mó: káeru mitimiti MO kangaeta no da ga ... 'he thought about it on his way back (too)' (Fn 213b).

—	—	d	n	saiwai 'happily, fortunately'
—	m	—	—	saiwai ní 'happily, fortunately'
—	m	—	—	hukóo ni 'unfortunately'
—	—	d	n	ainiku {tó} 'unfortunately'—also adjectival noun 'unfortunate'
w	m	—	—	rippa ní 'splendidly'
—	—	—	—	míngoto = míngoto ni 'admirably'
—	—	—	—	táda-de-sae 'even under normal circumstances; (more/worse so) than ever' (Okitsu 1.334)

(10) Adverbs of LOGICAL RELATION

—	—	—	—	káette 'contrariwise'
—	—	—	(n)	músiro 'rather' (n: músiro no kotó)
—	—	—	—	náraba 'if possible, preferably'
—	—	—	—	yahári 'also; nevertheless'
—	—	d	n	sore yúé 'therefore' (cf. §2.4a)
—	—	—	—	nán da ka 'somehow (or other), sorta, somewhat; for some (unknown) reason' (cf. Y 385-6)
—	—	—	(n)	an-nó-zyoo 'as expected'
—	—	—	—	tínami(¯) ní 'by the way'
—	—	—	—	ma-no-atari {ní} 'before one's eyes; actually'
—	—	—	—	gén ni 'actually'
—	—	—	(—)	ge ni 'truly' (~mo is literary)
—	—	—	—	zitú ni 'truly'
—	—	—	—	án ni 'tacitly, implicitly'
—	—	—	—	mása ni 'precisely; just'
w	—	—	(n)	syosen 'after all' (n: syosen no tokoró; syosen wa, Tk 2.188a)
w	—	—	(n)	kekkyokú 'after all; in the last analysis' (kekkyokú no hana ^(?))
w	m	(d)	—	kekkyoku-no-tokoró 'after all'
w	—	—	(n)	hikkyoo 'after all; virtually; in substance'
—	—	—	(n)	tootei 'after all; absolutely; ultimately' (tootei no kotó de wa ná)
—	—	—	—	hiité-wa 'and by extension; moreover, furthermore'
—	—	—	—	kédasi 'after all; probably'
—	—	d	n	umaretuki 'by/from birth' (also noun, postadnominal—see §13.2)
—	—	—	n	séirai 'by nature, naturally, constitutionally'
—?	—	—	—	yúrai 'originally, by nature, from the first' (< yurai 'origin')
w	—	d	n	motomoto 'originally, naturally; strictly speaking'
w	—	(d)	n	daitai 'on the whole, in substance (= daitai ni óite); strictly speaking, originally (= motomoto)'
—	—	(d)	(n)	ittai 'properly speaking, originally; [what etc.] in the world'; ittai ni 'in general' (ittai no tokoró)
w	?	d	n	gánrai 'originally' ¹⁴⁸

148. Occasionally gánrai functions as pure noun '(by) one's origin': N wa gánrai ga, Tookyóo-zin na no de arimásu ... 'N is a Tokyoite by origin' (this may be idiomatic).

—	—	—	n	sómo-somo 'to begin with; in the first place; wh(atever) ...!; well, now'
—	—	—	—	símete 'all told, in total' (usually followed by a sum of money)
—	—	—	—	awásete 'altogether, in all'
w	—	d	—	issei ní 'unanimously'
w	?	d	—	ái-tomo ni
w	?	d	—	tómo(⁀) ní
w	m	d	—	issyó ní
—	—	(d)	n	tomódomo(⁀) {ní}
—	—	d	n	morotomo {ní}
—	—	—	—	ryoo-ryoo (ái ...) 'both (mutually)'—see p. 798.
w	—	—	—	[o-]tagai ní 'mutually, reciprocally', ¹⁴⁹
w	?	d	—	tendé[n](⁀) ní 'separately, respectively; each'
w	m	—	—	kakubetu ní 'individually'
—	—	(d)	n	sorézore, meimei, onóono 'each, severally, respectively'—but also nouns: kono sorézore ni wa 'to each of these'
—	—	—	—	sunáwati
—	—	—	—	sóku (= sunáwati)
—	—	—	(n)	masásiku (n: masásiku no tokoró ^(t))
w	—	—	n	tori-mo-naósazu
w	—	—	(n)	túmari 'id est; in brief' (n: túmari no tokoró ^(t) /hanási ^(t))
—	—	—	—	hito-yonde 'what is called, what people call'
—	—	—	—	narabi ni 'and, additionally, both together'
w	m	d	n	matá-no-na(⁀) 'alias; also known as'
—	m	—	?	wákete 'most of all; all the more; in particular'
—	—	—	(n)	toriwake[-te] 'especially'
w	—	—	—	tóku ni 'especially'
—	—	—	—	kóto ni 'especially'
—	—	—	—	nakánzuku 'especially; in particular (among the many)' (= náka de mo)
—	—	—	n	itidan 'especially, conspicuously' (also noun)
—	—	d	n	hitósio 'especially; all the more, much more'
—	—	—	n	hitókiwa 'especially, conspicuously'
—	—	—	—	tán ni 'simply, merely'
—	—	d	n	táda 'merely' (see § 3.1 for other uses)
—	—	—	n	tatta 'only, just'
—	—	—	—	táká-ga 'merely, only'
—	—	—	(n)	takádáka(⁀) 'at highest/most' (n: takádáka(⁀) no tokoró)
—	—	—	(n)	séizei 'at the outside; at most, to the utmost' (n: séizei no tokoró)—also séize (Tk 4.52a).
—	(m)	d	n	gíri-giri 'at the lowest limit' (m: gíri-giri mo gíri-giri)
—	—	d	n	móppara(⁀) 'mainly, exclusively' (móppara(⁀) no tokoró wa)

149. There is an adnominal form [o-]tagai nó 'reciprocal', but the expected *tagai dá 'it is reciprocal' seems to be always replaced by o-tagai dá. In o-tagai o rikai(⁀) si-áu 'mutually understand each other' the word is used as a noun.

—	—	—	—	ómo ni 'principally'
—	—	—	—	náo-nao 'still; additionally'
—	—	—	—	betu ni '(not) especially'
—	—	—	n	betudan '(not) especially'

(11) Adverbs of SENTENTIAL RELATION:
ASSERTION AND PREDICTION

—	—	—	—	dóo-sité mo 'by any/all means; surely; eventually; all things considered'
—	—	d	(n)	kanarazu 'for sure, inevitably' (= kanarazú ya)
—	—	—	(n)	kanarazú-símo '(not) necessarily' (~ no kotó/hanasí)
—	—	—	—	ikiói 'necessarily, inevitably, perforce, a fortiori' (also noun 'force')
—	m	—	(n)	tikátte(¯) 'for sure' (tikátte no yakusoku—or is this the gerund?)
—	—	(d)	—	kit-tó 'surely'
—	m	—	n	sasuga: sasuga wa 'naturally enough' (Sasuga wa Tokugawa san desú 'That's just like you, Mr Tokugawa', Tk 3.209b); sasuga nó (see §13.5, p. 752), sasuga {ní} (§13.7, p. 788).
—	—	—	—	hataséru-ka-na = hatásite 'sure enough'
—	—	d	n	mattakú 'truly, indeed; I must say' (also DEGREE 'wholly, utterly, perfectly')
—	—	—	—	naru-hodo 'true/truly enough'
—	—	d	n	motíron 'undoubtedly; (as a matter) of course'
w	—	—	—	subekáráku 'by all means, necessarily (ought)' (+ ... ¯béki)
—	—	—	—	zóngai(¯) 'contrary to (or beyond) expectations'; cf. ángai(¯) under 12
w	m?	d	n	tamásaka(¯) 'unexpectedly' (also FREQUENCY 'seldom, very occasionally')
—	—	—	—	igai-ya/mo-igai 'surprisingly enough'
—	—	—	—	tásika 'if I am not mistaken' (often said when trying to recall things)—also adjectival noun 'certain', cf. tárika ni 'certainly, for certain'
—	—	—	—	tekkíri 'surely, clearly, I (must) conclude that'
DENIAL				
—	—	—	—	kessite '(not) ever; absolutely (not)' (also PROHIBITION)
—	—	—	—	táete '(not) at all, (not) in the least'
—	—	—	(n)	tote-mo 'utterly (not)' (also DEGREE)
—	—	—	—	náni-mo(¯) '(not) in any way'
—	—	—	—	tittó-mo '(not) in the least' (= sukósi mo + NEGATIVE)
—	—	—	(n)	másaka 'surely (would not)'—conjecture + denial
—	—	d	n	manzara '(not) wholly'—or is this DEGREE?
—	—	—	n	tootei 'absolutely (not)'
—	—	—	—	túi-zo '(not) at all, (not) ever'
—	—	—	—	kaimoku '(not) at all'
—	—	—	—	ikkoo {ni} '(not) at all; absolutely, quite' (also DEGREE)
—	—	—	—	maru-de '(not) at all' (also COMPARISON)

—	—	—	—	maru-[k]kiri '(not) at all'	
—	—	—	—	ten-de '(not) at all'	
—	—	(d)	—	kára-[k]kiri, -[k]kisi 'utterly, quite, totally' (~ dá = ~ damé da)	
—	—	—	—	ikkána(¯), itukána(¯) [< iká na] '(not) on any account' [old-fashioned] = dóo-sité mo	
				PROHIBITION or REFUSAL	
—	—	—	—	kessite '(not) under any circumstances; (not) ever' (also DENIAL)	
—	—	—	—	dán-zite(¯) 'positively (not)'	
				DESIRE	
—	—	—	—	zé-hi 'by all means' (< zé ga hí de mo 'even if right be wrong', cf. Fn 187a)	
—	—	—	—	dóo-ka 'please'	
—	—	—	—	dóo-zo 'please'	
—	—	—	—	nani-tozo 'please'	
				SUPPOSITION	
—	—	—	—	tatóe(¯) 'if'	
—	(-)	—	—	mósi 'if'; mósi ya/ka {sitára, suru to} 'if perchance'	
—	—	—	n	mósi mo 'if, perchance' (mósi mo no kotó ga áreba/áttara 'in the unlikely event')	
—	—	d?	n	mán'iti 'if'	
—	—	—	(n)	yósi ya 'if'	
				COMPARISON	
—	—	—	—	átáka-mo, ádáka-mo 'just (like)'	
—	—	d	(n)	tyoodo 'just (like)' (d: Sáizu ga tyoodo nára [= tyoodo yókereba] iró ya katati wa kamawánai 'If the size be right, I don't care about the color or cut'.)	
—	—	—	—	sá-mo 'just (like)'	
—	—	—	—	maru-de 'just (like)' (also DENIAL)	
				MISCELLANEOUS	
—	—	—	(n)	nani-bun: ~ {tó mo} 'please, by all means'; ~ {ní mo} 'in any event, at any rate, anyway'; ~ no 'some (amount/sort of); a definite'	
—	—	—	—	hitótu 'just (to see), a bit; please' (also quantity noun 'one; one year old')	
—	—	—	—	ái-naru-beku-wa 'if possible; if it's all right'	
—	—	—	—	nasi-u-békunba 'if possible' (Shiba 96)	
—	—	—	—	sokó-haka-to-náku 'in a general sort of way; vaguely, somehow' (haka is a Kyōto variant of hoka = sika, cf. Inokuchi 286, 291)	
				(12) Adverbs with MULTIPLE MEANINGS	
—	—	d	n	ziki {ní}	PLACE 'nearby' (koko kara ziki no gakkoo) SPEED 'immediately'
					MANNER 'readily'
w	(-)	d	n	súgu {ni}	SPEED 'immediately' (súgu ni mo; koko kara súgu no gakkoo) MANNER 'readily'

—	—	d	n	nakanaka {tó}¹ ¹⁵⁰	DEGREE 'considerably; (not) anywhere near enough'
					MANNER '(not) readily' (or SPEED?)
—	—	(-) ¹⁵¹	—	hu-to	SPEED 'at once, in an instant'
					MANNER 'unexpectedly, by chance'
—	—	—	—	dóo-yara	DEGREE 'barely'
					LOGICAL RELATION 'likely'
—	—	d	(n)	máda (ímada, imada-ni)	TIME '(not) yet': Syokuzi ga máda no hitó wa imasén ka 'Isn't there anyone who hasn't eaten yet?'
					DEGREE 'still (more); no more than'
—	—	d	n	$\left\{ \begin{array}{l} \text{yat-tó} \\ \text{katugatu} \\ \text{katukatu} \end{array} \right\}$	TIME 'at last'
					MANNER 'with difficulty' (or is this a combination of TIME + MANNER?)
—	—	d	—	háruka {ni}¹ ¹⁵²	PLACE 'far off'
					TIME 'long ago'
					DEGREE 'by far'
—	—	—	(n)	toriaezu	SPEED 'at once' (= tádati ni)
					TIME 'first of all' (= mázu); 'for the time being' (= toobun)—toriaezu no syóti to site 'as a temporary measure' (Ōno 1967.241)
w	—	d	n	syóttuu, sízyuu	DURATION 'from start to finish; the entire time'
					FREQUENCY 'always, frequently'
w	(m)	?	n	itioo	MANNER 'always, constantly, without letup'
					FREQUENCY 'once' (itioo mo nioo mo 'again and again')
					DEGREE 'in general; in outline'
					LOGICAL RELATION 'tentatively; for the sake of formality'
—	—	—	—	dóo-mo	(1) DEGREE 'very; ever so much'—whence, by ellipsis of ~ [sumimasén], 'thank you' and 'excuse me'.
					MANNER 'how/somehow'
					(2) = dóo-sité mo, dóo-sit'átte '(not) on any account, willynilly'; (= nán to sité mo) 'at any cost; inevitably'
					(3) = nán to itté mo 'eventually, come what may'
					(4) = dóo míte mo 'to all appearances'
w	(m)	d	n	tyót-to	DEGREE 'somewhat, a little' (= tyoui-tó)
					DURATION 'a little while'

150. Kono "motíron" ni wa nakanaka to hukumí ga arimásu ... 'In this "of course" there is quite a lot of hidden meaning ...' (Tk 4.159). Older men and dialect speakers also use nakanaka ni; in Tk 3.137a it occurs in a sentence with zyaróo = daróo.

151. Kekkyokú,^[1] hu-to desyóo ná 'After all, it is by chance' (Tk 2.103b). NHK has hú-to(-) = hú-tó.

152. Háruka is also an adjectival noun.

					EVALUATION 'well/but ...' (hesitancy or reservation)
w	-	d	n	daitai	SENTENTIAL (desire) 'please'
w	m	(-)	n	daitai-ni-óite	DEGREE 'generally; for the most part; practically; almost; substantially'
					LOGICAL RELATION 'strictly speaking; originally; from the start'
-	-	-	-	gút-to(-)	SPEED 'suddenly, at once'
(w) ¹⁵³	-	-	-	mázu	DEGREE 'markedly, by far'
					TIME 'first of all; well now'
					DEGREE + EVALUATION 'about, fairly (well)'; (+ NEGATIVE) 'hardly'
					LOGICAL RELATION 'anyway, anyhow' (= tó-ni-kaku)
-	-	d	(n)	ángai(-) ¹⁵⁴	DEGREE 'unexpectedly (much)'
					SENTENTIAL RELATION 'contrary to (or beyond) expectations'
-	-	-	-	túi	DEGREE 'just (a short time/distance)'
					MANNER 'by mistake/chance, carelessly, inadvertently'
-	-	?	-	tómi ni	SPEED 'suddenly'
					DEGREE 'exceedingly'
w	(m) ¹⁵⁵	?	-	yóku	FREQUENCY 'often'
					DEGREE 'much, lots'
					EVALUATION 'nicely, well; with ease, readily'
-	-	(d)	-	iyóiyó	DEGREE 'more and more'
					TIME 'at last'
					LOGICAL RELATION 'really'
w	(m)	-	-	sígeku	DEGREE 'lots, in profusion'
					FREQUENCY 'often' (= asi-sígeku)
-	-	-	n	zyuzyúu(-)	DEGREE 'exceedingly'
					FREQUENCY 'repeatedly'
w	-	-	n	higoro	DURATION 'for a long time'
					FREQUENCY 'usually, ordinarily, always'
-	-	-	-	zut-to	DURATION 'all during/through'
					PLACE 'directly, all the way'
					DEGREE 'by far'
w	(-)	(-)	-	ún-tó	DEGREE 'by far, way': ún-tó ^[1] takái tókó zya ... 'when you're way high up' (Tk 4.44a)

153. Mázu-wa 'be that as it may'—in letterwriting; also: Mázu-wa búnan desita 'No harm done' (Tsukagoshi 76).

154. Also an adjectival noun 'unexpected'.

155. Yóku mo has the special meaning 'it is amazing (a wonder) that; how can it be that', a sentential adverb showing incredulity: Yóku mo watasi o damásita wá né 'How could I be so taken in!' (Kotoba no uchū 1967/8.25a).

					utata	QUANTITY 'lots, abundantly; generously'
						MANNER 'hard, with force; severely'
-	-	-	-			DEGREE 'increasingly; deeply'
						MANNER 'somehow in spite of oneself' (= sozoro {ní})
w	-?	-?	n		hitó-sikiri	TIME 'at one time' (= kátute)
						DURATION 'for a while' (= sibároku)
w	-	-	-		izure	TIME 'one of these days; someday; sooner or later'
-	-	-	-			LOGICAL RELATION 'anyhow'
						(Also a literary equivalent for dóre, dótira, and dóko, §29.)
-	-	-	(-)		tama-tama	MANNER 'by chance'
-	-	(-)	n			FREQUENCY 'very occasionally, once in a while' (= tama ní {wa})

13.7a. CONJUNCTIONS

Certain adverbs and adverbial phrases apply to the sentence as a whole; among these we find a number of connectors that show some logical relationship between two sentences. Typically the CONJUNCTION, as we can call such a phrase, serves to introduce the second sentence. The first sentence may be explicit or implicit—summarizing a prior situation; it may be stated as a separate complete sentence or it may be reduced or conjoined to form a complex sentence, with the conjunction serving to remind us of its origin. The conjunction is set off from both sentences by an underlying major juncture on each side; the juncture, however, will sometimes be reduced or even suppressed, depending on the cohesion of the two sentences, on the accentuation and length of the conjunction itself and of the immediately adjacent phrases, and on the speed of utterance. (Thus we find *Á | náisi wa || B*; *Á naisi || B*.) The conjunction is a kind of interpolation, like an interjection, and is like a minor sentence in itself. Elsewhere in this study you will find the suggestion that sentence-initial adverbs, including the conjunctions described here, might be treated as TRANSITIONAL THEMES with respect to the immediately following sentence. The use of conjunctions is apparently more common in modern written Japanese than in the older texts (Terase 101b).

Below is a list of common conjunctions, arranged according to seven semantic categories: (1) coordinative (AND ALSO), (2) sequential (AND THEN/NOW), (3) consequential (AND SO), (4) disjunctive (OR ELSE), (5) adversative (BUT), (6) corrective (CONTRARIWISE), and (7) explanatory (ID EST). We might wish to add a few other categories such as concessive (GRANTED THAT), contemporal (SIMULTANEOUSLY WITH—sore to tómo/dóozi ni), and comparative (BY COMPARISON WITH—sore ni kurabete, sore yóri mo, etc.), but these are less commonly expressed with a single word. On sentence introducers in general, see §24, where most of the expressions given below should be mentioned.

LIST OF CONJUNCTIONS

(1) coordinative conjunctions (AND ALSO)

- | | |
|---------------------------|-----------------------------------|
| sosite—also sequential | sikásite, sikári sikásite (Tk 3.) |
| sore kara—also sequential | —also sequential? |

sikási, sikasi-nágara; ga sikási	muron

(6) corrective conjunctions (CONTRARIWISE)

káette
sore dókoro ka
?músiro

(7) explanatory conjunctions (ID EST)

sunáwati	motomoto
masásiku	ittai
tori-mo-naósazu	haté wa
túmari, tumáru tokoró ^[r]	hito-yonde
[sore] to iú no wa	mata ⁽⁻⁾ -no-na [wa]
[sore] to iu kotó wa	iu náreba
kekkyokú	itte míreba
kekkyoku-no-tokoró	iwába ⁽⁻⁾
tootei	ikóoru 'equals, is equivalent to' ¹⁶⁰

Conjunctions are often used to signal a direct, paratactic conjoining of noun phrases: ... gyooretu máta⁽⁻⁾ gyooretu no pabiríon, ... 'row upon row of pavilions' (SA 2676.109a); ... go-nen mósiku-wa zyúu-nen no kigen ga ... 'a term of five or ten years' (SA 2686.44d). In the following sentence the conjunction máta⁽⁻⁾ is used to mark an intensive iteration of a free verbal noun before attachment of the auxiliary: ... tyooyaku máta⁽⁻⁾ tyooyaku site hattatu sita 'it developed leap after leap[ing]' (SA 2664.81b). With an intransitive verbal noun such as we see here, the direct-object marker ó is optional before the auxiliary suru, so that our example is simply an extension of noun conjoining: VN máta⁽⁻⁾ VN [o] site.

The literary conjunction kátu 'and' is frequent in modern writing and links a variety of things; it seems to be particularly favored to join adjectival nouns (especially those of Chinese origin). The prior adjectival noun will appear with one of the 'and'-forms of the copula, typically dé: ... hituyoo ni site kátu yuukoo na zí ga ... 'characters that are necessary and effective' (Ōno 1967.177—ni sité = dé). But the copula connector can be suppressed, leaving a direct conjoinment: ... goohoo kátu tekisei na monó 'what is lawful and proper' (SA 2688.25c); ... máda wakái ga yúunoo kátu miryoku-teki de ári ... 'he is still young but is capable and personable' (SA 2688.90e); ... kikai-teki kátu rakuten-teki hándán wa ... 'a mechanical [= automatic] and sanguine judgment' (SA 2688.42b); Naiyoo wa, gutai-teki kátu rinsyoo-teki de, ... 'The content is concrete and clinical, and ...' (SA

159. With interpolation: Tokoró-ga desu né, ... (SA 2662.19d); Tokoró-ga de aru (SA 2672.122b— with final period: 'However.'). Cf. Tokoro ga 'The place [as subject]'.

160. Mósi iti-ónsu IKÓORU sánzyuu kyúu-doru datta to sité mo, iti-wari no mooké de aru 'Even if it were one ounce of gold equaling thirty-nine dollars, there would be a profit of ten percent' (SA 2676.44b). This is also an adjectival/precopular noun 'equal'.

2653.128a); Sékkusu no kaihoo wa, móhaya sekai-teki kátu rekisi-teki na zízitu to itte íi daroo 'Sexual liberation can now be called a worldwide and historic reality' (SA 2688.119b). The following passage conjoins an adverbialized adjective to an adverbialized adjectival noun with the aid of kátu: ... móttó-mo kokugo ni husawásiku, kátu heimei ni kore o syóki(¯) suru ... 'writing these in a way most suitable for Japanese and (most) simple' (Shibata in Ōno 1967.47). The next example is presumably an adverbialization of a phrase that consists of two adjectival nouns conjoined with the conjunction kátu: Sono kotó o sottyoku kátu tan-teki ni hyoomei sita monó ga ... 'What has demonstrated this fact frankly and bluntly ...' (Kaneda in Ōno 1967.288). That is, I assume an immediately underlying structure sottyoku [de] kátu tan-teki da—rather than sottyoku [ni] kátu tan-teki ni with the conjoining of two adverbialized adjectival nouns; cf. § 13.5a.

The somewhat more literary usage kátu {wa} V₁-i kátu {wa} V₂ has a meaning very close to that of paired representatives V₁-tári V₂-tári suru: ... kawá no kátu kie, kátu arawárete taéru kotó no náí suiwoo ... 'the bubbles of the river that incessantly vanish and (re)appear' (SA 2676.93b); ... senpai wa, yama-óku no syoogákkoo sika dekinái kotó o, kátu wabi, kátu házita ga ... 'my older friend was alternately apologetic and shamefaced that he could only introduce me to a remote primary school but ...' (lg 78); Káno-zyo wa kátu wa naki, kátu wa kóe o huri-sibótte sakebimásu 'She sobs and wails' (lg 78). Very similar is the pair nakábá(¯) {wa} ... nakábá(¯) {wa} ... 'half ... (and) half ...; partly ... (and) partly ...': Sore wa bóku(¯) o nakábá(¯) íbu si, nakábá(¯) kyoosei site ita 'That was half pacifying me, half coercing me' (lg 78); Sore kara bóku(¯) wa nakábá(¯) nemuri, nakábá(¯) mu-ísiki no zyootai dátta 'Then I was in a state half asleep, half unconscious' (lg 78); ... nakábá(¯) wa sore o omoi-nágara nakábá(¯) wa sore o wasure-nagara, ... 'while half remembering that and half forgetting it' (lg 78); Matúnaga wa nakábá(¯) wa kookí-sin nakábá(¯) wa kyoéi-sin kara kono suzigákí(¯) ni sansei sita 'Matsunaga agreed to the scheme partly from curiosity, partly from vanity' (lg 78); Atarásiku tukútte iru anó-hito no ié wa, nakábá(¯) yoohuu, nakábá(¯) wahuu no syareta monó da 'His newly built house is a fancy thing, half western-style, half Japanese'. Sometimes only one of the 'partly ...' pair will appear: Nakábá(¯) zyoodán to site warukuti o ii-áu 'We exchange insults, half in joke'.

A noun or (noun+ dá) in a series can be introduced by yáre to mean 'whether (it be) ... or (whatever)' or 'what with ... and ... (all)'—usually something bad: Yáre sutó da, yáre tin'age da to, urusái kotó bákari iu 'They talk trouble, whether it be strikes or raises or whatever'; Yáre kenkoku-kinénbi, yáre kootei-tanzýóobi, yáre soozyúu-setu, yáre kikokú-sai tóo-too, samázama no syukusái-zitu ga tikazúku góto ni, ... 'What with Foundation Day, what with Emperor's Birthday, what with Double-Ten Day, what with Crop Prayer Festival, and so on and so on, every time one of these various holidays approaches, ...' (lg 78).

The word púrasu(¯) 'plus' is borrowed from English as a noun meaning 'advantage': Motíron, purásu(¯) to mainasu o tómo(¯) ni mótu sangyoo mo áru 'Of course some industries will have both advantages and disadvantages' (SA 2685.25d); Én kiriage no purasu-máinasu 'The advantages and disadvantages of devaluing the yen' (SA 2685 heading). But púrasu(¯) is also used as if a conjunction: ... kentikú-hi|púrasu(¯)|hyakuman-en dé ... 'for construction costs plus a million yen' (SA 2659.118b); ... iti-síon|púrasu(¯)|liti-bóon (or iti-bóoin) 'one consonant plus one vowel'. This conjunction-like behavior is an extension of the use of púrasu(¯) and mainasu as prenumerary adverbs: purásu(¯) san 'plus three, three over (count), up three', mainasu zyúusan 'minus thirteen, thirteen under (count), thirteen short,

down thirteen'.¹⁶¹ An underlying juncture will surface with longer numbers: *mainasu | sánbyaku | sánzyuu* 'down 330'. I have even come across $\bar{\text{p}}\bar{\text{u}}\bar{\text{r}}\bar{\text{a}}\bar{\text{s}}\bar{\text{u}}$ as a quasi-restrictive in *hyaku-zíkan* $\bar{\text{p}}\bar{\text{u}}\bar{\text{r}}\bar{\text{a}}\bar{\text{s}}\bar{\text{u}}$ 'one hundred hours plus', but this may be a nonce usage borrowed from English. (The expression *purasu-áruhwa* "'plus alpha"' = and a bit over/more' is added at the end of a number, often in sport measurements, usually set off by a juncture.)

The word *kén* 'additionally (functioning as)' can be used as a conjunction: ... *résutoran | kén | hóteru* 'a combined restaurant and hotel' (SA 2689.126c); ... *pán-ya | kén | kasí-ya* 'a bakeshop and confectionery' (SA 2863.63a); ... *syusyoo | kén | gaisyyoo* 'prime minister and at the same time (his own) foreign minister'; *Nízyuu ís-sai no Súuzan wa, googoo-dánsaa kén kásyu de aru* '21-year-old Susan is a (combination of) *gogo*-dancer and singer' (SA 2656.134b); ... *mizugi no kaisetú-sya kén móderu no katawará(̄)* *kodomó-táti ni suiei o osiete iru sóo da ga ...* 'in addition to being a promoter and model for swimsuits she teaches swimming to children, we hear, and ...' (SA 2640.42); *Tatami-siki no byoositu wa sinsitu kén hokori-ppói sagyoo-ba kén syokudoo yatta* 'The mat-carpeted hospital ward served at the same time as bedroom and dusty workroom and dining room' (SA 2670.32c) —*yatta* from *yaru*. But often the juncture before *kén* will drop and the conjunction is attached to the preceding noun as a suffix (preaccentuated), forming a nonce kind of pseudo adnoun: *Kono heyá wa, oosetumá-ken imá-ken syosai to iu tokoró de, ...* 'This room is a living room combined with a study, and ...' (SA 2678.156).

The word *tái* 'versus' is a similar conjunction, often used in giving athletic scores or the like; but it usually attaches to the preceding noun to form a pseudo adnoun:¹⁶² *sinhonkái roodóo-sya no toosoo* 'the struggle of labor against capital'; *ní-tai ití no tokutén(̄) de kátu* 'wins by a score of 2 to 1' (Kenkyusha); *sán-tai san desu ga* 'it's three to three (and ...)'. This might be regarded as a reduction of ... *ni tai-súru* 'in confrontation with = as against'. The digit following *-tai* will sometime lose its accent, with the juncture dropping; in the case of *ití-tái ití* 'one to one' the syntactic reduction is lexicalized as a precopular noun: *itítái-iti no tatibá de* 'on a one-to-one footing' (Nagano 1968.152), *itítái-iti de hanasi-au* 'talk one-to-one' (MKZ⁵).

13.8. PRECOPULAR NOUNS

In examining the many types of nominal sentences we find it necessary to differentiate those types which adnominalize by converting *dá* to *nó*—including pure nouns and predicable adverbs (such as *sibáruku* 'for a while')—from adjectival nouns (such as *sízuka* 'quiet'), which adnominalize by converting *dá* to *ná*. Certain words are like predicable adverbs but never occur directly adverbialized, becoming adverbial always by way of the copula infinitive (or essive) *ní*. These words we can call either "quasi adjectival nouns" (since they behave so much like adjectival nouns) or, as here, PRECOPULAR NOUNS, in recognition of the fact that they (like adjectival nouns) are always followed by some form of the copula, with certain exceptions to be noted below.

161. An example: *Kongetu wa, séngetu yori mainasu sén nihyakú-en óoku no riéki ga átta* 'We had ¥1200 less profit this month than last' (V 1967a.103).

162. In §2.4 we treat $\bar{\text{t}}\bar{\text{a}}\bar{\text{i}}$ as a quasi-restrictive. But for Hamako Chaplin in some uses there is no prior-accent cancellation or preaccentuation: *Wáseda tái | Keioo no baai* 'in the case of Waseda vs. Keiō', *Keioo tái | Wáseda no baai* 'in the case of Keiō vs. Waseda'; *dansei tái (l) dansei no baai to || zyosei tái | zyosei no baai tó de mo, || ...* 'in the case of male vs. male and also in the case of female vs. female' (Nagano 1966.72).

The precopular nouns differ from the adjectival nouns in following the regular adnominalization pattern, converting *dá* to *nó*; they differ from adverbs in that they normally require *ní* when adverbialized. (But the *ní* is optional after the negative precopular noun *-azu* that comes from the literary negative infinitive, §9.5; such words are treated either as precopular noun or as adverb.) The word *tama* ‘occasional’, for example, occurs in *Tama dá kara ...* ‘Because it is only occasional ...’, [taihen] *tama ní* ‘[very] occasionally’, and *tama no yasumí/niti-yóobi* ‘an occasional holiday/Sunday’; we conclude that *tama* is a precopular noun. Another example is *ippan* ‘general, common, average’ as in *góku ippan no hitóbito* ‘extremely average people’ (SA 2670.103e)—note the modification by an adverb of degree—and *ippan ní* ‘generally’; *ippan dá* ‘is ordinary’ is also possible. (A synonymous adjectival noun is made by attaching the suffix *-teki*: *ippan-teki na N.*) But *ippan* can also be used (like *zénbu* ‘all’) as a quantity noun in expressions of the type *N {no} | ippan* ‘the whole of N’; *kokumin ippan ga* ‘all the nation’ (Ōno 1967.285); *syákai | ippan ní wa* ‘in the society as a whole’ (R). A similar expression is *N {no} | zenpan* as in *syákai zenpan ga* ‘the whole society’. There are a number of other expressions with the prefix *zen-* ‘entire’, such as *Nihón | zéndo* ‘all Japan’; but *Nihon-zénkoku* ‘all Japan’ is usually tightened into a compound noun instead of appearing as the expected *Nihón | zénkoku*. On these expressions, see §25.

In the following sentences the word *uttetuke* ‘just right, most suitable’ appears to be a precopular noun: *Kono sigoto wa káre ni uttetuke dá* ‘This work is just right for him’; *Káre ni uttetuke no sigoto dá* ‘It is just the right work for him’; *Sono sigoto ni uttetuke no hitó* ‘He is just the man for the work’; *Uttetuke zya náí* ‘It is not the most suitable’; *Uttetuke na món ka* ‘Surely it is not the most suitable’ (*ná* because of *món*). But there seems to be no adverbial **uttetuke ní* (or **uttetuke*) ‘most suitably’. In this respect, *uttetuke* is like *byooki* ‘ill’ (see below); both lack the adverbial form. Similarly defective are *motté-no-hoka(⁀)* ‘outrageous’ and *hatu-mimi* ‘hearing for the first time’ as in *Hatu-mimi {no hanasí} da* ‘It’s news to me’; there is no **motté-no-hoka(⁀) [ní]* ‘outrageously’ or **hatu-mimi [ní]* ‘as news’. The two words *tokubetu* ‘special’ and *betu-betu* ‘separate, apart’ are precopular nouns with all three forms *dá*, *nó*, and *ní*; but the *dá* forms of *békkó(⁀)* ‘separate(ly), *sára* ‘new(ly)’, and *hatú* ‘first (time)’ are seldom heard. You will find all three forms for *nanáme* ‘aslant’ and its Tōkyō-dialect equivalents *hasu{kai}*, and for *omoi-ómói* ‘as (each) one pleases’—*omoi-ómói no sutáiru de* ‘each in his own style’ (CK 985.378). In *sya ni kamaéru* ‘assumes a stylishly slanting pose’ the word *sya* must be an adverbialized precopular or adjectival noun (equivalent to *nanáme* ‘aslant’), but the word seems to be limited to that one expression.

Most precopular nouns belong also to at least one other class. For example, *byoodoo* as an abstract noun meaning ‘equality’ can be specified as subject or object (*byoodoo gá/ó*); but *byoodoo dá* has two meanings ‘it is equality’ and ‘it is equal’, and the latter indicates a precopular noun, subject to the adverbialization *byoodoo ní* ‘equally’ and the adnominalization *byoodoo nó* ‘equal’. (But the word is also sometimes treated as an adjectival noun: *byoodoo na sógata ni* ‘in equal respect’—SA 2670.52b.)

From meaning alone we would assume that *byooki dá* ‘it is an illness’ or ‘he is sick’ is a precopular noun as well as a regular (abstract) noun, but we fail to find the adverbial **byooki ní* ‘in a sick manner’¹⁶³ that we expect by analogy with *génki ni* ‘in a lively/

163. That is said with *byooki no yóo ni*. In *byooki ni náru* ‘becomes an illness’ or ‘becomes ill’ *ní* is the mutative conversion from *dá*, not the adverbial; see §9.1.11.

healthy manner' and *byoodoo ní* 'equally'. If we reinterpreted our semantics we might attribute the "ambiguity" of *byooki dá* to the usual residual vagueness of Japanese toward the subject, considering 'He is ill' to be something like 'As for him, it is (a case of) illness'. But unlike most abstract nouns *byooki* can be modified by adverbs of degree—Taihen *byooki dá* 'He is very ill'—and that is a point of behavior shared by few nouns that are not clearly adjectival or precopular. So it would seem best to treat *byooki* as both a pure noun (abstract) 'illness' and a precopular noun 'ill' that, like *uttetuke* 'suitable', simply lacks the adverbial form.¹⁶⁴ As it turns out, we actually have two classes of precopular nouns: those which are virtually adjectival nouns (and often can take *ná* instead of *nó* as an option) and those lacking the adverbial form, most of which are derived from verbs or nouns. Other examples of the latter include *mæ-muki* 'forward-looking' as in *mæ-muki no zyuutaku-séisaku* 'forward-looking housing plans' (SA 2684.126d), *motté-no-hoka* (–) 'outrageous', *motte-kói* 'ideal(ly suitable)', and a number of the quasi-restrictives in § 2.4. (But not all precopular nouns lacking the adverbial are derived; *honnen* 'natural, innate' as in *honnen no sūgata* 'one's innate character' is a Chinese loanword.)

References to COLOR can be made with adjectives, with adjectival nouns, with precopular nouns, and with abstract nouns; the same word will sometimes allow more than one treatment. A large number of color terms are made up of a free noun + *-iro*, the suffix form of *iró* 'color': *akane-iro* 'madder red', *ama-iro* 'flaxen', *anzu-iro* 'apricot', *bara-iro* 'rose', *daidai-iro* 'orange-red', *enzi-iro* 'dark red', *gin-iro* 'silver', *hai-iro* 'gray', *kaaki-iro* 'khaki (color)', *kaki-iro* 'persimmon', *kaba-iro* 'birch (= tan)', *kikyoo-iro* 'dark violet', *kin-iro* 'gold', *kitune-iro* 'tawny, tan', *kogane-iro* 'copper', *kohaku-iro* 'amber', *komugi-iro* 'wheat', *kon-iro* 'dark blue', *mizu-iro* 'water green, pale blue, aqua', *momo-iro* 'pink', *namari-iro* 'lead-gray, leaden', *nibi-iro* 'dark gray', *niku-iro* 'flesh-color', *nizi-iro* 'iridescent, opalescent', *onando-iro* 'grayish blue, sky blue', *sora-iro* 'sky blue, light blue', *tamago-iro* 'egg-shell = light tan; egg-yolk = yellowish', *titi-iro* 'milk-color = cream', *toki-iro* 'pale pink', *tya-iro* 'brown'. These words, like *byooki*, belong both to the class of abstract nouns and to a class of precopular nouns that are defective in lacking the adverbial form; *tya-iro ní* can mean only 'to brown(ness)', as a dative or allative, or 'into brown(ness), so as to be brown' (mutative or putative § 9.1.11), not 'brownly, in a brown manner'. Some color names that do not end in *-iro* have the same two-class grammar: *mīdori* 'green', *murāsaki* 'purple', *kurenai* 'crimson', *kassyoku* 'brown', and the modern terms *burāun* 'brown', *burūu* 'blue', *pīnku* 'pink', *burákku* 'black', *howáito* 'white', and *gurí[i]nu* 'green'.¹⁶⁵ Color words with the intensive prefix *ma(q/n)-* are usually treated as adjectival nouns: *makká* 'crimson', *massáo* 'deep blue, ghastly pale'; *mattyáiro* 'quite brown', *makkíiro* 'quite yellow', *makkúro* 'jet black', *massíro* 'pure white'. But on occasion you may run across these words used as precopular nouns (adnominalized with *nó* instead of *ná*); and the last two freely form adjectives, *makkurói* and *massirói*. The word *ki-iro* 'yellow', like other color names that contain *iró* 'color', is both an abstract noun and a precopular noun; unlike the others, it is

164. Similar to *byooki* in grammar, *kitoku* means 'serious, critical' as a precopular noun and 'critical condition' as an abstract noun: *háha no kitoku o kiita* 'heard about mother's serious condition'.

165. For some color names the suffix is optional: *moregi*[-iro] 'light green', *hi*[-iro] 'scarlet', Notice that while only certain colors can be expressed with adjectives, there is a noun available for each color, and in certain situations the noun must be used (BJ 1.284-5): when an object has more than one color (*áka to síro no hatá* 'a red and white flag'); when the color is named (*áo o erábu* 'selects blue'); or when the color is modified (*usui áo no kabe* 'a light blue wall', *kói áka no kami* 'dark red paper').

also freely used as an adjective *kiroi* 'is yellow'. None of the color words—whether precopular or adjectival nouns—use *ní* as an adverbial, only as a mutative, a putative, or a case-marker; and the use of the infinitives of the color adjectives (*kiroku*, *makkúroku*, *massíroku*) is similarly limited. *Akaku yotte iru* 'is red-faced with drink' is mutative.

Precopular nouns—like adjectival nouns, adnouns, and adverbs—can not be modified by any adnominal phrase: in *usui mizu-iro no penki* 'light water-green paint' the color word is used as an abstract noun. Precopular nouns are most commonly found in adnominal position, and it is often questionable whether the predicative form is in use: we find *zekkoo no hikoo-biyori* 'ideal flying weather', *zekkoo no tyánsu* 'an excellent chance', *zekkoo no kond'isyon no motó* 'under perfect conditions', and *nezumi ni tótte zekkoo no esá(-)* 'the best bait for rats', but we are unlikely to run across *zekkoo dá* 'it's ideal/excellent/best'. A precopular noun that appears only in the adnominal form can be called HIGHLY DEFECTIVE; other examples are *zantei* 'provisional', *tokutei* 'special, specific', Some precopular nouns have individually LIMITED distributions: *dai-nasi* 'ruined', from the phrase *dái ga nási* 'lacks a base', occurs only in the mutative conversion *dai-nasi ni náru* 'gets ruined' and *dai-nasi ni suru* 'ruins'. Compare *monkú-nási* 'perfect, satisfactory', from the phrase *mónku ga nási* 'has no complaint', which occurs in all copular forms—adnominal *nó*, adverbial *ní*, and finite *dá* (etc.)—though there is no **monkú-nási sono mónó* 'perfection itself'. *Issyo-kuta* 'mishmash, jumble' is common in the mutative (N o *issyo-kuta ni suru* 'makes a jumble of N') but it also occurs with *dé*, *dá*, and *nó*. A number of the adjectival and precopular nouns and certain adverbs of limited distribution act as if they were free nouns in entering into compounds of the type N + N, especially those which are in origin Chinese binoms: *byoodoo*, *zyúurai*, *tyokusetu*, *ippan*,

Some words are adjectival nouns and at the same time either precopular nouns or adverbs, depending on whether *ní* is required for adverbialization; they adnominalize sometimes by converting *dá* to *nó* (precopular noun) and sometimes by converting *dá* to *ná* (adjectival noun). In modern writing there is a certain amount of wavering between the two categories for these and a number of other nouns. The difference will correlate with a subtle difference of meaning for certain words; the precopular noun emphasizes quantitative description where the adjectival noun concentrates on qualitative description. When the writer presents us with *samázáma(-) no zyoohoo* 'all sorts of information' (SA 2677.50a) he is taken to mean something like '(much) information of many kinds'; if he had written *samázáma(-) na zyoohoo* it would have been taken to mean 'highly varied (pieces of) information'. But it is difficult to see any difference in meaning between the two versions of *akusitu no/na* 'inferior' and *tókusyu(-) na/no* 'special'.¹⁶⁶ Nor does meaning or context determine whether you say *kará/karappo no N* or *kará/karappo na N* 'empty N'; an example of the latter: *nakámi no kará na syuugi-zútumi* 'a congratulatory envelope empty of contents' (Fn 175b).

The following words can be treated as adjectival nouns, as precopular nouns, or as adverbs (i.e. directly adverbialized without *ní* as well as with it): *sootoo* 'reasonable, fair, considerable'; *iroiro* 'various', *samázáma(-)* 'various';¹⁶⁷ *matímati(-)* 'various', *moromoro*

166. *Dókuzi(-)* 'original; individual, personal' is normally treated as a precopular noun, but you may occasionally see *dókuzi(-) na N* in print. *Zimei* 'self-evident' is similar.

167. Both *iroiro* and *samázáma(-)* occasionally turn up as pure nouns meaning 'the varieties': ... *tatami no zí no iroiro o* ... *go-ran itadaki-tai* 'I'd like you to look at the variety of characters used to write the word *tatami*' (Nagano 1966.28). Okutsu 1965b has the title "*Nó*" *no iroiro* 'Various kinds of *nó*'.

'various, all' (in modern writings largely limited to the adnominal *moromoro nó/ná*); *kánari* 'fair, passable', *takusán* 'much', *wázuka* 'few, scanty', *kotó-sara*(⁻) 'deliberate; especial', *?isásaka* 'slight'. According to Mio 149 the following also belong in this list: *hontoo*, *toozen*, *zyuubún*, *anmari*, *sokkúri*, *sínmi* 'kind', *hitorimae*, *sizen*, *betu*, *kangae-dóori*. But (Mio 147) the following do not: *muron*, *motíron*, *zissai*, *ookata*, *sekkakú*, *karisome*, *ooyoso*, *yobo-yobo*, *hazímete*, *súbete*. (These are mostly adverbs; he also includes *kánari* and *wázuka*—but see above.) *Kázu-kazu* '(in) large numbers; numerous' is a quantity noun (*Gotisoo no kázu-kazu ga narabimásita* 'Lots of goodies were lined up') that can be predicated (*Kázu-kazu na no ni odoróita* 'I was amazed at the number') and directly adverbialized (*Kázu-kazu itadakimásita* 'I received many') as well as adnominalized (*Kázu-kazu no N*). The word *torídóri*(⁻), from a reduplication of the infinitive *tóri* 'take', means 'to each one's taste' or 'various', and it is usually treated as a precopular noun; the expression *iró^[1] torídóri*(⁻) *no/ni* 'in all sorts of colors', often heard in advertising, contains an ellipsis: *iró [ga/no] ...*

The word *tokúí*(⁻) 'special, favorite' can be either an adjectival noun or a precopular noun; with different meanings ('prosperity, regular customer, ...') it can also be a pure noun. (See note at beginning of § 13.6.) *Dooitu* 'identical' is a precopular noun (but you may occasionally find it treated as an adjectival noun in print); as an abstract noun it means 'identity'. The vexing word *sizen* means both 'nature' as an abstract noun (so that *sizen nó* can mean 'of nature') and 'natural, spontaneous' as an ambivalently adjectival/precopular noun (*sizen ná/nó N*); *toozen* 'natural, reasonable', on the other hand, is not an abstract noun and only displays the grammar of an adjectival/precopular noun (*toozen ná/nó N*). In colloquial usage both *sizen* and *toozen* can be directly adverbialized, though it is common to use *ní*; thus they are adverbs as well as adjectival/precopular nouns. A similar grammar characterizes *tyokusetu* 'direct': *tyokusetu ná/nó N*, *tyokusetu {ní}*.

A number of words belong to the class of abstract nouns as well as to the class of adjectival nouns: *gán-ko* means both 'stubbornness' and 'stubborn'; *sínsetu* means both 'kindness' and 'kind'; *sikakú* means both 'a square' and 'square' (as in the mutative *sikakú ni kíru* 'cuts it square'), the latter treated as either an adjectival or a precopular noun and also forming an adjective *sikakúi* 'is square'—similarly *manmáru*(⁻) *na/no N*, *manmarúi* 'is perfectly round'. As an abstract noun 'present fashion' *ima-yoo* is obsolescent but it continues to function as a precopular noun 'modern'.

The word *súgu* is an adjectival noun (*súgu da*, *súgu na N*) now largely replaced by a prefixed version *massúgu* 'straight; direct; honest' with the adverbialization *massúgu {ní}* (thus it is also an adverb). But in the common meanings 'directly' (= *tyokusetu*) and 'immediately' (= *ziki ní*) we find only the forms *súgu* and *súgu ni*; and in the common meaning 'right (nearby)' it is an ordinary predicable adverb with the forms *súgu*, *súgu da*, and *súgu no N*—as in *Té o nobáseba súgu no tokoró ni taipuráitaa ga áru* 'I have a typewriter right at hand' (but the adnominalized form is usually replaced by *súgu soko/sóba no N*). In the latter meaning *ziki* is also a simple adverb, but in the meaning 'immediately' it is more commonly said as *ziki ní*. *Zíka* 'immediately' usually occurs as *zika ni*, but it is also found in noun compounds such as *zika-dánpan* 'direct negotiations'—to be derived, however, from *zika ni dánpan suru [kotó]*. (*Ziki-tórihiki* 'spot transaction' has a similar derivation.)

There are a few instances of direct conjoining of two of those words that are both adverbs and adjectival or precopular nouns: *iroiro samázama/matímati*(⁻) 'various and diverse', *syúzyu matímati*(⁻)/*iroiro* 'various and sundry'; *syúzyu samázama*(⁻) *no sooi ga*

áru 'there are various and sundry differences' (Ōno 1967.5); syúzyu zatta na/no gyóozi 'various functions', ...¹⁶⁸ Syúzyu and zatta belong to the same classes as samázama—adverb and adjectival noun—but the predicative forms appear to be little used.¹⁶⁹ In each of these conjoinings there is an underlying minor juncture, usually suppressed only when the first word is atonic. In dáisyoo samázama no N 'N in various sizes large and small' dáisyoo 'large and small (sizes)' could be regarded as a precopular noun (but defective for there is no adverbial *dáisyoo ni 'largely and smallly') or as an abstract noun, for it appears elsewhere as a pure noun.

The surface sentence Iroiro mondai ga áru can have at least two immediate sources: (1) an ellipsis of Iroiro {na/no} mondai ga áru 'There are various problems'; (2) a permutation that shifts the adverb back (leftward) from its location in Mondai ga iroiro áru 'There are all sorts of problems'. The surface sentence Takusán mondai ga áru has only the latter type of source, being a permutation from Mondai ga takusán áru 'There are a lot of problems'. The difference is clearly seen by the unacceptability of *Takusán mondai dá kara → Takusán no mondai dá kara 'Because they are a lot of problems' despite the acceptability of Iroiro mondai dá kara 'Because they are (or: it is a matter of) problems of all sorts'. Any quantity word will behave like takusán: Ití-mai kamí ga áru = Kamí ga ití-mai áru 'There is one sheet of paper' is quite acceptable but *Ití-mai kamí da kara (= Ití-mai no kamí da kara 'Because it is one sheet of paper') is not. With the ellipsis, iroiro {na/no} N becomes a pseudo adnoun; cf. the remarks on sasuga {no} N on p. 788 (§13.7).

The phrase hutatu-tígai no áni 'the brother two years older' might lead us to think that AGE-tígai words are precopular nouns, but in fact they are abstract nouns 'being apart in age by ... (years)' as can be seen from the sentences Hutatu-tígai ga óói 'A discrepancy of two years in age is common' and Hon-no hitotu-tígai ga óói 'A mere one year difference in age is common'. (But kentoo-tígai is both a verbal noun 'guessing wrong, miscalculating' and an adjectival noun: kentoo-tígai na kotó/kangáe/hanasí 'a mistaken thing/idea/matter'.) Some precopular nouns will appear to be pure nouns meaning 'one who is ...' but these are best treated as ellipsis of PcN {no [hitó/monó]} ga/o. An example is yuru-hun 'with loosely worn loincloth = week-kneed, irresolute' as in yuru-hun {no} ga óói 'there are many who are weak-kneed'; cf. yuru-hun {no} seizi-ka 'a namby-pamby political figure' (Tk 3.276b). Some precopular nouns are seldom, if ever, found except as the first member of what looks like a noun compound, reduced from an elliptical structure of the type mentioned above: kamitu-syákai 'overcrowded society' (SA 2689.49c) ? < kamitu {no} syákai.

The class of precopular nouns, like that of adjectival nouns, includes a number of different types of lexical formation:

(1) Most words with the negative prefix *mu-* 'without, lacking, -less' are precopular nouns; for those that are adjectival nouns, see p. 764. The prefix attaches to:

(1a) A native Japanese word: mu-tódoke 'without notice/leave' (todoké being a noun derived from the transitive infinitive todóke); mu-hízuke 'undated'; ...

168. Also sikázika kákukaku(°) no N 'such-and-such N'. Of the words for 'various', iroiro suggests interesting variety, matimati(°) undesirable variety; the others are rather neutral.

169. An example in adnominalized form with the literary náru (= de áru) where we would expect ná: ... syúzyu naru atarasii réi o mi-dasu kotó ga dekíru 'we can spot various new examples' (Ishigaki Kenji 33). The expected form appears in syúzyu na mén ni óite(°) 'in various aspects' (Kotoba no uchū 1967/4.11).

(1b) A single, usually bound, morpheme of Chinese origin; the resulting word is best treated as a primitive lexical item: *múseki* 'without registered domicile', *musaku* 'without resources, resourceless', *múteki* 'invincible', *músyoku₁* 'colorless', *músyoku₂* 'jobless', *múzi* 'unpatterned, solid-color', *múkan* 'lacking office', *múryoo*(-) 'free of charge', ...

(1c) A free noun of Chinese origin, usually containing two morphemes: *mu-tyákuriku* 'nonstop (flight)', *mu-kánkei* 'unrelated', *mu-syózoku* 'unattached', *mu-téiken* 'lacking a fixed opinion, vacillating', *mu-rísoku* 'free of interest', *mu-bóobi* 'defenseless', *mu-zyóoken* 'unconditional', ... (The negative prefixes *hi-* and *hu-*, on the other hand, usually make adjectival nouns; for exceptions, see p. 764.)

(2) Chinese binoms: *anmoku* 'tacit', *byoodoo* 'equal', *ippan* 'general, average', *kakudan* 'particular, noticeable', *syosoo* 'premature; too early/soon', *tóssa*(-) 'instantaneous', *tokubetu* 'special', *zatta* 'sundry', *byooki* 'ill'; *kazyuu* 'overloaded'; *saikoo* 'maximum, the greatest', *saitei* 'minimum, the worst', *saiaku* 'the worst', *sairyoo* 'the best' (*sairyoo no seisaku* 'the best policy'); *honnen* (preferred to the older *honzen*) 'natural, innate'; *kinsyoo* 'scanty'; *tayoo* 'diverse'; *híssu*(-) 'obligatory', *nín'i*(-) 'optional'; *sínki* '(a)new, fresh'; *kookyuu* 'permanent' (there is an adjectival noun *kookyuu-teki*); *yúuhu* 'having a husband, being married'; *zekkoo* 'excellent'; ...

(3) Chinese reduplications: *betu-betu* 'separate, apart'; (*with nigori*) *syúzyu* 'sundry'; ...

(4) Single morphemes that were free adjectives in Chinese: *dái* 'great; large(r)' as in *Watasi no dái no hiiki no ana[únsaa] san da* 'He is an announcer who is a great favorite of mine' (SA 2678.46ab) and *dái no tuki* 'an odd (= 31-day) month' and *Songai ga dái datta* 'The damage was great', but this is also an abstract noun as in *dái o násu* 'achieves greatness'; ...

(5) Color names with the suffix *-iro* (from the noun *iró* 'color'): see above.

(6) Iterated verb infinitives: see §9.1.1b.

(7) Native words of miscellaneous structures: *hadaka* 'naked', *suppádaka* 'stark-naked', *hatu-mimi* 'news (heard for the first time)', *uttetuke* 'most suitable, just right', *tama* 'occasional', *dasinuke* 'sudden, unexpected', *mukidasi* 'bare, naked, frank', *haenuki* = *kissui* 'born and bred',¹⁷⁰ *karisome* 'temporary, transient; trifling, slight' (~ *ní mo* 'for even a moment, [not] at all'), *togire-tógire* 'interrupted, intermittent, broken, choppy', *hudebuto* '(writing) in bold strokes', *ottu-káttu* 'about equally, evenly matched' (~ *ni* 'in the nick of time'), ...

(8) Adjective base + the suffix *-me* 'tending to be, a bit on the ... side, somewhat'. These should be entered as separate lexical items in the dictionary. Below are listed 26 examples that I have found or elicited; not all are in current dictionaries. Some speakers treat all these forms as atonic; others accentuate the final syllable (*-mé*) for those derived from tonic adjectives.

170. As in *haenuki no Edokko* 'a Tokyoite born and bred', *haenuki no gunzin* 'a military man to the core', *kono daigaku no haenuki no kó-zukai* 'a janitor whose world is confined to this university'. Notice the common ellipsis in *Oosaka [no] haenuki no sinbun* 'a truly Ōsaka newspaper' (Tk 3.288a) and *Nikkatu [no] haenuki no hitó desita kara né* 'He had spent his whole life working for Nikkatsu, you see' (Tk 3.238b); cf. §25. Nakau 80 has an example of an accusative-marked *haenuki*, which can perhaps be treated as an ellipsis of *haenuki [no hitó/kotó]*.

atu- 'thick': Sutéeki wa atu-me no hoo ga umai 'Steak tastes better a bit thick'.

átu- 'hot': Onsite ga atu-mé(-) dá kara, tyoosetu site morai-tai 'The hothouse is a bit on the hot side, so I'd like to have it adjusted'. [The form is little used.]

háya- 'fast': Okure-soo da kara haya-mé(-) ni arúku 'I will walk fast since I'm about to be late'.

híku- 'low': Kákine wa hiku-mé(-) ni sita hoo ga me-záwari ni naránai desyoo 'If we lowered the fence a bit it wouldn't look so bad'.

híro- 'broad': Asobi-ba o hiro-mé(-) ni tótte sekkei suru yoo ni 'Plan your play-ground on the wide side'.

hóso- 'narrow, slim': Dóa o hoso-mé(-) ni akete, nozoita 'I opened the door a narrow bit and peeped'.

húká- 'deep': Kono ryooi wa huka-mé^(u)(-) no hatí ni motte kudasai 'Pile this cooked dish into a fairly deep bowl'.

hútó- 'fat': Gesui no páipu wa huto-mé^(u)(-) nó ga tukatte áru yoo da 'For sewers, pipes that are fairly big around seem to be used'.

kára- 'spicy': Natú wa kara-mé(-) ni azi-tuké(-) o suru yoo ni 'In summer, spice your food on the hot side'.

karu- 'light in weight': Hazime no aida wa karu-me no rákétto de rensyuu sita hoo ga rakú desyoo 'At the beginning it would be easier if you practiced with a racket on the light side'. [Little used.]

kata- 'hard': Sukósi kata-me ni yuderárete itá ga ... 'It [= the macaroni] was boiled a bit on the hard side but ...' (SA 2685.122a)—ni is the mutative conversion of the copula 'so as to be'.

mizíká- 'short': Kodomó-huku wa mizika-mé^(u)(-) no hoo ga kawaii 'Children's clothes are cuter when on the short side'.

nága- 'long': Yoko wa naga-mé(-) ni, usiro wa mizíkaku kátto site kudasai 'Cut it [= my hair] long on the sides and short in back'.

núru- '(luke)warm': O-húro wa nuru-mé(-) ni yu-kágen site kudasai 'Have the water in the bath on the warm (rather than hot) side'.

óo- 'much, many': Kuriimu o oo-mé(-) ni ireta koohii ga sukí da 'I like coffee with a fair amount of cream in it'; Kúmó ga oo-mé(-) desu 'It's quite cloudy'.

óoki- 'large': Nán dé mo tasyoo ooki-mé(-) ni tukutte okéba matigái nai 'It would be no mistake to make everything more or less on the large side'.

oso- 'slow': Sigoto wa oso-me dá ga seikaku na yoo da 'The work is a bit slow but it seems to be accurate'. [Little used.]

sukúná- 'scarce, few': ... hutuu yori mo sukuna-mé(-) ni kimerarete imasu '... have been set at fewer than usual' (SA 2665.101e).

táka- 'tall': Moo sukósi taka-mé(-) ni bóoru o nagéreba, aité ga komáru daroo 'If I throw the ball any higher, my partner will be in trouble'.

tiísá- 'small': Tiisa-mé^(u)(-) no bótan(-) o takusán^(u) tüketa óobaa wa waka-muki desyoo ka 'Would an overcoat with lots of smallish buttons be suitable for a young person?' [Little used.]

túyo- 'strong': Soko wa, mótto tuyó-mé(-) ni hiite 'Put a little more force into your playing of that passage [on the piano]'.

usu- 'thin': Yóru no o-tya wa usu-me ni taténai to, nemurenaku náru 'If I don't brew the tea at night on the weak side, I find I can't get to sleep'.

yásu- 'cheap': [Bóku(-) wa zyakkan sukuna-mé^(u)(-) no hoo ga ii. Kontikusyoo to

raibaru-ísiki o moyaserú no wa kyúuryoo desu kara né.] Zibun o kánri suru syúdan to site, sukósi yasu-mé(¯) no kyúuryoo wa arigatai '[For me it's better to be on the scant side. What fuels a feeling of rivalry with the next bastard is salary, you see.] As a means of my controlling myself, a salary that is a bit on the cheap side would be appreciated' (SA 2681.28e).

yawaráká- 'soft': Kore wa kiwámete yawaraka-mé(¯) ni hukkúri to taki-agéru 'This [= the rice] they cook up very soft and puffy' (SA 2676.116d).

yówa- 'weak': Hi-kágen wa yowa-mé(¯) ni site, nágaku niru kotó 'To be cooked for a long time over a low flame'.

yúru- 'loose': Íhuku wa yuru-mé(¯) ni tukútta hoo ga rakú ni kirareru 'If you make clothes on the loose side they can be worn more comfortably'.

At least one verb infinitive yields a precopular noun of this type: hikae-mé(¯) 'moderate' comes from the transitive verb hikáeru 'refrains from, is moderate/temperate in'. Like other precopular nouns, these words do not normally become subjects or objects; on occasion you may find gá (and perhaps ó) immediately following, but only as the result of ellipsis: Haya-mé(¯) [ni suru hoo] ga ii 'It would be better [to do it] a bit on the fast side'. The word haya-mé(¯) is also used as an adjectival noun 'early' as in ... haya-mé(¯) na hirú o tabéru to sugu ... 'right after eating an early lunch' (Kb).

These precopular nouns should not be confused with a few pure nouns that are derived from an adjective base + the noun mé 'eye', notably the two words oo-me 'large eyes = taking a generous view' as in Kore kara ki o tukemásu kara kóndo daké wa oo-me ni míte itadakemasén ka 'Won't you kindly overlook this one time since I will be careful from now on?' and usu-me 'narrow eyes' as in Nemutta hurí o site usu-me o akete míte ita 'While pretending to be asleep I was watching through narrow eyes'. Semantic extensions from 'eye' are found in some nouns based on verb infinitives (or on nouns derived from verb infinitives): kiki-me 'effect, efficacy', hakari-me 'weight, quantity; scale', agari-me 'an upturn in the market', sagari-me 'a downturn in the market', Another semantic extension is found in the suffix that derives ordinal numbers and other expressions of points in serial order such as: kisétu no kawari-me ni ítu mo ... 'always at the change of seasons', where -me is attached to the infinitive of kawaru 'it changes'; perhaps wake-mé 'dividing line, part(ition), crisis', wakaré-mé 'turning point, parting of the way', sakai-mé 'boundary line, crisis', and sini-me 'moment of death'.

The ordinal numbers ('first, second, third ...') are made by attaching (-)¯mé to a numeral + counter.¹⁷¹ The result is a noun: hutatu-mé [= hutatú ¯mé] ga owaru to 'when the second one is finished', mittu-mé [= mittú ¯mé] o hazimeru 'begins the third one'. It could be argued that these ordinal numbers are precopular (rather than pure) nouns if we explained the occurrences as subject and object by assuming an ellipsis hutatú ¯mé {no ǰ noǰ } ga 'the [one (that is)] second'; but below we will see other evidence that the ordinals are pure nouns. Ordinals made on numbers that contain the general counter -tú only go up to 'ninth' (kokónotu ¯mé); you will recall that the series for general counting (and for counting years of age) uses -tú through '9', tóo for '10', and then switches to the Chinese numerals with no overt counter: zyuuiti 'eleven things' or 'eleven years old'. For 'tenth' and higher ordinals you use the Chinese numerals with the counter 'ban

171. And that is what underlies the idiom hutakoto-mé ni wa 'at every second/other word = constantly'. Except for such idioms, we will space ¯mé as a quasi-restrictive.

'number' followed by (-)̄mé as if making a single counter -̄banmé: (zyuu-banmé or zyuuban-mé=) zyúu-ban ̄mé 'tenth', zyuiti-ban ̄mé 'eleventh', hyakú-ban ̄mé 'hundredth', etc. You are free to use this option also for the lower numbers: ní-ban ̄mé = hutatú ̄mé 'second'. The Chinese ordinals are also in use, especially in compounds; they are made by attaching dáí- to the Chinese numerals, with or without 'ban ̄mé: dáí-ni or dáí ní-ban ̄mé 'second'. As the last example shows, dáí is attached as a pseudo adnoun when the number is more than two morphemes long: dáí nizík-ka 'Lesson 20', dáí sánbyaku sánzyuu (or dáí sánbyaku sánzyúu-ban ̄mé) '330th'. Like other elements attached to numbers, what appears phonologically to be a prefix or a suffix will sometimes turn out to be in grammatical relationship with a larger constituent, which may contain several phonological words: in the expression sén sánbyaku sánzyuu sán-ban ̄mé '333rd', the ordinalizer ̄mé refers to the entire phrase marked by the counter 'ban 'number', so that both elements enjoy a greater domain than that of the usual type of suffix. Counters (including 'ban) and the ordinalizer ̄mé are thus very similar to the quasi-restrictives of §2.4. When two ordinal numbers are conjoined it is sometimes possible to omit the first ̄mé: san-kái náisi yon-kái ̄mé ni means the same thing as san-kai ̄mé [ni] mátá-wa yon-kái ̄mé ni 'on the 3rd or 4th time' (major juncture is appropriate both before and after the conjunctions náisi and mátá-wa). The example below (from Shiga Naoya, quoted from V 140) puts an ordinalized number in the indefinite form by attaching [dá(tta)] ka and then modifying that structure with the sentence adverb tábun 'perhaps' (tábun hutuka ̄mé ka ni 'on perhaps the second day'); but what makes the example of particular interest is that we must treat either the incorporated number hutuka 'two days' or—more likely—the ordinalized number hutuka ̄mé 'second day' as a transitional epitheme that is modified by an adnominalized sentence: Tómi ga sono syúzyutu o ukéru tamé ni nyuuin sita tábun hutuka ̄mé ka ni bóku(-) wa Yamada no ié o nige-dasite simatta 'On perhaps the second day after Tomi entered the hospital for the operation I fled the Yamada household'. If, as I believe proper, we take the ordinalized number as the epitheme, it will not be possible to consider ordinals as precopular nouns, since those do not epithematize.¹⁷² Another example: káette kíta mikka ̄mé de ... 'it was the third day after I got back and ...'.¹⁷³

You may also encounter a use of the suffix -̄mé as an abbreviation of the counter -̄monmé, an old measure of weight equivalent to 3.75 grams and hence most common with the hundreds; hyaku-mé = hyaku-monmé is about 13 ounces. (The ordinalizing suffix -̄mé is contained within the counter -̄monmé.)

The ordinalizing suffix is thought to be a semantic extension of mé 'eye' conceived of as a notch or scale mark on a measuring rod. But the suffix that makes the precopular nouns meaning 'somewhat' is said to be an abbreviation of mié 'appearance', a derived noun from the infinitive mié 'appear', itself an old passive-type derivative from the transitive verb mí(-) 'look, see'. (Mé 'eye' itself is somehow related.) A quite different suffix -̄mé can be attached to a noun that refers to a person in order to show contempt: baka-mé 'fool', bakamono-mé 'fool', beraboo-mé 'damn fool', hyakusyoo-mé 'country bumpkin', koziki-mé 'damn beggar', usotuki-mé 'liar', dorobooneko-mé 'damn alley cat', bakayaro[o]-

172. And this argues heavily that (-)̄mé is, after all, a quasi-restrictive.

173. The matter would appear to be settled by the following example, where ̄mé is marked as an accusative: Sake ga kúru to káre wa íp-pon ̄mé o nomi-hazime, ... 'When the rice wine came, he started drinking the first bottle ...' (Endō 259). But see the suggested explanation as ellipsis (above).

mé 'sonuvabitch', yowamusi-mé 'damn coward', namakemono-mé 'damn lazybones', etc. We also find koitu-mé 'this bastard', soitu-mé 'that bastard', and aitu-mé 'that bastard' (but not *dóitu-mé 'what bastard'), along with yatu-mé 'bastard, damn guy'. Most such words are fixed, but new creations come into being every now and then, perhaps ephemerally: hakuti-mé 'damn imbecile' (SA 2685.22d), Wagamama-musume-mé! 'Wilful damn daughter!' (SA 2260.122a—heading). Writers will sometimes use watakusi-mé 'wretched me, wretch that I am' as a lively humble form. One etymology suggested for this suffix is a contraction of muré 'group, flock'; another possibility is that it may somehow be related to the noun mé = me-sú 'female', usually encountered as a prefix me(n)-, opposite of [w]ó = [w]o-sú 'male'. The prefix is often associated with the word yátu, which is probably a truncation of yátuko = yákkō 'slave' from yá-tu ko = ié no ko 'child [= person] of the house', -tu being an old (locative-)genitive marker.

13.9. PREDICATIVE AND ATTRIBUTIVE FORMS BORROWED FROM THE LITERARY LANGUAGE

A modern Japanese verb or adjective remains in the same form, whether it appears at the end of an adnominalized sentence or not. But the modern copula de áru will (except in formal speech) contract to dá when not adnominalized—and then it will sometimes drop; when the nominal sentence is adnominalized, the copula appears as ná or nó, depending on the nature of the nouns on either side, as we explain elsewhere.

The older literary language maintained a difference in form between PREDICATIVE and ATTRIBUTIVE (= adnominal) functions for adjectives and for many verbs. The predicative and attributive endings differ in shape for the imperfect and for the various perfects. But consonant-base verbs did not mark the difference in the imperfect: tori [ga] naku 'the bird sings', naku tori 'the bird that sings'. There is a complication in the case of óru 'stays', áru 'is', and verbs derived from them—such as sikáru 'is so', habér-u 'serves a superior', the objective copula náru, and the subjective copula táru—in that the INFINITIVE (óri, ári, sikári, habéri, nári, tári) is coopted to serve most, but not quite all, the predicative functions; that is why these verbs are usually listed in dictionaries of the literary language in the shapes ending in ...i which is called the "predicative" though it is identical with the infinitive. (The traditional analysis assumes two different endings that sound the same; a better analysis is to state the syntax as requiring substitution of the infinitive for the predicative-attributive under specified circumstances.)

Even in colloquial contexts, you will sometimes run across these distinctively marked predicative and attributive forms; they have been borrowed into the colloquial from the literary and are sometimes used to lend a special flavor of bookishness or cuteness to what is being said. Below we will look at some examples, listed by word classes.

Examples of the adjective PREDICATIVE form (*A-si*): Genkin-huyoo-zídai, mása ni tikási de aru 'The cashless era is now upon us' (SA 2660.25b); Ténki wa yósi, kaze wa nási, bura-túku no ni motte-kói no hí da 'The weather is fine, there is no wind, it's the perfect day to stroll' (Kb 335a); Tokoro-sémasi to naranda o-kage de, kodomo wa ukkári kake-dasu kotó mo déki ya sinai 'Owing to [play-equipment] things being all crowded up, the children can't enjoy a good free run' (SA 2666.108e); Uri-tási—Kai-tási— 'Wanted to sell—Wanted to buy—' (SA 2688.36c); Zyósi to syoozin wa yasinai-gátasi to iimásu ga ... 'They say that women and children are hard to raise, but ...' (SA 2678.139c); E-yásuki

monó wa usinai-yásusi '(What is easily got is easily lost =) Easy come, easy go'; Óbi ni mizíkási tasukí(¯) ni nágasi '(It's too short for a sash, too long for a sleeve-tie =) It is good for neither one thing nor the other'; Kyuu-káabu-zíko óosi 'Sudden curve—many accidents' (roadsign); Yósi! 'OK!'; "Nán de mo yósi" ni ... 'Indiscriminately (regardless of what it may be) ...'; "Dáre de mo yósi" ni ... 'Indiscriminately (regardless of who it may be) ...'.

When an adjective base ends in the syllables *si* or *zi*, haplology suppresses the ending itself: *yorosi*[*si*] 'it is all right', *onazi*[*si*] 'it is the same'. These shorter forms are the standard usage from the earliest texts, but the full forms in *-si-si* and *-zi-si* are attested in texts of the 11th and 12th centuries (Satō 1.173). For *A₁-sa wa A₁-si* 'is ever so A, is A as A can be', see §14.7. The phrase *ítasi káyusi* 'it hurts and it itches' is used idiomatically to mean 'is ticklish, delicate'; it is often reduced to a single word, the precopular noun *itasi-káyusi* (no *mondai* 'a delicate problem').

Examples of the adjective ATTRIBUTIVE form (*A-ki*): *Húruki yóki zidai to iú na* 'Don't talk of the "good old days"' (SA 2676.114c); ... *kono yóki huusyuu ga* ... 'this excellent practice' (SA 2685.62e); ... *yóki aité* ... 'a suitable partner'; ... *sono yóki mén*, ... 'a good feature about it' (SA 2664.90d); *Yóki ími de no Makyaverísuto* 'He is a Macchiavelian in the best sense' (SA 2651.71d); *Yóki pápa de mo náku, yóki otto dé mo náí bóku(¯) o túma ya kodomó-táti wa dóno-yóo ni míte iru daroo* 'I wonder how my wife and children look at me who am neither a good daddy nor a good husband' (SA 2658.59c); ... *ásiki kígyoo(¯) ga ryoosin-teki kígyoo(¯) o taósu no de aru* 'the evil businesses drive out the conscientious businesses' (SA 2688.45d)—*ási-* is the usual literary equivalent of *wáru-* 'bad' (the predicative form suppresses the ending: *kígyoo(¯)* [*ga*] *ási*[*si*] 'the business is evil'); ... *tookí sósen* ... 'distant ancestors' (Tk 4.264a); ... *takumásiki nínsoo* 'a strong face' (Tk 4.238); *Orokásiki zyosei wa—*'And the FOOLISH woman—?' (Tk 2.105a); *Iyóiyó ayasiki innén(¯) désu ná* 'More and more mysterious connections, hmm' [*jocular*] (Tk 2.72b); *Kyooyoo takaki interi-húzin to site* ... 'As an intellectual lady of high culture ...' (SA 2664.102d)—the literary language often drops the subject marker *gá*, as here after the first word; *Káre ni tótte, itiban omoide [ga] óoki kyóku(¯) de áru* 'For him it is the song with the most memories' (SA 2652.67c); *Tíkaki kóro mo, ... sinde simatta* 'As a recent example, ... died [neglected]' (CK 985.362); *Yásuki ni túku* 'We take the line of least resistance'—also, perhaps, said as *yásuki o nusúmu* (Tk 3.137a); ... *Sinátorá to obósiki eiga-háiyuu ga* ... 'a movie actor who would appear to be a [fictionalized] Sinatra' (SA 2679.118d); ... *éiga(¯) no gízuyutu rásiki monó o* ... 'things that are like movie techniques' (SA 2635.59a). See also *aru-máziki = aru-mazíi* 'unbecoming, unlikely', §15.12a. The attributive often appears with direct nominalization, equivalent to colloquial *A-í no* ...: *Túmari, taiki-ósen ni túite wa utagawásiki wa bas-sé yo to iu rónri na no da* 'In short, the logic is to punish whoever is suspect with regard to air pollution' (SA 2649.43c); ... *ói(¯) mo wákaki mo* 'both the agèd and the young'—*ói(¯)* is a noun 'the agèd' derived from the infinitive *ói* 'age, get old'; *Húruki ga utí(¯) ní mo hurúi onná ni wa, ...* 'For a woman who is the most old-fashioned of the old-fashioned ...' (Fn 278a)—on the literary genitive (*húruki ga utí(¯) = hurúi no no utí(¯)*) see §3.11.2.

Most commonly in the colloquial usage the attributive-marked form is a brief epithet; observe the phrase ending with the colloquial *takái* right before the literary *wákaki* in the following sentence: ... *tóozí wa syuusai no homaré(¯) ga takái wákaki gákuto de atta* 'at that time he was a young student whose talent was highly praised' (SA 2651.28b).

Quite common are the predicative and attributive forms of *nái*—*nási* and *náki*, respectively:

NÁSI: *Sínin*(⁻) *ni kuti nási* 'Dead men [have no mouths=] tell no tales'; ... *Súupu wa, nási?*—*Nái desu, ée.* ... 'How about soup: none?—There wasn't any, that's right' (SA 2658.124). Direct adverbialization of ... *nási* is common: *Íma de mo né, atakusi no utí*(⁻) *tte iú no wa, rázio*(⁻) *wa nási, kúro-siro no buk-koware no térebi sika nái n desu* 'Even now, you know, at my house there's no radio, there's just a busted black-and-white television' (SA 2676.46c). Predicates with *nási* are often treated as if precopular nouns (*da/ni/no*): *Kore nási de wa, kónniti no Mitúbisi wa nákatte to ieyoo* 'We can probably say that had it not been for this we would not have the Mitsubishi of today' (SA 2689.18d); ... *tyuugákú-sei tte no wa, kodomo dé mo nási otona dé mo nási no zidai désu kara né,* ... 'Since the junior high school student is at an age that is neither child nor grownup, you see ...' (Tk 2.270b); *Náze hitókoto no renraku mo nási ni, bóku*(⁻) *no tati-ai mo nási ni, sore ga okonawaretá no ka* 'I wonder why that would have happened without one word of contact and without my even being present' (SA 2656.63c); *Nán no setumei mo nási ni* ... 'Without the least explanation ...'; ... *si-kata [ga] nási ni* ... 'with no other recourse' (Tk 3.254a). Cf. ... *~daké de nási ni = ... ~daké de náku[te]* 'not only ... but', §8.1, §9.1. You will also find direct nominalizations: ... *sínin*(⁻) *ni kuti [ga] nási o ii kotó ni suru wáke de wa arimasén ga* ... 'I do not mean to take advantage of the fact that the dead can not speak, but ...'.

NÁKI: ... *aizyoo náki kekkon* 'a loveless marriage' (Tk 2.262b); ... *kakumei náki kakumei* 'a revolution without revolution' (SA 2680.103c); *Íma, Óobei*(⁻) *dé wa, miti náki miti o kuruma de hasíru ohuroodo-réésingu ga dai-ryúukoo [de aru]* 'Very popular in Europe and America now is "off-road racing" in which you drive the car on a roadless road' (SA). The attributive *náki* serves as an adnoun meaning 'deceased, late' as in *Watasi no náki tití mo* ... 'My late father ...' (SA 2671.117b) and *Íma wa náki Leonard Bloomfield* 'The late Leonard Bloomfield'. The accentuation indicates that certain phrases are best regarded as lexical primitives: *kokoro-náki sinryakú-sya* 'the heartless invaders' (= *kokoro-nái < kokoró [ga] ná-*); ... *itizi-kyúusen no yamú-naki ni itátta*(⁻) 'reached the point where a truce is inevitable' (SA 2656.147c) (= *yamú no ga nái* 'there is no stopping').

In *Nízyúu-nen no nágaki ni watatte* 'over the long period of twenty years' (SA 2665.9) we might think that *nágaki* is a noun derived from the literary attributive, but in *Zyúu-nen no nágaki nénetu* 'Ten long years' the word is clearly functioning as an adjective. The noun *omóki*(⁻) 'weight, dignity' derives from *omo-ki* '(which is) heavy'. There are a few nouns derived from the A-si forms; notably men's names such as *Tádasi, Másasi, Hírosi, Yásusi*, etc., and the words *karasi* 'mustard' from *kára-si* 'is piquant', *súsi* 'vinegared rice' from *sú-si* 'is sour', *árasí* 'storm' from *ára-si* 'is rough', and perhaps *akasi* 'light' from *aká-si* 'is red/bright' and *omosi* 'weight' from *omó-si* 'is heavy'. In *Káre-ra no koodoo no yósi-asi wa betu ni site,* ... 'Aside from the merits of their activity' we find a noun derived from a juxtaposition of the two literary predicatives *yósi* 'is good' and *ási* 'is bad'; a similar example is the precopular noun *itasi-káyusi* (no N) 'delicate, awkward, ticklish' from *ítasi* 'is painful' and *káyusi* 'is itchy'. The idiomatic phrases *áru ka náki ka no N* 'hardly any N' and *áru ka nási no N* 'few if any N' function as if prenouns. And the atonic noun *roku-de-nasi* 'a goodfornothing' derives from the phrase *roku de ná-si* 'is not satisfactory'.

An alternative version of the adjective attributive is *A-káru*, a contraction of *A-ku áru*, which you may occasionally run across: ... *tanosikáru ~béki syokutaku* 'the dining table

that ought to be delightful' (SA 2652.140c). In *wakakárisi hí* 'the days when (one was young' we find a literary perfect A-*kárisi*, a contraction of A-*ku ári-si*; the same word is found in this example: *Mukasi bóku(-) ga wakakárisi kóro, Kámata no éki de bízin ni átta* 'Once long ago when I was young I saw a beautiful girl at the station in Kamata' (Tk 2.294a). For the negative forms A-*karánu* and A-*karazáru* (etc.) see §8.6. Here are two examples: *e-yasukaránu monó* 'something rarely come by (met with)'; *e-yasukarazáru zén'i no hitó* 'a person of rare goodwill' (Kb 411a.5).

In the following examples the infinitive *ári* functions as the literary predicative: "*Wáre ári to omóu yúé ni wáre ári*" "'Je pense donc je suis'" (Tk 3.156b); ... *situmei no osoré ári* [= *osoré ga áru*] *to ganka-byóotoo ni nyuuin sasereta* 'He was hospitalized in the ophthalmology ward with the diagnosis that there was danger he might lose his eyesight ...' (SA 2656.28b); ... *zyósi puro-resu ni sonó-hito ári to sirareta hitó rasii* 'seems to be a person well known in women's wrestling' (SA 2678.151c). A common idiomatic turn is to predicate a series of N *ári* phrases: *Gensoku ári, reigai ári, kyoyoo ári de, ...* 'What with rules, with exceptions, with dispensations, ...' (Kaneda in Ōno 1967.276); *Ritoo ári, hekison ári, onsen ári, yamā ári minato ári da ga, súbete tyósyá ni tótte wa míti no basyo de ári, minami kara kitá(-) e Nihón o tabí sita kikoo de áru* 'There are faraway islands, there are isolated villages, there are hot springs, there are mountains, there are ports, and all of them are unfamiliar (= brand new) places for the author who gives us a journal of traveling Japan from south to north' (SA 2665.94a); *Sisoo ya koodoo no mén de mo, minséi-kei ári, "sanpá-kei" ári, "hippii-anaakisutó-kei" ári de, makoto ni hyakka-séihoo no omomúki(-)* '[Among the "underground folksingers"'] from the viewpoint of ideology and behavior, what with the existence of the socialist group, the ultra-leftists and the "hippie-anarchist faction" it truly takes on the appearance of "let a hundred flowers bloom"' (SA 2637.98c). Cf. §14.6 (p. 904).

Examples of other *ári*-type verbs: "*Sikári*" *to kotáeru* 'Answers "Yes"': *Senzen no Róosutyáirudo ni site sikári* 'For the pre-war Rothschilds that's the way it was' (SA 2664.44a).

Below are examples of the copulas.

nári: *Tokí wa kane nári* 'Time is money'; *Gyaku mo máta(-) sín nari, désu ka* 'Is it a case of "The opposite also holds true"?' (Tk 4.45b); *Kodomó-táti wa ákanbée. Toozen nári. Nán no hentetu mo náí búranko ni, dáre ga íma-sara(-) nori-tai monó ka* 'The children make faces [of displeasure]. Small wonder. Who wants to ride on a perfectly ordinary old swing?' (SA 2666.198e).

náru: *Nekki-kyuu naru aidéa wa ...* 'The idea of a hot-air balloon ...' (SA 2647.4); *Soo site sonó-hito wa watasi o googoo-kúrabu naru tokoró e turete itta* 'Then he took me to a place that was a gogo club' (SA 2660.134b); ... *sootoo náru kingaku* 'an appropriate sum' (9SA 2680.121c); ... *ika-yoo náru tokoró* 'what sort of place' (SA 2663.104d); *Íma kara rokú-nen máe, máda mánsyon naru monó ga konna ni hukyuu suru ízen ni, ...* 'Some six years ago now, before the "mansion" apartment-house had yet spread like this, ...' (SA 2679.158); ... *byooin e háiru to iu "Míti naru tokoró e no yori-miti" o sita kotó ni yotte, gaikoku-ryókoo o sita tokí ni masáru(-) tó mo otoránai(-), iroiro no kyookun o éta* 'By making the "side trip to an unfamiliar place" of entering the hospital I gained all sorts of edification that was neither better nor worse than when (= if) I took a trip abroad'

(SA 2645.47a); ... nite hí naru monó datta ga 'it was a thing that was similar and yet (= but) different' (SA 2641.10). In the example ... wá-ga kuni no gakusya no utí(¯) naru búnka no keisei ni ... 'in the culture formation among the scholars of our country' (SA 2659.114b) náru is presumably to be taken as equivalent to colloquial de^[1]áru = nó, rather than as ní^[1]áru with locative ní.

naránu (see also § 8.6): ... hadaká-uma naranu mai-káa de ... 'in a private automobile that is a far cry from a bareback horse ...' (SA 2666.121e).

narazáru (see also § 8.6): Niwasaki ni óite(¯) kuruma no nánbaa ga Tookyoo-nánbaa de, "kappe" narazáru tokoró o kóozí(¯) site iru 'The license number of the car left in front of the garden is a Tōkyō number and proudly proclaims that it is not some "hillbilly's" place' (SA 2648.35c).

NOTE: The negative equivalent of sentence-final nári is ní árazu (cf. § 8.5): Íma ya aidéa no náí hitó wa hito ni árazu 'Nowadays the person without ideas is not a person at all' (SA 2652.47b).

narasiméru (pseudo-literary causative): ... genzitu ni kanoo narasiméru zyookén(¯) o ... 'the conditions that will make it possible in reality' (Tanigawa 139); ... sono zoogo ó mo kanoo narasiméru kisó ... 'the foundation that makes the very word coinages possible' (Kgg 43.61).

nári-si (attributive perfect): ... syoowa-syóki túmari rebyuu-keiégeki [ga] hanáyaka nárísi kóro no Asakusa-rókkú o haikai ni sita merodórama '(It is) a melodrama that has as its background the sixth ward [= the entertainment area] of Asakusa at the beginning of the Shōwa period, that is at the time when revues and light theater were popular' (SA 2657.118c).

nári-ki (predicative perfect): Nógiku no gótoki kimi náríki 'I recall you were [fresh and unsophisticated] like a wild chamomile' (epithematic identification—quoted in K 1966.214).

tári: Sosite konketu de áru kotó o iti-nítí tari to mo wasurerú na 'And never forget for a single day that you are of mixed blood' (SA 2656.137).

táru (see also § 13.5, § 13.5a, § 21): ... oyá taru monó ... 'he who is a parent'; Zyosei taru monó, koo iu kunren ni onozukara netú ga háiru no wa atarimae desyóo 'For one who is a woman it is surely only to be expected that an enthusiasm for this instruction should well up spontaneously' (SA 2645.140); sekai-kéizai zídai no biznesú-man taru monó ... 'he who is a businessman in the worldwide-economy era ...' (Gd 1969/9.66a); ... kókka no kihón-hoo(¯) táru kénpoo no kaisei 'the revision of the constitution which is the fundamental law of the land' (KKK 25.78b); Yuui-ténpen no hagesii bundan ni átte, sánzyuu gonén-kan mo dáí is-sen no sákka(¯) táru tii o kákuho site kíta no wa, yooi naránu kotó datta ni tigai náí 'Surely it was no easy matter for him to have preserved for all of thirty-five years his front-line position in literary circles which suffer a severe turnover of talents' (SA 2685.104d).

tarasiméru: (see p. 750)

tarazu: used in the colloquial only to quote literary passages such as Oyá,^[1] oyá tarazu to mo, ko wa ko táre 'Even if the father be not paternal let the child be filial'.

taránu: not used (see § 8.6)

tarazáru (see also § 8.6): ... zizyoo wa, sára ni hukuzatu tarazáru o énai 'matters are bound to be more complicated' (SA 2664.91a).

tári-si (attributive perfect): Gunzin tárisi monó sura, hansen-úndoo ni sánka(¯) site

iru g^énzai, ... 'Today when even former military men are taking part in the anti-war movement ...':

táři-ki (predicative perfect): used in the colloquial only to quote literary passages.

The colloquial verb *suru* is the descendent of the literary attributive form; the predicative form is *su*. You will often find this form used before *ḥéki*, since the literary post-adnominal adjective *bé-si/-ki* normally follows the predicative form—including the morphological predicative form for *áru* (etc.), identical with the attributive (as for consonant verbs in general). The polite auxiliary *-i-másu* is by origin a predicative form and we sometimes find the attributive *-i-masúru* used in adnominalized sentences (see § 22.1).

Vowel verb bases of more than one syllable (*kangáe*- 'think', *kurabe*- 'compare', *óti*- 'fall', *síi*- 'force', ...) drop the final vowel and add *-u* for the predicative, *-uru* for the attributive.¹⁷⁴ The predicative form *kangáú* occurs in ... *kangáú ḥéki yóti ga áru to omóu* 'I believe there is room to think about it' (K 1955.65) and the attributive form *kangáúru* occurs directly nominalized in *Túra-tura kangáúru ni* ... 'Upon careful reflection ...' (Kansai speaker Endō Shūsaku, SA 2651.46c).¹⁷⁵ For 'compare' the forms are attributive *kuraburu* and predicative *kurabu*, the latter found in this example: *Íma o toki-méku "Móotáa-syoo" ... ni wa kurabu ḥéku mo nái ga* ... 'It can not be compared with the "motor shows" that are the in thing today, but ...' (SA 2674.138).

The literary forms of the passive have the ending *-(r)aruru* for the attributive, *-(r)aru* for the predicative. Thus the shape *kakáru* may represent the predicative of the passive of *káku* (the attributive being *kakarúru*, the infinitive *kakáre*, the negative *kakárezu*) and mean 'it gets written' or it may represent the convergent attributive-predicative form of the verb *kakáru* 'it hangs' (infinitive *kakári*, negative *kakarázu*); another possibility is that it may represent the attributive form of a verb using the infinitive for most of its predicative functions — *kakári* 'is like this' (an abbreviation of *káku ári*), for which the negative is *kakarázu* (= *káku árazu*).

Since the provisional form *-réba* is made by adding *eba* to the attributive (dropping its final *u*), the forms for these vowel verbs will be *-ureba*: *Nagamúreba* = *Nagaméreba* 'Upon scrutiny ...' (SA 2660.136d).

The literary forms for 'fall' (infinitive *óti*) are attributive *otúru* and predicative *ótu*; for the infinitive *házi* 'ashamed' the forms are predicative *házu* and attributive *házu ru*, as in ... *házu ru kotó wa náni mo nái ga*, ... 'there's nothing to be ashamed of, but ...' (SA 2664.28a). The literary forms for 'force'—attributive *siúru* and predicative *siú*—were earlier spelled "sihu(ru)" and the infinitive *síi* was spelled "sihi"; because the cluster of two like vowels came from dropping an earlier labial (originally *-p-*) that separated them.¹⁷⁶ But some vowel clusters do not result from a dropped labial; instead, what has dropped is

174. The traditional pronunciation of final *-au* in such forms follows the dialect pattern of vowel reduction and prefers /oo/ but we will follow the orthography (and the modern Tōkyō pronunciation) in writing *-au*. Similarly, the rare case of *-eu* is traditionally pronounced *-yoo*: *uréu* = *uréeru* 'grieves' is pronounced /uryóo/; the attributive is *uréuru* /uryóoru/. The negative is *uréezu*.

175. But in *kangae-u ḥéku mo arimasén* 'there is no likelihood of its being thinkable' (Tsukagoshi 76), the predicative is of the auxiliary *-u(ru)* = *-eru*; see § 9.1.10.

176. Modern *mukúru*(⁷) is given the literary form *mukuy(i)-*, with the predicative *mukuyu* and the attributive *mukuyuru*, but in earlier times it was apparently *mukúp-*, a consonant base (Satō 1.95), and that has apparently survived as the source of *mukuwarenu issyoo* 'an unrewarded life' (MKZ⁵ 1077c).

-y-. The verb *mie-* 'appear', for example, makes literary forms that are spelled *miyúru* for the attributive and *miyu* for the predicative. Since the distinction between *-iu-* and *-iyu-* is difficult to maintain, Japanese are often confused about the spellings of some of these words. You may run across such false spellings as **siyu* and **siyúru* for 'forces' or **kuwáyu(-)* and **kuwayúru* for *kuwá(h)u(-)* and *kuwa(h)úru(-)*, corresponding to the colloquial *kuwaéru(-)* 'adds'. In reading the literary forms, speakers will often follow the patterns of vowel reduction characteristic of dialect speech (where *kau* 'buys' is pronounced *koo*) and say *ku[w]óo(-)* for *kuwáu(-)* and *ku[w]óoru(-)* for *kuwaúru(-)*. The literary conjunction equivalent to the formal colloquial [*sore ni*] *kuwaéru ni* 'moreover' is *kuwáu ru ni*, usually pronounced *kuóoru ni*, as you may hear in a public speech.

When we come across a predicative form ending in *-u*, we can not be sure from the shape whether it is a consonant verb that would be identical in the colloquial or whether it is a vowel verb, which would be *-eru* or *-iru* in the colloquial.¹⁷⁷ Thus "*aku*" might be the consonant verb 'it opens' (colloquial *aku*), with the same form in the attributive and with the infinitive *aki* and the negative *akazu*; or it might be the vowel verb 'opens it' with the attributive *akuru* (colloquial *akeru*) and the infinitive *ake*, the negative *akezu*. Such confusions may be responsible for the ambivalent shapes of certain verbs today. The three infinitives *áki* 'weary', *tari* 'suffice', and *kari* 'borrow' are the same in virtually all dialects. But in Tōkyō these verbs are treated as vowel bases, so that the imperfects are *áki ru*, *tariru*, and *kariru* while the negatives are *áki nai*, *tarinai*, and *karinai*; in western Japan they are usually treated as consonant bases with the imperfects *áku*, *taru*, and *karu* and the negatives *akán*, *taran*, and *karan*. The infinitive *simi* 'permeates' is similar in that Tōkyō treats the verb as a vowel base (imperfect *simiru*, negative *siminai*) but in western Japan it is often treated as a consonant base (imperfect *simu*—in Ōsaka also *syumu*, negative *siman*). A less obvious case is *tare* 'drip': Tōkyō speakers say *mizu ga tareru* (*tarinai*) 'water drips (doesn't drip)' but the Ōsaka forms are said to be *mizu ga taru* (*taranai*), apparently homonymous with 'suffice' (infinitive *tari*). (Cf. Maeda 1961.214. Is the Ōsaka infinitive for 'drip' *tari*?) The infinitive *móre* 'leak' also is treated either as a vowel verb (*moréru*, *moré nai*) or as a consonant verb (*móru*, *moránai*—is the infinitive *móri*?), and these forms are apparently both in current use in Tōkyō (cf. BJ 2.277 n. 26).¹⁷⁸ The verb *sinóbu(-)* 'tolerates' is a consonant base in the colloquial, but a vowel base (attributive *sinóbúru(-)*, infinitive *sinóbi(-)*) in the literary, and it is from the literary that the colloquial borrows the negative in the stereotyped expression *V-ru ni sinobinai(-)* 'can not find it in

177. Except for the final vowel being *i* or *e*, the two kinds of bases show no differences in modern Japanese. But in Hidaka-gun in Wakayama prefecture the old distinction of conjugation is maintained (K 1966.205). The change from *-uru* to *-eru* (and *-iru*?) began as early as Kamakura times, but verbal auxiliaries such as the passive were slower to follow the change, which became general in the latter part of the 17th century (Y 138). In parts of Shikoku (Ehime prefecture) and Kyūshū such old forms as *orúru* = *oríru* 'descends', *sugúru* = *sugíru* 'exceeds', and even *sinuru* = *sinu* 'dies' are still alive (H 1968.149, 165).

178. In the Nara period (Satō 1.90) the following verbs were treated as consonant bases, though they later became vowel bases as indicated: *kák(e)-* 'hang it', *mák(e)-* 'appoint' (whence modern *makase-* 'entrust with', originally a causative), *wák(e)-* 'divide it'; *momít(e)-* later *momíd(e)-* 'leaves turn color'; *todóm(e)-* 'stop it', *hur(e)-* 'touch', *kakúr(e)-* '(vanish =) die', *osór(e)-* 'fear', *wasur(e)-* 'forget', *tár(e)-* 'droop/drip it'; *tar(i)-* 'suffice'. In the Heian period (Satō 1.114) the following were treated as consonant bases: *sidár(e)-* 'droop', *tur(e)-* 'follow' (intransitive; the vowel form was transitive 'bring as company'), *mór(e)-* 'leak', *midár(e)-* 'be disturbed' (also 'disturb' = later *midás-*); *um(e)-* 'bury'; *ík(i)-* 'live'.

one's heart to do' (see § 14.6). The expression *mi/kokóró ni simiru* 'penetrates one's self/soul = is deeply felt' is normally treated as a durative-stative (§ 3.12): ... *simite iru* and ... *simita N*, with the gerund ... *simite* used adverbially to mean 'with deep interest'. But the literary predicative form *simu* surprisingly turns up in use as a quasi adnoun: ... *isso mi ni simu monó ni surú no ni zyuubún datta* 'was sufficient to make it something all the more deeply felt' (Kb 124b). Perhaps this is due to the influence of the merger of the attributive and predicative forms in the Ōsaka *simu*.

One-syllable verb bases that end in *i* (*mí*- 'see', *i*- 'stay', *í*- 'shoot' or 'cast metal', *hí*- 'get dry') simply add *-rú* for both the attributive and the predicative forms, as in the colloquial. (The irregular verb *kí*- 'come' is normally replaced by a variant, the consonant base *kitár*-, a contraction of a compound of *kí*- 'come' + *itár*(-) 'reach'.) But the one-syllable vowel bases *é*- 'get' and *hé*- 'pass' have separate forms in the literary language for the attributive (*úru*, *húru*) and the predicative (*ú*, *hú*); the infinitives are *é* and *hé*, the negative *é-zu* and *hé-zu*. An example of the attributive: *tosí o húru* [= *héru*] *hodó ni* ... 'as one passes through the years' (SA 2684.138c). The verb *dé*- 'emerge' has the literary shape *íde*:- the predicative form is *ídu* (= *ízu*), the attributive is *idúru* (= *izúru*), and the negative is *ídezu*. The infinitive *íde* is the source of *o-ide*, the honorific infinitive used as a euphemism for 'going', 'coming', and 'staying' (§ 6.4).

We have observed separate shapes for the attributive and predicative of verb forms in other sections: the various negative forms in § 8.6; the literary perfects *-i-tú/-túru*, *-i-nú/-núru*, and *-i-ki/-si* in § 9.5; and the literary perfect-resultative *-éri/-éru* in § 9.6. We have also seen the quasi-literary causative form *V-(a)siméru*, made from the infinitive *V-(a) síme* by colloquial patterns; the genuine literary forms *V-(a)simu* and *V-(a)simuru* are also sometimes used: ... *kánozyo-ra no íssyu no risoo-syúgi no sikarasimúru tokoró na no de wa nakaróo ka* 'I wonder if it isn't a kind of idealism on the part of those women that make them be like that' (SA 2658.52d)—the causative is made on the literary verb *sikár*- < *sikáár*- 'is such'.

There is also a literary version for the colloquial perfect *-tá* (§ 11), the forms being *-i-táru* for the attributive and *-i-tári* for most of the predicative uses; the latter is the source of the colloquial representative *-tári* (§ 9.4). Examples of the literary attributive: ... *kagiráretaru hán'i de* ... 'in a limited scope' (Tk 2.333b); *Óitaru Gyaban* ... 'Gabain, who has aged ...' (SA 2679.118a); *Réi no gótoku ni kazari-tátetaru tosi* no kure '(It is) the end of the year all decorated up as usual' (SA 2657.3); *Tugí ni arawáretaru wa* [= *arawáreta* no wa] *onná no kao* 'It was a woman's face that next appeared' (SA 2660.135d); *Arawáretaru wa káta-ya kuro-táitu ni sora-iro* [no] *mizugi o kita débu-san* 'What has appeared in the one corner [of the wrestling ring] is Miss Fatso wearing a light blue swim suit and black tights' (SA 2678.140e). As the last two examples show, it is common for attributive forms to appear directly nominalized, where the colloquial would call for the nominalizer *nó*. In the literary language *V-rú mo* and *A-kí mo* are sometimes used to mean 'but, however' where the colloquial would have *V-rú keredomo* and *A-í keredomo*. Cf. LF 72-3; Henderson 163-4. *V-rú ni* and *A-kí ni* are used to mean 'despite (the fact that)'—corresponding to colloquial *V-rú no ni* and *A-í no ni*—but also to mean 'where, where-upon'. The perfect predicative form *túkétari* 'has attached' is the source of the noun *tuketari* 'a supplement, an accessory'. *Étari* 'I've got it' is used as an exultant exclamation 'Good (for me)!' often in the form *Étari ya óo* 'Have I got it?—Yea!' (and *Étari óo* in Miyara 1954.112); *étari tó* *bákari* and *étari kasikósi tó* means 'with great eagerness'

(kasikó-si being the literary predicative of the adjective 'wise, shrewd'); etarí-gao(ˉ) means 'a look of triumph'.

Occasionally we see the attributive form of a consonant base (indistinguishable from the predicative) used before what looks to be a postadnominal of the shape raku: ... bóku(ˉ) gyaku ni toú raku [wa] 'what I inquire, conversely [is]' (Tk 2.220a); Nozomú raku wa ... 'It is hoped that ...'; Osímu raku wa ... 'It is a pity that ...';¹⁷⁹ Utagaú raku wa ... 'It is doubted that ...'. These are back-formations by false analogy with some of the forms of an archaic nominalization that is made by adnominalizing the verb to a postadnominal aku (or ˉáku—the accentuation is unclear) and then obligatorily reducing the forms by contraction and/or crasis:

(1) consonant verbs ... C[u] aku: iw[ú] aku = íwaku 'what one says (is ...)'; negáw[u] aku = negáwáku wa 'what one requests (is ...)';¹⁸⁰ katar[ú] aku = kataráku 'what one tells (is ...)'; ár[u] aku = áráku 'that (it) exists ...; that (one) has ...'; tir[ú] aku = haná [ga] tíraku wa 'the scattering of the flowers'.

(2) vowel verbs ...r[u] aku: tugur[ú] aku = tugúráku 'what is reported (= tugerú no, tugeru kotó); oyúr[u] aku = oyúráku 'being old';¹⁸¹ kúr[u] aku = kúráku 'coming'; sur[ú] aku = súráku 'doing'; mír[u] aku = míráku 'seeing'.

(3) adjectives ...-ki aku > -keku: tákaki aku > tákakeku 'being high; what is high'; yásuki aku > yásukeku 'being cheap/easy; what is cheap/easy'; hósiki aku > hósikeku 'being desired; what is desired'.

(4) verb negative ... (a)n[u] aku = ... (a)naku: sen[ú] aku = sénaku 'not doing' (= sinái no, sinai kotó).

(5) literary tentative/hortative ... (a)m[u] aku = ... (a)maku: sém[u] aku = sémáku 'not likely/wanting to do' (= sinái daroo, suru ˉmái). See also ˉ(a)mási 'wants to (be/do)' < ˉ(a)má[ku] hósi < ˉám[u] aku hósi-, § 15.12a.

(6) various perfects:

V-i-túr[u] aku = V-i-túráku (= V-tá no, V-ta kotó);

V-i-núr[u] aku = V-i-núráku (= V-tá no, V-ta kotó);

V-i-ár[u] aku = V-ér[u] aku = V-éráku (= V-te iru kotó/no; V-tá no, V-ta

kotó)¹⁸²

V-i-ki-ár[u] aku = V-i-kér[u] aku = V-i-kéráku

V-i-ki aku¹⁸³ = V-i-kéku

V-i-si aku = V-i-siku¹⁸⁴

(7) perfect tentative:

V-i-ki-ám[u] aku = V-i-kém[u] aku = V-i-kémáku (= V-tá daroo).

179. As in ... osímu raku wa, watasi ni yakuyu no tísiki ga náí 'I am sorry to say I have no knowledge of baseball' (Tk 3.53). Urám raku wa 'It is regretted that ...' corresponds to earlier uramúr[u] aku.

180. A variant: negáwaku ba.

181. The modern oiraku 'old age' as in oiraku no kói 'a love of one's later years' is a variant. (The syllable yu is often replaced by i in modern dialects.)

182. As in Kózin iéráku 'Men of old said as follows' (MKZ^s 43b).

183. Since this is the predicative form, we would not expect it to turn up, but -ki/-si were used somewhat indiscriminately in early days. Cf. Martin 1967.260 n. 24.

184. The form is irregular; we would expect it to be V-i-séku. See Terasé 214, Shimmura 586b.

13.10. PSEUDO ADNOMINALS; PREDICATE-PRONE ADJECTIVES

There are a number of idioms in Japanese that involve a noun derived by attaching the prefix *oo-* 'big' or *ko-* 'little' in such a way that the reference of the size is to the extent of the action of the verb rather than to the noun itself: *ko-mimi ni hasámu* 'hears casually', *ko-te o kazasu* 'shades one's eyes with one's hand', *ko-kubi o kasigéru* 'cocks one's head (slightly)', *ko-mata o hiráite/hirogete* 'taking short strides', *oo-mata o hiráite/hirogete* 'taking long strides', *oo-áse o káku* 'perspires heavily', Ishigaki (58) speaks of these as "pseudo adnominals". The best way to handle them, it would appear, is as idiomatic lexical items. See also some of the examples with "intensifier" prefixes in §9.1.1a. *Ko-básiri ni hasítte* 'tripping along' (Tk 3.206b) looks similar to these expressions but the verbal meaning is contained within the first word, which also functions as a verbal noun *ko-básiri suru* 'trips along, walks quickly'; there is also *ko-básiri ni yatte kíta* 'came tripping (to meet us)'.

The adjectives *sukunái* 'is little in quantity; are few' and *óói* 'is much; are many' do not adnominalize quite so freely as other adjectivals. Normally, for example, they will not permit a subject to be extruded as epitheme: *Kodomo ga óói* 'Children are many' will not readily convert to (?)*Óói kodomo* 'Many children' for that will be said as *Takusán no kodomo* or *Óoku no kodomo* 'A lot of children'; *Kane ga sukunái* 'Money is little (in quantity)' will not readily convert to (?)*Sukunái kane* 'Little money' for that is said as *Sukósi no kane* 'A little money'. But (with or without the subject explicitly expressed) the sentence will permit epithematization of other adjuncts: [*Kodomo ga*] *óói háha* ... 'A mother who has many children ...', [*Kane ga*] *sukunái tokí* ... 'A time when money is in short supply ...'. And when the epitheme is to be used in a negative sentence, it is possible to extrude the subject of these adjectives: *Anmari óói kodomo no sewá ga dekinái* 'I can't take care of too many children'. And if the reference is definite ('THE many/few...'), extrusion of the subject is also possible: *Sukunái kane o dóo tukaimasyóo ka* 'How shall we use such a small amount of money as this?' (= *konna ni sukósi no kane*). Other examples occur in written Japanese: ... *Hukuzawa Yukiti wa "Gakúmon no susume"* *sonó-ta o sukunái kanzi ni yotte káki*, ... 'Fukuzawa Yukichi wrote "The promotion of learning" and other works with very few Chinese characters' (Ōno 1966.232); ... *sukunakaránu Ameriká-zin wa* ... 'no few Americans ...' (SA 2681.34c). *Yorosii* 'it is satisfactory (as matters stand)' is also typically predicative, perhaps because its reference is to a general situation rather than a specific noun subject.

14 NOMINALIZATIONS: GENERAL AND SPECIFIC

Two very common postadnominals are used to nominalize a sentence: *ko¹tó* makes a general nominalization that is abstract, habitual, or remote; *no* makes a specific or definite nominalization that is single, immediate, concrete, or directly perceivable. The basic difference between *ko¹tó* and *no* can be seen in sentences of the type exemplified by *Soo kangáéru NO wa toozen no KOTÓ da* 'It is natural to think so', an identificational sentence with the specific nominalization (*soo kangáéru no da* 'to think so') as the Identified and the general nominalization (*toozen no ko¹tó ga* 'a natural fact') as the Identifier, with the usual thematization and focus (... *no da* → ... *no wa*, ... *ko¹tó ga* → ... *ko¹tó da*). Notice also: *Káre-ra no mokuteki wa watasi no kao o míru ko¹tó datta* 'Their purpose was to get a look at [my face =] me' (Endō 197). A detailed discussion of the semantic features that differentiate *ko¹tó* and *no* will be found in Josephs (to appear); he labels the features DIRECT (*no*) and INDIRECT (*ko¹tó*).

There are a number of compound nouns with *-goto* (= "koto) as later member: *negai-gótó*(⁻) 'one's desire', *warai-gótó*(⁻) 'laughing matter', *kangae-gótó*(⁻) 'something to think about; concern', *si-goto* 'work, job', *deki-gótó* 'a happening', *kaké-goto* 'gambling'; *sinpai-gótó*(⁻) 'a matter of concern, a worry', *zyoodan-gótó*(⁻) 'a joking matter', *soodan-gótó*(⁻) 'a matter for consultation', *hito-goto* 'other people's concerns'; *asobi-goto zya nái* 'it is not child's play'.

14.1. KOTÓ

A sentence can be adnominalized to *ko¹tó₁* with various meanings that can be summarized as 'the act/fact/experience of ...'. Nominal sentences convert *dá* to *ná*: *Aitu ga warúi yátu na | ko¹tó wa || dáre de⁽¹⁾ mo sitte 'ru yó* 'That he is an evil bastard is known to everyone, I tell you'.

To be distinguished is the use of *ko²tó* as an ordinary (though usually modified¹) noun 'facts (about), matter (regarding)': *Sensei no | ko¹tó desu ga ...* 'It's (a matter) regarding the teacher ...'; *Hontoo no ko¹tó o litte kure* 'Tell the real story; Tell the truth'; *Sonna ko¹tó wa || ore no sitta ko¹tó zya | nái* 'Such things are no concern of mine'. This is one way to set up a loose theme, as in the first example above; observe how *Asitá no ko¹tó desu ga ...* 'It's about tomorrow (that I want to speak to you) ...' is very similar in meaning to *Asitá wa [née] ...* '(Now, as for) tomorrow ...'. When the sentence adnominalized to *ko²tó* is something other than a predicated pure noun, the sentence is usually quotationalized: *Okyaku-san ga míeta to iu | ko¹tó da* 'It's (about the fact) that guests have arrived'; *Kozútumi ga | tyót-to | omoi to iu ko¹tó da* 'It's a matter of the parcel being a bit too heavy'; *Kónban | damé da to iu | ko¹tó da* 'It's that tonight is out'. The nominalizations (including those made on predicated pure nouns, *N da to iu ko¹tó*) need not be predicated; they can be put to use as subject or direct object, often referring to the perception of a fact:

1. Other noun uses need not be modified: *Kotó no ikisatu wa ...* 'Details about the matter are ...'; *ko¹tó ga | okóreba* 'if an incident should arise' (SA 2685.99b); *Kotó wa, || Nikuson no | nerai doori ni | susumu daró ka* 'Will the matter go as Nixon aims it to?' (SA 2679.18b).

Kore da Omoi Móo kíta Móo kíta daroo to iu kotó o/wa kikanákatta	}	to iu kotó o/wa siranákatta 'I didn't know (that)	}	it was this'. it was heavy'. it had come'.
---	---	---	---	--

Móo | kíta daroo to iu | kotó o/wa | kikanákatta 'I hadn't heard that it was probably already here'.

Hayákatta to iu | kotó ga | wakátta 'I realized that it was early'.

Another use of kotó₂ as object is N n^[1] kotó₂ o iu 'it refers to N, it means N'. Notice also N t^[1] iú no wa S kotó₂ da = N wa S t^[1] iu kotó₂ da 'N means (doing, being) S'. The word kotó₂ as an ordinary noun has a number of meanings: 'matter, affair, thing; circumstances, case; incident, event; task, duty, work'. S t^[1] iu kotó nara (or S t^[1] iu kotó de áreba) means 'if it turns out (to be the case) that S, if it (so) happens that S', as in this example, which offers another S t^[1] iu kotó, as well: Ima-máde | tukatte ite || kóoka ga | ná iu | kotó de áreba, || kusuri o | kaete miru to iu | kotó mo || hitóu no | hoohoo désu 'One method is to change the drug, if it happens that there is no effect from using it to date' (SA 2669.104c).

Some other uses of kotó are described elsewhere: ... t^[1] o no kotó₂ da, §21; N o kotó to mo sinai, §21.4; ... ni koto-kaite, §14.6.2. For sentence-final kotó, see §15.13, §16.2.(17). Kotó is also used in letterwriting as a polite substitute for the particle gá: Watakusi koto, meaning something like Watakusi no kotó de 'It's about me', is used at the beginning of a letter where you might expect Watakusi ga; cf. kóso. Another particle-like use is ALIAS kotó || NAME (with the juncture cancelling the final accent of kotó): Hasegawa Kazuo kotó || Hayasi Tyoozírōo 'Chōjirō Hayashi, later known as Kazuo Hasegawa'; An-Turu san kotó, || sákka(°) || Ándoo | Turuó-si ... 'the writer Mr Tsuruo Andō, who goes by the nickname of An Tsuru' (SA 2656.24). Perhaps this usage can be regarded as a shortening of B n^[1] kotó n^[1] A 'the person A to whom the name B refers'. By "alias" we mean pen name, stage name, nickname, etc. In written Japanese (and in somewhat formal speech) you may come across kotó—followed by major juncture when read aloud—as a thematic signal at the beginning of the sentence, anticipating a phrase that will tell you what the sentence is about: ... KOTÓ || kane NI TÁI-SITE WA, ... 'when it comes to money' (Tk 3.283); ... KOTÓ || koo iu mondai NI TÚITE WA, ... 'with respect to this matter' (Tk 2.67b); ... KOTÓ || gó NI | KAN-SÚRU | kágiri wa ... 'as long as the subject is the game of gó' (Tk 2.74b); ... KOTÓ || seibutu-syákai no | kotó TO | NÁRU TO ... 'when it comes to a matter of the biological society' (SA 2677.112e); KOTÓ || kaikái-siki NI | KÁN-SITE WA || Minpoo sizyoo || hazimatte írai to iu || dooitu zikán-waku, || dooitu gámen(°), || dooitu ónsei(°), || dooitu supóonsaa de || hoosoo [suru] to iu kyooryoku-buri [da] 'In the matter of opening ceremonies [of the Ōsaka Exposition], the collaboration—unprecedented since the beginning of the private network (Minkan-hoosoo-rénmei = Minpoo-ren)—is such that they will be televised with identical [time frame =] hour-format, identical setting, identical sound, and identical sponsor' (SA 2670.24d). This kotó always forms a phrase to itself and is never focused by wá or mó.

A number of uses of kotó₂ involve adverbialization, with the copula dá converting to the infinitive ní (§9.1.11) to produce set phrases such as mazúí kotó ni 'inconveniently enough, unfortunately, awkward as it happened to be', omosirói kotó ni 'interestingly/amusingly (enough)', osorosii kotó ni 'frightening to tell', kanasii kotó ni 'sad to say', arigatái kotó ni 'happily enough, fortunately', uresii kotó ni 'to my delight', kokkei na kotó ni 'comically enough' (Tk 2.64b), hiniku na kotó ni 'ironically enough', iyá na kotó ni 'to my disgust, unpleasant to say', yákkai na kotó ni 'annoyingly enough', ígai(°) na

kotó ni 'surprisingly enough', tugoo ga ii kotó ni 'conveniently enough'; odoróita kotó ni 'to one's surprise', komátta kotó ni 'to one's distress' (~ wa ... 'the trouble is that ...'); husigi na kotó ni wa 'oddly enough, strange to tell', osii kotó ni wa 'pitiful to say, it is a pity that'; warúi kotó ni {wa} 'unfortunately', nãni yori mo warúi kotó ni 'worst of all'; cf. não warúi kotó wa 'worse still', and the dephrasal adverb Totemó-no-kotó-ni 'While you are about it ...'. For expressions with kotó ni nãru/suru, see §14.1.2. Notice also (§9.3) sinai kotó ni wa 'unless it happens' (= sinákereba, sinai to, sinái de wa) or 'so long as it does not happen' (= sinai kágiri, sinai utí(-)), and suru kotó nãsi ni {wa} with similar meanings (§14.6). With dropping of ní (§9.1.12) we get such direct adverbializations as isso no kotó^[1] 'preferably, rather',² nagái kotó^[1] 'for a long time',³ and hayái kotó^[1] 'promptly'—listed by some dictionaries as lexical adverbs; cf. áru-hi no kotó^[1] 'one day ...' ← áru-hi no kotó datta 'it happened one day', Séngetu nízyuu iti-nití no kotó^[1], ... 'On the 21st of last month ...' (SA 2654.141c). Observe also súde-no-kotó {ni} or súde no tokoró de = sú[n]de ni 'almost, on the point of' (< intransitive gerund súde 'ending'—súde ni also means 'already').

In the imperfect form, V-ru kotó₂ da can be used to convey advice ('the thing to do is to V'): Sãa || hataraku kotó da 'I guess what we/you better do is work'; Sonna kéesu ni l áeba, || o-mãwari-san ni l tugeru kotó desu 'If you meet with such a case [= run into such an incident], you should tell a policeman' (SA 2661.111c).

This is the origin of the usage to express an indirect command: Eda o oránai l kotó da 'Please don't break the branches'; Tabako o nománai l kotó [da] 'No smoking, please'; Yokei na o-sékkai wa, || sinai kotó da l ná 'You'd do well to mind your own business' (Hayashi 136). Compare V-ru monó de wa náí 'It is not the [proper] thing to ...': Hito o yubi-sãsu l monó de wa l arimasén 'You shouldn't point at people' (Hayashi 172). Perhaps this is the likeliest source for the expression V-ru kotó to suru 'I will make it a point to V, I'll be sure to V' as in Asitã^[1] áme de mo iku kotó to simãsu 'I'll be sure to go even if it rains tomorrow'. Somewhat different is S kotó to suru to 'If [we suppose/assume/know that] S': Asitã^[1] kãre ga Tookyoo ni túku kotó to suru to, watasi wa éki made mukae ni ikanéba naránai 'If he is to arrive in Tokyo tomorrow I'll have to go to the station to meet him'.⁴

The meaning of TIME no kotó da 'It's a matter of TIME' is 'happened (or will happen) at a time': Zyúu-nen máe no kotó da 'It happened ten years ago', Asátte no kotó da 'It will take place day after tomorrow'. This is the source of yat-tó^[1] no kotó de (= yat-tó^[1]) 'at long last, barely, narrowly'—and its synonym yooyaku no kotó de (= yooyaku)—together with some of the direct adverbializations of ... no kotó above. Dekiru kotó nara means 'If (it's) possible; If I can'. Dóo sita kotó {[da] ka} means 'What happened?' or—interpolated in a narrative—'what-do-you-know-but; somehow (or other)'.

One interesting usage of kotó₁ can be called the ITERATIVE CONCESSIVE: S₁ kotó

2. Isso no koto^[1] || ziei-tai o l yamete simaoo, tó wa || kangáénakatta? 'You didn't think of quitting the Self Defence Force as preferable [to resistance while a member]?' (SA 2662.24c).

3. ... nagái koto^[1] koko ni nete ite ... 'having slept here for a long period' (SA 2672.23b). This use of A-i koto^[1] as the equivalent (in a few instances) of A-ku is reminiscent of the use of V-(a)nákú wa náí as a variant of V-(a)nai kotó wa náí, p. 394.

4. But this sentence would be more comfortable with kotó ni nãru to. And V-ru kotó ni suru 'decides to (makes it a point to) V' is more common than V-ru kotó to suru, though their meanings are virtually identical.

wa S₁ ga/kedo 'as for doing/being S₁ it is true that S₁ but' (§17.4-5). More often than not, the sentence is repeated without the adjuncts: Tegami o káku kotó^(r) wa | káku ga || ... 'I'll write the letter, never fear, but ...'; Kore mo || yasúi kotó^(r) wa | yasúi n da kedo, || ii mōn da | né 'This also is cheap enough, all right, but it's a good one' (Tk 4.294a); Wakáru kotó^(r) wa | wakáru kedo || ... 'I understand, all right, but ...'; Iki-tai kotó^(r) wa | iki-tái ga || ... 'I want to go, all right, but ...'. Various changes can be rung on the resulting sentence, and the input can be negative, desiderative, etc., but it must be imperfect:⁵ Iki-tai kotó^(r) wa | iki-tákatta ga || ... 'I wanted to go, all right, but ...'; Iki-taku náí kotó^(r) wa | iki-taku náí ga || ... 'I don't want to go, it is true, but ...'; Yari-sugiru kotó^(r) wa | yari-súgita ka mo | sirenái ga || ... 'I may have overdone things a bit, but ...'; Kodomo wa || génki na kotó^(r) wa | génki desu ga || ... 'The child is healthy, all right, but ...'; Káre wa || tomodati na kotó^(r) wa | tomodati dá kedo || ... 'He is a friend, true, but ...'; Hontoo na kotó^(r) wa | hontoo dá kedo || ... 'It's the truth, to be sure, but ...'; Omosirói kotó^(r) wa | omosírokatta kedo || ... 'It was fun all right, but ...'. An adjectival noun permits optional dropping of [na kotó]: Sízuka {na kotó} wa | sízuka da ga || ... 'It IS quiet, all right, but ...'. The repeat must have the same polarity (negative or affirmative) as the input, if the result is to be interpreted as the iterative concessive, since this construction will not let you say 'it is not true that ... but' or 'it is true that not ... but'. On the other hand, if kotó is taken as the ordinary noun (meaning 'doings' or the like) all sorts of combinations can occur:

Watasi wa || suru kotó wa | surú ga, || sinai kotó wa | sinái 'I do what I do and I don't do what I don't do', or: 'I do what [someone] does ...' etc.

Watasi wa || sinai kotó wa | sinái ga, || suru kotó wa | suru 'I don't do what I don't do and I DO do what I do', or: 'I don't do what [someone] doesn't do ...'.

Hito no sinai kotó wa | surú ga, || suru kotó wa | sinái 'I do what others don't do but don't do the things others DO do'.

Hito no suru kotó wa | sinái ga, || sinai kotó wa | suru 'I don't do what others do but do do things others don't do'.

Watasi wa || suru kotó wa | sinái ga, || sinai kotó wa | suru ningen da 'I'm a person who doesn't do the things that are done but does the things that aren't done'.

Watasi wa || sinai kotó wa | surú ga, || suru kotó wa | sinai ningen da 'I'm a person who does the things that are not done but doesn't do the things that ARE done'.

Watasi wa || si-tai kotó wa | surú ga, || si-taku náí | kotó wa | sinái 'I do the things I want to do and don't do the things I don't want to do'.

Watasi wa || si-tai kotó wa | sinái ga, || si-taku náí | kotó wa | surú n da 'I don't do the things I want to do but do the things I don't want to do'.

A sentence like Náí kotó wa náí ga could be taken either as the iterative concessive 'There are none, it is true, but ...' or it could be taken as the experiential nominalization of §14.1.1 'It never happens that we are out of them but ...'. Perhaps these meanings can be disambiguated by juncture,⁶ in any event, substitution of mó for wá will make the

5. In contrast with S₁ mo S₁ 'really S' which can take an input that is perfect: tábeta mo tábeta 'really ate' etc. Cf. pp. 758, 900. But some speakers will permit the perfect in the input when the iteration is perfect, especially for the copula: N dáta/na kotó wa N dáta kedo.

6. According to BJ 2.282-3 there are speakers who make a difference in juncture between Ikanai kotó wa | náí 'It isn't that I'm not going' and Ikanai kotó wa || náí 'I always go'. A similar example: Tití ga kaeránai kotó wa náí 'It never happens that father fails to come home' (= 'Father always comes home') or 'It isn't that father fails to come home'.

meaning clearly experiential. (Two other meanings could be interpreted from *Nái kotó wa náí ga ...*, 'There are no matters that are lacking, but ...' and 'What matters are lacking are lacking, but ...'.) Cf. §9.1.1a, §14.6.6.

In place of *kotó wa* or *kotó [w]a* you may hear the assimilated form *kotáa* or a shortened version *kotá*.^[1] In rapid speech you may run across other forms:

... *kotó da* → *kóttá*: *Iyá na | kóttá* 'It's something I don't like' (Kb 161a); *Íi kóttá | né* 'Nice, isn't it' (Tk 3.32a); *Hontoo no kóttá* 'It's true' (Kb 106b); *Nán no kóttá | wakaránai* 'Heaven knows what it is all about' (Tk 3.310b); *Anó-hito no | kóttá kara* 'Because it is about him' (Kb 99a); *Móo, || anmari || gaisyutu sinai kóttá | ná* 'I don't go out much any more' (SA 2792.32c); *Koo iu tokí wa || waru-ágaki | sinai kóttá* 'At such a time there's no point in [useless struggling =] fretting' (SA 2676.92a); ... *tái-sita | kóttá | ná ...* 'it's a terrible thing, you know' (Kb 196b).

... *kotó daroo* → *kóttaro[o]*⁷: *Sonna kóttaroo to | omóttá | yó* 'I thought something like that would happen' (Kb 175a); ... *korya || tote-mo hu-kánoo na | kóttaroo | ná* 'this, I think is quite impossible, you see' (Tk 3.217b).

?... *kotó datta* → *kóttatta*: Examples sought.

... *kotó desu* → *kóttesu*⁸: *Gá, || ano otokó no kóttesu, ...* 'But it's about him ...' (Kb 131b); ... *kore wa | íi kóttesu | né* 'this is something good (to do)' (Tk 4.109b); *Oosaká-zin no | ii-soo na kóttesu | né* 'It's what you'd expect an Osakan to say, all right' (Tk 4.229b).

... *kotó desyoo* → *kóttesyoo[o]*: *Má[a], || sonna kóttesyoo | né* 'Why, I guess that's the way it is, all right' (Tk 4.60a); ... *hutuu no baai ní wa || ná | kóttesyoo | né* 'I guess it wouldn't happen under ordinary circumstances, would it' (Tk 3.15b).

... *kotó desita* → *kóttésita*: *Kinodókú na kóttésita | ná* 'That was a shame' (Fn 162a).

... *kotó desite* → *kóttésite*: Examples sought.

... *kotó de* → *kótte*: *Sonna kótte || íi | siai ga | dekimásu ka* 'With such things happening, how can you have a good game?' (Tk 3.59a); ... *Nihón || daké ni | áru | kótte | né ...* 'is something that happens only in Japan' (Tk 3.36b); *Kore wa | móo || taisetú na kótte* 'This is now an important matter' (SA 2669.50b—speaking is Inumaru Tetsuzō, born in rural Ishikawa prefecture in 1887; on sentence-final *dé*, see §9.2.1a).

... *kotó zya náí* → *kóttya náí*: *Dá kara | iwan kóttya | náí* 'Now you see what I was talking about!' (Hayashi 165)—*iwan[u]* = *iwanai*; *Dé mo || betu ni || atasi to húuhu datta | wáke zya | náí kara, || sitta kóttya | náí* 'But since he wasn't my husband it was none of my business' (SA 2666.44d).

... *kotó zyaa (= de wa)* → *kóttya[a]*: *Sonna kóttya, ...* 'In such an event ...' (Tk 4.220ab); *Honto no kóttyaa | née* 'It's NOT true' (Kb 162b); *Sonna tái-sita | kóttyaa | née n da* 'It's no big deal' (Kb 151a). But there are dialects (such as that of Mie, Zhs 4.44 and 48) where *kóttya(tta)* is a contraction of *kotó da(tta)*, or perhaps of the dialect equivalent *kotó zya(tta)*. An example: *Aburá-tubo kara | tenzyoo nozoku tó wa, || kimi mítai na | yátu no | kóttya* 'Staring at the ceiling from the oil jar, just what I'd expect from a rascal like you!' (Y 403).

Some of these contractions will also be found for compound nouns ending in *-goto*: *Warai-gottya náí yó* = *Warai-gotó(-) zya náí yó* 'Tis no laughing matter, I tell you' (Okitsu 1.270).

7. In some dialects *kóttyaroo[o]*: *Ima-goro wa, || sá-zo || seiséi | sit'óru | kóttyaroo* 'You must feel relieved these days' (Y 358).

8. In dialects also *kóttasu* (from *kotó dasu*), *kóttosu* (from *kotó dosu*), and *kón desu* (from *kotó ndesu*, in which [nd] represents a dialect pronunciation of /d/); cf. Y 455.

14.1.1. *Experiential nominalizations: kotó ga áru/nái.*

An adnominalized sentence + kotó₁ ga áru means 'it sometimes happens that S' or 'there exists the experience that S'; an adnominalized sentence + kotó₁ ga nái means 'it never happens that S' or 'there lacks the experience that S'. The juncture before kotó usually drops. The resulting sentences require some special tricks of translation, as shown below:

- (1a) yobu kotó ga áru 'we sometimes [DO] call'
 yobu kotó ga nái 'we never [DO] call'
 hayái kotó^(r) ga áru 'sometimes it is (IS) early'
 hayái kotó^(r) ga nái 'it is never (NEVER) early'
 génki na kotó^(r) ga áru 'he is sometimes healthy'
 génki na kotó^(r) ga nái 'he is never healthy'
- (1b) yobu kotó ga átta 'we sometimes called (DID call), used to call'
 yobu kotó ga nákatta 'we never [DID] call, didn't use to call'
 hayái kotó^(r) ga átta 'sometimes it was (WAS, used to be) early'
 hayái kotó^(r) ga nákatta 'it was never (NEVER, it never used to be) early'
 génki na kotó^(r) ga átta 'sometimes he was (WAS, used to be) healthy'
 génki na kotó^(r) ga nákatta 'he was never (NEVER, he never used to be) healthy'
- (1c) yonda kotó ga áru 'we have (on occasion) called, we called once'
 yonda kotó ga nái 'we have never called'
 háyakatta kotó^(r) ga áru 'it has (on occasion) been early, it was once early'
 háyakatta kotó^(r) ga nái 'it has never been early'
 génki datta kotó^(r) ga áru 'he has (on occasion) been healthy, he was once healthy'
 génki datta kotó^(r) ga nái 'he has never been healthy'
- (1d) yonda kotó ga átta 'we had (on occasion) called, we had once called'
 yonda kotó ga nákatta 'we had never called'
 háyakatta kotó^(r) ga átta 'it had (on occasion) been early, it had once been early'
 háyakatta kotó^(r) ga nákatta 'it had never been early'
 génki datta kotó^(r) ga átta 'he had (on occasion, once) been healthy'
 génki datta kotó^(r) ga nákatta 'he had never been healthy'
- (2a) yobanai kotó ga áru 'we sometimes don't call'
 yobanai kotó ga nái 'it never happens that we don't call = we always (unfailingly) call'
 háyaku nái kotó^(r) ga áru 'it sometimes fails to be early'
 háyaku nái kotó^(r) ga nái 'it never fails to be early'
 génki zya nái kotó^(r) ga áru 'he is sometimes not healthy'
 génki zya nái kotó^(r) ga nái 'he never fails to be healthy'
- (2b) yobanai kotó ga átta 'we sometimes didn't call, we used to fail to call'
 yobanai kotó ga nákatta 'we never used to fail to call'

háyaku nái kotó⁽ⁱ⁾ ga átta 'it used to fail to be early, it sometimes failed to be early'
 háyaku nái kotó⁽ⁱ⁾ ga nákatta 'it never used to fail to be early'

génki zya nái kotó⁽ⁱ⁾ ga átta 'he used to be (was) sometimes not healthy'
 génki zya nái kotó⁽ⁱ⁾ ga nákatta 'he never used to fail to be healthy'

- (2c) yobanákat⁽ⁱ⁾ta kotó⁽ⁱ⁾ ga áru 'we have (on occasion, once) failed to call'
 yobanákat⁽ⁱ⁾ta kotó⁽ⁱ⁾ ga nái 'we have never failed to call'

háyaku nákatta kotó⁽ⁱ⁾ ga áru 'it has (on occasion, once) failed to be early'
 háyaku nákatta kotó⁽ⁱ⁾ ga nái 'it has never failed to be early'

génki zya nákatta kotó⁽ⁱ⁾ ga áru 'he has (on occasion, once) failed to be healthy'
 génki zya nákatta kotó⁽ⁱ⁾ ga nái 'he has never failed to be healthy'

- (2d) yobanákat⁽ⁱ⁾ta kotó⁽ⁱ⁾ ga átta 'we had (on occasion, once) failed to call'
 yobanákat⁽ⁱ⁾ta kotó⁽ⁱ⁾ ga nákatta 'we had never failed to call'

háyaku nákatta kotó⁽ⁱ⁾ ga átta 'it had (on occasion, once) failed to be early'
 háyaku nákatta kotó⁽ⁱ⁾ ga nákatta 'it had never failed to be early'

génki zya nákatta kotó⁽ⁱ⁾ ga átta 'he had (on occasion, once) failed to be healthy'
 génki zya nákatta kotó⁽ⁱ⁾ ga nákatta 'he had never failed to be healthy'

Nominal sentences with pure nouns are not excluded from these expressions, though examples are less easily come by: byoonin na kotó mo áru (or: byoonin de áru kotó mo áru) 'I have my share of illness', roodóo-sya datta kotó ga áru 'I know what it is to be a worker (for I have been one in my day)', ...

Further conversions can be applied to the resulting sentences provided the conversions are acceptable for áru and nái to begin with, including ari-sugiru and nasa-sugiru, ari-nágara and nái nagara, etc.^{8a} The focus on kotó can be highlighted (kotó mo áru etc.) or subdued (kotó wa áru). It is rare, however, to find focus applied to the possession verb: ... kotó ga ári wa/mo/sae suru or ... kotó ga náku wa/mo/sae áru. Two or more experiential sentences can be conjoined: Koo iu turi-kata wa || míta kotó⁽ⁱ⁾ mo [I nákereba] || kíita kotó mo | nái ga, || ... 'Such fishing methods I had neither seen nor [had I] heard of, but ...' (SA 2672.98a). It is even possible to make a second kotó-nominalization on top of one already made, as we can see from the following concoctions (the negation is shown in the schematic patterns on the left):

- + + + Yobu kotó ga áru kotó⁽ⁱ⁾ mo áru 'It also happens that we sometimes call'.
- + - + Yobu kotó ga nái kotó⁽ⁱ⁾ mo áru 'It also happens that we never call'.
- + + - ?Yobu kotó ga áru kotó⁽ⁱ⁾ mo nái 'It also never happens that we sometimes call'.
- + - - Yobu kotó ga nái kotó⁽ⁱ⁾ mo nái 'It also never happens that we fail (ever) to call'.
- + + Yobanai kotó ga áru kotó⁽ⁱ⁾ mo áru 'It also happens that we sometimes fail to call'.
- + - ?Yobanai kotó ga áru kotó⁽ⁱ⁾ mo nái 'It also never happens that we sometimes don't call (sometimes fail to call)'.
- - + ?Yobanai kotó ga nái kotó⁽ⁱ⁾ mo áru 'It also happens that we never fail to call'.
- - - ?Yobanai kotó ga nái kotó⁽ⁱ⁾ mo nái 'It also never happens that we unflinchingly call = We also sometimes fail (forget) to call'.

If the number of negatives is odd, the purport of the sentence as a whole will be negative; if even, affirmative. See §8.3. The eight sentences listed above can have any or all of the

8a. Also subject-exaltation: Irásita kotó^[i] wa o-ari desu ka 'Have you (ever) been there?'

three predicates in the perfect, so that there are $8 \times 3 = 24$ possible sentences involving the perfect. In conversation these involved sentences, often with multiple negatives, turn up more frequently than you might expect, for the recursiveness is a handy rhetorical device.⁹

Although in S kotó ga áru (etc.) the kotó will normally refer to a possessed EXPERIENCE, sometimes the reference will be to a FACT whose existence is being asserted (or denied): Takái kotó mo | náí 'There's nothing expensive about it' or 'It isn't expensive at all'; Zenzen naku-naru tte kotó wa | náí ga, || usúkú wa | náru | né 'It isn't that it completely disappears (or: It never completely disappears) but it DOES grow faint, doesn't it' (Tk 4.274b); Taberarénai kotó wa | náí no | yó 'Oh, it's not that I haven't been able to eat' (Kawabata: Saikai). Free translations sometimes stray from what a literal interpretation might produce, especially in certain contexts such as íkura ... sité mo ... si-sugíru kotó wa náí '(however much you ...) you can't ... too much' or 'it is impossible to (you will never) over-do'. To bring out the meaning 'never' you can preface the sentence with the adverb kessite or with iti-dó mo 'once even'; to bring out the meaning 'ever' you can begin with iti-dó^[1] 'once'; to bring out the meaning 'sometimes' you can start off with tokidoki 'sometimes' or tama ní wa 'on occasion, every now and then' or synonymous phrases. Remember that ... -tári suru (§9.4) also often translates as 'sometimes'.

In addition to S kotó ga ÁRU you will find other predicates implying existence or possession, especially these:

S kotó ga óói, S kotó ga sukúnáku náí 'There are many (no few) instances where S = It often happens that S' or 'Often S' (= yóku S).

S kotó ga sukunái, S kotó ga óoku náí 'There are few (not many) instances where S = It seldom happens that S' or 'Seldom S' (= anmari S NEGATIVE).

S kotó ga itizirúsiku náí 'It is not unusual for it to happen that S'.

The subject particle gá may drop in rapid speech (at least in certain contexts), leaving suru kotó [ga] náí, and that is susceptible to still another interpretation 'there is no necessity to do it' = suru kotó [wa/mo] náí. This is not to be confused with suru kotó zya náí 'you shouldn't do it' from suru kotó da 'you are supposed to do it'. To recapitulate:

'never does it'	{	suru kotó ga náí	}	
		suru kotó ^[1] náí		
		suru kotó wa/mo náí		
		suru kotó zya náí		
		suru kotó de wa/mo náí		
				'there is no need to do it'
				'ought not to do it'

With kotó taken as the ordinary noun kotó₂, of course, there is a third meaning for suru kotó wa/mo náí 'there is nothing to do', epithematizing the extruded object (kotó_o suru). But an intransitive verb would not be liable to such an interpretation: Isógu kotó wa | náí | yó could only be taken as 'There's no need to rush = Don't rush' (? < 'after all there's nothing to rush ABOUT/FOR') or, conceivably, as 'We never rush' or 'We do NOT rush'. And normally Ánta ga | kuti o dásu kotó wa | náí (Hayashi 172) will be taken as 'There's no need for you to butt in' though conceivably it could mean 'You never butt in'. There is another meaning of S kotó de mo náí 'It is not exactly the case that S', as in this example with a negative S: Kantan ni | gaikoku-go de setumei dekinái kotó de mo |

9. A first-aid technique to help disentangle the syntax: replace the first kotó with tokí 'time, occasion'—S tokí ga áru kotó^(o) mo áru 'there also happen to be times when S'.

nái 'It isn't exactly that I can't explain it simply in a foreign language'. Notice also the usage *V-ru/-ta daké no kotó wa áru* 'it is well worth doing (or having done)', from a verbal sentence adnominalized to the postadnominal *daké* (§13.2).

The meaning of *V-(a)nai kotó wa nái* is sometimes expressed by a variant version, *V-(a)nákú wa nái* (§9.1).

14.1.2. *Kotó ni náru/suru.*

In §9.1.11 we observed that the infinitives of adjectivals (*A-kú*) and of nominals (*N ní*) enter into MUTATIVE conversions with *náru* 'it gets to be' and *suru* 'makes it so that it is'. These expressions can be formed on imperfect and perfect nominalizations with *kotó*; but when the nominalization is from an adjectival or nominal sentence, the expected forms are often replaced by the simpler expressions of §9.1.11: *Ookii kotó⁽¹⁾ ni náru* = *Óokiku náru* 'It gets (to be) big'; *Kantan na kotó ni suru* = *Kantan ni suru* 'It makes it simple(r)'. There are several meanings:

(1) *V-ru kotó ni suru* means 'decides to do' or 'arranges to do'—as in *Soodan no kekka, ll Káiro e l tobu kotó ni l sitá ga, ll ...* 'Upon consultation we decided to fly to Cairo, but ...' (SA 2676.90a); *V-ru kotó ni náru* means 'it is decided/arranged for one to do (or: for it to happen)'. The latter expression is often used in the resultative conversion *V-ru kotó ni nátte iru* 'it is (in the state of having been) arranged that V' and this makes a good translation for many sentences that contain the English 'supposed to' where the implication is less one of obligation ('ought, should, must' = *sinákereba naránai, sinákute wa ikenai*) or advice ('better' = *sita hoo ga ii*) or likelihood ('likely, expected to' = *suru hazu dá*) than of prior understandings 'according to arrangements (it will happen that)': *Sotugyoo site kara ll kaisya ni háiru l kotó ni l nátte iru* 'I'm supposed to go to work for the company after I graduate'. There is a corresponding meaning for *V-ru kotó ni site iru* 'makes it a rule/practice to V' and *V-(a)nai kotó ni site iru* 'makes it a rule/practice not to V': *Gózen(-) -tyuu wa ll tabako o (l) suwanai kotó ni l site imásu* 'I make it a rule not to smoke in the morning'; *Atasi wa l né, ll senkyo-énzetu l daké wa ll kotowáru kotó⁽²⁾ ni l site imásu l yó* 'I make it a practice to turn down (bids to make) election speeches' (Tk 2.278b); *Soko de ll kotira wa ll koyá(-) o l tukútte ll roozín(-) ni (l) mihari o sase, ll kotó ga l okóreba ll tatimati zyúu o l tótte, ll tádasi ll sóra e l zyuukoo o muketé da ga, ll ikakusyágeki o l suru kotó ni l site iru* 'Then we built a hut and put an old man on guard, with the rule that if an incident should arise he would immediately take his gun and—but with the muzzle pointed at the sky—fire warning shots' (SA 2685.99b). In addition to these meanings which appear to imply that some agent has decided the course of action or brought about the situation, *S kotó ni nátte iru* can also be used with the meaning 'it has come about that; it has become traditional that; traditionally'. Since no agent is implied, the *S* is not limited to voluntary verbals, but includes adjectivals and impersonal verbals, as in these examples (from Hayashi 132): *Natú wa ll atúi kotó⁽²⁾ ni l nátte iru* 'Summers are traditionally hot'; *Gó-zi de l owaru kotó ni l nátte imásu* 'It ends at five o'clock (by tradition, by arrangement, by rule, etc.)'.

(2) *V-ru/-ta kotó ni náru* means 'will be doing (will have done)'; with *náru* perfectivized to *nátta* the translation is 'would be doing (would have done)'. *V-ru kotó ni náru* 'will be doing, will have been doing': *Gógatu de ll han-tosi^[1] yómu kotó⁽²⁾ ni l náru* 'I will have read it for half a year by May'. *V-ta kotó ni náru* 'will have done': *Mata yómeba ll ni-dó^[1] yónnda kotó⁽²⁾ ni l náru* 'I will have read it two times if I read it again'.

V-te iru kotó ni náru 'will be (or have been) doing': Gógatu de || han-tósi yónde iru kotó^(r) ni | náru daroo 'I guess by May I will have been reading it for half a year'.

V-te ita kotó ni náru 'will be (or have been) doing': Gógatu de || han-tósi yónde ita kotó^(r) ni | náru 'I will have been reading it for half a year by May'.

But *V-ru kotó ni náta* will usually be taken as 'it was arranged that *V*' (and that is the source of the resultative *náte iru* above): Okinawa dé wa || séngo⁽⁻⁾ || kuruma wa || Amerika no yóo ni || dóoro no | migigawa o hasíru kotó^(r) ni | náta 'On Okinawa after the war it was decided that cars would drive on the right of the road, as in America'.

(3) *S kotó ni wa naránai* means 'it can not be said that *S*; it hardly amounts to a case of *S*': Táda || muzukasii⁽⁻⁾ kango o | takusán tukau kotó ga || búnsyoo o | yóku suru | kotó ni wa | naránai 'Just using difficult Chinese loanwords doesn't mean you are a proficient writer'. Although these expressions are perhaps more common with verbal imperfects, nominal and adjectival sentences can also occur, as can perfects: Isogásii kotó^(r) ni wa | naránai 'It can not be said that he is busy'; Isogásii kotó^(r) ni wa | naránakatta 'It could not be said that he was busy'; Isogásikatta kotó^(r) ni wa | naránai 'He can not be said to have been busy'; Isogásikatta kotó^(r) ni wa | naránakatta 'He could not be said to have been busy'. The juncture is often suppressed before the *kotó* phrase (thus removing its accent): Doozyoo suru kotó wa || tasukéru (l) kotó^(r) ni wa | naránai 'Sympathy won't help (her)'.

(4) *S-ta kotó ni suru* means 'assumes that *S*, supposes that *S*': Koko ni ita kotó ni | simasyoo 'Let's assume/suppose that you were here'.

14.1.3. The circumlocutionary potential: *kotó ga dekiru*.

One way to say 'can (do)' is *V-ru kotó ga dekiru*.¹⁰ If the verbal predicate is *suru* 'does' you have the option of dropping *suru kotó* [ga]: benkyoo [suru kotó [ga]] dekiru 'can study', yásuku [suru kotó [ga]] dekiru 'can make it cheap'. The option applies to the honorific infinitive + *suru* in object-exalting conversions (§6.3): O-negai [suru kotó [ga]] dekimásu ka 'Can I ask it of you?' And the ellipsis can leave a direct object stranded behind: Sore o zikkoo [suru kotó ga] dekinai desyoo 'That would be impossible to carry out'. (The object marking will often be masked by focus: Sore wa/mo)

The resulting sentence can be freely converted into any sentence that *dekiru* is capable of making; excluded are desideratives (**Iku kotó ga deki-tái* → *Iku kotó ga dékitara ii* 'I wish I could go'), passives (even as honorific—the expected **dekiraréru* is replaced by *o-deki ni náru*), favors, commands, and exhortations, since "ability" is considered to be outside human control. (But notice that *V-ru yóo ni náru* can be converted into a potential.) Nuclear focus can be applied to *dekiru* (*V-ru kotó ga déki wa/mo/sae suru*) and, though much less commonly, to the adnominalized sentence or even to both sentences—provided a different focus is applied to each: Hón o || yómi mo | déki wa | sinai kusé ni || ... 'Despite the fact that he can't even read a book ...'. You can make the output sentence negative (*Sore wa yameru kotó wa dekinai* 'We can not stop it = There is no stopping it'); it is also possible to build the potential expression on a sentence containing a negative: *Iti-nití* ~zyuu || tabénai de | iru kotó wa | dekiru 'I can get by without eating all day' = *Iti-nití* ~zyuu || tabénai de | súmu, §9.2.4.(10). In this respect the expression is more versatile than the full or shortened passive-potential (§4.2, §4.4). But the foreign student should be

10. Apparently **V-rú no ga dekiru* never occurs, perhaps because ability is conceived of as a lasting possession and thus seldom applicable to only a single event—with, to be sure, a few unusual exceptions: *Dare de mo sinu kotó ga dekiru kedo* ... 'Anybody can die, but ...'.

aware that native speakers prefer the latter expressions whenever they are possible; in the speech of many Japanese *dekíru* is largely limited to use with verbal nouns. Often the best translation for an English potential of the type 'It can get awfully hot in the summertime' is the propensive 'it is likely to happen' (§9.1.8): *Natú wa átuku nari-yasúi*.

Notice that nothing prevents you from forming a circumlocutionary potential on a causative (*saseru kotó ga dekíru* 'can make someone do it') but you can not do the same on a passive (**sareru kotó ga dekíru* 'can have it happen to one'—the English will correspond to Japanese *sare-yasúi*) or on a potential: **dekíru kotó ga dekíru*, **V-eru kotó ga dekíru* 'can be able to do it'—the English will correspond to the simple or focused potential. For special problems with verbal nouns, see §14.3.

In a number of dialects, e.g. Ōsaka, the verb *dekíru* is pronounced in a variant version *dekéru*:¹¹ *Gootoo san wa || warúi kotó ga | dekéru | hitó desu | yó* 'Mr Gōtō is a person who couldn't do anything bad' (SA 2662.122b—Ōsaka speaker). Some forms recorded from Hyōgo include *deketara* (Zhs 4.293), *dekete* (303), and *deke-nahatte* (302). In Wakayama *dekuru* is reported (Zhs 4.371).

14.1.4. Verbal + kotó ga + adjective or adjectival noun.

A nominalization of an imperfect verbal sentence can be made the subject of an adjective or an adjectival noun; the meaning of *V-ru kotó ga A-i* (or *AN da*) is 'it is A (or AN) to do V': *Sibai o míru kotó ga | omosirói* 'It is fun to see a play'; *Inaka de yasúmu kotó ga | tanosii* 'It is pleasant to have a vacation in the country'; *Sensoo ga okoránai kotó ga | nozomasii(-)* 'It is to be hoped that we will have no war'; *Ōngaku o | kiku kotó ga | sukí da* 'I like to listen to music'; *Sonna hitó ni | áu kotó ga | kirai da* 'I hate to meet people of that sort'. Under "adjectives" we include a few words derived from verbal negatives (cf. p. 384), and that will account for examples such as this: *Dán-zite(-), || sirizóku kotó wa | narimasén* 'We definitely must not retreat' (Hayashi 172) = ... *sirizóite wa | likemasén*. Instead of *kotó ga* you may occasionally find *nó ga*, usually implying a comparison. There is a slight difference in meaning between *Oyógu kotó ga yasasii* 'It is easy to swim' and *Oyogi-yasúi* (= *Oyógu kotó ga si-yasúi*) 'It is an easy swim', §9.1.8.

14.2 NÓ (DA)

When an imperfect or perfect sentence is adnominalized to the postadnominal *nó*, the resulting nominalization can be used in at least three different senses: (1) 'the act of ...', very similar to *kotó* in meaning, but more specific and often implying a comparison, and less commonly used for *kotó* in the sentences of §14.1.4; (2) 'the one which ...', somewhat similar to some of the uses of *monó* 'thing, person, one', but often implying comparison—as in *Zyo-gákusei de || ninsin sitári | surú NO ga | óói to | iú no wa, || ...* 'The fact that there are many who get pregnant as schoolgirls ...' (Tk 2.284a); (3) 'the fact that ...; a matter of ...', etc.

The verbal and adjectival sentences, and all perfect sentences, are adnominalized with no change; but imperfect nominal sentences adnominalize by changing *dá* to *ná*. The imperfect copula *dá* always becomes *ná* before the postadnominal *nó* (as before *bákari*,

11. This is an instance of sporadic substitution of e for i (cf. English catsup : ketchup) and is not to be confused with dialects which regularly neutralize the distinction. Other Kansai examples are *metukeru* = *mitukeru* 'finds' and (Tk 4.300a) *óoke na* = *óoki na*.

daké, dókoro, gúrai, hodó, kotó₁, món—cf. § 13.2), but that happens before other nouns only when the copula is preceded by an adjectival noun. Speakers commonly shorten *nó* to *n* before *dá*.¹² The short form sometimes appears elsewhere, as well: *Íma de mo || sonná n ga | áru n desu | yó* 'We've still got some of that sort' (Tk 4.72a). And *sité n no ni/de* is a contraction of *site irú no ni/de*; *V-té n né/ná* is a shortening of *V-té irú no [da] né/ná*—as in ... *soo iu seisitu o mótte n | né* 'has such a character, you know' (Tk 4.290a); *V-n né/ná* is an abbreviation of *V-rú no [da] né*—as in ... *utí(¯) e || nóko-noko || agatte kún | né* 'comes brazenly up to the house, you see' (Tk 4.296a); *V:n no* is a shortened version of *V-rú no*—as in *Wakán no ka ná* 'I wonder if they understand' (Tk 4.290b) and this excellent example: *Su | sono-mónó wa || bóku(¯) wal mínakatta kara, || kí no | ué ni | án no ka [= áru no ka], || kí no | sitá ni | án no ka, || siranákatta n da kedo mo* 'The nest itself I didn't see, so I couldn't tell whether it was up in the tree or under the tree' (Tk 4.291a). When *no* is used as a particle, too, it occasionally shortens to *n*: *Bóku(¯) n da* 'It is mine'; ... *kimi n tókó ...* 'your place' (KKK 3.10); ... *ore n tókó ...* 'my place' (Tk 3.144a). And notice that *bóku(¯) no utí(¯)* 'my house' shortens to *bóku(¯) n 'tí(¯)*; dictionaries usually treat this as a single lexical item. Even the *nó* that functions as one of the shapes of the adnominalized copula imperfect (the other shape being *ná = de áru* 'which is') can be shortened: *Soko n tokoró ...* 'The [place =] passage that is there' = 'That bit ...' (SA 2663.105c); the full example is given below. Another abbreviation to bear in mind is *náa* for *nó [w]a*: *Omae mo hatarakú naa | ii ga, || karada o kowásitya | naránee | yó [= kowásite wa naránai yó]* 'It's all right for you to work, but you mustn't harm your health' (Fn 118b); ... *site okú naa || osii zya ná | ka* 'Isn't it a shame to ...' (Fn 83a). Cf. the contraction *táa* for *tó [w]a*.

Here are the patterns of the *nó*-nominalization:

Verbal	Yobu.	→	Yobú n[o] da.
	Yonda.		Yondá n[o] da.
Adjectival	Ookíi.		Ookíi n[o] da.
	Óokikatta.		Óokikatta n[o] da.
Adjective-nominal	Sízuka da.		Sízuka na n[o] da. ¹³
	Sízuka datta.		Sízuka datta n[o] da.
Nominal	Tomodati da.		Tomodati ná n[o] da. ¹³
	Tomodati dáta.		Tomodati dáta n[o] da.
Possessive (§ 13.4)	Tomodati nó da.		Tomodati nó na n[o] da. ¹³
	Tomodati nó datta.		Tomodati nó datta n[o] da.

These nominalizations are used as full sentences, sometimes to emphasize the factual nature of expositions ('The fact is ...', 'It happens that ...', 'It is the case that ...', '... you see')¹⁴ and sometimes, especially with the nominal inputs, just to "pad" a sentence so as to

12. And *V-rú n-foǝ da* may further contract to *V:n [n] da*, so that *sún da = sún ɸnǝ da* comes from *surú n-foǝ da*. Similarly, *áru n-foǝ da* will sometimes contract to *án ɸnǝ da*, as in ... *káite án desu = ... káite áru no desu* 'it is written ...'. Dialect versions of *S n[o] da = S n[o] zya* and *S n[o] ya*: *Áto kara minná, watasi no mane o sitá n ya [= sitá no da]* 'Afterward everyone imitated me' (SA 2669.49b—speaking is Inumaru Tetsuzō, born in rural Ishikawa prefecture in 1887).

13. But there are dialects which use ... *dá n da* in place of ... *ná n da*; Y 435 cites examples from modern fiction.

14. As in this example: *Toohin no | hotóndo ga, || tokai no || "kakko-ii" monó⁽⁶⁾ bakari da. || KORE WA, || katei-kánkyoo ya || kooyuu-kánkei | daké de | riyuu-zukerarénai, || syakai-kánkyoo to mo | missetu ni | kanren site irú NO DA* 'The stolen goods are almost all just the "stylish" things from the big city. This

give it extra indirectness or politeness; Kuno remarks that “in formal speech even *n^o de aru* *n^o de aru* appears”. The use of *S n^o da* is especially common when some sort of reservations may be mentioned (*Káre wa koo iú n da ga ...* ‘This is what he says, but ...’) or be implied or expected, as with the desiderative: *Iki-tái n desu (ga ...)* ‘I want to go, you see, (but ... dare I? may I? can I?)’. Sentences of this type are also used to emphasize directions (as in recipes) and in ordering children to do things: *Koo surú n da* ‘Do it like this’, *Soo sinái n da* ‘Don’t do it like that’; *Nakú n zya náí—daman-nasái* [= *damari-nasái*] ‘Don’t cry—be still’ (SA 2820.31d—to a baby). Also, in summing up decisions: *Tó-ni-kaku koo surú no da* ‘Anyway, this is what we’re going to do’.

Just as any pure noun might do, these nominal sentences (in all three meanings) freely turn into subjects, objects, etc. One common use as direct object is to report the perception (seeing or hearing) of a specific event, handled in English either by turning the subject of the event into the object of the perception (‘I saw him do it’) or by making it into a genitive of the English nominalization (‘I saw his doing it’—rather stiff in modern English and usually replaced by the hybrid form ‘I saw him doing it’): *kúmo ga sú(ˉ) o kánete irú no o míru* ‘sees a spider spin(ning) a web’; *sore o ittá no mo kikanákatta* ‘didn’t hear him say that, either’. Examples of *S n^o* followed by *gá*, *ó*, and *ní*: *Zibun ga, ll zibun no kodomo o sikarú no ga, ll náze l warúi [ka]* ‘What’s the matter with me scolding my own child?’ (= *Zibun ga zibun no kodomo o sikatte náni/dóko ga warúi [ka]*, §9.2); *Soko n[o] tokoró o l kiki-morásita no ga l zannén de aru* ‘I’m sorry that I failed to catch [= hear] that bit’ (SA 2663.105c); *Káno-zyo wa ll ... watasi no káeru no o l mátte itá(ˉ) no da* ‘She was waiting for me to return’ (SA 2639.35a); ... *toki¹⁵ no tátu no o l wasurete* ‘forgetting the passage of time’ (SA 2665.104c); *Bútai ga ll ti-mámiré(ˉ) dáta no o l obóete iru* ‘I remember that the squad was covered with blood’ (SA 2670.46a); ... *kono sábetu mo l nakusú no ni l seikoo sita* ‘succeeded in getting rid of this discrimination, too’ (SA 2674.38d); *Tumetai áse no l nagaréru no o ll káre wa ll todome-kaneta* ‘He was unable to stop the cold sweat from pouring (down his back)’ (Kb 240a).

The *n^o*-nominalizations can be negativized (*S n[o] zya náí*) but it is more common to negativize the underlying sentence, especially in the third meaning (‘the fact that ...’).¹⁵ A double negative is possible: *Tabako o nománai no [= nománai wáke] zya náí* ‘It’s not that he doesn’t smoke’. The sentences can be converted into concessives (*S no nágara*—but this sounds strange with verbal inputs), provisionals (*S n^o nara*,¹⁶ as in *Asoko ga sizuka na no nara benkyoo si ni itté mo íi* ‘Provided it’s quiet there, we can go there to study’), and representatives (*S n^o dattari*, as in *Ookii no dattari tiisái no dáttari suru* ‘Sometimes they’re large and sometimes they’re small’). They can be made tentative (*S n^o daróo*) and they can become perfect (*S n^o datta*) even when the input sentence is itself perfect (*Yondá no*

is not to be attributed only to family environment and companion relations but is closely linked also with the environment provided by society’ (SA 2647.119b). The usual function of *S n^o da* is to EXPLAIN or PERSUADE. Kuno (1973) provides a good translation for *S n^o da* ‘The explanation (or evidence) [for that] is S’; he also observes that when paired with a request *S n^o da* is often reproachful.

15. The highlighted negative can be used in an interesting way: ... *máiniti(ˉ), kurai, in’utu na sóra bákari ga tuzuita. S^oo ka to itte húru no de mo nákatta* ‘... every day only a dark gloomy sky held. Still, it didn’t quite rain’ (Kb 25b).

16. *V-rú n[o] nara* and *A-í n[o] nara* often shorten to *V-rú nara* and *A-í nara* with the meaning ‘if it’s a case of ...’; cf. §17.8. Another example: *Sinú n nara anna tokoró ga íi náa* ‘A place like that would be nice to choose for one’s death’ (Y 399).

datta 'It was the one that [or that someone] had called'). You might not expect a perfectivized version with the third meaning—since "facts" are, after all, facts—but you will find examples such as *Koo surú no datta no ni ...* 'You should have done it this way (but ...)'. The sentences can be extended (*S nó da né* etc., § 15), conjunctionalized (*S nó da kara* etc., § 17), hearsay-reported (*S nó da sóo da*, § 18),¹⁷ quoted (*S nó da to*, § 21), and stylized (*S nó desu*, *S nó de gozaimásu*, § 22).

With further adnominalization it appears possible to get strings of more than one *nó*: *Yobú no no hazu da* 'It must be the one that [or that someone] calls'; *Ookii no no hazu da* 'It must be the big one' or 'It must be the big one's'. *Tomodati nó no hazu da* 'It must be the friend's'—cf. *Tomodati no hazu da* 'It must be the friend' ← *Tomodati dá*; *Tomodati ná no hazu da* 'It must be the case that it is the friend' ← *Tomodati ná no da*; *Tomodati nó na no hazu da* 'It must be the case that it's the friend's'.

Génki na hazu da 'He must be healthy' ← *Génki da* 'He is healthy'; *Génki na no hazu da* 'It must be the healthy one' ← *Génki na no da* 'It is the one that is healthy'; *Génki na no no hazu da* 'It must be the healthy one's' ← *Génki na no no [monó] da* 'It is the healthy one's' ('It is a thing of the one that is healthy').

Byooki no hazu da 'He must be ill' ← *Byooki da* 'He is ill'; *Byooki nó no hazu da* 'It must be the ill one' ← *Byooki nó no da* (*Byooki no monó da*) 'It is the one that is ill'; *Byooki nó no no hazu da* 'It must be the ill one's' ← *Byooki nó no no [monó] da* (*Byooki no monó no monó da*) 'It is the ill one's' ('It is a thing of the one that is ill').¹⁸

For sentence-final *nó*-nominalization (used as equivalent of *ká* or *yó*), see § 15.13. Just as *S nó ga* (= *S tokoró ga*, § 17.5) can mean 'but', you will find that sometimes *S nó o* also serves as an antithetical transition: *Zyotyuu ga, iti-dó, toko e háitta NO O ókite kíta rásiku, sita ni nemaki o ki-kónde iru* 'The maid had apparently gone to bed but then got up, for she was bundled in her night clothes underneath' (Fn 392a); *Soosaku-négai ga déte né, iti-dó utí(-) e káetta keredo mo, okáasan ga "Sekigun[-ha] e itté mo ii ga, utí(-) ni ite okure"* to iú *NO O, mata utí(-) o détyatta* 'With their request for a police search, you see, he returned home, but though his mother said "You may go to the Red Army [group] but please live at home", yet he left home again' (SA 2678.48a). A few of the examples on p. 861 might be interpreted as belonging here. The transitional *ó*, like the transitional *gá*, is sometimes better translated as 'and' rather than as 'but'. Compare *S tokoró o* 'whereupon'; *S monó-o* 'but' (§ 17.4); *Sore o ...* 'Despite that, ...' (= *Sore ná no ni ...*).

The gerund (*S nó de*) and the infinitive (*S nó ni*) occur with the expected meanings of the nominalization; from the third meaning ('fact' etc.) there are derived some additional uses discussed in the following sections. Some speakers from outside Tōkyō treat *nó de* and *nó ni* (especially the latter) as conjunctionalizations (§ 17) in these additional meanings: they will say *Kore dá no de/ni ...* instead of the standard *Kore ná no de/ni ...*. And even some of those speakers who use the standard forms will begin a sentence with *Dá no ni ...* 'However ...', to be derived by ellipsis from [*Sore*] *dá no ni* = standard *Sore ná no ni*; but *Ná no ni ...* is also used (SA 2678.113d, 120d). There is no **Dá no de ...*, perhaps

17. As in ... *kurúsiku ná i n da sóo desu yó* 'They say it isn't (so) painful ...' (SA 2650.44cd). There is also *S n[o] da sóo {da} ná*; cf. p. 757.

18. The *kotó*-nominalizations also adnominalize: *Sensoo no kotó da* 'It's about the war' → *Sensoo no kotó no hanasí da* 'It's a story about the war'. And adnominalization is not uncommon for other post-adnominals, e.g. *Mita monó no hazu da* 'It must be the one that I saw'.

because the causality is but weakly marked; instead, you would begin a sentence with *Dá kara ... = Sore dá kara ...* 'Because it is that = Therefore'. Cf. the variant treatments of *monó* (da), § 17.1, and of *sóo da*, § 18. Another use of the *nó*-nominalization is in *S nó ka* 'perhaps because S', § 15.6.

On the use in various dialects of *gá* for the pronominal *nó* and also for the sentence nominalization, see § 2.2. A number of dialects omit *nó* in *S nó da*, attaching *dá* directly to the imperfect and perfect forms of verbs and adjectives: *Watasi wa gakkoo e ikú da* '(It's that) I go to school' (Kgg 82.41a, n.13). This is characteristic of local dialects in Kanagawa, Shizuoka, Yamanashi, Nagano, etc. (Zhs 2.21-2, 7.20); and it corresponds to the literary use of direct adnominalization (= attributive form) + *nári*, as described in § 15.19. *Kyūshū* speakers use *S tó dya* for *S nó da* (Zhs 6.16, n.5). Kansai dialects have *N n[ō] ya*, since *yá* is there used for *dá*: ... *sonna atukai siyóru no ya = sonna atukai o surú no da* 'they give such treatment' (SA 2672.137b—for *siyóru* < *si-í* [w]óru, see p. 454); ... *iut'óru n ya = itte irú no da* '(it is that) they are saying ...'. In place of *N ná no ni*, Kansai speakers will sometimes use *N yá no ni* (equivalent to the non-standard *N dá no ni*), as in this example from the speech of a resident of Sakai (Ōsaka): *Kyóo wa súupaa wa kónde 'ru hazu yá no ni ...* 'Although today the supermarkets should be crowded ...' (SA 2681.131a).

In written versions of Kansai speech, *nó* (in many but not all of its uses) will often appear as *nón*: *Watakusi nón desu* 'It's mine', *Kane ga ná non de yósite* (= *Kane ga ná no de yameta*) 'As I lacked the money, I decided not to go'. From examples we can see that the Kansai *nón = nó* is used in several ways:

(1) *N non ya = N nó da*: *Kore dāre non ya* 'Whose is this?' (Maeda 1965.454b).

(2) *S non = S nó*: *Sitte 'rú non ka* (= *Sitte irú no ka*) 'You know it?' (ibid.); *Kyūsyū-ryókoo ni déru non to onazi kimoti yá wá* (= ... *déru no to onazi kimoti dá wá*) 'It's the same feeling as leaving for a *Kyūshū* trip' (SA 2673.26d; an Ōsaka office lady is talking); ... *Oosaka no hōo wa "itibiri" iú non ka* (= *to iú no ka*) ... 'in Ōsaka I think they call it "ichibiri" (cutting up)' (SA 2654.135b)—on omission of the quotation marker *tó*, see p. 1001; *Erái kinodókú ya ná, turete itte kurerú non ka* (= *kurerú no ka*) 'Why, I'd be mighty obliged if you'd take me with you' (SA 2669.110b); *Íma no wakái hitó wa, hun'iki ni toke-komú non ga hayái desu né. Yoo* (= *Yóku*), *iú non ka, kore, ittan, hén na hookoo ni náttara abunái desu kedo né* 'Young people of the present day are quick to lose themselves in atmosphere. It is often said, but if this should once take a queer direction it could be dangerous, you know' (SA 2654.135b).

(3) *S non = S nó to*: *Oosaka-ben de yaru yótté ni omosirói tokoró mo áru non tigáú ka náa* = *Oosaka-ben de yarú no de omosirói tokoró mo áru no to tigáú* (= *áru no zya ná*) *ka ná* 'I wonder if it isn't that there are some amusing spots because I am using the Ōsaka dialect?' (SA 2654.135a).

(4) *S non = S nó ga*: *Makerú non kirai yá* = *Makerú no ga kirai dá* 'I hate to lose' (Maeda 1965.454b).

(5) *S non = S nó o*: *Hái, tésuto sūnda si ... Ítu mo watasi ga kono térebi o míte 'ru non sitte 'rú kara* (= *míte irú no o sitte irú kara*) 'Yes, my tests are over and ... she knows I am always watching this television program, so [my mother doesn't worry about my being here in the studio so late]' (SA 2654.134d).

(6) *S non ni = S nó ni*: *Sonai iut'áttara ée non ni, damátte 'ta non ka i ná* = *Sonna ni (itte áttara =) itte itára ii no ni, damátte itá no ka ná* 'I wish he'd said something like that, but what did he do but keep quiet' (Maeda 1965.454b).

(7) *S non de = S nó de*: *Sore ga gozarimahén non de, kore de ma ni awásit 'okimásita = Sore ga gozaimasén no de, kore de ma ni awásete okimásita 'As that was lacking, I had them make do with this' (Maeda 1965.454b).*

(8) *S non = S nó* (sentence-final—mostly in the speech of women): *Kamahén non = Kamawánai no 'It makes no difference' (Maeda 1965.454b); Míta kotó ga áru non 'I've seen it' (ibid.); Nán de hadasi ni náru non 'Why do they go barefoot?' (SA 2660.134a).*

(9) used in addressing persons associated with a shop or the like, equivalent to ... *no hitó/katá*: *o-mise non 'Mr Shopkeeper', yaoya non 'Mr Groceryman', go-kínzyo non 'Mr Neighborhood Man', ... (Maeda 1965.454b).*

Maeda suggests that Uses 6, 7, and 8 are fairly recent; the others appear to be older.

In place of *S non ya = S nó da*, you may hear the Kansai forms *S nen* and *S ne* (not to be confused with *S né[e]!*);¹⁹ these are said by Maeda (1965.446a) to come from *non ya* by vowel assimilation (\rightarrow *nen ya* \rightarrow *nen*) and dropping of the final nasal (*nen* \rightarrow *ne*). An example: *Iku kotó wa ikú nen kedo = Iku kotó wa ikú no da kedo 'I'll go, all right, but ...' (Maeda 1965.446a).* Where standard Japanese would have *N ná no da*, the Kansai equivalent is often *N ya nen*: *Só ya nen = Sóo na no da 'That's right' (Maeda id.).* And *S nen* can be followed by *ná*: *Náni o surú nen na = Náni o surú no da ná 'What are you doing?'; Há háa, anna húu ni, kóiki(¯) ni háiru nén ná, to omóttá ga ... (= ... háiru no da ná) 'Aha, so they go in with such style, I thought, ...' (SA 2659.131d); Dáre ya nen na = Dáre na no da ná 'Who is it?' In Tōkyō you seldom hear *nó da* after the polite *V-i-másu* form, but you will find the equivalent *nen* used in Kansai in this way: ... *kakkoo-ée to omoimásu nen = kakkoo-ii to omóu no desu 'I think it's nice' (SA 2673.26d; Ōsaka office lady speaking).* And the final *-s[u]* often assimilates, so that you will hear *V-i-mán nen* for *V-i-másu nen (= V-rú no desu)* and *dén nen* for *désu nen (= ná no desu)*: *Yasasii to tigaimán nen 'It's not easy' (SA 2657.46a); Watasi, otokó de kúroo surú no, sukí den nen 'I like to work for a man' (SA 2657.48d; speaking is Miyako Chōchō, an entertainer born in Tōkyō but a Kansai resident since the age of four).* The sequence *sún nen* represents a Kansai version of *surú no da*: *Soko de náni sún nen 'What are you up to over there?' (SA 2669.110b).* In the following examples *nen* is further reduced to *ne* (and thus runs the danger of misinterpretation as *né[e]*): ... *soko ni hitótu no sén ga arimán ne (= áru no desu) 'There is one line there' (SA 2657.46a); Simán ne = Surú no desu 'I will do it' (Maeda 1965.441); Omahan no sekinin yá ne de = Omaesan no sekinin ná no de[su] 'It's your responsibility' (ibid.); Nán de ya ne = Nán de (Náze) na no da 'How come?' (ibid.); Míte n ne = Míte irú no da 'I am watching' (Makimura 538a); Onnasi surú ne yattara ... = Onazi surú no dattara 'If one were to do it the same ...' (ibid.); Síyahen ne ya kedo = Sinái no da kedo 'I haven't done it (won't do it) but ...' (ibid.); Sóo ya ne ya té = Sóo da to iu kotó da 'That's what they say' (ibid.).**

14.2.1. *N[ó] de.*

The nominal gerund *N dé* has the meaning 'it is N and (so)', hence the meaning of *S n[ó] de* 'it is a fact that S and so' or just 'as/since (it is a fact that) S'.²⁰ This is a common

19. Also *S n ya nen*: *Ittá n ya nen = Ittá no [na no] da 'He's gone' (Makimura 543a).*

20. The contraction *V-rú n[o] de* \rightarrow *V²n [n] de* is sometimes heard: *sún de = surú no de; án de = áru no de.*

way to link a circumstance to its consequence: *Áme ga | hútta no de | sanpo dekinakatta* ‘Since it rained, we couldn’t take our walk’ or ‘It rained, so we couldn’t take our walk’; *Bóku(ˉ) wa | utí(ˉ) ni (l) kaeri-táku | nátta no de | nigemásita ...* ‘I got to wanting to go home and [so] ran away’ (SA 2674.89a). The circumstance and the consequence are rather evenly balanced in emphasis, in contrast with the *kará*-conjunctivalization (§ 17.1): *Áme ga hútta kara (hútta monó de, hútta tamé) sanpo dekinakatta* ‘We couldn’t take our walk because it rained’ places the emphasis on the consequence, with the circumstance offered as a reason.²¹ According to Mikami 1963.117 *kará* refers to a SUBJECTIVE reason and *nó de* to an OBJECTIVE reason; cf. Nagano 204-5. But Mio 267 says that *nó de* is rather uncommon in Tōkyō speech, “usually being replaced by ... *món da/desu kara*”, so that *nó de* serves as an elegant variation for *S món da kara* (or *S món de?*).

Observe also *S nó ka = S séi ka* ‘perhaps because *S*’, § 15.6; *V-rú/-tá n[o] de wa*—and contractions *V-rú n zya*, *V²n [n] zya* and *V-tá n zya*—as a way of stating conditions, § 9.3. Similar to the latter is the use of *S n[ó] de mo* for stating a concession: *Úntin wa, | konténa ga | hattatu sita tamé ni | Amerika ni hakobú n de mo | yasúi* ‘The freight is cheap, even shipping to America (even if you ship to America), as a result of the development of the container [ship]’ (SA 2668.46c). But *S nó de mo* can also represent an ordinary (‘too/even’) highlighting of the causal *nó de*: *Nihón wa | késiki ga | ii no de | yuumei desu. | Mata, | Nihón wa | zisin ga | óói no de mo | yuumei desu* ‘Japan is famous for its scenery. And, it is famous also for its many earthquakes’ (Hayashi 61).

One difference between *S kará* and *S nó de* is that a following command or question can (and usually will) apply to the sentence as a whole, including *S kará*, in the first type; but in the second, the command or question will normally refer only to what comes after *S nó de*. (Cf. *Kōgo-bumpō no mondai-ten* 297.) Nagano 203-4 gives a number of examples of *S nó de* which would sound unnatural with *S kará*, unless the completed sentence ends with ... *nó da*, which serves to impart the necessary subjective flavor. Nagano (205) has examples of *S nó da/desu kara*; an example of *V-ta kará de ...* will be found in Y 399. Polite stylization (*V-i-másu*, *A-i desu*, *N desu*) is less uncommon for *kará* than for *nó de*, but it is possible for both.

The modern trend, according to Kgg 89.38b, is to SAY *kará* but WRITE *nó de*.

14.2.2. *Nó ni*.

In the first two meanings of the *nó*-nominalization—‘act’ and ‘the one(s) which’—the particle *ní* can occur as it might with any noun, when called for to specify an indirect object (‘to the one which’ etc.) or when appropriate for a particular predicate, as in the sentences meaning ‘necessary for’: *surú no ni hituyoo da* (or *ir-u*, etc.) ‘it is needed in order to do’. In this use, the “for” build-up is often subdued with *wá* in order to play up the

21. The meaning of *S nó de* can be regarded as a simple extension of the use of *S nó da* to provide an explanation, as in this passage: *Roozin(ˉ) to | onna(ˉ) | bákarí de, | sei-sóonen no | otokó wa | hotóndo | inai. | Miná(ˉ) | sensoo ni itte irú no de aru* ‘It’s all women and old men, there are virtually no young or middle-aged males. (FOR) they’ve all gone off to the war’ (SA 2686.43c). Or, it might be regarded as directly taken from the causal use of the copula *gerund*—an interpretation that would be necessary for this example (because of the nominal conjoining): ... *sore dé mo | yómu no to | káku no de | ni-zikan | gúrai | toráreyau n desu* ‘even so with reading it and writing it two hours are taken up’ (SA 2676.50a).

prerequisite: Kírei ni | káku no ni wa || hude ga iru 'To write nicely you need a brush'.²² And, at least when *wá* is present, it is possible to omit *nó*, leaving a direct nominalization (§ 14.6): Kaze o naósu [no] ni wa || kono kusuri o nónde kudašái 'Drink this medicine to get well'. In these "necessity" expressions, *ní* can be thought of as elliptical for {no tamé} ni: Hito o tanosimaséru ni wa, || mázu, || zibun ga || hito-itibai(-), | kúroo | sinákute wa | ikenai, || to iu tokoró ka 'Perhaps the situation is that in order to amuse people you must first of all work terribly hard yourself' (SA 2661.3); ... magó^[1] no kao o míru ni mo || ni-zíkan mo | dénsya(-) ni | noranákereba | naránai '... just to see my grandchild's face I have to ride the train for two whole hours' (SA 2671.130d); Mótto-mo, || yodomí(-) ya || manneri o nakusú ni wa, || ryuudoo saserú no ga | ií n de | né 'Of course to avoid stagnation and [mannerism =] stereotype it's good to move people around' (SA 2674.113e—manneri = mannerízumu; for sentence-final *dé né*, see § 9.2.1a). And *nó* ni can be thought of as elliptical for *nó* {tamé} ni: ... gaikoku no ryokóo-sya o | sasóu no ni | kenmei de, || ... 'desperate to attract foreign tourists' (SA 2656.61d). Notice that the "necessity" in these expressions is a semantic category that includes a number of unexpected predicates.

In the third meaning of the *nó*-nominalization—'fact (etc.)'—*ní* occurs as the essive (or copula infinitive) with a special implication: 'despite the fact that'.²³

Yobú no da. → Yobú no ni 'Although (despite the fact that) one calls ...'.

Ookíi no da. → Ookíi no ni 'Although (it is) big ...'.

Tomodati ná no da. → Tomodati ná no ni 'Despite it's being a friend ...'.

Tomodati nó na no da. → Tomodati nó na no ni 'Despite it's being a friend's ...'.

The antithetical meaning is stronger than that found in conjunctivalizations with *ké[re]do* [mo] 'though' and *gá* 'but' (§ 17.5) or *mono-no* or *monó-o* (§ 17.4): Deeto-kúrabu ni | damasáreta. || Kane o harátta no ni | onná ga | kónai 'I was swindled by a "date club", I paid my money but no girl showed up' (SA 2689.120c); Sono aida, || hóbo | iti-ní, || eisei wa || tikyuu o mawatte ita hazu ná no ni, || Amerika wa || sono kotó o, || Tyuugoku-séihu yori | saki ní wa || happyoo sinákatta 'During that time the [Chinese-launched] satellite must have been circling the earth for about a day, but America did not publish that fact until the Chinese government did' (SA 2678.136b).

Alfonso 763 says that *S nó ni* is used only for "objective contrasts"; the highlighted gerund (V-té mo, A-kute mo, N dé mo) will be used, instead, if the concluding sentence is advice, command, prohibition, or future (whether probable or definite). But, he continues, the highlighted gerund is avoided in favor of *S nó ni* for RECENT SPECIFIC events in the past ('despite the fact that recently ...'), so that you do not always have a free choice between *S nó ni* and V-té mo (etc.) even with antithetical conclusions other than those mentioned above. (In this connection, notice our suggestion that the *nó*-nominalization is "specific" in contrast with the *kotó*-nominalization.)

There are examples of *S nó ni* in which the contrast is better translated as 'whereupon' or 'then' rather than as 'despite': H²sya [etti-sya] ni || ni-kágetu mo | hatarakanái no ni, ||

22. The concluding sentence need not express "necessity"; other types of example include these: Otaku e ikú no ni {wa} || Sinbasi-eki no | sóba o || toorimásu ka 'In going to your house, do you pass near Shimbashi station?' (BJ 2.168.3); Nihon-go o oboéru no ni {wa} || zikan ga kakáru desyoo? 'It takes time—doesn't it—to learn Japanese?' (ibid.); Kippu o káu no ni {wa} || dóo sitara | ií n desyoo ka 'What should you do to buy tickets?' (BJ 2.160.9—other examples 172.H); Asoko e ikú no ni wa || nán de | ikéba | itiban bēnri desyoo ka 'How is it most convenient to go there?' (BJ 2.241.6). V-rú no ni mo also occurs: Háiru no ni mo déru no ni mo kyóka ga hituyoo désu 'Permission is needed both to enter and to leave'.

23. Both *gá* and *ó* are also used to signal antithesis; see § 2.2.

b^oku(-) wa || matá-mo || kubi ni nátte simatta 'I worked for H Company barely two months and then got fired once again' (SA 2640.59c). Observe the additional adnominal represented by the adnoun kono 'this' in Kono atúí no ni || dekakerú n desu ka 'Are you going out despite this heat?' and by the adnoun ano 'that' in Ano samúí no ni || deketá n desu ka 'You went out in that cold?'; these expressions seem to be rather idiomatic, with n^o substituting for ... hí 'day (that is ...)'. The English 'I wish ...' will translate certain uses of S n^o ni in sentence-final position (making a fragment or minor sentence type, § 23): Kanemótí(-) nára | íi no ni 'I wish I were rich (but ...)'; Asoko dáttara | yókatta no ni 'I wish that had been thê place (but ...)'. These expressions are discussed elsewhere (§ 9.3, § 9.4). Another sentence-fragment usage is with Sekkakú^[r] ..., as in these examples (from Hayashi 158): Sekkakú^[r] tooi tokoró kara | kíta no ni 'And you've come from such a distance, too! [What a shame that there is little to offer you etc.]'; Sekkakú^[r] yóoi ga | dékite | irú no ni 'And after all the trouble of getting ready [what a shame that ...]'.

In place of S n^o ni you may hear S kusé ni (§ 13.2) for situations that involve some feeling of deceit: Yásuku | katta kusé ni || tákakatta (|) to iu 'He claims it was expensive (despite the fact that =) though he bought it cheap'; Siranai kusé ni || sitta kao o suru 'He puts on a knowing look even though he doesn't know'; Káre wa || wakái | kusé ni | marude || nanazís-sai -sugí no || roozín(-) no yóo na | kotó o iu 'He says things (= talks) just like an old man of over 70 despite the fact that he is young' (Hozaka 334); Sumisu-ando-Wésson da ga, || dóo iu | monó ka || kenzyuu wa || tiisái kusé^(s) ni, || hídoku || zyuukoo na atúryoku o | mótte iru 'It's a Smith and Wesson, but for some reason the pistol packs quite a wallop for one so small' (SA 2685.100b). This expression (S kusé ni) is seldom written, but it is common in speech—especially that of women and children. In standard Japanese kusé is treated as a postadnominal (mongái-kan da → mongái-kan no kusé ni 'even though he is a mere outsider'); but some of the non-Tōkyō speakers who say Kore dá no de/ni for Kore ná no de/ni (§ 14.2) may perhaps be expected to treat kusé ni as a conjunctualization, saying (?)Mongái-kan da kuse ni for Mongái-kan no(?!na) kusé ni.

Remember that S n^o ni may also represent an ordinary nominalization followed by the dative marker ní (in any of its uses) or by the copula infinitive or essive (in any of their uses). Only wider context would make it clear whether Óói no ni odoróita is to be taken as 'Despite the large number I was surprised' or (more likely) as 'I was surprised at the large number that there were'. The sentence Tikei ga kawatte irú no ni | bikkúri si, || ... 'I was surprised that the land features had changed, and ...' (SA 2670.43a) is obviously not to be taken as 'I was surprised despite the fact that ...'. In the expression Watasi ga kangáeru no ni ... to omóu 'My opinion is to think that ...' the ní is probably best taken as the copula infinitive predicating the nominalization 'It is my thinking and/but ...'. In theory another interpretation should be possible: 'Despite my thinking (about it), I think that ...'. The copula infinitive can be taken as either strongly antithetical ('despite') or weakly antithetical ('but'—shading into 'and'). Another view, with something in its favor, would take the strongly antithetical meaning as a (perhaps obligatory) ellipsis of S n^o ni [tái-site] 'as against the fact that S (or the act of S)', thus attributing the divergent meanings of S n^o ni to different derivations.

In written Japanese, direct nominalization can leave both V-rú {no} ni (wa) 'for the purpose of V' and V-rú {no} ni 'despite the fact that V; when V; V whereupon' (see § 13.8a), as well as other uses of S {n^o} ni where ní is functioning as a case-marker or mutative or the like.

A sentence can begin with Ná no ni ...; this is an abbreviation of [Sore] ná no ni ... ,

and it is sometimes said as *Dá no ni ...*. Though not common, polite stylization (V-i-másu, A-i desu, N désu) can be applied before *nó ni*.

14.2.3. Post-appositional *nó*.

An unusual use of the *nó*-nominalization is exemplified by the sentence *Kutúsita no | usúi no wa | náí ka* 'Haven't you any thin stockings?' One way to explain this is as follows: *Kutúsita ga usúi* 'The stockings are thin' → *Kutúsita ga/no usúi no da* 'It is the ones (about which we can say) the stockings are thin, It is the ones with thin stockings' → *Kutúsita no usúi no ga áru* 'There exist thin stockings' (→ ...), with the first *nó* being taken as a marker of the subject of an adnominalized adjectival sentence. But another interpretation would view it as the adnominal form of the copula (equivalent to *de áru*): *Kutúsita da* 'They are stockings' → *Kutúsita no (, ...) no da* 'They are the ones which (are ...) and which are stockings', i.e. 'They are stockings and they are thin', with two adnominals independently modifying the postadnominal *nó*. Although the second interpretation may seem "intuitively" less convincing, it is perhaps supported by the phrasing, which sometimes inserts a pause: *Bíiru no || tumetái no o | kudasái* 'Give me a cold beer' (or 'Give me a beer and make it a cold one?'). Examples: *O-imo no (|) nitá no ga | áru | yó!* 'Boiled sweet potatoes!'; *Kawagutu no (|) haki-hurusita no o | kureta* 'He gave me his old shoes'; *Botányuki no || nisiki no | yóo no na ga | huri-dasita* 'It started to snow large flakes, like brocade'; ... *tizikomaru to || umebosi no táne no || dekáí no | mítai ni | nanimásu* 'when it [a leech] curls itself up it gets like a big dried plum' (Tk 4.154b); *Rosiya-ónna no | lookii no wa, || mattaku || zóo mítai desu kara | né* 'The big(gest of the) Russian women [athletes] are just like elephants, that's why' (Tk 3.82a); *Watasi, buta no koma-gire o katte áta no [o] motte kíta wa* 'I've brought (with me) some chopped pork that I had bought' (Ariyoshi 33); ... *yádo o | déru to, || óoki na usi no | sindá no o || hito ga katúide kíta* 'when he left the lodgings, (he saw that) people had brought on their shoulders a big ox that had died' (Takeda 1970.48); *Sono kí no | ue^[1] no hóo ni wa || tatta hitótu (-)dake^[1] || kaki no | akái no ga | nokótte imásita* 'On top of the branch of the tree there was only one persimmon remaining that was red' (Kholodovich 125); *Sosite || kaerí ni || kudámono no | íi no ga | áttara || katte kíte moraoo* 'And on your way back if there's any good fruit I'd like you to buy some' (ibid.); *Yuuzin wa || tokidoki || áyu no | hósita no ya || kaki no hósita no o | okutte kureta* 'A friend sometimes sent me dried trout and dried persimmons' (ibid.); *Bannín wa || ... imo^[1], || négi no | takuwáéta no o | motte kíta* 'The caretaker brought out sweet potatoes and onions that he had hoarded' (id. 129); *Róohi wa || ... kataté(-) ní wa || Sakurada-bíiru no || sén no | nuitá no o || ságete || háitte | kúru* 'The old woman servant came in with an uncapped bottle of Sakurada beer in one hand' (ibid.); *Koitu [w]a (|) hanamí e iku (|) kakkoo zya | née | yá [= náí | yó], || dóo | mít'atte || néko no | sindá no o | sute ni iku yóo da* 'This guy doesn't look as though he's going flower-viewing, why he looks for all the world as if he were on his way to throw out a dead cat' (Okitsu 1.70). Instead of *nó*, you may find *yátu*: *Iku tokí wa || kanarazu || seiyoo-tenúgui no || óoki na | yátu o | buraságete iku* 'Whenever I go swimming I go carrying a large occidental-type towel' (Kholodovich 127).

The following examples, being somewhat more complicated, will help us understand better the structure behind the post-appositional *nó*: *Moti no iso-maki o kúu no ni, || hutuu wa || ití-mai no | NORÍ O || íkutu ka ni || tíisaku | kitta NO O | kuttukéru n da ga ...* 'In eating laver-wrapped rice cakes, usually what you do is attach [to each] a thin slice

from a sheet of laver ...' (Tk 3.254a); Noziko to iu TORI GA || kegá site || ótite | 'rú NO O | hirotte kíte, || sodáteta kotó^(o) ga | arimásu | yó ' I once picked up and raised a bird of the kind called *nojiko* that had fallen from an injury' (Tk 3.100b)—cf. Meziro o || itiban takusáñ míta NO wa, || nán-ba -gúrai desu ka 'The time that you saw the most *mejiro* birds (= silvereyes), how many was it [that you saw]?' (ibid.); Koo iu HOOKOKU GA || saikin || sinbun ni déte iru NO O | mimásite, || ... 'I saw this sort of announcement appearing recently in the newspaper ...' (Tanigawa 16); Reikiti wa || ... syoozi ni || sottí-kotti || ANÁ GA aite | irú NO O | tukurótte ita 'Reikichi was patching the holes that had appeared here and there in the *shōji*' (Kholodovich 126); HÓOSYA GA | deinei no náka ni | loti-itte || sukósi mo (I) ugokán NO O || osite || osite || osi-tóosita 'They pushed and pushed and pushed on the gun carriage that was so-stuck in the mud it wouldn't move a bit' (ibid.); Suru to || SÚGIKO GA || món kara | déru NO NI | átta 'Then he met Sugiko who was leaving through the gate' (id. 127); ... O-kísi wa || ... AINOKO-BÚNE GA | káeru NO E notte || ... 'O-kishi rode in the hybrid boat on its way back ...' (ibid.).

The following examples might be taken as the antithetical ('but/and') use of nominalization, as suggested by their translations, but they may well be of the same type as the preceding sentences: Sono || Ériko kara || áru-hi, | TEGAMI GA kíta NO O, || Hutákiri wa || ukkári, || tukue ni dasi-ppanasi ni site, || Oíkawa | Hátu ni || mirárete simatta 'One day from Eriko there came a letter, but Futakiri inadvertently left it out on the table and wound up having it read by Hatsu Oikawa' (Fn 53a); Háha no | tukue no ué ni, || kaki-kake no KÁADO GA | tunde áru NO O, || syozai-náku || Ériko wa || yónde | míta 'On her mother's desk there were piled half-written [experiment writeup] cards, and out of boredom Eriko tried reading them' (Fn 61b); Sore kara, || tonde kúru | hae nánzo, || SINBÚN-SI [O] | marumeta YÁTU de || pat-to tataki-otósitari | né 'Then whatever flies that would come flying in, I'd bat them down with rolled-up newspapers, you see' (Tk 3.165a). In these sentences the *nó* (or, in the last, *yátu*) is a pronominal reference to a case-marked noun in the adnominalization, the case being independent of the grammar of the larger structure within the final sentence.^{23a}

When the epitheme is not a pronominal reference it can usually be treated as a resultative epitheme: Késa | MOTI o tábeta | NOKORÍ ... 'The remains of the sticky rice we ate this morning ...' (Takahashi 177); ... zatta na ZÍNSYU ga | takusáñ kíte iru | AMERIKÁ-ZIN ni, ... 'for Americans who are (the result of) many races who have come (to America)' (Tanigawa 159). Perhaps the examples with *nó* and *yátu* can be regarded as a subtype of this structure. A less obvious type is found in Aságao ga | akaku saita | IRÓ wa ... 'The color of the red-bloomed morning-glories ...' (Takahashi 172), in which the underlying semantic structure is something like "the flowers have a color, and the color is the result of their having bloomed so as to be red".

Often the structure *N ga V nó o* (+ verb of perception, discovery, seizure, etc.) can be taken with the same meaning as *N ga V tokoró o* ('saw, discovered, seized, etc.) N just when N V': Doroboo ga kane o tótte iru no o tukamaeta 'They caught the thief taking the money' = Doroboo ga kane o tótte iru tokoró o tukamaeta 'They caught the thief as he was taking the money'; cf. § 13.2.2. In such situations, the appropriate explanation for both structures appears to be an underlying *N ga V tokoró no no o tukamaeta 'they caught the one [namely N] who is at the point of V' with reductions to *N ga V tokoró o* ... in the one version and to *N ga V nó o* ... in the other. This explanation is probably appropriate for the sentence Totyuu kara [obáatyan o] Sigezoo ni mukatte hanáyaka ni

23a. A good example: Hyakuen ga gozyúu-doru datta NO GA, yónzyuu gó-doru ni nári, yonzyúu-doru ni nári, ... 'The hundred yen that used to be \$50 became \$45, it became \$40 ...' (Agawa 1.259a).

warai-nagarā^[1] syaberi-tuzukete irú no o nokósite, Ákiko ga ómoya ni modóru to, ... 'Akiko left her [the old lady] talking away laughing merrily toward Shigezō, and returned to the main house; whereupon ...' (Ariyoshi 126). Notice how these structures resemble those of the postadnominals of relative place and time, for which similar explanations may be in order: háha ga suwatte iru [tokoró no] migi 'the right of where mother is sitting' (§ 13.2). For other explanations of the tokoró structures see Harada 1973 and Josephs (to appear).

The type of structure represented by the post-appositional nó appears to be quite old; Ishigaki Kenji (26) gives a thousand-year old example from Ise-monogátari, with direct nominalization: Onná no máda yó(-) hézu to oboetáru [] ga, hito no o-moto ni sinobite 'A woman who appears to know nothing yet of life hides behind others ...'. (See also Ishigaki's discussion on p. 237.) A number of examples from Literary Japanese will be found in Kholodovich. Kinoshita 18 carries a summary of the ways this phenomenon in Literary Japanese has been treated by grammarians.

A different meaning is sometimes possible if we treat the second nó as 'fact': Kutúsita (ga/)no usúi no wa komáru 'We are distressed that the stockings are thin'.

You might think that the following examples lend support to the view of the post-appositional nó structure as paired adnominal phrases: Samúi no, | nán no [tte], || kogoezini suru gúrai datta 'It was so indescribably cold that we nearly froze to death'; Samúi no, || sámuku | nái no ... 'terribly cold'; Yuki ga | húru no, | huránai no ... 'snowing very hard'. But these paired nominalizations seem like echo-questions (cf. § 15.13)—'what do you mean cold or not cold?!'—and may better be treated separately. Perhaps they are to be regarded as reduced from AFFIRMATIVE nó NEGATIVE nó {to iu kotó} de wa náí 'whether S or not is not in question = really S': Okótta no || okoránai no dé⁽²⁾ wa | arimasén 'I really blew my top'; Odoróita no || odorokánai no zya | arimasén 'Were WE ever surprised!'; Sikararetá no || sikararenái no dé⁽²⁾ wa | gozaimasén 'What a dreadful scolding I got!'; Tábeta no | nán no zya | arimasén 'How we ate!' Notice that even when the affirmative is perfect (V-tá) the negative remains imperfect (V-anai); cf. p. 603. More examples of the "reduced" form: Ikú no | káeru no [to] || ii-átte iru 'They are arguing over whether to go or to return'; Surú kara | dóo no, || sinái kara | dóo no || to iu kotó wa | náí 'It is not a question of whether one does or one doesn't'. A similar expression is the idiom dóo no kóo no 'saying/asking this or that': ~ itte 'on one pretext or another', ~ iwazu ni 'without question', etc. See also the discussion of dá no = désu no = de gozaimásu no, § 15.17.

Hayashi 154 gives a number of examples with S no nán no tté, saying they are most common with adjectives, yet little used with adjectival nouns—which, when used, commonly drop ná: Gánko [] no nán no tté 'What's all this stubbornness?!' He gives examples with verbs: Íya, húru no nán no tté 'Oh how it's raining!' And also with polarity-paired verbals: Yohodo hará ga | hette ita to miéte, || kúu no || kuwánai no | tté 'He looked starved, he ate so much!' The expression nánno-sono (= nán de mo náí) 'is nothing at all, is no great matter, is no big deal' seems to be derived from something like nán[i] no so[re] no. Examples: Dá ga, || koo itta toráburu mo || nánno-sono, ... 'But indifferent to even this sort of trouble, ...' (SA 2666.16e); Ima-máde | bekkyo site ita syuutome o hikitóru nánte || nánno-sono to | bákari, || otótosi no | áki ni | hikkósite ... 'Simply feeling that it would be no great matter to take in my mother-in-law who had been living separately, we moved [into the house] year before last in the autumn and ...' (SA 2659.118b).

14.2.4. Cleft sentences.

It is possible to extrude virtually any adjunct of a simplex or of a converted simplex and turn it into the Identifier of an Identificational sentence, with the remainder of the source sentence nominalized (by adnominalization to the postadnominal noun *nó*, § 14.2) and used as the Identified. The result, called a "cleft sentence" (because the source sentence has been neatly split into two parts), tells you nothing more than the original did but it allows special attention to be called to the extruded adjunct—now treated as "new" information. The English sentence 'It was yesterday that he came' gives no information not available in 'He came yesterday' but permits certain distinctions of phrasing and emphasis that would otherwise be difficult or impossible to express. Often the surface representation of a cleft sentence will be ambiguous, since the "it" sometimes has an actual reference from the situation (DEICTIC) or from the preceding sentence (ANAPHORIC). 'It was the book that I read' can mean 'What I read was the book' (as in 'It was the book that I read, not the newspaper') but it can also mean 'What that was was the book that I read' (as in 'You ask what scared me—it was the book that I read'); by "cleft sentence" we refer only to the first possibility, interpreting the sentence with no external "it". The *nó* is CATAPHORIC (looking ahead), as is the 'it' in the English translation.

A concocted example (cf. Ig 1962.68) can be manipulated to show the variety of operations that are possible with cleft sentences:

- (0) Kinóò utí(-) de háha ga kodomo ni okási o watasita.
 (1) ——— Uti(-) de háha ga kodomo ni okási o watasitá no wa kinóo da.
 (2) Kinóò ——— háha ga kodomo ni okási o watasitá no wa utí(-) [dé] da.
 (3) Kinóò utí(-) de ——— kodomo ni okási o watasitá no wa háha da.
 (4) Kinóò utí(-) de háha ga ——— okási o watasitá no wa kodomo [ní] da.
 (5) Kinóò utí(-) de háha ga kodomo ni ——— watasitá no wa okási da.

The input sentence (0) means 'The mother handed sweets to the child at home yesterday', with no particular focus intended. It is possible to translate the output sentences as:

- (1) 'It was yesterday that the mother handed sweets to the child at home'.
 (2) 'It was at home that the mother handed sweets to the child yesterday'.
 (3) 'It was the mother who handed sweets to the child at home yesterday'.
 (4) 'It was the child that the mother handed sweets to at home yesterday'.
 (5) 'It was sweets that the mother handed the child at home yesterday'.

But Japanese writers often use such sentences merely as a stylistic variation best translated by a fairly straightforward (uncleft) English sentence. Notice the varied translations in the examples listed below. See also the examples in Alfonso 969 of extruded time—*toki* [ni], *máe* [ni], *áto* [de]; and of extruded cause—*kará*, *támé* [ni].

EXAMPLES OF CLEFT SENTENCES WITH VARIOUS EXTRUSIONS

(1) Extruded subject: *Káketé | kíta no wa | Itoó dáttá* 'It was Itoó who had run up' (Ig 1962.90); *Táyori ni | náru no wa, || yahári | sake de áru* 'It turns out to be liquor that one relies upon' (Ig 1962.90); *Siká-mo, || uretá no wa || sore daké de wa | náí* 'Moreover that's not the only one that sold' (Ig 1962.90); *Dé mo, || syúzin ga | bútyoo(-) ni (|) náttá | tokí ni, || itiban yorokónda no wa || syúzin no || imootó desu | yó | né* 'But when my husband

got to be department head, you see, it was my husband's younger sister who was most pleased!' (SA 2672.61c); ... kekkyokú^[L] || kátta no wa || D'íkku datta 'in the end it was Dick who won' (KKK 3.185); ... zyúnsa(¯) ni | turerarete || háittel kíta no wa || Súuzan da '... in comes Susan escorted by police' (KKK 3.185); Sá-te || kono "sáwagi" de || itiban || toku o site irú no wa || dáre ka 'Well, now, who is it that profits most from this "fuss"?' (SA 2664.24c).

(1a) Extruded surface-subject (from converted sentences): Mayótte iru || Kúniko no | kokóro o | kimesasetá no wa || Ayao no || omoigake-nái | kotobá datta 'It was Ayao's unexpected words that decided Kuniko's confused mind (for her)' (Ig 1962.90).

(1b) Extruded surface-subject (= cathectic object): Natukasii no wa || isiyaki-imo da 'It's hot-pebble roasted sweet potatoes that I hanker after' (SA 2666.110a).

(2) Extruded object: Ó no | tuttá no wa, || is-syakú^[L] tikái | iwana to, || goroku-sun no || yamame ní-hiki de atta 'O (? = Wu) caught two fish—a char nearly a foot long and a five-or-six-inch lake trout' (Ig 1962.90); Matumoto-tei de siiku site irú no wa || tyóozame (¯)daké de wa | náí 'It is not just sturgeon that they are raising at Mr Matsumoto's mansion' (SA 2677.63b); Dá ga, || byooín ¯gawa ga | itiban sinpai sitá no wa, || háto o | baitai to suru | saikin no dénpa(¯) de áru 'But what has most worried the hospital people is the spread of germs that treat the pigeon as their medium' (SA 2649.126b); ... wareware to site || móttö-mo || tyuumoku senéba | naránu no wa || kyóotei seiritu ni itáru(¯) máde no || Sóren no | táido no | kyuuhen de ári, || sono || sín'i de áru 'For us what must be watched most are the sudden shifts in the Soviet attitude until an agreement is reached, and their true intentions' (KKK 3.171).

(2a) Extruded traversal object: Íma || hutarí ga | arúite | irú no wa || áo ya | áka no || néon ni | irodoráreta | sakari-ba de áru 'The two are now walking in an amusement area bright with blue and red neon lights' (Ig 1962.90).

(3) Extruded place: Sore o ii-dásita no wa || Ginza no || áru | kissá-ten(¯) da 'It was in a Ginza coffee shop that he suggested that' (Ig 1962.90); ... ísiki ga | too-nóite(¯) itte, || tugí ni | ki ga túita no wa || yasen-byóoin no | béddo no | náka datta 'he gradually lost consciousness and the next thing he noticed was from a field-hospital bed' (SA 2679.39a)—I assume propredication; Kántoo de || attoo-teki ni | zipán-zoku ga | óói no wa || Yokohama [dá] 'In eastern Japan it is Yokohama where there are an overwhelming number of blue-jean wearers' (SA 2668.9); Syukuhaku saretá no wa, || dótira desita ka | ná 'Where did Your Highness stay?' (Tk 3.175b—addressed to Prince Chichibu); Míru no wa | Mitukósi [de], || kaú no wa | ítibá [da] 'Mitsukoshi (Department Store) is where you look (at it), the market is where you buy (it)' (SA 2793.128a).

(4) Extruded time: Ano yó^[L] || Masúnaga ga | Sasazuka no ié ni | káetta no wa || zyuuní-zi ¯sugí da 'That night it was after midnight when Masunaga got back to Sasazuka's house' (Ig 1962.90); Hukóo na | ziken ga | okótta no wa || yokka no || hiru-góro datta 'It was around noon on the fourth that the unhappy incident occurred' (SA 2680.22d); Káre | zisin ga || natú o | sugósita no wa, || sono || máta(¯) || iti-nen | máe made de áru 'It was even a year before that that he himself had spent the summer (there)' (Ig 1962.90); Kono hón ga | kakáreta no wa || muron | senzen dá kara, ... 'It was, of course, before the war that this book was written, so ...' (SA 2649.110a); Sikási || Háruko no | sono izumi(¯) ga || kareta yóo ni | kan-ziretá no wa || han-tosí ¯gákari | máe kara da 'But it was only a half year ago the feeling set in that that well-spring of Haruko's had dried up' (Ig 1962.91); Bútai no | súbete ga | modótte | kíta no wa || yokuyokú-zitu(¯) ni nátte kara de atta 'It was a couple of days before all the outfit

got back' (Ig 1962.91); Tokoró-ga, || ligurú-goo kara lootoo ga átta no wa || yokuzitu no || gógo ni | nátte kara datta 'But it was after it had become afternoon the next day that an answer came from the [ship] Eagle' (SA 2674.129c).

(4a) Extruded frequency: Rokuzyuú^[1] hati-nen no || daitooryoo-sénkyo no | sái ni mo || koogai-móndai ni | huretá no wa | ití-dó^[1] -daké de, || táí-site | zyuyoo na mondai tó wa | kangáete | inákatta yóo da 'At the time of the '68 presidential election he touched on the question of environmental damage only once, apparently not regarding it as a very important issue' (SA 2670.128a).

(4b) Extruded duration: Taiwán^[1](-) de | o-yakunin o nasútte | 'tá no wa, || ítu kara || ítu made datta n desu ka 'You were an official on Taiwan over what period?' (Tk 4.160a).

(5) Extruded cause or reason: Así ga || komakáku | hurerú no wa || kuyásikute | tamaranáí kara da '(My) legs are trembling because it is excruciating' (Ig. 1962.91); Sigoto ga || yotei yóri | okuretá no wa || níbuku | nátta | atamá^[1] no tamé^[1] [|] bákari de | náí 'It isn't just because of my sluggish head that the work is behind schedule' (Ig 1962.91); Gúnbu ni wa, || Betonamu-sénsoo ni | katénai no wa || kaihoo-sénsen -gawa ga | "seiiki" o mótte | irú kara da, tó^[1] no | kangáe ga || nezúyoku | átta 'The military had the firm idea that the reason they are unable to win the Vietnam War is because the Liberation Front forces possess "sanctuaries"' (SA 2679.18a); Eigyoo kaisi o || kaimaku to dóozi(-) ni | sinái no wa || náze ka 'Why don't they open for business with the start of the Fair?' (SA 2669.120d); Anáta ga | kami-gata o kaenáí no wa || náze desu ka 'Why is it that you won't change your hair style?' (SA 2668.97b); Senséi ga | tuihoo ni sitei saretá no wa, || nán de desu ka 'What is the reason you were named in the purge?' (SA 2660.47a); Anáta ga || ítu mo || burázyaa o | site inái no wa || dóo site desu ka 'Why is it that you never wear a bra?' (SA 2668.97c); Mórúgan(-) ni yoru to, || koo sita yobi-kata ga áru no wa, || keitei to || símai to ga || sóogo ni | kekkon no aité de átta kará de áru (to iu) 'According to Morgan, (it is said that) it is because brothers and sisters were respective partners in marriage that this sort of [kinship] appellation exists' (Ōno 1966.159).

(6) Extruded instrumental: Atira de koogí^[1](-) nasáru no wa || Eigo dé [desu/desita ka]? 'Was it in English that you lectured over there [in America]?' (Tk 3.160b).

(7) Extruded sentential adverbials: Sikási || Mótoko ga | múkuti de, || utiki na seisitu ni (|) sodati-tútu | áru no wa || zízitu de aru 'But it is true that Motoko is growing up to be reticent and bashful by nature' (Ig. 1962.91) ← Zízitu Mótoko ga ... 'In truth Motoko ...'; Géngo ga || óoku no | baai, || búnka to | hukugoo site || kyooson site irú no wa | sizen de áru 'It is natural that languages for the most part coexist in a complex with cultures' (Ōno 1966.192) ← Sizen ni ... 'Naturally ...'; Akíyama san ga | awatete tori-modositá no wa || motíron de aru 'It goes without saying that Mr Akiyama hastily retrieved it' (SA 2673.139d) ← Motíron Akíyama san ga ... 'Of course Mr Akiyama ...'; Ayao ga || syozí-hin(-) no || kaneme no monó o || hotóndo || zénbu || tebanásita no wa || motíron de aru 'It goes without saying that Ayao handed over virtually all the valuables he had' (Ig 1962.91) ← Motíron Ayao ga ... 'Of course Ayao ...'; Sono kyootan ga, || inaka no sóntyoo de atta | tití ni || sono || bizin-ga no e-hágaki o | kawasetá no wa || akíraka datta 'It was obvious that admiration made the father, a (former?) country village headman, buy the postcard with the picture of a beautiful woman on it' (Ig 1962.91) ← Akíraka ni ... 'Obviously ...'; ... muzukasíi(-) mondai ni (|) tooméni(-) surú no wa || akíraka de ari, ... 'It is clear that we face a difficult problem, and ...' (KKK 3.171).

In some sentences the Identified is attenuated by the kotó-nominalization, as in these examples (numbered according to adjunct-extrusion type):

(1a) Sore kara || watasi o | odorokáseta no wa, || bízin ga || ígai(⁻) ni || oogara de áru kotó datta 'What surprised me next was that the beauties are unexpectedly large women' (Ig 1962.90); Sinpai ni náru no wa, || imootó no yóo ni site | issyo ni kurasite ita || Tízuko no | kotó desita 'The worry was over Chizuko with whom she was living like a sister' (KKK 3.185)—or is this the noun kotó?

(2) Korétika ga || náni yori | osóreta no wa, || Higasi Sanzyóoin ga || higo-ro kara || Mitínaga o || tokubetu ni || go-tyooguu [= tyóoi(⁻)] ni nátte iru | kotó datta 'What Korechika feared more than anything was that H.S. was showing special favor toward Michinaga these days' (Ig 1962.90); Kono-góro(⁻), kan-zirú no wa, || tosí-góto ni || huruhon-ya ga | hette yuku kotó de aru 'What I feel lately is that the number of secondhand book shops is declining with each passing year' (SA 2656.112b).

(4) DDŦ no | kiséki(⁻) ni | (l) odoróita no wa, || haisen-tyókugo no | kotó de aru 'It was right after losing the war that we were startled by the miracle of DDT' (SA 2684.45a); Sómeya to || Kúniko to no | aida ni || zyóozi ga | hazimattá no wa || sono ban no kotó de atta 'The beginning of the affair between Someya and Kuniko was something that happened that night' (Ig 1962.90-1); Nitiro-sénsoo ga | owattá no wa || sono || tyókugo(⁻) no | kotó da 'It was right after that that the Russo-Japanese War ended' (SA 2660.116d); Gaburíéru ga || Kurisutian no | té o | tótta no wa, || sonna || áru ban no | kotó datta 'róo ka 'Might it have been some such evening as that that Gabrielle took Christian by the hand?' (SA 2649.105a); Yodogawa Nagáharu ga || térebi no || "Nityoo-yooga-gékizyoo" no | kaisétú-sya to site | toozyoo sitá no wa, || Syóowa(⁻) || yónzyuu | iti-nen no || zyuugatú no | kotó da 'It was in October of 1966 that Nagaharu Yodogawa made his debut as the commentator of TV's "Sunday Foreign Movie Theater"' (SA 2655.121d); Sikási || sono kotó ga || óoku no | hitó ni yotte || túyoku || ísiki | sareru yóo ni | nátta no wa, || osóroku || seizyóo-syoku ga | huyuu sité kara no | kotó to | omowaréru 'But it appears to have been probably after the popularization of straight-row planting that many people became strongly aware of that' (KKK 3.185).

And some sentences have both parts attenuated with kotó: Táda || koko de || mondai ni náru | kotó wa || ... to iu | kettén(⁻) o | mótu | kotó de aru 'The only problem here is that it has the drawback of ...' (KKK 3.185). This is perhaps not a cleft sentence, just an identification, as would seem to be true of the following example: Mono-wárai ni | náru no wa || hazukasii | kotó de aru 'It is a shameful thing to become the object of laughter' (SA 2680.41a).

As in all identificational sentences, the Identified normally must undergo focus, and the above examples all contain subdued Identifieds (... nó wa). But a cleft sentence can also HIGHLIGHT the Identified, as in these examples (see also those on p. 241): Nooyaku háiki(⁻) ni túite || kumiái-in no || ísi | tooitu ga || sunnári to | dékita no mo || kono tamé da 'It is for this reason that so easily there formed a consensus of the [farmer-]guild members with respect to the abandoning of pesticides' (SA 2684.63d)—with the reason extruded (ísi {no} | tooitu 'unity of opinion = consensus' results from ellipsis, as does nooyaku {no} háiki(⁻) 'abandoning of pesticides'); Kono yóo na | kékka(⁻) o | (l) míru to, || tyoohookéi-syoku to || seihookéi-syoku to no || dóre ga | yói ka to | omoi-mayóu no mo || muri-karánu | tokoró de aru 'In view of this kind of results, it is hardly unnatural to be at a loss as to which is better, oblong planting or square planting' (KKK 3.213); Korétika

no | omói ga || háha no | titi^[f] || Sigétada no | kotó ni | oyondá no mo | toozen dátta 'It was only natural that Korechika's thoughts should dwell on his mother's father Shigetada' (Ig 1962.91); Kore to tómo(¬) ni || kaihukú-ki ni | háitta || haisen Doitu-kókumin no | zisin ga || takamáru no mo | toozen de átte, ... 'It is only natural for a rise to occur in the self-confidence of the defeated German people embarking upon their recovery at the same time as this [= military and economic stabilization under the Marshall Plan], and ...' (KKK 3.171, 213).

We have assumed that the identificational sentence, with its subdued and thematized Identified as in Aité wa onná da 'The partner is a/the WOMAN', has an equivalent form with the Identifier marked by gá and the Identified marked by the essive ní that underlies the copula dá: Onná ga aité da 'A/The WOMAN is the partner'. Since we wish to treat all cases of focus and theme as secondary, the latter form is here treated as basic, despite its lesser frequency. Now if the sentences that result from the "cleaving" operation described above are like other identificational sentences, we can expect equivalent forms of this sort:

- (1a) Kinóo ga utí(¬) de háha ga kodomo ni okási o watasitá no da.
- (2a) Utí(¬) ga kinóo^[f] háha ga kodomo ni okási o watasitá no da.
- (3a) Háha ga kinóo^[f] utí(¬) de kodomo ni okási o watasitá no da.
- (4a) Kodomo ga kinóo^[f] utí(¬) de háha ga okási o watasitá no da.
- (5a) Okási ga kinóo^[f] utí(¬) de háha ga watasitá no da.

Though this sort of output sounds unusual, in such "full" sentences at least, we will probably wish to call it grammatical in order to account for such sentences as these:²⁴ Máiniti(¬), || kaisya o déru no ga || yóru || kú-zi -sugí [da] 'Every night it is past nine when he leaves the office' (SA 2668.24d)—extruded time; Itiban komátta no ga, || zyoyuu-búsoku de aru 'What has been MOST distressing is the shortage of actresses' (SA 2635.59a)—extruded dative or instrumental; Sosite || kinnen, || kótte | itá no ga | léiga(¬) -zúkuri de, || zíp-pon hodó^(o) no | tyoohen karaa-gekiéiga o || zisaku | zien sita 'Then in recent years it was movie making that he [=Sihanouk] had been absorbed in, and he directed and acted in some ten full-length color drama films' (SA 2680.17e-18a)—extruded dative (eiga-zúkuri NI kótte ita); Kono || "séntaa" to | narande || séngo(¬) no (|) Nihón ni || kyuugeki ni húeta no ga || kákusyu no | soodán-situ ya | soodan-zyó(¬) de áru 'All sorts of counseling offices and counseling agencies have suddenly proliferated one after another in postwar Japan under this designation of "center"' (SA 2684.44a)—extruded subject; Sore kara, || kutikazu ga sukunái no to || kuti no kiki-kata no sízuka na no ga, || tokutyoo de átta 'And then, it was his (?) characteristic to be sparing of words and to speak quietly when he did speak' (KKK 3.172)—extruded Identified ('characteristic'); Sore wa, || ... tizin(¬) o (|) tazunéru no ga | mokuteki de átta ga, ... 'It was his aim to visit a friend ... but ...' (KKK 3.172)—extruded Identified ('aim'). In fact, it would seem proper to assume such an intermediate stage as that represented by (1a)-(5a) in getting from the underlying simplex to the cleft sentences (1)-(5). And this operation, once granted, may provide us with a better explanation for the ellipsis assumed to account for the examples of "emphatic GA" given in § 2.3.1: instead of the more specific time and space references (aida, tokí, tokoró) suggested there, what is dropped is the nominalization ... nó da. Here, too, we may find an explanation for the indiscriminate subjectification (conversion to subject) that the

24. More examples of S nó ga N da will be found in § 3.10: pp. 224, 248.

facilitative conversion allows its adjuncts. *Hási ga tabe-yasúi* 'It is easy to eat with chopsticks' would be immediately derived by terminal ellipsis from *Hási ga tabe-yasúi no da* (= *Tabe-yasúi no wa hási [de] da* 'It is chopsticks that are easy to eat with'), a cleft sentence that has extruded the instrumental from [*Hito ga monó o*] *hási de tábe(-yasúi)* '(It is easy for) [people] to eat [things] with chopsticks' and used it as the Identifier for the remainder of the sentence. Similar explanations may prove helpful in accounting for other cases of subjectification; the intransitivizing resultative of §9.2.4.(2) immediately comes to mind. But we will still need to state explicitly just WHICH situations will permit—or require—the ellipsis that leaves the *gá*-marked Identifier stranded while suppressing all other evidence of the cleft sentence we are assuming.

Nothing prevents us from making a cleft sentence out of an identificational sentence: (*Aité wa onná da* ←) *Onná ga aité da* 'A/The WOMAN is the partner' → *Aité na no wa onná da* 'It is a/the woman that is the partner'.²⁵ If the above argument is sound, this sentence must be derived by way of *Onná ga aité na no da* 'A/The WOMAN is what the partner is'.²⁶ Since, in theory at least, nominalization would appear to be recursive, we can ask whether it is possible to repeat the cleaving of a cleft sentence. *Háha ga kodomo ni watasítá no wa okási da* 'It is sweets that the mother handed the child'—with assumed underlay of *Okási ga háha ga kodomo ni watasítá no da* 'SWEETS is what the mother handed the child'—should lead, by way of *Háha ga kodomo ni watasítá no ga okási da* 'WHAT THE MOTHER HANDED THE CHILD is sweets', to *Okási wa háha ga kodomo ni watasítá no da* 'Sweets is what the mother handed the child' (to be differently interpreted from 'It is a fact that the mother HANDED THE CHILD sweets' with subdued thematization of the direct object *okási o*).

We might think it possible to carry this process one step further and produce (*)*Okási ga háha ga watasítá no ná no wa kodomo da* 'It's the child that sweets is what the mother handed him' from an underlying (*)*Kodomo ga okási ga háha ga watasítá no ná no da* 'The CHILD is the one that it's sweets is what the mother handed him'. But these sentences are blocked by a rule that does not permit *S *no ná no da* to begin with (p. 253). Thus the following monstrosities are all to be rejected not for clumsiness alone but for violating the rule as given:²⁷

**Kodomo ga okási ga háha ga watasítá no ná no ná no wa kinóo da* 'It's yesterday is when it's the child that sweets is what the mother handed him'. ← **Kinóo ga kodomo ga okási ga háha ga watasítá no ná no ná no da* 'YESTERDAY is (the one) when it's the child that sweets is what the mother handed him'.

**Kinóo ga okási ga háha ga watasítá no ná no ná no ná no wa uti dé da* 'It's home where it's yesterday is when it's the child that sweets is what the mother handed him' ← **Uti ga kinóo ga okási ga háha ga watasítá no ná no ná no ná no da* 'HOME is where

25. An authentic example: *Itiban mondai ná no wa || zyakunén-soo ni |lataeru |eikyoo dá* 'What is the biggest problem is the influence upon the young generation' (SA 2647.119b) ← ... *eikyoo ga itiban mondai ná no da*. But *mondai* is an adjectival noun as well as a pure noun, so this example may not be convincing.

26. An authentic example: *Siká-mo || kono íkku no || móttó-mo |síba-siba |kikarerú no ga, || hokanaránu || soko ná no da* 'And it is precisely THERE that this phrase is heard most often' (Maeda 1962.159).

27. In other words, when the sentence builder's ingenuity overstrains the machinery by producing ... *no ná no ...* a light goes on that says "TILT" or "This problem will not compute", and the grammarian puts an asterisk in front of his attempt.

it's yesterday is when it's the child that sweets is what the mother handed him'.

Notice that the cleft sentence differs from the factual nominalization of § 14.2. It is possible (if unusual) to "factualize" a cleft sentence: Aité na no wa onná na no da 'It is a fact that it is a/the woman that is the partner' = Onná ga aité na no da 'It is a fact that a/the WOMAN is the partner'.

14.3. VERBAL NOUNS

A number of words form predicates by attaching the auxiliary verb *suru*; most of these VERBAL NOUNS are borrowed from Chinese, but some are taken from English or are of native origin. There are both transitive and intransitive verbal nouns, and many carry specific grammar with them, just like verbs (§ 3.1). In addition to the expected nominalizations built on the auxiliary (*suru kotó*, *surú no*, etc.), there are also special nominalizations which consist of simply dropping the auxiliary so as to leave only the verbal noun itself, with the specification of subject or object (or both) obscured by reduction to a "genitive" *nó*:

VNI (verbal noun, intransitive):

Kóogyoo ga dokuritu *suru* 'Industry becomes (or is) independent'.
→ Kóogyoo no dokuritu ... 'The independence of industry ...'.

VNT (verbal noun, transitive):

(1) Gakusya ga sizin o kenkyuu *suru* 'Scholars study poets'.
(2) Sizin ga gakusya o kenkyuu *suru* 'Poets study scholars'.
→ Gakusya no kenkyuu ... (1) 'Study by the scholars ...'.
(2) 'Study of [= about] the scholars ...'.
→ Sizin no kenkyuu ... (1) 'Study of [= about] the poets ...'.
(2) 'Study by the poets ...'.

Thus the sentence *Gakusya no sizin no kenkyuu dá* is multiply ambiguous: (1) 'It is a study, by scholars, of poets'; (2) 'It is a study of scholars by poets'; (3) 'It is a study by poet-scholars = poets who are scholars' (*gakusya no* ← *gakusya dá*); (4) 'It is a study about poet-scholars'; (5) 'It is a study by scholar's poets' (*gakusya no* ← *gakusya nó* [*monó*] *da*); (6) 'It is a study about scholar's poets'. Adjuncts other than subject and object need not lose their specification, for they can be adnominalized with their markers intact: *Gaikoku dé* [*surú no*] *da* 'It is [happening] in foreign countries' → *Gaikoku dé no kenkyuu* ... 'Study [done] in foreign countries ...'. This is in keeping with the practice for nouns in general: *Gaikoku é no húne* ... 'A boat [headed] for foreign countries ...', *Gaikoku tó no torihiki* ... 'Transactions [entered into] with foreign countries', etc. Often (as in the last example) the noun is a lexicalized predicate with specific valences carried over; see § 3.8a. A Japanese scholar once suggested creating by analogy the combinations **N gá no* and **N ó no* to clear up the subject-object ambiguity: **Gakusya gá no kenkyuu* ..., **Sizin ó no kenkyuu* ..., etc. The status of the subject is sometimes made clear by adnominalizing *suru*: *Gakusya ga/no suru kenkyuu* ... 'Study that scholars do ...'. But, for some reason, you can not say **Sizin o suru kenkyuu* ... 'Study that one does on poets ...'. Other devices are available to make both subject and object explicit: *sizin ni yoru kenkyuu* 'study by poets', *sizin ni túite no kenkyuu* 'study about poets'.

Whether transitive or intransitive, verbal nouns can be treated as the object of the predicator *suru* and marked with *ó*, PROVIDED no other object is mentioned: *Kóogyoo ga dokuritu o suru* 'Industry becomes independent'; *Gakusya ga kenkyuu o suru* 'Scholars

do research'. Since (with the exception of the double objects discussed in §3.11.1) two marked objects are not normally permitted, you might think it unacceptable to subdue or highlight the object of the verbal noun if that verbal noun is itself marked with *ó*, but this turns out to be untrue: while you can not say **Kéizai o kenkyuu o suru* 'does research on economics' (you will have to say *Kéizai o kenkyuu suru* or *Kéizai no kenkyuu o suru*) it is quite possible to say *Kéizai wa/mo kenkyuu o suru*. There are two ways we might explain this. One way would be to say that what is focused is not the object as such (= **kéizai ó wa/mo*) but a THEME that has been extruded from an objectival genitive (*kéizai no kenkyuu o suru* 'does the study of economics'). Another way would be to assume that the unacceptable **Kéizai o kenkyuu o suru* is the underlying abstraction from which the acceptable *Kéizai o kenkyuu suru* (as well as *Kéizai no kenkyuu o suru*) is derived by obligatory conversion of one of the objects—either conversion of the verbal noun's object into an objective genitive or "incorporation" of the verbal noun into the auxiliary verb *suru*, i.e. verbalization of the verbal noun; that would be permit us to regard *Kéizai wa/mo ...* as an instance of focus applied directly to the underlying simplex. There is much to be said in favor of the latter viewpoint. As we have observed elsewhere, the basic form of a verb is actually the INFINITIVE, a kind of verbal noun; the finite forms can be regarded as coming from a contraction of an expression (*)*V-i suru* postulated to account for *V-í ɬoɬ wa/mo suru*.²⁸ In Korean the corresponding structure allows both the object and (optionally) the verbal noun to be marked with the particle corresponding to the Japanese *ó*: kyengcey *lu/ yenkwu ɬu/ɬ hanta* 'studies economics'.

Free verbal nouns make a potential only by way of the expression *suru kotó ga dekíru*, for VN *sareru* can be taken only as passive or as subject-exalting (depending on the marking of the adjuncts), though VN *saserareru* can also have the potential meaning 'can cause one to do VN'. VN *suru kotó ga dekíru* can be shortened to VN *ga dekíru* and VN *dekíru*, but the shortening with VN *ga* is unusual (or unacceptable?) if the verbal noun carries adjuncts.

The designation "verbal noun" can be used to refer to at least four different kinds of words. We will distinguish FREE verbal nouns, QUASI-FREE verbal nouns, BOUND verbal nouns, and PSEUDO verbal nouns. A bound verbal noun is never separated from *suru*. A free verbal noun can, under certain circumstances, be marked with *gá* or *ó* and separated from *suru*, but typically the marking is suppressed and an audible juncture intervenes only when *suru* is converted into some longish phrase after a tonic verbal noun, e.g. *áísatu sinákattara* 'unless one were to greet'. (For details, see Martin 1970.) Free verbal nouns can usually serve also as subject, object, etc.; but adjuncts, if carried along, must be genitized (or predicated and adnominalized) with *nó*. Quasi-free verbal nouns can, under certain circumstances, be separated from *suru* by a juncture, but not by *gá/ó* or *wá/mó*. Both free and quasi-free verbal nouns will permit the reduction of the potential VN [*suru kotó ga*] *dekíru*; bound verbal nouns will not.

Pseudo verbal nouns are ACTION nouns or ABSTRACT nouns that can be predicated with the auxiliary *suru*—and thus resemble verbal nouns—but normally require marking with *gá* or *ó*, though the markers will sometimes casually drop: *mane [o] suru* 'imitates', *míbáe(-) [ga] suru* 'makes a good appearance', As phrases, these expressions are intransitive; to say 'imitates a person' you say *hito no mane o suru* (= *hito o maneru*). By

28. And *suru* itself, at an earlier stage, was perhaps derived from *sí [ga] woru* 'there exists the doing' (by appropriate contraction and vowel assimilation), i.e. the infinitive *si < si-í* + the auxiliary *wo- < bo- + -ru*, as suggested in Martin 1968.

way of contrast, you can say 'takes care of a person' either as hito *no sewá o suru* or as hito *o sewá suru*, for *sewá* is a free verbal noun. The final accent of *sewá*—and of *annái* 'guiding'—never drops when a form of *suru* is added; compare *áisatu | sinákattara* and its minor juncture with *sewá sinákattara* and *annái sinákattara*. (I here report Hamako Chaplin's usage. Apparently there are other speakers who will say *sewá^[r] sinákattara* and *annái sinákattara*, reflecting an underlying juncture that suppresses the final accent of the verbal noun before itself disappearing. Other oxytonic verbal nouns: *sikí [o] suru* 'directs', *henzí [o] suru* 'replies' (*henzí sita no wa*, BJ 2.312.E5), *dangén [o] suru* 'asserts', *kegá [o] suru*²⁹ 'has an accident, injures oneself', *tabí [o] suru* 'journeys',) The accentuation of *ái-súru* 'loves' usually follows the patterns you would expect for a vowel verb: *ái-sita*, *ái-sínakattara*, *ái-simasén desita*, etc. But some speakers will heed an underlying juncture before the longer forms and say *ái-sinákattara*, *ái-simasén desita*, etc. That option is even more often chosen, it would appear, for *kói-súru* 'loves'; perhaps that is because *kói* is a native noun (derived from the infinitive 'beg; love') and *kói o suru* will be used, though (**ái o suru* would be unusual. A few pseudo verbal nouns of Japanese origin: (*hito to*) *naka-náori [o] suru* 'gets back on good terms (with a person)'; *o-syáberi [o] suru* 'chatters' (cf. *o-syaberi suru*, the object-exalting conversion of *syabéru*—rarely used); *sayonára [o] suru* 'takes one's farewell, say good-bye'—cf. ... *bunmei-syákai ni o-sáraba site* ... 'bidding farewell to civilized society' (SA 2661.133c), in which the last phrase represents a synonym of *o-sáraba o tugete*; Pseudo verbal nouns have various origins; *mane* is a noun derived from the infinitive of a transitive verb 'mimic', and many action nouns are similarly derived from infinitives. A number of action nouns made with the suffixes *-mono* (typically attached to a verb infinitive) and *-koto = -goto* function as pseudo verbal nouns: *kaimono* 'shopping', *araimono* 'washing (up)'; *Tutómete iru to, || okeiko-góto(¯) ga | dekinai kara* 'Because I can't do any lesson-taking while I'm employed' (SA 2672.64c).

It is not easy to draw the line between free verbal nouns and pseudo verbal nouns; most of the latter are listed in one dictionary or another as "also verbal nouns". The function of *suru* in predicating these action nouns, however, is not so different from the use of *suru* to predicate a sensory stimulus: *otó ga suru* 'makes a noise', *nióí ga suru* 'emits an odor', *kanzi ga suru* 'a feeling is present/felt', *zutuu ga suru* 'has a headache', *okan ga suru* 'catches a cold', We can compare this with the use of *suru* as a general pro-verb used to take the place of many (but not all) more specific verbs: *denwa o suru/kakéru* 'makes a phone call', *o-kan o suru/tukéru* 'heats the wine', *nékkuresu o suru/tukéru* 'wears a necklace', *mégane o suru/kakéru* 'wears glasses', *óbi (nékutai, bāndo, béruto) o suru/siméru* 'wears a sash (necktie, belt)', *yubiwa (tebúkuro) o suru/hameru* 'wears a ring (gloves)'. (But *suru* will not substitute for other verbs of wearing, such as *kiru*, *haku*, etc.) Perhaps these examples belong here: *Dé mo || raisukáree no | NEDAN ga || sen-en mo surú n da | zé* 'But the price of rice curry costs (= is) a whole thousand yen!' (SA 2640.105a); *Watasi no oi wa || káta made | taréru | KAMÍ o | site itá no de aru* 'My nephew had [= was wearing] his hair down to his shoulders, you see' (SA 2684.40a); *Yó ni mo | osorosíi | KAO o sita otokó ...* 'A man with the most frightful face ...' (R); *Nán da i, || ano san-ban ¯mé no wa || ... nán tee | kitanéé | SIRÍ o | site 'rú n da* 'Look at that third one—what a dirty bottom *he's* displaying!' (OKitsu 1.228). We might regard most of these cases as simple ellipsis of the specific verb infinitive, for we are taking the view that ALL verbs contain the auxiliary

29. *Kegá* can take a body part as direct object: *así o kegá suru* 'injures one's leg' = *así ni kegá {o} suru* 'injures oneself on the leg'.

'do' within them, having found that that accounts for the appearance of *suru* under nuclear focus (§ 5) as well as (perhaps) the historical development of the finite shapes: *tegami o káku* is an obligatory shortening of *tegami o kák [i ... sur]u* and *denwa o kakéru* is an obligatory shortening of *denwa o káke [... su]ru*.

The vast majority of free and quasi-free verbal nouns are binoms that were either Chinese loanwords to begin with or were made up in Japan out of morphemes borrowed from Chinese. But some are of Japanese origin: *dáko suru* 'embraces', *ónbu suru* 'carries on the back', *námida suru* 'weeps' (free because you can say *námida mo sezu* 'without a tear'); *ne-age suru* 'raises the price of' (transitive according to MKZ), a compound of a noun 'price' + the transitive infinitive 'raise'; *tomádó(í)* 'losing one's bearings', a compound of a noun 'door' + the noun *madó(í)* derived from an intransitive verb infinitive; *?kói suru* (= *koi-súru*) 'loves', from the noun derived from a transitive verb infinitive; There are also many free and quasi-free verbal nouns taken from English: *sutoráiki [o] suru* 'goes on strike', *kotobá o másutaa suru* 'masters a language', *onná ni/o kí[s]su suru* 'kisses a girl', *seikatu o enzyói suru* 'enjoys life'; *tyárenzi [suru kotó ga] dekiru* 'can challenge', From the Chinese binom found in *ími o suru* 'has meaning, makes sense' we would expect the reduction *ími suru*, functioning as a free verbal noun; but this is usually replaced by the BOUND verbal noun *imi-súru* (*imi-site*, *imi-sínai*). This is an unusual case; cf. *kánsya* 'thank', *sáiban* 'judge', *káisyaku* 'appreciate', *íbu* 'pacify'—all free verbal nouns. Some speakers may treat *íti suru* 'is located (in), finds its place' in the same unusual way (*?íti-súru*, *?íti-site*, *?íti-sita*, ...), but we will follow MKZ⁵ in considering *íti* to be a free verbal noun only, reduced from *íti [o] suru*; another free verbal noun is *ízi suru* 'maintains' (*ízi site*). Words derived from verbal nouns are not necessarily verbal nouns themselves: *táimen* 'encounter, interview' is used as a free verbal noun, but *syo-táimen* 'first encounter/interview' is not.

A few native words are bound verbal nouns, i.e. they are not separated from the auxiliary *suru*, at least not in the meaning intended: (*monó o*) *watakuši-suru* 'appropriates (things)', (*N ni*) *kumi-súru* 'takes part (in N), joins (N)', (*N o*) *yomi-súru(í)* 'sings the praises (of N)', (*N ni*) *kokóro-suru* 'pays attention (to N), attends to (N)', (*tyuumoku ni*) *atai-suru* 'is worthy (of attention)', (*N ni*) *hukairí(í)-suru* 'delves deep (into N)', (*ekimáe(í) ni*) *tamuro-suru* 'encamps (in front of the station)', *Kemí-súru* 'lets (years) elapse; investigates' derives from an old variant of the Chinese morpheme KEN; a synonym in the first meaning is *es-súru(í)* (ETU), which also has the meaning 'peruses'. Are there any bound verbal nouns taken from English?

Most one-morpheme verbal nouns of Chinese origin are bound, but a few also serve as free verbal nouns: *hito ni gáí o suru* means 'does harm to a person' and *hito o gai-súru* means 'harms a person'. *Són suru* (notice the accent) is simply a shortening of *són o suru* 'causes damage'; the bound version is *son-zíru(í)* 'damages'.³⁰ Other examples: *toku [o] suru* 'provides benefit (to)', *syaku [o] suru* 'serves the wine', *réi [o] suru* 'bows', *kán(í) [o] suru* 'heats the wine', *bán [o] suru* 'stands guard', *hún [o] suru* '(a dog) defecates' (cf. *N ni hun-súru* 'takes the role of N'), *rakú [o] suru* 'lives in comfort',

One-morpheme bound verbal nouns of Chinese origin fall into two classes: those that voice the initial sibilant of the auxiliary and those that do not. The latter is the larger

30. *Són [o] suru* is intransitive; *son-zíru(í)* is both intransitive and (= *kowásu*) transitive, but it is obsolescent in the standard colloquial language. (It also functions as a semi-literary infinitive-auxiliary, §9.1.10.)

group, containing well over a hundred different morpheme shapes—and some shapes represent several different morphemes. In Literary Japanese these verbal nouns attach the predicating auxiliary in the same forms as are used for the two-morpheme free verbal nouns: the imperfect attributive is ...-suru and the predicative ...-su; the negative is ...-sezu, the infinitive ...-si. For the colloquial language, we would expect the predicative to be replaced by the attributive, giving ...-suru in all cases, and look for new negatives to appear in the form ...-sinai. But this pattern is in competition with a colloquial treatment of the very common ones as if they were regular s-ending verbs (treating ka-súru 'assigns' like kasu 'lends'): ...-su for the imperfect (both predicative and attributive), ...-sanai for the negative, and ...-si for the infinitive. A word like ryaku-súru 'abbreviates' will have the imperfect ryakú-su as a common option, and from that we get ryaku-sánai competing with ryaku-sínai; you will also find ryaku-sázu and possibly ryaku-sízu, though most speakers feel more comfortable with ryaku-sézu, since (in Tōkyō, at least) this negative ending -(a)zu is not very colloquial, to begin with. (An example of zoku-sázu 'not belonging' appears in SA 2680.101b.) For a list of bound verbal nouns see KKK Shiryō-shū 7.248-9.

In the Japanese of Hamako Chaplin, one-morpheme Chinese bound verbal nouns show varying degrees of assimilation to the native Japanese pattern of verbs that end in /s/. We can set up the following groups on the basis of the criteria stated:

(1) Highly assimilated. Accepted are: -su daroo (as well as -suru daroo), -sanai (as well as -sinai), and -su N (as well as -suru N):

yaku- 'translate'	zoku- 'belong'	huku- 'serve'
ryaku- 'abbreviate'		zyuku- 'ripen'

The verb monó-su[ru] 'does; writes' probably belongs here, though it is of native origin. Chaplin prefers -sanai and -sazu for the negative. Cf. yadó-su 'provides with shelter for the night', for which the -suru form is unusual except in the object-exalting o-yado suru.

(2) Well assimilated. Accepted are: -sanai (as well as -sinai) and -su N (as well as -suru N), but NOT -su daroo for -suru daroo:

ka- 'assign, assess'	tyoo- 'collect, solicit'
ki- 'anticipate'	hun- 'impersonate'
to- 'wager'	taku- 'entrust'
zi- 'resign'	yoku- 'bathe'
gyo- 'control'	eki- 'benefit'
yoo- 'need' (-sinai Tk 4.193b)	teki- 'fit'
guu- 'treat'	kai- 'understand' ³¹
kyoo- 'offer'	hai- 'bow'
syoo- 'call'	gai- 'harm'

(3) Less well assimilated.

(3a) Although -sanai is accepted, reservations are expressed about -su N:

in- 'imprint'	hen- 'incline'
---------------	----------------

(3b) Although -sanai is accepted, -su N is rejected in favor of -suru N:

haku- 'obtain'	geki- 'get excited'
oku- 'flinch'	han- 'oppose'
soku- 'conform'	men- 'face'

31. And probably kai- 'insert, go between': ... sukōsi mo i ni kái-sánu no de aru 'doesn't mind in the least' (Fn 43b). An example of 'understand': Bunmei o kai-sánai hito da 'He has no understanding (= appreciation) of culture' (Tk 3.231a).

(4) Of questionable assimilation. Although -su N is accepted, reservations are expressed about -sanai:

wa- 'harmonize'	baku- 'refute'
yuu- 'possess'	bas- 'punish' (BATU)
hyoo- 'criticize'	tei- 'present'

Note: Here also belongs hos- < hori- 'desire', of native origin.

(5) Still largely unassimilated. Although -su N is accepted (despite its ungrammaticality in LITERARY Japanese), -sanai is rejected:

da- 'descend'	hi- 'conceal'
ga- 'celebrate'	ri- 'profit'
ha- 'dispatch'	si- 'contribute'
sya- 'thank'	ho- 'appoint'
za- 'sit'	syo- 'handle'
zyo- 'divide, exclude'	das- 'doff; omit; escape' (DATU)
hu- 'affix; refer'	has- 'issue; leave' (HATU)
goo- 'name, declare'	sas- 'conjecture' (SATU)
koo- 'resist'	tas- 'reach' (TATU)
ryoo- 'govern'	kes- 'determine' (KETU)
soo- 'perform, play'	nes- 'heat' (NETU)
tyuu- 'put to death'	ses- 'contact, adjoin' (SETU)
tai- 'confront'	tes- 'penetrate' (TETU)
sei- 'control'	bos- 'sink; hide' (BOTU)
rui- 'be akin/similar to'	kus- 'bend' (KUTU)
sen- 'proclaim'	saku- 'plan'
	syuku- 'congratulate'

(6) Probably unassimilated.

(6a) Reservations are expressed about -sanai; -su N is rejected:

doku- 'poison'

(6b) Reservations are expressed about -su N; -sanai is rejected:

ma- 'graze, scrape'	zoo- 'keep, cherish'
gi- 'discuss' ³²	tyoo- 'mourn'
i- 'entrust'	hoo- 'satirize'
mi- 'charm'	as- 'press' (ATU)
go- 'rank'	kis- 'eat, drink, smoke' (KITU)
mo- 'mimic'	mes- 'perish' (METU)
roo- 'labor'	syoku- 'eat'
	tyaku- 'arrive; wear'

(7) Unassimilated. The forms are -suru N, -sinai:

do- 'reclaim, redeem'	gas- 'combine' (GA [P]U = GOO)
(-)si- 'regard as'	kas- 'thirst' (KATU)
kyuu- 'stop, rest'	zes- 'be the ultimate' (ZETU)
hei- 'invite, engage, enlist'	is- 'let slip, deviate' (ITU)

32. Yet here is an example of gi-sánai, in a jocular context: Tó-ni-kaku giin na n da kara, gi-sánakya ikemasén yó 'But since they are "giin" (Diet members) they've got to "gi" (deliberate)' (Tk 4.17a).

kei- 'respect'	sis- 'lose, forget' (SITU)
mei- 'close one's eyes; find repose'	boku- 'foretell; choose'
kan- 'relate (to)'	moku- 'be silent'
ken- 'investigate'; control'	roku- 'carve; control'
hin- 'verge (on)'	(toku- 'benefit'—see separately)
son- 'exist'	

Dictionaries are inconsistent in their treatment of these troublesome words, though some attempt is usually made to list the short forms in common use; one dictionary (K) lists *róo-su* as well as *roo-súru* for the meanings 'labors' and 'jests' but not for the meaning 'deafens'. Most of the words do not readily undergo exaltation conversions; the only forms clearly acceptable are these:

- o-sas-si ni náru and o-sas-si suru from sas-súru(¯) 'surmises'—but perhaps this is because there is a noun *sassi* derived from the infinitive *sás-si*(¯);
- o-kai-si ni náru from kai-súru 'understands' (but not *o-kai-si suru);
- o-taku-si ni náru from taku-súru 'entrusts' (but not *o-taku-si suru);
- o-hun-si ni náru from hun-súru 'impersonates' (but not *o-hun-si suru);
- o-yaku-si ni náru from yaku-súru 'translates' (but not *o-yaku-si suru);
- o-tas-si suru from tas-súru in the meaning 'reports' (But not *o-tas-si ni náru nor the humble form in other meanings of tas-súru).

Most of these bound verbal nouns resist voice conversions. Hamako Chaplin accepts the following (those in parenthesis with reservations):

VERBAL NOUN	CAUSATIVE	POTENTIAL	PASSIVE
	-saseru	-seru	-sareru
ka- 'assign, assess'	(+)	(+)	
(-)si- 'regard as'			+
gyo- 'control'	(+)	+	(+)
syo- 'handle'		(+)	
to- 'wager'	(+)	(+)	
hyoo- 'criticize'			(+)
kyoo- 'offer'			+
syoo- 'call'		(+)	+
guu- 'treat'			(+)
tyuu- 'put to death'			+
hai- 'bow'		(+)	
kai- 'understand'		+	
hei- 'invite, engage, enlist'			(+)
sen- 'proclaim'		(+)	
hun- 'impersonate'	+	+	
bas- 'punish'	?(p. 289)	+	+
das- 'do off; omit; escape'		+	
sas- 'conjecture'		+	
tas- 'reach'		+	
tes- 'penetrate'		(+)	
is- 'let slip, deviate'		+ ³³	

33. In *is-senai*, the negative.

VERBAL NOUN	CAUSATIVE	POTENTIAL	PASSIVE
baku- 'refute'		(+)	(+)
ryaku- 'abbreviate'	(+)	(+)	(+)
saku- 'plan'			(+)
taku- 'entrust'		+	+
yaku- 'translate'	+	+	+
doku- 'poison'			+
yoku- 'bathe'	+	+	
zoku- 'belong'	+	+	
huku- 'serve'	+	+	
zyuku- 'ripen'	+		

For the passive you will sometimes see the pseudo-literary *-serareru* in place of *-sareru*: ... to syoo-serar^éru monó ... 'those that are called ...' (Tk 4.95b). (The true literary form is *-seraruru/-sararu*.) Cf. pp. 289, 297.

A number of the bound verbal nouns are little used and speakers are familiar with them in but one or two forms, perhaps the gerund (*-site*) or the perfect (*-sita*). That is why I have not included in the lists above *gi-súru* 'models after; likens to', *hi-súru* 'compares', (*seikatu ni*) *kyuu-súru* 'is in need (for one's livelihood)', *kyuu-súru* 'supplies', *sen-súru* 'compiles, composes', *roku-súru* 'records', etc., since I have been unable to obtain reliable information on them as colloquial words.

There are about 35 different shapes of bound verbal nouns coming from single morphemes of Chinese that cause voicing of the sibilant of the auxiliary, turning *s* into *z*. The best known, perhaps, is *kan-ziru/-zuru* 'feels'; there is even a noun *kanzi* 'feeling' derived from the infinitive *kan-zi* 'feel'. The usual colloquial practice treats these words as regular vowel verbs ending in *...-zi*, so that the imperfect is *...-ziru*, the negative *...-zinai*, and the infinitive *...-zi*. But there is a conflicting trend from the literary versions, which have imperfect attributive *...-zuru*, predicative *...-zu*, negative *...-zezu*, and infinitive *...-zi*. Since in *Tōkyō* the *-(a)zu* negative is not very colloquial anyway, many speakers feel more comfortable with *...-zezu* than with *...-zizu*, but the latter also occurs: ... *yooi ni sin-zizu*(^[-]), ... 'does not easily trust/believe' (SA 2674.94c); ... *ki^[f]ri no yoo na monó no i hirogarú no o i kan-zizu ní wa irarenai* 'I can't help feeling the spread of something like a fog ...' (SA 2647.88c). And the passive has the colloquial version *...-zirareru* in competition with the pseudo-literary *...-zerareru* (the genuine literary being *...-zeraruru/-zeraru*). For more on the negative and passive forms, see §4. The imperative is *...-zé yo: k^ín-zé yo* 'ban them' (SA 2684.45b).

Most of the sibilant-voicing verbal nouns are morphemes which ended in a nasal in classical Chinese (cf. Lewin 130); but a number of such morphemes belong in the other class, e.g. *han-súru* 'opposes'. The final velar nasal of many Chinese morphemes turned into a high vowel in Japanese, and the high vowel (*i* or *u*) in turn assimilated to make the modern long vowels we write with *ei* and *oo*. Moreover, a few of the morphemes that belong to the *-ziru* group never had a nasal in Chinese: *too-zíru*(^[-]) 'throws' < DHEU, *koo-zíru*(^[-]) 'gets aggravated' < KAU, and *hoo-zíru*(^[-]) 'reports' < PAU. Eight of these verbal nouns do not come from Chinese at all, though they are treated just like those that do: *omon-zíru*(^[-]) 'values' is said to be from *omo-mi* 'heaviness' + *suru*; *karon-zíru* 'belittles' is said to be from *karo-mi*, a variant of *karu-mi* 'lightness', + *suru*; *aman-zíru* 'contents one-

self with' is from ama-mi 'sweetness' + suru; yasun-zíru 'is contented with' is from yasumi 'ease' + suru; uton-zíru 'is cold toward' is from uto-mi 'alienation' + suru; gaen-zíru 'consents' is said to be from kae ni suru; sakin-zíru 'goes ahead' is from saki ni suru; soran-zíru 'memorizes' is from sóra ni suru.

Of the auxiliary-voicing bound verbal nouns, only one seems to be used with object-exaltation: o-an-zi suru/itasu 'I worry (about you)'. And none, it appears, will make a short potential, though the passive -zirareru is sometimes used with potential meaning. The other possibilities that are acceptable to Hamako Chaplin as colloquial forms are listed below, with parentheses indicating reservations:

VERBAL NOUN	o...-i						
	-ziru	-zuru	-zinai	-zezu	-zisaseru	-zirareru	ni náru
ei- 'be reflected'	+	(+)	+	-	-	-	-
mei- 'command'	+	(+)	+	+	+	+	+

Most bound verbal nouns are TONIC: ka-súru, ká-site, ka-sínai, ... ; yaku-súru, yoo-súru, tai-súru, kan-súru, The exceptions are as follows: (1) Although younger speakers treat as tonic those bound verbal nouns that end in a voiceless consonant (-s from a morphophonemic -TU or rarely -[P]U), older speakers treat them as atonic: sas-súru(-), bas-súru(-), kis-súru(-), (2) Although younger speakers treat as tonic those bound verbal nouns that end in a long vowel (including ei) and voice the auxiliary sibilant, older speakers treat them as atonic: ei-zíru(-), kyoo-zíru(-), oo-zíru(-), But tuu-ziru 'communicates (etc.)' has only the atonic version. (3) Most instances of ...n-ziru are optionally tonic or atonic: sin-zíru(-), omon-zíru(-), But kan-ziru 'feels' has only the atonic version, and seven of the eight native Japanese bound verbal nouns are always tonic: amán-, karón-, gaén-, utón-, yasún-, sakín-, során-ziru; cf. omon-zíru(-). Cf. Akinaga 65 in NHK. The foreign student is advised to treat all bound verbal nouns as tonic except for kan-ziru and tuu-ziru.

Two suffixes are especially productive in deriving verbal nouns from free nouns (typically Chinese binoms): 'ka(-) 'ize' and 'si 'regard as'. The suffix 'ka(-) attaches to abstract nouns,³⁶ and perhaps a few adjectival nouns, to form free verbal nouns that can be used both intransitively (-ize = become) and transitively (-ize = make it into). This means that Ameriká-ka(-) suru in one interpretation (intransitive) is logically equivalent to Ameriká-ka(-) sareru 'is Americanized', the pure passive of the other interpretation. The verbal noun can be accentuated on the penultimate or treated as atonic, in free variation: kan'í-ka(-) 'simplification', kan'í-ka(-) suru 'it simplifies; simplifies it'; kikái-ka(-) 'mechanization', kikái-ka(-) suru 'it gets mechanized; mechanizes it'; goorí-ka(-) 'rationalization', goorí-ka(-) suru 'it gets rationalized (= put on a rational basis); rationalizes it'.

The suffix 'si normally yields BOUND verbal nouns (transitive) that are accentuated on the penultimate syllable: ... hito o hakugán-si-suru 'looks askance at people, looks coldly

36. And occasionally other types of nouns: konpyuutá-ka(-) 'computerization' from konpyúutaa 'computer', rekoodó-ka(-) 'recording' from rekóodo; zyuukagakuoogyóo-ka(-) "'heavy-chemical industrialization" = conversion to heavy-chemical industries' from zyuukagaku-kóogyoo 'heavy-chemical industry'.

upon a person'; ... azi o dogái-si-site 'ru, ... 'they neglect flavor ...' (SA 2689.55b); ... danzetu o kadái-si-suru 'overestimates the generation gap' (SA 2680.29d); ... hoo o zettái-si-site kangáeru kotó wa dekinai 'We can not think of the law from such an absolute viewpoint' (SA 2677.51d); ... sono téido(-) de || Asakusa ga || tati-naorú ka | dóo ka, || gimón-si-suru | kankéi-sya ga | óói 'there are many in the business who regard it as doubtful whether at this rate Asakusa can get back on its feet' (SA 2658.111e); ... súde ni || Miki | Takeó-si no | rikkóho ga | kakuzitú-si-sarete | irú ga ... 'Mr Miki Takeo's candidacy is already regarded as certain but ...' (SA 2689.136a); ... yuubóo-si-sarete iru 'is regarded as hopeful'; ... mondái-si-sarete kíta 'has come to be regarded as a problem' (Y 269).

But 'si can be attached to nouns, compound nouns, and even phrases, of quite diverse origin: ... tabúo-si-sarete ita 'which had been regarded as tabu' (SA 2677.117b); Sore de || daiitizi-táisen no || Pári no || koowa-káigi no | tokí ni wa, || Kónoe san ga | kikenzinbutú-si-sarete ita 'And so at the time of the Paris peace conference of World War I Mr Konoé was regarded as a dangerous character' (Tanigawa 39); Ziki-séiken no || honméi-si-sareru || Hukuda | Takeó-si wa || dóo ka 'What about Mr Takeo Fukuda, who is regarded as the likely winner of political power next?' (SA 2663.116d); Tó wa ie, || sékái no | Kurosawa mo, || itíbu de wa || "káko no | hitó"-si-sare, || "íma-sara(-) || déru | makú de mo || nakaróo ni" || to || hiyakasi-hánbun de || mukaeru múki mo | sukúnáku | nái 'But the world-famous Kurosawa himself is regarded as a "has-been" in some quarters, and there are quite a few who will greet it [= the film] half-teasingly with 'You wouldn't have expected to see him getting involved with it any more"' (SA 2658.110a); ... "ígaku no || dendóo"-si-sarete | kíta | daigaku-byóoin ... 'the university hospitals which have come to be regarded as "sanctuaries of medical science" ...' (SA 2660.146). For this reason, a good argument can be made to treat (ʔ)si-suru as a subtype of "postnominal verb" (§ 3.13)—the only one that is itself a bound verbal noun SI- 'regarding', a single morpheme of Chinese origin. The unusual characteristic is that the bound verbal noun is bound on BOTH sides, as the hyphens above indicate. If we are forced to choose one or the other, the grammatical constituency would favor retaining the second hyphen: "ígaku no dendoo" si-sarete. But the juncture and accentuation would favor retaining the first hyphen: "ígaku no dendóo"-si sarete. So I have retained both. In part, our problem with (ʔ)si(-) can be compared with the situations we face in deciding how to treat postnominal verbs, quasi-restrictives, and quasi-suffixes or postnouns such as the collectivizers (rá, táti, etc.) and short titles (kun, si; san; etc.). Notice that in tokubetu-si-suru 'regards as special' and dooitú-si-suru 'regards as identical', the syllable tu unvoices (whispers) its vowel but does not fully assimilate to the following s, so you do not say *tokubessi- or *dooissi-.

The infinitive-derived noun atukai 'handling, dealing with' is attached to free nouns to form a compound noun meaning 'treating as': sirooto-átukai 'treating one as an amateur', zyamamono-átukai 'treating one as unwanted (as a nuisance)', mamako-átukai 'treating one as a stepchild', tanin-átukai 'treating one as a stranger', kodomo-átukai 'treating one as a child', hanzaisya-átukai 'treating one like a criminal', These nouns can be used as subjects or objects: tagosaku-átukai o ukéru 'receives the treatment of a hick = gets treated as a hick', Most of them can also be used as transitive verbal nouns: A ga B o N-átukai suru, A ga B ni tái-site N-átukai o suru, B ga A ni N-átukai sareru, etc.: Are wa || kitigai-átukai | saretá n desu, || kyónen 'He got treated like a madman, last year' (Tk 3.56a). For some you will also find A ga B o N-átukai ni suru: Káre wa káno-zyo o mamako-átukai ni suru 'A treats B as a stepchild'; Mooretu-syáin to iu | kangae-káta no | náka ni wa || ...

ningen o || syoomoohin-átukai ni | suru yóo na | monó ga | áru no (l) de^(t) wa | náí ka | to
 omoimásu 'I can't help thinking there's a bit of using the human being as a piece of ex-
 pendable goods in the idea of the "zealous company man"' (R).

Free verbal nouns enjoy a fair number of options for ellipsis. One example is when the negative and affirmative forms of the same verbal noun are juxtaposed; there is no need to repeat the verbal noun itself: Onazi úmi no monó^(t) o | tábete || HATUBYOO suru hitó to || [] sinái hitó ga | déru n desu | né. || Náze ka | ná 'Eating the same seafood some people get sick and some do not, you see. I wonder why' (SA 2681.44a); Zim-in-too ga || koko de | BOOSOO surú ka, | [] sinái ka, || to iu mondai ni narimásu | yó 'It is a problem of whether the Liberal Democratic Party will run wild or not' (SA 2663.20a); SÁSZU | suru monó mo, | [] sareru monó mo, || tómo(¯) ni || wakái kara, || naniwa-busi no eikyoo náńka || úkete 'nai to || ganbáru ka mo sirenai 'Those directing [the TV programs] and those being directed alike are all young, so without such effects as the *naniwa-bushi* singing they may have to try harder' (SA 2662.32d). In journalistic style, especially in headlines, the auxiliary forms suru, sita, and si[te] are often omitted. The reader must rely on the context to fill in the missing elements: Ikkóo(¯) wa || gógo | gó-zi [ni], || Haneda-kúukoo ni | TOOTYAKU [si(te)], || tádati ni | kaizyoo ni mukatta 'The party arrived at Haneda airport at 5 pm and immediately headed for the convention hall' (Hayashi 86). We have observed earlier (§5) that the infinitive sí optionally drops when a verbal noun takes nuclear focus: Sono kóro wa || íma no yóo na | zyootai ni náru kotó^(t) wa || YOSOO [sí] mo sarenákatta? 'At that time you didn't even imagine that things would come to the sort of situation they are in now?' (SA 2662.44a). It is possible to conjoin two verbal nouns directly; in texts this is sometimes signalled by a raised centered dot (cf. §2.8), but usually there will be no indication in the printed text: ... kore o koo^(t)gí(¯) kenkyuu sita monó 'those who have lectured and/or researched on this' (KKK 3.81). When read aloud, the direct conjoining may be signaled by juncture: ... kinóo ni hiki-tuzuki || Konkóorudo ga || ririku | tyakuriku suru sái no [l] soo'oo || menmitu ni | sirabéru | kotó^(t) ni site orimásu 'continuing yesterday's investigation they are closely checking on the noise made each time the Concorde takes off or lands' (R). But sometimes the ellipsis is more complicated, as when N ni soo'oo suru N is propredicated as N [ni] soo'oo no N: Sosite, || seikatu ni hituyoo na monó mo || sorézore || míbun [] | soo'oo no monó de | áru ¯béki | kotó wa ... 'And then the fact that the things essential to life should be things that correspond respectively to one's status ...' (SA 2659.117e).

Sometimes ellipsis or propredication will leave a stranded object before the verbal noun: Watasi wa || kono sángatu || úmaku | ikéba || dezain-gákkoo o | sotugyoo [surú no] désu 'I will graduate from design school this March if all goes well'; Yo-nen máe, || Toodai-hoogákúbu o | sotugyoo [suru] to dóozi(¯) ni || keisatú-tyoo ni | háiri, || ... 'Four years ago upon graduating from the law faculty of Tōkyō University he joined the police department and ...' (SA 2656.50c); Kaisya o (l) sooritu no sái, || ... 'At the time they founded the company ...'. Cf. V-i-hazime no N, §9.1.7.

Free verbal nouns are made potential by adding suru kotó ga dekíru, but ellipsis is possible: Dáre ga náni o gáman [suru kotó ga] dekíru 'Who can stand what?'. And the object of a transitive verbal noun can replace ó by gá when the ellipsis is chosen: Dáre ni/ga náni ga gáman dekíru 'Who can stand what?'. The underlying marking may be obscured by focus: Watakusi wa anmari kóokoo mo [suru kotó ga] dekimasén de ... 'I have been unable to do very much for my parents ...' (R) ← kóokoo ㊦㊧ mo.

14.4. VERBAL-NOUN RENOMINALIZATIONS: *-tyuu*, *-gó(-)*, *-zén*; *-zumi*.

Nouns referring to times or events can attach as quasi-restrictives (§ 2.4) the three Sino-Japanese temporal suffixes *-tyuu* 'during', *-gó(-)* 'after', and *-zén* 'before': *sensoo -tyuu* = *sensoo-tyuu* 'during the war', *sensoo -gó(-)* = *sensoo-gó(-)* (= *séngo*) 'after the war', *sensoo -zén* = *sensoo-zén* (= *senzen*) 'before the war'. There are various lexically determined limitations; despite *gózen(-)* *-tyuu* = *gozen-tyuu* 'during the morning' there is no **gozen-zén* nor ?**gozen-gó(-)*. And the restrictive *-máe* often replaces *-zén*: *sensoo -máe* 'before the war'. The suffix *-tyuu* appears to enjoy a somewhat wider range than the other two; it is to be distinguished from the etymologically identical quasi-restrictive *-zyuu* (< -"tyúu-) which means 'all through (a time or place)', as you can see from the minimal contrast of *Yasumí -tyuu dá* (= *Yasumi-tyuu dá*) 'It is during the vacation' with *Yasumí -zyuu dá* (= *Yasumi-zyuu dá*) 'It is through the entire vacation'.

Any verbal noun of appropriate aspect can attach *-tyuu dá* to mean 'is in the midst of doing = is doing'.³⁷ The meaning is very close to, or perhaps identical with, one of the meanings of *V-te iru*; we might wish to treat the renominalization as a conversion from that: *Sanpo site iru* 'He is taking a walk' → *Sanpo -tyuu dá* 'He is in the midst of a walk'. But it makes better sense to treat the form as an abbreviation of *site iru sáityuu da* 'is in the (very) midst of doing': *sanpo* [*site iru sái*]*tyuu dá*.³⁸

Why do we consider this a kind of nominalization conversion of the verbal noun, rather than a simple lexical derivation? There are two reasons. In the first place, the expression is open to ANY verbal noun capable of taking the *V-te iru* continuative conversion (thus excluding punctual verbs, possessive verbs, etc.), with no lexical restrictions. In the second place, adjuncts remain intact, with no change in marking: *Kaisya ga/de syukusya o kentiku site iru* 'The company is building dormitories' → *Kaisya ga/de syukusya o kentiku -tyuu dá* 'The company is in the midst of building dormitories'; *Tadáima || kono hikoo-ki wa || Óosima no |zyookuu o hikoo -tyuu de gozaimásu* 'Right now this airplane is in flight over Ōshima' (R); *Otóosan ga | né, || kore o kíru ka | kiránai ka, || sían -tyuu ná n da* 'Father is undecided whether to cut this or not' (V 1972.165); *Káre wa || karada o wáruku site, || kaisya o kyuusyoku -tyuu ná no de aru* 'He is temporarily suspended (= has taken leave) from the office because of poor health' (lg 58).

This conversion is one of the few that produce a surface form that seems like a nominal taking a direct object. The others are the alternant subject exaltation of *o-V-i dá* = *o-V-i ni náru* and *V-i-hazime nó* (§ 9.1.11); the direct object is, of course, an adjunct to the verbal element in the underlying sentence.

Both *-gó(-)* and *-zén* are similar: *Syukusya o kentiku -gó(-) [ni] ...* = *Syukusya o kentiku sita áto [de] ...* 'After building the dormitory ...'; *Syukusya o kentiku -zén [ni] ...* = *Syukusya o kentiku suru máe [ni] ...* 'Before building the dormitory ...'; *Yonen-kóosu o syuuryoo -gó(-) wa ...* 'After completing the four-year course ...'; *Tookyoo-tóritu no noogyoo-kóokoo o sotugyoo -gó(-) mo, ...* 'Even after graduating from the Tōkyō Metro-

37. The verbal noun need not be of Chinese origin: *woomingu-áppu -tyuu* 'while warming up (for a game)' is from English.

38. But in some examples we must assume an abbreviation of *sarete iru sáityuu*, with the passive: *... tó no ikoo ga túyoku kentoo -tyuu de áru* 'under close study is the idea of ...' (KKK 3.167); *hoosoo -tyuu da* 'is being broadcast'; Perhaps also in the sign *Takusii zyoomú-in bosyuu -tyuu [da]* 'Taxi drivers wanted', though the lack of a particle after *zyoomú-in* makes it hard to decide.

politan agricultural high school ...' (SA 2669.16a); Raihoo ̄tyuu no Índo daitóoryoo wa Kyóoto o kenbutu ̄gó(̄) Oosaka e mukau 'The president of India now visiting Japan will proceed to Ōsaka after seeing Kyōto'. Semantic or aspectual considerations would seem to preclude certain verbal nouns from taking one or another of these suffixes, but I have not investigated the limitations. Sore ni kanpuku ̄gó(̄) = Sore ni kanpuku sita áto ... 'after admiring it', for example, has been questioned on acceptability, but at least one native speaker is not unhappy with it. These two conversions might be treated as abbreviations of VN [site í]go and VN [suru í]zen, respectively, following the lead suggested by the derivation VN [site iru sái]tyuu. Under optional ellipsis it is often necessary to infer the case marker appropriate to an adjunct from the grammar of the verbal noun: Nati-séiken [ga] seiritu ̄gó(̄) mo ... 'Even after the establishment of Nazi power ...' (SA 2674.104d).

A number of instances of ̄tyuu da might appear to be derivational or lexical in nature. Among these are compounds with the infinitive-derived noun hanasí in [O-]hanasi-tyuu dá 'It is in the midst of [your] talking',³⁹ the action noun sigoto in Sigoto-tyuu dá 'It is in the midst of one's work', etc. There is no *sigoto-gó(̄) = sigoto sita áto 'after doing the work', nor *sigoto-zén = sigoto suru máe 'before doing the work'. Other lexical cases include Seeru-tyuu désu 'It is on sale'; but Níkuson-si no roonin ̄tyuu 'while Nixon was out of a political job' (SA 2661.126c) makes the conversion on a verbal noun (roonin suru).

In written materials you will occasionally come across VN ̄zumi [da] '[is] through doing = has finished/completed doing'. The quasi-restrictive ̄zumi, etymologically ̄sumí, is derived from the noun sumí 'completion = "settled, OK"', in turn derived from the intransitive infinitive súmi 'ending, being completed/settled'. (Dictionaries list three different intransitive verbs pronounced súmu, according to the Chinese characters that mean 'be terminated = become settled', 'become clear = be settled, unclouded', and 'live, dwell = settle down'; but all three would seem to go back to the same etymon.) The expressions are often adnominalized VN ̄zumi no N, as in keiyaku ̄zumi no kyaku 'customers that have signed an agreement' in contrast with keiyaku {no} mikomi ga kakuzitu na monó 'those who are certain prospects for an agreement' (SA 2670.26e), but other forms turn up: ... bángároo, || nikai-béddo, || yágu no | rúi mo || súde ni || tyúumon(̄) ̄zumi de, || mókka, || koozyoo-seisan-tyuu {da} to iu 'bungalows, double-bunk beds, and bedding have already been ordered and at present are said to be under production at the factories' (SA 2669.120d —the 'are said to' could also be taken to include the 'have been ordered'). Cf. LF 52: "Instead of past tense forms, one commonly meets in FWS [Formal Written Style] constructions with *zumi* 'completed'; *hassō zumi nari* 'he has sent' indicates completed action, and is roughly identical in meaning with *hassō sitari*"; for *sitari* (= *sitári*) read *séri*. Additional examples: ... ní-nen | máe ni | happyoo ̄zumi no "ronbun" kara ... 'from a "thesis" published two years ago' (SA 2666.26); O-kási nádo o | okurú no ni, || aná ga | aitári, || húruku | nátte | yóo ̄zumi no zii-pan de || sóto o | tutúnde | átta no da 'For sending candy and stuff, [it] was wrapped on the outside with worn-out blue-jeans old and full of holes' (SA 2668.37e)—yóo o suru means 'is of use'; Sikási, || zidóo-sya(̄) no | syatai-bángoo ya || denwa-bángoo de || keiken ̄zumi no tóori, ... 'But as proved by license-plate numbers and telephone numbers ...' (SA 2657.43d); Senséi ga | kyóka ̄zumi de || kono heyá o |

39. Cf. Káigi ̄tyuu desu 'He is in conference'. Perhaps we would do well to ignore the question of whether the noun is verbal and treat ̄tyuu '(in) the midst' in all cases as a quasi-restrictive: ima no níinki(̄) ̄tyuu 'during his present term (of office)' (R). That is the treatment we follow elsewhere (e.g. in §2.4).

tukawaseru 'They let this room be used when a teacher has approved'; Kaisya ga/de syukusya o kentiku ʔzumi desu 'The company has completed the building of the dormitory'.

The expressions that result from the four conversions discussed in this section function as predicable adverbs.⁴⁰ When the quasi-restrictive ʔzyuu is attached to a TIME word, the result is a predicable adverb (hitó-ban ʔzyuu 'all night long') but when it is attached to a place word (or other noun) the result is a place noun: sékái ʔzyuu o ryokoo sita 'traveled all over the world', karada ʔzyuu ga itái 'aches all over one's body'.

14.5. INFINITIVE-DERIVED NOUNS

A large number of nouns are derived from verbal infinitives.⁴¹ Those nouns derived from the infinitives of "atonic" verbs are basically atonic; they remain without an accent even when followed by a particle. But the infinitive of the atonic verb has a basic accent on the last syllable, an accent that you will hear only when the infinitive is followed by a particle such as wá or mó: ikí mo 'even go[ing]' (infinitive) but iki mo 'even the trip out' (derived noun). Nouns derived from the infinitives of tonic verbs are basically oxytonic and you will hear the accent on the last syllable when a particle follows: káeri mo 'even return[ing]' (infinitive) but kaerí mo 'even the trip back'. In many environments, to be sure, you will hear both kaerí (derived noun from infinitive of tonic verb) and ikí (infinitive of atonic verb) without an accent; before a juncture it will be impossible to hear a difference between ikí 'go[ing]' and iki 'the trip out', but kaerí 'the trip back'—even though it loses its accent—will sound different from káeri 'return[ing]'. This difference of BASIC accent is the only phonological signal to mark the derived noun as different from the infinitive. (But recall that the oxytonic infinitives of the "atonic" bases lose their accent before ní in the purpose conversions V-i ni iku 'goes to V' etc. of §9.1.1. And often there is no way to know whether what has gone into a compound noun is the infinitive or the noun derived from the infinitive.)

A few derived nouns are irregular in accentuation:

(1) When the derived noun comes from an infinitive that ends in a vowel dyad, the accent will usually be on the penultimate vowel, and thus identical to that of the infinitive:

negái 'requesting'	negái 'request'
omói 'thinking'	omói 'thought'
yatói 'hiring'	yatói 'employee'
kangáe 'thinking'	kangáe 'thought'

But some are reported as also oxytonic:

kurúi 'going mad'	kurúi 'madness'
sorói 'lining up'	sorói 'array'

40. But, at least when attached to nouns referring to times or events (that are not verbal nouns), the suffixes ʔtyuu, ʔgó(ʔ), and ʔzén appear to yield resulting forms that are TIME nouns; though typically used as adverbs, they can take optional time-locative marking with ní (yasumí ʔtyuu {ni} 'during the vacation') and occasionally other case markers: benkyoo ʔtyuu o zyama sita 'bothered her while she was studying' (Ariyoshi 300). Moreover, at least some expressions with ʔtyuu can be used as pure nouns meaning 'person in the midst of doing' as in roonin ʔtyuu {no hitó} ga/mo iru 'there are those waiting for better luck in next year's entrance examinations'.

41. In a few instances the derivation may have gone the other way historically (the infinitive deriving from the noun); from the viewpoint of the synchronic description, it would appear not to matter—and, in fact, to be undecidable.

obóe 'recalling'	obóe 'memory'
kokoróe 'knowing'	kokoróe 'knowledge'
sasáe(-) 'supporting'	sasáe(-) 'support, prop'

The atonic form for the last example represents a variant in the verb base itself (see p. 25). But there is only the atonic uttae 'complaint' from uttae(-) 'complaining'.

(2) For at least one noun derived from a tonic infinitive with a final vowel dyad, the accent may be either atonic or on the penultimate vowel (and thus identical to that of the infinitive):

arasói 'struggling'	arasói(-) 'a struggle'
---------------------	------------------------

(3) When the derived noun comes from a tonic infinitive of more than four syllables the accent may be regular (oxytonic) or atonic:

kokorozási 'aiming'	kokorozási(-) 'aim'
hazukasíme 'humiliating'	hazukasímé(-) 'humiliation'

(4) When the derived noun comes from a tonic infinitive of four syllables, the accent may be regular (oxytonic); it may stay the same as the infinitive (penultimate); or the derived noun may be atonic:

yorokóbi 'rejoicing'	yorokóbi(-) 'joy'
kokorómi 'trying'	kokorómi(-) 'trial'
kurusími 'suffering'	kurusími(-) 'distress'
ikigómi 'being enthusiastic'	ikigómi(-) 'enthusiasm'
sikuzíri 'blundering'	sikuzíri(-) 'blunder'
ayamáti 'erring'	ayamáti(-) 'error'
kuwadáte 'scheming'	kuwadáté(-) 'scheme'
akiráme 'resigning oneself'	akirámé(-) 'resignation'
samatáge 'hindering'	samatágé(-) 'hindrance'

But for some, only the two tonic versions are reported:

ayamári 'apologizing'	ayamári 'apology; error'
atumári 'gathering'	atumári 'a gathering'
honoméki 'glimmering'	honoméki 'glimmer'

And for some, only the oxytonic and atonic versions are reported:

awarémi 'pitying'	awarémi(-) 'pity'
narawási 'accustoming'	narawási(-) 'custom'
takurámi 'scheming'	takurámi(-) 'scheme'

(5) Nine nouns derived from tonic infinitives are irregularly prototonic, but two also have the regular form:

kári(-) 'hunting' [literary]	kári 'hunt(ing)'
óbi(-) 'wearing (as a girdle)'	óbi 'sash, girdle'
tómi 'being rich'	tómi 'riches'
tátari 'cursing'	tátari 'curse'
táyori 'relying'	táyori 'reliance'
sawági 'clamoring'	sawági 'clamor'
simári 'tightly closing'	simari 'being tightly closed'
domóri 'stammering'	dómori 'stammerer'
háre 'being clear'	háre 'clear/fair weather'
kaségi 'earning'	kasegi 'earnings; job'
kagiri 'limiting'	kágiri 'limit'
sinógi '(bravely) enduring'	sínogi 'suffering'
sabáki 'disposing; judging'	sabaki 'disposal; judgment'

Nagási 'letting flow' has the regular derived noun nagási in the meaning 'a drain (sink)' and also the irregularly accentuated nágasi with the meanings 'cruising (taxi); street musician;

bath service'. The infinitive *tanómi* 'requesting; relying' underlies the regular derived noun *tanomí* 'request' and the irregularly accentuated *tánomi* 'reliance' (= *táyori*). *Hánare* = *hanare-zásiki* 'detached house' may belong with this group, too. Also *kámáé* 'structure'.

(6) At least one noun derived from the infinitive of an atonic verb is irregularly prototonic:

nuki (= *nukí*) 'omitting' *núki* 'omission'

The noun *átari* 'vicinity' is probably derived from the infinitive *atari* (= *atari*) 'hitting (etc.)' which has the regular derived noun *atari* 'hit'.

(7) At least one noun derived from the infinitive of an atonic verb is irregularly oxytonic:

tugi (= *tugí*) 'succeeding' *tugí* '(what is) next'

But there is a regular derivative *tugi* in the sense of 'patch' as in *tugi o ateru* 'puts on a patch'—cf. *tugí o mátte iru* 'waits for what is coming next' (SA 2688.100c).

(8) At least two nouns that are derived from tonic infinitives are irregularly atonic:

dé 'emerging' *de* 'appearance, turnout, attendance'
déki 'being produced' *deki* 'make; workmanship; yield'

But there is a regular derived noun *dé* in the idiomatic sense of 'substance' (as in *dé ga áru* 'is substantial') and there is an irregularly prototonic derived noun *déki* = *dekiai* 'ready-made' that belongs with (5) above. In origin *déki*- is a compound verb (made up of *dé* 'emerge' and *kí* 'come'); derived nouns from compound verbs are regularly atonic, and that is what accounts for atonic *sikumi* 'contrivance' from *sikúmi* 'contriving', a compound made up of *si* (= *sí*) 'do' + *kúmi* 'assemble'.

You will not find a noun derived from every verb (there is no *arukí* from *arúki* 'walking'),⁴² nor can you predict the exact meaning of a derived noun from the infinitive that underlies it. Each infinitive-derived noun should be separately listed in the dictionary, but existing dictionaries often omit transparent examples. You are unlikely to discover *sinzi-sugi* 'overconfidence' in any of the dictionaries, perhaps because *V-i-sugi* 'over-V-ing' is so productive. (Many of the verbs that appear in *V-i-sugi* as a derived noun do not themselves underlie simple derived nouns; there is no **sinzi* 'confidence' from *sin-zíru*(-).)

I have looked in a number of dictionaries for *kagerí* 'darkness, shadowing' but with no success, despite this example: *Óoki na mádo ga kagerí^[1] no náí akarui seikatu o hosyoo suru* 'Large windows guarantee a bright and unshadowed life' (SA 2662.131). Nor have I been able to find *horobí*(-) 'extinction' despite an example in SA 2674.94a; *tagirí* 'boiling' despite an example of *kama no tagirí o kiite* 'hearing the kettle's boiling' in SA 2678.116a; And *yobi* 'call', *rikimí* 'strain; bluff' (Tk 3.295b), *itói* 'hatred' (as in *itói^[1] no náí teai* 'a fellow without rancor', Kb) are apparently listed only by Shimmura. The noun *tukaihirusi*, derived from the compound infinitive *tukai-hurúsi* 'wearing out', is used as a synonym of *tukai-hurúsita* 'worn-out' in *tukaihirusi no táiya*(-) 'worn-out tires' (SA 2670.107d) but I have not found it in a dictionary. The derived noun *obié*(-) 'fear' from the infinitive of *obiéru*(-) 'fears' is apparently a non-standard synonym of *osoré*, carried only by Shimmura; it is used as a summational epitheme in this example: ... *to iu obié*(-) *mo tetudátte* ... 'partly helped by the fear that ...' (SA 2665.127d). Though some dictionaries, such as Shimmura, give a separate entry for *osimí* 'begrudging' from the transitive infinitive *osimi*, the derived noun appears only in *osimi*(-)*náku* 'freely, without grudging the expense' and in compounds of the type *N-ósimi*, yielding such verbal nouns as those in *mono-ósimi suru* 'is stingy' and *hone-ósimi sinai* 'spares no efforts'. (For some reason, *make-osimi* 'reluctance to lose, sour grapes' is atonic.)

42. Yet we will probably have to assume such a noun, in order to account for ... *hatu-áruki o simásita* '[a hiking group] did its first walk of the year' (R) and *hitori-áruki* 'walking alone; independence'.

According to one estimate, only 24.1 percent of the "2000 basic verbs" yield a derived noun (Kgg 43.69b), but that figure seems low and the basis for it is unclear. Nishio in his extensive study of the question (Kgg 43.60-81) cites the following figures from a count of the entries in MKZ (and I have added the percentages):

- | | | | |
|-----|-------|----------|---|
| (A) | 946 | (.2149) | from simple verbs: ugokí 'movement', utagai 'doubt', sirabé 'investigation', nerai 'aim', asobi 'game'; sassi 'conjecture', kanzi 'feeling'; |
| (B) | 741 | (.1683) | from compound verbs: utiawase 'previous arrangement, appointment', toriatukai 'handling', wariate 'allotment', mitoosi 'prospect', kumitate 'structure', moosiire 'proposal', sikumi 'contrivance' (< si-kúmi 'contriving'); |
| (C) | 126 | (.0286) | from combinations of two infinitives (as if making compound verbs not in current use): tobi-yomi 'desultory reading', sui-nomi 'feeding cup for a patient', tati-uti 'firing from a standing posture', sukui-nage 'tripping', |
| (D) | 32 | (.0073) | a compound of two derived nouns, often antonyms: kasí-kári 'lending and borrowing', agári-ságari(¯) 'rising and falling', norí-ori 'boarding and alighting', |
| (E) | 1716 | (.3897) | a compound of N + infinitive: yuki-dóké(¯) 'snow thaw', nezi-máwasi 'screwdriver', |
| (F) | 842 | (.1912) | a compound of infinitive + N: tati-bá 'standpoint, footing', todoke-saki 'destination, consignee', |
| | <hr/> | <hr/> | |
| | 4403 | (1.0000) | |

Classes B and C are always atonic in basic accentuation; Classes D, E, and F require more complex rules. Nishio's count for Class C includes a few items such as *omoidasi-wárai* 'a quiet laugh of recollection' that are better treated as a subtype of Class F, as indicated by the accentuation.

As Nishio remarks, infinitive-derived nouns are more often found in colloquial contexts, for he who writes is apt to prefer synonymous verbal nouns of Chinese origin. In a study of frequency in the newspaper *Asahi*, Nishio tells us, there were 2173 different common nouns found to be used more than ten times each in a one-month period. Of these, only 67 were derived from verb infinitives—27 from Class A, 34 from Class B, 6 from Class E, and none from the other classes; yet there were 589 different verbal nouns of the Chinese binom type.

Nishio divides the meanings of the infinitive-derived nouns into the following scheme (recognizing that some words will have more than one meaning and fall into more than one class):

(1) process: (1a) the process itself: *oyogí* 'swimming', *sirabé* 'investigation', *kasidasi* 'lending out', ...; (1b) the content of the process: *kangáe* 'thought', *osie* 'instruction', *nozomí(¯)* 'hope', *negái* 'request', *nayamí* 'worry', *inorí* 'prayer', ...; (1c) the appearance, method, degree, condition, or feel of the process: *suberí* [*ga íi*] 'smoothness of slipping', [*kome no*] *deki* 'the harvest [of rice]', *ure-yuki* 'the (amount of) sales', *atari* [*ga yawarakái*] 'the feeling (from contact) [is soft]',

(2) the product or result of the process: (2a) from a transitive verb: *tutumí* 'bundle',

horí 'ditch', kakituke 'note, bill', ... ; (2b) from an intransitive verb: amarí 'excess', katamari 'clod', koori 'ice', atumári 'gathering', kubomi 'dent',

(3) the agent of the process: (3a) human agent: súri 'thief', dómori 'stammerer', minarai 'trainee', tukisoi 'attendant', yopparai 'drunkard', ... ; (3b) nonhuman agent: nagaré 'stream, flow', samatágé(-) 'hindrance', sasáé(-) 'support, prop',

(4) the object of the process: tumami 'knob (to grasp)', yatói 'employee', sasiire (= sasiire-mono) 'a thing sent in',

(5) the means of the process: hakarí 'scales (for weighing)', hatakí 'duster',

(6) the aim of the process: kobosí (= mizu-kóbosí) 'a basin to catch rinse water poured from teacups',

(7) the place of the process: toorí 'way, street', haté 'the ends (of the earth)', uketuke 'inquiry office, reception (desk)',

(8) the time of the process: kure 'sundown; year end', owari 'end',

In addition to the various kinds of pure nouns listed above, we also find the adjectival nouns sukí 'liked' and kirai 'disliked' and the precopular nouns mukidasi 'bare; frank' and dasinuke 'sudden, unexpected'. There are also adverbs, sometimes with different accentuation: túmari (< tumári) 'after all', amari (< amarí < amári) 'too, overly'; óyobi(-) (< oyobi) 'additionally, and'; aráizárai(-) '(down to) every last thing, without reserve' (< arai + sarai). The restrictive -átari probably comes from the infinitive atari. The postadnominal toori 'like' (whence the restrictive -dóori 'like') is probably derived from toorí 'way', in turn the derived noun from the infinitive toori 'passing by/through', rather than being a direct derivation from the infinitive.

Quite a few nouns, as we have observed, are derived from compound infinitives and given an atonic accentuation. These should be distinguished from nouns that are compounded of two infinitive-derived nouns (often antonyms), which may enjoy a variety of accentuations: agarí-ságari(-) 'rise and fall'—there is no *agari-sagári 'rising and falling'; Tookyoo no ikí-kí(-) 'trips to and from Tōkyō'—there is no *Tookyoo e iki-kí 'going and coming to Tōkyō'; norí-ori 'boarding and alighting'—there is no *nori-óri 'getting on and getting off'. Often the derived noun will come from the infinitive of a conversion of infinitive-and-auxiliary (§9.10): norikae 'transfer (of vehicle)' from nori-káe 'transferring (vehicles)'; nomikomi [ga warúi/osoí] '[is slow in] catching on, comprehending' from nomi-komi 'drinking in'; nariyuki 'progress, development' from nari-yuku 'turns out, becomes'; The verbal excessives, as we have remarked, will usually yield a derived noun (always atonic): ii-sugi 'exaggeration' from ii-súgi 'exaggerating', nomi-sugi 'intemperance' from nomi-sugi 'overdrinking', It is something similar that underlies the sentence conversions of §9.1.7: V-i-~sasi [dé], V-i-~kake [nó], V-i-~tuke [nó], V-i-~hazime [nó]; as well as V-i-~tate (§9.1.6) and probably V-i-~gati (§9.1.5). The atonic accentuation of these forms points to their origin as nouns derived from compound-verb infinitives V₁-i - V₂-i. Sono moesasi o asimótó e suteta 'he dropped the [match]butt at his feet' (SA 2689.43b) includes a noun derived from moe-sasi [no mátti] 'half-burned [match]'.

There are a few nouns derived from causative infinitives, notably uresigarase 'flattery' from uresigaráse 'causing one to enjoy' and iyagarase 'an unpleasantry' from iyagaráse 'causing one to loathe'; the atonic accentuation suggests that the causatives are being treated as if compound verbs, even though they are not made on the infinitive. Misesime 'an example, an object lesson (for others to see)' is derived from the infinitive mise-síme 'causing to show', a literary causative. There are also a few nouns derived from passive

infinitives, notably *iware* 'history, origin, reason' from *iware* 'being said'. Nouns derived from causative and passive infinitives are found in a number of compounds such as *hito-nákasé(-)* 'a nuisance to people', *hanasase-zyóózu* 'being good at getting people to talk', *nikumare-mónó(-)* 'an object of hatred', ... ; some examples appear to be nonce formations: *musi-sasare* 'being stung by an insect' (Nishio); *kenasare no sómo-somo no hazimari wa ...* 'the very beginning of the be-disparagement' (Tk 4.311a).

There may be a few nouns made on repeatedly compounded verbs, but I lack good examples (leaving aside the auxiliary conversions). The word *omoidasi-wárai* [o suru] '[has] a quiet laugh over a recollection' is to be treated as a compound-verb infinitive *omoi-dasi* 'recalling' attached to a NOUN *warai* 'laughter' that is derived from the infinitive *warai* 'laughing'. There are two nouns derived from bound one-morpheme verbal nouns of Chinese origin + *si* (= *si*), the infinitive of the auxiliary: *sassi* 'conjecture' from *sas-si* 'conjecturing' (= *sas-si*) and *kanzi* 'a feeling' from *kan-zi* = *kan-si* 'feeling' (= *kan-si*).

The meaning of the derived noun will sometimes seem far removed from that of the underlying infinitive. You might think that *kaburituki* 'the front row in a theater' was from some mysteriously Slavic **kabritski*, but it turns out to be a noun derived from the infinitive of the compound verb *kabúri-túku(-)* 'sinks one's teeth into, bites'. Some nouns are derived from verb infinitives no longer in use as colloquial predicates: *kuragari* 'darkness' comes from the infinitive of an obsolete verb *kuragaru* 'grows dark'. The second element in *hitori-yógari* 'complaisant, complaisance' (adjectival noun and abstract noun) is **yo-garí*, an otherwise unused derived noun from the obsolescent intransitive verb *yo-gáru* 'exults; (a woman) is sexually gratified'. The expression *dedasi wa* 'at the start/outset' contains the noun *dedasi* 'opening line of a literary work', apparently from the infinitive of a gerund-auxiliary compound *de-dasu* 'starts to depart'.

From the standpoint of sentence structure, our interest in the infinitive-derived nouns is that many of them are closely associated with the underlying infinitive and thus will allow the adjuncts appropriate to the infinitive to be genitivized to the derived noun: *desí o sinzi-sugiru* 'trusts too much in one's disciple' will yield *desí¹ no sinzi-sugi* 'overconfidence in one's disciple' (SA 2679.140cd) and *hakuzin ga tati-iru* 'the white man steps in' will yield the object in *hakuzin no tatiiri o kinsi si ...* '(they forbid) the white man's entry (and ...)' (SA 2666.121c). The noun phrase *atarasii gakúmon no umi no kurusímí(-)* 'the birth pangs of a new science' is derived from ... *umi de kurusímu* '[the world] suffers from the birth ...'; within the noun phrase, ... *gakúmon no umi* is derived from ... *gakúmon o umu* 'gives birth to a science'. *Umi no háha to sodaté¹ no háha* 'the mother who gave me birth and the mother who brought me up' (R) contains structures derived from *háha ga umi* 'mother give birth' and *háha ga sodáte* 'mother bring up'. But some derived nouns today bear very little association with the infinitives from which they come; the relationship is etymological: *hayasí* 'forest' is derived from *hayási* 'letting it grow/luxuriate' but surely less association is felt between those two words than is felt between *hayasí* 'musical accompaniment' and *hayási* 'accompanying'. (Ultimately all four words, and also *háe*- 'grow' are related to the adjective *háya*- 'fast'.)

Sometimes an infinitive-derived noun seems to be used in place of a nominalization. *Oyogí ga dekiru* and *Oyógu kotó ga dekiru* both mean 'I can swim', but the former has a more restricted sense of knowhow or physical ability. One difference is that the derived noun does not carry with it the case-marking of the adjuncts of the underlying verbal, being derived directly from the infinitive that underlies our nuclear sentence. Like verbal

permit no changes in the markings as given, except when noted.) Some of the expressions are cited as negatives, that being the common use; but affirmatives will also occur, at the very least in rhetorical questions (S *món ka* 'I can hardly believe that S').

LIST OF COMMON CONSTRUCTIONS OFTEN PRECEDED BY
DIRECT NOMINALIZATION

w/m (1) *ni atai-suru* 'is well worth (doing or having done)': *Izure sinu | watakusi no inoti wa || ... nobásu ni | atai-sinai* 'The life of me who am about to die at any moment is not worth prolonging'.

-/- (2a) *ni atatte/atarimásite* 'when (it comes to), at the time of': *Syómotu o | erábu ni | atatte ...* 'When it comes to selecting books ...'.

(2b) *ní wa ataranai* 'there is no need to' (= *ní wa oyobanai*): *Sore-daké nara || betu ni || odoróku ni wa | ataranai* 'If that's all there's no particular need to be surprised' (SA 2685.111c).

w/m (3) *ni husawasii* 'is suitable for (doing)': *Kono tékisuto wa || itinén-sei ga | yómu ni wa | husawasii* 'This text is suitable for first-year students to read'; *Káno-zyo mo | sore o kirú ni || husawásiku | nai* 'It is inappropriate for HER to wear that' (lg 1962.84).

w/m (4) *ni itáru(-)* 'comes to (do), leads to (doing), results/ends in (doing)': *Sippai no kekka || hasan surú ni | itátta(-)* 'The failure led to bankruptcy'; *Túi ni || koo kangáeru ni | itátta(-)* 'She finally got around to thinking this way'; *Sikasi-nágara, || sono kotó ga || káre no | koodoo o || yokusei surú ni wa | itaránakatta* 'But that did not lead to controlling his behavior'; *Sosite || kóndo no | sekai-táisen -gó(-) ní wa, || yooyaku || itiren no || kokugo-séisaku ga | zissi sarerú ni | itátta(-)* 'Then, after the recent world war, at last a series of language policies came to be put into effect' (Shibata 1965.198); *Sin-zírú ni | itáru(-)* 'They will come to believe it'.

-/- (4a) *ni itátte wa, ni itáttya(-), ni itátára* 'when it comes to ...; if' (used as a roundabout way of stating a theme)—occurs after verbs in the imperfect only, after adjectives only as quotations: *Tanaka san máde | soo iú ni | itátte wa || benkai no yóti(-) wa | nai* 'There's no excuse for Tanaka (going so far as) to say that'; *Anna hitó ni made | site morau ni | itátte wa, || watasi wa || hazukasii* 'I'd be ashamed to have such a person do it for me'; *Ano | nónki na | hitó ga || "isogasii" ni | itátte wa || (= taboo ni náru ni | itátte wa ||) watasi mo || hatarakanákereba | naránai* 'If that lazy fellow is busy, then I better get some work done, too'.

-/m (5a) *ni kakawárazu(-)* 'regardless of ..., despite ...': *Hantai ga áru ni mo | kakawárazu(-) || ...* 'Despite there being opposition ...'; *... issyo ni || sazukeráeru -béki de | átta ni mo | kakawárazu(-), || sore o || koróri to | wasureta* 'despite the fact that it was appropriate for them [= pronouns of both the first and the second person] to be taught together, that I completely forgot' (Maeda 1962.71); *... konómu [no] to || konomazáru [no] ni | kakawárazu(-) || ...* 'whether we like(d) it or not ...' (SA 2662.90); *... ísiki no, || takái [[no] to] | hikúí [no] ni | kakawárazu(-) || ...* 'regardless of the consciousness being high or low'.

w/?m (5b) *ni kawari náí* '... in any event (come what may); is bound to ...': *Káre ga | seikoo surú ni | kawari {wa} náí* 'He is bound to succeed'.

-/- (6) ni kosita kotó wa náí 'there is nothing so good as ...; there is nothing like ...-ing; you're best advised to ...': Itte míru ni | kosita kotó wa | náí 'There's nothing like going and seeing'; Zibun de nímotu o | tóri ni | ikú ni | kosita kotó wa | arimasén 'The best thing to do is to go get your luggage yourself'.

w/?m (7a) ni makaséru 'leaves it to (happen), lets it (happen)': Mé o tubutte || musumé-
ra no | sárú ni | makáseta 'He closed his eyes and let the girls depart'; Syúui no | zyúmoku
mo || sigéru ni | makasárete iru 'The surrounding vegetation is left to overgrow'; Katte ni
hanásu ni wa | makaseraréni 'They can't be left to talk freely'. Cf. omóu ni | makasénai/
makasénu (1) 'finds it difficult (to do)', (2) 'is disappointing, vexatious' (náhi mo ~
'things do not turn out as one wishes').

w/?m (7b) ni masáru(⁻) 'outrivals (doing/being), is better/worse than': Sizén-syoku o |
tabéru ni | masáru(⁻) | kenkoo-hoo wa | lárú ~ mái 'Surely there is no better way to stay
healthy than to eat natural foods'; ... kiki-si ni masáru(⁻) | susamázi-sa datta 'it proved to
be even more dreadful than they had heard it would be' (SA 2793.129)—V-i-si is the
attributive of the literary perfect (§9.5).

w/m (8a) ni oyobu 'extends to the doing of, has occasion (call/need) to do'—usually
negative: Soo surú ni wa | oyobanai 'There's no need to go that far'; Sinpai surú ni wa |
oyobanai 'There's no call for alarm'; Ippan-syuukánsi wa || móosu ni | oyobanai (= iu máde
mo | náí) 'It goes without saying for the general weeklies' (SA 2651.68a); Iú ni wa |
oyobanai 'It goes without saying'; N₁ wa | iú ni oyobazu N₂ (= N₁ wa motíron N₂) 'N₂ to
say nothing of N₁'; Ayamáru ni wa | oyobanai 'You need not apologize'; Isógu ni wa |
oyobanai 'There's no need to rush'. But affirmative examples can be found: ... hiragana-
máziri no | kokubungakú-syo(⁻) ga, || ki-kátuzi de || tasúú | syuppan sarerú ni | oyonde, ...
'there was need for works on Japanese literature with hiragana-mixed script to be pub-
lished with wooden movable type in large numbers, and ...' (Ōno 1966.223).

-/- (8b) ni siku wa náí 'nothing is like, nothing is the equal of, nothing is as good as;
it is best (to do)': Yóozin suru ni | siku {kotó|} wa náí 'There's nothing like being cautious';
Benkyoo {surú|} ni siku {kotó|} wa náí 'There's nothing the equal of hard work'; Háyaku |
okíru ni | siku wa náí 'It is best to rise early'. Cf. Kane ni siku {monó|} wa náí 'There's
nothing like money'. Siku is an intransitive literary verb meaning 'rivals, equals'; in this
expression it is itself directly nominalized: S ni siku [kotó/monó/nó] wa

-/- (8c) ni sikazu '[there is no equal to=] it is best (to)': Háyaku | okíru ni | sikazu
'It is best to rise early'; Benkyoo {surú|} ni sikazu 'Nothing compares with (is the equal of)
hard work'.

w/m (9) ni sinóbu(⁻) 'bears/endures doing; finds it in one's heart to do'—the expression
is always in the form PSEUDO-literary negative sinobínai(⁻) (also, perhaps, in the form of
a rhetorical question sinobíru {monó|} ka, both from the literary vowel-base version sinóbi-)
or compounded as sinobi-kanéru(⁻) 'can not stand to do': Sono sanzoo wa || míru ni |
sinobínákatta 'I could not bear the tragic sight'; ... míru ni | sinobi-káneta(⁻) 'couldn't bear
to look' (Fn 59b); (?) ... míru ni | sinobíru { | monó| } ka 'How could I possibly watch ...?!'.

-/- (10) ni sitagátte(⁻) (= ni turete) 'in proportion to, (accordingly) as': Bunmei ga
susumú ni | sitagátte(⁻) ... 'As civilization progresses ...': Syuunyuu ga masú ni | sitagátte(⁻) ...
'In proportion as one's income rises ...'; Tosí o | tóru ni | sitagátte(⁻) || tié ga | túku 'Wisdom

comes with age'; Karada ga yóku | náru ni | sitagátte(-), || Tookyoo ga | kóisiku | nátta 'As my health returned I began to long for Tōkyō'.

w/m (11) ni taénai 'cannot bear to do': Káre-ra no | kaiwa o | kíkú ni | taénakatta 'I couldn't stand listening to their conversation'; ... kyooretu na || kíkú ni | taénai yóo na | hukoowá-on ... 'a loud discord unbearable to hear' (Tk 3.45a); ... míru ni | taénai | kyoogén ... 'a farce that you can't stand to see' (SA 2684.118d).

w/m (12) ni tariru/taru 'is sufficient to do; (= ni atai suru) is worth doing': Koré-ra || ... undoo wa, || izure mo || séken o | lugokásu ni | tarinákatta 'None of these movements ... was adequate to move the public' (Ōno 1966.236); Mozi-zínkoo no | zooka no | sūgata o | ukagaú ni | tariyoo [= tarirú daroo] 'It [= the increase of haiku writers over a thirty-year period from 178 to more than 3000] will serve to give some idea of the growth of the literate population' (Ōno 1966.224); Iú ni | tarinai kotó ... 'a thing not worth mentioning'; Ron-zúrú ni | tarinai 'It is not worth discussing'; Aité ni | surú ni | tarinai 'He is not a good match'; Rúpo no | naiyoo wa || watasi no | yóo na | ... ningen ó sae || odorokaséru ni | taru monó de aru 'The content of the report is enough to startle even a person such as me ...' (SA 2673.42a); Hotóndo || odoróku ni | taranai 'I should scarcely have been surprised'; Kyuudai sitá no wa || ayasímu ni | taranai 'No wonder he passed'; Syoo-súru ni | taru 'It is worthy of praise'; Tóru ni | tarinai kotó da 'It's a trivial matter'.

w/m (13) ni teki-súru 'proves suitable for (doing)': Sore wa || bungaku-teki ni atukaú ni wa || óoi-ni | tekí-site iru 'It lends itself admirably to a literary treatment'; Kánúu o | noserú ni || tekí-sita | monó ... 'something suitable for carrying a canoe'.

?w/m (14a) ni todomáru 'it is limited to (the doing), it amounts to nothing more than simply ...', ni todomárazu 'not merely/only ... but (also/even)': Tán ni || kiboo o | nóbeta ni | todomáru 'I simply expressed my desire'; Zíken wa || yaziuma o | yorokobaséru ni | todomáta 'The affair served only to delight the masses' (Ig 1962.84); ... tukatte yói | góku o | sentei sitá ni | todomárazu, || sono || tadasíi | hatuon [to] || ákusento o | kitei si, ... 'not only selected expressions to be used but even indicated the correct pronunciations and accents for them' (K 1966.144).

?w/m (14b) ni todoméru 'limits it to (the doing), lets it be nothing more than': ... sono (l) yootén(-) o | nobéru ni | todoméru 'I will limit myself to mentioning the main points'; Koko dé wa, || íma || moosimásita yóo na | ten de || tyuumoku sú beki | monó o | ní-san | tori-agerú ni | todomemásu 'I will limit myself here to giving two or three noteworthy examples of what I have been speaking about' (Tsuji-mura 157).

-/- (15) ni turete 'in proportion to, (accordingly) as': Tokí ga | tátu ni | turete ... 'As time goes by ...'; Kanemóti(-) ni | náru ni | turete || sinpai ga | óoku | náru 'Wealth brings with it many anxieties'; Óoku | náru ni | turete ... 'As they grow in number ...'; Sotugyoo no | hí ga | tikazúku ni | turete ... 'As graduation day draws near ...'; Éiga(-) ga | susumú ni | turete ... 'As the film progresses ...'; Syuutyakú-eki || Singapóoru ni | tikazúku ni | turete || syánai ni | kuuseki ga medátte | kíta 'As we drew near Singapore, the terminal station, the number of empty seats became noticeable' (SA 2660.16).

w/m (16) ni zyuubún da 'is sufficient for (doing), is enough to (do)': Sore wa || káre-ra o | odorokaséru ni || zyuubún na | nyúusu datta 'That was a bit of news sufficient to startle them'; Sore wa || káre no | ludemáe(-) o | syoo-súru ni || zyuubún de aru 'That is sufficient to prove his ability'.

w/m (17) ni uttétuke dá 'is just the one for (doing)': Imootó wa || ... hakobú ni wa | uttétuke dátta 'The younger sister was (built) ... just right to carry it' (lg 56); Asoko e doráibu | surú ni wa, || káre wa | uttétuke no aité dátta 'He was the ideal person to drive there with' (cf. lg 56).

-/- (18a) ni sité mo 'regardless of ...; even if ...' (§9.1.11, §9.2.2, §2.11): Dóko de | dékita ni | sité mo || ... 'Regardless where it may have come from ...'; Tatóeba || sore ga || dékínai ni | sité mo ... 'For example, even if that proves impossible ...'; Sono sikén wa || muzukásikatta ni | sité mo || tugí no | sikén wa || yasasíi ka mo | sirenái kara ... 'That test may have been hard but perhaps the next one will be easy, so ...'; Mensetu o ukéru tokí⁽¹⁾ wa || tatóe(-) || zisin ga áru ni | sité mo || yahári | huan na monó da 'When you are to be interviewed you are bound to feel uneasy even if you have confidence'; Zíko to | iu kotó ni | náru ni | sité mo, || séken wa || kimi o | hanzaisya-átukai surú⁽²⁾ ka mo | sirenai 'Even if it turns out to be called an accident, the world may treat you as a criminal' (SA 2642.38b); Soo suru to, || songai wa || unten site ita monó to, || hoyúu-sya no | watasi tó de || baisyoo sinákereba | naránai ni | sité mo, || kíngaku(-) no | hutan no wariái wa || dóno-yóo ni | náru no desyóo⁽³⁾ ka 'Well, then, granted that the damages must be covered by both the driver and me who am the owner (hoyúu-sya = syoyúu-sya), how is the responsibility for the sum proportioned?' (SA 2664.107d); Sore ga owatta tokí⁽¹⁾, || syoonén-táti no | kokóro ni, || náni ka || múra-mura sita | monó ga || ókita to | sité mo | husigi wa náí 'When that [wild festival] was over, it is hardly surprising that something in the way of sudden desire should seize the lads' (SA 2647.119a); Kono zíko wa, || toppatu-teki dé wa | átta ni | sité mo, || kessite || "ígai(-) na (l) de kígótó" de wa | ná katta 'This accident, unexpected though it was indeed, was by no means an "unforeseen incident"' (SA 2676.143); Tóozi no | riarízumu ni || sizensyugi-teki keikoo ga átta ni | sité mo, || sore wa || káre no | sekinin dé wa || náí to | omóu 'Though there was a naturalistic tendency to the realism of the time, I do not think that was his [responsibility =] fault'. (More examples will be found in KKK 3.94.)

-/- (18b) ni sita tokoró ga 'even if' (= -ta to sité mo): Kono taigun o || seihuku suru kotó ga || dékita ni | sita tokoró ga, || ... 'Even if he had been able to conquer this strong army, ...'.

-/m⁴⁴ (19) ni si ro, ni sé yo 'let it be the case that = even though' (§ 16.1)—often used in pairs to mean 'whether ... or ...': Ikú ni si ro || yasúmu ni si ro, || hookoku daké wa | sit' oke 'Just let us know, whether you go or whether you don't'; Íi ni | sé yo, || warúi ni | sé yo, || tyót-to || insyoo-teki désita 'Whether good or bad, it was rather impressive'; ... káre-ra mo (l) máta(-), || iká ni || si-teki sensai to | hyoogén(-) no | hengen ni takuetu site itá ni mo | sé yo, || kekkyokú wa ... 'they also, however they may have excelled in poetic delicacy and variegated expressions, in the final analysis ...' (CK 985.312). Nouns and adjectival nouns drop the colloquial copula: Dónna ni | bínboo [na no] ni | sé yo || ... 'However poor one may be ...'. In writing, however, the formal de áru may appear: Siróoto no | bóku-ra ni wa, || tootei (l) wakaránai | sékái de | áru ni mo | sé yo, || tobaku to iu | yakuza-teki sonzai ga, || Nihón no minsyú-ka(-) no (l) seityoo o | musibánde iru kotó⁽¹⁾ | daké wa || tásika de aru 'Though it is a world totally unknown to us amateurs, it is quite clear that the gang-ridden existence of gambling is impairing the growth of democratization in Japan' (KKK 3.127).

44. In paired sentences, if one is ... ní mo, the other must also be highlighted.

(20) ní mo hodó ga áru 'there's a limit to ...; one can do/be just so ...': Osói ni mo | hodó ga | áru 'One can be just so late'.

(21) to onazi ..., to dooyoo ... 'the same as (doing) ...': Watasi ga (l) muné ni | ukabetá [no] to | onazi kotó o | káre wa | itta 'He said the same thing that had floated into my mind' (lg 55); Kinóo kiitá [no] to | onazi hanasí da 'It is the same story I heard yesterday'; Ítu mo | syuudóo-si ga suru to | onazi yóo ni | Míyo no | té ga | karuku | Syoozyuuroo no káta ni | nóbita 'Miyó's hand reached lightly out to Shōjurō's shoulder the same as the monks would always do' (lg 56); "Motéru monó" to "motazáru monó" no aida dé wa, mizu ga tákaki kara hikúki ni nagaréru to dooyoo no gensoku ga sonzai site irú no de ari, ... 'Between "haves" and "have-nots" there exists a principle that is the same as water flowing from high to low, ...' (Nakane 154).

(22a) to tómo(¯) ni 'at the same time as; together with (the fact that)': ... to iu tatibá ga | arimásu to | tómo(¯) ni | ... 'has such a standpoint and at the same time ...'; Zyuukyuu-séiki ni | nátte | déko ga | oogatá-ka(¯) suru to | tómo(¯) ni | ningyóo-geki wa | sabíreta(¯) 'In the 19th century with the shift to oversize heads, the puppet drama declined' (SA 2651.79); ... hónsyō wa, | soo iu kooki-sin ni | kotáeru to | tómo(¯) ni, | óoku no | kotó o | watási-táti ni | kizukásete kureru 'This book while answering such curiosity, calls our attention at the same time to many things' (SA 2635.64—the original text omits the particle tó, but that is a misprint); "Bankokú-haku no | tosi^[1] | akeru" | ... wa | kensetu-kóozi ga | hóbo | owatta | kakkók-kan no | moyoo o | genba-tyúukei de | tutaéru(¯) to | (l) tómo(¯) ni, | bankokú-haku no | rekisi ya | kaimaku-zyúnbi ni | matuwáru | episóodo o | syookai suru ' [The program] "Expo Year Begins" brings us by relay from the site a look at various countries' pavilions on which construction work is almost finished and at the same time presents the history of international expositions and the episodes that accompany opening preparations' (SA 2660.128d).

(22b) to issyo ni 'at the same time as': ... sore o nuku to issyo ni, | món ga | aita 'with his removing it [the bolt], the door opened' (Fn 420a).

(22c) to dóozi(¯) ni 'at the same time', to doo-zíkoku ni 'at the same moment as ...': Híme ga ano gen'ei o míta to | doo-zíkoku ni | tyúui wa | sinzoo o | uti-nukarete | taóreta 'At the instant the princess saw that vision the lieutenant fell, shot through the heart' (lg 56); Hí wa | túku to | dóozi(¯) ni | sirói | hai ni | tutumárete | daidai-iro ni | nátta 'The fire as soon as ignited was surrounded with white ashes and turned orange' (lg 56).

For [NEGATIVE +] tó mo kagiránai 'who can tell but what = perhaps' and tó wa kagiránai 'it does not necessarily follow that', see §21.1.(8); these are special uses of quotation, not direct nominalizations.

(23) ga hayái ka 'no sooner ... than': Tuka ni (l) té o | kakéru ga | hayái ka | ... 'Almost before he could be seen to put his hand on the hilt (of the sword) ...'; Dénnya(¯) o (l) oríru ga | hayái ka, | káre wa | itimóku-san ni | hasiri-dasita 'No sooner off the train than he started running like mad' (KKK 3.18); ... tutumí o | lakerú ga | hayái ka, | ... 'no sooner had they opened the packages, than ...' (R).

(24) ga íi 'it is better to do, one should do': Ikanáí ga | íi 'It would be better not to go'; Denwa surú ga | íi 'You ought to telephone'; Móo | osói kara | netá ga | íi desyoo 'It's already late so we had better get some sleep'. Also V-rú/V-tá ga yokaróo (or íi daroo):

Zityoo surú ga | yokaróo 'You'd better be circumspect'; Moo iti-dó^[r] | de-naositá ga | yokaróo 'We better try again'. We could regard all these expressions as involving ellipsis of nó or of hóo:

Surú	}	[no/hóo] ga íi [daroo].
Sitá		
Sináí		
Sináikatta		

In place of *gá* you may find the focus particles *wá* or *mó*: *Sináí [no] mo íi* 'It would be better not to do it (even/either)'. Cf. *Sináí de mo íi* 'You need not do it' and *Sináí de wa irarenai* 'One just has to do it' in which *sináí de* functions as the negative gerund, and presumably there is no ellipsis. To be sure, the expression *S [nó] ga/wa/mo íi* need not be advice; it can also be a report that some fact is appreciated: *Amerika e itte, are o yarimásitara, ll taihen yorokónde | kuretá wa | íi keredo mo, ll áto no | páat'ii de, ll are wa | Betonamu-sénsoo no | kotó o | mozitta | monó ka, ll to kikaretyatta* 'When I went to America and performed that (kyōgen farce) I am glad they kindly enjoyed it very much, but at the party afterward I found out that it had been taken as something of a parody on the Vietnam War' (SA 2659.52c); *Suisu-dókei o ll Nihōn no hán-ne(-) -íka ni | negittá wa | íi ga, ll Haneda ni túitara ll hári ga | tomatte ita ...* 'It was great to get a Swiss watch at less than half the price in Japan, but when we arrived at Haneda the hands had stopped ...' (SA 2660.37c—woes of the Hongkong shopper).

(25) *ga gótoku {ni}* 'like ...-ing' (=S yóo ni); *ga gótoku/gótoki da = ga gótosi* 'is like ...-ing' (=S yóo da): *Kawá ga nagaréru ga gótoku ni ..., Kawá^[r] no nagaréru ga | gótoku ni ...* 'Like a river flowing ...'; *Kawá^[r] no nagaréru ga | gótoki da* 'It is like a river flowing'; ... *maru-de ll gizyoo ni okéru(-) ll dai-énzetu o | kikú ga | gótoku de atta* 'it was just like listening to a major speech on the floor (of the Diet)' (Tk 4.228); *Sono-mónó ga | ganzen ni náí no ni, ll áru ga | gótoku ni | omoi-ukabu monó ga | íméezi de aru* 'An image is something that occurs to you as if it were real even though the thing itself is not in front of your eyes' (Kotoba no yurai 178); ... *sonó-hito no | dóosa(-) ga ll átákamo ll "sizen" no surú ga | gótoku de aru* 'it is just as if his actions were done by "Nature"' (Ōno 1966.64); *Gozyū^[u] gó-sai to | ié-do mo ll siti-hatizissai ni | tás-site(-) irú ga | gótoku | miéru* 'He may be fifty-five but he looks like he had reached seventy or eighty' (SA 2665.116b); ... *Kuhara san wa | tit-tó mo | koohun site inái ka ni | mie, ll nitizyoo-sáhan o | katarú ga | gótosi* '(but) Mr Kuhara shows not the least excitement and appears as though he were telling a commonplace' (?Tk); *Sugitáru wa oyobazáru ga gótosi* 'Too much is as bad as too little' (SA 2837.23a). For some speakers an "atonic" inflected form will keep its basic final accent suppressed and drop the juncture after *ga*: ... *kiku ga gótoku*, ... *suru ga gótoku*, etc. In Formal Written Style, ... *ga gótosi* or ... *monó ga/no gótosi* can be used (like ... *omomúki(-) nari*) to report hearsay in a way corresponding to the colloquial ... *sóo da* or ... *to iu/no kotó da* 'it is said that, we hear that, reports have it that ...' (cf. LF 89). See also 34 below.

(26) *ga mamá (ni/no/da)* 'just as': *Matuda no (l) iú ga | mamá ni, ll Beihei ga | oozéi^[r] atumátte ita* 'Just as Matsuda said, there were a lot of American troops gathered'; *Surú ga | mamá ni | sasete okoo* 'Let's let him have his own way'; *O-kéiko ni háitte, ll o-síbai wa ll Réiton no | iú ga | mamá desu | né* 'Once we're in rehearsal the play goes just as Mr Layton says, you see' (SA 2664.36a).

(27) *ga tamé {ni}* 'for the purpose of doing; because (of the fact that)': ... *kitanái*

to | kangaeráreta ga | tamé ni || betu no tokoró ni | okareta monó ... 'a thing put in a separate place because it was thought dirty' (Ōno 1966.42); Táda || iu ⁽¹⁾ békí | súbé o | siranáí ga | tamé ni, || sono yóo na | monoíi o | site irú ni | sugínai 'They only talk like that because they don't know what to say'; Korasán [⁽¹⁾ < Korasamu = Korasoo] ga | tamé ... 'For the purpose of disciplining ...'; Kenkyuu sén [⁽¹⁾ < semu = siyoo] ga | tamé ni ... 'For the purpose of studying ...'.

(28) ga yúé ni 'because of': Tabitabi míru ga | yúé ni || wasurerarenai 'I am unable to forget it because of seeing it so often'; Igirisu wa || káko ga | káko de áru ga | yúé ni, || sore ga | génzai mo | iki-tuzúketé iru kuni de ⁽¹⁾ áru 'England is a country whose past continues to live even in the present day because it has that sort of past' (SA 2664.90b); ... mása ni || Amerika wa | "teikoku" de áru ga | yúé ni, || kono | rekisi-teki ziken o || iwaóo to | sinákatta || oozéi no | hitóbito ga | iru '... because America is exactly an "empire" there are many people who were reluctant to celebrate this historic event [= the moon landing which gave proof that America is "an empire that has conquered the world in the field of scientific technology"]' (CK 985.37).

(29) mo onazi [kotó] da, mo doozen da 'is the same thing as, is virtually': Tyoodai sitá mo | onazi kotó desu 'I will take the will for the deed'; Atarásii mo | onazi desu 'It is as good as new'; ... sindá mo | doozen da 'is the same as (might as well be) dead' (Fn 161a).

(30) o matánai 'it needs no ...-ing, it goes without ...-ing': Iú o | matánai 'It needs no mention, it goes without saying'.

(31) o énai 'can't ...'; V-(a)záru o énai 'can't help doing': Yamú o | énai/ézu 'It can not be stopped' > yamu-o-énai/-ézu 'is unavoidable'; Káre no | seikoo o || homezáru o | énai 'I can not help admiring his success'; Káre wa || seikoo o | sezáru o | énai 'He can not help succeeding'; ... iká ni mo || okásiku | kan-zezáru o | énai 'can not help feeling it rather odd' (SA 2654.42b). Mori Ōgai used a kotó-nominalization: Kore ní wa || bóku() mo || hídoku || kyoosyuku sezáru | kotó o | énai 'At this I can not help being terribly embarrassed' (Y 178).

(32) no miti 'the way to do' (bookish?—cf. p. 659): Ríkai() surú no miti ... 'The way to understand it ...'.

(33) no hoka 'outside of those that ...' (bookish?—cf. p. 659): ... kinsyoo no reigai o nozokú no hoka wa ... 'all (others) with the exclusion of a few exceptions' (KKK 3.192).

(34) N no (/ga?) gótoki wa = N no gótoki monó wa (= N no yóo na monó wa = N nádo wa) 'N for example; say N; one such as N' (KKK 3.185; MKZ 293b).

See also S ⁽¹⁾ tō suru and S ⁽¹⁾ tō sité mo (§21.4); cf. ni sité mo above, ni sité wa (p. 229).

There are a number of additional types that are best treated as abbreviations of ⁽¹⁾ nó ni or of [⁽¹⁾ nó] tamé ni (cf. §14.2.2; Ig 39–40), such as these: Háyaku | ikú ni wa || dóo sitára | íi desyoo 'How can we get there fast?'; ... káre ni | kátu ni wa || dóo sitára | íi ka, || kangáeta n desu 'I've thought about how best to beat him' (SA 2685.45a); Hu-kéiki na tokí() de | né, || udé ni | syokú wa | (I) nási, || syóobai | yarú ni mo | sihon ga náí 'It was depression times, you see, so there were no jobs for my skills, and I didn't have the capital to go into commerce, either' (SA 2678.47b)—for the loose-reference mó, see §5.4; Kyooiku-máma no | hutokoro o neraú ni wa, || kyooiku-syóobai ni | kagíru ... 'There's nothing like educational merchandising if you are aiming at the (breast of the) school-conscious mama' (SA 2664.23e)

—first part; Hutuu no saráii-man ga | zimae de mótu ni wa || tyót-to | takái 'It [= a small computer] is a bit too expensive for the usual salary earner to afford by himself' (SA 2660.23e); ... seihú-gun no | tokoró e | modóru ni wa, || amari ní mo || too-sugiru 'it was entirely too far to return to where the government troops were' (SA 2678.41c), Saiken-táikai to | iú ni wa || amari ni | hodo-tóoi | ságata datta 'It was too distant a guise to be called a reorganization convention' (SA 2678.134a); Manabú ni | yasaki, || rakú ni | kakéru | mózi ga || tukuri-dasareneba | naránakatta 'It was necessary for there to be devised a script that was easy to learn and could be written with no trouble' (Ōno 1966.206); ... sirú ni | yósi | nási 'there is no way of knowing'; ... onná no hatuzyoo o sirú ni wa | yósi | náku, ... 'there being no way for her to know woman's sexual arousal ...' (Fn 66b). Here belong the various expressions of NECESSITY: Móttó-mo || syooryoo dé mo || okíru ka | dóo ka o | tasikaméru ni wa, || háruka ni | genmitu na zikken ga hituyoo de áru 'In order to ascertain whether it happens even with the smallest quantity, far more rigorous experiments are necessary' (SA 2651.21c); Hankó^[1] bannoo to iwareru wá-ga kuni de wa, || nání o | hazimerú ni mo | linkán() ga hituyoo désu 'In our country, known for the omnipotent "chop", a signature seal is needed to start anything' (SA 2661.121—advertisement)—the first expression is an ellipsis of hankó [ga] bannoo [da] 'the chop is omnipotent'; Kotosi no | sin-sotugyóosei wa, || itiryuu-dáigaku ni | háiru ni wa || roonin o | ní-nen site || benkyoo sinákereba | naránai to | iú no da 'They say this year's graduates will have to spend two years out of school studying in order to get into a first-rate university' (SA 2663.27a). (Other examples will be found on p. 858.)

In the following example I am uncertain whether to treat the ellipsis as suru [tamé] ni mo or as surú [no] ni [sité] mo: Amerika no kígyoo() wa || kozin-tán'i de | sigoto o surú ga, || Nihón no kígyoo() dé wa || nání o | surú ni mo || ka^[1] | tán'i da⁴⁵ 'American enterprises do their work by person units, but in Japanese enterprises anything you do it's (by) "section" units' (SA 2668.22a). But the latter analysis would seem more likely; here is an example for which only an ellipsis of [no] ni [sité] mo is appropriate: Zinan-húuhu wa || dóko e | ikú ni mo | issyo ni turete itte kuretá ga, || kono utí() dé wa || itu mo | rusu-ban [da] 'When I was living with] my younger son and his wife, they would take me along wherever they went, but in this household I'm always the one who stays home to watch the house' (SA 2671.130c).

The expression A ga/no iú ni {wa} ('...' to iu) 'A says ("...")' is equivalent to A ga iú no ni, serving as an introductory alert to a quotation, or (... sóo da) to a hearsay report: ... syúui no | kimoti o | daiben suru yóo na | tyoosi de || kuti o hiráite | iú ni wa, || "----" 'In a tone as if to apologize for the feel of the surroundings he opened his mouth and said "----"' (SA 2660.13c); Káre ga | iú ni wa, || ... sóo de || ... 'He says that ...' (SA 2793.132a). Similar are {Watasi ga} omóu ni ... 'In my opinion ...', {Hirugáette} kangáeru ni ... 'Upon reflection ...'; ... yóri sas-súru() ni ... 'To judge from ...'.

Among sentence-introducers (§ 24) we find Yoo-súru ni ... 'In a word ...'. See also -[y]óo ga and -[y]óo ni (§ 17.6); -[y]óo (and S) + zya náí ka (§ 15.16). The expression iú máde mo náí 'it goes without saying' involves a postadnominal (§ 13.2) rather than a particle; but ... to iú de mo náku 'even without saying' would seem to be a case of omitted nó—hence, in a sense, a good COLLOQUIAL direct nominalization. We have treated V-(a)zu ni súmu = V-(a)nái de súmu 'gets by without doing' in a separate section (§ 9.6).

45. Perhaps || ka-tán'i da for those more familiar with the term.

The various examples given earlier include adjectives as well as verbs.⁴⁶ We also come across examples of literary adjective predicative forms (A-si) that are directly nominalized, such as *nási* (= *nái*) 'it is lacking' in *nási ni* = *náku* and *nási de* = *nákute*, often preceded directly by an unmarked noun (or noun + *mó*—but also + *wá*, *gá*, *sáe*, *súra*, *daké*; cf. Mio 139) and frequently to be translated as 'without (even)'.⁴⁷ *Senséi daké de nási ni gakusei mo ...* is equivalent to *Senséi daké de/zya náku{te} gakusei mo ...* 'Not only the teacher but also the student'. There are a number of idiomatic clichés: *Nán no rikutu mo nási ni ...* 'For no reason at all ...'; *Náni-ge-nási(⁻) ni ...* 'Casually ...'; *O-kamai nási da* 'It is of no concern to me'; *Sizen wa || sonna kotó || o-kamai nási desu* 'Nature doesn't care about such things' (SA 2649.117d). And ... *kotó nási ni {wa}* is equivalent to ... *kotó ga nákute wa* (= *nákereba*) 'unless' in stating a negative condition or contingency: *Syakai-teki doobutu to sité no |zínruí ni |tótte wa || tagai ni |tasuke-au kotó nási ni wa || tán-naru |sonzai mo || kónnan to |náru kara de áru* 'It is because for a social animal like man unless there happens to be mutual aid even simple existence becomes difficult' (KKK 3.139); *Minsyu-syúgi o |hakai sen [= siyoo] to suru |teki o hakken suru kotó nási ni || minsyu-syúgi no |kensetu wa |nái* 'There is no building of democracy unless an enemy is discovered seeking to destroy it' (KKK 3.139). Nominalized *nási* enters into a compound noun (of the "dvandva" or coordinate type) with nominalized *ári* or *áru*: *áru-nasi*, *ári-nasi* 'existence or nonexistence' as in *N no áru-nasi ni kakawaránai de* 'regardless of whether N exists or not'. (You will recall that in Literary Japanese the infinitive *ári* takes over in place of *áru* for many of the functions of the predicative.)

A number of additional types of direct nominalization can be accounted for as due to the obvious ellipsis of *nó*:

(1) Antonymously paired sentences:

(1a) Directly juxtaposed antonymous sentences (see also 12a below): *Kotobá no || tadási, || tadásiku |nái wa, || syákai no |syuukan ni yoru kotó desu* 'Whether words are right or wrong is a matter that depends on the usage of the society' (Shibata 1966.59); *Tuu-ziru tuu-zinái ni (|) kankei náku, ...* 'Without respect to whether it is understood or not, ...' (Maeda 1962.19); *Iku ikanái wa || áto de |kimeté mo |íi* 'You can decide later whether to go or not'; *Sikási, || mondai wa || zikan no |óoi |sukunái |daké no |kotó de wa |nái, ...* 'But the problem is not a matter just of how many or how few the hours are ...' (Kaneda in Ōno 1967.298); *Kore wa || kessite, || yói |warúí o |itte irú no de wa |arimasén* 'This is by no means saying it is good or bad ...' (Ōkubo in Ōno 1967.133); *Yosida san mo kúru |kónai wa || ánta ga |sitte 'rú wa |né* 'You know whether Mr Yoshida is coming or not, don't you?'; *Soo iu tabí o |site míreba, || kono |kyókuti(⁻) no syookoku ga || nísín no |toréru |toréni de || sikátu(⁻) o |sáyuu (|) sareru zizyoo ga || íkura ka || wakátte |ki-sóo*

46. Direct nominalization of nominal sentences (N dá, AN dá) is much rarer, but occasionally it turns up: *Sikási, sensoo da, sokai da, otto no zyuutai dá de, ...* 'But what with (there being) the war, the evacuation, the husband's grave illness, ...' (Kawabata: Suigetsu). This example puts the copula gerund (*dé*) squarely after the copula imperfect (*dá*). In the following example we are forced to recognize ellipsis because of the juncture: ... *toozen no kotó da |to iu kurai ni |omótte ...* 'thinking it was only natural' (Shiba 144).

47. Here is an example of the literary attributive *náki* directly nominalized: ... *monmóo-ritu wa || náki ni |hitosii yóo ni |hette simau* 'illiteracy [rate] is reduced so that it is virtually nonexistent' (Ōno 1967.164). The noun *omóki(⁻)* 'importance, weight'—as in *kéizai ni |omóki(⁻) o |násu* 'weighs heavily on the economy'—is derived from a direct nominalization of the literary attributive *omoki* 'being heavy'.

de aru 'When you make a trip like this, it gradually becomes apparent how much [are the circumstances by which] this small polar country [of Iceland] has its (life-or-death =) fate controlled by whether herring are caught or not' (SA 2668.88b); *búnka no | tika rá(-) no | tuyói | yowái ni | yotte, || géngo ni || hénka ga | okóru* 'changes happen to a language according to whether the power of the culture is strong or weak' (Ōno 1966.161); *Atúi | suzusií ni | kankei-náku, || tó-ni-kaku || rokugatú kara | hatigatú made wa, || myóo ni | tyoosi ga warúi* 'Regardless of whether it is hot or cool, I feel oddly bad from June to August' (Tk 3.138b); *Kookoo no | sin-sotugyóosya wa, || syonín-kyuu no || takái | hikúi de || syokúgyoo [ya], || kaisya o | lerabánai ...* 'The new graduates from high school do not select their job or company on the basis of whether the starting salary is high or low' (SA 2637.39a); ... "ó" to || "wó" to o || ákusento no || hikúi | takái de || kúbetu sita '(he) differentiated [the kana] "o" and "wo" by whether the accent is low or high' (Ōno 1966.214); *Sore -irai, || umái | mazúi wa || kuuhuku no zyootai to | missetu na kankei ga ári, || syukan-teki na monó da to | sitta* 'From that time on, I have been aware that whether something tastes good or bad is a subjective thing closely tied to the emptiness of one's stomach' (SA 2674.110e).

(1b) Antonymous sentences paired with highlighting *mó*: *Sore ga | sen-en mo surú no de wa, || umái mo | mazúi mo | náí* 'When that [= rice curry] costs a whole thousand yen there's no delicious or unpalatable about it [= the taste is irrelevant—I don't care how good or bad it tastes]' (SA 2640.105b); *Kono | atarasíi | kyooiku-séido o || ikásu mo | korosú mo || kokumin no | nétui | hitótu de aru* 'Whether this new educational system is let live or is killed it all depends on the enthusiasm of the people'; *Sirú mo | siranú mo | náí, || wá-ga | syokubá(-) no | dooryoo de áru* 'He is a workshop colleague whom I know but not particularly well' (SA 2669.106a); *Syooti surú mo | sinái mo || náí | wá* 'It's not a matter of consenting or not consenting' (Kb 389b); *Dóo surú mo | koo surú mo || náí | sá* 'It doesn't matter what happens' (Kb 35b); *Iyá ka? || -Iyá mo | íi mo || náí wa | yó. || Zettai | hukanoózi [= hu-kánoo na kotó] desu | yó* 'You don't wanna?—It's not wanna or don't wanna, it is absolutely an impossibility' (Fn 179b); *Sore kara || iti-zíkan to | tatánai utí(-) ni, || omae, || sagasú mo | sagasanái mo | náí, || hitori-de ni* 'And then before an hour had passed, you know, I realized it was stupid to think of looking for him, all by myself' (Kb 285b).

The juxtaposing of *S mo* with the negative of *S mo* followed by *nái* (or by *ári wa sinai, áru món ka*, etc.) forms a SCOFFING pattern: 'It's nonsense to talk about ...; it doesn't matter (I don't care) whether ...; it is a far cry from being (a matter of) ...'. Two nouns of opposite meaning can be used in a similar way: *Hazí mo gaibun mo náí* 'It doesn't matter whether it is shame or respectability = I don't care about what people may say'. In place of the negative repeat of the sentence you can use *kusó mo* 'or shit', *hetima mo* 'or a snakegourd', or *hé mo* 'or a fart':

Ikú mo { *ikanái*
kusó/hetima/hé } *mo náí* 'It's hardly a matter of going or not'.

Omosirói mo { *omosiroku náí*
kusó/hetima/hé } *mo náí* 'I don't care if it's fun or not'.

Into the first slot you can put a pure noun, a verbal noun,⁴⁸ an adjectival noun, or a precopular noun (or even a predicable adverb) provided you follow with *kusó mo* or *hetima mo* or *hé mo* in the second slot: *Hadé mo kusó/hetima/hé mo náí* 'It's hardly a question of being gaudy'; *Sikási mo hetima mo née [= náí], ...* 'There's no "but" about it

48. As in *Kandoo mo hé mo áru ka* 'What do you mean, disown me?!' (Tk 3.15a).

at all, ...' (Kb 187b). The sentences can be perfect, as well as imperfect, but notice that if you use *kusó/hetima/hé mo* in place of the negativized repeat you do not perfectivize that part (**kusó/hetima/hé dátta mo*):

Ittá mo	}	<div style="border-left: 1px solid black; border-right: 1px solid black; padding: 5px; display: inline-block;"> ikanákatta kusó hé hetima </div>	mo áru mon ka 'Surely it's not a matter of having gone (or not)'.
Omosírokatta mo	}	<div style="border-left: 1px solid black; border-right: 1px solid black; padding: 5px; display: inline-block;"> omosíroku nákatta kusó hé hetima </div>	mo ári wa sinai 'It's ridiculous to talk of it's being fun or not'.
Génki datta mo	}	<div style="border-left: 1px solid black; border-right: 1px solid black; padding: 5px; display: inline-block;"> génki zya nákatta kusó hé hetima </div>	mo náí 'It is hardly a matter of whether one was healthy'.

Instead of ... *kusó/hetima mo náí* you will sometimes find ... *nāni mo náí*: *Máa, || sore | kimattá no? ||—Kimattá mo nāni mo | náí* 'Well, that's decided, then?—Decided, nothing!' (Fn 60b). From the adverbialization of this (... *nāni mo náku*), with ellipsis of *náku*, we get sentences such as the following: *Ítakatta desyoo. ||—Saisyo wa || itái mo nāni mo [] , || táda, || sibiretyatte, || maruku nátte || unátte | 'tá n desu* 'It must have been painful [having rocks fall on you when mountain-climbing].—At first there was no question of pain or anything, I was just so benumbed I curled up and moaned' (SA 2649.47d).

(1c) Antonymous sentences paired with *ni túkē*^[1] (see §9.7): *Yói ni tuke | warúi ni tuke, || iroiro to || mondai ga áru* 'Whether with respect to the good or with respect to the bad, there are various problems' (Maeda 1962.1); *Tó-mo-kaku, || kono | "nodo-ziman-konkúuru" wa || yóki ni tuke, || ásiki ni tuke, || Nihōn no ongaku-zyóokuyoo ga || mígoto ni | tooei sarete kíta | moyoosi de átta | kotó ni wa || iron wa náí* 'Anyway, there's no denying the fact that this "amateur singing contest" was an entertainment in which the state of Japan's music, both good and bad, came to be reflected beautifully' (SA 2672.116ab—*ásiki* = *wáruki* 'bad').

(1d) *V₁-tá mo V₁-ta* 'really did, did ever so much'; *V₁-(a)nái mo V₁-(a)nai* 'really doesn't/didn't, doesn't/didn't at all'; *A₁-í mo A₁-i* 'is ever so A'; *V₁-rú mo V₁-tári*: *Tábeta mo | tábeta* 'I ate and ate; I ate ever so much'; *Tabénaí mo | tabénaí* 'I don't eat a thing' or 'I haven't eaten a thing'; *Sirói mo | sirói* 'It is ever so white'; *Tóru mo | tóttari, || itioku-en no gomakasi da* 'Such a grab—it's a hundred-million yen swindle!' This intensive iteration is apparently limited to the paradigmatic forms given; cf. *AN₁ mo AN₁*, §13.5a. But here is an adnominalized example: *Tótta mo | tótta | itioku-en, || aita kuti ga husagaranai* 'A hundred million yen grabbed, I'm flabbergasted!' These expressions are vivid and short. They are never said with *kotó* or *nó* before *mó*.

(2) *V-tá {no} ga sáigo {da}* 'Once it has happened that's the end of it': *Sóto e || así o | dásita [] ga | sáigo {de}, || hyakuén-satu ga || tonde simaú no desu kara* '(Because) once I set foot out the door, there goes a hundred-yen note [for the taxi or the like]!'—On ellipsis of *dé*, see §9.1.12, §28; *Taru nánka e || té o | tukkónnda [] ga | sáigo {de}, || íkura | té o | aratt'átte, || tume no aida e | nuká ga | hasamáttimatte, || ano kusamí ga | nuké yaa | sinee [= nuké wa | sinai]* 'Once you've stuck your hand in the cask that's it, the bran is stuck

under your fingernails so you'll never get rid of the stench, however much you wash your hands' (Okitsu 1.296).

(3) V_1 -rú {no} to V_2 -rú {no} to 'V₁-ing and V₂-ing': Yómu to | káku to wa || tigau 'Reading it and writing it are two different things' (Kusakabe 1968.62); Kikú to | míru to wa || oo-tigai ... 'There's a world of difference between hearing and seeing ...' (SA 2672.116e with ellipsis of final [dé], SA 2678.27a with ellipsis of final [dá]); Tanaka san no musuko wa || "nómu || útu || kau" || mittú -tomo sorótte | irú kara, || o-yome no ki-té ga | arimasén 'Tanaka's son indulges in "drink, wager, and [geisha-]purchase" so he lacks a prospective bride'.

(4) S dé mo náí 'it is not even a matter of S; it is not exactly that S': Dáre o | togaméru de mo | náí | kutyoo de ... 'In a tone that wasn't accusing anybody ...' (SA 2647.86b); Syoomén de || muki-átte iru | gunsyuu wa, || ugóku de mo | náku || táda || níya-niya | sūru | 'The crowd facing each other head-on do not move but just sneer' (Gd 1969/9.108); Minná wa || hu-to | damátte, || káre o || míru de mo | náku, || mínai de mo | náku, || sekí no | yamu máde || mátte | yaru 'Everybody suddenly stops talking and, without quite looking at him nor quite looking away from him, they wait for the cough to stop' (SA 2659.69a).

(5) S ni túite 'with respect to S': ... kingu-sáamon o | turú ni | túite || ... kibisíi | saisoku ga | hootéi-ka(⁻) sarete ita ... 'strict regulations had been put into law with respect to fishing for king salmon' (SA 2668.88b).

(6) Miscellaneous types with ellipsis of V-rú {no}: Míru mo | múzan na | kinén-hin(⁻) ni (l) nátte simau 'It ends up being a souvenir horrible to look at'; ... míru mo | múzan na | súgata desita 'it was a horrible sight to see' (SA 2681.44d); ... nádo, || míru mo | kikú mo || kotogótoku || kono tabí ga | hazímete [de] || ... 'this trip was the first [opportunity] to see and hear all these things, such as ...' (SA 2662.51a); En-zúrú wa || Hitotubasi-dáigaku || karaté-bu no || Ée-kun [da] 'Lecturing is Mr A from the karate group of Hitotsubashi University' (SA 2674.99d). Koko ni híroo | simasúru wa, || ún o | tén ni | makásete no | dai-bóoken [da] 'What we will reveal here is a great venture with one's fate entrusted to heaven' (SA 2666.16)—for V-i-masúru, see p. 1031; "Tokoro kawaréba sina kawaru" | [to iú no] wa || toozen dá keredo mo, || Nepáaru de wa || bikkúri suru koto^[l] | bákarí desita | yó 'It is natural that "things differ as places change" (Tokoro [ga] kawaréba sina [ga] kawaru) but I tell you in Nepal it was one surprise after another' (SA 2664.110a); Kúu ni || komátte | irú no de wa | náí ka ... 'I wonder if they are not hard-pressed for food to eat ...'; Siranú ga | hotoké(⁻) désu | né 'Ignorance is bliss, you know' (SA 2671.47c); Watakusi ga omóu ni wa, || ... 'In my opinion, ...'.

(7) S nára S de yói/i—see §9.3.1: p. 562.

(8) Directly nominalized imperatives—with ellipsis of [to iú no]: Doronawa-siki ni, || kore ga tarináí kara || kane o kíhú(⁻) site kure | [to iú no] dé wa || komáru 'We are embarrassed when, at the last minute, they ask us to contribute money because this [= the donated food] is insufficient' (SA 2671.63d)—doro-~~boo~~-nawa '(making) rope after the robber appears'; Kumiai wa || toókkyoku ni | táí-site, || kensyúu-bi o | yokóse | [to iú no da] no, || kensyúu-hi o | dáse | [to iú no da] nó to, || meimoku daké wa || yói | yookyuu o | dásu, || honto no tokoró wa, || namake-tái no to | tigua ka 'The unions submit demands to the authorities that have a fine ring to them, all right, saying "Give us study days" and "Give us study stipends", but in truth don't they just want to loaf?' (SA 2661.112e); "Són [o] | sinai téido(⁻) ni | sigoto o yare^[l], | ga || kaisya no (l) mótoo da 'The motto of the company

[that exclusively employs retired people] is “Work only to the extent that you do yourself no harm” (SA 2681.104c); *Góo ni lireba* [= *háireba*], || *Góo ni sitagáe* (I) da ‘It’s “When in Rome do as the Romans do”’ (Fn 94a); *Sá-te* || *sore kara lesukooto-gáido o* | *sendoo ni* [site] || *zyóonai o* | *mawaru wáke de ga*, || *súgu* || *zyóonai* \neg *yoo* [no |] *denki-zidóosya*(\neg) o | *yobé no*, || *kán-tyoo*(\neg) ni || *demukaesase ró to* || *hunzori-káeru* | “oomono” ga *óoi* ‘Well then it is a matter of touring the [Expo] grounds with an escort guide leading the way, but there are lots of the “big shots” who call for one of the Expo-use electric cars and haughtily insist on being met by the pavilion heads’ (SA 2684.115b); *Íma wa* || *asobe*, *asobé no* | *zidai da* ‘This is the age of “play! play!”’ (SA 2792.17d); ... *umé yo* | *huyáse yo no* | *zidai* ‘the era of “breed and multiply!”’ (Shibata 1961.173); *Nóme ya* | *utaé no* | *oo-sáwagi* ‘A great spree of drinking and singing ...’.

(9) Directly nominalized hortatives: *Dé*, | *dóko e ikoo* | *koko e ikoo no* | *ageku* || *Mukoozima e* ... ‘Then, lacking any better inspiration, I went to Mukōjima ...’ (Kb 125a), *nó* = *de áru*; *Sore o kyootyoo siyoo ga* | *tamé ni wa*, ... ‘In order to emphasize that ...’ (Maeda 1961.121).

(10) Paired interrogative sentences of various types:

(10a) S_1 [ka] to S_2 [ka] to [iú no] o *tówazu*(\neg) ‘without respect to (regardless of) whether S_1 or S_2 ’: ... *sore ga* || *Nihon-go de áru to* || *gaikoku-go de áru to o* | *tówazu*(\neg) || ... ‘regardless of whether it is Japanese or is some other language’ (Tsuji-mura 1967.206). Notice that we must assume direct nominalization—or ellipsis—because the quotation-marker *tó* creates an adverbialization rather than a pure nominalization (cf. p. 997) and so can not take *ó*-marking. A less likely explanation would take the two quoted sentences as linked with the conjunctive *tó* ‘and’ (§2.7) and consider the direct nominalization as applied to each sentence before the linkage: S_1 [no] to S_2 [no] *tó o* ...

(10b) S_1 [ka] to S_1 -NEGATIVE [ka] to ‘whether S_1 or not’: *Minná ga* || *ísiki suru to* | *sinái to ni* | *kakawárazu*(\neg) | *né* ‘Regardless whether they are all aware of it or not’ (Tk 2.123ab); *Sikási* | *né*, || *utí*(\neg) to *iu monó wa*, || *wáihu ga* | *irú to* | *inái to dé* wa || *kóo mo* | *tigau ka to* | *omóu* | *kúrai* | *tigau* | *né* ‘But, you know, households differ to the point of making you wonder how they can differ so much, depending on whether there’s a wife or not’ (Tk 3.38a). These are not to be taken as juxtaposed quotations; the function of the two *tó*’s is to conjoin the directly nominalized sentences.

(10c) S_1 [ka] to S_1 -NEGATIVE [ka to] ‘whether S_1 or not’:⁴⁹ *Tokoró-ga* || *sakibiki no inú ga* || *irú to* | *inái de wa* || *éraku* | *tigau sóo desu* | *yó* ‘But they say it makes quite a difference whether there’s a dog pulling [the cart] in front or not’ (Tk 2.311a).

(10d) S_1 [ka to] S_1 -NEGATIVE [ka to [iú no]] ‘whether S_1 or not’: *Kaisan o suru sinái wa*, || ... = *Kaisan o surú ka* | *sinái ka to* | [iú no] wa, ... ‘(The question of) whether to dissolve or not ...’ (Tk 4.220a); *Dá kara* || *kau kawanái wa*, || *koosyoo no kekka daroo zya* | *nái desu ka* ‘So whether we buy or not surely will depend on the result of the negotiations’ (Fn 27b).

(10e) S_1 ka S_1 -NEGATIVE [ka no *utí*(\neg)] ni ‘no sooner S_1 than ...’ (see p. 928): ... *káre ga* || *yose-gáyo* o || *hazimerú ka* | *hazimenái ni*, || ... ‘barely had he started going to vaudeville shows when ...’ (Kb 279b).

(10f) S_1 *tó ka* S_1 -NEGATIVE *tó ka* ‘whether (saying) S_1 or (saying) not S_1 ’:

49. But * S_1 ka to S_1 -NEGATIVE ka (ga/o/de/...) is rejected.

Ueno no | Sinobazu-no-iké de, || hasu no haná ga | hiráku toki⁽¹⁾ ni || otó ga || surú tó⁽¹⁾ ka || sinái tó⁽¹⁾ ka, || zúibun || gíron sita kotó⁽¹⁾ ga | arimásita | né 'There was quite a debate over whether when the lotuses in Ueno's Shinobazu Pond open they make a noise or not' (Tk 2.289b).

(11) S zya náí 'it isn't a matter/question of S': Maa || íi | sá. ||—Maa || íi | zya || náí wa | yó 'Well, that's enough (about that).—Whaddaya mean that's enough?! ...' (? Fn). See also S zya náí ka etc., §15.16.

(12) Adnominalizations of direct nominalizations: V-rú no N, A-í no N. Although from a colloquial viewpoint this looks grossly ungrammatical, it seems to have been popular in Meiji writings and is still found in bookish texts (cf. 32-4 in the list earlier in this section).⁵⁰ In contemporary prose this pattern can perhaps be treated as an ellipsis of S no †da to iu† N. Compare S no ími = S tó no ími = S to iu ími †da† 'it means S'.

(12a) Adnominalizations of paired antonymous nominalizations: Kindái-ka(¯) ni tomonáu || syo-móndai no | náka ni wa, || sono mondai ga || hyoomén-ka(¯) suru (l) ziki ni || hayái || osói no | sá(¯) wa (l) áru ga, ... 'Among the various problems that accompany modernization, there ARE differences of being early or late in the time of the (particular) problem's surfacing, but ...' (CK 985.291); Yói | warúi no | mondai dé wa | náku, || i-zínruí wa | i-zínruí da 'It's not a question of good or bad, but race is race' (SA 2660.136c); Mookátte iru, || mookátte | inái no || mondai zya náí to | omóu 'I don't think it is a question of making money or not making money' (SA 2681.26b).

(12b) Adnominalization of other paired nominalizations: ... boo de nagúru || kéro no | ranboo o hataraita 'they beat [and kicked =] the living daylight out of him with a stick' (SA 2647.116). In another text (SA 2680.143b) a comma separates the two verbs: ... nagúru, || kéro no | ranboo-róozeki 'an outrage of punching and kicking'.

(12c) Other adnominalizations of direct nominalizations: ... térebi ni | sitasímu no | kóo to | moosemasyóo '(I suggest that) we can call it the season for familiarizing ourselves with television' (SA 2660.128a); Matumoto san wa || 'San-nen máe, | Tookyoo de || kissá-ten o | keiei site ita toki no || nazimí-kyaku de, || sanzís-sai 'kúrai' || †to iu† no hoka wa || náni mo | siranái no †da to iu† | litten-barí(¯) [dá] 'Mr Matsumoto sticks to the story that he knows nothing beyond that "He was a good customer at the time I was running a Tōkyō teashop three years ago and he is about thirty years old"' (SA 2663.127e); Wakái | monó mo || yagaté wa | oíru. || Soo sita | sake-erarénaí | zízitu o | músi site wa || ningen táru no | sikaku súra | náí 'Young people eventually get old. If you ignore that unavoidable fact, you lack even the qualifications to be a human being' (SA 2655.29d)—for táru, see p. 748. There is a way of making a title that places the literary attributive before ... no kí 'a chronicle of ...': Náki | háha o | kóuru no | kí 'A chronicle of loving one's late mother' (SA 2684.238—heading). In this example, kóuru was spelled with kana *u* rather than the historically correct *hu*; even so, the form is a puzzle until we discover that although the verb ków- 'love' is a consonant base in the colloquial (and accordingly we would expect the attributive and predicative forms of the literary to converge as kó[h]u) in the literary language it is a vowel-base verb, with the infinitive kó[h]i identical to the colloquial, but with the imperfect ko[h]úru, the predicative kó[h]u, and the negative kó[h]izu. A rare example of the direct nominalization of an adjectival noun + ná is cited by Kholodovich (118), from the 16th-century translation of Aesop's fables: Áru-toki | yazin || kaihen [=

50. According to Noriko Kajikawa the example Nagái no no | hóoga | yói 'The longer (one) is better' is cited as early Meiji usage by Yamada Yoshio (Nihon bumpō kōgi p. 205, Tōkyō 1924).

kaihin] ni || déte || úmi no | mǐdori no || nagóyaka NA O | mǐreba || ... 'Once when a hick went to the seaside and saw how peaceful the green of the ocean was ...'. In the following sentence zyoozú and hetá are used as abstract nouns (paratactically conjoined) rather than being directly nominalized adjectival nouns, as one might mistakenly think: Tuzurí ga || tadásiku sae | áreba, || kaki-káta no | zyoozú^[U] [] hetá wa, || mondai ni simasén 'If the spelling just be right, I won't make an issue over the skill or clumsiness of the penmanship'.

Mátta, the perfect of mátu 'waits', is used as a noun in the expression máttá o kakéru/ suru 'calls a halt': ... kookoku ni || máttá o | káketa || Koo-tori-i [= Koosei-torihiki-iinkai] é no | uramí wa | hukái 'Deep is the resentment toward the Fair Trade Commission that called a halt on the advertising ...' (SA 2674.130b). This is also used in the idiomatic *Matta-nási da* 'No "time out" allowed'. Other examples of directly nominalized perfects: Syakei-keíken no | tobosíi(¯) | wakamonó(¯) ga || wakátta | wakátta de, || tuppasíru to | abunai 'It is dangerous when young men with no social experience go dashing in with the idea they know it all' (SA 2678.49ab); Seiyóo-zin dattara, || yappári || boomei sitára | boomei sitá de, || soko no kuni de | sinu máde | kurasu to iu hitó ga || zúibun || óói | wáke desu | yó | né 'When it comes to Occidentals, if they go into exile they are (really) IN exile and there are lots who live till death in the other country, you see' (Tanigawa 165); ... Sagáreba | sagátta de, || ... 'When they fall ...' (SA 2679.28bc—the full example is given in §9.3.1); Koo iu tokoró no | hitó wa, || sore, || té ga | sawatta, || así ga | sawattá de | kane o | toru 'People in this sort of position, why, they take in money every time they lift a finger or move a toe' (Fn 146b); ... subétta | korondá de || atamá ga | ippai désu | né 'my head's abuzz with all the criticism' (SA 2838.42a).

There are a few situations which leave infinitives dangling in odd places, as if suddenly nominalized; e.g., with the ellipsis shown below that leaves us with a rare example of ní o: Soko de || kekkón-siki wa | gensyuku ni [site], || hiróo-en wa | kánso NI | [surú no] O || móttóo ni [site] || kekkonsikizyoo o | sekkei sitá n desu 'Thereupon we set up a wedding festivity hall with the motto "Make the wedding ceremony solemn, the reception simple", you see' (SA 2684.65c). In the following example the infinitive ári is used three times in the function of a literary predicative, and the conjoined phrase that results is directly nominalized: Gensoku ári, || reigai ári, || kyoyoo ári de, || ... 'What with rules, with exceptions, with dispensations, ...' (Kaneda in Ōno 1967.276). Cf. §13.9, where you will find more examples. A negative version of this structure will replace ári with nási: Ko nási, || íé nási, || kane nási de/no || hidói | kurasi désu ga, || sini-tákú mo | arimasén 'It is a terrible life, with no children, no home, no money, but I have no desire to die'. And you will find the literary copula nári used in a similar way: Mukasi wa || musumé nari, || túma nari, || zotyuu nári de, || sono | kami-kátati [= kami-gata] mo || íhuku mo | tigatte ita monó da 'In the old days it used to be that both your hair style and your clothes differed as a girl, as a wife, as a maid'; Soko ni atumátta | hitó-tati ni wa || gakusya ári || ongak[u]-ka ári || geizyutu-ka ári de, || iroiro na hitó ga | imásita 'There were all sorts of people gathered there—scholars, musicians, artists'.

There are various other kinds of direct nominalizations, often hypostatic as in the quasi quotation in this sentence: Ryokóo-sya no | ningen to | áezu ni, || hagúrete | simattára, || "bánzi | kyúu-su" de aru 'If we should stray so we can't get in touch with a person from Intourist, all would be lost [since one can not eat without food coupons]' (SA 2656.62a).

14.6.1. *Ní* [wa/mo] *tigai náí*.

A sentence in the imperfect or perfect (but not the tentative) will allow you to add *ni tigai náí* with the meaning 'surely, undoubtedly, no doubt' or '(surely) must be/do' etc. In a nominal sentence the imperfect copula *dá* obligatorily drops:

Yobu. → Yobú *ni tigai náí* 'Surely he calls (or will call)'.

Yonda. → Yondá *ni tigai náí* 'Surely he called'.

Ookii. → Ookíi *ni tigai náí* 'Surely it is large'.

Óokikatta. → Óokikatta *ni tigai náí* 'Surely it was large'.

Hón da. → Hón *ni tigai náí* 'Surely it is a book'.

Hón datta. → Hón datta *ni tigai náí* 'Surely it was a book'.

Sízuka da. → Sízuka *ni tigai náí* 'Surely it is quiet'.

Sízuka datta. → Sízuka datta *ni tigai náí* 'Surely it was quiet'.

Tigai is a noun 'discrepancy' derived from the infinitive of *tigau* 'it differs', and *tigai náí* can be thought of as a reduction from *tigai ga/wa náí* 'there is no discrepancy (in the fact that ...)'; the form with *wá* is also heard: *Kákkoku* | *kisyá-dan wa*, || *itte míreba*, || *o-tagai ni* || *kyoosoo-áite de* | *áru kotó* | *ni* | *tigai wa náí ga* ... 'The corps of international reporters no doubt are, so to speak, rivals to one another but ...' (SA 2658.62d). A less colloquial way to say the same thing is *ni sooi* {*wa*} *náí*; *sooi* is a synonym of *tigai*: *Íma de mo*, || *Mótoko wa* || *konna húukei no* | *náka ni* | *itá ni* | *sooi náí* 'Surely Motoko was still in a setting of this sort' (lg 1962.86); *Káre wa* || *hídoku* || *yopparatte itá ni* | *sooi arimasén* 'There is no doubt that he was dreadfully drunk' (SA 2637.29b).

These expressions can be made from most imperfect or perfect sentences, regardless of origin, including negatives: *Yobanáí ni tigai náí* 'Surely he won't call'; *Óokiku náí ni tigai náí* 'Surely it isn't large'; *Hón zya náí ni tigai náí* 'Surely it isn't a book'; *Osóraku tábete ináí ni tigai náí* 'No doubt they don't eat it' (SA 2677.62e). You can even create such involved sentences as *Yobanai kotó ga náí kotó mo náí ni tigai náí* 'Surely it also never happens that they unfailingly call' with a quadruple negative (§14.1.1). But the expression is incompatible with hearsay (*... *sóo ni tigai náí*), with the semblative (*... *rasíi ni tigai náí*), and with the evidential (*...-*sóo/-gé ni tigai náí*).

The sentence that you end up with can be stylized (*ni tigai* {*wa*} *arimasén/gozaimasén*), quoted (*ni tigai náí to iu*), hearsay-reported (*ni tigai náí sóo da*); it can be made perfect (*ni tigai nákatta*)⁵¹ or tentative (*ni tigai náí daróo*) or perfect tentative (*ni tigai nákatta daróo*); it can be extended (*ni tigai náí né/ka/etc.*—even *ni tigai náí ka mo sirenai* 'maybe there's no doubt that'); it can be adnominalized (*ni tigai náí N* 'The N that undoubtedly') or nominalized (*ni tigai náí kotó* [*ga áru*], *ni tigai náí no da*), converted to infinitive (*ni tigai náku* [*náru*]) or to gerund (*ni tigai nákute wa/mo*, *ni tigai náí de*),⁵² made concessive (*ni tigai náí nagara* 'while surely'), made provisional (*ni tigai nákereba*) or conditional (*ni tigai nákattara*) or representative (*ni tigai nákattari*); it can be conjunctionalized (*ni tigai náí kara/to/si/etc.*); it can become evidential (*ni tigai nasa-sóo da*, *ni tigai na-gé da*) and semblative (*ni tigai náí rasíi*); the nucleus can be subdued (*ni tigai náku wa áru*) or highlighted (*ni tigai náku mo áru*, *ni tigai náku sae áreba*). But the expression can not be made excessive: there is no *... *ni tigai nasa-sugiru* (cf. *Tigai ga/wa nasa-sugiru* 'There are too

51. *Sore wa* (|) *sóo* [*de aru*] *ni* | *tigai nákatta* 'There was no question but of it's being true' (lg 1962.86).

52. But further uses are subject to the limitations of *áru* itself, e.g. you do not expect to get *... *ni tigai náí de kudasái*.

few discrepancies'). And it is limited with respect to a few other things more generally precluded from adjectivals (e.g. forming a desiderative) or verbals outside human control (e.g. favors, potentials).

As elsewhere, there are subtle differences depending on whether a conversion is applied to the inner or the outer expression: *Sore dátta ni tigai náí* means 'There's no doubt it was that', *Sore ni tigai náí* means 'There's no doubt it is that', *Sore ni tigai nákatta* means 'There was no doubt that it was that', and *Sore dátta ni tigai nákatta* means 'There was no doubt that it was (had been) that'.

Additional examples: *Óoki na | kutuzyoku dátta ni | tigai náí* 'It was unquestionably a great humiliation' (SA 2649.105e); ... *kowáreta | dóa kara | hazusitá ni tigai náí || kugi-ana no hiraki-sugita (l) kanagu ...* 'a metal fitting with over-wide nail holes that must have been removed from a broken door' (SA 2645.46a); *Suróogan wa, || kooyaku no íssyu ni wa | tigai náí* 'Surely a slogan IS a kind of public commitment' (SA 2666.37b); *Méiga ni wa | tigai náí no | daróo ga, ...* 'It is probably undeniable that it is a famous painting but ...' (SA 2648.4); *Kono náka kara || sugúreta lsi o mituke-dásu kotó wa, || nankai dé wa | lnáku to mo, || nánzi de | áru ni wa | tigai náí* 'It is certainly a hard job to find an outstanding poem among these, even though they are not hard to understand' (SA 2654.43b); ... *GNP [zii-enu-píi] no | zoodai wa || sínpo no | hitótu ni wa | tigai náí ga ...* 'increase of GNP is certainly a (kind of) progress but ...' (SA 2689.140d).

In substandard and dialect speech you will hear the pronunciation *tigee née*: *Sóo ni wa | tigee née* 'That must be right' (Kb 95a). (This will sound more natural with *ni wa* reduced to *nya*.) According to Fujiwara 67 the sentence *Tigai náí* is used in Shizuoka to mean 'Yes, indeed'. The Kōchi dialect of Shikoku uses ... *ni kaaran* (= *kawaranai*) to mean ... *ni tigai náí* or ... *rasíi*, according to Zhs 5.18.

14.6.2. *Ní [wa/mo] sugínai*.

When a sentence is followed by *ni sugínai* the meaning is 'It is nothing more than (a case of) ...' or 'only, just, merely'. Often there is an anticipatory *táda* 'just' or *tán ni* 'simply': *Koré-ra wa || tán ni || doogú ni | sugínai ga ...* 'These [examples] are nothing more than merely [words for] tools but ...' (Ōno 1966.162); *Táda || iu | békí | súbé o | siranái ga | tamé ni, || sono yóo na | monoíi o | site irú ni | sugínai* 'They only talk like that because they don't know what to say' (Maeda 1962.54). An imperfect nominal sentence obligatorily drops the copula [*dá*]: *Tíisa na | hón ni | sugínai* 'It is merely a little book'. Adjectival nouns can take the expression: *Maré(-) ni sugínai* 'It is just rare (that's all)'; cf. *Mare-sugiru* 'It is overly rare' (or 'Too many of them are rare'), *Mare-suginai* 'It is not overly rare' (Or 'It is not true that too many of them are rare')—said only as contradiction or sarcasm.

The sentence to which *ni sugínai* is attached can be imperfect, perfect, negative, etc., but not tentative (**Yobú daroo ni sugínai*) nor hearsay (**Yobu sóo ni sugínai*). The semblative has been reported, though with some disapproval, in sentences like *Sensoo ga okótta | rásíi ni sugínai* (= *Sensoo ga okótta | rásiku miéru ni sugínai*) 'It just LOOKED as if a war had broken out'; and there seems to be some doubt about approving the evidential in sentences like *Zyoobu-sóo [na no] ni sugínai* = *Zyoobu-sóo ni miéru ni sugínai* 'He only LOOKS robust'. Both ... *ni tigai náí ni sugínai* and ... *ni sugínai ni tigai náí* are said to be acceptable.

The resulting sentence can be converted into any sentence appropriate for a negative,

including the evidential (ni suginasa-sóo da) and the semblative (ni sugínai ~rasíi). But it can not have its nucleus put in focus: *ni suginaku wa áru, *ni súgi wa sinai; *ni suginaku mo/sae áru, *ni súgi mo/sae sinai.

The form N ní sika sugínai 'it is nothing more than just ...' also occurs: Zítú wa ll róbotto ni sika | sugínai 'It is really nothing but a robot' (SA 2635.21); Seiyoó-zin no | gaikoo ~zyoo no ll bízi (l) réiku wa ll hizoku na | don'yoku(¯) o | ooi-kakusu, ll tán naru ll véeru ni sika | sugínai no de wa | náí ka 'Isn't the diplomatic eloquence of the westerner nothing but just a mere veil to cover up his vulgar greed?' (CK 985.295). Here is an elicited example of V-tá/-rú ni sika sugínai: Gutai-teki na kotó wa | nóbezu, ll táda ll ippan-teki na kotó o | setumei sitá/surú ni sika | sugínai 'Instead of saying something concrete they only explained/explain in generalities'. But it is difficult even to elicit an example of A-í/-kátta ni sika sugínai.

14.6.3. *Ní [wa/?mo] kimatte iru.*

Any imperfect or perfect sentence can add ni kimatte iru 'obviously', 'you must expect it to (be true that)', 'it is sure (certain, bound) to be the case that': Seikoo surú ni wa | kimatte irú ga ll zikan ga kakáru desyoo 'He is bound to succeed but it will take time'; Konna ni tábetara, ll o-naka [o] kowásu ni | kimatte 'ru wá 'If he ate this much, he's sure to be in for a stomach upset' (Ariyoshi 33); Mukóo(¯) ga (l) kátu ni | kimatte iru 'The other side is bound to win'; Káre wa ll korosarerú ni | kimatte ita 'It was clear that he would be killed'; Ikanáí ni | kimatte iru | sá 'Of course I won't go'; Natú wa ll atúí ni | kimatte iru 'You have to expect summers to be hot'; Kusuri wa mazúí ni | kimatte iru 'Medicine always tastes bad'; Kono ié mo ll káno-zyo no | monó de aru ni | kimatte iru 'Obviously this house belongs to her, too'. In the last example, de áru ni could be made more colloquial by using ná no ni or simply ní (with the imperfect copula dropping).

The resulting sentence can not be made negative,⁵³ but it can be turned into a tentative (ni kimatte irú daroo 'I think that obviously ...') and it can be converted to polite style: Aa iull yaru kí no náí | sensoo wa, ll makerú ni | kimatte imásu 'An (unwilling =) unpopular war like that you're bound to lose' (SA 2668.47c).

14.6.4. *Ni kagíru.*

The expression ni kagíru can be added to an imperfect sentence with the meaning 'the best (or only) way is to (do/be)': Kimi wa ll damátte irú^(y) ni | kagíru | yó 'Your best bet is to keep your mouth shut'; Isogasíi ni | kagíru 'The only thing to do is be busy'; Tatami wa ll atarasíi ni | kagíru 'Mats are best when new'; Syaberánai ni | kagíru | yó 'You do best to cut out the chatter'; Heiki de irú no ni | kagíru 'It's best to stay unperturbed'; Eigo ni zyukutatu surú ni wa | Amerika ni itte benkyoo surú ni | kagíru 'The best way to master English is to go study in America'. But the imperfect copula in a nominal sentence will obligatorily drop: Kore ni kagíru 'This is the best'. The expression can be made negative, as a denial or contradiction. But internal focus is rejected: *... ní wa/mo kagíru. Cf. [NEGATIVE +] ... tó mo kagiránai; ... tó wa kagiránai—§21.1.(8).

14.6.5. *Ní [mo] koto-kaite.*

The expression ní [mo] koto-kaite can be added to a verbal imperfect with the meaning

53. Not even as a denial or contradiction. Where that is wanted you will find S tó wa kimatte inai.

'of all the possibilities to ... (you had to go and ...)': *lú ni [mo] | koto-kaite || sonna sitúrei na | ii-kata o suru* 'Of all things you have to say something so rude!'; *Hanásu ni | koto-kaite, || byoonin no makurá-moto de, || saikin || onazi byooki de sinda hitó no koto⁽¹⁾ o | ii-dásita* 'Of all the things one might talk about, he had to start talking at the patient's bedside about someone who had recently died of the same malady'; *Nihon-zín wa || gaikokuryókoo no | kinén-hin(-) to site || kaú ni mo | koto-kaite || sono || Nihon-séihin o | katte káetta* 'Of all things for a Japanese to buy as a souvenir of travel abroad he came back with something made in Japan!'. The focus can be highlighted but not subduded: *... *ní wa koto-kaite*. I have been unable to find or elicit a negative in this expression. *Koto-kaite* is a contraction of *kotó o kaite* 'lacking the ...-ing', and you will sometimes find the uncontracted form: ... *saserú ni | kotó o | kaite, || ...* 'for lack of anything (better/else) to have her do' (Fn 45b). Alternate accentuations: *kotó-kaite, koto-káite*.

14.6.6. Verbal Iteration with Direct Nominalization + *ní*.

There are two patterns of verbal iteration that involve direct nominalization of the imperfect verbal. The first is $V_1 \text{ ní wa}(?/mo) V_1$ and it seems to be roughly equivalent to $V_1 \text{ kotó wa } V_1$ (§ 14.1—that pattern holds not just for V but for any S): *Ikú ni wa | ikú ga/kedo || = Iku kotó wa | ikú ga/kedo ||* 'I'm going, all right, but ...'; *Reigai mo || áru ni wa | arimásu ga ||* 'There are exceptions, to be sure, but ...'; *Hanásu ni wa | hanásita n desu ga ||* 'I spoke, all right, but ...'; *Irú nya [= ni wa] | irú kedo ||* 'There ARE some but ...' (Saitama, Zhs 2.179); *Sakana mo || tabéru ni wa | tabéru ga, || anmari sukí zya | ná i na da* 'Fish, too, I'll eat, but I'm not too fond of them(, either)'; *Ittá ni wa | ittá ga || súgu || káettyatta n da* 'I went all right but I came right back'; *Dóa wa || áru ni wa | áru ga || kagí mo | zyoo mo ná i kara, || sore wa || íssyu no | soosyoku ná no da to | kangáeta hóo ga | tadasikatta* 'It has [= had] a door all right but no key or lock, so that it was more accurate to think of it as a kind of decoration' (SA 2659.67b); *Káesu ni wa | káesu ni | sité mo ||—uti(-) e || han-tukí -bákari | oit' oite || sore kara káesu kotó⁽¹⁾ ni | simasyóo ka* 'We WILL return it, of course, but shall we plan to put it away in the house for a couple of weeks and then return it?' (R)—note the second direct nominalization with ... *ni sité mo*, p. 893. The sentence can end without expressing the reservation of the 'but' clause: *Mukasi kara, || syokugyoo-byoo to sité no | zensoku wa, || áru ni wa | látta* 'From early days asthma HAS been around as an occupational disease, to be sure' (SA 2649.41c).

The second pattern is $V_1\text{-rú ni } V_1\text{-POTENTIAL NEGATIVE}$ with the meaning 'can not possibly (do)': *Urú ni | urenai | uti(-) ...* 'A house one can't sell for the life of one ...'; *Kosú ni | kosarenu | kakí ga | áru* 'There is a fence impossible to cross'; *Yamú ni | yamarenu | kimoti ...* 'An impulse too strong to resist'; *Iú ni | iwarenu | kanasímí(-) ...* 'An agony beyond description'; *Susumú ni | susumarenu | kónzatu ...* 'A total impasse'; *Kaú ni | kawarenai | kottóo-hin(-) ...* 'A curio that can not be bought for love nor money'; *Tóku ni | tokarénu | mondai ...* 'A problem beyond solution'; *Koráeru ni | koraerarenu | kutúu(-) ...* 'A pain one can not possibly endure'; *Déru ni | derarénu | kago no tori ...* 'A caged bird that can not get out'; ... *míru ni | mi-kanete* 'unable to look' (Fn 50a). There are examples of highlighting: *Nakú ni mo | nakenu | ningyoo ...* 'A doll that can not even cry'; *Sinú ni mo | sinezu, || ikíru ni mo | ikiraréni* 'I can't die, nor can I go on living' (Fn 412b).

In contrast with $V_1\text{-í [wa/mo] } V_1\text{-ru}$ (§ 9.1.1a), this pattern is rather literary and seems to be largely limited to imperfect adnominal use, as in most of the above examples. But KKK 3.145 has an example with a hortative adnominal: *Dénsya(-) wa | tyoo-mán'in [de], ||*

óku no h⁽²⁾o ni | osi-komerárete simatte, || oriyóo ni mo | orirarénaí 'The train was so crowded that we were shoved back and could not get off, try as we would'. This contains highlighting and is used predicatively; it probably belongs with the types in § 17.7. Verbal nouns do not readily enter into this structure (? VN surú ni VN dekinai N). Cf. V-rú ni taénaí 'can not stand doing' (§ 14.6).

14.7. ABSTRACT LEXICAL NOMINALIZATIONS OF ADJECTIVES AND
ADJECTIVAL NOUNS (A-sa, AN-sa; A-mi, AN-mi)

In addition to the regular paradigmatic forms that are used in the various conversions we have discussed, there are a number of ways to derive nouns from adjectives, adjectival nouns, and verbs. In § 14.5 we discussed nouns directly derived from verb infinitives, and in § 14.8 we describe some abstract nouns derived from verbs by attaching suffixes to the infinitive.

Each adjective will derive an abstract noun by adding the suffix *-sa*. In some of the dialects, notably those of the Ryūkyūs, these forms function much like the infinitive *-ku* and combine with the auxiliary *ár-* to predicate the adjectives. But in standard Japanese the forms are limited to use as nouns, and our principal reason for discussing them in terms of sentence conversions is that the subject of a particular adjective can be genitivized to the abstract noun derived from it: *kí ga takái* 'the tree is tall' → *kí no táka-sa* 'the height of the tree', *kotó ga muzukasíi(-)* 'the matter is difficult' → *kotó no muzukási-sa* 'the difficulty in/of the matter'. Examples: *Kuzira no ému no | nága-sa(-) wa || zyuu-méetoru ni mo | náru | yó* 'The length of a whale's M[embrum = penis] may be a whopping ten meters!' (SA 2676.114c); *Sono || ningen-rási-sa o | kan-zita* 'He felt his (-) humanness'.

The accentuation of the *-sa* forms is unstable. In general, the accent will follow the basic accent of the infinitive (*háya-ku* : *háya-sa* 'speed, earliness') but the traditionally "atonic" adjective bases cause difficulties, since the infinitive shows its basic accent only when a particle follows, and then there are two versions: though *abunaku náru* 'becomes dangerous' displays no accent in the infinitive, *abunákú wa naránai* 'does NOT become dangerous' is said with the accent either on the ending or on the last syllable of the base. When the ending is *-sa*, the atonic base will ordinarily be accented on the last syllable of the base: *abuná-sa* 'dangerousness'. But for shorter atonic verbs, the usual practice is to treat the noun as atonic: *aka-sa* 'redness', despite *akákú wa naránai* 'does NOT become red'; *omo-sa* 'heaviness', despite *omókú wa naránai* 'does NOT become heavy'. Some speakers also prefer to atonicize the derived nouns from shorter TONIC adjectives as well; K cites *taka-sa*, *naga-sa*, and *tuyo-sa* as "newer" versions for the traditional *táka-sa*, *nága-sa* 'length', and *túyo-sa* 'strength'—and also lists both *hutó-sa* and *huto-sa* for *hutó* 'fat around'. Atonic *oo-sa* 'muchness' and *ooki-sa* 'bigness = size' are the only forms reported for *óo-* 'much, many' and *óoki-* 'big'.

Most adjectival nouns will also attach *-sa* to make an abstract noun.⁵⁴ The prevailing accentuation rules (Akinaga 49 in NHK) yield atonic forms from atonic adjectival nouns but accentuate the syllable just before the suffix when *-sa* is added to a tonic adjectival noun: *seikaku* 'exact', *seikaku-sa* 'exactness'; *kiraku* 'comfortable', *kiraku-sa* 'comfortableness'; *óroka* 'stupid', *oroká-sa* 'stupidity'; *genki* 'healthy', *genkí-sa* 'healthiness'.

54. And this is true regardless of the pedigree of the adjectival noun: *Derakkusú-sa wa arimasén ga*, ... 'There's nothing of the deluxe to it, but ...' (Tsunagoshi 131a).

This sentence contains an abstract noun from an adjective (*yóí*) as well as one from an adjectival noun (*bénri*): *Keirin keiba no yó-sa wa || súhyakú-en de | kén ga | kae, || utí(-) de | térebi o | míru kotó mo | dekíru to iu || benrí-sa ni | áru no de wa | náí ka* ‘The good thing about bicycle races and horse races surely lies in the convenience that you can buy a ticket for a few hundred yen and watch them on television at home, even’ (SA 2664.33d). And here is an example of a fairly long adjectival noun (*ii-kagen*): ... *kore máde no | kyooiku no || iikagen-sa ga wakáru* ‘You can see the perfunctory nature of education up to now’ (SA 2666.97d). *Sízuka* is usually given the irregular form *sizuké-sa* ‘quietness’, but *sizuká-sa* has recently been turning up in automobile advertisements;⁵⁵ it is the traditional reading given to the word in a haiku by Bashō composed in 1869: *Sizuká-sa ya || iwá ni | simi-íru | semi no kóe* ‘The stillness!—the cicada voices permeate the rock’ (cf. Miyara 1954.188). *Sizuké-sa* is formed on a literary adjective *sizúke-si* = *sízuka da* ‘is quiet’.

Abstract nouns can be made from desideratives and negatives, including *nái*, the negative of *áru*: ... *zisin no ná-sa* ... ‘lack of self-confidence’ (Tk 2.140a); ... *tóonai ni | okéru(-) | híhan(-) no (|) ná-sa* ... ‘the nonexistence of criticism within the party’ (SA 2663.20a). The accent of such forms will usually follow the accentuation of the underlying form. Atonic negatives will yield atonic *-sa* forms, tonic negatives will accentuate the *-sa* form on the same syllable as the other negative forms.

Abstract nouns form compounds rather freely with *-kágen* ‘the extent of its being ...’ (see §9.1.7); this is the form in which you will often find the abstract nouns from negativized verbs (*V-ana-sa - kágen*), but occasionally *V-ana-sa* appears in other contexts: *Sono || wakarána-sa ni | heikoo sita* ‘I was amazed at his failure to understand’; *Zibun no itarana-sa wa || zikaku site orimásu* ‘I am fully aware of my own inadequacy’; ... *kooun ní mo, || tatimati || káre wa, || sono kakkoo no tukána-sa kara | sukuwareta* ‘as fortune would have it, suddenly he was saved from the unseemliness of the situation’ (Kb 302a). It seems to be rare for the negativized adjective to make an abstract noun; I have no examples of *A-ku ná-sa*, despite an unusual example of an abstract noun made on the negativized copula (*N de ná-sa*): *Sono sógata no | karisome de ná-sa ga, || Ítoko o | omoku útta* ‘The untriviality of the figure struck Itoko heavily’ (Ig 1959.57).

There are compound nouns made by attaching *hósi-sa* ‘desire’ to adjective + noun: *amai-mono-hósisá* ‘a desire for sweet things’, *takai-mono-hósisá* ‘a taste for expensive things’, *mezurasii-mono-hósisá* ‘a yearning for exotic things’, The *-sa* form is sometimes used as an expletive (cf. Hayashi 155-6) as in this example: *Amarí no kudaraná-sa* ‘Stupidity to spare!’ = ‘How terribly stupid!’ An emphatic iteration of the adjective is made by subduing the abstract noun and following with the literary predicative *A-sa wa A-si* ‘is ever so A’: *Kura-sa wa kurá-si* ‘It is ever so dark’ (Kb 227b); *Sámu-sa wa sámu-si* ‘It is cold as cold can be’.

For adjectives that express a psychological or emotional state, there is a type of sentence conversion that will leave adjuncts intact while adding *-sa ni to mean* ‘out of a feeling of ...’: *Soo iu kotó ga | iyá-sa ni, || Ken’iti wa || suki-ppara o osáeru kotó ga | tabitabi de átta* ‘Out of a feeling of dislike for such things, Ken’ichi found himself having to put up with an empty stomach quite often’ (Ig 57); *Sikararerú no ga | kówa-sa ni, || utí(-) e (|) kaeránakatta* ‘From a dread of getting scolded, he would not go home’; *Syozaí-ná-sa ni* ...

55. And it is found in each of the last two sentences of Endō 265. Cf. p. 760 n. 77.

'From boredom ...'; Káre no |gíron ~méita |hanasí o | háyaku | yamete morai-ta-sa ni, ... 'Out of a desire to have a speedy end put to his argumentative talk, ...'; ... waribiki site morai-ta-sa ni ... 'from a desire to get a discount' (Endō 189); Yooroppa-kénbutu |si-ta-sa ni || ... 'With the desire to see Europe ...' (SA 2670.138); ... sono onná no kao [o] mí-ta-sa ni ... 'from a desire to see that woman's face' (Endō 189). From kowái monó ga/o mí-ta-sa ni 'out of a desire to look at scary things' comes a derived noun kowaimonomítasa 'a desire to look at scary things'; it is followed by the gerund dé in Fn 62a. The structure of the noun is similar to that of naimono-nédari 'asking for the unobtainable' ← náí monó o nedari 'pestering for that which does not exist'.

In addition to the -sa form, some adjectives derive a somewhat less abstract noun with the suffix -mi: táka-mi 'height (= high place)', omo-mi 'weight (= pressure)'. According to Akinaga (49 in NHK) the appropriate accentuation rule tells us to make atonic forms from atonic adjectives (ama-mi, akaru-mi, yasasi-mi) and to put the accent on the suffix for shorter tonic adjectives (niga-mí, sibu-mí); the longer tonic adjectives yield forms accentuated on either the suffix or the last syllable of the base, or atonic forms: omosiró-mi, omosiro-mí, omosiro-mi. But there seem to be individual fluctuations and exceptions (táka-mi 'height'). A few adjectival nouns also produce -mi forms, and the accentuation is variable: sinken 'earnest' yields sinken-mi or sinkén-mi; sínsetu yields sínsetu-mí, sínsetú-mi, or sínsetu-mi (Akinaga, *ibid.*).

For some words, variant accentuation correlates with a difference in meaning: atu-sa means either 'hotness, heat' or 'summer heat' but átu-sa is limited to the second meaning; sámu-sa means either 'cold(ness)' or 'winter cold', but samu-sa is limited to the specialized meaning. In the meaning 'deep place' K lists both huka-mí and huká-mi, but in the meaning 'depth' only huka-mí; siró-mi means only 'sap, albumen; white meat' but síro-mi has the general meaning 'whiteness' in addition to the specialized meanings.

Little is known about the origin of these suffixes. The suffix -mi is usually taken to be identical with the old literary "alternative" form (V₁-i-mi V₂-i-mi = V₁-tári V₂-tári, §9.4) and with the suffix that participated in a peculiar construction of early Japanese, N o A-mi 'because the N is A'. It seems likely that the source for these several kinds of -mi is the infinitive of a verbalizing suffix -m-, still found in over 20 verbs derived from adjectives, e.g. itámu 'hurts' from itái 'is painful', and as part of the suffixes -me- and -mar- that occur (separately or, with paired transitivity, jointly) for over 30 adjectives: hiroméru 'widens it', hiromáru 'it widens' from hirói 'is wide'. The suffix -sa has been etymologically associated with samá 'appearance' (earlier also 'direction'); see the discussion of the dialect particle sa 'to' on p. 49.

14.8. ABSTRACT LEXICAL AND SENTENTIAL NOMINALIZATIONS OF VERBS (V-i-yoo, V-i-kata)

Virtually every verb will derive an abstract noun by attaching to the infinitive the suffix -kata; if the verb is tonic, the noun will carry an accent on the penultimate syllable (hanási 'talking', hanasi-káta 'way of talking') and if the verb is atonic the noun will also be atonic (yobi 'calling', yobi-kata 'way of calling'). Although the resulting noun will retain the possibilities of the underlying verb for selecting particular adjuncts, the adjuncts are usually adnominalized (by propredication or genitivization): Watasi ga || mé o | mi-háttá no wa, || mázu || dáí-iti ni || gakkí é no || káre-ra no || nazimi-káta de aru 'What caught

my eye was, first of all, the way they were familiar with their instruments' (SA 2665.33a) ← *káre-ra ga* | *gakkí (e =) ní nazímu* 'they become familiar with their instruments'; ... *kabe no kizuki-káta* 'the construction of the walls' ← *kabe o kizúku* 'they construct the walls'; *Syakai-ka* [no] *zyúgyoo no* | *uke-káta* ... 'Receiving instruction in social studies ...' ← *zyúgyoo o* | *ukéru* 'they receive instruction'; *Inú o* || *ziyúu ni* | *saseru* ||—*sore ga* || *wága-ya no* | *inú no* | *ai-si-káta datta* 'Giving the dog his freedom—that was the way we loved dogs in our family' (SA 2663.103a) ← *inú o* | *ai-súru* 'we love dogs'; ... *kí no* | *ue-kata* || *arú-wa* || *isi*^[1] | *no oki-kata de*, || *hitótu no* | *niwa ga* || *híroku* | *náttari* || *sémaku* | *náttari suru* 'By the planting of trees or the placing of stones, a single garden gets wider or narrower' (Tk 2.327a) ← *kí o* | *ueru* 'they plant trees', *isi o* | *loku* 'they place stones'. The noun need not carry any of the underlying adjuncts; it can be modified by other adnominalizations: *Ke no seisitu wa* || *amari zyootoo de náku*, || *arai monó de*, || *arai tumugi-káta o* | *site iru* 'The quality of the wool being none too high, it is coarse stuff and is given a coarse weave' (SA 2685.79); *Siká-mo* || *kono umare-kata mo* || *sodati-káta mo* || *kyooyoo mo* || *minná*^[1] | *tigattá n desu* 'Moreover, both this way of being born and of being brought up, and the education, too—all were different' (R).

The abstract noun can be made from voice-converted verbs (*sase-kata* 'way of making one do', *sare-kata* 'way of being made to do'), from verbal nouns (VN *si-kata*), and from verb infinitive + auxiliary (*si-tuzuke-káta* 'way of continuing to do it').⁵⁶ A few examples: ... *imootó ga* | *zankoku na korosare-kata o* | *suru bámen*(⁻) | *ga* (l) | *átte* ... 'there is a scene [in the book] where the younger sister was the victim of ruthless murder and ...' (SA 2662.44d); *Táda* || *mondai wa*, || *sono* || *tukuri-káta*, | *siyoo sare-kata de áru* 'But the question is the way people form them and the way they get used' (SA 2655.29b); ... *sono* (l) | *soonyuu sare-kata zítai ni* || *kiwámete* || *zyuuyoo na* | *imi-ái*(⁻) | *ga* | *kan-zirareru* 'in the very way it is inserted, an extremely important significance makes itself felt' (SA 2680.104c)—for the spontaneous passive-potential at the end, see §4.

Instead of *-kata* you can attach the suffix *-yoo*, with the same pattern of accentuation: *hanasi-yóo* 'way of talking', *yobi-yoo* 'way of calling'. It is particularly common to replace *si-kata* 'way of doing' by *si-yoo* or its contraction *syoo* in the expression *Si-yoo* (*Syoo*) *ga náí* 'There's nothing can be done'. In Kansai dialects this is pronounced *Si-ya*[a] *nái*, and that is evidence confirming the historical spelling that shows us the older form was *yau*, coming from Chinese *yàng* 'appearance'. We can compare other cases of *au* > *aa*, which seems to be particularly common from northeast Hyōgo through Izumo (Zhs 4.314 n. 4): *ka*[h]u-te > *kau-te* > *kaa-te* 'buying' (Zhs 4.327)⁵⁷ where Kyōto has *koo-te*; *n*[i]-te *ar-a-mu* > *de ara*[m]u > *darau* > *dara*[a] 'probably is' (= *daróo*, Zhs 4.305 n. 5); *kura*[k]u *natte* > *kuraa nátte* 'becoming dark' (Zhs 4.312) where Kyōto has *kuroo nátte*.

There is another use of *V-i-yoo* as a SENTENTIAL nominalization that can retain the adjuncts of the underlying verb: *Oetu o* || *osae-yóo ga* | *nákatta* 'There was no way to suppress the sobs' (Tk 4.271a); *Ryokóo-sya no* | *kanási-sa*(⁻), || *dáre ní* | *yari-yoo mo*, | *wake-yóo mo* | *nái* 'The sadness of a traveler—there's no giving it to anyone, nor sharing it' (Kb 251b); ... *mattaku*^[1] || *peten ni kakáta to sika* | *ii-yoo ga náí* 'It can only be said that he was completely deceived' (SA 2687.137e); *Ano baai*, || *dáre*^[1] | *d'átte* | *o* (l) | *tome-yoo ga náí desu* | *yó* 'In such a situation there's no way to detain anybody' (SA 2681.123d); *Nái* | *monó o* ||

56. Notice also *motte iki-kata* (Tk 3.195b) = *hakobi-kata* 'way to carry on (continue)'.
 57. A variant *kaa-tte* is also reported here; it is unclear whether this is perhaps a transitional form to the eastern *katte* or whether it is merely emphatic.

mise-yóo ga | náí zya náí ka 'Surely there's no way to show something that doesn't exist!' (Okitsu 1.17). All the examples I have found are followed by *ga/mo náí* 'there is no [way to ...]'. Are other predicates permitted? The sentential nominalization would seem to be relatively uncommon; when the adjuncts fail to surface, we will assume the lexical nominalization: *Kangae-yóo de wa (... tó mo toréru)* 'Depending on how you look at it, (it can also be taken that ...)' (Shibata 1965.205). In the following example *utagai no* could be taken either as diagnostic of the sentential nominalization (being a stylistic variant of *utagai ga* under adnominalization) or as diagnostic of the lexical nominalization (a subject that has been genitivized or propredicated and then adnominalized): ... *Táhara san ni | utagai no oki-yóo wa | nákatta* 'Mr Tahara ... had no way for suspicions to arise' (SA 2666.112c). But in *té no | take-yóo no náí | kyóri* 'a distance out of (hand's) reach' we must assume an objectival genitive, derived from *té o tukéru* 'brings one's hand in contact (with)'.

Very occasionally, you may find V-i-kata also used as a sentential nominalizer, with an adjunct intact: *Tokoró-de, || Tároo no | yuumei ni nari-káta wa || ippuu | kawatte ita* 'Now, Tarō's way of becoming famous was quite odd' (lg 58). In this example, the conversion is made on [*Tároo ga*] *yuumei ni nári* 'Tarō become famous', but the underlying subject is genitivized to the resulting nominalization.

There are a few other suffixes that make lexical nominalizations from verb infinitives, notably -ppuri 'manner, way': ... *sono syookai no si-ppuri náńka ...* 'the way the introduction was made' (Tk 2.116b); ... *piano no hiki-ppuri ...* 'the way the piano is played'; ... *nomi-ppuri ga íi ...* 'is a good drinker' (Tk 2.250b); ... *hanasi-ppuri mo yóku nite iru* 'are much alike in the way they talk'; ... *utai-ppuri ...* '(way of) singing' (SA 2645.106d). This is a variant of the quasi-restrictive *-buri* 'manner' (§2.4).

15 SENTENCE EXTENSIONS

As H. Kindaichi has observed (1957.170), the speaker of Japanese hates to let a sentence end on a note of finality. This attitude has helped foster the development of certain verbal auxiliary expressions, stylization devices (§22), purely formal uses of quotations (§21), and extravagant nominalizations. And it accounts for the tendency to attach a FINAL PARTICLE to impart some additional hint of the speaker's attitude toward what he is saying—doubt, conviction, caution, inquiry, confirmation or request for confirmation, recollection, etc. Some of the particles (*sá, yó, né*, etc.) are little more than interjections that have been tacked on to the end of the sentence, as often can be seen from an examination of their phrasing: typically the particle is separated from the sentence by a minor juncture, needed in our description to account for the unvoicing of final /u/ and the high pitch on the particle in such sentences as *Sóo desu | yó*. Some of the particles (*ká, ná, kké, tté*, etc.) are like the grammatical markers of case, of adverbialization, and of conjunctionalization; they are attached with no juncture: *Hanásu na* 'Don't speak!' has a voiced /u/ and the particle is low in pitch, cf. *Hanásu | ná* 'I'll speak, you see' with voiceless /u/. (In *Sóo desu ka* the unvoicing of the /u/ is accounted for by the surrounding voiceless sounds, not by a juncture.) Certain sentence extensions (*ká mo sirenai, zya náí ka, daróo*) are normally attached without juncture, but may be preceded by an underlying juncture (as evidenced by various accentual manifestations) in order to emphasize the meanings they impart, as explained in the relevant sections. By its meaning the tentative (S + *daróo/desyóo*) obviously belongs with these "sentence extensions" but it has been treated separately (in §12.1) for several reasons.

A fair number of other sentence conversions that here, for a variety of reasons, are treated separately would perhaps belong with the "sentence extensions" if we were starting from the deeper meanings, notably these: hearsay reporting (*sóo da* §18) and quotations (§21), the semblative (*rasíi* §19), the evidential (*-sóo da* §20), many of the types of command or request (§16), the hortative (§12.2), certain of the nominalization uses (*nó da* §14.2), a number of the postadnominals (*hazu da, tumori da, yóo da, ...*), some of the direct nominalizations (such as *ni tigai náí* §14.5.1), a few auxiliaries (*-te simau* in one meaning, that of displeasure, and *-i-yagaru*—at least); and even the desiderative, the negative, and the stylizations.

In the following sections each sentence extension is taken up individually with notes on its meaning and use. Unless otherwise stated, the extension can be applied to any finite sentence—imperfect, perfect, tentative, etc. (This is one reason for describing the tentative separately.) The particles *í* and *é* are treated as variants of *yó* or of *né*; see §15.4 (*wá í*), §15.7 (*ká í/é, dá í/é; -i-másse, dósse/dásse, -rú na í, -e ró í*), §16.1 (*-é í, -e ró í*).

The "interjection"-type particles—called "cessationals" (i.e. sentence-enders) by Fujiwara—are used to add a personal touch to what one is saying; often they defy ready translation. The particles *né[e]* and *ná[a]* in particular are used to involve both speakers and hearer in what is being said, as English speakers often do with 'you know, you see, I'd say, I'd think, it seems to me, I mean, I want to tell you, as I'm sure you know (have heard)', etc. Another device used by English speakers is the frequent insertion of a vocative ('Now, Tom, ... And that's what happened, Tom') or some generalized substitute for a vocative—such as 'my dear, my friend, darling, honey, sweetheart, beautiful, love, lover,

old man, old fellow; guys, you guys, fellows, you fellows, friends¹ that was originally intended as an endearment, in contrast with the similar use of 'sir' or 'ma'm' to pay respect, much as the honorific stylization does in Japanese. In Japan vocatives are used more sparingly, so that ... né[e] often turns out to be the suitable translation for the vocatives that may be strewn through an English sentence; conversely, one of the English vocatives (or an endearing substitute) may prove an apt translation for a Japanese né[e]. Sometimes a 'now' inserted into the English—with or without the vocative—will catch the conversational intimacy implied by né[e]: 'Now THAT would be fun' = *Soo sitára omosirói née*. Sometimes né expresses a concession: *Sóo na n desu né* 'That's true, all right'. But the force of the interjectional particles is often carried in English and other languages by GESTURES—a smile, a frown, a shrug, a jab, a wag.

To our list of exclamatory particles we might well wish to add the final glottal catch that is represented in writing by a reduced kana TU (often katakana), rendered into romanized form as an apostrophe or as -q:² *Kowaiq!* or *Kowai!* 'I'm afraid!' (SA 2664.35a—spelled with small katakana TU); *Eq syuunyuu désu ka?* 'Eh?—(you wonder about) earnings?' (SA 2671.30b—small hiragana TU). This is common with peremptory commands: *Modóreq!* 'Go back!' When followed by a quotative *tó*, the glottal catch assimilates so that we hear a long /tt/: "*O-kotowariq*" to *kuti o tugumaréru no ga itiban yari-nikú!* 'It's the hardest thing to be clammed up on with a "Not interested!"' (SA); *Simáttaq to omótte ...* 'Thinking "Damn!" ...' (SA 2677.122d—written with small katakana TU); *Dé, toozí-sya wa* "*Kore daq*" to *omótta rasii* 'And so the concerned parties apparently thought "This is it!"' (SA 2684.118b—small katakana TU); ... *yararetaq to omóttara ...* 'if you think "I've been had [= poisoned]!"' (SA 2674.50b); ... *kore wáq to omótta n zya ná!* 'didn't you think "what's this?!"' (SA 2574.46b—written with small hiragana TU). See also *ttó*, § 21.1.(20). In the example *Ooya san q!* 'Landlord!' (Okitsu 1.72), the spelling (small hiragana TU after N) probably represents a brusque tone of voice.

A similar kind of quasi-particle is the half-lengthening of a final vowel used to signal a question: *Kore desu[:]* 'This?'. This is seldom shown in print, but I have seen *Sóo desu kaa?* 'Ohh?' written with hiragana /a/.³ See § 15.6.

The plain imperfect of the copula (*dá*) often drops before a particle. It is common to drop *dá* before *ká* and extensions (*ká sira*, *ká mo sirenai*, *ká né* etc.), and before *sá* the ellipsis seems to be obligatory; before *né* (or *ná*) and *yó*, speakers have a choice: for the meaning 'Mind you, it's that' men usually say *Sore dá yó* or (§ 14.2) *Sore ná n da yó*, women say *Sore yó* or *Sore ná no yó*. (Just the opposite in some dialects.)

The word *dá* itself is used as an interjectional particle, interpolated by certain male speakers to give an "overbearing, preachy tone" (Y 384). Examples of this use of *dá* (and *dá ná*, *dá né*, *dá ga né*, *dá yó*) will be found in Y 384. As a sentence-final particle *dá* sounds rustic (Y 384). On other interpolations of the copula, see § 24.

1. Or the "there" that means "I recognize you but your name slips my mind" as in "Why hello, there". Notice how English also uses personal pronouns as interjections: "My (oh) my!", "Yoo [= you] hoo [= who]!"

2. Or, as in Kenkyusha's dictionary, with a breve over the vowel to mark it as extra-short: *â* = *aq*, *a'*.

3. The lengthening is sometimes used to emphasize an adverb: ... *sore kara háha wa SUKÓOSI masi ni nári*, ... 'then my mother got a little better' (SA 2684.139b) spelled, in hiragana, "sukousi". Emphatic lengthening of particles and mimetic words is often represented by katakana: *Ára, sóo[:]* 'Oh, really??' (Ariyoshi 71) has the hiragana spelling "so-u" followed by small katakana "o".

15.1. | Né[e], | ná[a]

The particles né[e] and ná[a] soften a statement and invite confirmation on the part of the hearer: 'don't you think, n'est-ce pas?' The ná[a] form is more rustic and vigorous, hence often used by men and boys among friends or people of the same age and social status—or to inferiors, but usually not to superiors.⁴ In speaking to yourself ná is often more natural than né; notice the appropriate English pronominal references in the translation of this example: Zúibun tigau ná to omóttá né 'It's quite different, I thought to myself, you see' (Tk 4.295a). Nominal sentences (like Kore dá né 'It is this') optionally drop the plain copula (Kore né), and this is the source of the né or ná interpolated so freely after phrases throughout the sentence, especially in the speech of women and in telephone conversations, where a quick response of há[a] or é[e] or n[n] 'uh-huh' is often called for.

Constant marking of pauses with né or sá or yó can be irritating to the listener; I am told there is a movement afoot to discourage promiscuous use of these particles, appropriately called the ne-sa-yo-úndoo or (Uyeno 133) ne-sa-yo - tuihoo-úndoo 'Movement to banish né sá yó'. Such a movement will probably be of little interest to the 5-year-old girl giving her definition of a postwar Japanese phenomenon: Santa-Kuróosu tté né, akai o-yóhuku kite né, óoki na hukuro katúide né, yasasii kaizyuu mitai na hitó^[1], 'Santa Claus—he's a man who wears a red suit and uh, carries a big bag on his shoulder, and uh, is like a nice monster' (SA 2658.116c).

The particle né[e] is often used to soften requests (§16) and proposals (§12.2); but apparently (Uyeno 106) the plain imperative is semantically incompatible (*Nóme né) unless accompanied by yó (Nóme yó né). For abbreviation of né to í or é, see §15.7 (ká í, dá í). Stylized sentences are often extended with né[e] (... desu né[e], ... de gozaimásu né[e]); they are sometimes heard also with ná[a]. Né[e] and Ná[a] are also used as interjections (§23) to equals or inferiors, somewhat like English 'Say, ...' or 'Look, ...'. Né[e] or ná[a] will sometimes appear after other sentence extenders as a kind of minor sentence, usually with major juncture: Sóo | yó || né 'That's right, my dear' (woman to woman). For the feminine ... wá né[e], see §15.4; for ká né, see below. There are rustic dialects that use a particle nóo in place of náa: Soko de nóo wasi mo késsín sita n zya 'That's when ah made up mah mind, yuh see' (=Soko de née/náa watasi mo késsín sita n da); Sikási, wasi-ra gen'eki zídai to tigoote [= tigatte], yamanobori-dóogu wa sínpo sita. Kane wa kakarimásu nóo 'But, unlike the period when we were in active service, mountain-climbing equipment has improved. It takes money, you see' (SA 2680.114e—a 57-year-old Kansai male).

Examples of S zya ken nóo (=S dá kara née) from a Yamaguchi woman and of ...-te nóo, ... (= -te née) from a Gifu man can be found in SA 2673.26a/c. We would expect a shortened form nó, as well as nóo, and the following sentence might be taken as an example: Sore de ádóresu o káke tte iú kara kakimásita nó 'Then they told me to write my address so I wrote it, you see' (SA 2685.43b—speaking is the writer Kojima Mieko, born in Tottori province). But (especially since the speaker is female) this is perhaps more likely to be taken as a nominalization of the polite sentence, here used as a statement marker (§15.13). Fujiwara (1965.83ff) reports a dialect form ní[i].

4. According to Uyeno a male will use ná[a] with statements addressed to others as well as himself but a female will use the particle only when speaking to herself or in making requests or commands, the command form with ná being rather feminine, since men would be more likely to use ná yó.

The confirmatory particles are used in many situations that seem highly idiosyncratic to the foreigner, as in the following leavetaking that was once overheard: Sayonara née.—Sayonara ‘G’bye now.—Good-bye’. Notice how the addressee can be brought into the picture with née: O-naka ga sukimásita née; syokuzi simasyóo ‘I’m hungry and you must be, too; let’s eat’. In responding to a statement that ends in né, the addressee will often come back with né (cf. Uyeno 119): Samúi né—Sóo né ‘It’s cold, isn’t it.—Yes, it is’.

In Kansai speech a preceding -s[u] is often assimilated so that you will hear -mán né[e] for -másu né[e] and dén né[e] for désu né[e], dén ná[a] for désu ná[a]: Sore ga mondai dén náa ‘THAT is the problem’ (SA 2669.101c). (On Kansai s[u]n > hn > nn, see Zhs 4.229.)

By ellipsis (of sore or sóo) expressions such as dá né/ná, désu né/ná, and dé né/ná often turn up as interpolations within the sentence—or at the very beginning: [Sore] dé né, Ráito-san wa koko de hóteru o benkyoo nasátta wáke desyoo. [Soo] de áru kara, Ráito-san wa ryoori-zyoo no kotó wa zenzen siranai ‘Well, you see at this point Mr. Wright had applied himself to (the study of) hotels. That meant he knew nothing of dining facilities’ (SA 2669.47b). Similar introducers are Dá kedo né and Dá ga ná ‘But ...’. Cf. §24.

Hayashi 157 observes that -tára (conditional) and -réba (provisional) are sometimes followed directly by náa as well as by ii náa and ii n da ga náa to express yearnings: Sóra o tobetára [] náa ‘If only I could fly in the sky!’; Mítiko san no yóo ni utukúsikattara [] náa ‘If only I were beautiful the way Michiko is!’; Híme ga ite kureréba [] náa ‘If only we have a “princess” (= [baby] girl)!’; Sémete anó-hito ṅúrai nára(-ba) [] náa ‘If only it’s him (or an equivalent) at least!’.

Although the origins of né[e], ná[a], and nó[o] are obscure, it is possible that they are all abbreviations from the negative: náí⁵ becoming née by the common crasis characteristic of downtown Tōkyō speech (and widespread elsewhere, as well), náa coming from ná[i] or from ná[ku] by abbreviation, with compensatory lengthening of the vowel (later shortened in all three versions); and nóo representing the Kansai version of náku (i.e. ná[k]u = ná’u). An alternative explanation of nóo would take it back to the Azuma (= eastern) dialect of Old Japanese, which had negative verb forms ending in -nahw- [naF] (and -nohw-? —see Miller 169). A wilder speculation is that né[e] and ná[a] might be from an old word for ‘you’, nandi < na-muti; cf. the suggestion in §15.4 that the particle wá may have once been the word for ‘I’, proto-Japanese ba(nu). Other speculations involve the word for ‘what’ nání (but Ryūkyū nuu) and the literary particle námu/nán ‘indeed’.

In place of V-i-ná[sái] yo ‘do V!’ downtown Tōkyō men often use a variant V-i-née as in Súsí kui-née = Susi o kui-ná[sái] yo ‘Eat some sushi’—cf. kuwánee ‘I will not eat’. With vowel verbs, this can lead to ambiguity: /sinee/ can represent either sinee = sinai ‘I will not do it’ or si-née = si-ná[sái] yo. But the accent will show the difference: tabénee = tabénai, tabe-née = tabe-ná[sái] yo. Do not confuse this with né[e].

In Saitama prefecture (Shibata 1961.71) náí—probably a variant of ná + yó—is used to

5. There are Kyūshū dialects in which náí (or néi, née, náa) means ‘yes’ (and Chikamatsu used it in that sense); this is presumed to be a shortening from nári = [sóo] da, thus unrelated either to the negative or to the Korean n[ye]y ‘yes’. Compare the widespread ná[n] ‘uh-huh, yeah’—usually written “un”. Note also ina ‘nay’ and V-ru ná = V-ru nákáre ‘do not V!’ (§15.12). A more direct explanation for some of the dialect forms in the northeast would be a shortening of [Sóo] nda [yo/i] since [nd] is the local pronunciation corresponding to standard /d/. (Cf. Fujiwara 1965.35–6).

mean *né*, and the word corresponding to standard *nái* (= *arimasén*) is pronounced *née*, as in downtown Tōkyō speech. Thus Saitama *Sóo da nái* is equivalent to *Soo da né* 'That's right, isn't it' and is not to be taken as *Sóo zya née* = *Sóo zya nái* 'That's not right', though there are dialects which use *N da nái* for *N zya nái* (see p. 373n).

15.2. | *Sá*'

The particle *sá* is vigorous and ego-assertive; it is put on at the end of a sentence (often containing *motíron* 'of course') to mean 'indeed' or 'believe-you-me' or 'let-me-tell-you ...'. The particle is too frank to be used with the polite style (Uyeno 83). A nominal sentence obligatorily drops *dá* when adding *sá*: *Kore da.* → *Kore f̄dāḥ sá!* (or, § 14.2, *Kore ná no f̄dāḥ sá!*). *Sízuka f̄dāḥ sá!* (*Sízuka na no f̄dāḥ sá!*) 'It's quiet!' This is perhaps the source of the occasional interpolation of *sá* after phrases within the sentence, especially with *kará* 'because' and *kédo* 'however' (cf. KKK 3.54); for certain speakers *Dá kara sá* 'And that's why ...' and *Dá kedo sá* 'But anyway ...' are frequent sentence-introducers (§ 24). We also find *D'átte sá ...* = *Dé mo sá ...* 'But still ...'—not to be confused with *Sóo da tté sá!* 'That's what they say (all right)!' There is an interjection *Sá[a] ...* 'Well (now) ...' or 'Now (then) ...', often used to introduce an exhortation or command, to express urgency, or to reveal perplexity—as when at a loss for an answer. Cf. *Né[e] ...*, *Ná[a] ...*, in the preceding section.

But *sá* is not limited to assertions; KKK 3.54 lists insistent questions of this sort: *Náni sá* 'What (is it)?'; *Zya dóko e nerú no sá* 'Well WHERE shall I lie down?'; *Dóo site sá—otóosan no o-tomodati ná no ni* 'How come—when he's your father's friend?'; *Dóo iu kotó na no sá* 'What IS this?!' Such questions always contain an interrogative word and must not be marked by *ká*; the predicate must be nominal (Uyeno 85): **Náni o suru sá* → *Náni o surú no sá* 'What WILL we do?'. A sentence ending ... *tó sá!* or ... *tté sá!* is a lively way of quoting someone, as in Kenkyusha's example *Káre wa mata kúru to sá* 'He says he will come again'; sometimes the quotational meaning is attenuated—*Mukasi áru tokoró ni oziisan to obáasan ga átta to sá* 'Once upon a time, they say, there was in a certain place an old man and an old woman' (KKK 3.54)—and sometimes an element of contempt is implied as in *Aitu ano kóe de nodo-zíman ni déta n da tté sá* 'And to think he put a voice like that on display!' (KKK 3.54) and perhaps in *Móo háru da tté sá* 'So it's springtime!' (SA 2665.89c—spoken by an unconcerned stone in a cartoon). For ... *tté 'ttára sá sore kóso ...* (theme + anaphoric reprise) see the example in § 21.2. For ... *si sá*, see § 17.3. The adverb *yassa-móssa* 'in disorder/trouble, helter-skelter' is derived from the exchange *Yaru sá—Modósu sá* 'I'll give it to ya!—I'll return it!' A declarative sentence ending in *sá* can add *né* (Uyeno 93). *S daróo sá* and *S ni tigai nái sá* are possible, but not **S yóo/rasii/sóo sá* (Uyeno 85). Do not confuse *sá* with 's' *á*, the contraction of *désu* [w]á, as in *Sóo 's' a ná[a]* = *Sóo desu wa náa* (Okitsu 1.227, 248).

The origin of *sá* is unknown, but it may very well have developed from the deictic *sa/so* 'th(at etc.)'; cf. English '... so there!' Notice also the suggestion (in § 22.3) of a dialect development from the old auxiliary *sooróo*.

15.3. | *Yó*'

The particle *yó* is an insistent 'indeed', used in asserting a claim, advocating a course of action, or emphasizing a warning: *Abunai yó* '(Look out—) it's dangerous!' Some useful

translations are 'I want you to know', 'Believe (you) me ...', 'I tell you', 'I'd say', 'let me tell you', 'mind you' (interpolated just about anywhere in the English sentence); 'But ...', 'Look, ...', 'Hey, ...', 'Say, ...', 'Why, ...!' In standard speech yó does not occur except at the end of a sentence; the sentence may be perfect, imperfect, tentative—including what we have called "literary" tentative, §12.3: *Másaka úso zya arimásu ˉmái yó = ... zya nái desyoo yó* 'I certainly don't think it's untrue!', etc. Yó can also occur after the feminine particle *wá* (*Abunái wa yó!*) which is limited to imperfect and perfect. But see the note at end of §15.6 on women's avoidance of simple yó (like *ká*) after a sentence-final plain-style form; there is a masculine sound to *Suru yó!*, for a woman would say either *Surú no {yó}!* or *Surú wa {yó}!* And Mio says that ... *dá wa yó!* is rare, being usually replaced by simple ... yó!

In country dialects (southwest Kantō, Zhs 2.21) yó is sometimes used like *sá* or *né* to punctuate phrases within a sentence; in such dialects the vowel is often lengthened: *Dá kara yó[o], gakk[o] e yó[o], ikanai yó[o]* 'That's why, see, I'm not going to school, see'. Lately the short form yó is said to be in vogue among rough young men in Tōkyō as a synonym of *sá*, which may be losing some of its vigor now that everyone is using it.⁶ Yó is also said to be common in the speech of nagging children. Occasionally N yó is used as a vocative: *Tároo yó!* 'Hey, Tarō!' (This corresponds to the literary and dialect use of *yá*. Usually people are hailed without a particle.)

The copula *dá* is optionally omitted: *Kore {dá} yo* (or, §14.2, *Kore ná no {dá} yó*) 'It's this!'; *Damé {dá} yo!* (*Damé na no {dá} yó!*) 'It's no good!'

The particle yó can also be used to firm up one's authority in making commands, requests and proposals.⁷ See §12.2, §16. There is a dialect form *i* that occurs at least as a variant of yó after the imperative (or imperative + *ró*); see §16.1. There is a Kansai form *sé e* for *sé yo* 'do it!' as in *Mokuteki wa, wareware ga ningen ˉrasii seikatu ga dekéru [= dekíru] yó^(o) ni, séihu wa háiryō se e, to iu kotó na n desu wá* 'The aim is that the government should concern itself to see that we can live like human beings' (SA 2678.65bc—Ōsaka speaker). Maeda 1961.20 says that *é* for yó is no longer so much used in Ōsaka but still is frequent in Kyōto.

A sequence of yó *né/ná* is possible:⁸ *Kono bún zya ziki-syátyoo wa, ore dá yó né* 'At this rate, I tell you, I'll be the next head of the company' (SA 2655.113a); *Géndai no seikatu to iú ka, íma no saraiiman-tétugaku to iu monó ni pittári da yó né* 'It fits to a T what is known as modern life or the white-collar philosophy of the day, you see' (Maeda 1962.149); *Kekkyokú wa, dootokú-sin no mondai désu yó né* 'After all, it is a question of one's sense of morality, you see' (SA 2670.54c); *Sikkári yaré yo ná* 'Keep your chin up!' (SA 2672.27e); *Omosirói desu yó né*. *Kyoogén hodo omosirói monó wa nái desu né* 'They ARE amusing, you know. There's nothing so amusing as kyōgen farces, I'd say' (SA 2659.52d). Uyeno (103-4) says that *ká yó* can be used to emphasize a rhetorical question, and may be interpreted as "an insult for the addressee"; it can not be followed by *né* (107).

6. *Sore ga yó [= sá], mattakú no kitai-házure ni nátta no sá!* 'That, I tell you, was not what I expected at all!'

7. The need to firm up the authority makes the commands or requests seem softer. Cf. Uyeno 101-2, who observes that commands with yó are often followed by *ii {desu} ka* 'OK?' and requests with yó are often followed by *Tanómu kara* (or *O-negai dá/désu kara*) 'I'm asking you to'.

8. As is the feminine *wá yó né*; see §15.4.

I know of no suggestions for the origin of *yó*; but consider *yá* (§ 15.6a), *yáa* 'hey!'; *yó'u* = *yó*[k]u 'well', *yó-si* 'good!'. A remote connection with *zó* and its Ryukyuan equivalent *dó*[o] is also possible.

15.4. [l] *Wá'*

At the end of unstylized sentences, the particle *wá* is almost exclusively a woman's item and it helps give female speech its characteristically feminine flavor. Uyeno observes that the female use of *wá* carries an implication of the speaker's femininity and hence is inappropriate in "official" situations—particularly to a male boss or the like, since the female use of *wá* in speaking to a male often implies an intimate relationship. With polite and honorific stylizations (§ 22: *-másu wa*, *désu wa*, *de gozaimásu wa*) the particle is also much used by women, but in addition you will hear middle-aged gentlemen using it when they deliver an assertion with a certain air of assurance or authority. *Wá*, unlike *yó*, is not used after tentative (**Kore daróo wa*), command (**Iké wa*), or proposal (**Ikóo wa*). Sentence-final /*wái*/, apparently [l] *wá* *i* = [l] *wá* *yó* (see § 15.7) is dialectical: *Wasi no yóo na roozin*(-) *ga syabéru kotó wa náni mo arimasén wá i* 'There's nothing for an old codger like me to talk about' (SA 2662.60c); *Kore wa taihen na tokoró e kíte simatta wá i* 'What a terrible place I've ended up in!' (SA 2669.62—speaking is a young man from Rishiri-tō, an island off Hokkaidō).

For *wá yó* see § 15.3; both that sequence and *wá né*[e]/*ná*[a] seem to be exclusively feminine:⁹ *Iutára, biznesu-hóteru to awáseta yóo na seikaku désu wa ná* 'Why, it [= a rendezvous hotel (abekku-hóteru)] has the characteristics of having been blended with a businessman's hotel, so to speak' (SA 2659.133b—a Kansai woman is writing; the first word is pronounced *yutára* and is equivalent to Tōkyō *ittára* or *yuttára*).

But the following two examples of *wá ná* are from the speech of the critic Nakano Yoshio (who appears to be from Kansai): *Rokuon-tépu ga áru to iú kara, sore ga déreba, dónna hanasiai dáta ka, wakarimásu wá ná* 'Since there is said to be a tape recording, if it is brought out then it will be clear what sort of agreement there was' (SA 2663.22d); *Sikási, mondai wa seizi to sinkoo no kankei désu wá ná* 'But the question is the relationship of government and religion' (SA 2663.23d). And this example is from the speech of a 57-year-old Kansai male: *Hitóri hyakuman-en hodó kakarimásu wá ná* 'It [= the expedition] costs a million yen a person, you know' (SA 2680.114d). On Tōkyō men's use of *wá* EVEN WITH PLAIN-STYLE FORMS see Mio 357, from which I take these examples: *Áru wa, áru wa, mono-súgoku áru* 'There are, there are, there are indeed!'; *Are mo hosii wa, kore mo hosii wa, dé wa komáru* 'I want this and I want that, so I'm at a loss what to do!' These cases involve repetition within an utterance as in the sentences presented next below, but Mio also cites—as dialect—the masculine *Ore mo ikú wa* 'I'll go too'. An example from an Ōsaka-born male: *Umái kotó itta món da to omóu wa* 'He was clever saying that, I think' (Shiba 121).

Is the difference between masculine and feminine usage of *wá* correlated with the difference between the two phrasing treatments (*wa* with no juncture versus *wá* with preceding

9. There is also *wá yó née*: *Ara || sitte 'ru wá yó | né* 'Oh, I've got it (= I know it)!' (R). The feminine expression ... *dá wá* {*yó*} is said to have started in theater and brothel during the early part of the Meiji period and gradually gained respectability and widespread use; in Sagami it is a masculine usage (Y 378).

junction)? According to H. Kindaichi (1957.50) distinctions between male and female speech are fairly new and urban; the trend toward a distinction has been diminishing since Meiji times, and especially since World War II (51-2), but public opinion still favors keeping what distinctions there are (52).

Iterated sentences ending in *wá* are sometimes inserted as lively circumstances in a larger setting: *Gá, kúru wa kúru wa, yon-mán nisén-nin no zyukén-sya ga na-nóri(ˉ) déta* 'But, come one come all, forty-two thousand examinees appeared as candidates' (SA 2654.140a); *Áru wa áru wa, zuráři to hóteru ga noki o narabete sukima mo náku, miti o hasánde ryoogawa ni hisiméki tátte irú no da* 'What a lot there are—hotels lined up eave to eave solidly crowding both sides of the street' (SA 2659.130e); *Dé mo, makú ga aku to súgu ni, bútai de ísyoo o tuke-nágara, seríhu(ˉ) wa iu wá, utau wá, sigusa wa áru wá, desyó* 'But when the curtain goes up, then—still dressing on stage—I say my lines, I sing, I act, you see' (SA 2664.36b); *Ano onná wa, syabéru wa syabéru wa, akireru hodó da yó* 'That woman will talk your ear off!'; *Tároo wa, tabéru wa tabéru wa yamá-hodo átta o-kási o zénbu tairágetyatta(ˉ) yó* 'Tarō ate his way through the stack of cakes that had been there'. Sometimes parallel sentences ending in *wá* are followed by *dé*—with or without juncture?—as a list of emphatic reasons: *Syakkín wa suru wa syakkín wa (or siharai wa) tamaru wá de komátte iru* 'Incurring debts, piling up debts (or payments)—with all that I'm in a fix'; *Tantóo-sya ga yoŕi-tukerárete, o-medama o tyoodai suru wa, Okumura no hwán ˉrásiki sityóo-sya ... kará wa* "téepu nara yókute, náze hónnin ga déte utáú no wa ikenáı no ka" to itta tuikyuu no denwa ga zyán-zyan kakátte kúru wa, *dé* ^[r] *mattakú* ^[r] *atamá* no itái koto 'I get called in by the manager and bawled out; viewers who appear to be fans of Okumura's ... keep my phone jangling with complaints "if it's OK on tape why can't it be sung in person"; so, what a headache!' (SA 2647.111b). All the authentic examples I have come across seem to have verbs before *wá*; do adjectival and nominal sentences also occur? Negatives? Desideratives? Perfects?

We have noted elsewhere that the focus particle *wá* sometimes contracts to a[a]. The emphatic particle *wá* also contracts in the same way, and V(r)u *wá* will sometimes be heard as V(r)'a[a]: *Zya, koko ni hyaku-en ár'a* [= *áru wá*] 'Well here's a hundred yen' (R); *Huzakéru na i, toshima sugír' a i* [= *sugíru wa yo*] 'Don't kid me, she's well over forty!' (Okitsu 1.109); *Moo íp-pai, tanóm'aa* [= *tanómu wa*] 'Gimme another drink!' (Fn 439b); *Nánni mo náı kúuki no náka o órite [i]ku yóo na kanzi dés'aa né* [= *désu wá né*] 'It's a feeling like going down through empty air, you see!' (Tk 4.44a); "Sinkoo-syúukyoo wa íntiki(ˉ) nári" to iu kangae-káta ga, *íma no wakái hitó-tati no muné ni wa né o hatte 'r'aa né* [= *hatte irú wá né*] 'The idea is firmly rooted in the breast of the young people that "new religions are fakes"' (Tk 4.272b). Notice that /... *desa/* may represent either ... *dé sá* (copula gerund + emphatic particle) or *dés'a* [a] = *dés[u w]á*.

On the Tōkyō male use of [w]a, see Maeda 1961.160, who describes such forms as N *dá 'a*, N *dés'aa*, Kú'r'aa (Kúru *wá*), *lí ya = lí wa* (with intrusive *y*). But Zhs 2.21 observes that in southwest Kantō people often lengthen N *dá*[a] and V-*tá*[a] regularly; in western Yamanashi (Zhs 2.24) the equivalent forms are N *doo* and V-*too*; and in parts of Yamanashi and Shizuoka V-*noo* is used for V-*nai* (Zhs 2.24). It is not clear whether these various forms may come from shortenings of *dá* (etc.) + *yó* or + *mo*[*nó*].

In Kansai speech, *-másu wá* contracts to *-mássa*, *dósu/dásu/désu wá* to *dóssa/dássa/déssa* (= *désu wá*), as explained in § 22.1: *Kore kara Ákasi no utí(ˉ) e kaerimássa* 'Now I'll go back home to Akashi' (SA 2672.17a). In the speech of young women in Ōsaka a sentence-

final *sí* is used like *wá* (Maeda 1961.164-5): *Úti no kotó^[1] wasuretára, akan si* 'You mustn't forget me now' (166).

15.5. *Zó, zé*

Two forceful particles *zó* and *zé* are almost exclusively used by men: *Keikan ga kíta zó, háyaku nigé ro* 'Cheese-it, the cops!' (SA 2655.37c); *Óya, mata náni ka nágeta zó* 'Oh-oh, they've thrown something else!' (KKK 3.63); *Té o agé roq--nigeyóo 'tt'atte damé da zó* 'Hands up—you can't get away!' (KKK 3.63). Uyeno says that a woman may use *zó*, but only in speaking to herself. Of the two, only *zé* can follow the hortative (*Ikóo zé* 'Let's go, man!' but not **Ikóo zó!*) and neither can follow a command (**Iké zé/zó*).

Zé is apparently friendlier than *zó*; see Alfonso 1145, who says it is 'less rough ... and ... widely used among classmates and close friends', and KKK 3.63, which cites the example *Zyáa, asitá mo kono-hen dá zé* 'Well, I'll see you around here again tomorrow'. An example of this friendly use: *Mítu tyan, móo kaen-ná yó [= kaeri-ná yó = kaeri-nasái yó]*. *Osoku náru to mata ohukuro-san ga sinpai suru zé* 'Go home, now, Mitsu. If you're late your mother will worry again' (SA 2640.107c). According to Uyeno (77) the particle *zé* is used in buddy-buddy or boss-henchman exchanges; it is not used in speaking to oneself, so it will not normally be quoted as "thought". *Zé* is also used to show disdain, as in this sentence: *Koko no táisyoo d'atte, anmari matomo zya arimasén zé* 'Our boss is none too honest, either!' (KKK 3.63). But except for situations of that sort, *zó* and *zé* sound strange with polite stylization.

In literary or pseudo-literary phraseology, you will come across *zó yá* to mean little more than an insistent *dá ká*: *Mótó-yori mondai wa, sinkoo tó wa náni zo ya to iu, makoto ni kongen-teki na tokoró kara okótte iru wáke de, ...* 'Of course, the problem arises from the truly basic question of what IS faith, ...' (SA 2640.24c); *... zínsei to wa nán zo ya o syoomén kara toi-káketári, ...* 'asking head-on what "human life" (really) is, and ...' (SA 2673.112d)—*nán = nán[i]*. Another literary use is as an emphatic *gá*: *Kámi nómi zo siru* 'God only knows!' (= *Kámi-sama daké ga sitte iru* 'Only God knows').

Both *zé* and *zó* have coexisted as dialect variants for over a thousand years (cf. *nánzo = náze* 'why' and *nazo* 'riddle'); the particle *zó* was much used for emphasis in the literary language and is related to some uses of *tó* and *-do* (see § 2.3.4). Maeda (1961.164) suggests that *zé* is a shortening of *zee < zoe ? < zó yó*; *zó yá* has also been suggested as the origin (Gekkan-Bumpō 2/5.56b).

According to Maeda (id. 41) Ōsaka has replaced *zé* by *dé*¹⁰ and uses *té[e]* for *sá* (id. 168-70), Ōsaka N *ya de* being equivalent to Tōkyō N *da yo/ze* and Ōsaka N *ya te* being equivalent to Tōkyō N *tó sá*. (Cf. Ōsaka *káte*, § 2.9.) The use of *te[e]* is reminiscent of the Kyūshū sentence-final *tái*: *Kékkoo desu tái* 'That's fine' (SA 2678.135ab); *Kangáete mireba, okási na hanasí desu tái* 'When you think about it, it's a funny story' (id. 135d). Fujimura 115 suggests that Kyūshū *tái* is from *tó i < tó yó*; the vowel development is peculiar—but notice *sá* (and the interjection *sá[a]*), perhaps from the deictic *sa/so*; and *má[a]* 'well' (short form SA 2676.111) or 'now; more' (= *íma*, as in *[i]ma sukósi = mo[o] sukósi*), which are etymologically akin to *móo* 'already; now' and *mo[o]/móto* 'more', cf. Ryūkyū *naa* 'now, already' < *nyaa < myaa < (y)imya < (y)ima*. (This would open

10. An example: *Watasi wa ore ya náí de [= ore zya náí zé] to kotaéta ga, osóroku sore wa watasi dátta ka mo sirenu* 'I answered "It's not me!" but likely it was me, perhaps' (Endō 81).

another line of pursuit for the explanation of the baffling Miyako particle *mai* = *mó*.) In the northeast, *mázu* is widely used for the interjection *máa*. The interpolated *maa* of Hyōgo is from *maan* < *omahan* = *omae* 'you', according to Zhs 4.274 n 1. Kyūshū also has sentence-final particles *bái* and (meaning 'of course') *kusai* (Tōjō 1954.76). In southern Kyūshū *S tóo* corresponds to western Kyūshū *S tái* and *S óo* corresponds to *S bái* (Zhs 6.21). Other emphatic sentence extensions used in western Kyūshū are *S món ná* and *S tó zyá*. Also *S+ banta*, *kanta*, *nomai*; *S+ bana*, *ban*, *kan*. These all are said to have *anáta* 'you' built in except for *nomai* which has *omai* = *omae* 'you' within it. Kumamoto uses *S baita*. (In these particles /*ka*/ is presumably the interrogative particle, and /*ba*/ is to be connected with *wá*—and ultimately, perhaps, with the first-person pronoun.)

15.6. *Ká*

The particle *ká* marks a question. Most questions are directed toward the listener, but some are self-directed and some are rhetorical: *Mata ka* 'Not again?!' (SA 2642.32d). Questions can be asked either with this particle (or some substitute such as *nó*, § 15.14, or *-té*, § 9.2) or with no particle but with half-lengthening of the final vowel (or *ñ*) and a rise of intonation; the half-lengthening restores voicing to any syllable that has become unvoiced under the devocalization rules: *Sóosu da* 'It's sauce', *Sóosu* 'Sauce', *Sóosu ka* 'Is it sauce?', *Sóosu[:]*? 'Sauce?'. For nominal sentences, the unstylized copula *dá* usually drops, as in the preceding example; it is in doubt whether **Nán da ka* and **Dáre da ka* (etc.) ever normally occur as complete sentences, for the ellipsis of *dá* may be obligatory (as with *sá*, contrast *yó*).¹¹ But when stylized the copula is present: *Sóosu desu[:]*? = *Sóosu desu ka*? And when the sentence contains a content-interrogative (an indeterminate), it is often *ká* that drops: *Dáre da* or *Dáre ka* 'Who is it?', *Nán da* or *Náni ka* 'What is it?' (Since *dá* by itself can sound a bit blunt as a sentence ending, *S dá* is more common in the speech of males.) Within a sentence, the content-interrogative questions with *ká* can have a special meaning 'somebody, something, etc.':¹² *Dáre ka* (or *Dáre da ka*) *sirimasén* 'I don't know who it is' or 'Somebody doesn't know'; *Dáre dátta ka sirimasén desita* 'I didn't know who it was' or 'Somebody didn't know' (the 'somebody' meaning is somewhat less common with the perfect); *Nán daroo ka* (or *Náni ka sira*) *nódo ni tukáeta yóo na kanzi da* 'It feels as if something or other were stuck in my throat'. The sentence *Náni ka kiita* is ambiguous: it can mean 'I asked something' or (usually with juncture after *ká*) 'I asked what it was'. *Nán da ka kiita* can also be taken both ways, as can *Nán datta ka kiita*; but *Náni ka da ka kiita* or *Náni ka ka kiita* is unambiguously 'I asked whether it was something'. *Náni ka* 'something' is sometimes pronounced *nán ka* and that is the source of a synonym of *nádo* (§ 2.9). For 'once (upon a time)' you will hear both *ítu ka* and *ítu datta ka*. The expression *ítu-no-má-ní-ka* 'in no time at all' is usually treated by dictionaries as a

11. The forms are all right within a larger structure: *Náni ga nán da ka wakaránai* (or *Náni ga náni ka wakaránai*) 'I don't know what is what (=what everything is)'; *Dáre ga Tanaka {da} ka sitte 'rú no?* 'You know which one is Tanaka?'; *Nán da ka kentóo ga tukimásu ka* 'Can you guess what it is?' (SA 2666.42a); *Nán da ka sinnái [=siránai] kedo* 'I don't know what it is but ...' (SA 2666.44a). And *nán da ka* has an extended meaning 'somehow (or other), somewhat' (= *nán to naku*) in such sentences as *Go-kúroo bákari kánete nán da ka warúi desu né* 'I feel somewhat guilty causing you so much trouble'. In eastern Mikawa, *N dá ka* is common (Hōgen-gaku gaisetsu 405).

12. This is why the content-interrogatives are more broadly called "indeterminates" (or interrogative-indefinites).

lexical adverb (note the three different accentuations that are listed in K); it is derived from *ítu no ma ní ǂdaǂ ka* 'it is at the interval of when'. *Ítu-no-hí-ni-ka* 'on some day or other' is a similar case. The syntactic looseness of the indefinite expressions is shown by the fact that the copula + *ká* can occur before or after a relational particle such as the ablative *kará*: *Dáre kara ǂdaǂ ka tegami ga kimásita* = *Dáre ǂdaǂ ka kara tegami ga kimásita*; *Dáre kara datta ka tegami ga kimásita* = *Dáre datta ka kara tegami ga kimásita*. These four sentences all mean 'A letter came from somebody'. Examples with the case particle between the interrogative-indefinite word and *ká*: *Ga mo dóko e ka sáta(-)* 'The moth went off somewhere' (Kb 82b); *Sibároku site génan wa dóko kara ka ude-íppai ni zyúu o motidasite kíta* 'After a while the servant started bringing out armloads of guns from somewhere' (SA 2685.98c). When an interrogative number is followed by *ká*, the meaning is 'some (number of)' as in *nánzén-nen ka no mukasi kara* 'from some thousands of years back' and *iti-nen to nan-kágetu ka* 'a year and some months'.

Alternative questions are asked with a rising intonation on the first and a falling intonation on the second, which is often introduced by *sore tó mo* 'or else': *Kore ka, ǂsore tó mo ǂsore ka* 'Is it this, or that?'; *Kore dáta ka, ǂsore tó mo ǂsore dáta ka* 'Was it this, or that?'; ... *úso ka hontoo ka wakaránai yóo na hanasí o sité wa ...* 'telling such stories that you didn't know whether they were false or true ...' (SA 2650.61b). Such a structure is the source of the idiomatic *norú ka sóru ka* 'win or lose, sink or swim'. Alternative questions can be stated as separate consecutive sentences, with or without *Sore tó mo* 'Or else' to introduce the second sentence: *Kyóo ni simásu ka, ǂsore tó mo ǂasitá ni simásu ka* 'Will you (decide to) do it today, or tomorrow?' can be said also as: *Kyóo ni simásu ka. ǂSore tó mo ǂasitá ni simásu ka* 'Will you (decide to) do it today? Or, will you do it tomorrow?' An example: *Okyaku-sama nó desu ka? Sore tó mo purézentó desu ka?* 'Is it for yourself, madam? Or is it a present (for someone else)?' (SA 2672.64ab). When the second question is 'or not' you can stop with *sore tó mo*: *Inumarú san go-zísín no seikatu wa zeitákú desu ka, sore tó mo* 'Is your own life, Mr Inumarú, on the luxurious side?' (SA 2669.48c—what is omitted at the end is *zeitákú/sóo zya náí desu ka* 'or isn't it luxurious'). A further use of the alternative question is with the last question de-interrogativized: *Kore ka sore da* 'It is this or that'. *A ka B (ka C) ga íi daroo* 'A or B (or C) would be fine'. Cf. *A tó B* (§2.7) which might be regarded as coming from quotation (§21), as I have indicated for *A tó ka B* (see §21.6); or, again, from *A dá tó* (§17.2—cf. *A da B da C da to ...*), though derivation from the particle 'with' may be simpler. In *Kore ka náni ka da* 'It is this or something' we have the special meaning of *ká* with an indefinite, and this does not de-interrogativize (to **Kore ka nán da*) directly; instead, *náni ka* (← **Nán da ka*) is directly nominalized and the sentence is to be treated as *N₁ dá ka + N₂ dá ka* → *N₁ ka N₂ da* 'It is N₁ or N₂' with *N₂* derived from a sentence **N dá ka*. The copula is not always omitted in expressions of the type *N₁ [dá] ka N₂ [dá] ka* 'N₁ or N₂': *Watasi no tanzýoo-bi wa kyúu Nihón-gun no Sinzyú-wan koogeki no yokuzitu. Sono iti-nití da ka hutuka dá ka notí(-)* ni umareta rasii Sakamoto Kyúu san 'My birth was the day after the former Japanese military forces attacked Pearl Harbor. Kyú Sakamoto was born, I understand, a day or two after that' (SA 2664.41a)—both sentences have dropped the final copula *ǂdáǂ* or *ǂdátaǂ*, and the latter sentence is an epithematic identification (§3.10a). Conjoined structures *N₁ ǂdáǂ/dáta ka N₂ ǂdáǂ/dáta ka* can take case markers such as *gá* and *ó* and *ní*: *Watasi ka ootoót ka ga o-ukagai simásu* 'Either I or my little brother will call on you'; ... "kimi" dáta ka "bóku(-)" dáta ka o moti-iru kotó ... '... to

use “kimi” or “boku” ...’ (Maeda 1962.69—the full sentence will be found on p. 167); ... zibun no misé no wakái monó ka dáre ka *ni* kiite ... ‘asking (= inquiring of) a young man from one’s own shop or someone ...’ (SA 2677.56d).

Other situations where the sentence INDETERMINATE + [dá] + ka is directly nominalized are these: *Dáre* {*datta*} ka *ni* aimásita ‘I met somebody’; *Ítu* {*datta*} ka {*ga*} mondai da ‘It is a question when it is (was)’; *Dóno-yóo* *ni* tiguá ka o simesóo(–) ‘I will show how they differ’; *Dónna* *ni* óói ka *ni* odorokasáreta ‘I was surprised at how many there were’. But direct nominalization is typical for any question, with or without an indeterminate: *Kónban kúru* ka {*ga*} wakaránai ‘I don’t know whether he is coming tonight (or not)’. It is not clear that we should treat this as direct nominalization (of the sort noted in §14.6); perhaps rather we should say that the addition of *ká* is itself a nominalization—at least when attached to perfect and imperfect, and the use of the question with the optionally omissible particles *gá* and *ó* is the expected use, so that we are not surprised to find questions used in other noun-like contexts, e.g. *uezíní*(–) o *surú* ka *nusubito* *ni* náru ka *ni* mayóu ‘is puzzled over whether to starve to death or to become a thief’. If we take this point of view, then the sentence-final use of *ká* implies an obligatorily omitted copula: *Nusubito* *ni* náru ka ‘Will I become a thief’ is derived from **Nusubito* *ni* náru ka da ‘It is a question of whether I will become a thief’. This view becomes a bit troublesome when we get to stylization; do we really want to derive *Wakarimasén* ka ‘Don’t you understand?’ from **Wakarimasén* ka da/desu ‘It is a question of whether you don’t understand?’ But treating *ká*-questions as nominalizations points up their similarity to questions asked with the *nó*-nominalization (§15.13—see also *dá* no §15.17).

In such situations, when there is a general alternative ‘or not’ the Japanese, like English, can give just the one question (as in the preceding example); or, it can give a minimal alternative “pro-sentence” (§29) *Dóo* [da] ka ‘How is it?’: *Kónban kúru* ka *dóo* ka {*ga*} wakaránai ‘I don’t know whether he is coming tonight or not/what’. (In written Japanese you will also find ... *ína* ka ‘or not’.) It is more common to do this rather than repeat the sentence in its negative form: *Kúru* ka *kónai* ka {*ga*} wakaránai ‘I don’t know whether he is coming or not coming’, but there is nothing ungrammatical about such a sentence. In place of *Dóo* ka you also hear *Náni* ka as the alternative to a pure nominal sentence: *Kore* ka *náni/dóo* ka {*ga*} wakaránai ‘I don’t know whether it’s this or what/not’. But adjectival nominals, like adjectivals and verbals, will take only *Dóo* ka: *Bénri* ka *dóo* ka {*o*} sitte *irú* ka ‘Do you know whether it is convenient or not?’

More examples of noun-like uses of *ká*-marked questions: *Huyú* *ni* náru to *zyookuu* kara úete *iru* ke{*da*}mono *ga* *iná* ka *dóo* ka o *sirábe*, ... ‘In winter they check from the air whether there might not be animals starving (or might be), and ...’ (SA 2663.50b); *Sosite* *sore* *wa*, *náze* *sóo* *na* no ka o *ríkai*(–) *surú* no *ni* *wa* *yaku*-*datimásu* ‘And that is useful in understanding why things are that way’ (SA 2679.104a); *Dóko* *de* *tomarú* ka *ga* *dái*-*iti* no mondai *dá* ‘Where it [= the Chinese revolution] will stop is the Number One question = The Number One question is where it will come to rest’ (Tk 4.186a); *Dáre* *ga* *túketa* ka *wa* wakaránai ‘I don’t know who attached it (or: turned it on)’ (ISJ 8.1.66); *Nihon-kókumin* no *sóoi* *ga* *tyuuritu* o *nozomú* ka *nozomán* ka *de*, *tyuuritu* *ga* *dekíru* ka *dekín* ka *ga* *kimaru* to *omóu* n *desu* ‘I think whether neutrality is possible or not will be determined by whether the collective will of the Japanese people aspires to neutrality or not’ (Tk 4.233a); *Sore* *ga* *ítu* *made* *tuzukú* ka *da* *ná* ‘It’s a question of how long it will continue’

(SA 2679.48d); Yoo-súru ni nagéru ka nagénaí ka *de* wa náku, mótu kotó ga sekigun-ha ni zoku-súru tamé ni hituyoo dátta to iu kotó^(r) 'In short it is not a question of throwing [bombs] or not throwing, but that it was necessary to have them [= bombs] in order to belong to the Red Army faction' (SA 2677.152e); ... mírai no hénka o, iká-ni háyaku yómu ka *de* syóbu ga kimaru 'The winner is decided on the basis of how fast he can read the future changes ...' (SA 2662.29a); Kono Aaru-andó-D'ii ni dóre-dake(°) tikará(°) o irerú ka *de*, sono kuni no syórai ga kimaru ...' ... a country's future is decided by how much power it puts into this R and D [= research and development]' (SA 2662.29a); Yameté kara dóo surú ka *de*, íka no san-táipu ni bunrui dekíru to iu 'It is said that they can be classified into the following three types, depending on what they do after they quit [their professorships]' (SA 2671.30b); ... dóko ni dóo syóbun site irú ka *made* tukánde wa inái no ga zitzuyoo no yóo da 'The facts seem to be that they have not yet come to grips with even the question of how to deal with what aspect ...' (SA 2668.29e).

According to Mio (360, 364) women do not use *ká* or *yó* (§ 15.3) with sentence-final plain-style forms; instead they substitute the nominalization with *nó* (§ 15.13), so that such forms as *surú ka* and *suru yó* are marked as men's speech.

By way of direct nominalization (?—see remarks above) questions can be adnominalized: (Maru-de / Átaka-mo) ... áru/átta ka no yóo da 'It is just as if we had (got) ...'; *surú ka* no yóo ni (miéru/omowaréru or suru) '(seems or makes) as if to do'; ... de áru ka no gótoku kangáéru tokoró ... 'when we think as if to wonder whether it is ...'; etc. One special use of the 'or not' alternative question (without reduction to *Dóo ka*) is found in *Surú ka sinai utí(°) ni* ... *sita* 'I did it before I knew it'¹³ (for which there is a literary or semi-literary equivalent *Surú ya ina ya*, in which *ina* 'nay' functions as an analog to colloquial *dóo*, and *yá* to colloquial *ká*); we would instead expect (?*)*Surú ka sinái ka no utí(°) ni* ..., with the former regarded as an abbreviation, that also explaining *surú ka sinái ka ni*—described below. The following sentences would seem to be direct adverbialization (rather than, say, *ó*-ellipsis): *Zibun de káu ka hitó ni tanómu ka itasimásu* 'I'll either buy it myself or ask someone'; *Kono natú wa úmi e ikú ka yamá e ikú ka simásu* 'This summer I'll go either to the sea or to the mountains'. (But, for the *ó*-ellipsis interpretation, cf. *Koohii ka otya ka {o} mesiajarimasén ka* 'Will you have coffee, or tea'—from NOUN *dá ka* [o], see p. 924.)

A common way to complain or protest is to use an imperfect sentence adnominalized to *monó/món da* 'it is natural (to be expected) that' (§ 13.2) as a rhetorical question: *Sonna kotó ga áru món ka* 'How can such things be?!'; *Takái món ka* 'How can it be so expensive?!'; *Nománai monó desu ka* 'Surely you will drink something!'; *Ano teppén made ikenai monó ka* 'Surely we can make it to the summit!' (Hayashi 157); *Káre ga itinén-sei na monó ka* 'He surely can't be a freshman!' It is unusual to find a perfect verbal used in this way, but the adjectival perfect seems to occur: *Atúkatta món ka—sámukatta gúrai sá* 'It certainly wasn't hot—it was positively cold!' A rhetorical question can, of course, be asked with just *ká*; and dissatisfaction can be indicated by such introductory adverbs as *iyóiyó* 'at last, really' or *mata* '(not) again?!', as in these examples from Hayashi 156: *Iyóiyó zaa-tto kúru ka* 'Is it [the rain] going to start coming down in earnest?';

13. As in ... *situmon ga owarú ka owaranai utí(°) ni*, ... 'the question was barely finished when ...' (SA 2661.25c); ... *bóku(°) no mono-gátari ga owarú ka owaranu syunkan ni tu-to tati-agatte* ... 'the instant my tale was done, she jumped to her feet and ...' (Esuperanto 52.343a). On the optional cancellation of the accent of the affirmative question, see below.

Iyóiyó gakkoo tó mo o-wakare ka 'Are we really saying farewell to school at last?'; Mata áme ka 'Not rain again!'; Mata damé ka 'Another mistake?!'

Another way to ask a question, a friendly use much favored by women and children, is to use a *nó*-nominalization (§ 14.2) as a complete sentence (with a slight rise of pitch): Kónban kúru no? 'Are you coming this evening?'; Omosírókatta no? 'Was it fun?'; Senséi datta no? 'Was it the teacher?'; Kore ná no? 'Is it this one?' This works only for imperfect and perfect sentences; there is no tentative *Senséi daroo no? (*Kore daroo no?) because the tentative does not normally adnominalize (§ 13.3). Cf. § 15.14 ff.

The particle *ká* can be used not only with the imperfect, perfect, and tentative (Ikú daroo ka 'I wonder if he will go?') but also with the hortative: Ikóo ka? 'Shall we go?' = 'Let's go' or 'You wanna go?'. For sentence-final ... *ká* to, see § 21.1.(15).

Alfonso 813-4 calls our attention to the use of questions to show surprise at something contrary to expectations, especially *N₁ ka to omóttara N₂ dá/dátta* 'To my surprise it is/was not the *N₁* I was expecting but is/was *N₂* instead' and *S₁ ka to omóu to S₂* 'If you think that *S₁* then to your surprise *S₂* = not only *S₁* but also/even *S₂*'; cf. the sentence opener *Ká to omóu to ...* 'If that surprises' or 'If you question (or wonder about) that' (Fn 265a). Examples will be found in SA 2640.24a and in the sentence *Dáre ka to omóttara anáta desu ka* '(Just when I was wondering who it might be)—what a nice surprise, it's you!' said to an unexpected caller. The sentence opener *Ká to itte* 'Should that be surprising/questioned ...' starts with an ellipsis of *S₁* or of *Sóo/Sore*.

When you directly nominalize a structure which comprises an affirmative sentence that is questioned and then immediately answered in the negative, the meaning is 'surprisingly, contrary to expectations' and thus 'hardly, barely' or the like, as in these examples: *Sóo de náí hí de mo, Utidá-si wa yóru no zyuuni-zi máe ni kitaku surú no wa tukí ni iti-dó⁽¹⁾ áru ka nási* [= *nái ka da*] 'Even on days that aren't like that, hardly one time in a month does Mr Uchida get home before midnight' (SA 2651.71c)—i.e. 'you might think he would ... at least once in a month, but no'; ... *kawaií ogawa ga nagárete ite, haba ga san-méetoru áru ka da ga, soko ni masú ga súde iru* '... a charming stream flows, a bare three meters wide, and trout live there' (SA 2671.92b); *Igirisu hógo⁽¹⁾ ka* [= *hogó-ka*] *no dokóo-koku de, zinkoo wa iti-mán áru ka nási ka, nami no sekai-tizu ni wa notte inai mini-kókka de aru* 'It is an emirate (sheikdom) under British protection, the population hardly ten thousand, a mini-nation uncarried on the usual world map' (SA 2673.139a). A similar use is found in this sentence: *Yat-tó⁽¹⁾ utí(-) ni túita toki, DÓO SITA KOTÓ KA, kuti no náka ni wa móo nánni mo nokótte inákatta* 'When I finally reached home, WHAT DO YOU KNOW BUT there was nothing left in my mouth [for the iced sweet had melted]!' (SA 2666.110d).

Notice the various ways you can phrase an affirmative-vs.-negative question to express the meaning 'no sooner [does] than; as soon as [one does]' or 'hardly/barely [does one when]', similar to *surú ya ina ya* (above), *surú ga hayái ka* (§ 14.6) and *sitá ka to omóu to* (§ 21.1.(18)):

(1) *surú/sitá ka sinái ka no utí(-) ni*:¹⁴ *Túita ka tukánai ka no utí(-) ni móo káette kityatta* 'We no sooner got there than we turned around and came back'.

(2) *surú ka sinái utí(-) ni*: *Senséi ga káeru ka kaeranai utí(-) ni káno-zyo ga kimásita*

14. The accent on the affirmative question is sometimes cancelled in these expressions, the pattern being said as two phrases or even—dropping the minor juncture before *utí* thus removing its accent—as one phrase: *deru ka | dénai | utí(-) ni* can also be said as *deru ka dénai | utí(-) ni* and as *deru ka dénai uti ni*.

'No sooner had you left to go home, sir, than she arrived'; Nihyakú-nin ga kawá o watattá ga, watari-owáru ka owaranai uti(¯) ni kaihoo-sénsen no zyuugeki ga hazimatta 'Two hundred men got across the river, but they hardly made it before the Liberation Front [= the Vietnamese NLF] opened fire' (SA 2679.39a).

(3) surú ka sinái ka ni: To o akerú ka akenái ka ni, ikiói yóku néko ga tobi-kónde kíta 'I barely opened the door when in rushed the cat' (Nagano 177); Sensei ga káeru ka kaeránai ka ni káno-zyo ga kimásita 'You had barely left to go home, sir, when she arrived'.

(4) surú ka sinái [] ni:¹⁵ ... káre ga yose-gáyoí o hazimerú ka hazimenái [] ni, ... 'No sooner had he started attending vaudeville (than) ...' (Kb 279b).

(4a) surú ka sezu ni: ... zyumyoo ga nácutte, hátati ni náru ka nárazu ni kono-yó(¯) o sáтта(¯) '... did not live long, leaving this world at hardly twenty years of age' (Kb 50a).

(5) surú ka sinái ka no N: Segóbia nánte iú no wa hyakú-nen ni hitóri déru ka dénai ka no "tyoo-ténsai" desu yó 'Let me tell you a Segovia (or the like) is a "super-talent" that barely turns up once in a century' (SA 2679.119c).

(6) surú ka sinái N: Yóku rokuzyúú^[1] hati-nen no Itigatú ni Betonamu e okurareta káre wa, ni-kágetu tátu ka tatánai Sángatu tuitatí no sentoo de hínsi(¯) no zyuusyoo o ottá no datta 'Sent to Vietnam in January of the following year, 1968, he sustained a near-fatal injury in the battle of the first of March, barely two months later' (SA 2679.40d).

An adnominalized sentence + nó ka or + séi ka (obligatory reductions from nó [da] ka and séi [da] ka) can be used to mark a suggested cause 'perhaps it is that ...' or 'perhaps it is owing to ...' = 'perhaps/apparently because ...': ... gakusei da to wakáru to sin'yoo ga takái no ka, taitei nosete kureru 'They generally give me a lift, I guess (= perhaps/apparently) because when they see I'm a student they have confidence (that they can trust me) ...'; Sono séi ka ... 'Perhaps that's why ...'; ... Húkuko no kóe o mimí ni sitá no ka huri-múita otokó ... 'a man who turned his head apparently because he had heard Hukuko's voice' (lg 1962.105); Sí no Nihon-go wa rippa dá ga, Nihon-go dé wa ími ga zyuubún ni tuuzinai to kan-zitá no ka, ítu ka Eigo ni kawatte ita 'His Japanese is excellent, but occasionally, apparently feeling he wasn't getting his meaning across adequately in Japanese, he would switch to English' (SA 2660.41c); Sonna wáke de, suteru monó ga náhi mo nákatte no ka, uti(¯) no wakí ni átta gomí-bako(¯) wa tukatte náku, zitén-sya no kuukí-ire ga hoori-konde átta 'Apparently because there was nothing to be thrown away, he didn't use the trash-can that was beside the house, a bicycle pump having been tossed into it' (SA 2665.117a). This use of nó is similar to that in nó de, §14.2.1. Since the vowel of n[ó] optionally drops, you will hear such sequences as N ná n ka (cf. N nánka 'N or the like, the likes of N), A-í n ka, V-rú n ka, V-tá n ka, etc. And /-run[o]/ sometimes assimilates to /-nn[o]/ so that for surú no ka you may hear sún no ka → sún n ka = /súnka/—with the usual reduction of nnC to nC; and for site [i]rú no ka you may hear sité 'n no ka → sité 'n n ka = /siténka/.

Nó ka can also, of course, be any of the expected interrogativizations of ... nó da, as in these examples from KKK 3.173: Náze soo náru no ka 'Why is it that it turns out that way?'; Sikási hutarí wa dóo sitára zyútú ga tokéru no ka wakaránai no de ... 'But the two

15. Since the "atonic" negatives show an accent before [] ní, we will assume that what is omitted is ká: sinái [ka] ni. If the ellipsis were an omission of uti(¯), we would have difficulty explaining the reversal in the accent cancellation found in sinái uti(¯) ni (which owes to the underlying juncture before uti).

did not know how they could dispell the sorcery and ...'. On S_1 [nó] ka S_2 to express "a guessed cause and effect 'perhaps it's (that)'"', cf. Alfonso 800. And ... ká no yóo ni is used as an equivalent of ... ká to omóu yóo ni, § 21.1.(18), to mean 'as if perhaps': ... náhi mo nákatta ka no yóo ni ... 'as if nothing had happened' (SA 2679.41d); Hóo o nádete toori-sugiru yókaze ga natú^[1] no owari o tugerú ka no yóo ni tumetai 'The night wind rubbing past one's cheek is cold as if to tell the end of summer' (SA 2647.116); Naru-hodo, géngo wa iká-ni mo sizen ni kawarú ka no yóo ni kawaru 'Indeed language changes very much as if perhaps it changes of its own accord' (Shibata 1965.200). These expressions are, of course, an adverbialization of ... ká no yóo da 'it seems as if': Kore wa sa-nágara(¯) géndai no inpáasónaru na ningen-kánkei o syootyoo site irú ka no yóo de aru 'This seems as if it really symbolizes the impersonal human relationships of the present day' (SA 2659.134a). For that matter, simple ká is sometimes equivalent to 'perhaps' or 'apparently':¹⁶ Seisan-teki de átta zidai wa yáya hurú ka to omowaréru ga, ... 'The era when it was productive would seem to be perhaps a bit earlier, but ...' (Sakakura 320); Go-zónzi ka to omoimásu ga 'I think you perhaps know but ...'; Go-zónzi zya ná ka to omoimásu ga 'I think you perhaps don't know but' (or, if taken rhetorically, the same meaning as the preceding)—in these expressions ká is equivalent to daróo and that could be used instead; Go-zónzi da to omoimásu ga 'I think you know but ...' is more direct. Sometimes an introductory question will best translate as 'I think': Yon-kai desu ka, óoki na o-niwa ga dekíru yóo desu né 'I think it's the fourth floor where you seem to have a large garden in the making' (SA 2669.46b—on a new hotel building).

Expressions with ...-té ka 'perhaps/apparently because' are to be regarded as containing an ellipsis ...-té fdaǰ ka, representing a nominalization of the gerund (§ 9.2.1): Sono tamé mo átte ka, ... 'Maybe THAT's why ...' (SA 2640.105d); Sono séi mo átte ka, ... 'Perhaps partly for that reason ...' (SA 2664.29a); Sono kai átte ka ... 'Apparently as the effect of that ...' (SA 2665.9d); SF-syóosetu ... no eikyoo mo átte ka ... 'Perhaps/apparently under the influence of science fiction' (SA 2659.38a); Kámo wa máiniti(¯), kimoti yosásóo ni suimen o oyógi, kozákana o otté ka ikióí yóku sensui sita 'The wild ducks each day would swim on the water looking in good spirits and make vigorous dives apparently in pursuit of small fish' (SA 2661.33c); Mooretu-úrikomi ga seikoo sité ka, Toonan-Ázia de wa Nihon-séihin ga hanran site iru 'Apparently as the result of success in hot-shot salesmanship, Japanese products are flooding Southeast Asia' (SA 2659.43c). Also note mósi ka/ya 'if (perchance)', § 13.7.

The expression dóo iu wáke ka (or dóo iu monó ka or dóo sita wáke/kotó ka) means 'for some reason or other' and could be regarded perhaps as an ellipsis of dóo iu wáke ka [siranái ga] ... '[I don't know] what the reason is [but], ...' (cf. náni ka 'something [or other]'). Similar in meaning and derivation are dóo iu riyuu dé fdaǰ ka 'for some reason or other' and soo iu wáke de fdaǰ ka dóo fdaǰ ka 'whether for that reason or some other (= or what)'. You will also find paired examples, translated something like '[I don't know OR It is not apparent] whether because ... or because ...': Zyuuí-gatú^[1] tuitatí^[1] guu-zen ka kói ka, zieitai-kinénbi ni táiho sareta 'Whether by accident or by design, he was arrested on the first of November, the anniversary of the Self Defense Force' (SA 2662.26); the opposite order kói ka guu-zen ka 'whether by design or by accident' will be found in

16. Hoka ni sen'yaku ga { átta no/kara/tamé ka, } káre wa kesseki sita 'He was absent, apparently having a previous engagement elsewhere' (Mikami 1963.85).

SA 2660.23e. And here is a sentence created by a female critic who loaded it with *ká*-phrases: *Sore to ko'oo sité ka, arúi-wa sore ga saki ka, hóteru ga áto ka, hóteru ga saki ka, sei-kákumei ga áto ka, mótitu motáretu no kankei de hóteru wa zoosyoku si, yagaté^[1] zíwaziwa to syákai ni né o orósite ki-sóo de aru* 'Perhaps in response to that [= the sexual revolution] or perhaps from mutual influences—whether that was first and the hotels later or whether the hotels were first and the sexual revolution later—the [rendezvous-type] hotels are proliferating and gradually seem to be taking root in the society' (SA 2659.133c).

The particle *ká* is sometimes used for little more than emphasis, e.g. in *yóri ka* [mo] or *yó' ka* = *yóri mo* 'than' (p. 141), *mósi ka* [sitara, suru to] 'if (perchance)', ... See also ... *si ka*, p. 80. One usage that can disconcert a non-Japanese is the echoing of obvious questions as a stalling device, in order to gain time in which to formulate the socially appropriate response. Sometimes this is a way of backing out of a proposal: *Watasi desu ka? Kónban? Káre o turete tté? Sore wa née ...* 'Me? Tonight? You say bringing him? Well, ...'. In Shikoku dialects *N ka* is used like *N ttára*, §21.1, to set up a theme (Doi 283).

The particle *ká* is used in virtually every dialect of Japanese. A variant (S+) *kó* is reported for Ishikawa (Zhs 3.149 etc.); this may be a contraction of *k[á n]ó*, fortuitously resembling the Korean doublet *ka/ko*. In Kansai speech you will find *-mákka* for *-másu ka*: *Sore wa dáre de mo hairemákka* [= *hairemásu ka*] 'Well, can anybody go in?' (SA 2669.111d); ... *tigaimákka* [= *tigaimásu ka*] '... isn't it?' (SA 2669.101c). And for *desu ka* you will find *dékka*, (Kyōto) *dókka*, and (Ōsaka) *dákka*: *Watakusi dékka* 'You mean me?' (SA 2669.101e); *E? Wate dékka?* 'Eh? You mean me?' (SA 2672.17a); *Dóo dekka* 'How is it?' (SA 2669.112d). A dialect variant of ...*rú ka* is ...*kka*: *Mísete yakka* [= *yarú ka*] 'Shall I show it?'

S + bákari f̄daʃ ka by itself means 'Is it just that S?'; when another sentence is conjoined, the meaning is 'Not only S but ...': *Sore ga kóndo wa pitári to syaberánai bákari ka, hazime wa hita-[-ʃ]kákusi(-) ni kakúsite '-yagán da (= i-yagán n[o] da = i-yagáru no da)* 'He now not only does not talk to the point but he's concealing every damn thing from the beginning' (KKK 3.202; the third word after the comma, as the notation is intended to indicate, can be pronounced *hitakákusi*, *hitakakusi*, *hitagákusi*, or *hitagakusi*). *N bákari f̄daʃ ka* 'not only N but' appears in the sentence-opener *Sore bákari ka ...* 'Not only that but ...'. = 'What's more, ...; moreover, ...'.

S/N + ˉdókoru f̄daʃ ka is a kind of rhetorical question ('How could anyone think merely S/N?!') implying the answer *S/N + ˉdókoru* [no *sáwagi/sátá/hanasí*] *de wa ná* 'It is anything but [a matter of] ...' or 'Far from being [a matter of] ...' or 'In no wise is it [a matter of] ...' or 'Hardly ...' or, in some cases, 'Not only (is it [a matter of]) ... but'. The question seldom, if ever (?), occurs alone. Rather, it is used to introduce a stronger statement, often to the contrary: *Soko de, itidoo kámo o mí ni ura-niwa ni dekakerú ga, kámo ˉdókoru ka, suzume ip-pikí^[1] inai* 'Then we all go out to the back garden to see the wild ducks, but wild ducks?—there isn't even a single sparrow!' (KKK 3.121); ... *búnsyoo ˉdókoru ka namae súra mánzoku ni kakénai* '... can't even write his name satisfactorily, much less a sentence' (KKK 3.121); *Are wa rippa na sikéi(-) da. Watasi wa a-zen to suru dókoru ka osorósiku náta* 'It was a fine example of lynching. I was more than dumb-founded; I was frightened' (KKK 3.120); *Kono daigaku ní wa, higasi-káigan kara ˉdókoru*

ka, Ázia ya Ahurika kará sae, gakusei ga kíte iru 'In this university there are students not only from the East Coast but even from Asia and Africa'; Tokoró-ga, sono káre ga ití-nen tátte mo sinanai dókoro ka, zibun de hakken sita kusuri o nomi-hazimeté kara wa, méki-meki to kóoka ga arawáre, yagate⁽¹⁾ móto no tóori no karada ni káetta no o míte murá⁽²⁾ no hitóbito wa kii no kán ni utarezú ni wa inákatta 'But not only did a year go by without his dying but after he started taking a medicine that he discovered himself a remarkable effect took place and by and by he returned to his original health; which seeing, the village folk could not help being struck by an odd feeling' (KKK 3.120). From this usage comes the sentence-opener Sore \bar{d} ókoro ka 'On the contrary' or 'That's quite out of the question (because ...)'. (This expression will not permit ellipsis; a sentence can not begin *Dókoro ka.)

Dókoro is not confined to rhetorical questions, of course, for what is implied by such questions is the negative ... dókoro de wa [or zya] náí 'it is unthinkable (out of the question)' as in these examples: Sonna ni tooi tokoró made iku dókoro zya arimasén yó 'It is out of the question to think of going to such a faraway place'; Tokoró-ga, yonzúu-nen no hukyoo de yakyuu \bar{d} ókoro de wa náku nátta 'But with the 1965 recession, [company-sponsored team] basketball became out of the question' (SA 2669.16a); Bóoryoku($\bar{}$) tó ka téro, sonna monó wa demókúrasii no yo-nó-naka de ími ga náí dókoro zya nákute, taihen na gáí ga áru 'Violence and terror, such things are not merely devoid of meaning in a democratic society but are actually quite harmful' (SA 2678.50c); Hikkosi wa tanosii ga, nimotu o hakobú no wa tanosii dókoro de wa náí 'It is fun to move, but it is far from being a pleasure to carry the luggage'.

Dókoro is a restrictive (§2.4). The accent of a preceding noun is cancelled by \bar{d} ókoro, but a sentence attaches the word as a postadnominal (§13.2) with an underlying juncture between.¹⁷ You may run across an ellipsis AN $\{na\}$ \bar{d} ókoro in which the accent of a tonic adjectival noun is cancelled: sízuka \bar{d} ókoro = sízuka na |dókoro 'far from being quiet'. However, in the following sentence hima is to be taken as an ordinary noun ('free time') rather than an adjectival noun ('being at leisure'): Zissai, watasi zisin de mo, hima \bar{d} ókoro ka, tamaranaku zikan ga osii 'Actually, even I myself, far from having free time, begrudge the hours terribly' (SA 2673.39c). In the sentence Kigeki ga dekíru no dekinai no, sonna dókoro no sátá zya née n da 'Whether he can do comedy or not, such a matter is hardly the question' (Kb 100a), the phrase sonna dókoro seems to represent an ellipsis sonna [kotó] \bar{d} ókoro or the like; otherwise we would expect (?*) sonná na |dókoro 'far from (its) being like that'.

As a unit ... \bar{d} ókoro ka can be used to restrict nuclear and other structures, as shown in the chart in §5.5; these uses are probably to be explained as ellipsis of a nominalized predicate. Examples: Káre ni aimásita ka?—Ái \bar{d} ókoro ka sirasé mo sinákatta 'Did you see him? See him—why, I didn't even let him know [I was in town]'; Wakaré ga kanásikute

17. These are the patterns followed in this book. According to K the accent cancellation applies optionally to a preceding tonic verb or adjective, i.e. yómu ($\bar{}$)dókoro can be said either as yomudókoro or as yómudokoro (= yómu [|] dókoro), but the cancellation is obligatory (perhaps owing to the underlying juncture) for the "atonic" verb or adjective forms: nakú ($\bar{}$)dókoro will only be said as nakudókoro. After nouns, according to K, the cancellation is optional and the dókoro can be treated as a particle, instead: áme ($\bar{}$)dókoro can be said as ámedokoro or as amedókoro, haná ($\bar{}$)dókoro can be said as hanádokoro or as hanadókoro, the latter version being indistinguishable from hana ($\bar{}$)dókoro.

naitá desyoo?—Kanásíkute ˉdókorō ka, urésíkute nakimásita, iyá na hitó da kara ... 'You surely cried at the sadness of parting?—At the sadness?—far from it, I cried with joy, he's such a dreadful person'; ... Tároo wa dezáato o, syokuzi ga súde kara dókorō ka,¹⁸ syokuzi no sitaku mo dekinai utí(ˉ) ni tábete simatta 'Far from waiting till the end of the meal, Tarō ate up the dessert before I had the meal prepared'; Atuku ˉdókorō ka, kamí no yóo ni usuku kitta 'Thick?!—why I sliced it thin as paper!'; Kírei ni káite áru desyoo?—Kírei ni ˉdókorō ka, zí no katati sáe wakaránai hodo ranboo ni káita 'Surely it is written neatly?—Neatly?! why it's written so poorly you can hardly make out the shapes of the characters'; Tábe ni ˉdókorō ka mizu o nómi ni mo iki-taku ná hodo namake-mónó(ˉ) desu 'He is such a lazybones that he doesn't even want to go get a drink of water, much less eat'; Hima na tokí ni wa utí(ˉ) ni ite térebi de mo míte 'ru n desu ka?—lie, utí(ˉ) ni ité ˉdókorō ka zimú-syo ni itté sae míte imasu yó 'When you have nothing to do do you stay home and watch television?—[Watch] at home, nothing!—I watch even at the office!' (the reply could also have been: lie, ... zimú-syo ni itté ása kara ban máde tutómete imasu yó '... I am busy at the office from morning till night').

In all its uses *dókorō* can be shortened to *dóko*.

15.6a. *Ya'*

In Literary Japanese the question particle *yá* has a number of uses, some of which are heard in expressions that have been borrowed into the colloquial language, such as *áni hakarán ya* 'quite unexpectedly'—roughly equivalent in structure to *dóo site hakaróo* (= *hakáru daroo*) *ka* 'how is one to estimate?'—and especially ... *ya ína ya*, which means either 'whether or not' (= ... *ka dóo ka*) or 'no sooner ... than; as soon as ...' (= *sitá ka to omóu to, surú ka sinai utí(ˉ) ni* or *surú ka sinái ka ni, suru to sugu*; cf. *-rú nari*, §15.19): *Áru ya ína ya wa gimō da* 'Whether it exists or not is in doubt'; ... *tokudane de áru ya ína ya mo wakarán desu kara né* 'For I don't know whether it is a scoop or not ...' (Tk); *Tabéru ya ína ya haki-hazimeta* 'No sooner had I eaten it than I started vomiting'; *Syokuzi o surú ya ína ya tonde itta* 'As soon as he had finished eating he dashed away'; *Koogeki wa seihoo kara kaisi saretá ga, hazimarú ya ína ya Seihú-gun wa nígete simatta* 'The attack opened from the west and it had hardly begun when the Government troops fled' (SA 2686.40c). In the meaning 'as soon as' *ína ya* may be omitted: *Sotugyoo surú ya yookoo sita* 'Right after graduating he took a trip abroad'; *Pató-kaa ga arawaréru ya káno-zyo-tati no sógata wa kiete simatta* 'As soon as the patrol car appeared the women vanished' (SA 2681.104b). The noun *ínaya* 'an objection', as in *Kane o dásu kotó ni ínaya wa ná n da* 'I have no objection to paying the money', is derived from *ína ya* 'is it nay?'. *Ína* 'nay' also underlies the verb *inám-* 'nay-say, gainsay, deny, refuse' as in *Inaménai no wa ...* 'It can not be denied that ...'.

Literary clichés such as *Osóru kotó ya áru* = *Osoréru kotó ga áru mon ka* 'Is there anything to fear?! = Surely there is nothing to fear' are best explained in terms of the grammar of the literary language, where the structure is a permutation (almost obligatory) from ... *kotó áru ya* with the appropriate attributive form of the existential verb *ári*. (But unpermuted ... *áru/ári ya* can be found. On the vexing question of whether the appropriate verb form is attributive or predicative, see Henderson 345-7.)

18. A minor juncture always separates *V-té kara* from ˉ*dókorō ka* (for reasons not entirely clear) and so the accent cancellation is inoperative.

Another stereotyped usage is V_1 -rú ya V_1 -azu da ‘almost, nearly; hardly’ as in these examples (from Ig 76): Hotóndo kúu ya kúwazu de ... ‘Almost half starved ...’; Sore wa mózi -dóori kúu ya kúwazu no máiniti(-) de átta ‘It was day after day of, literally, near starvation’; Yómu ya yómazu de hógó ni site simai ... ‘It’s hardly read before it’s thrown away as wastepaper ...’. This is sometimes similar in meaning to V -rú ya ína ya: ... syotáimen no áisatu ga súmu ya súmazu ni, ... ‘with the introductory greetings barely finished ...’ (Fn 162a); ... sánzyuu ni náru ya nárazu no wakái mi-sora no yakusya ... ‘an actor with a young body barely thirty years old’ (Kb 187a).

Another use is in iwán ya ... ó ya da, a literary permutation of ... [w]ó iwán [= iwamú] ya ‘shall I say ...?! = surely not ...’, with the meaning ‘to say nothing of ...; still more/less ...’ as in the example offered by Henderson and Kenkyusha: Káre wa keizái-gaku sura wakaránai—iwán ya Marukusu-syúgi o ya da ‘He doesn’t even know any economics, much less Marxism!’ A common variant of this usage is Iwán ya ... ni óite(-) ó ya de áru ‘How much less need is there to mention ...!’ as in Iwán ya sararíi-man to site nyuusya si, syatyoo no íti ni túita hitóbito ni óite(-) ó ya de áru ‘And that is all the more true for those people who entered a company as salaried employees and ended up presidents!’ In the following example the text spelled it with hiragana “oya” rather than “woya”: Yusyutu-kóotyoo no zidóo-sya(-) mo, totan ni riéki o usinai-dásu. Iwán ya zoosén-gyoo ni óite(-) ó ya de aru ‘Even such a favorable export as the automobile will suddenly begin to lose profits. How much worse for the ship-building industry!’ (SA 2685.25c). Sometimes ... ó ya V represents a literary permutation of ... ó V ya as in Henderson’s schoolbook example (342): Kuni ni háha o ya nokósu ‘ramu ‘Has he perhaps left a mother back home (in his native province?’ In this example Nokósu ‘ramu is equivalent to the colloquial nokósu daróo ‘probably leaves behind’ (see p. 615, § 12.3). The form [a]rámu (also [a]rán) is added to the PREDICATIVE form of the verb (Chamberlain 1924.83 mistakenly says the attributive)—including the morphologically genuine predicative forms of áru, óru, and derivatives, which coincide with the attributive forms (as do those of all consonant verbs) but are replaced in most predicative uses by the infinitive (ári, óri, etc.); see Henderson 237-8.

Like ká (and nári), the particle yá is borrowed for nominal conjoining; see § 2.7. In the following example (from KKK 3.248) yá mo sirenu is used as a semi-literary equivalent of ká mo sirenai ‘perhaps’ (§ 15.8): Kazyyu na kazei wa toti-káikaku keikaku o suihoon ni ki-sesiméru ya mo sirenu ... ‘Excessive taxes may spell the end of plans for land reform ...’; the form sesiméru is semi-literary for the literary attributive sesimúru (< si-asim[e s]Juru) equivalent to colloquial saseru ‘causes to do’.

The particle yá sometimes is added to a sentence (usually by a man) for emphasis, much like yó or zó or zé: Maa íi yá, sikkári yaroo ‘Well OK! let’s hold tight’ (KKK 3.224); Kaeróo yá ‘Let’s go home!’ (KKK 3.224); Kón’ya wa bihuteki o tabeyóo yá ‘Tonight let’s have steak’ (SA 2662.51c); Bóku(-) mo kooihii de íi yá ‘Make mine coffee, too’; Daitai, o-sú wa tiisái ya né ‘The male is usually small, you see’ (Tk 4.295b); Omosirói yá ‘It’s fun!’ (SA 2640.11); Zyoodán zya arimasén yá ‘It’s no joke, I tell you’ (SA 2660.51a). It is also used—in old-fashioned (regional or literary) speech—after a name as a vocative marker (where yó also is used): Obáasan ya! ‘Hey there, granny!’; Sóre, Usa-tyan ya, asa-góhan ageyo[o] ‘There, Bunnykins, have your breakfast!’ (KKK 3.225). These uses probably come from the interjection yá[a] ‘hey!’ Cf. the remarks on Yose yái ‘Cut it out!’ in § 16.1.

The yá used after adverbs in KKK 3.225—íma ya ‘nowadays’, matá-mo ya ‘yet again’,

másite ya, kanarazú ya—would appear to be in most cases a variant of the focus particle wá. But yómo ya ‘surely (not)’ and mósi ya (= mósi ka/mo) ‘if (perchance)’ seem clearly to have the question particle; the other cases might be similarly treated. (Cf. yóri ka/mo/wa.)

Not to be confused with the yá we have been discussing is the yá₂ that, like zyá₂, serves as a dialect variant for dá in western and southern Japan. Occasionally you will run across this yá in print, as when a writer wants to lend local flavor to a quotation: “... sore ga kakumei ya tó wa ien to omoimásu” “... I don’t think THAT c’n be called a revolution” (Kagaku-Asahi 1968/7.96). For yá₃ = zya₁ (= dé wa), see § 8, p. 373n: ... ya n[ái] ka = ... zya náí ka, § 15.16. Note also the yá₄ that is a variant of the focus particle wá (§ 2.3.4). For zó ya (= dá ka), see § 15.5.

15.7. Ká né[e]/ná[a]; (ká, dá, -tá) í/é

The particle sequence ká né[e] is a softer way to ask a question. It is also used when talking to yourself—with others invited to eavesdrop, and in that event né[e] is usually replaced by ná[a]: Sóo ka ná[a] ‘I wonder about that’; Dáre ka kore o katte kureru hitó wa inái ka náa ‘Isn’t there ANYBODY who will buy this from me?!’ (Hayashi 157); Yóru, osokú made, mátte ‘tá kedo, kónai n da. Dénki túket’ oita kara, ókite ‘ru no wakáttiyatta no ka náa. Dé mo, inái n zya náí ka ná ‘I stayed up till late at night waiting, but he [= Santa Claus] never showed up. I wonder if he knew I was up because I had the light on. But maybe he doesn’t exist?’ (SA 2658.117a—a five-year-old boy talking).

In place of ká né, many people use what is said to be an abbreviation¹⁹ ká í; others, said to be dialect speakers (but MKZ says “feminine”), use ká é: Ano né, kimi, himitu ga mamoréru ka i ‘Say, you think you can keep a secret?’ (KKK 3.10); Kimi n-fo} tókó ni sake wa náí ka i ‘Haven’t you got anything to drink at your place?’ (KKK 3.10). Just as ... dá ka usually shortens to ... ka, ... dá ka né usually shortens to ... ká né/í/é: Kore ká í? ‘Is it this one?’; Daizyóobu ka i ‘OK?’; Bóku(-) ní ka i—dáre kara? ‘For me?—who from?’ (KKK 3.10). After content-interrogatives, just as ... dá ka shortens to ... dá, ... dá ka né shortens to ... dá né, and this is often pronounced dá í (or dá é by those who say ká é): Nán da i, sore ‘What is it, that thing?’ (KKK 3.10); Dó[o] da i ‘How about it?’ (Kb 100a); Dóo sita no da e ... ‘What happened?’ (KKK 3.11). Similarly, ...tá ka né can shorten to ...tá né and this may be pronounced ...tá í/é: Dáre datta í ‘Who was it?’; Ésu wa dóo sita i ‘What’s happened to S?’ (Kb 33b—not si-tai ‘wants to do’); Ítu sinda i ‘When did he die?’; Dóo kangáeta i ‘What did you think up?’ (Okitsu 1.24—not Dóo kangae-tái ‘How do you want to think?’).

Ká né, like ká, can be used to extend imperfect, perfect, and tentative sentences, and also can be used with hortatives: Ikóo ka né ‘Shall we/I go?’ (Also: Ikóo ka i/e-?). Notice that ká í and dá í may be pronounced as kée and dée by speakers who regularly or often substitute /ee/ for /ai/: Dóo sitee = Dóo sita i ‘What happened?’; Dóo dee = Dóo da i ‘How is it?; How about it?’

19. There are other instances of dropped /n/ under similar conditions (see p. 406), so the notion that ká é/í and dá é/í are simply abbreviations of ká/dá né is quite plausible. But it has also been suggested that é/í perhaps comes from the literary question marker yá (Tsuru 55c). The Kansai use of sentence-final é in -másu é (etc.) is probably from yó; see below.

On *í* as a variant of *yó* after the imperative, see § 16.1. The third group of examples in KKK 3.10 seem to have *í* as a variant of *yó*, mostly after imperatives or negative commands: *Hí o tuke ró í* 'Light the fire!'; *Yokei na kotó surú na í* 'Don't stick your nose in other people's business!'; *Yóo mo née [= náí] no ni, yokei na kotó o iú na i* 'Don't put in your two cents' worth when it's none of your business'. But there are also examples (in the same place) which seem to be abbreviations of *wá í* (= *wá yó*): *Taihen dá [w]á í*, *Tengugórirá ga kisen kara nígeta [w]á í* 'Terrible, Long-Nose Gorilla has escaped from the ship!'; *[I]yá da [w]á í!* *Úso da [w]á í!* *Damé da [w]á í!* 'No! It's a lie! It's no good!' In the following vaudeville exchange the first ... *n da i* represents ... *no ka*, the second ... *no da yo*: *Dóko e ikú n da i.*—*Tokoya e ikú n da i* 'Where are you going?—I'm going to the barbershop(, of course)!' (Okitsu 1.162). For a clear example of *wá í*, see § 15.4.

This use of *í* or *é* for *yó* may be the best explanation for the Kansai form *-másse* = *-másu é* = *-másu yó*: *O-tosiyori mo miemásse* 'Old folks come also' (SA 2659.133b). Similar are *dósse* (Kyōto) and *dásse* (Ōsaka) for *désu é* = *désu yó*. You will also find *désse*: *Ni-nó-mai wa go-men désse [= désu yó]* 'Never again, thank you' (SA 2670.21d); *Án[í]-san, orinpíkku kitté(-) wa íma, sén nihyakú-en desse* 'Young man, let me tell you those Olympic stamps are now worth twelve hundred yen' (SA 2672.18a). Notice too the Kyōto example *Tyót-to o-turi ga tarimahén é [= tarimasén yó]* 'The change is a bit short' (Inokuchi 100; also *tarimahén dosse*).

Kindaichi Kyōsuke (1959.175-6) suggests that the question usage of (*dá/ká*) *í* comes from sentence-final *yó[o]* "used in areas around Tōkyō" (... *désu ka yoo*). That would help explain these examples, where *í* appears after *-ru* and *désu*: *Sono oyá no óoya no kao wa dóko de tatéru i* 'How can you give "face" to the landlord who is [like] a father to you?' (Okitsu 1.323); ... *ittee, kóndo wa nán no yóo desu i* 'well NOW what on earth do you want?' (Okitsu 1.472). (Kindaichi derives *dá né* and *ká né* from the sentence-final *dá ná í* of Fukushima prefecture. He observes that speakers in Gumma prefecture put *í* on the end of a sentence for politeness.)

15.8. [] *Ká mo siren* [ai]

Questions are often put into sentences meaning 'asks whether ...', 'knows if ...', etc., by the direct nominalization mentioned above; from this come expressions with the question highlighted by the particle *mó* and followed by what is either the negative of the intransitive verb *sire-* 'be known' → *sirenai* 'is not known' or the negative potential form of *siru* (→ *sireru*) → *sirenai* 'can't know': 'it is not known whether (= there's no telling whether)' or 'we can't know whether' = 'maybe, perhaps'. This differs from the tentative in that no opinion is offered about probability: *Sóo daroo* means I think 'It must be that way'; *Sóo ka mo sirenai* means 'It may be that way' but I have no way of knowing or guessing. The form can be stylized: *ká mo siremasén* or *ká mo sirenái desu* (§ 22.1). It can be nominalized (*ká mo sirenái no da*) and adnominalized (*Kúru ka mo sirenai hitó da* 'It is a person who may come'), adverbialized (... *de áru ka mo sirezu*, ... Ariyoshi 232), conjunctionalized (*ká mo sirenái kara* etc.), quoted (*ká mo sirenai to iu*), hearsay-reported (*ká mo sirenai sóo da*), and so forth; it can be put in the tentative (*ká mo sirenái daroo [ga ...]*). It can be followed by further sentence extensions: *ká mo siren[ai] né[e]/sá/yó/wá/zó*, but not **ká mo sirenái ka [né/í]*, though (?)*ká mo sirenái ka sira* (§ 15.9) is occasionally heard. An example of *ká*

mo sirenái zya náí ka will be found in § 15.16. Downtown speakers permit nuclear focus subdual: S ká mo siré ya sinee [= siré wa sinai] (Okitsu 1.505).

Sometimes the expression is left dangling without the verb: Sóo ka mo, née 'Maybe so, you know' (R); Nanazyuu-néndai ni wa utyuu-símin te na [= to iu yóo na] monó mo tanzýoo(¯) surú ka mo—'In the 70's perhaps there will be born citizens of space' (SA 2659.11). And occasionally the specific question is omitted: Ká mo sirenai né 'Maybe [so]' (Ariyoshi 217).

Instead of sirenai, you will sometimes hear sira[nai]: Sóo ka mo sira 'Maybe so'; it is not clear whether this (like ikanai for ikenai = damé da) is dialect. Cf. ká sira (§ 15.9). One example is from the speech of the critic Nakano Yoshio, who is apparently from Kansai, since shortly afterward he uses ya náí for zya náí: Sikási né, kore wa ánta to íken ga tiguaú ka mo sirán keredo mo ... 'However, you see, this may differ from your view, but ...' (SA). A more common substitute for sirenai is wakaránai 'there's no telling': Sóo ka mo wakaránai. Since the sequence /-ranai/ is often reduced to /-nnai/ you will also hear ... ká mo wakánai/sinnai; and /ee/ is substituted for /ai/ in downtown Tōkyō and other inelegant areas, so you may come across ... ká mo wakaráne/sirane and ... ká mo wakánee/sinne, as in this example: Mítu tyan wa ore no kotó o keibetu surú ka mo sinné keredo ... 'Mitsu, you may despise me, but ...' (SA 2640.108e). For an example of yá mo sirenu as a semi-literary equivalent of ká mo sirenai, see § 15.6a.

A roughly synonymous expression is NEGATIVE + tó mo kagiránai 'it is not impossible that; it may very well be that': kónai to mo kagiránai = kúru ka mo sirenai 'may come'.

Although the usual phrasing would attach the phrase either with no juncture or with juncture before sirenai, quite often a speaker will pause and tack on the extension ká mo sirenai—perhaps as an afterthought—with a juncture (sometimes even major) that leaves a clearly heard accent on ká.²⁰ The predicate with ká mo sirenai will sometimes be introduced by the adverb arúí-wa 'perhaps' (also a conjunction 'or' and 'some ... others'): Kono otokó,^[1] arúí-wa kitigai ká mo sirenai 'Perhaps this man is crazy' (SA 2672.119c). The sentence may be nominalized before ká mo sirenai is attached: ... dai-syookengáisyá ni o-rei o iwanákereba naránai no ká mo sirenai 'it may be a matter of having to express gratitude to the big securities companies' (SA 2679.30e).

15.9. Ká sira

The word sira is a shortening of siranu = siranai 'I don't know', and the sequence ká sira is tacked onto a sentence that you wonder about to yourself: Sóo ka sira 'I wonder about that'; Náze hituyoo ná no ka sira 'I wonder why it is necessary'. Unlike ká né[e], which invites others to listen in on your musings, you are really talking just to yourself with ká sira. Yet the expression can be used with hortatives: Minná de ikóo ka sira 'I wonder whether we should all go'. And the form in any use is largely confined to women's speech; men prefer ká né/ná (§ 15.7) though a man may use ká sira in speaking to a woman. The following example (from the speech of Yoshinaga Sayuri, born in Tōkyō 1945) has ká sira in place of ká sira: Kokóro de omótte mo, iwanái n zya náí ka sira 'I may think it in my heart but I doubt I would every say it' (SA 2645.49d). Women sometimes add ká

20. This is probably another instance of the "emphatic" accentuation of a sentence extension, found also in S [l] zya náí ka and the tentative S [l] daróo. See § 15.16 and § 12.1.

sira after stylization: *Kodomo ga gakkoo é de mo iku tosi-goro ni narimásitara, watakusi, nemuru zikan ga arimásu ka sira* 'Perhaps when my child has reached the age to go to school or the like, then I will have some time to sleep' (SA 2640.20c).

Occasionally *ká sira* will turn up in a nonfinal position; the sentence has been directly adverbialized, creating clichés that are usually pronounced with the accent removed—*dáre ka sira*, *ítu ka sira*, *dóko ka sira*, *nán [i] ka sira*, as in: *Náni ka sira* (= *Nán daroo ka*) *nódo ni tukáeta yoo na kanzi desu* 'I have the feeling something is stuck in my throat'; ... *ítu mo nán ka sira yatte* 'ru 'I'm always doing something (or other)' (Tk 4.314a); *nán ka sira* = *náni ka sira*. In the following example, the *ká sira* phrase would appear to be in apposition: *Gaikokú-zin no Nihón-ron ni wa, dóko ka sira múri na rikai(¯) ya kentoo-házure ga tukímono de ari* ... 'The theories foreigners have about Japan are inevitably accompanied by SOME POINTS of unreasonable interpretation and miscalculation, and ...' (SA 2662.91a). Examples with adnominalization, such as *dóko {da} (or {datta}) ka sira no monó* 'a thing from I-don't-know-where = from somewhere or other' may provide us with a transition in the development of the indefinite phrases such as *dóko [datta] ka* 'somewhere'.

15.10. Kké'

The retrospective particle *kké* can be added to the perfect of verbal, adjectival, and nominal sentences, and also to the unstylized imperfect of nominal sentences: *Yonda kke* 'He called, I recall'; *Óokikatta kke* 'It was large, I recall'; *Senséi datta kke* 'It was the teacher, I recall'; *Senséi da kke* 'It is the teacher, I recall'. The sentences are used in thinking back, recollecting to oneself, or questioning oneself about some situation to be recalled: *Ano toki utatte irásita kke* 'You were singing at that time, I recall'; *Nán datta kke {ka née}* 'What was it, now let me see'; *Dóko ni oitá kke* 'Now let's see if I can recall where I put it'; *Ee-to, nán te tokoró da kke, wasuretá wá* 'Uh, lemme think, I've forgotten what place it is' (KKK 3.43); *Anáta wa kotosi kazoédosi de nán-sai da kke* 'Now let me see, how old would you be this year by Japanese count?'. The particle *kké* can be followed by *né, ná, ká, ká né, zó*: *Kuusoo ni muné o hukuramaseta kotó mo átta kke né* 'There were times too, I recall, when I let my chest swell with daydreams, you know'; *Anó-hito no namae wa nán to iú n da kke né/ná* 'Now what was his name, I wonder'; *Omeé [= omae] mo itízi wa kore ni ki ga átta n da kke náa* 'YOU used to be interested in this, I recall' (Y 387); *Aa, sóo sóo, sonna zyoyuu ga itá kke née* 'Oh, that's right, there WAS such an actress, now, wasn't there' (KKK 3.43); *Sono máe wa buróoti, sono máe wa kutibeni, sono máe wa—nán datta kke ná* 'Before that there was the brooch [that you wanted me to buy], before that the lipstick, and before that—what WAS it now?' (KKK 3.43); *Ore [w]a kinóo wa omotákute hídókatta kke zó* 'Man, did I feel lousy yesterday!' (Y 231); *Dáre da kke ka ga, ...* 'Someone ...' (Kb 17a).

It is possible to put the perfect into polite style (§22.1) before adding *kké*: *O-ikutu désita kké né—Kyúzyuu desu tté* 'How old WAS he, now?—Ninety, they say' (Ariyoshi 174); *Dóko desita kke né* 'Where was it, now?'; *Íkura desita kke* 'How much was that, now?' (Fn 185b); *Née-san wa íkutu desita kke né* 'How old did you say you were, my dear?' (Y 231); *Senséi wa yóku tanka o rooei simásita kke* 'The teacher (or You) would often read poems aloud, I recall'; *Koo iu hanási o kiita kotó ga arimásita kke* 'I seem to recall having heard such talk as this' (Y 231). Note that there is no polite *... *désu kke* alongside the plain imperfect ... *dá kke*—itself something of an anomaly, perhaps allowed

because of the shape resemblance between *dá* and *-tá*. In *Tōkyō kke* is not used after *A-i*, though *A'katta kke* is accepted, and some speakers are hesitant about *N dá kke*, preferring *N dátta kke*, except when *N* includes an interrogative as in *Dáre no hón da kke ka náa* 'Whose book was it, I wonder'. For one locality where *A-í kke* is used, see Zhs 3.17.

It is generally assumed that *kké* comes from an abbreviation of the literary *-kéri* < *-ki ári*. Yoshida (231-2), who speaks of it as "retrospective or past-past", traces *-tá kke* from earlier *-tákkeru* < *-tárikeru*; he says the form began in Muromachi times, flourished in the Edo period, and is still popular in the Kantō area. Although in *Tōkyō* the expression is mostly exclamatory, in Shizuoka there are wider uses (Y 231-2); the anomalous form *N dátta kke* is largely limited to *Tōkyō* (Y 232).

15.11. *Tté; káte*

In addition to certain obvious abbreviations which will be described below, there appear to be two kinds of marker that are often discussed together as a "particle *tté*". One is used to mark quotations as if a variant of *tó* (§ 21—examples of this *tté* will be found in KKK 3.72-3); the other serves as a lively equivalent of the highlighted gerund used to express a concession: *-té mo* 'even doing/being'.

When marking a quotation, the particle attaches quite regularly, though the first /t/ is normally suppressed after /n/ in accordance with a general rule of consonant-cluster reduction by which *nCC* → *nC* and *nnC* → *nC*, so that *Hón tte* is pronounced (and sometimes written) /*hónte*/ and *Nán[i] tte* will sound the same as the word *nánte* (§ 2.9). In the following examples "te" was written for *tté* after /n/: *Ningen te sonna món na n desu yó* 'People are like that, I tell you' (SA 2669.92c); ... *Rosiyá-zin to Nihon-zin te, sūgoku nite* 'ru to omotta no né 'I felt that the Russians and the Japanese were very similar, you see' (SA 2666.44b). And even after a vowel we sometimes run across "te" written for what is to be pronounced *tté*: ... *koo ii-tai baai mo áru te* [= *áru tte*] 'I understand there are occasions when you want to say this' (SA 2674.101a).

But the rules needed to describe how the particle *tté* attaches in the second situation (marking a concession) seem a bit odd if we merely assume that *tté* is a synonym of *mó* and, like it, attaches to the gerund: *V-té mo* = *V-tá tte*, *A-kúte mo* = *A-kúta tte*, *N dé mo* = *N dá tte*. To uphold an analysis of that sort we would have to assume that the gerund changes its final mid vowel /e/ to the low vowel /a/ when—and only when—the particle *tté* is attached. I believe a better explanation is to regard the concessive /*tté*/ as a special use of the gerund *átte* 'being', with the final vowel of the gerund obligatorily dropped: *V-tféé átte*, *A-kútfeé átte*, *N dféé átte*. The usage in question, however, is more extensive than the usual conversions of gerund + *áru* would lead us to expect, so I propose writing the forms as *V-t'átte*, *A-kút'átte*, and *N d'átte*, with no space between the apostrophe and *átte*.²¹ We will write *Dáre ga kít'átte* = *Dáre ga kíte mo* 'Whoever comes', *Dóre ga hósikut'átte* = *Dóre ga hósikute mo* 'Whichever is wanted', *Nán d'átte ii* = *Nán dé mo ii* 'Anything will do'. Examples: *Kóndo no ga damé da to iwaret'átte situboo wa sinai yó* 'I won't be disappointed even if I'm told this one is no good' (Y 239); *Hito no*

21. But do not assume that /*tatte*/ is always *-t'átte*; it may represent *-ta tté* = *-ta tó*, as in this sentence: *Aru-Kápóne náanka mo irerareté [i]ta tte iu yuumei na tokoró da kedo, ...* 'It is a famous place where they say even the like of Al Capone was held ...' (SA 2673.122c). Additional examples of *d'átte* = *dé mo* will be found in § 2.11.

kokóro nánte, íkura gakúmon o sit'áte, kenkyuu o sit'áte, wakarí-kko náí daroo to bóku(¯) wa omóu n desu 'Another person's heart is impossible to understand, in my opinion, however much learning or research you may do' (Y 239); Káette kónakut'atte íi yó 'You need not come home' (Y 558); Dé mo íi zya náí desu ka, daigaku e ikanákut'atte 'But isn't it all right—NOT to go to college?' (SA 2666.44b); Osóraku dóno syúukyoo ni d'atte human daróo to omóu 'I daresay there will be discontent with any religion' (SA 2671.19d); Hóra, dóнна otokó no kokóro no náka ni d'atte áru desyó, ítu ka utí(¯) o tobi-dásite ate-zúppóo(¯) no tabí ni de-tái tte iu yumé ga 'Look, it must be in every man's heart—the dream of wanting sometime to fly out of the house and go off on a random journey' (SA 2668.116c).

You will recall that to express a concession the gerund need not always be highlighted: Itté {mo} íi 'It's all right to go'. And there are occasional examples of ...t'áte mo: ... gakkóo-gun ni nátt'atte mo seiseki o otósu mái to ... 'not wanting to let the grades drop even though it becomes just one of many schools' (SA 2673.17c); Dóko made d'atte mo, túite iku 'I'll follow you anywhere' (Terase 116).

Sentence-final tté is used, often after polite stylization, as an equivalent of ... sóo da or of ... tó no kotó da or ... tó¹ iu hanasí/kotó da 'they say ...', 'I hear ...' (see § 18): Gaizin no miná-san, soo ossyaimásu, Nihon-zin te kíyoo da tté 'All the foreigners say that, that the Japanese are skillful' (SA 2664.37a). The "sentence-final" tté can be followed by né[e]: Sinbun-kísyá ni nátta n da tté né 'I hear he's become a reporter, you see' (KKK 3.75); É mo káku n desu tté né 'I hear you draw pictures, too?' (SA 2666.43b). And it can be preceded by yó: Kono namae de san-nen táttara, anáta wa tíi to méiyo to o-kane o éru kotó ni narimásu yó tté 'With this name, he [= the Name-Doctor (a kind of prognosticator)] told me, in three years you will come to gain position and fame and money' (SA 2685.46b). As an intonation-marked question the final tté can mean 'Did I hear (you say) ...?' as in these examples: Máiniti(¯) vaiorin o hiite 'rú n desu tté? 'Did you say you play the violin every day?' (KKK 3.173); Hánnin o tukamaeta yó!—Tukamaeta tté? 'We've caught the culprit!'—'You've caught him?' (KKK 3.75); Dáre ga iku tté? = Dáre ga ikú ka tté? 'Who'd you say was going?' See § 14.2.3 for paired nó-marked questions followed by tté, often AFFIRMATIVE nó NEGATIVE nó tté 'What do you mean ...?! = very ...'. On tté sá, see § 15.2. In KKK 3.75 there are two examples that have dá tté as an afterthought at the very end of a report: Sositára, ... teikyúu-bu ga áru n desu tté née dá tté 'And I hear they have a tennis group ..., as I understand it'; Tó ittára, mai-tosi site 'rú zya náí ka, dá tté 'From what is said I understand they must do it every year'. Observe that what confronts us here is not the D'áte 'But' (= Dé mo) that is found in such examples as D'áte, kuyasii n desu mono! 'But it's simply mortifying!' (KKK 3.257).

Tté (like té[e]) is also used as an abbreviation of the expressions *to iu*²² and *to iú no wa* (usually with an identificational or adjectival sentence—examples are in KKK 3.74); but *tté no wa* also occurs, with tté substituting for just the two words tó and iu, as in this example: Konó-goro(¯) no gakusei wa sonkei suru tté no wa odateru kotó da to omótte 'ru n desu 'Students nowadays think to respect means to flatter' (Ōno 1966.55). Often tté,

22. As in Takasimaya tte tokoró ga ... '[the place called] Takashimaya' (SA 2672.61b) and Watasi ga Tookyoo ūmare da tte kotó de wa nákute, ... 'It's not (a matter of) my being Tōkyō-born, but ...' (Fukuda in Ōno 1967.224). Other examples will be found in KKK 3.73-4. Here is one preceded by ellipsis: ... go-ongaesi sinákereba {naránai} tte kimoti ga tuyói ... 'I have a strong feeling that I must repay my obligation ...' (SA 2670.113b). An example in an apposition: Atityúudo, táido tte monó wa né, ... 'The "taido"—(what is called) attitude, you see, ...' (SA 2671.17c).

tté no wa, or tte monó wa is used to cite a theme (cf. § 3.9): [Énniti e iku to, o-kane tukaú n desu.—] Énniti tté, dóko desu? '[When I go to the (temple) fair I spend my money.—] Which fair is it?' (SA 2663.46b); Sensoo tté, otokó ni wa tokidoki hituyoo na monó zya náí ka sira 'I wonder if war isn't something the male needs every now and then' (SA 2664.92e); ... okámisan te monó wa ... 'the housewife ...' (Tk 2.104b); Okosan te ángai(-) karee-zuki désu né 'Children are unusually fond of curry, aren't they' (SA 2679.122d); Tyoosyú-sya tte no wa, yonaká ni ókite benkyoo site iru hazu no hitó ga syutai na wáke desyo 'It must mean that the [radio] audience is mostly comprised of people who are presumably studying late at night' (SA 2684.115a). An example of tté = to iú no [wa] used as a thematic afterthought: Iyá desu || nées || otokó tte 'Aren't they awful?'—men ...' (with the afterthought spoken in a lowered register of voice). In some sentences tté represents a contraction of *to itte*; there is additional ellipsis in this example: Sutorippaa ni nátte mo [ii to i]tté, anáta, karada ni zisin ga áru no né 'Your saying you could become a stripper must mean you have confidence in your body' (SA 2666.45b)—cf. § 9.2.2. I am inclined to treat -kattatte in the following example as -katta tte with tté representing an abbreviation of *to itte* [*mo*], unless it is to be taken as a dialect version of -kut'átte: Káko nánka íkura utukúsikattatte, yókattatte, nán ni náru 'The past and all, however beautiful [you say] it was, however nice, what does it come to?' (Y 239). In the example ... taihen da, tté n de ... 'they say it would be terrible ... so ...' (SA 2672.28b) /ttende/ represents a contraction of ... to itte irú no de.

A less colloquial version of tté in both quotative and concessive uses is tóte, from which tté is usually said by Japanese grammarians to have been contracted. The entry of tóte into the picture casts a shadow on my explanation of /-tatte/ as ...-t'átte, since tóte permits the concessive use: íkura de aru tote = íkura da t[o]te = íkura d'atte = íkura de mo 'however much', dóko e ittá tote = dóko e ittá t[o]te = dóko e itt'átte = dóko e itté mo 'wherever one goes'. But I believe that the use of ...-tá tote for ... t'átte may be a back-formation, pseudo-literary in nature, and that all historically legitimate cases of tóte are to be taken as equivalent to ... tó itte 'saying that ...' and attached to finite forms only, so that ...-ta tote should only be used where ...-ta to itté mo is possible; accordingly (*)-kuta tote should be avoided, and Siranákut'atte hazukásiku náí 'There's no shame in not knowing' should not be cited as (*)Siranákuta tote ...²³ (The examples in KKK 3.123 are V-tá tote and N de átta tote. Presumably the appropriate reflex for N d'átte would be N †dá† tóte or N de áru tote.) And we will join Kazama (203 ff) in condemning (*)d'átt'atte as a pleonasm for d'átte 'even being' (= dé mo) while allowing the homonymous dátta tte 'saying that it was'. See the discussion in § 21.3.

The sequence /ttatte/ is an abbreviation that can be spelled 'tt'átte = [i]tt'átte 'even saying' (= itté mo);²⁴ and /ttettatte/ represents tte 'tt'átte = to itt'átte 'even saying that ...'

23. Terase 146 constructs examples of "colloquial" tóte {mo} as equivalent to d'átte (= dé mo) after a case-marked noun (Nihón e tote mo); as equivalent to A-kút'atte (= A-kúte mo) after an adjective imperfect (kurusii tote mo); and as equivalent to V-t'átte after a verb perfect (yondá tote). In Wakayama the form ná'atte (from náku ári-te) is used where standard Japanese would have nákute (Zhs 4.329). Yoshida says -t'átte is from -tá tote, which will be found in written versions of conversation only under special circumstances: Ki ni surú na; ki ni surú na, ki ni sitá tote dóo dekiru monó ka 'Don't let it bother you; don't let it bother you, how can you let it bother you' (Y 240). No one seems to have considered the problem presented by the adjective form -kut'átte.

24. But in western Japan the quotative particle tó freely drops, so that tt'átte will turn up where you would expect tó itt'átte = tó itté mo: Sikási sore wa Nihon-zin no syuukan desyoo. Kyuu ni kae

(= to itté mo), with the first /t/ automatically suppressed after /n/, so that /nántettatte/ represents nán[i] tte 'tt'atte = nán[i] to itt'áte 'whatever one says = when all is said and done, after all' (= nán to itté mo). Cf. nán t'atte (SA 2670.150), a further abbreviation of nán[i] to itt'áte.

Not to be confused with tté is the ending -kutte, a lively form of -kute (the adjective gerund §9.2) made by inserting the intensive infix that doubles a voiceless consonant and inserts a nasal before a voiced consonant (see Martin 1952).²⁵ And /tetatte/ represents -té 't'atte = -té [i]t'áte 'even doing', equivalent to -té [i]té mo, as in this example: Sore ga tasyoo Sangiin no zyoosiki to tigatté 't'atte kamawánai zya náí desu ka 'Surely it doesn't matter that it differs somewhat from the prevailing sense of the Upper House' (SA 2660.48d).

In §2.11 we observed that speakers in western Japan often use the particle káte after a noun²⁶ that a Tōkyō speaker would mark with d'áte, dé mo, or just mó. But káte also occurs after inflected forms:

V-tá kate = V-t'áte (= V-té mo): Áto de naitá kate siran wá yó 'She may have cried later, I don't know' (KKK 25.74b); Rokuzyúu ni nátta kate, rippa ni yakú ni tátta hitó ga óoi desu yó 'There are plenty of people who, though sixty years old, have rendered splendid service' (Tk 3.285b); Nanbo yakusoku iutá kate ... (= Íkura yakusoku o itt'áte) 'However much they promise, ...' (SA 2689.147a); ... kúroo ga átta kate (= átt'atte, átte mo) tati-agaru seizon-kyóosoo wa hagési-sa mo aróo ga, ... 'There will be quite a struggle for existence but we will stand (up to it) to the extent that we have worked hard' (SA 2686.49b).

V-(á)n kate = V-(a)nákute mo, V-(a)nákut'atte: ... kakán kate 'even without writing' (Zhs 4.230); Sinpai sén kate yorosi (= Sinpai sinákute mo yorosii) 'You need not worry about it' (Y 512); Sonna hidói kotó sén kate ée ya náí ka (= Sonna hidói kotó o sinákute mo ii zya náí ka) 'Must you do such a terrible thing?' (Makimura 1956.164a).

V-rú kate: Náni o surú kate saki-dátu monó wa nán to yara 'Whatever you may do the important thing is something or other'.

N yá kate (or N káte) = N d'áte: Kono tuki ya kate ... = Kóngetu d'atte ... 'This month even ...' (Maeda 1965.129).

A-[k]ú kate = A-kú d'atte, A-kú de mo: Nága'u [/nágoo/] kate mizíka'u [/mizíkoo/] kate dóo ni dé mo kittáru de = Nágaku d'atte mizíkaku d'atte dóo ni dé mo kítte iru zé 'Both long and short, they are cut every which way!' (Makimura 1956.164a).

A-ku náí kate = A-[k]u ná[k]ute mo = A-ku nákut'atte: Úmaku náí kate = Úmaku ná'ute mo, Úma'u ná'ute mo [/úmoo nóotemo/] 'Even if it is not tasty/skillful ...' (Maeda 1961.215).

According to Maeda (1965.129c) káte first appeared around 1860, replacing an earlier kátte, an abbreviation of kátete (which appeared around 1780), a form derived from ká + tóte. All three forms (kate, katte, katete) are found in kana spellings of the modern period.

ró tt'atte, sómo-somo múri na soodan désu yó 'But surely that is a custom of Japanese people. Why, it would be absurd from the very beginning to advise "Suddenly change it!"' (SA 2673.35e).

25. But some would account for the double tt as the result of a contraction of -ku site. Notice that, as we would expect from A-kutte, the form A-kutt'atte is also heard, as a lively variant of A-kut'atte.

26. Or case-marked noun: Íma kara kate osoi koto arahen (= Íma kara de mo osoi kotó wa náí) 'You won't be late even (starting) now' (Makimura 1956.164a).

The forms *katte* and *katete* are reported for Fukui province: *warii katte* = *wárukute mo* 'even if it's bad' (Zhs 3.235), *orósu katete* = *orósite mo* 'even if they lower it' (Zhs 3.232). Makimura (1956.164a) says that the Ōsaka sentence *Míta kate kamahen* (= *Mít'atte kamawánai*) 'It doesn't matter if you look' can be further abbreviated to *Míta te kamahen*.

15.12. *Ná; nákáre*

A negative command (i.e. a direct prohibition) can be made by following the verbal imperfect *V-rú* with the particle *ná*: *Kesú na* 'Do not erase!' (Cf. *Kesu ná* 'I will erase it, you see' ← *Kesú ná*.) Carefully distinguish the infinitive *V-i + (-)ná*, an abbreviation of *nasái*: *Kesi-ná[sái]* 'Erase!' (see § 16.3).

The particle can be followed by *yó* for emphasis: *Kesú na yó* 'Don't erase!'; *Nigásu na yó* 'Don't let it [= the fish] get away!'; (SA 2664.83b); *Óoki na kóe o dásu na yó* 'Don't shout so!' = 'Keep your voice down!' (SA 2671.93a). And *yó* is sometimes pronounced *í*: *Mútya o surú na í* 'Don't be rash!' (KKK 25.74a). Some speakers pronounce /nai/ as /nee/: *Ranboo na kotó o iú nee* [= *iú na yó*] 'Don't say such rough things!' (Okitsu 1.61). The negative imperative can be put into a direct quotation, with or without *yó*: *Kéti-keti surú na yó tte ittá n desu kedo né* 'He told me "Don't be stingy!", you see, but ...' (SA 2672.62a). The verb can take polite stylization before adding *ná*: *Kesimásu na* 'Do not erase!' (with fully voiced *u* before *na*—cf. the unvoiced *u* in *Kesimásu ná* 'I will erase it, you see').

The particle *ná* has the same meaning as *nákáre* < *nák[u] áre* 'let there not be' (a literary imperative), and that form is sometimes seen, especially in slogans or the like: *Ogoru nákáre, zimin-too* 'Beware of pride, O Liberal Democratic Party!' (SA 2661.116a); *Táka-ga benpi to iu nákáre* 'Don't say (it is) just constipation!' (heading of a medical note in SA 2650.97b); *Haguréru kotó o osoréru nákáre* 'Have no fear of going astray' (SA 2678.117d); *Konpyúutaa yó, sararii-man no sasáyaka na tanosímí() o ubáu nákáre* 'O computer, rob not the salaried man of his little pleasures!' The verbal imperfect in these expressions is functioning as a direct nominalization, and there is an underlying minor juncture before *nákáre*, so that the structure seems to be saying *V-rú* [no *ga*] *nák[u] áre* 'let there be no *V-ing*'. Compare the noun *koto-nakare*, an abbreviation of *kotonakare-syúgi* '(the principle of) peace-at-any-price' from *kotó ga nákáre* 'let there be no incident!', as in ... *koto-nakare no genzyoo-izi-ha* 'the status-quo wing in favor of peace at all costs' (Fn 200b).

15.12a. *~Mái, ~mázi/ ~máziki; -(a)mási_{1,2}*

As described in § 12.2, the negative form of the hortative ('Let's not do it!') can be expressed by attaching *~mái* at the end of the verb imperfect, either plain (*V-rú ~mái*) or polite (*V-i-~mási ~mái*), and the forms are sometimes used as written equivalents of the negative tentative *-(a)nái daroo* (§ 12.1).²⁷ These forms are derived from an inflected

27. It is not always clear whether *V-rú ~mái* is to be taken as a hortative or a tentative: *Bóku() wa kodomo o tukúru ~mái* 'I will father no children' (SA 2792.44d—said by a man who has had a vasectomy). From what Yoshida says, it would appear that in modern fiction the "hortative" meaning of *V-rú ~mái* is more like *V-(a)nái tumori da* 'I have it in mind (I intend) not to' and the "tentative" meaning is more like *V-(a)nái ni tigai nái* 'will surely not', *V-(a)nái ni kimatte iru* 'is bound not to', or *V-(a)nái rasii* 'will apparently not', rather than like *V-(a)nái daroo*.

auxiliary of the literary language with the attributive form ʔmázi-ki and the predicative form ʔmázi = ʔmáziʔ-siʔ. In the literary language the auxiliary follows the predicative form, including the TRUE predicative of áru and derivatives (náru, táru), óru, and habéru; which—as for all consonant verbs—coincides with the attributive, rather than following the infinitive (ári etc.) which unexpectedly substitutes for the true predicative form of these verbs in some but not all of the normal predicative uses. One form surviving into the modern language is aru-máziki ‘unbecoming, unlikely’, which now functions as an adnoun and is sometimes given a more colloquial version aru-mazii (MKZ), the consonant of -[k]i having dropped for all adjectives in the modern language.

Henderson 153 says that the forms with ʔmái are now “more used in the west and south than in Tōkyō and apparently ... going out of use”. Yoshida 315 says they are old-fashioned and stiff, enjoying little favor with those who are young or female. Perhaps that accounts for the measure of insecurity as to the approved forms of certain verbs; thus SA 2658.39ab condemns iru ʔmái, kúru ʔmái, and míru ʔmái in favor of i-mái, ko-mái, and mi-mái. In this study we will say that the -rú of vowel verbs OPTIONALLY drops, so that kúru ʔmái and kúʔ ʔmái are both acceptable (as are suru ʔmái and suʔ ʔmái as well as míru ʔmái and míʔ ʔmái, iru ʔmái and iʔ ʔmái etc.); we treat ko-mái or ki-mái and se-mái as dialect forms for kú[ru] ʔmái and su[rú] ʔmái respectively. The historical explanation is somewhat more complicated for each of the forms, but we will not go into that here.²⁸ I have recorded examples which attach ʔmái without the accent cancellation: yamerú mái can be regarded as a variant, within the standard language, of yamerú ʔmái.

These forms should not be confused with the literary forms -(a)mási₁ ‘will probably (be/do)’, a derivative from -(á)mu the literary tentative-hortative (whence -aʔu > -[y]oo the modern hortative); and -(a)mási₂ ‘wants to (be/do)’, a contraction of -(a)máʔkuʔ hōsi < -ám[u] aku (nominalization of the literary tentative-hortative = V-[y]oo kotó) followed by the adjective hōsiʔ-siʔ, a contraction of *po[r-á]si- ‘desirable’, from the old verb hór- ‘desire’ (in meaning equivalent to modern hosi-gáru) from which hór(e)- ‘become infatuated (with)’ is a derivative.

Dialect variants of ʔmái include ʔmée, ʔméi, ʔmyáa, and ʔmáa (Y 312). Examples of ʔmái taken from modern fiction will be found in Y 305-16.

15.12b. ʔBési/ʔbéki, ʔbéku, ʔbekárazu/ʔbekarazáru; ʔbéi, ʔbé[e], ʔbé ná

The literary language has an inflected auxiliary with the predicative form ʔbé-si, the attributive form ʔbé-ki. It is attached in the same way as ʔmázi: to the predicative form—including the true predicative form of áru (and derivatives), óru, and habéru, which coincides with the attributive form, as does that of consonant verbs in general. (On the substitution of the infinitives ári, óri, and habéri for some but not all of the uses of the predicative, see pp. 608, 933.) Since the predicative form of surú is sú, the appropriate conversion is sú bési/béki;²⁹ ‘ought to do (etc.)’; the predicative forms of vowel verbs with two-syllable

28. In colloquial materials from the Muromachi period the formation V-a-mai was common (Y 306); in the dialect of Ehime such forms as aromai (= áru ʔmái), iromai (= irú ʔmái), and ikomai (= ikú ʔmái) are reported (Y 305-6, 312).

29. For some reason, the accent cancellation is usually ignored in reading these literary formations: sú beki, sú besi. But the cancellation is operative when the colloquial imperfect (< literary attributive) is used: surú ʔbéki.

infinitives, such as *tábe* 'eat' and *abí*⁽¹⁾ 'bathe in', are shorter than the attributives (*tabúru/tabú* = colloquial *tabéru* 'eats', *aburú/abú* = *abirú*⁽¹⁾ 'bathes') so that the appropriate conversion is *tábu* *̀bési/̀béki* 'ought to eat (etc.)' and *abú* *̀bési/̀béki* 'ought to bathe in (etc.)'.

The meaning of the literary forms varies: (1) obligation 'ought to' (= *sinákereba naránai*); (2) possibility 'can' (= *suru kotó ga dekiru*); (3) presumption 'is likely/expected/presumed to' (= *suru hazu dá*);³⁰ tentative 'probably does or will do' (= *surú daroo*); definite future 'will do' (= *suru* in a restricted sense); indirect command (= *suru kotó da, sé yo*). Only the first meaning—'ought to' or 'must'—is common in the colloquial, which uses the form *̀béki da* (direct nominalization of the attributive adjective) after the plain imperfect of a verb. The negative is used as a PROHIBITION *V-rú ̀béki zya náí* 'ought/must not' (= *sité wa ikenai, surú na*) but in writing there is often a replacement by the literary negatives *̀bekárazu* < *̀bék[u] árazu* (predicative) and *̀bekarazáru* < *̀bék[u] arazáru* (attributive); examples of the attributive will be found in KKK 3.247, and here is an example of the predicative: *Tatí-syóoben su ̀bekárazu* 'No urinating' (Tk 4.260a). The double-negative expression *V-(a)záru ̀bekárazu* is equivalent to the colloquial *V-(a)nákereba naránai* 'must' and thus is much the same as one use of *V-rú ̀bési*.

The infinitive form *̀béku* 'needing to' also occurs: *Nagái ryokoo ni iku ̀béku, zyúnbi o hazimete iru* 'Having to go on a long trip we are beginning our preparations' (Morishige 168). *Su[ru] ̀béku mo náí* means 'There should be no possibility of doing it'. (Cf. *A-kú wa náí* = *A-i kotó wa náí*, p. 372). And *V-rú ̀béku yogi-náku sareru* means 'becomes/is inevitable'; examples will be found in Y 370. Although the colloquial will use *̀béki* only after verbs, the literary language permits greater variety, as illustrated by this example of adjective + *-káru* (< *-k[u] áru*) *̀bési*: ... *tanosikáru ̀béki syokutaku* 'the dining table that ought to be delightful' (SA 2652.140c). The attributive form *A-káru* is a contraction of *A-k[u] áru* and thus follows the pattern of *áru* as the appropriate true predicative form.

An abbreviated form *̀bé[k]i* appears in dialects, regularly following the pattern of *k*-dropping that led from the literary attributive *-ki* to the modern adjective imperfect ending *-i*. (Why is the *-k-* preserved in the auxiliary? Because the standard language lost the form except as a literary relic. Compare the competing forms *aru-máziki* and *aru-mazíi* mentioned in the preceding section.) And *̀béi* is widely pronounced as /bee/. This is the source of the form *V-ru bée* heard in dialect speech as an equivalent of the tentative *V-rú daroo*: *Áme ga húru ̀bée* = *Áme ga húru daroo* 'It will likely rain'. With the copula the form seems to be /nbee/ as in *Sóo da nbee* = *Sóo daroo* 'I guess so'; perhaps this is merely a stranded example of the pronunciation [nb] for /-b-/ that is common to a number of dialects in different parts of the country. Most particles with a long vowel freely shorten the vowel, so you will also find *bé* for *bée*. And the particle *ná[a]*—also *né[e]*?—can follow, as in these examples: *Attí wa tokkú-ni yuki^[1] hútte samúi ̀bé ná* 'It must be cold back there [at home] with snow on the ground for quite a while' (SA 2660.141c—a male speaker from Fukushima prefecture); *Hiki-sio de oki ni motte 'karetá no mo zúibun átta ̀bé náa* 'Musta been (= There must have been) a lot carried out to sea by the ebb tide, too' (SA 2670.107b).

15.13. *Kotó* and *nó*; *nánte*

We have elsewhere treated sentence + *kotó/nó* as nominalizations (§ 14); typically, as with

30. But, although *̀béki* would seem to include the meaning of *hazu*, the sequence ... *̀béki hazu* is not uncommon (Y 369).

adnominalized sentences in general, the sentence is unstylized. Women often use these nominalizations as full sentences—just as they often indulge in sentence fragments (§ 23), left dangling for modesty or other reasons; and since the sentences stylize readily before adding kotó/nó (as often in other fragments such as those with ... kará), it would make sense to treat kotó and nó by class overlap as sentence extensions together with the other sentence-final particles. In the case of kotó (but not nó) a nominal sentence can stand unadnominalized with dá, but only as an exclamation: Kore dá koto! 'It's this!' Kore ná koto can serve as an exclamation, too, but in addition it can be a statement or a question. The sentences extended with nó can be: (1) exclamations (with or without following né); (2) statements (with or without following yó); or (3) questions (accompanied by an appropriate rise of intonation). Examples: Dá ga || sono úmi no || nán to | máa | kitanái kotó^[1] {?da} 'But, my [máa], what a dirty sea it is!' (from a newspaper); ... okumen mo náí wakamonó(-) ga nán to húeta kotó^[1] {?da} yó '... how the number of brazen young people has grown!' (SA 2654.134d); Zúibun, zisin ga o-ari desu koto 'You DO have a lot of confidence in yourself!' (Fn 323b); Móo, káeru no? 'Are we leaving now?' (SA 2653.59c); [Zúibun hirói desu né.—] Dé mo né, máda híroku sitái no ' [That's a very wide range, I see.—] Yes, but I want to make it still wider, you know' (SA 2672.62d). The kotó exclamation can be preceded by a deictic used merely for emphasis: Sono tuyói koto! 'How strong!' (Hayashi 155; cf. p. 859). For an example of exclamatory kotó after a rhetorical question, see p. 948. People in Kanazawa often end sentences with ... tó^[1] koto, somewhat in the spirit of English 'I tellya': ... déte kíta n ya to koto = déte kíta n desu yó 'They've come out, I tellya' (Zhs 3.210 n. 8).

Although especially common in the speech of women and children, the nó-forms are sometimes used by men; sentence-final kotó, however, seems to be distinctively feminine, especially after dá: Máa, kírei na kusí da koto 'Why, what a lovely comb!' (Y 388); Kansin dá koto. Wakái no ni mo niawánai de 'I'm full of admiration. So young and yet not unbecoming' (Y 388).

For paired echo-questions with ... nó, see p. 862. See also dá no, § 15.17; ... nó ga = tokoró ga 'but', § 17.5; ... nó ka 'perhaps because', § 15.6. For sentence-final (postadnominal) ... kotó [da] 'one should, please to do' (with obligatory ellipsis of dá), see § 16.2.(17), p. 966.

In standard Japanese it is possible to abbreviate nó to n[ó] when it is followed by dá (or other copula forms) or ká: ikú n[o] da, ikú n[o] ka. And in dialect speech you may run across a sentence-final n[ó] of the same sort: Totie tyaan—ítu gakkoo [o] e ikú n? Benkyoo dónai surú n? (= Totie-tyan—ítu gakkoo e ikú no ka; benkyoo dónna ni surú no ka) 'Li'l Toshie, when you goin' to school? How you gonna learn?' (SA 2665.112c). On the use of S nó as a question, etc., see § 14.2.

The kotó-exclamation shows surprise at a sudden apperception; SENTENCE + nánte is similar, but adds a touch of incredulity, as in these examples from Hayashi 153: Huyú, kaminári ga áru nánte 'What's it doing thundering in the wintertime?!'; Kúmó yori mo takái nánte 'Why it's higher than the clouds!'; Senséi no kotó o "kába" da nánte 'How can you speak of the teacher as an "ool-fay" [fool]?!' (The word "kába", ostensibly 'hippopotamus', is an intentional metathesis of báka 'fool'.) As Hayashi points out, these expressions are very similar to SENTENCE + tó wa 'to think of ...!', 'imagine ...!', § 21.1.(10). For other uses of nánte, see § 2.9.

15.14. *Tó mo*

Tó mo is used as a sentence-final extension to mean 'of course' or 'indeed': *Sóo da to mo* 'Yes, indeed'; *Kamaimasén to mo* 'Of course it's all right'; *Kíta to mo* 'Of course I'm here', *Iku tó mo* (or *Ikú to mo*) 'I will go indeed' (all from KKK 3.125). As the last example illustrates, *tó mo* attaches to an atonic verb form in the same way as *tó* alone does: either losing its accent after the inherent accent of the ending (*Ikú to mo*) or retaining its own accent at the expense of the accent of the ending (*Iku tó mo* ← *Ikú | tó mo*).³¹ In §21.1.(14) it is suggested that this usage, which goes back to the Muromachi period (Tsuru 56b), might be regarded as an abbreviation of some quotation, perhaps with ... *omoéru* or ... *ieru* as the omitted verb. In Shiga and Fukui (Zhs 4.126 n. 7) a sentence + *kurai* (or *kúrai*?) is used like *S tó mo* in *Tōkyō* to mean 'of course'.

In addition to the sentence-final usage, *tó mo* can also represent a highlighted quotation—or a highlighted version of almost any of the various uses of quotations. Note in particular *tó mo tukánai* §21.1.(7), *tó mo kagiránai* §21.1.(8), *tó mo = -té mo* (etc.) and *dé mo* §21.1.(9),³² *tó mo náku* §21.1.(12), *tó mo aróo monó/hitó* §21.1.(13). For *N nárazu to mo = N daké de náku* 'others besides (in addition to) N', see p. 368. For *sore tó mo* 'or (else)' to introduce an alternative question, see p. 924. For *nári* [to [mo]] see §15.19. These examples show specialized uses of quotations: ... *masárú tó mo otoránai* 'kessaku' to *syoo-saréru* 'it can be called a "masterpiece" equal to any' (SA 2689.19b); ... *kore mo Tookyoo ni masárú tó mo otoránu nedan dá ga* ... 'this is a price that neither exceeds nor trails *Tōkyō* but ...' (CK 985.271); ... *mé o tukarásu to mo siraná de, káre-ra wa syuukán-si o yómu* '... ignoring their tired eyes they read the weeklies' (Hayashi 117).

And, of course, *tó mo* may be a highlighted reciprocal 'even/also with' as in *Áni to mo ootoó to mo kenka suru* 'I quarrel with both my older and my younger brother'. The noun *tómó* 'companion' and the adverbialization *tómo() ni* '(as a companion =) together'—equivalent to *issyō ni*—are best treated separately. (The noun is the source of the collectivizer *~dómo*, §2.7.) Synonyms of *tómo() ni* 'together', in addition to *issyō ni*, are *tomódomo() {ni}* and *morotomo {ni}*.

There are two suffixes—or, likely, quasi-restrictives (§2.4)—that derive from the noun *tómó*:

(1) (-)~tomo (< ~tomó^[1]) 'all ...' (atonicizing) as in *húuhu ~tomo = huuhutomo* 'both husband and wife', *símai ~tomo = simaitomo* 'both/all the sisters', *ryóosya ~tomo = ryoosyatomo* 'both persons together', *ryóokun ~tomo = ryookuntomo* 'both the two gentlemen' (SA 2681.95b), *ryoo-zíko ~tomo = ryoozikotomo* 'both accidents' (SA 2688.130e), *Ryoo-zín'ei ~tomo né = Ryoozin'eitomo né* 'Both camps alike, you see' (Tk 2.247a), *ryoohóo() ~tomo = ryoohootomo* 'both', *ryoogan ~tomo = ryoogantomo* 'both

31. This is explained in Martin 1967.251 n. 8. Another example of the accent option is *Kore dá to mo = Kore da tó mo* 'Of course it's this'—notice that *dá* can not drop.

32. Of which I take *káku N tó mo* to be an example, since it means *dóno N dé mo* 'whatever N' as in this example: *káku | sinku-tánku to mo || kore ni dóo | táisyo | surú ka ni, | kúryo site iru || kotó mo | zizitu da* 'The fact is that all of the think tanks are struggling with the question of how to cope with this [= the cutback in government funds]' (SA 2661.29d). Other examples: *káku ea-ráin to mo* 'each and every airline' (SA 2685.80), *káku depáato to mo* 'each and every department store' (SA 2685.112a). I believe *káku-sya to mo* 'each and every firm' (SA 2672.30d) belongs here, too; cf. *káku-syoo ~góto ni* 'in each and every paragraph' (SA 2685.105a).

eyes', mittú ˉtomo = mittutomo 'all three', mikka ˉtomo = mikkatomo 'all three days', yonín ˉtomo = yonintomo 'all four people'.

(2) (-)ˉtomo(ˉ) 'including ...' (dominant prototonic but optionally atonicizing) as in sóoryóo ˉtomo(ˉ) = sooryootómo or sooryootomo 'including postage', huroku ˉtomo(ˉ) = hurokutómo or hurokutomo 'including appendix'.

The first suffix should not be confused with the use of tó mo after a number as in Mikka tó mo kakaránai 'It won't take even three days'; see §21.1.(4).

Expressions such as Kyóo lasú tómo(ˉ) ʃniʃ || háré desyoo 'Today and tomorrow will both be fair' involve parataxis or ellipsis that leaves two nouns directly conjoined and immediately followed by the adverbial tómo(ˉ) ʃniʃ 'together': Kyóo [to] lasú [wa] | tómo(ˉ) ʃniʃ. Examples: Humikiri-zíko no tamé || Tóobu | Toozyoo-sen ga || nobori | kudari tómo(ˉ) || hutuu ni nátte imáshu 'Owing to an accident at a crossing, on the Tōbu Tōjō line both the up-trains and down-trains are out of operation' (R); ... ími yoofoo tómo(ˉ) ... 'both meaning and use (together) ...'; mágutí, okúyuki tómo(ˉ) ni 'frontage and depth (of the shop) together' (SA 2671.38c); ... iró wa natú huyú tómo(ˉ) kón de, ... 'the color is dark blue summer and winter alike, and ...' (SA 2671.107)—the ellipsis is natú [to] | huyú [wa] | tómo(ˉ) [ni] || with junctures that cancel the final accents on natú and huyú and then automatically disappear so that natu huyu tómo(ˉ) is pronounced as if it were a single word.

Similar cases involve an inherently nonsingular noun: zí-ta tómo(ˉ) ni 'both oneself and others', méi-zitu(ˉ) tómo(ˉ) ni 'both in name and in reality'; dán-zyo tómo(ˉ) 'both men and women', sitú-ryoo tómo(ˉ) 'both quality and quantity'. (These differ from the nouns that take ˉtomo 'all' in not being numbers.) The adverbial expression zéhi-tomo(ˉ) 'at all costs, for sure' apparently comes from zé-hi 'right or wrong = by all means' + tó mo [áre káku mo áre] '[be it] even so or [be it even thus]' with the old deictic tó (= sóo) best known in tó-ni-kaku = tó-mo-kaku [-mo] = tó ni mo káku ni mo 'whether so or thus' = 'nonetheless, anyway'; cf. Sore wa tó-mo-kaku ... 'Be that as it may ...'.

15.15. Ttára, tteba[a]; tó, ttó, tó ka

A number of sentence extensions derive from various quotational structures, and these are treated in other sections. Ttára and tteba[a] are described in §21.2. On the use of a quotation (§21) as a full sentence to report hearsay, see §18: Sóo da to = Sóo da tte (§15.11) = Sóo da sóo da 'They say it is so'. The quotation can be followed by né, ná, yó, or sá: "Íma ni, mata nágaku náru kara míni nánka tukúttara oo-zón yó" tó ná 'She says "Before long they [= skirts] will become long again so it would be a big waste of money to make one of those minis!" you see' (SA 2659.118e). For an emphatic sentence-final use of tó or ttó, see §21.1.(20). For sentence-final tó ka, see §21.6.

15.16. [l] Zya náí [ka/no], [l] zya arimasén ka (= zya náí desu ka), [l] dé wa gozaimasén ka

A sentence can be turned into a rhetorical question by a direct nominalization that is converted into a negative question, i.e. by adding to the sentence zya náí {ka/no}, politely zya náí desu ka or zya arimasén ka, hyperpolitely dé wa [or zya] gozaimasén ka. Imperfect nominal sentences will either drop the copula dá or nominalize with ... ná nō. The normal

pattern attaches the stretch that starts with *zya* (or *dé wa*) as a sentence extension without juncture; the basic final accent of an “atonic” inflected form will surface and the underlying accents in the extension will automatically drop. (See further discussion at the end of this section.) Examples: *Hayái zya nái [ka]?* ‘Aren’t we early? = Surely we are early’; *Háyaku nái zya nái [ka]?* ‘Surely we aren’t early’; *Íi zya nái desu ka* ‘But isn’t that nice!’ (SA 2673.46c); *Íi zya nái no?* ‘Nice, isn’t it? = How nice!’ [said after putting a record on the record player]; *Sonna kotó, kangaeraré nái zya nái desu ka* ‘Surely such a thing is unthinkable!’ (KKK 3.282); *Nihón ga Amerika o osáe, bookei no tóppu ni tátte iru kotó o míte mo, Nihon-zín ga kirawarete iru hazu ga nái zya nái desu ka* ‘Surely there is no reason for Japanese to be disliked just because (we see that) Japan has pushed America aside to become tops in trade’ (SA 2660.39a); *Sono sinkoku ga kanarazú-sí-mo ryoosin-teki zya nái ka mo sirenái zya nái ka, to iwarerú n desu né* ‘We get asked whether it isn’t likely that those [income] reports may not always be as conscientious as they might be’ (SA 2670.52a); *Koitsu wa dare d’atte uresikaróo zya arimasén ka [= uresii daroo zya arimasén ka = uresii hazu dé wa arimasén ka]* ‘Surely ANYONE would be delighted with this one’; *Sonna kotó ni náttte wa komáru zya arimasén ka* ‘If such things happen surely we’ll be embarrassed’ (Alfonso 803). Cf. Hayashi 165. Sometimes this device is used to add lively vividness to a report (‘what-do-you-know-but’): *Sosite, konna sitúrei na monó o to tirigami ni tutúnda monó o watasú zya arimasén ka. Sen-en désita yó* ‘And then what does he do but hand me something wrapped in tissue saying “Excuse me for such a discourteous gift”. It was a thousand yen!’ (SA 2679.35d). For some sentences the rhetorical question expresses a “what-do-you-know(-but)” kind of surprised realization of the unexpected, sometimes translated ‘after all’ or ‘I see/guess’: *Kúru to ittá no ni kónai zya arimasén ka* ‘He said he’d come but I guess he’s not coming, after all’ (Alfonso 803); *Sóra o míru to nání ka sirói monó ga ótite kúru zya arimasén ka* ‘When I look at the sky what do I see but something white coming down’ (Alfonso 805); *Náka o míru to nání ka hén na monó ga háitte iru zya nái ka* ‘When you look inside there seems to be something peculiar in there’. Alfonso 807 says that *S n[o] zya nái ka to omóu* means ‘I’m of the opinion that S’. This sort of usage is frequent in lively narration: *Soo sitára, ikinari mukóo(¯) no kénpei no zípu ga máe ni tukkónde kíte, zyama o surú zya nái desu ka* ‘And then what should happen but one of their M.P. jeeps cut in ahead of us and got in our way’ (SA 2665.111d).

The nominalization need not be direct; *n[ó]* can be used: *Kekkon sité mo zenzen aénai nánte hígeki ga okóru n zya gozaimasén koto?* ‘[For the couple who both work] there arise such tragedies as not being able to see each other at all even though they are married, you know’ (SA 2640.21a)—apparently a rhetorical question with exclamatory *kotó*, § 15.13. The rhetorical question is also used to soften a hortative: *Kaeróo zya arimasén ka* ‘Shall we leave now?’; *Íp-pai nomóo zya nái ka* ‘How about a drink?’; *Sáa, tabeyóo zya nái no?* ‘Let’s eat, shall we?’; *Yameyóo zya nái ka* ‘Let’s not (do it)’; *Kaeróo zya (or: de wa) gozaimasén ka* ‘Shall we leave?’

In some dialects *zya* will be replaced by *ya*: ... *soko de benkyoo siyóo ya nái ka to omótte* ‘thinking I might study there’ (SA 2639.45a). Moreover *ya nái ka* can contract to *ya n ka* as in this Ōsaka example: *Monogótuu kimoti ée ya n ka = Monosúgoku kimoti [ga] íi zya nái ka* ‘What a terribly good feeling!’ According to Zhs 2.21 the abbreviated forms *S zya n ka = S zya nái ka* are coming into Tōkyō from surrounding dialects of the south-west Kantō area: *Íi zya n ka; Ikóo zya n ka*.

Ordinary negativized nominal sentences usually carry an underlying juncture before the

negative auxiliary, and this will be heard when what is being denied is expressed with a tonic phrase: Nagasaki zya I arimasén ka 'Isn't it Nagasaki?', Sízuka zya I náí kara ... 'Because it isn't quiet ...'. If the word expressing what is denied is atonic, the juncture is usually suppressed: Yokohama zya [I] arimasén ka 'Isn't it Yokohama?' and Kantan zya [I] náí kara ... 'Because it isn't simple ...' are normally said as single phonological stretches, with the pitch staying up from the second syllable through the accented syllable. But in the rhetorical uses described in this section you will find that the juncture and accentuation are somewhat different. Just like S [I] daróo, the tentative (§12.1), this conversion permits two options. You can attach the final stretch with a juncture after zya (or dé wa) in order to emphasize the rhetorical negative: Kane ga kakáru zya I arimasén ka 'SURELY it will cost money!' With this option, the basic final accent of an "atonic" inflected form will be suppressed, after which the juncture will itself disappear: Kane o tukaú [I] zya arimasén ka 'SURELY we will spend money!' But more commonly you will attach the stretch with no juncture; the underlying final accent of an "atonic" inflected form will be heard, and the accent on the negative auxiliary automatically cancelled: Kane ga kakáru zya arimasén ka 'Surely it will cost money!' Kane o tukaú zya arimasén ka 'Surely we will spend money!'

15.17. Dá no

There are a number of ways to conjoin noun phrases as coordinates: A to B {to}, A ya B, A tó ka B {tó ka}, A ka B {ka}, A dé mo B dé mo, A ni B {ni}, These may all ultimately derive from simple nominal sentences that contain either an essive (objective ní or subjective tó) or the copula dá, which is liable to drop before yá or ká 'question'; the ellipsis is usual, though not obligatory, for we find A dá ka B dá ka or A dá tó ka B dá tó ka in examples such as these (from Ig 77): Kono ningen wa musuko dá ka musumé da ka ga hitóri áru to iu hanasí datta ga ... 'The story was that this individual had a son or a daughter, one or the other, and ...'; Wataru tanbí ni ni-sén da ka is-sén da ka no hasí-sén o toráreta 'Every time we crossed we were charged a bridge toll of two sen or one sen'; Sirí da ka hará da ka, dóotai to omowaréru itíbu ga wázuka ni suimen ni miéru daké datta 'All that appeared on the surface of the water was what would be thought some part of a body—the buttocks or the belly'; Káre-ra ni hituyoo na monó wa sirákaba(¯) no hayasí da to ka pópura no namiki dá to ka mizu dá to ka gensi-teki na húukei da to ka ikoku-zyóotyó da to ka de, koré-ra no monó nara taitei mihon ga sorótte ita 'The things they require are birch forests or rows of poplars or water or primitive landscape or exotic sentiments, and of such things we generally had an array of samples'.

Under §14.2.3. we observed paired sentences nominalized with nó, of which these two (from Ig 77) are examples: Súita no sukáreta no to iu kúuki ni ... 'In an atmosphere of good grace or bad (grace) ...'; Íya, sonna hazíru no wabirú no to itta nama-yasasíi(¯) kimoti dé wa náí 'Nay, it is no such simple feeling as being ashamed or apologetic'. A similar kind of coordinate conjoining can be effected by adding to each of the two nominal adjuncts dá no: Hón da no zassi dá no (= Hón yara zassi yára) ga góta-góta tunde áru 'Books and magazines are piled up helter-skelter'. This could be regarded a nominalization but for the fact that dá does not change to ná. Henderson 70 is probably wrong in his suggestion that dá no might be a contraction of tó áru monó; the dá would seem to be the copula, cf. the variant N dá no de/ni = N ná no de/ni (§14.2) and the sentence-introducer

Dá no ni = Ná no ni 'But'. Examples of dá no (from Ig 77): Kási da no sibai no kippu dá no o máiniti(¯) no yóo ni motté kíte ... 'Bringing candy or theater tickets every-day ...'; Sibai dá no ongákkai da no no kippu ... '... tickets to the theater and to concerts'; Uti(¯) no kodomo no kóro da no, wakái musumé no kóro da no no hanasí ... '... stories from when a child at home and when she was a young lady ...'; Haikyuu dá no tooroku dá no, sonna kotó wa náhi mo siranai 'I know nothing of such things as rationing and registration or the like'. The last example puts a noun in synoptic apposition with the conjoined phrase; a similar example is Róndon da no Pári(i) da no (Bérurín da no) ironna tokoró e itté kíta 'I've been to all sorts of places—London, Paris, (Berlin,) and so on'.

KKK 3.69 has examples in which nádo replaces the second dá no: ... ebi dá no áwabi sazái(¯) nádo o siirete kíta 'she came [back from Enoshima] well supplied with shrimp and with abalone, wreath shells, and the like'—'abalone' and 'wreath shells' are in paratactic coordination, marked only by the juncture (ellipted yá can be assumed); ... goosei-zyúsi da no beekuráito nádo no atarasíi seihoo ya ooyóo-hoo(¯) o hatumei si ... '... he discovered new ways to make and use plastics and bakelite and so on'; ... budoo dá no kurí nádo o motta o-sara o ... '... a plate heaped with grapes and chestnuts and things' (motta is from moru). In this example N dá no is followed directly by nánka: Hukú da no nánka wa betu desyó.—Zenzen betu desú 'Clothes and whatnot must be separate [from your regular allowance].—Quite separate' (SA 2663.46b). And sometimes (as with other conjoining-markers) the second dá no will be omitted with nothing to mark its absence: Mánnyuu da no Bíruma e mo, ikaretá n zya ná n desu ka 'Didn't you get to Manchuria and Burma too [as well as other places]?' (Tk 2.323a); Gakusya dá no geizyutu-ka ga sumáu uti(¯) o tukúru kotó mo hituyoo desú 'It is necessary, too, to construct houses for scholars and artists to live in' (Tk 2.310b). Other examples of dá no: Sóo yó, hén née, kyúuri da no kyábetu da no kaú no wa heiki de, o-imo wa hazukasíi nánte okasíi wa 'Yes it's odd, isn't it, that I'll buy cucumbers and cabbages without a second thought, but I'm ashamed when it comes to sweet potatoes, it's funny' (KKK 3.69); Tóo-tyan da no, née-tyan da no, Ken-íti(¯) san dá no, sagasí ni kíte kuretá no sá 'Daddy and Sis and Ken-ichi, they kindly came to look (for it/me)' (KKK 3.69); Suna dá no koisi dá no ga atumátte, suiryuu no atúryoku de iwá ni náru 'Sand and pebbles bunch together and turn into rock under the pressure of the current' (Tk 2.162a); Sono tok^[i], hóoboo no yadoya de, gaku dá no kakémono da no ni, muzukasíi mózi ga áru to, Sasakí-si to watakusi tó de soodan si-nagará^[i] yónnda monó da 'At that time, at inns all around when there were difficult characters on tablets or scrolls Mr Sasaki and I together would read them in consultation with each other' (Tk 2.101b).

A quotative tó sometimes follows the conjoined expression, with or without a quoting verb: ... waisetu dá no nán da no to iwareta ... 'was said to be obscene and all' (Fukuda in Ōno 1967.222); Otya dá no ikébana da no to isogasíi 'I'm busy with the tea ceremony and flower arranging and the like'; Áa da no kóo da no [to], urusái kotó da 'What with this and that it is a nuisance'; Ookíi da no tiisái da no to kenka suru 'They quarreled over whether it was big or little'. The last example is best explained as a direct nominalization of the conjoined adjectival sentences. Alfonso 1149 gives examples with adjectival nouns: Sukí da no kirai dá no to itte iraremasén 'You mustn't harp on your likes and dislikes'. Alfonso suggests that in speech the quoted uses of dá no may be more common than the other uses. Examples of the quoted use (KKK 3.69): Higasí(¯) dá no nisi dá no, kitá(¯) dá no tte iú kedo hontoo wa, tikyuu ni toozai-nánboku ga áru wáke zya ná desyo, táda, ningen ga tükete 'ru daké na no yó 'You talk of east and west and north and all but really

it doesn't mean there are four directions right on the globe, it's just that man has put them there'; Dóko made ga Nihón de, dóko made ga Tyúugoku da no, Amerika dá no Sobiétto da no tte katte ni wakú o hamete, kenka sitári, sensoo sitári, báka née 'It's stupid to quarrel and make war with such an arbitrary framework as how far Japan extends, how far China and America and the Soviet and so on'; Sinpin o motte-kói da no, sinpin de nákereba iyá da no, iú no nara, gakkoo o yamesasetimae [= yamesasete simae] 'If you are going to say new things are It and things have to be new for you to like them, let me quit school'—this example marks the quote by the quoting verb only.

In these examples with the quotative element—or similar elements such as the verbalized desiderative—it is possible to stylize dá: Kore désu no are désu no to ossyaimásu ga ... 'You ask if it's this or if it's that, but ...'; Kimono de gozaimásu no yoohuku de gozaimásu no iroiro hosigáru n de gozaimásu née 'They want all sorts of things—Japanese kimonos, Western suits, ...'. (This is the origin of the misleading suggestion in Chamberlain 1924 that the conjunctive dá no can be stylized to de gozaimásu nó.) Thus we can say that N₁ dá no N₂ dá no has two uses:

(1) with a meaning like N₁ tó ka N₂ tó ka, it can be followed by the case-marking particles gá, ó, ní, etc., or by the essive ní (underlying the copula dá, nó, etc.). The conjoined expression is treated as a noun, and dá no is functioning as a conjunctive; dá can not be stylized.

(2) with a meaning like N₁ dá tó ka N₂ dá tó ka, it can be followed by some quotative element (tó, tté, tó itte/omótte). Here nó is functioning as a question particle (equivalent to ká) and dá is simply the copula, and so can undergo stylization. Unconjoined questions with nó are usually treated as nominalizations (Kore ná no? 'Is it this?') but the conjoined questions treat the nó as a sentence-extension or particle (Kore dá no are dá no ... '... whether it is this or is that') in the same way that ká is treated.

In newspapers and magazines you may run across such expressions as N₁ no N₂ no (+ quotative tó) which represent an ellipsis of the copula: N₁ {dá} no N₂ {dá} no tó This is the explanation for the following example from Kusakabe 1968.45: Úmi no, yamá no, oozóra no tó iki-tagáru 'Eager to go—the sea, the mountains, the sky!' (a travel ad?).

A case-marker can be attached to simple or conjoined questions marked by ká and to conjoined nominals marked by ká or tó ka: A {tó} ka B {tó} ka ga/o is an abbreviation of something like A dá {tó} ka B dá {tó} ka ga/o. Cf. A dátta {tó} ka B dátta {tó} ka ga/o where the tense requires the presence of the copula. The second noun can be stripped down to its case marking: A dá[ttá] ka B ga/o, A dá[ttá] to ka B ga/o, A {tó} ka B ga/o. This is not possible with conjoined questions that use nó instead of ká.

Notice that nári (§ 15.19), a similar joiner, derives from the literary copula, and thus ultimately from the essive ní also. Like nári and yára (§ 15.18)—and, in fact, all nominal joiners (including tó, yá, ní, ká, tó ka, dé mo)—an indefinite number of phrases can be built up in a long chain ('A and B and C and D and ...') though more than two or three are seldom used in well-planned sentences that do not purport to be lists.

15.18. Yára

The particle yára apparently comes (by way of yara'u = yara[m]u) from a literary expression N yá arán/arámu, in Heian times N ní ya arámu (Terase 225a), equivalent to N d[e] aróo ka 'would it be?' with yá being a permuted postadnominal interrogative. (Cf.

Satō 2.109-10, Chamberlain 488, Henderson 349.) It can be used as a soft equivalent of *ká*, especially when the question is oblique or quoted: *Náni ga náni yara sappári wakaránai* 'I just can't make out what is what' (= *Náni ga nán da ka ...*); *Dótti ga áni yara ootoótó yara wakaránai* 'I don't know which is the older brother and which the younger'; *Kúru yara kónai yara hakkíri wakaránai* 'I don't quite know whether he's coming or not' (= *Kúru ka kónai/dóo ka ...*); *Ítu-no-má-ní-yara* (SA 2673.50a) = *Ítu-no-má-ní-ka* 'unawares' (see pp. 923-4).

When used as a complete sentence the meaning is usually 'I wonder' (= *ká ne* or *ká sira*): *Dáre ga dáre yara* 'I wonder who is who = I wonder who everybody is'; *Ítu owaru kotó yara* 'I wonder when it will end' = *Ítu owaru kotó da [ka] ne*; *Dóko e ittá yara* 'I wonder where he went' = *Dóko e ittá ka sira*; *Dóko de dóo site irú no yara* 'I wonder where he is and how he is getting along'. But after *tó* it serves to quote adages and the like: "*Sáru(-) monó wa híbi ni utósi*" to *yara* 'As they say, "Out of sight, out of mind" '.

In the same vein, *tó yara* can be used as a gentle equivalent of *tó ka* in its various uses (§ 21.6): *Yamada tó yara iu hitó* = *Yamada tó ka iu hitó* 'a person, called, I believe, Yamada'; ... *tó yara iu hanási da* 'The story is something to the effect that ...'; ... "*Tyosenzin-gakuseikumiai-réngoo*" to *yara no namae de* ... 'under the name of something like "United Korean Student Associations" ...' (SA 2685.138c). Cf. Nagano 1970.184.

After indeterminates the effect is the same as that of *ká*: *Dáre ni yara* (or *Dáre yara ni*) *watasita* = *Dáre ka ni watasita* 'I handed it over to someone'; *Náni yara miéru* = *Náni ka miéru* 'Something is visible'; *Náni yara kawatta monó* 'something strange'. *Dóo yara*³³ is equivalent to *dóo ni ka* 'somehow or other; barely (managing)' but it is also used like *dóo mo* to reinforce a statement of appearance 'ever so (likely)': *Asitá wa dóo yara* (= *dóo mo*) *áme no yóo desu né* 'It certainly looks like rain tomorrow'. Kenkyusha gives the examples *Dóo yara hare-sóo da* 'The weather is likely to clear up' and *Dóo yara rúsu tyuu ni tazúnete kíta rasii* 'He called in my absence, apparently'. These examples are from KKK 3.226: *Hutarí ga hanasi-nágara arúite iku uti(-) ni dóo yara miti o matigáeta rásiku, tonde-mo-nái tokoró e déte simaimásita* 'While the two were walking along talking they seem somehow to have lost their way, ending up at some totally unexpected place'; *Akegata kara áme wa yande, dóo yara kyóo wa sukósi wa hare-má^[k] no mie-sóo na ása de áru* 'The rain letting up toward dawn, it is a morning that gives every appearance of offering a few sunny periods for the day'. Notice that in this usage *ká* can not take the place of *yára* (though *mó* can), since *dóo ka* has another meaning 'please'. Conversely, *yára* can not take the place of *ká* when it is used for *mó* after *yóri*: *yó[ri] ka = yóri mo*, § 2.6.

Paired (or multiple) sentences with *yára* are coordinated and used adverbially—or first nominalized and then gerundized with *dá* changing to *dé*: *Waméku yara donáru yara {de} oo-sáwagi da* 'What with screaming and yelling there is a great fuss'; *Kinóo uti(-) e oozéi no hitó ga kúru yara káeru yara de taihen nigiyaka desita* 'It was very lively yesterday with so many people going and coming around the house'.³⁴ The conjoined phrase can be quoted: *Mizu o kumú yara táoru o sibóru yara to itta guai ni ...* 'In a situation where you dip water and wring towels ...'.

33. Though the reasons are not compelling, elsewhere we treat *dóo-yara*, *dóo-mo*, and *dóo-ka* as lexical adverbs (hyphenated), following the dictionaries.

34. Kuno 1973.121 observes that in such expressions *yára* "seems to be suitable only when the speaker is annoyed (or affected) by the actions or states enumerated by the construction".

Adjectival sentences, and those with adjectival nouns, are more commonly nominalized with *nó* before *yára* is attached: *Iki-tái no yara iki-taku náí no yara hakkíri wakaránaí* 'I don't quite know whether I want to go or not'; *Ookíi no yara tiisái no yara ...* 'Whether it is big or little ...' or 'Whether it is a big or a little one ...'; But sometimes unnominalized (or directly nominalized) adjectives are conjoined with *yára*: *Uresíi yara kanasíi yara wakaránaí* 'I don't know whether I'm happy or sad'.

Nominal sentences can reduce to N_1 *yára* N_2 *yára* (N_3 *yára* ...) with the meaning 'and (among others)', equivalent to N_1 *ya* N_2 ; the conjoined phrase can be put in the same positions as any noun: *Hana yára nódo yara ni tumátta mizu o ...* '... fluid clogged up in the nose or throat'; *Koora ni koké(̄) yára mizuaka yára ga habikori-hóodai ni habikóttá, yuu'utu-sóo na dorage de áru* 'It's a sad-looking mud turtle, thoroughly incrustated with moss and slime on its shell' (SA 2681.92a); *Akanboo no kóbusi(̄) ga ... áka yara áo yara kúro yara ni tadarete itá no de áru* 'The baby's fist ... was inflamed [into] red and blue and black' (lg 78); ... *busata no wabi yára náni yara o itta* 'said some apologies for not writing or something' (Kb 38b); *Hón yara zassi yára (tízu yara) ironna monó ga áru* 'There are all sorts of things—books and magazines (and maps) and so on'. The set phrase *náni yara káni yara (de isogasíi)* '(I'm busy what with) one thing and another' is modelled (or over-modelled) on *náni(̄) ya ká ya* 'one thing or another' in which *ká* is an old deictic that is equivalent to *are* 'that' (cf. *káre* 'he'). You will also find *nán(̄) ya kán ya* and *nán yara kán yara*, but not **náni ya [ra] káre/are ya [ra]*.

15.19. *Nári; ná{ri} [to], nári [to (mo)]*

The infinitive *nári* 'becoming' derives a noun *nári* 'form, shape, stature, (personal) appearance, garb' that, in turn, underlies the atonicizing suffix *-nari* (according to H, oxytonic *-nari*) which means 'shape', as in *mikazuki-nari (no monó)* '(a thing of) crescent shape' and *magari-nari* 'curved shape'; it also means '(appropriate) state', as in *Káre ga kodomo no ii-nari (or iinari-sídai) ni náru* '(He) gives in to his child's every word (= wish)' and *Kimi no ii-nari ni dasóo* 'I'll pay whatever you say' (Tk 3.237a). From the latter meaning of the suffix *-nari* there has developed a use as a quasi-restrictive (§ 2.4) 'appropriate to, to be expected of', as in these examples: *sore -nari ni* 'in its own way' or 'just as it is'; *sore -nari no hituzen-sei* 'an inevitability of its own' (SA 2677.159c); *Zibun wa zibun -nari ni íkite iki-tai* 'I want to start living according to my own principles'; ... *zibun -nari ni arasótte ikoo to ...* 'wanting to struggle along in one's own way ...' (SA 2672.136e); *káre-ra -nari no péesu de ...* 'at their own pace' (SA 2639.41e); *Watasi -nari ni téigi sasete moraú nara, ...* 'If I may be permitted to define it in my own way, ...' (SA 2673.40c); ... *watakusi -nari no kangáe de baken o kai, ...* 'I buy horserace tickets according to my own estimates' (SA 2685.119a); *tiisái kodomo -nari no handán-ryoku* 'the discernment of a little child'; ... *wá-ga íkka wa wá-ga íkka -nari ni inú o ái-site ita ...* 'my family loved the dog in our own way' (SA 2663.102). Although *-nari* atonicizes the immediately preceding noun, that noun can be preceded by separately phrased modifiers as in the last two examples; hence the decision to treat it as a quasi-restrictive. In *Sígeko wa Sígeko -nari ni* 'Shigecko, for her part, ...' the meaning is very close to that of *N wa N de*, p. 244.

The PARTICLE *nári* is of separate origin, coming from the literary copula *nári* < *ní ári* (as in *Syó wa hitó nari* 'The penmanship tells the man'), which is familiar in the cliché used on payment requests such as *Sanzén gohyaku-en nári* '¥3500'. In this usage the

literary copula is sometimes treated as if directly nominalized, though in truth the form is the infinitive merely borrowed for some of the predicative functions, and so it is already nominal: ... *keiyákú-kin*(⁻) *wa nenkan nisenman-en nári de*, ... 'with a contract that calls for twenty million yen a year ...' (SA); *Kokumin-hóken da kara sán-wari hutan no hyákú^[1] hatizyúu-en nari ga, kusurí-dai*(⁻) *de átta* 'The drug charge was a sum of 180 yen, (which is) the 30-percent amount to be defrayed [by the patient] because of (it's being) government health insurance' (SA 2664.27c); ... *hyakuman-en nári no mini-béssoo mo* ... 'even a mini-villa with a million-yen price tag' (SA 2687.49a); ... *heyá-dai*(⁻) *sen-en nári o siharáu toki*, ... 'when I paid the thousand yen for the room ...' (Shibata 1961.79); *Gentei sán-bu, ití-bu itimán nisen-en nári no gooka-bon* 'Limited to one thousand copies, it is a deluxe volume with a price tag of twelve thousand yen a copy' (SA 2676.119a). The particle *nári* is used to conjoin two (or more) parallel adjuncts with a meaning very close to *N₁ dé mo N₂ dé mo* 'whether *N₁* or *N₂*; either *N₁* or *N₂*' and not unlike *N₁ ká N₂* '*N₁* or *N₂*'—allowing a choice of options. The particle may be added directly to a noun, with case marking added after, or the noun may be marked for case with *nári* added after, as can be seen in the following two examples (found in both *Kenkyusha* and *Henderson*): *Iwá nari isí nari e kuttúku* 'They fasten onto rocks or stones, and the like'; *Syómen*(⁻) *dé nari kootoo dé nari moosikomi-nasái* 'Apply either in writing or (by word of mouth =) in person'. Other examples: *Murá nari matí nari* ... 'Whether village or town ...'; *Kore wa sonó-hito no zoku-súru gakkoo nári syákai nari ga, sekinin o mótu* 'béki na n desu' 'This is something that the school or society he belongs to must bear the responsibility for' (Tk 3.79a); *Tooka nári hatuka nári da* 'It will be the tenth or the twentieth of the month'; *Yamá e nari úmi e nari* '(Let's go) either to the mountains or to the sea!'; *Móttö-mo, taigai-tóosi ga riéki o age, rísi nari rizyun nári ga okuri-kaesaréru kotó ni náreba, zítai wa kawatte kúru* 'Of course if it is arranged so that the foreign investment raises its profits and both the capital and the interest can be repatriated, the situation changes' (SA 2664.45c); *Bútyoo*(⁻) *ní nari katyoo ní nari soodan si-nasái* 'Consult the division head or the section chief'; *Kotobá o kokuban nári kamí nari ni kaki-toraseru* 'We have them take dictation at the blackboard or (on paper =) at their desks'; *Kókka nari koeki-dántai nari ga sonsitu o hutan suru* 'Either the nation or some public corporation bears the loss'; *Tití nari háha nari ni ukagaimásu* 'I will ask my father or my mother'; *Yamá nari úmi nari sukí na tokoró ni ike* 'Go some place you like, say the mountains or the sea'; *Zassi nári hón nari sukí na monó o tótte kudasai* 'Take whatever you like—a magazine, say, or a book'.

The idiomatic phrase *dái nari syóo nari* 'whether large or small' is a variant of *dái nare syóo nare*, with the literary concessive of the literary copula (KKK 3.134). Sometimes (perhaps with *yá* or *ká* as a model) *nári* is omitted after the second noun: ... *Kore wa sán-i nari, gó-i made hoosyoo sú beki da to omoimásu* 'Indeed, I think they [= four baseball hitters lasting into the final competition] should walk off with the third or the fifth place in awards' (KKK 3.134); ... *nízyúu-nen nari sánzyúu-nen to tuzuku kotó ni náru* ... 'it gets to be a matter that drags on for twenty or thirty years' (SA 2677.119c); ... *íkkyo ni roomá-zi nari kana-mozi ni arataméru nádo to iu kotó wa kangáete inai to omóu* 'I do not believe they are thinking, for instance, to switch to romanization or kana letters in a single stroke ...' (Shibata 1965.205); ... *Nihón nari gaikoku no gakkoo ni irete yari-tai* ... 'I want to put them into a school in Japan or abroad' (Tk 2.321b).

This particle can appear also with paired predicates (imperfect or perfect), perhaps by

way of direct nominalization (§ 14.6): *Ikú nari ikanái nari hakkíri henzí o site kudasái* 'Answer clearly whether you are going or not going'; *Iki-tái nari iki-taku náí nari hakkíri itte kudasái* 'Tell me definitely whether you do want to go or you don't want to go'; *Damátte ité wa wakaránai kara itái nari kayúi nari (sukí nari kirai nári) nán to ka itte kure* 'If you don't speak up we won't know, so say something as to whether it hurts or itches (as to whether you like it or dislike it)'; *Míta nari kiitá nari hakkíri to ie* 'Be it what you saw or what you heard, tell it clearly' (Henderson). If no specific verb is available to pick up the rest of the sentence, the auxiliary *suru* is used (cf. -tári): *Háiru nari déru nari si-nasái* 'Come in or go out, one or the other'; *Ikú nari káeru nari katte ni si ro* 'Either go or return, whichever you please'; *Benkyoo surú nari nerú nari hakkíri sitara dóo da* 'How about making up your mind whether you're going to study or sleep?'; *Watasi ga káette kúru made tabéru nari, nómu nari site kudasái* 'While I'm gone (till I get back) have something to eat or drink'. It is not so common to use directly nominalized adjectives in this way, the *nó*-nominalization being preferred (*sirói no nari kurói no nari* 'white or black'), but verb-derived or verb-related adjectives will be found: *Isogásii nari isogásiku náí nari (sirasete kudasái)* '(Let me know) whether you are busy or are not busy'; *Iki-tái nari iki-taku náí nari hakkíri site morai-tai* 'I'd like you to make it clear whether you want to go or not'; *Hosíi nari hósiku náí nari kikimasyóo* 'Let's ask whether they want it or don't want it'.

When *nári*, or *nári*, appears directly after a single verb phrase or a sentence it is always without accent since the accent of the base (or, if an atonic base, of the ending) will prevail. It is unclear whether we should treat this as the particle *nári* (and add it to the conjunctivalizations of § 17) or as a postadnominal (§ 13.2); what happens when the S is nominal, N/AN *ná nári*?

The meaning of *V-rú nari* (when unpaired) is usually 'as soon as', roughly the equivalent of *V-ru to^[1] súgu* or *V-rú ya ina ya*: *Míru nari tati-agatta* 'I rose upon seeing him'; *Bangóhan o tabéru nari nete simatta* 'I went to bed right after dinner'; *Matí e túku nari renraku site kudasái* 'Please get in touch with me as soon as you arrive in town'; ... *misé o déru nari, así o hayámeta* 'once out of the shop he quickened his pace' (KKK 25.82a).

The meaning of *V-tá nari*, however, resembles that of *V-ta mamá* 'just (as it is)': *Netá nari* 'while still in bed', *suwattá nari* '(while) seated, from one's seat'; etc. In this example from KKK 3.134 *nari* refers to the entire situation from the third word on: *Káre wa nedoko no ué ni hará-bai(¯) ni nátte, makurámoto no tabakó-bon ni tabako o sutetá nari zit-tó^[1] sono é o mi-agate ita* 'Lying on the bed flat on his belly with his cigarette(s) tossed aside on the tray beside the bed, he stared up at the picture'. Henderson provides a nice contrast between *V-rú nari* and *V-tá nari* in these two examples: *Ása okíru nari mizu o kabúru* 'As soon as he gets up in the morning he pours water over himself', *Ása ókita nari de máda kao o arawánu* 'He has just gotten up and has not yet washed his face', the latter example having the gerund of the copula *dé*.

Two other uses of *nári* remain to be described. In the first use, *nári* is optionally followed by *tó*, but that closes the structure: *Watakusi ní nari {to} soodan site moraeatára ...* 'I wish they would consult, say, me ...'; *Bóku(¯) ní nari {to} tyót-to itte kuré sae sitára yókatta no ni née* 'You might have just said something about it to me, at least'; *Zyotyuu ní nari {to} tukatte itadakemasén ka* 'Won't you hire me, say, as a maid?'; *O-dénwa de nari {to} o-kikase kudasaimasén ka* 'May I perhaps have the favor of a phone call from you?'

As the translations indicate, the effect of *nári* {to} is similar to that of one use of *dé mo* (not *d'átte!*) 'for example, say, or something, at least, perhaps'. In this use, at least, *nári-to* can be shortened to *ná-to* (Terase 156, MKZ); Makimura 1956.512b implies that the shortening is an Ōsaka phenomenon. Yoshida 430 gives examples from modern fiction of *ná-to*, *nát-to*, and *nái-to*—all of which, he tells us, are dialect variants of *nári-to*.

The other use is something like the other use of *dé mo* = *d'átte* 'even if it be', and in that use *nári* is optionally followed by *tó* or by *tó mo*: *Syasin dé nari {to} {mo} } mi-tái monó da* 'I want to see it at least in a photograph'; *O-tuide ni nári {to} {mo} } yotte kudasái* 'Drop by whenever you are in the neighborhood'; *Sémete sono syunkan daké nari to {mo}, ziko o mitume, mízukara o hansei suru kikái(¯) tarasime-tái to mo watakusi wa negátte iru* 'But I hope to take full advantage of the opportunity to look at myself and reflect on my person, at least for that moment alone' (KKK 3.133). This accounts for expressions such as *tasyoo nári to {mo}* 'to some extent (at least)', *sasáyaka nari to mo* ... 'little (= humble) though it may be' (SA 2670.113e), and *ippúnkan nari to {mo}* 'even for a moment'. In all these expressions it is more common for the *tó* not to drop, and with an indeterminate, where the meaning is '...-ever, ... at all', the *tó* is apparently obligatory: *nán nari to {mo}* = *nán de mo* 'whatever (it may be); anything (at all)', *dóko nari to {mo}* 'wherever, anywhere', *ítu nari to {mo}* 'whenever, any time at all', etc. Here are examples in sentences: *Sáa dóko e nari to sukí na tokoró e ikú ga yói* 'Well, it would be a good idea to go wherever pleases you' (Ig 67); *Káre wa zibun no higó-sya ¯ate no tegami ni, zensen e dásite morai-tai to iú no de, "Izure é nari to haizoku sasete itadaki-tai, yakú ni wa tatánaku to mo, kiken na tokoró nara dóko de mo kékkoo desu" to káite, ...* 'With the desire to be sent to the front, he wrote to his protector "Please let me be assigned anywhere at all; if it is a dangerous place, even if of no use, anywhere at all will be all right" ...' (KKK 3.133—the literary *izure é nari to*, at the beginning, turns into the colloquial *dóko de mo* later).

With much the same meaning as *nári to {mo}* the expression *tári to mo* is found in ... *iti-nití tari to mo yasúmu kotó o siranai* 'knows not a day's rest' (Kgg 81.94). This is a literary touch, made by attaching *tó mo* (= *dé mo*) to the subjective copula (*t[ó] ár-*) in its infinitive-used-for-predicative form; the other form, *nári to {mo}*, is the same structure made with the objective copula. Other examples: *iti-byoo (íp-pun, iti-zíkan) tari to mo* 'for even a second (minute, hour)'; *it-tekí (íp-pai) tari to mo* 'even a drop (a drink)'.

In Literary Japanese the copula *nári* (< *ní ár-i*) can be used at the end of a directly adnominalized sentence where the corresponding structure in the modern language would require the nominalizer *nó* (*S nó da*): *surú nári* = *surú no da*. An adnominalized sentence in the literary language requires the ATTRIBUTIVE form (where this differs from the predicative); the summational epitheme equivalent to the modern *nó* is zero (or ellipsis of some unspecified N). There is another usage in Literary Japanese that must be carefully distinguished; the PREDICATIVE form can be followed by *nári*³⁵ to mean 'is said to' or 'seems' equivalent to the modern hearsay (*V-i-sóo da*) or evidential (*S + sóo da*): *sú nári* = (1) *suru sóo da* 'is said to do'; (2) *suru yóo da, si-sóo da* 'appears to do'. When the distinction between attributive and predicative forms is neutralized (as with most consonant

35. It has been suggested that this *nári* has a different origin, possibly *n[e]* 'sound' + *ári*. See Mabuchi 1968.160.

bases) the literary form will be interpretable either way: *yobú nári* (1) = *yobú no da*; (2) = *yobu sóo da* or *yobi-sóo da*. Probably we should distinguish these two uses by juncture: *yobú^[1] nári* → /yobunári/ 'is said to call, seems to call'; *yobú^[2] nári* → /yobúnari/ 'calls'. But the traditions of reading literary forms such as these are not fixed.

15.20. LITERARY AND DIALECT SENTENCE-EXTENSIONS

Certain sentence extensions are limited to use in the literary language (or in clichés borrowed therefrom) and/or in dialects.

(1) *ká-si* is a literary particle of emphasis, now heard only in a few clichés such as *yókare ká-si to omótte* 'desiring for it to be good', [N ga] *áre ká-si* 'that there may be [N]', N de *áre ká-si* 'may it be N', Examples: *Yumé de áre ká-si to omóu* 'I wish it were all a dream' (Kenkyusha); *Yaziuma wa kotó [ga] áre ká-si to mátu monó de aru* 'The rabble are apt to wait in eager hope that something will happen' (SA 2637.103a). In the literary language, this follows the imperative, much like *yó*; but it can occur after *yó* (at least when *yó* is attached to a vowel verb): *mí yo ká-si* 'I want someone to look'. It also follows other sentence-final forms (usually predicative—but also attributive and hypothetical forms triggered by certain particles); the particle *zó* (S *zó ká-si* = S *nó de áru yó* 'It is indeed a fact that S'); and a few nominals: *Sá ká-si* = *Sóo [da] yó* 'Yes, indeed!'; *Íza ká-si* = *Sáa* 'Now let's do it!'. Examples from the literary language can be found in Terase 25.

(2) *ga-si* [*ni/no*] is a variant that appears in a very few clichés after imperative + *yó*: ... *oré-táti ni kikoe yó ga-si ni*, "... tte iu hitó ga ita monó ná 'There was a guy saying "... as if wanting us to hear his words' (SA 2665.24c); *Kikoe yó ga-si no hanasí* 'Talk meant to be overheard'; *Kore mí yo ga-si ni míseta* 'He showed it ostentatiously (wanting people to look at it)'. Also: *kotó áre ga-si na mé* 'eyes eager for something to happen' (KKK 44.47).

(3) *gá-na* is a relic of a literary form which turns up in a few common clichés in the modern language: *Áto wa iwazú mó ga-na* 'The rest is better left unsaid' = 'The less said about the rest, the better' (SA 2658.11d); ... *náku mo ga-na no búbun de aru* 'they are parts that are dispensable/redundant' (Maeda 1962.203); *Kore wa árazu mó ga-na da* 'This is unnecessary/unwanted' (Kenkyusha). There is another usage, equivalent to *dé mo* 'even; or something' (MKZ 144c): *Hima na suki gá-na rensyuu o site iru* 'We drill every spare moment we have'; *Itta monó de ga-na gozaimasyóo* 'He must have gone or something'; *Náni ga-na ...* 'Something (or other); Anything ...' (cf. Henderson 100). In *hí ga-na iti-ní^[1]* 'all day long' the meaning is idiomatic. These set phrases appear to stem from one of the literary desiderative forms that comprise the following set:

A-ku }
N } mo/si ga [na] 'wants it to be A/N' = A-i yóo ni ari-tái (hosíi), N de áru yóo ni ari-tái (hosíi)

V-te (-) si { ga [na] }
 { ga mo } 'wants to do' = V-i-tai

V-i-ni-si ga [na] 'wants it to happen' = V-ru yóo ni ari-tái (hosíi)

For details on the literary uses, see Terase. You may occasionally hear a colloquial N mo *ga-na!* 'Oh for an N!' (cf. Henderson 166).

(4) *V-ta ge na* is used in dialects to mean 'it seems that ...' or 'I've heard that ...' (equivalent to the evidential or to hearsay reporting); Henderson (103) says the form is prevalent in western Japan, and Zhs 2.19 says it is not used in eastern Japan. Examples

are cited from Fukui (Zhs 3.234), Gifu (Zhs 3.281), Aichi (Zhs 3.476), and northeast Hyōgo: Hanasii kikimasuryaa yorokobi ga arimasita ge na ga ... omedeto-san de arimasu 'From what I hear, it appears you have had a blessed event, and uh ... congratulations' (Zhs 4.331). Even in eastern Japan V-i-ge is sometimes used for the evidential (V-i-soo), e.g. in Gumma and Saitama provinces, where V-ru ge da is reported with the same meaning (Zhs 2.22).

(5) *S mo[no]* is reduced to a sentence extension in certain dialects, according to Fujiwara 1965.24-6.

(6) *S ... móosi* is the source (Fujiwara 1965.92ff) of various dialect sentence extensions:

S ná móosi: namo[n], nam[u], nao; nasi, na[s]su

S nó móosi: nomo[si], no[o]si, no[o]su; nesu, ne[e]si

S é móosi (? < né, ? < yó): emusi, emo, and (y)esi

Examples of *S mo* and *S na mo* (pronounced [nãð]) from Aichi will be found in Zhs 3.413 ff.

(7) *nan (namu, namo)* is a literary particle with a meaning and grammar much like zó 'indeed'; reference is usually to the sentence as a whole but the particle is attached to one of the adjuncts, including directly nominalized (attributive) verbs, and the predicate is put in its attributive form. Often the predicate is omitted, however, leaving *nan* at the end of the sentence with a following *áru, habéru, iu, omóu,* or *kiku* understood from the context (Terase 153 has examples). This particle is to be distinguished from the *nan (namu)* that appears in two other structures:

(7a) *V-(a)-nan (-namu, -namo)* 'I want it to happen that V' is roughly the equivalent of colloquial *V-te hosii*, and *V-(a)-zara-nan (-namu, -namo) < V-(a)zu ar-a-namu* 'I want it to happen that not V' is roughly the equivalent of *V-anái de hosii*. In origin this may be the literary tentative *-(a)mu* attached to the negative *-(a)na-*, perhaps with oblique idea 'will it not be that ...?'—cf. the use of 'won't you' in English to make a request.

(7b) *V-i-nan (-namu)* 'it will probably happen that V, it is likely true that V' is believed to be the literary tentative *-(a)mu* attached to the infinitive-auxiliary *-nú/-núru* (§9.5) which is a perfect, so that the form ought to correspond to colloquial *V-tá daroo* 'probably did V', but the actual usage is more like *V-rú daroo* 'probably will V' (though the sentence may be embedded in a larger context that is past). The modern language has a relic in the set phrase *sá mo ari-nán* 'it must be so': ... *sá mo ari-nán to omoi-nágara* *kyootan sitá no de aru* '... was filled with wonder, thinking it must be so' (Ikeda Yasaburō). (The accent of *ari-nán* seems to be irregular.)

16 COMMANDS AND REQUESTS

Requests in Japanese are made either by a direct command that uses an IMPERATIVE form or—more commonly—by various circumlocutions, typically by asking as a favor. Kazama 127 ff. says that *dóo-zo* 'please' (and synonymous *dóo-ka* etc.) can be used to anticipate a request (regardless of form) but not a command, nor a simple statement of desire or expectation. Requests are sometimes introduced by such phrases as *Tanómu kara ...* 'I'm asking, so ...' and *O-negai dá/désu kara ...* 'It is my humble request, so ...'.

Japanese commands may mention the subject, which by meaning ought to be second-person (the addressee—"you")¹ but which may in FORM be a third-person term because of pronominal avoidance: *Tároo san ga iki-nasái* 'Tarō, you go' is quite acceptable but **Dáre ga iki-nasái* 'Who go?' is not. And some commands are addressed to oneself: *Ei, mendóo da; kítimae [= kítte simae]* 'This tangle is a nuisance—I may as well cut it (= the thread)' (Mikami 1963a.76). Very occasionally you may run across a genuinely third-person command: *Onná no monó wa onná ga tukúre* 'Let women's things be made by women!' (SA 2672.63a—heading). It has been observed that interrogative adjuncts are incompatible with commands and requests, though not necessarily with the hortatives. You can not say **Dóko de mátte kudasái [ka]* 'Wait where!?' but you can say *Dóko de matimasyóo ka* 'Where shall I (Where do you want me to) wait?' or 'Where shall we wait?' Hayashi 173 reminds us that certain imperative expressions are used as rhetorical exclamations, so that the underlying intention is a prohibition: *Úso o túke!* '(Tell your lies! =) Stop lying!' (*Úso o túku na*); *Báka ie!* '(Say all the silly things you can! =) Don't be silly!' (*Báka na kotó o iú na*).

16.1. THE IMPERATIVE

The imperative ends in *-é*, optionally followed by the particle *yó* for consonant verbs and obligatorily followed by *yó* or by *>ró* (*yó*) for vowel verbs,² with an optional abbreviation of TONIC *>ró yó* (→ ... 'royo) to *yó* (→ ... 'yo). Vowel verb bases of more than one syllable reduce both *é-é* and *e-é* to *é* and both *í-é* and *i-é* to *í*; but while monosyllabic vowel verb bases similarly reduce *é-é* and *é-í* to *é* and *í*, they reduce *e-é* and *e-í* to unaccented *e* and *i*, respectively. The derivations continue as follows:

... → *tábe yó* → *tábe yo* = /*tábeyo*/ 'eat!'
... → *tábe >ró* → *tabé ro* = /*tabéro*/ 'eat!'
... → *tábe >ró yó* → *tábe >ro yo* → *tabé ro yo* = /*tabéroyo*/ 'eat!'

1. As in this telling example: ... *kimi ga ie, anáta ossyái to yuzuri-átte ...* "'You tell him"—"YOU tell him", they would pass the responsibility back and forth' (Ariyoshi 276).

2. Here the symbol *>* means that *ró* triggers a shift to the right by one syllable of the accent on the imperative. But the right-shift does not apply if the base is monosyllabic: *mí ⟩ró* = *mí ro* [yo] 'look!' (= *mí yo*), *i ⟩ró* = *i ró* [yo] 'stay' (= *i yó*), *ne ⟩ró* = *ne ró* [yo] 'sleep' (= *ne yó*). Thus the accentuation in the following example: *Sizuka ni si ro, damátte i ro* 'Be quiet, shut up!' (SA 2659.49d —the accent is on *ró* in both sentences, but cancelled by the final juncture).

- ... → óki yó → óki yo = /ókiyo/ 'arise!
 ... → óki >ró → óki ro = /okiro/ 'arise!
 ... → óki >ró yó → óki >ro yo → okí ro yo = /okíroyo/ 'arise!
 ... → aké yó → aké yo = /akéyo/ 'open it!
 ... → aké >ró → aké >ro → ake ró = /akeró/(→ akeroll) 'open it!
 ... → aké >ró yó → aké >ro yo → ake ró yo = /akeróyo/ 'open it!
 ... → abí yó → abí yo = /abíyo/ 'bathe!
 ... → abí >ró → abí ró = /abiró/(→ abiroll) 'bathe!
 ... → abí >ró yó → abí >ro yo → abí ró yo = /abiróyo/ 'bathe!'

The following verbs are irregular:

(1) suru	sé yo ³	si ro, si ró yo
(2) kúru	— [LIT. kó yo]	kói, kói yo ⁴
(3) kéru	—	ké ro, ké ro yo ⁵
(4) kureru	—	kure, kuré yo, o-kure yo ⁶
(5) kudasáru		kudasái {yo}
nasáru		nasái {yo}
irassyáru		irassyái {yo}
ossyáru		ossyái {yo}

It is possible to add *ttára* (§21.1): *Misé ro ttara* 'Show me, I tell you!' I have one example of *V-é yo ná*: *Sikkári yaré yo ná* 'Keep your chin up!' (SA 2672.27e). Men sometimes add *yái*: *Yose yái* 'Cut it out!'; *Hakkíri ie yái* 'Say it clearly!' (Okitsu 1.443). This seems to be the interjection *yái* (< *yá yó*) 'hey!' Is it added after *ró* [yo]? A variant of *yó* in the shape *í* is sometimes used by downtown *Tōkyō* speakers, and also in other dialects: *Kono mondai o tóite mí i* (= *mí yo*) 'Try answering this question'; *Ake ró i* (= *Ake ró yo*) 'Open up!'; *Omae, utatte mí i ... odotte mí i ...* 'Try singing, try dancing, ...' (Tk 2.320a). MKZ 28b associates this *í* with the variant of *né* found in *ká í* = *ká né* and *nán da i* = *nán da né* (§ 15.7), giving the example *Katte ni si ró i* 'Please yourself' but the grouping in that dictionary may be for convenience only. See § 15.3 for more on the substitution of *í* (or *é*) for *yó*. In *Hokkaidō* *ré* is used for *ró* (H 1968.127); perhaps this is a reduction from *ró i* = *ró yo*. Hayashi 168 says that the forms in *-é yo* and *ró yo* are very frequent among male intimates. Apparently some speakers (even in *Tōkyō*?) emphasize the imperative with *yá*: *Háyaku kói ya* 'Come quick!' *Ore n[o] tókó ni asobi ni kói ya* 'Come visit my place!' (SA 2647.117—the invitation is from a young man on the Noto Peninsula). Though often thought of as an "eastern" form, *V-e ró* also pops up in parts of western and southern

3. It would appear that *si-é* here reduces to *sé*, rather than the *si* we expect from the earlier rule; perhaps that accounts for the accentuation, or maybe that is the result of interdialect borrowing, since the *sé yo* form is not used in *Tōkyō* colloquial speech. The imperative appears without *yó* in the form underlying the adverbs *nán[i]-se* = *náni-si-ro* '(do whatever =) anyhow, anyway' and *doo-se* '(do however =) anyway; after all; of course; at all'.

4. Such forms as *ki* [i] and *ki ya* are reported from *Shikoku* (Miyara 154).

5. The verb *kér-* 'kick' is a consonant base in the standard language, but the expected imperative *kére* is not used; instead the standard language uses the imperative from the vowel-base treatment of the literary language (and *Kansai*?) but with *ró*. The usual plain command in *Tōkyō* is actually *kéttyae* {yo} < *kétte simae yó*. If *kére* occurs (cf. Lewin 109) it is in nonstandard speech.

6. *Kure ró* {yo} is dialect.

Kyūshū (Zhs 6.23, 26). The forms in ... ró {yo} are often replaced by simple ... yó in quotations (§21): *Mí ro [yo]!—Mí yo to ittá kara míta n desu* ‘Look!—He said “Look!” so I looked’. But the form with just ró CAN be quoted, as in this example from the complaint of a six-year-old: *Otóosan wa, úmi wa kitanái kara púuru de gáman si ro tte iú kedo sá, bóku(ⁱ) wa doo-se oyogénai kara, úmi nánka kitanákut’atte kamawánai n da. Suna-ásobi dekiréba ii n da mono* ‘Father says I should put up with a pool because the sea is dirty but, gee, since I can’t swim anyway it doesn’t matter if the old sea is dirty. If I can play in the sand, that’s enough’ (SA 2635.41b). Other examples: ... *koogyoo-kóokoo e singaku si ro to iu titioya no susume o kette* ... ‘I rejected my father’s urging to continue my studies in a commercial high school and ...’ (SA 2662.22a); *Tyuugaku no tokí ténisu o yatté ‘te, kookoo-sei no tokí wa óyazi(ⁱ) ga benkyoo si ro si ro tté, supóotu wa yaraserenákatta n desu* ‘In junior high I played tennis but when I was a high school student my father said, “Study, study!” and I wasn’t allowed to engage in sports’ (SA 2662.44b).

Theoretically, an imperative form could be made from any verbal sentence, but in practice you find limitations. Some of the exalting forms do not occur for reasons of semantic incompatibility (*O-kaki ni náre, *Itase). Without personification, actions not subject to human control will not occur in imperative or hortative forms; but occasionally weather verbs turn up, perhaps personified: *Ténki ni náre yo, Háre yo* ‘Clear up!’ If the imperative is made on a passive, the passive is probably to be taken as subject-exalting: *Kangáete miráre yo = Kangáete go-ran nasái* ‘Think about it’ or ‘Just think’ (K 1966.177). It is unusual to find imperatives from áru (or de áru) except in written style: *Syoozíkí/Sínsetu/Téinei de áre* ‘Be honest/kind/polite!’, *Kámi mo syooran áre* ‘May God be my witness = So help me God!’, ... *ni syukuhuku áre* ‘May ... be blessed!’ (Cf. *nákáre*, § 16.3.) A more colloquial style would use a fragment ... (de) áru yóo ni. And A-káre < A-k[u] áre has a special use when followed by *tó omótte yaru* ‘with the idea/desire that it be A’: ... *kawaií imootó no tamé ni yókare to omótte yaru kotó ga* ... ‘thinking of what would be best for his dear little sister’ (SA 2668.112b); ... *seito no tamé ni yókare to omótte yatte ita* ... ‘were doing it with the thought of benefiting the students’ (SA 2663.28a). Is this expression limited to the adjective yói (=ii)? Cf. *yókare* (-kási)—see § 15.20, MKZ. (For the concessive use of A-káre, see just below.) Examples of áre and de áre: *Désu kara, tanzyun na hoosoku de áre to iu hoo ga, dodai múri na tyuumon(ⁱ) ná no ká mo siremasén* ‘That’s why maybe it is a fundamentally unreasonable request to ask that they be simple rules’ (Kaneda in Ōno 1967.276); *Sonna tokí no atasi no kao, go-soozoo áre* ‘Just imagine my face at that time!’ (Tk 2.192a); ... *hitótu dókusya(ⁱ) no hoo de go-kandai na syare-kibun o o-moti áre* ‘May the reader have a generous feeling for the wit’ (Tk 2.228). The imperative can be formed on the polite stylization: -*máse {yó/né}* or -*mási {yó/né}*. An unusual example, made on the subject-exalting passive of *nasu* (whence by contraction the subject-exalting *nasáru = suru*): *Sore ga damé nara mi no hú-un to o-akirame nasaremáse* ‘If that is no good, resign yourself to [recognizing] your hapless fate’ (SA 2679.122bc).

Some special written-style uses of the imperative with the meaning ‘even’ seem to derive from the literary concessive -*ré* [do], § 9.3:

(1) *de áre = dé mo*: *Nán no heyá de are, móo koko ni tomete morau hoka wa náí* ‘We have no choice but to get put up for the night here, whatever the room may be’; *Syúukyoo de are, gakkoo no syúusin de are, soo iu kotó wa zénbu kinsei de, ...* ‘Both in

religion and in school-taught ethics, all such things are taboo ...' (Tk 3.109b); ... *sinrui*(-) *de áre tizin*(-) *de áre* ... 'whether it be a relative or an acquaintance' (SA 2665.36c).

(2) *áre* = *átte mo*: Examples lacking.

(2a) *náre* = *dé [átte] mo*: *dái nare syóo nare* 'whether large or small' (a variant version: *dái nari syóo nari*, KKK 3.134).

(2b) *ní ... áre* = *dé [átte] mo*: In the literary language *N ní mo áre* abbreviates to *N ní m[o] áre* = *N ni máre*, just as *N máre* = *N m[o] áre*; you may run across this in modern texts: *Nanigoto ní mare* [= *Nán de mo*, *Náni de átte mo*], *mottai-na-gáru kotó o siranu seikaku to miéru* 'In all things, she looked to be of a character ignorant of conspicuous waste' (Fn 299a).

(3) *-kú áre* > *-káre* (= *-kúte mo*): *óokáre sukúnákare*, *ookare-sukúnákare*; *sukúnákare óokare* 'more or less'; *tákakare yásukare*, *yásukare tákakare* 'whether costly or cheap'; *túyokare yówakare*, *yówakare túyokare* 'whether strong or weak'; *osokare-háyákare* 'sooner or later'; *yókare asikáre*, *yokare-ásikáre* 'right or wrong, good or bad'. (Note the idiomatic accentuations.) Cf. *V-rú nákáre* '(let there be no doing=) don't', source of the colloquial negative imperative *V-rú na*.

(4) *tó wa ie* = *tó itté mo* (§21): *Byooki tó wa ie, káre wa ki ga sikkári site ita* 'Though ill, he was in good spirits'. We also find written the literary ... *kóso* ... *V-re*, where the colloquial would call for ... *kóso* ... *V-réba* or (KKK 3.52) ... *kóso* ... *V-rú ga*.

Similar, but not using the literary concessive (*suré*), is the following:

(5) $ni \left\{ \begin{array}{l} si\ ro \\ sé\ yo \end{array} \right\} = ni\ sité\ mo = dé\ mo$: *Dótira ni si ro sore wa onazi da* 'Either one/way, it's all the same'; *Dóno-yóo na zizyoo ni sé yo ... dekinakatta* 'It was impossible ... under any circumstances'. This can be regarded as an example of the direct nominalization with dropped essive (i.e. = *N ná no ni sé yo*); see §14.6. From the last type we get a number of clichés such as the adverbs *doo-se* and *náni-si-ro/náni-se[-yo]* mentioned earlier, and a way of linking sentences with 'or' meaning: *X ni sé yo Y ni sé yo*, *X ni si ro Y ni si ro* = *X ni sité mo Y ni sité mo* = *X dé mo Y dé mo* '(whether) X or Y'.

The DOMAIN of an imperative may include sentences conjoined by the gerund or the infinitive: *Utí*(-) *e káette góhan o tabé ro* can be interpreted as 'Go home and eat' and also as 'Eat after you get home', with the command applied to an already conjoined sentence. But sentences conjoined by conjunctivalizations (such as *kará*, *tó*, *gá*, *sí*) can only take the second treatment, and that is apparently why KKK 23.236 rejects these sentences: (*)*Kimi wa sake mo nómu ga tabako mo nóme* 'Both drink and smoke!'; (*)*Kimi wa sake mo nománai ga tabako mo nómu na* 'Neither drink nor smoke!' (With a looser interpretation, the sentences are not totally unacceptable.) By way of contrast, notice that adnominalization is quite easy for such conjoined sentences: *Sake mo nómu ga okási mo tabéru káre* 'He who not only drinks liquor but also eats candy ...' (KKK 23.236).

Iterated imperatives are sometimes used for vividness or insistence: *Íma de wa ... núizyae*, *núizyae tte iu kotó de* 'Nowadays ... [in commercial photography] it's all "strip! strip!"' (SA 2680.48c)—*núizyae* = *núide simae*; for the sentence-final gerund *dé*, see §9.2.1a.

Although normally directed to the second person, the imperative is sometimes used with a third-person subject: ... *túma mo ko mo náru yóo ni náre*. (*Ore ni hituyoo ná no wa, kono onná hitóri da*) '... let my wife and child become what they will. (All I need is

this woman)' (SA 2793.105a). And there is the old saying *Zén wa isóge* 'Don't put off a good thing' which might be taken as 'may the good be hastened'. Notice also the saying *Sá mo áreba áre* 'So be it' (sometimes shortened to *Sábare*) from 'Since it is so, let it be so', *áreba* being the literary use of the provisional to mean 'because'.

16.2. CIRCUMLOCUTIONS

The most common way to make a request is to ask it as a favor:

(1) *Site kudasái {né/yó}*, *Site kuré {né/yó/i}*, *Site o-kure {né/yó/i}* or *Sit' o-kure* 'Please do me the favor of doing it': *Syooyu o tótte kudasái* 'Pass the soy sauce, please'; *Náni ka tabesásete kudasái yó* 'Let me have something to eat'; ... *itt' o-kure yó* 'say it; get it said' (Tk 3.3a); *Zibun de o-tya ǀgúrai irete nónd' o-kure yó* 'Make your own tea!' (Okitsu 1.254); *Katyoo ni itte kuré i* 'Tell the section head!' (SA 2689.124d).

This can be made less direct by putting it as a question, usually with polite stylization (§22.1):

(2) *Site kudasaimásu ka? Site kurerú ka?* 'Will you do it for me?'; *Kyóo tomemásu ka?* 'Will you put me up for the night?'

But the question is usually made softer by phrasing it negatively:

(3) *Site kudasaimasén ka? Site kurenái/kuren ka?*⁷ 'Won't you do it for me?' Subduing the gerund will further soften the expression: *Sité wa kudasaimasén/kurenái ka*. And making the verb tentative will lower the posture from which the plea is made (says Hayashi 170): *Sité wa kudasaimasén desyoo ka*, *Sité wa kure[rú] ǀmái ka* (= *kurenái daroo ka*).

A still less direct circumlocution is to ask if one will receive the favor:

(4) *Site itadakimásu ka? Site moráú ka?* 'Will I get you to do it for me?'

More commonly, this is put as a potential (§4.4):

(5) *Site itadakemásu ka? Site moraerú ka?* 'Can I get you to do it for me?'

And this can be made more polite and less direct with the tentative (and with double stylization):

(5a) *Site itadakemásu desyoo ka? Site moraerú daroo ka?* 'Might I get you to do it for me?'

To either of these, we can add the softening touch of the negative:

(6) *Site itadakemasén ka? Site moraenái ka?* 'Can't I get you to do it for me?'

(6a) *Site itadakemasén desyoo ka? Site moraenái daroo ka?* 'Mightn't I get you to do it for me?'

Or, again, the favor-to-be-received may be put in the desiderative (§7):

(7) *Site itadaki-tai/morai-tai*, *Site itadaki-tái (morai-tái) desu*: *Site hosíi (desu)* 'I'd like to have you do it for me'. The object can be treated in either of two ways: *Kono sigoto o/ga site hosíi* 'I'd like this work done'. This can be made more polite by using an honorific infinitive (or equivalent verbal noun): *Kono yúuga na kahwetériya o go-ran itadaki-tai* 'Just look at this elegant cafeteria' (SA 2661.4). And *negai-tai* can be used in place of *itadaki-tai*: *Koko de zyuunana-pézi no hyoo o go-ran negai-tai* 'At this point please look at the chart on p. 17' (SA 2662.21a).

These forms can be made more hesitant by adding *monó/n[o] desu ga*, suggesting a negative expectation, real or feigned:

7. In *Kyōto* also shortened to *Sité 'n' ka*.

(7a) Site itadaki-tai/morai-tai monó/n[o] desu ga ... Site hosii monó/n[o] desu ga ...

Another, rather casual, way to make a request is to use just the gerund (with *kudasái* dropped, as it were); this can be followed by *né* or *yó*:

(8) Site {*né/yó*}: Sono kádo de tyót-to mátte 'te *yó* 'Wait for me on that corner'; Mótto óku e túmete *né* 'Move over (and make room for me)'; Kangaesásete 'Let me think it over'; Kón'ya kaesána de '(Don't send me home tonight =) Let me spend the night with you'.

A less polite form is the infinitive (or, for those verbs that have one, the honorific infinitive) + (-)nasái {*yó/né*}:⁸

(9) Si-nasái {*né/yo*} 'Do it': Yobi-nasái, O-yobi nasái 'Call him'; Mi-nasái, Go-ran nasái 'Look'; Syoosetu-ka ni o-nari nasái 'Become a novelist' (SA 2685.43b). The older form of *nasái* was *nasáre*, and this still occurs in some dialects (Y 492); the Kansai version is V-i-naháre {*yá*}: Oyá ni kóokoo si-naháre *yá* (= si-nasái *yó*) 'Show proper devotion to your [parent =] father' (SA 2685.111b). And V-i-na[h]áre can reduce to V-i-náre (Maeda 1961.225); V-i-naae, V-i-nahai (Y 498). In Chiba V-i-nasái can be shortened to V-i-sái (Zhs 2.223-5) and that is often pronounced V-i-sée (Zhs 2.228): Ki-[na]sái {*yó*}, Ki-sée {*yó*} 'Come here'. Other dialect versions include V-i-nasee, V-i-nasai (and V-i-nsee?), V-i-nai, and V-i-nee (Y 492); V-i-nhiya is said to be contracted from *nahari-yare* (Y 499). The preceding structure can be shortened to infinitive + (-) *ná* {*yo*}:⁹

(10) Yobi-ná {*yo*} 'Call him'; Mi-ná {*yo*} Go-ran ná {*yo*} 'Look'; Sono yoko no néko no sara o dokásit' oki-ná yo 'Take away that cat saucer on the side' (Okitsu 1.378); Kotira é mo kootya o kure ná 'Let me have some tea, too' (cf. Kurerú na 'Don't give me ...'). Note that *-ri(-)ná* sometimes is pronounced *-nná*, so that only the accent will distinguish it from *-rú ná* or *-rú na* when those are reduced to *-n ná* and *'n na*, respectively:

Kaen-ná = Kaeri-ná (= Kaeri-nasái) 'Go home'.

Káen ná = Káeru ná (= Káeru né) 'You are going home, aren't you'.

Káen na = Káeru na (= Káeru nákáre) 'Don't go home'.

Atonic verbs will converge the first two forms:

Suwan-ná = Suwari-ná (= Suwari-nasái) 'Sit down'.

Suwan ná = Suwaru ná (= Suwaru né) 'You will sit down, won't you'.

Suwan na = Suwarú na (= Suwaru nákáre) 'Don't sit down'.

Moreover ...re ná is also sometimes pronounced ...nná, and that is the immediate source of *kun-ná* (= *kure-nasái*) in the following example: Zyáa, íp-pai *kun-ná* 'Well, give me a drink!' (Tk 4.226b). In dialects, *o-kun nasái* < *o-kure nasái* will also be heard. In Kansai V-te *kun-nare* < *kure-nahare* is an equivalent of V-te *kudasái*. And *ná yo* is sometimes pronounced *ná i* or *néé*: Súsí kui-née = Súsí o kui-ná yo 'Eat some sushi'; Maa, kottí e ki-née '[Oh, it's you,] well, come over here!' (Okitsu 1.189); Maa, mati-née 'Well, wait' (Fn 440b). A phrase written "akenee" might represent either *akenee* = *akenai* 'will not open it' or *ake née* = *ake ná yo* = *ake nasái yo* 'open it!'; a phrase written "okinee" might represent either *okínee* = *okínai* 'will not get up' or *oki née* = *oki ná yo* = *oki nasái yo* 'put/leave it

8. When attached to the infinitive, *-nasái* is a form from the paradigm of a compound verb V-i-*nasáru*, hence the hyphen in *Mi-nasái*. But the honorific infinitive behaves like a verbal noun, hence the space in *O-yobi nasái* and *Go-ran nasái*. Infinitives that end in *-ri* will often assimilate this syllable to the following nasal: *O-hairi nasái* 'Come in' may be heard as *O-hain nasái*.

9. But not *... ná né!

(there)!'; and "sinee" might be either *sinee* = *sinai* 'will not do' or *si-ná yo* = *si-nasái yo* 'do it!'.

The imperative auxiliary *nasái* or its abbreviation *ná* can drop altogether after an honorific infinitive¹⁰ or an equivalent verbal noun:

(10a) *O-yobi {yó}* 'Call!'; *Go-ran {yó}* 'Look!'; *Go-men* 'Excuse me!'; *O-yasumi* '(Rest! =) Good night!'; *Hén, issyo ni o-mi yó* 'Pff, you look too!' (Fn 348b); *O-ide yó, o-ide yó!* 'Come here, come here!'. This form will permit an honorific infinitive from *suru*, found nowhere else¹¹ in the grammar: *Sízuka ni o-si* (= *si-nasái* = *nasái*) 'Be quiet!'; *Ansin o-si, Oikawá-kun(-)* 'Don't worry, [colleague] Oikawa!' (Fn 65b); *Sore kara Hattsan, omae-san mo súgu ni káette sitaku o o-si yó* 'And then you, too, Hattsan, you go and make your preparations' (Okitsu 1.460). Cf. Hayashi 169; his example is *li-kagen ni o-si* 'Enough of that!'

Notice that gerund + *go-ran nasái* 'try doing it' is often used to mean simply 'do it', and freely drops the *nasái*:

(11) *Yonde go-ran [nasái]* 'Try calling' or 'Call!'; *Míte go-ran [nasái]* 'Try looking' or 'Look'. For more on *-te go-ran* and *-te mí ro*, see §9.2.4.(7).

Somewhat more polite is the honorific infinitive + *kudasái {né/yó}*:

(12) *O-yobi kudasái {né/yó}* 'Call!'; *Go-ran kudasái {né/yó}* 'Look!'; *Kaityuu-mono o zyuubún ni go-tyúui kudasái* 'Watch your pockets [against pickpockets]!' There is no *(o-)kure *kudasái/nasái*;¹² instead, *Kudasái* itself is used for 'Give me'.

The expressions with *nasái* and *kudasái* can be made more polite with stylization (§22.1): *O-yobi nasaimáse/kudasaimáse* 'Call!'; *Dóo-zo, miná-san, go-sanka kudasaimáse* 'Please join us' (radio announcement). And ladies sometimes use *asobase*: *O-yobi asobase* 'Call!'; *Go-men asobase* 'Excuse me'.

You can also use forms with *V-(r)u yóo ni* + request forms of *suru*: *Yobu yóo ni site kudasái* 'Please arrange it so that you call'. Cf. quoted requests, §21. More politely, *V-(r)u yóo ni* can be followed by *tanómu/negáu* 'requests': *Yobu yóo ni tanómu* 'I ask you to call!'; *Yobu yóo ni negáu* 'I beg you to call!'; *Yobu yóo ni o-negai [o]*¹³ *simásu* 'I humbly beg you to call'. *O-negai simásu* 'I make a humble request' is the most common all-purpose 'Please', often said both as a preamble and as a farewell reminder, with a more specific request uttered between. (*O-negai simásu* can be preceded by *Dóo-zo* for greater emphasis; *Dóo-zo* is also used with the meaning 'Please [go right ahead]' in giving permission or the like.) Notice also *o-V-i negaemasén ka* 'could I ask you to V; do you suppose you might V'. Some other forms are:

(13) *Si-tamáe/-tamái {yo}*: used by male superiors to subordinates and juniors—and more widely in dialects, where *tamáu* is used to mean *kureru/kudasáru*.

10. Yoshida (241-2) allows also the plain infinitive (*Máti* 'Wait!'), citing examples from both older and recent fiction.

11. Except in the now rare negative *o-si de nái* 'don't do it'; see §16.3.

12. But an example of *kun-ná* < *kure-ná* is given above. We also find *kunnée* < *kure-ná yo*: ... *ore ni kunnée* 'Gimme some' (Okitsu 1.74); *Tya o ip-pee [= ip-pai] irete kunnée ná* 'Make me a cuppa tea, wontcha?' (Okitsu 1.254). Notice also the Kyōto form *o-ku' n'ái* = *kudasái* 'please (give me)' (Inokuchi 270); this is from *o-ku[re] n[as]ái*.

13. The optional *o*-marker is permitted only for those honorific infinitives which are also used as derived (verbal) nouns; cf. *O-negai (= Negái) ga arimásu ga* ... 'I have a request to make of you'. But (*zi* o) *o-kaki [ita]simásu* 'I write (the characters) for you' will not permit **o-kaki o [ita]simásu* even with the direct object of the verb itself dropped.

(14) Site kure-tamáe/-tamái: less direct than the preceding.

(15) Site tyoodái {yo}: more relaxed than Site itadakimásu, but more polite than Site moraimásu. Tyoodai suru is a synonym of itadaku; tyoodai functions as the honorific infinitive (with object exaltation only) of morau. With a direct object, stated or implied, it is like kudasái in translating as 'Give me'. As a verbal noun tyoodai is atonic, but it is oxytonic (tyoodái) when used as the equivalent of kudasái, which has a basic final accent. Nominalizations can be used as oblique requests:

(16) Yobú n[o] da 'It's a matter of calling = You're to call'; Háyaku arúku n[o] desu 'Walk fast!' (cf. §14.2).

(17) Tabako o nománai kotó ǂdaǂ 'No smoking!' (Cf. §14.1, §15.13)—the ellipsis is apparently obligatory in this meaning.

In addition to the forms given above, there are more elaborate ways to put together a request, e.g. V-te itadaku to iu wáke ni wa mairimasén desyoo ka? 'Wouldn't it be within the realm of [reason =] possibility to receive the favor of your V-ing?', V-te kudasaimásu yóo ni (watakusi wa) o-negai [o] itasimásu, V-te kudasáru kotó o o-negai itasimásu. By ellipsis there is also sentence-final ... yóo ni (cf. Hayashi 169): Kóre-kore, sukósi sízuka ni suru yóo ni 'Come come, let's have a bit of quiet'; Kessite tagon ni sinai yóo ni 'Do not divulge it to others' (SA 2679.63d); Zí wa téinei ni káku yóo ni 'I wish you would write more carefully'. Tōjō (1954.196-7) calls our attention to the use of simple statements for commands, as when the primary school teacher says Minná^[1]tatimásu 'Everyone will (please) stand up!' meaning O-tati nasái 'Please stand up!' and the peddler says Kaimásu '(You will) buy some!' meaning Katte kudasái 'Please buy some'. Yoshida (240) mentions the use of the perfect as a rough command (Mátta! 'Wait!', Noita noita 'Out of the way—move on!'); he says it was common to use V-i-tári this way during the Edo period.

In Shikoku, for V-te kudasái you may hear V-te tuka[a]sai or V-te tukahare (Zhs 5.15, 19); these are also used in the Chūgoku area of Honshū, where a shorter form V-te tukai is reported, as well (Zhs 5.21). In southern Kyūshū, V-te tamo[nse] is used (Zhs 6.25).

16.3. NEGATIVE COMMANDS AND REQUESTS

Since negatives are adjectivals, an imperative can not be made from them in colloquial Japanese. Instead, we extend our nuclear sentence (the imperfect form of the verb) with the particle ná 'don't', which has a literary paraphrase nákáre 'let there not be', which you will sometimes see in print (§15.12). The resulting forms (V-rú na) should be carefully distinguished from V-i-ná = V-i-nasái:¹⁴

Yobú na 'Don't call'.	Yobi-ná 'Call'.
Káeru na 'Don't go home'.	Kaeri-ná 'Go home'.
Also: Káen na.	Also: Kaen-ná.
Tabéru na 'Don't eat it'.	Tabe-ná 'Eat it'.
Also: Tabén na.	
Míru na 'Don't look'.	Mi-ná 'Look'.

This negative command can be followed by the particle yó (just as can the infinitive + -ná):

14. But in the Kōchi dialect of Shikoku the form V-i na is a milder equivalent of V-rú na, a negative command rather than an affirmative. See Doi 219-20. Cf. the Ōsaka forms given at the end of this section.

Máa, soo okóru na yo 'Well don't get so angry' (Okitsu 1.240). A dialect variant of yó is í: Iyá na kotó o iú na i 'Don't say such unpleasant things' (Okitsu 1.323); Tibi-tibi agén na i [= agerú na yo] 'Don't give it in driblets!' (Okitsu 1.301). And ná í may be pronounced née: Baka ni sún nee = Baka ni surú na yo 'Don't kid me!' (Okitsu 1.302). Do not confuse this ná í or née with náí (or née) 'exists not', nor with V-(a)nái.

It is more polite to request a favor phrased as a negative:

- (1) Sinái de kudasái {né/yó}. Sinái de kure.
- (2) Sinái de kudasaimásu ka? Sinái de kurerú ka?
- (3) Sinái de kudasaimasén ka? Sinái de kurenái/kuren ka?
- (4) Sinái de itadakimásu ka? Sinái de morau ka?
- (5) Sinái de itadakemásu ka? Sinái de moraeru ka?
- (6) Sinái de itadakemasén ka? Sinái de moraenái ka?
- (7) Sinái de itadaki-tai/morai-tai (n desu). Sinái de hosii (n desu).

Cf. Site morai-taku/hósiku náí 'I don't want to have it done'.

- (8) Sinái de {né/yó}.

Or, you can use the form V-(a)nai yóo ni + a request form of suru or a form of tanómu or negáu:

- (9) Sinai yóo ni site kudasái. 'Please arrange it so that you don't'.
- (10) Sinai yóo ni tanomimásu (o-negai simásu) 'I beg you not to'.

There is, of course, some difference of meaning between Matánai yóo ni site kure 'Arrange it so you don't wait' and Mátu yóo ni sinái de kure 'Don't arrange it so you wait'.

In Edo and Meiji times female speech included prohibitions of the form o-V-i de náí, as in Sinpai o-si de náí 'Don't worry!'; such forms are seldom found now (Y 450), but here is an example from vaudeville: Báka na kotó o o-ii de náí 'Don't talk nonsense!' (Okitsu 1.12; and with final yó, 1.171).

Notice that 'Don't do X, (instead) do Y' is said this way: X o sinái de Y o si ro (sé yo, site kudasái, etc.). For sinái de you can substitute sezu ni (§9.6), with a bit more bookish flavor, but not sinákute; cf. §9.2. See also the discussion of PROHIBITIONS (V-té wa ikenai etc.) in §9.2.2.

Hayashi 171-2 gives examples of the following sort: Báka na mane o si-nasáru na, si-nasán na (= Báka na mane o nasáru na) 'Don't make silly gestures'; Gakkári si-nasaránu yóo (= Gakkári sinai/nasaránai yóo) 'Don't be discouraged'. These are apparently non-standard. But it is perfectly standard to say VN si-nasái as well as VN nasái: Yóku benkyoo {si-}nasái né 'Study hard, now'. According to Maeda (1961.134-5) Ōsaka speakers have three degrees of negative commands, ranging from "hardest" to "softest" in force:

- (1) V-ru na {i {na} } as in Yuu na, Yuu na i, Yuu na i na 'Don't say it!'; Suru na → Su{n}na 'Don't do it!'
- (2) V-i na{i {na} }, V-i na ya as in li na, li na i, li na i na, li na ya 'Don't say it!'
- (3) V-te {kure} na as in Yuute na, Yuute kure na 'Don't say it!'

In Old Japanese an adverb 'don't' was preposed to the verb infinitive (irregular: na ko 'don't come', na se 'don't do'), and this structure was sometimes expanded into na V-i so (na ko so, na se so) by suffixing the root of suru 'does' (here used as a command, as was the Old Japanese ko 'come!'). The expanded structure (na V-i so) persisted in Literary Japanese; in the 11th century and later the adverb often dropped, leaving just V-i so 'don't V' to express the prohibition.

17 CONJUNCTIONALIZATIONS

Sentences can be marked as conjunctionalized in order to join another sentence with such meanings as 'and' or 'and so' or 'because' or 'but', etc., in the various ways described in the following sections. Before these conversions are applied, the sentence can be negativized (Kore zya náí kara ... 'It isn't this and so ...') or stylized (Kore desu kara ... or Kore de gozaimásu kara ... 'It is this and so ...'), or both (Kore zya arimasén kara ... or Kore zya gozaimasén kara ... 'It isn't this and so ...'); but stylization is infrequent except when the sentence is long or is uttered as a fragment, a deliberately incomplete utterance. Stylization is most common with *gá*—in fact it is almost obligatory if the final sentence is stylized; it is next most common with *ké[re]do*, and then *kará*, and so on down the list (cf. §22). Of the several markers, three also occur as sentence-introducing adverbs or conjunctions as a result of optional ellipsis: [[sore] *dá*] *ga/ké[re]do* 'but' and [[soo] *suru*] *tó* '(well,) then'—not to be confused with the detached quotation marker *Tó(,)* ... '(And) that ...' or '(Un)quote, ...', §21.

17.1. SENTENCE + *kará/mon[ó]*; *V-rú kará ni wa*, *V-tá kará [ni] wa*

The particle *kará*—or its colloquial synonym *monó/món*, more commonly heard from women (cf. §17.4)—means '... and so' or 'because ...' after imperfect, perfect, or tentative:

- Verbal: Yobu. → Yobú *kara* 'Because he calls/will call ...'
 Yonda. → Yondá *kara* 'Because he called ...'
 Yobú daroo. → Yobú daroo *kara* 'Because he will probably call ...'
- Neg.: Yobanai. → Yobanáí *kara* 'Because he does/will not call ...'
- Adjectival: Ookii. → Ookii *kara* 'Because it is big ...'
 Óokikatta. → Óokikatta *kara* 'Because it was big ...'
 Ookii daroo. → Ookii daroo *kara* 'Because it probably is/will be big ...'
- Neg.: Óokiku náí. → Óokiku náí *kara* 'Because it isn't big ...'
- Nominal: Senséi da. → Senséi da *kara* 'Because it is the teacher ...'
 Senséi datta. → Senséi datta *kara* 'Because it was the teacher ...'
 Senséi daroo. → Senséi daroo *kara* 'Because it probably is the teacher ...'
- Neg.: Senséi zya náí. → Senséi zya náí *kara* 'Because it isn't the teacher ...'

The synonym *monó/món* is also to be treated as a particle rather than as a postadnominal (as in other uses of the word) because an imperfect nominal sentence ends in *dá*, rather than *ná*: *Kore wa bōku(̄) no inú da mon[ó]*, *nárete iru hazu sá* 'This is my dog so he ought to be used to me'. But Kazama 232 says that the choice of *dá* or *ná* before *món* *desu kara* (and other forms of ... *monó/món* 'because?') is in flux, as before *sóo da* (§18) and *nó de/ni* (§14.2); we will treat as non-Tōkyō the forms *N na monó/món desu kara*, *N na sóo da*, and *N dá no de/ni*.

The conjunctionalized sentence with *kará* or *mon[ó]* can not be subdued with *wá* or highlighted with *mó* or *sáe*; for *kará wa* as ellipsis of *kará [ni] wa* see below. The *kará*-marked sentence is sometimes emphasized with *kóso* (*Dá kara koso* 'Just for that reason') in a semi-literary use similar to the more colloquial *sá* (*dá kara sá*). The conjunctionalized sentence can stand as a nominal, i.e. be directly nominalized and predicated: *Yobú kara da* 'It is because I (will) call'; *Yobú kara de ...* 'Since/As it's because I (will) call ...'; *To iú no*

mo ... *kará* da 'And THAT is because ...' (SA 2665.126a). Occurrences followed by sentence extensions *yó/né/sá* are to be derived from such sentences, with *dá* dropped. In this respect *kará* differs from all other conjunctualizations, leading us to say that it belongs by cleavage to two classes: conjunctualizing particle and (quasi) postadnominal (§13.2.). Although normally attached without a preceding juncture, the minor juncture that is appropriate to a postadnominal will sometimes separate a tonic sentence from *kará* when a juncture does not immediately follow the phrase (e.g. ... | *kará* ni wa, ... | *kará* de gozaimásita etc.). Notice that the adjunct marker *kará* 'from' (§2.2) and V-*té* *kara* (§4.2.3) behave in similar ways; moreover, in addition to the (predicative) nominalization they also permit case marking (*gá/ó*), which S *kará* 'because' will not.¹ S *kará* behaves like a PREDICABLE ADVERB.

A colloquial synonym for *kará* is the postadnominal *tamé* (§13.2), which has also the meaning '(for) the sake of'. Proof that *tamé* is not a conjunctualizing particle will be found in the fact that, unlike *kará*, it requires the *dá* of a nominal sentence to change to *nó*: *Byooki dá kara* = *Byooki no tamé* [ni]. In the perfect, of course, there is no way to tell: *Byooki dáta kara/tamé*.

The expressions V-*rú/-tá* *kará* ni wa (often contracted to ... *kará* nya) 'now that, since, as long as (... anyway)' are probably best treated as containing the copula infinitive *ní* in one of its special uses: *Ano otokó ga yakusoku surú kara ni wa sin'yoo mo matigái áru* 'As long as he will give his promise you/we will make no mistake in trusting him'; *Kénpoo de kitei sarete irú kara ni wa, sono kitei ni hazureru yoo na kotó wa yurusarenai* 'Insofar as stipulations are made in the constitution, we can not permit departures from those stipulations'; *Yamá e ikú kara ni wa tyan-tó sitaku o sinákereba naránai* 'Now that we are going to the mountains we've got to make proper preparations'; *Yarú kara ni wa, honki yó* 'As long as I am to do it, I do my best' (SA 2679.154); *Doo-se, Amerika máde dekakerú kara ni wa, yukkúri dekíru* 'As long as I am going all the way off to America anyway, I will take my time and go see as many different places as I can'; *Hazimetá kara ni wa, dóko made mo yaranákereba naránai* 'Now that I have started, I'll have to go through with it all the way'; *Soo ittá kara [ni] wa soo sinákereba naránai* 'Now that we have said it we must do it'; *Wakátta kara [ni] wa moo ni-dó to simasén* 'Now that I understand I won't do it ever again'. As the last two sentences illustrate, the *ní* is optional provided the verb is perfect.

Some other instances of ... *kará* ni may turn up. *Míru kara ni oisi-soo na gotisoo* 'A feast delicious from the very sight of it' and *Míru kara ni iyá na yátu da* 'He's an obvious scoundrel' employ an idiomatic usage that perhaps derives from a direct nominalization of *míru*, with *kará* fulfilling an ablative role 'starting from (the doing)' and *ní* functioning as the essive or copula infinitive; the expression is given, with optional *ní*, as a separate entry in MKZ. Perhaps S *kará* ni 'just because'—a literary or dialectal equivalent of the standard adnominalized S + *daké de*—comes directly from this by ellipsis: *Nán-do itté mo wakarán kara ni toótoo té o dásite simattá n da* 'Seeing as how [= seeing that] he didn't catch on however many times I told him, I finally took a hand to the matter myself'. (Or is this like *míru kara ni*?) Mikami 1963a.27 observes that stylization is not

1. Both *-té* *kará* and *-rú/-tá* *kará* can be followed not only by *dá/dé* (or the negative *zya náí/nákute*) but also by a number of the focus and restrictive particles: see pp. 509, 972.

possible for *V-rú kará ni* (there is no **V-i-másu kará ni*) despite *V-i-másu kara*; presumably the same restriction holds for *V-rú kará [ni] wa*.

In *S kará ni hoka-naránai* 'It is precisely because *S'* the *ni* is an infinitivization of *S kará da* 'It is because *S'*: ... *sore wa ... nitizyoo-teki na, zyunsui na géki ni tati-kaette irú kara ni hoka-naránai* 'that is simply because he has returned to down-to-earth, genuine drama' (KKK 3.38); ... *Man'yóo-syuu ni Azumá-uta ga óoku saisyuu saretá no mo ... Yamato-tihóo no hitóbito no kyóomi o sosóttá kara ni hoka-naránai* 'The very inclusion of many Eastern songs in the *Man'yō-shū* ... is precisely because they had excited the interest of people in the Yamato area' (Ōno 1966.219).

Another way to say 'just because' when followed by NEGATIVE is *S kara tté = S kara to itte* '(saying/thinking) it is because ...' as in these examples: *Muzukasii kara to itte yameté wa ikenai* 'You shouldn't give it up just because it is difficult'; ... *teikoo-ken ga áru kara to itte séihu ga kantan ni konran ni otíru kotó wa náí* '... the government never simply falls into confusion precisely because the right of opposition exists' (KKK 3.39); *Nedan ga takái kara to itte hinsitu ga íi to wa kagiránai* 'A high price does not necessarily mean high quality'; *O-níisan to kekkon sitá kara tte, ootoo^[1] no anáta o ai-súru kimoti wa arimasén* 'I don't feel like loving YOU just because I married your brother'; *Atamakázu ga tarínai kara tte yakyuu wa yameru wáke ni ikimasén* 'There's no sense in giving up a baseball game just because you don't have enough players' (KKK 3.124). The causal sentence is sometimes quoted with *tó* or *t[ó]*te with little more than emphasis intended by the ellipsis of *tó omótte* 'thinking that ...' or the like: *Sáigo no yóru máma ni tyót-to ohanasi ga áru kara to, watasi no heyá ni máma o yobi, "..."^[1] tó ano-kátá ga iimásita* 'The last night, having something to talk to mama about, he called her to my room and said "...'" (KKK 3.39); *Sukósi da kara to mendoo-gátte nokorí-bi o somatu ni suru kotó wa móttó-mo hu-kéizai desu* 'It is most uneconomical to neglect the embers fussing about there being so little left of the fire' (KKK 3.39); *Sono yokuzitu, koko ni itára abunái kara, tó minná mata ni-zúkuri o hazimemásita* 'The next day, since it would be dangerous to stay here, everyone began packing up' (KKK 3.39); *Nani-siro yói kotó ga káite áru daroo kara to, issyoo-kénmei ni yomóo to suru monó o sae hippátte iku tika^[1]rá^[1]) no náí hákusyo de áru* 'It is a puny white-paper that drags people into intensely trying to read it with the idea it must have SOMETHING good written in it' (KKK 3.39). Cf. § 21.

There would seem to be a double application of the conversion *i* in the example *osoku narimásita—tyót-to yoozi ga átta mon desu kara* 'I'm late—it's because there was some business I had to attend to' unless *mon[ó]* is taken as a different element.² Can you say ...

2. But that is unlikely. Here is an example from a radio soap opera: *Ée || kakemásita kedo || dé mo || hanasi-tyuu dáttá mon desu kara* 'Yes, I phoned him but the line was busy, however'. More examples: *Aité ga itte kurenai món da kara, zibun de "háí" o itte simaú no ga, anáunsaa no "háí" ka mo siremasén né, "háí"* 'The announcer's "yes" may be a matter of ending up saying yes oneself because the other fellow fails to say it, don't you think, "yes"' (SA 2647.50d); *Isya ni náru tumori dáttá mon desu kara né* 'That was because I intended to become a doctor, you see' (Tk 3.164a); *Kón'ya wa hanabi da mon da kara minná sóto e déte ite* 'Tonight there's fireworks so everybody's outside' (Kb 45a); *Osoku narimásite. Yodogoo-zíken de góta-góta simásita monó desu kara* 'Excuse me for being late [for this interview]. It's because we were involved with the [news of the] hijacking of the airliner Yodo' (SA 2676.46a).

There are four examples in KKK 3.38, including this sentence: *Bóku⁽⁻⁾ no inú mo, onazi iró datta monó da kara, kimi ga, bóku⁽⁻⁾ no inú o tótte ikoo to sitá no da to omóttá n da yó* 'I thought it was

átta kara désu mono?; ... átta kara désu kara?; ... átta mon[ó] desu mon[ó]? The expression ...-ru to ikenái kara 'since it won't do if ...'—a kará-conjunctivalization on a sentence that contains a tó-conjunctivalization—best translates as 'for fear that; lest'. See Kenkyusha for examples.

There seems to be nothing to prevent us from embedding one cause within another, applying a cause-conversion to a sentence already containing one; here is an example of a tamé-marked cause within a cause that is extruded as the Identifier in a cleft sentence: *Kono "sangyoo" wa heroin no eizoo-hanbaigyoo [da]. Rieki-ritu ga takái no wa, ihoo no TAME rísoku ga ookii KARA da* 'This "business" is the manufacture and sale of heroin. That the profit rate is high is because risks are great owing to its being illegal' (SA 2687.113c).

Mio 261 lists four ways Japanese use the construction S + kará:

(1) to link a cause with its consequence as in the usual examples, such as *Úmi ga tikái kara sakana ga atarásii* 'The fish are fresh because the sea is nearby' or 'The sea is nearby so the fish are fresh' (SA 2669.48a) and ... *sukí na n da mono atarimae [dá]* '... it's all right (to do) because we love each other' (SA 2670.112a).

(2) to end a sentence of explanation, usually in the polite or honorific style as in these examples: *Tugí ni orimásu kara* 'I'm getting off at the next stop [that's why I decline your offer of a seat]'; *Huyú wa mákisi ni kagíru wa. Attakái mon* 'For winter the maxi [-coat] is the only thing. 'Cause it's warm' (SA 2666.100).

(3) + dá, désu, ná n[o] desu, de gozaimásu etc. to set forth a reason 'It is because ...; the reason is that ...'. Examples will be found in KKK 3.37-9. There is an example of V-tá kara de in Y 399.

(4) + t[ó]te, to itte, etc.—as above.

In the last two uses the S before kará is usually in the plain style when the following S is polite (... dá kara desu), and polite only if the later S is honorific (... désu kara de gozaimásu; ... désu kara to itte ... de gozaimásu). But in the first use (as indicated in the chart, §22) and especially the second, the stylization of the cause is relatively independent and thus often polite when the following sentence is polite.

When monó or món is used in place of kará in the second use—ending a sentence of explanation—there is sometimes a feeling of protest or complaint: *D'átte, sore wa utá desu mono!* 'But that's a song!' (SA 2651.46d); *Teisyu-kánpaku nánte kotobá wa móo(¯) kikaremasén mono né* 'Words like "masterful husband" just aren't heard any more, are they' (SA 2665.114e); *Eigo no kyóosi wa Kanagawá-ken kara ni-zíkan mo kakátte tuukin site 'rú n daro. Kinodókú da mon ná* 'It takes the English teacher a good two hours to commute from Kanagawa prefecture, you know. That's miserable!' (SA 2665.22c). These sentences can perhaps all be regarded as elliptical, with dropped copula: ... monó [da] (né/ná/...). In the following example the copula appears in its gerund form: *Sonohi-gúراس no hoo da mon de*—'It's a matter of getting by from day to day, I'm afraid, so—' (SA 2661.101b—adult male speaker). Henderson 168 speaks of sentence-final monó as meaning 'definitely, positively, of course' and gives the examples *Soo desu mono* 'Of course it's

because my dog was the very same color that you started to take my dog'. Terase 220a simply lists mon[ó] da/desu kara as a kind of compound particle. As sentence-introducers you will hear *Soo iu wáke da mon desu kara, ...; Dá mon de, ...; and Dá mon desu kara, ...* 'And that's why ...' (K in Ōno 1967.29).

that way', *Máda kodomo dá⁽¹⁾ mono* 'He's still a child—no question about it'. Can this be regarded as an extension of the "protest" meaning? Or should the "protest" *monó*—and these too?—be assigned to *monó[-o]* 'but' in §17.4? In an interview in SA 2665.42-6, Fuji City mayor Watanabe Hikotarō ends a remarkable number of his sentences with ... (*desu*) *món ne*: *Go-roku-nen máe kara desu món né* 'It's been for five or six years now' (42c); ... *to iu kotó desu món né* 'It's a matter of ...' (43b); ... *tugi no teiréi-kai de seiritu sitá desu món né* 'it was set up at the next regular meeting' (43c); *Soo iu kóe ga túyokatta n desu món né* 'Strong voices were behind that' (43c); ... *kozín-kéiei to ka doozoku-kéiei desu món né* '... it's individual or family businesses' (42c); ... *zimin-too wa nízyuu yo-nín desu món né* '... it's 24 Liberal Democrats' (44a); ... *to ittá desu món né* '... said' (45a); ... *hannoo ga sukunái desu món né* 'there were few repercussions' (45a); *Simín ga sisei o dóo míru ka, desu món né* 'It's a question of how the people look at the city government' (46a); *Simín-kánzyoo ga watasi o sityoo ni sitá desu món né*, ... 'Popular sentiment is what made me mayor ...' (46b). The mayor's interview also contains some examples of *món dé*: ... *tóozí nízyuu kyúu-sai desita món dé, mukau ki ga tuyói da yó né*, ... 'at that time I was 29 years old so I was full of steam, you see, ...' (43b); *Táda, watasi mo wakái mon de, rooren-sa ga arimasén mon de, máda yootí-en desu món de né, sono ten wa tyót-to sinpai desu* 'But / am young, I have no experience; I'm still just a kindergartener, you know—and that worries me a bit' (45b).

On the difference in usage between *S kará* and *S nó de*, see §14.2.1. Nagano (1970.205) has examples of *S nó da/desu kara* and is puzzled at the unacceptability of **S ná no na no de* (or **S ná no desu no de*); see our discussion on the ungrammaticality of **N ná no ná no*, p. 868.

Here are *kará*-marked sentences followed by various particles:

S kara nádo⁽¹⁾: *Taka-sugirú kara nádo to iu riyuu de, katte moraená-katta* 'I wasn't able to get it bought for me on the grounds that it was too expensive and all'.

S kara náhte⁽¹⁾: *Riyuu wa byooki dá-tta kara nánte itté 'ta kedo, honto ká sira* 'He was saying the reason was because he was sick and all, but I wonder if that's true'.

S kara yori⁽¹⁾: *Sámukatta kara yori, ki-táku ná-katta kara no hoo ga hontoo no riyuu ni tikái to omoimásu* 'Rather than because it was cold, what I think is nearer the real reason is that he didn't want to come'.

S kara -dókoró: *Kono hatuon ga dekinái no wa Nihon-zín da kara -dókoró zya náí* 'The inability to achieve this pronunciation is hardly a matter of being because one is a Japanese'.

S kara bakari⁽¹⁾: *Sámukatta kara bakari de wa arimasén* 'It's not just because it was cold'.

S kara daké⁽¹⁾: *Sámukatta kara daké zya arimasén* 'It's not just because it was cold'.

S kara nómi⁽¹⁾: *Sámukatta kara nómi tó wa omoénai* 'I can't think it is just because it was cold'.

S kara -gúrai⁽¹⁾: *Sámukatta kará -gúrai no riyuu de yakusoku o yabúru to wa kesikarán* 'It's shameful to break a promise on the grounds of no more than because it was cold'. Most of these examples have a quasi-quotational character, as if there were an ellipsis of the type *Sámukatta [kará da to iu] gúrai ...*. I have been unable to elicit examples of *S kará + ná-ka, dé mo = d'átte, dé mo* 'or something', *hodó, máde, sika, sáe, or súra*. The surface string *dé mo* appears in *Riyuu no hitótu wa benkyoo sinákatta kará de mo áru* 'One of the reasons is also because I didn't study', but that is the result of highlighting the copula *dá = dé ... áru*.

A number of dialects (especially in western Japan) use *l sákai* (or a variant *l sáke[e]*) in place of *kará*: *Nán de mo ée sákai, iko, háya yó iko* (= *Nán de mo ii kara, ikoo, háyaku mo ikoo*) 'I'm game for anything so let's go, let's go right now!' (SA 2669.110b). Since *sákai* is normally preceded by a minor juncture, it would appear to be (like *tamé*) a post-adnominal serving as a transitional or relational epitheme. Yet examples such as those below, with *N yá = N dá* where we would expect *N ná/nó*, indicate that—unlike *tamé*—both *sákai* and its synonym *{ni} yótté* (also dialect) are to be treated as conjunctionalizations like the standard *kará*, in spite of the juncture: *Só ya sákai* (= *Sóo da kara*) 'Because it is so ...' (Makimura 271a); ... *tanomí ya sákai* '(as it is a request) = please' (Inokuchi 98); *Ane ga bizin yattara [= dattara] imootó mo kirei ya sákai, sugu ni tonde itte ryóosin ni hanasi o tukeru n ya* 'If the older sister is a beauty, the younger will be pretty too, so I rush to open talks with her parents' (SA 2831.36c); *Anna misé ya sákai, ii kotó nai n ya nai ka. Sibáruku no sínboo ya sákai ...* 'Since it is that sort of establishment, surely it isn't very pleasant; WE have been patient for some time, so ...' (SA 2793.125e); *Náa oba-han, wasira wa genbakubyoo-kánzya da ni yótté isya no susume mo átte huna o tutte óru* 'You see, lady, we are sufferers from atom-bomb radiation effects and so it is at the doctor's urging that we are fishing for carp' (Y 530). *Sákai* is said (by Ōtsuki, cf. Makimura 271 a) to be from the noun *sakái*, which means 'boundary' (< *saka[p]i*) and serves as a synonym of *aida* 'interval', a word used in formal letter-writing to mean 'owing/due to': *sooróo aida/sakái = desu kara*. In Ōsaka (and elsewhere) *{ni}* is optional after *sákai*, and that is true also of its synonym *yótté* (though I lack an example of *NI yótté ni*): *Ooki ni, tugi de orimásu sákai ni, kékkoo dosu* 'Thank you very much but I'm getting off at the next stop' (Inokuchi 99); ... *tugi orimásu yótté ni* 'I'm getting off at the next stop' (ibid.); *Ooki ni, sekkakú dosu kedo, kono tugi orimásu yótté, móo kékkoo dosu* '(SAME)' (ibid.); *o-wakái yótté ni náa = o-wakái kara née* 'because you are young, you see' (Zhs 4.202); *otiru yótte = otiru kara* 'because it will fall' (Zhs 4.202); *Oosaka-ben de yaru yótté ni omosirói tokoró mo áru non tiguaú ka* (= *Oosaka-ben de yaru no de omosirói tokoró mo áru no zya nai ka ná*) 'As it is done in Ōsaka dialect there really are many amusing spots in it, you know' (SA 2654.135a). Among the variants of *sákai* are these: *hákai* (Kyōto: *dósita hákai ni = désita kara*, Zhs 4.240), *sukai* (Kyōto, ibid.); *sake* (Yamagata, Zhs 1.234 n. 3); *sa, sage, sike, suke ni* (northeast, Zhs 1.73); *saka [ni[i]]*, *haka [ni]* (Wakayama, Zhs 4.405, 406, 416, 417); *sakee [ni]*, *sukee, sukai* (Niigata, Zhs 2.329, 336). An early example of *S sákai ni* appears in Diego Collado's 1632 book *Zangé-roku* (Kokugogaku jiten 1074a). Dialects in central Honshū, Shikoku, and Kyūshū (Zhs 5.15 n. 7, 19, 25) have forms such as *S + keni, ken,*³ *kee, kini, kin, kii* (Kyūshū); cf. *Toyama Zya keni[i] = Dá kara* (Zhs 3.30-1).⁴ All these forms are probably the result of contraction from *kará ni*. In a number of places the usual way to mark a cause is with *S dé* (e.g. in northern Nagano, Zhs 2.22; Fukui; ...), *N zyá/yá de* is used in some areas much as *N ná no de* (= *N dá kara*) is used in standard Japanese.

In western Japan (especially Ōsaka) *-su + sákai* often is pronounced *-ssákai* and *-su + yótté ni* is pronounced *-ssyótté [ni]*; cf. p. 1034. In Shiga the structure *S + ga tamé ni* is reported (*nákatta ga tamé ni*, Zhs 4.133), as well as *-ta sákai ni* (Zhs 4.134).

3. Not to be confused with *S kendon* (Miyazaki, Ōita—Zhs 6.21) = *S keredo mo* 'but'.

4. *S + zya ken* is used in a number of areas to mean something like *S nó da kara* or *S nó de*: ... *móo zénbu soróu zya ken nóo* 'now everything is lined up, you see' (SA 2673.26a, quoting a 68-year-old Yamaguchi woman).

Unusual forms from the Morioka dialect are reported in Nagano 1970. S *dasu* is used like standard S *kará*, but adjectival nouns are adnominalized (AN *na dasu*) and adjectives are given the form A-*mi dasu*; apparently this *dasu* is not connected with the Ōsaka *dásu* = *de arimásu*. In place of the standard S *nó de* 'because', the Morioka dialect has S *ahan te/to*; the forms are sometimes obscured by contraction, as found in V-*r[u] ahan te* (as in /*ikahante/* for *ik[u] ahan te = ikú no de*), /... *dahante/* for *N d[a] ahan te (= N ná no de)*, and *-mya[ha]nte* for A-*mi ahan te* (as in /*samumyante/* for *samu-mi ahan te = samúi no de*). These forms—and variants *ahade*, *ahede*, *ente*—are said to be contractions from *hodo ni yotte* (Kōza-kokugo-shi 1.172).

17.2 SENTENCE + TÓ

The particle *tó* occurs after the imperfect with the meaning 'when(ever)' or 'if'; after the verbal imperfect it can also mean 'as soon as' (= infinitive + *-sídai*, §9.1.2). In these several meanings it parallels the subdued gerund *-té wa* (§9.2.2) and the provisional *-(r)éba* (§9.3):

- Yobu. → Yobu to 'When/If/As-soon-as you call ...'
 Ookii. → Ookii to 'When/If it is big ...'
 Sensei da. → Sensei da to 'When/If it is the teacher ...'

The sentence can first be negativized:

- Yobanai. → Yobanai to 'When/If/As-soon-as you don't call'; 'Unless you call ...'
 Óokiku ná. → Óokiku ná to 'When/If it isn't big'; 'Unless it is big ...'
 Sensei zya ná. → Sensei zya ná to 'When/If it isn't the teacher'; 'Unless it is the teacher ...'

Occasionally, it is first stylized (§22):

- Yobu. → Yobimásu to ...
 Ookii. → Ookii desu to ...
 Sensei da. → Sensei desu to ...
 Sensei de gozaimásu to ...
 Sensei de irassyaimásu to ...

For example: *Sukósi oogesa ni moosimásu to ...* 'If I may exaggerate a bit ...' (R); *Kantan ni hukusyuu simásu to, tugi no yóo ni narimásu* 'Now let us review briefly what we have learned' (R). Compare the use of the particle *tó* (= *tté*) after imperfect, perfect, and tentative to mark a quotation (§21).

Alfonso (650 ff) describes *tó* as forming a connection between an antecedent and a "very close consequent"—"habitual, inevitable, or immediate"; it is preceded only by the imperfect and in colloquial speech it can be followed only by the imperfect or the tentative, though in written style the perfect may also follow. (If a perfect follows, the colloquial will use a gerund *S₁-te S₂*, Alfonso 655). But the final verb can not be "a command, a request, or some form showing determination" since *tó* "connects only statements of fact".

Some common expressions follow the *tó*-conjunctionalization with an adjective and translate as 'it is (or would be) A to ...': *...-ru to omosirói* 'it is (or would be) fun to ...'; *...-ru to yói/ií* 'it is good to ...' or 'it would be nice to ...' (= 'I hope/wish that ...', see §9.3, p. 561). There are also a number of set idioms such as (*kono hutari*) *yoru to sawaru to* 'whenever they (these two) get together'—apparently a coordinate parataxis 'when they approach and when they touch'.

Mio (290-1) suggests that *tó* is somewhat stiff in speech and is usually replaced by *-tára*, *-té*, or *-té wa*, depending on the meaning:

(1) = *-tára*: with affirmative verbs, an "established condition"; with nominals and adjectives or with negative verbs (formally adjectives) a "hypothetical condition"—thus, presumably, *Atúi to (súgu) = Átukattara* 'If it's hot, then (immediately)' and *Átuku náí to = Átuku nákattara* 'If it isn't hot, then' but *Átuku náru to = Átuku náttara* 'When it gets to be hot, then'.

(2) = *-té*: temporal sequence 'and then': *sore o kiku/míru to = kiite/míte* '(upon) hearing/seeing that'.

(3) = *-té wa*: habitual consequence 'every time that ... then': *Hén na monó o tabéru to (ítu mo) byooki ni náru = Hén na monó o tabete wa byooki ni náru* 'When(ever) I eat strange things I get sick'. Apparently *S tó wa* is sometimes used in this sense, for MKZ 911a has this sentence: *Nómu to wa kenka suru* 'Every time he drinks he quarrels' (= *Nónde wa kenka suru*). Cf. *Nómu to mo kenka [wa] sinai* 'He doesn't quarrel even though/when he drinks' (= *Nónde mo kenka [wa] sinai*). The sentences *Nómu to kenka wa sinai* 'When he drinks he does not quarrel' and *Nómu to kenka mo sinai* 'When he drinks he doesn't quarrel even/either' are both acceptable but the following are unacceptable: **Nómu to wa kenka sinai*; **Nómu to mo kenka surú (si, yameru tó mo kenka suru)*; **Nómu to wa kenka wa suru*; **Nómu to mo kenka mo sinai*.

Since there are at least three meanings for *-ru to*, some sentences are ambiguous. Thus *Dénsya(¯) ni nori-okuréru to básu de ikanákereba naránai* can mean 'If you miss your train you'll have to take the bus' or 'Whenever you miss the train you have to take the bus'. Notice that *tó* is inappropriate to translate many cases of English 'When': for 'When you go to America do you go by ship?' (EJ 93) you can not say **Amerika e iku tó*; the proper form is *Amerika e iku tokí wa (húne de ikimásu ka)*.

See also § 9.3 for other ways of expressing conditions. Notice in particular the observational condition (p. 557) 'when ... (what was noticed was that) ...'.

Sometimes *N dá tó* 'if/when it is N = as for N' is treated as having a postnominal particle "dá-tó". Notice that the western Japan form of this is *N yá tó: úti-ra ya to [= watasí-ra da to]* 'as for us' (Inokuchi 254).

Use of the particle *tó* in the meaning 'when(ever); if' seems to be relatively modern; Meikai kogo jiten 723b cites an example from the sixteenth century.

17.3. SENTENCE + SÍ

The particle *sí* can be added to the imperfect, perfect, or tentative, to mean 'and (also/moreover)'. Such a conjunctionalized sentence differs from the gerund in that there is no necessary logical or temporal connection between the two sentences linked with *sí*; cf. BJ 2.57-8, where it is observed that the second sentence often begins with *sono ue* 'moreover' after *S sí*, with *sore kara* 'and then' after *S-té*. Here are some patterns:

Yobu.	→ Yobú sí ... 'He calls/will call, and ...'
Yonda.	→ Yondá sí ... 'He called, and ...'
Yobú daroo.	→ Yobú daroo sí ... 'He's likely to call, and ...'
Ookii.	→ Ookii sí ... 'It's big and ...'
Óokikatta.	→ Óokikatta sí ... 'It was big and ...'
Ookii daroo.	→ Ookii daroo sí ... 'It must be big and ...'

- Senséi da. → Senséi da si ... 'It's the teacher and ...'
 Senséi datta. → Senséi datta si ... 'It was the teacher and ...'
 Senséi daroo. → Senséi daroo si ... 'It must be the teacher and ...'

The sentence can first be negativized (Yobaná si, Óokiku ná si, Senséi zya ná si) or stylized (Yobimásu si, Ookii desu si, Senséi desu si)—or, of course, both: Yobimasén si, Óokiku arimasén [desita] si, Senséi zya arimasén [desyoo] si, etc.

In some cases, where the 'also' sentence is omitted, the sentence with *si* implies reason or cause: Bóku(¯) daké zya ná daroo si (hoka no hito mo ótita n da kara) daizyóobu desu yo 'It's OK—I'm not the only one (who failed)'; Minná sóo daroo si (anáta soo sité mo) daizyóobu desu 'It's OK—everybody will be like that (so you can do that too)'; Íma siyoo sarete iru kikái wa, minná^[r] oogata dá si nedan ga takái 'The machines in use at present are all large models and [hence] high-priced' (SA 2647.137c). (Terase 81a seems to say the unpaired *si*-marked sentence must be negative for this causal interpretation. But there are a number of affirmative examples in KKK 3.58, e.g. Kekkon sitára móttö kurusii daroo si, kekkyoku^[r] onéesan mítai ná no ga itiban rikoo né 'Getting married would be even more trying, so after all the wisest is to be like [one's] older sister'.) With the second sentence unsuppressed, of course, reason or cause can still be implied: ... yukí da si, do-yóobi da si, demae wa dekinai to iu 'what with the snow and it's being Saturday (and all), they say they can't deliver [the food] (Ariyoshi 33); Kyuuzitu dá si, ténki da si, Yamada ga kúru daroo 'It's a holiday, the weather's nice—Yamada will come, I think'; Yó mo aketá si, háreta si, syuppatu suru to siyóo ka 'Dawn has come, the sky is clear; shall we start to make our departure?'; Dé mo, o-kane mo tariná si, monó mo ná si, honto ni itiban turai tokí de 'But there wasn't enough money, and there was a lack of things, [so] it was really the worst time' (R). Sometimes a single *si*-marked sentence is followed by *surú kara* to mean 'because' or 'since': Húben da si surú kara, ... 'Since it is inconvenient, ...'; Yóku sigoto o sinái si surú kara, ... 'Since I don't work much (or well) ...'; ... yuuryoku náru tugi no seikyoku-tantóosya mo inái n da si surú kara, ... 'since there are no powerful people to take the political helm next ...' (Tk 4.212a).

When both sentences appear, the double reason is sometimes summed up by *surú no de* as in Alfonso 564: Ténki wa ii SI yasumí da SI surú no de ... 'Since the weather's nice and it's a day off ...'. The *suru* is a verbal dummy, similar to that used with *-tári* (§9.4). The following example (from Matsuda) would seem to be a direct nominalization of the conjoined sentence ($S\ si + S\ si \rightarrow S\ si\ S\ si\ da$) that has been gerundized (... dá → ... dé): Nihon-go itinen-kúrasu wa, kootoo-kyoozyúhoo(¯) ni yoru dórúru ga tyuusin no tamé,^[r] kyóosi no kóe ga motánai kúrai tukaréru SI, zyúgyoo ga tanyoo ni naránai yóo^[r] ni ki o tukaú SI DE, gozip-pun ga naga-sugiru kúrai ni kan-ziru kotó ga arimásu 'For the first-year Japanese class you sometimes feel that fifty minutes is too long, as the teacher's voice will get too tired to go on because of the emphasis on oral drill and an effort must be made to keep the class from getting monotonous'.

KKK 3.57-8 has a number of examples of $S_1\ si\ S_2\ kará$ and $S_1\ si\ S_2\ no\ de$, including these: Háa—dé mo, móo kore kara káeru kotó ni itasimásu—sóro-soro dénsya(¯) mo náku narimásu SI, sore ni mósi tomodati dé mo kónakattara, hitó-ban zyuu yowattayaimásu KARA— 'Yes, but, I'll start thinking about going home soon; since before long there'll be no more trains and then unless, say, a friend turned up, I'd be in a fix for the whole night, so—'; Mutukasii SI sore ni itinifí^[r] no utí(¯) iti-nizíkan sika pén o tóru kotó o yurusárete inái NO DE, susumi ga osói no desu 'Since it's difficult, and as I am only permitted to

take pen in hand for an hour or two in the course of the day, progress is slow'.

According to Mio 127, writers sometimes replace A-i si by A-si, the literary predicative form. But since this seems to be limited to yósi 'is good' and wárusi 'is bad' and a few other clichés (Mio cites Sámusa wa sámusi 'the cold is cold' cf. p. 910) I would suggest that rather than the contamination implied by Mio what we see here is direct nominalization of the literary predicative with ellipsis of the copula, so that his first example is perhaps to be interpreted in this way: Ano onná to issyo ni dónna soko e oti-kondé mo yósi [de], mata issyo ni tenzyoo e mai-agátte mo yósi [da], soo iu gímu to sikaku tó o dóozi(-) ni sonáete iru otokó wa tyót-to hoka ni áru $\bar{m}ái$ 'Surely there would exist no other man possessed of both the duty and the capacity willingly to fall to any depth with that woman or to rise to the sky with her'. Another possibility, strongly suggested by the resumptive expression soo iu 'that sort of', is ellipsis of the subjective essive, i.e. of the quotative tó: ... mo yósi [to]; ... mo yósi [to], soo iu ... '... possessed of both the duty and the capacity such as to say/think that it is all right even if ... or even if ...'. Mio 74 suggests that sometimes phrase-final sí may represent an ellipsis of surú si rather than exemplify the conjoining use of the infinitive of suru, but his example does not make that interpretation compelling.

A single sí-marked sentence can be followed by sá or né (or ná) with or without the implication of cause or reason: Utí(-) ni káett'atte tumánnai [= tumaránai] si né 'I'm bored if I go home, so [that's why I come here to the sauna]' (SA 2662.97a); Niti-yóobi wa naru-béku(-) atumáru yóo ni site 'másu kedo, minná o-sígoto ga arimásu kara.—Anáta mo áru si né 'Sundays we try to get together as much as possible, but each person has his work, so ...—And you have yours, too, don't you' (SA 2663.43c); ... Sore ni arúite iru to ii kotó ga óói desyo.—Karada ga zyoobu ni náru?—Tigau. O-kane o hirou kotó d'atte áru si sá 'And then lots of good things come from walking (regularly).—You keep your health up?—No (, not that). It's that I sometimes pick up (= find) MONEY, even' (SA 2666.21e). Here is an example of two sí-marked sentences that need not be interpreted as implying cause or reason: Attí no sétu(-) o kikéba naru-hodo to omóu si, kottí no hoo no iu kotó o kikéba naru-hodo to omóu si 'When I heard that man's theory I think how true, and when I hear what this man has to say I think how true' (Tanigawa 105).

The uses of S si described in this section first appeared in the 17th century. In the speech of young Ōsaka women, sentence-final sí is an emphatic marker corresponding to the use of wá (see § 15.4), according to Maeda 1961.164-5. It is said to be a "polite" particle in the northeast.

17.4. SENTENCE + ké[re]do/mono-no/monó[-o]

The particle ké[re]do can be added to the imperfect, perfect, or tentative of any sentence, and it is often reinforced with the particle mó: kedo mo (SA 2686.27e), kéredo mo. With or without mó, it can be followed by né or sá. The sentence can first be negatized, stylized, etc. There are two meanings.

The first meaning 'however, but' is somewhat similar to that of nó ni (§ 14.2.2 'despite'): Karada ga tiisái kedo tikaará(-) wa tuyói 'He is small in body but mighty in strength'. Cf. tó itté mo (§ 21), tté (§ 15.11). Old-fashioned synonyms are [educated colloquial] mono-no and [written style] monó-o. Though common up to the Meiji period, monó-o is now rare; in its place we find just monó, with the particle dropped. Mio says monó is used to

show complaint or dissatisfaction, hence much used by grumbling women and children; when combined with the polite style (... *désu mono*) it sounds especially womanly—*Siranákatta n desu mono* 'But I didn't know!'; cf. *mon[ó] = kará*, §17.1, p. 968. Old men sometimes use *S kéredo mo ga* 'S (however,) but': ... *tásika ni ookii dageki désita keredo mo ga* ... 'it certainly was a great blow, but ...' (Tk 4.249b).

The other meaning of *ké[re]do [mo]* is 'and also': *Undoo mo surú kedo benkyoo mo suru* 'He engages in sports but/and also studies'. This is similar to the use of *si* and also of the provisional *-réba* (*Undoo mo suréba, benkyoo mo suru* §9.3). But joined sentences linked by *si* are generally reversible (*Áme mo húru si kaze mo húku* 'It rains and the wind blows' = *Kaze mo húku si áme mo húru* 'The wind blows and it rains') with little change in flavor, where those with *kédo* often imply surprise at the second sentence in view of the first. Cf. *Ké[re]do [mo]* as a sentence-introducer (§24), perhaps best regarded as an abbreviation of *Dá kedo ... < [Sore] dá kedo ...*

Examples of *mono-no*: *Sositu wa áru mono-no kíyoo ga wazawai site iru* 'While he has the temperament he suffers from a lack of skill'; *Soko e itta mono-no dóo káeru ka wakaránaku nátta* 'Once I got there I had no idea how I would get back'; *Kuti de sóo wa iu mono-no kokóro^[r] no uti⁽⁻⁾ wa mattaku^[r] hantai de ...* 'He may say so but in his heart he is completely opposed'; *Yooyaku koko máde kíta mono-no, tukare-hatete kore kara saki wa^[r] ip-po mo susumenákatta* 'I finally made it to this place, but I was so worn out I couldn't go on a step from here'; *Kana gúrai wa yoméru mono-no, kanzi to kítara zenzen wakaránai* 'I can read kana, all right, but when it comes to Chinese characters I'm completely in the dark'; *Uti⁽⁻⁾ no máe made itté wa míta mono-no, náka e háiru yúuki wa nákatta* 'I did try going as far as the front of the house, but I lacked the courage to go in'; *Syusai-zóroi to wa iu mono-no, tensai nádo to ieru yóo na gakusei wa hitóri^[r] mo inai* 'It is said to be an array of bright students, but there isn't a single one that you could say was a genius or anything'. Other examples will be found in KKK 3.220-2; 222 has examples of *monó[-o]*, and here is another: *Sottyoku ni hanáseba yói monó-o, benkai bákari site iru* 'I wish he would speak frankly but he keeps equivocating'. From the accentuation given in K, we can conclude that *mono-no* is preceded by a basic minor juncture, which disappears after taking away the basic final accent of an "atonic" form: *nakú (ga)* 'cries' + *l mono-no* = *naku mono-no*. The juncture may also be suppressed after tonic forms, but that is not entirely clear from the dictionary: *yómu [?!] mono-no*. From what is said in Terase 220-1, it would appear that the colloquial language treats *monó-o* as a conjunctionalizing (presumably *N dá monó-o = N dá kara*) but treats *mono-no* as a postadnominal (presumably *N na/?no mono-no*), while the literary language treats both forms as postadnominals (*N náru monó-o, N náru mono-no*). An example is cited from the novelist Futabatei of ... *yóo na mono-no = ... yóo da kara*. Actually, both expressions are quite old-fashioned. The sentence-opener *Tó wa iu mono-no ...* 'Nevertheless ...' (SA 2684.137a) is equivalent in meaning to *Tó wa ié[-do mo] ...*

In Hokkaidō and northeastern Honshū *S + do mo* (perhaps the expected reflex of *tó mo?*) is heard where we would expect *S kéredo mo*, as in these examples from Hokkaidō: *Ziman de née do mo (= Ziman zya náí keredo mo)* 'I'm not proud of it, but ...' (Zhs 1.326); *Kanáyⁿ desita do mo (= Kanawánai n desita keredo mo)* 'I was no match but ...' (Zhs 1.327). These examples are from the speech of a *sumō* wrestler from Niigata (Tk 3.16-20): ... *itigai⁽⁻⁾ ní wa ienáí do mo ...* 'I can't say in general but' (16a); ... *sita no hóo ni wa áru do mo ...* 'there are some below but' (18a); *Wasi mo bíiru yori wísúkíi no*

hóo ga íi n da do mo ... 'I prefer whiskey to beer, myself, but ...' (19b); Sonna kotó wa náí do mo né, ... 'Such things never happen, but, you see, ...' (20a).

In southern Kyūshū S don (probably < do mo) is used to mean 'but', and Miyazaki and Ōita use S kendon (Zhs 6.21).⁵ But Nagasaki is famous as the home of S batten, which Tōjō (1954.76) suggests may come from ba t[ō]te mo, observing that in Fukuoka they also say S batte mo; ba presumably would be the accusative marker corresponding to standard ó (but perhaps cognate with the focus marker wá?). The core case markers gá, ó, and ní are each used to carry the meaning 'but' in one or more constructions; cf. § 2.2.

17.5. SENTENCE + GÁ

The particle gá can be added to the imperfect, perfect, or tentative of any sentence to impart the meaning 'but, and (yet)', showing a weak contrast: ... go-syooti desyóo ga, ... 'as you (must surely) know' (SA 2678.27a); Sá-te, anáta no baai désu ga, kígen o kimenákatta to suréba, ossyáru tóori sánzyúu-nen desu ga, ... 'Well, in your case, if no term was set, then as you say it is thirty years, and ...' (SA 2677.119a). Gá can be followed by né as in ... wakarimásu ga né and ... tō omóu n desu ga né, but instead of ... gá sá the usual form is ... kédó sá.⁶ The sentence can be (and often is) stylized; it can also be negativized, etc. In addition to the 'but' meaning (Samúi ga gáman siyoo 'It's cold but we'll have to put up with it') we also find the meaning 'and also': Haná mo kirei da ga niói mo yói 'The flowers are pretty and also fragrant'. Often sentences are left dangling with gá ... as a deferential fragment (§ 23); this is especially common with desideratives, round-about requests, and the like. In identifying oneself on the telephone, for example, it is usual to say something like Tanaka désu ga ... 'This is Tanaka speaking'.

A number of sentence-openers make use of gá: Sitúrei desu ga, o-ikutu désu ka 'Excuse me for asking, but how old are you?'; Áto de kiita hanasí da ga ... 'Later I found out that ...'. Statements of desire, request, hope, and the like often trail off with a softening gá For a Shikoku usage of sentence-final gá as an emphatic, see Doi 287-8.

Sentence + gá might be regarded as an abbreviation of adnominalized sentence + tokoró ga 'whereupon, but' (sometimes 'when, if'—see § 13.2.2): Masúi-zai da kara yóku kiku to omótta tokoró ga, nakanaka kikanai 'It is an anesthetic so I thought it would be quite effective, but it just wouldn't take effect' (Tk 4.155b); Úmaku ikú daroo to omótta tokoró ga sippai sita 'While I thought it would go well, it failed'; Osoru-ósoru sensei ni soodan site míta tokoró ga, sensei wa dai-sánsei de átta 'I consulted the teacher with some trepidation but he was in complete agreement'. But the sentence in front of tokoró ga must be PERFECT; cf. KKK 3.119, Terasé 117a. This is the source of the conjunction Tokoró-ga 'But ...' (or Tokoró-ga desu né, ... SA 2662.19d); and Gá (= Dá ga or Désu ga) 'But ...' is also used as a sentence introducer, as is Sore ga 'But ...'.⁷

5. The form kendo is reported from around Kyōto, as is kennaa = keredo mo ná/né (Inokuchi 281).

6. Perhaps this is because sá calls for plain-style forms. In the everyday speech of today a preference has been noticed for gá with polite stylization (simásu ga) and kédó with unstylized sentences (surú kedo); I am tempted to suspect that prosodic factors may be partly responsible, the extra syllable of kédó making up for the shortness of the plain forms.

7. As seen in these examples: SORE GA kóndo wa pitári to syaberánai bákari ka, hazime wa hita-[']kákusi(¯) ni kakúsite '-yan da (= i-yagáru no da) 'BUT, this time not only does he not talk to the point, at first he conceals every damn thing' (KKK 3.202); ''Béika ga agaru to bukka ga agaru nánte, sakunen wa seisansya-béika o sue-oita. SORE GA dóo da, masúmasu bukka wa agatte 'rú zya náí ka'' to,

Instead of *-ta* {*| tokoró*} *ga*, the form *-ta* ^[r]*nō* *ga* is sometimes used, as in these examples: Hazime húuhu hutarí datta NO GA, kodomo *ga* dékite issitú^[i] hósiku náttari, ... 'At first they were just two, husband and wife, but they had a baby and wanted an extra room ...' (SA 2640.39d); Saikin no sibaí-zúkuri *ga*, náni ka kabe ni butukatté 'ta NO GA, ano yari-kata de kabe *ga* yabúreta kanzi de, ii kotó da to omóu n desu yó 'The latest staging had somehow come up against a wall (= barrier), but I have the feeling that the barrier has been broken through by that procedure (= by doing things that way), and that's good, I think' (SA 2664.35a)—*ano yari-kata de* is instrumental.

Ōide (115) speaks of three uses of *S ga*:

(1) opposition, as in *Watasi wa iki-tái ga yoozi de ikenai* 'I want to go but I can't because of things to do';

(2) cause or reason, as in *Káre wa óoi ni dóryoku(-) sitá ga, syubi yóku seikoo sita* 'He put in a lot of effort and succeeded in everything';

(3) a light connection or addition, as in *Watasi mo sitte irú ga, káre wa sínsetu da* 'I know him, too, and he's very kind'. This use can be found, with an anaphoric reprise that suggests a kind of thematization of the *gá*-marked structure, in the expression *S ga || sono tamé ka ...* 'S and perhaps that's why ...'. Jordan (BJ 2.202 n. 1) observes that *gá* is often used to separate "a statement from a related question". Ōide (123) advises the careful speaker to connect sentences with *gá* as little as possible, choosing instead connectors that are more specific.

Normally you can not omit the copula in *S hazu dá/dátta ga* 'is/was' to be presumed likely that *S'*, but when the *S* is affirmative and the sentence following the 'but' is its negation, we are permitted the option of dropping the copula (whether imperfect *dá* or perfect *dátta*): *Oyama san to Koizumi san no [ga] miéru hazu {dá} ga tóotoo o-mie ni narimasén desita* 'Oyama and Koizumi ought to be visible, but finally they have gone out of sight' (Kb 39a.7); *Káre mo kúru hazu [dátta] ga kónakatta* 'He was supposed to come, too, but he didn't'. The "negation" is semantic; it need not be the negative conversion of the first predicate: *Móodo wa sinu hazu {dá} ga iki-nokottá no datta* 'Maude ought to have died (in the concentration camp), too, but she had survived' (SA 2816.165c).

According to Ishigaki Kenji, the use of *gá* as a conjunction was a gradual outgrowth of its uses as a subject marker;⁸ the clearly conjunctional uses date from the works *Konjaku-monogátari* (11th or 12th century) and *Uji-shūi-monogátari* (13th century), gradually increasing in frequency, as shown by Ishigaki's chart (p. 53).

As an equivalent of *gá* 'but', Okinawan uses *-siga* and in Yaeyama we find both *-siga* and *-songa*.

bukka-zyóosyoo ni tai-súru urami wa toseikatú-sya to kawaranái no de aru 'Last year they stabilized the rice-producer prices saying that when rice goes up commodity prices go up (in general). But then what do we find—the commodity prices keep going up and up anyway, don't they?'—their [= the farmers'] resentment of rising prices is no different from that of the city-dweller' (SA 2584.18c, *ore ga* = *sore ná no ni* 'despite its being that').

8. And, interestingly, he assumes that the use as subject marker stems from the use as attributive (our "genitive" uses), though he finds it difficult to say just when the subject use began (p. 16).

17.6. LITERARY TENTATIVE + GÁ

The literary tentative (§12.3) is characterized by attaching the hortative ending to all verbs (*kakóo* instead of *káku daroo*, *aróo* instead of *áru daroo*), and using the abbreviation *-karóo* (< *-ku aróo*) for adjectives: *samukaróo* instead of *samúi daroo*, *nakaróo* instead of *nái daroo*. The verb negative is *V-rú ʔmái* (optionally—but preferably—shortened to *V-[ru] ʔmái* after vowel bases) rather than *V-(a)nái daroo*; the adjective negative is *A-ku nakaróo* rather than *A-ku nái daroo*; the copula negative is *dé wa nakaróo* rather than *zya nái daroo*.

Contrasting sentences in the literary tentative appear with the particle *gá* following each to mean 'whether ... or ...': *A daroo ga B daroo ga kamawánai* 'It matters not whether it is A or B'. The meaning is much the same as that of *-té mo*: *A dé mo B dé mo kamawánai*. Examples: *Onazi daroo ga tigaoo ga* 'Whether the same or different'; *Komaroo ga komaru ʔmái ga* 'Whether embarrassed or not'; *Kamaoo ga kamau ʔmái ga* 'Whether it makes a difference or not'; *Samukaroo ga atukaroo ga* 'Whether cold or hot'; *Tabeyoo ga tabe[ru] ʔmái ga* 'Whether we eat or not' (= colloquial *Taberu daroo ga, tabenai daroo ga* ...); *Romantikku de l aroo ga l aru ʔmái ga* || *sore wa l musí dekinai l hassoo desu yo* 'Whether romantic or not, this is a conception that cannot be ignored'; *Ikoo ga l iku ʔmái ga* || *ore no katte dá* 'It's up to me whether I want to go or not' (KKK 3.27); *Aitu ga ikoo ga iku ʔmái ga*, *ore no sitta kotó zya nái* 'It's none of my business whether he goes or not'; *Giin de aroo ga nakaroo ga,*⁹ *rippa na hitó wa takusan óru wáke desu né* 'Whether they are Diet members or not, there are many fine persons, you know = There are many fine persons, you know—some Diet members, some not' (Tk 4.16a); *Riyuu ga aroo ga nakaroo ga nagurareru no wa dare si mo iyá da* 'Nobody likes to get punched, whether there is a reason or not' (SA 2681.122a); *Syokuryoo(ʔ) no seisan daroo ga, kikái daroo ga nan daroo ga, Amerika no seisan-sei wa, wareware ni kurabete suu-bai de aru* 'Whether it be in food production or machinery or whatever, America's productivity is several times greater than ours' (SA 2678.44a); *Ginza no yon-tyoomé(ʔ) daroo ga, mizu no ué daroo ga, dóko de mo ii* 'I don't care where it is—the heart of the Ginza, (somewhere) on the water, anywhere will do' (SA 2689.121c); *Gótyoo ga sinoo ga syooi ga sinoo ga, soosiki ní wa kanarazu gungaku-tai ga túita món desu* 'Whether a sergeant died or a lieutenant died, there was always a military band at the funeral' (Tk 4.94a); *Kózin o l gisei ni site l kókka o l takameyoo to suru l seisaku ní wa* || *sore ga* || *puroretariáato no l dokusai to YOBAREYOO GA* || *Hwea-Diiru to iu na de l YOBAREYOO GA* || *watakusi wa l hantai dá* 'I'm opposed to a policy of elevating the nation at the sacrifice of the individual regardless whether it be called Dictatorship of the Proletariat or whether it be called Fair Deal' (KKK 3.26-7); *Sánbyaku rokuzyuu gó-niti hotondo kawaranái n desu. Nityoo daroo ga syukuzitu daroo ga, syogatú ganzitu daroo ga, nenzuyu onazi {dá}* 'The 365 days hardly change at all. Whether Sunday or a holiday, or New Year's, it's the same throughout the year' (SA 2650.42d).

Instead of *gá* the quotative particle *tó* can be used in these expressions; see §21.5. And, like the expressions with *tó*, the expressions with *gá* can also appear unpaired, equivalent to a more colloquial *-té mo* (cf. Alfonso 867): ... *sono toti ni donna tatémóno o tateyoo ga* [= *tátete mo*] *ziyuu de aru* 'you are free to build any kind of building on that land' (SA 2668.107a). Rarely, an example of stylization will turn up: *itasimasyoo ga itasimasu ʔmái ga* 'whether I will do it or not'.

9. I.e. *Giin de aroo ga* [*giin de*] *nakaroo ga*.

17.7. LITERARY TENTATIVE + *NI*

There are two uses of *-[y]óo ni*:

(1) ... *aróo ni* 'of all ... (there might be)', ... *daróo ni* 'of all ... (it might be)': *Basyo mo aróo ni watasi o anna tokoró e turete itta* 'He took me to such a place of all places'; *Hito mo aróo ni kimi ga sonna kotó o ioo tó wa!* 'To think that you, of all persons, should say so'; *Yamada wa kotó mo aróo ni Ísa no sóba ni tikayótte kita* 'Yamada, of all things, approached Isa' (Ig 40).

(2) *V-[y]óo ni mo* 'despite an effort/desire to (do)': *Nínpu o tanomóo ni mo ... kíte kureru hitó ga náí* 'Try as we would, we couldn't get a coolie' (Ig 40); *Sakebi-góe o ageyóo ni mo ... kóe ga dénakatta* 'Try to yell as he would, he could not find his voice' (Ig 40); *Sore o taizi site yaróo ni mo dóo sitára íi ka kentóo ga tukánaí* 'However much I want to eliminate them I can't figure out how to do it' (Ig 40); *Ikóo ni mo ikenai* 'Go though I would, I can't'; *Ryóo o yaróo ni mo gyozyoo wa ume-taterárete simau* 'The fishing grounds gets so filled in you can't even fish' (SA 2688.22d); *Bankoku-haku o kenbutu siyóo ni mo tomaru tokoró ga náí* 'I want to go to [the Ōsaka] Expo but there's no place to stay' (SA 2669.118ab). See also pp. 908-9.

These are perhaps best regarded as abbreviations from **-[y]óo no ni* with the predicated postadnominal (nominalizer) *nó* used in the infinitive (*nó da* → *nó ni*) with the meaning 'despite' (§ 14.2.2), so that the colloquial analogs would be *Basyo mo áru* [hazu ná] *no ni*, *Nínpu o tanómu* [hazu ná] *no ni*, etc. Perhaps the translation of Type 2 should be 'despite the need to'; cf. colloquial *V-rú no da* 'it (is a matter that) calls for'. But the colloquial translation suggested as better is *tó omótte/sité mo*: *Soo siyóo ni mo o-kane ga náí* = *Soo siyoo to omótte/sité mo o-kane ga náí* 'I'd like to do it but I lack the money'.

17.8. SENTENCE-FINAL TENTATIVE + *NI*

Very similar to the expressions described in § 17.7, sentences that end in *daróo/desyóo ni* are to be explained in the same way: *Konna kantan na kotó o kikkake to site Nihon-go ni sitasimaséru kotó mo dékita daroo ni* 'Such a simple thing [as exporting the word *shibusá* along with the word *shibui*] might have been the key to familiarizing them with Japanese' (Kazama 109); *Tabakó-nomi no kimoti wa || o-tagai yóku | wakátte iru daroo ni* 'Both passenger and driver [in an air-conditioned taxi] must have a mutual understanding of the desire to smoke a cigarette [yet the driver goes ahead and smokes while the passenger faces a no-smoking sign]' (SA); *Zénbu tabe-kirenai utí(¯) ni karada no hoo ga máitta n desyoo ná; sá-zo kokoro-nókorí datta 'roo ni* 'Before he [= the recently deceased miser] could get it all eaten, his body succumbed, I guess. He must have begrudged that!' (SA 2665.117a); *Go-senmon desyóo ni* 'Yet it's your specialty' (Shibata 1965.99).

Sometimes the expression is used to link two sentences into one: *Mattí-bako no íe ni, toraréru yoo na kóoka no monó mo náí daroo ni, nán no tamé ni inú o káu no?* 'Why do they keep a dog when there couldn't be anything valuable enough to get stolen in their matchbox of a house?' (SA). An interjectional *née* or *náa* may follow: *Dé mo, go-tyuunin no anáta ga, mótto yóku o-sirabe ni náttara, konna kotó wa okoránakatta desyóo ni—née* Kunio-san 'But if you as the go-between had checked more closely such a thing wouldn't have happened—would it, Kunio' (KKK 3.243-4).

In place of *V-(a)nái daróo ni* you may find *V-(a)nakaróo ni*; in place of *(N de/zya) náí*

daróo ni you may find (N de/zya) nakaróo ni: Tó wa ie, sékái no Kurosawa mo, itíbu de wa "káko no hitó"-si-sare, "íma-sara(¯) déru makú de mo nakaróo ni" to hiyakasi-hánbun de mukaeru múki mo sukúnáku náí "But the world-famous [film director] Kurosawa himself is regarded in some quarters as a "has-been", and there are quite a few who will greet it [= the film] half-teasingly with "You wouldn't have expected to see him getting involved with it any more"" (SA 2658.110a).

17.9. SENTENCE + NÁRA[-BA]

We might consider sentence + nára[-ba] 'if (it's a case of)' as still another kind of conjunctualization, but I think it is better treated as just an optional dropping of nó in the nominalization of §14.2: Yobú nara[-ba] ← Yobú no nara[-ba] 'If you are calling' (← Yobú no da). Sometimes the n[ó] is actually present: Nyóobo[o] mo kodomo mo sankootai-sei to iú n nara, hanasí wa betu dá ga né 'If we speak of wife and children on the three-shift system, too, it's a different story' (SA 2640.20a); Sinú n nara anna tokoró ga íi náa 'A place like that would be nice to choose for one's death' (Y 399); ... tori-hazusú n nara ... 'if it is to be dismantled' (SA 2689.121d); Kodomó-táti ga nemutté n nara fñemutte irú no nara] ... 'If the children are asleep, ...'. This 'if' often differs from other 'ifs' [-réba, -tára] in anticipating a specific instance by a general case: Mádo o akereú nara, kore o akete kudasái 'If you're going to open a window, open this one'; Mótto seikaku ni iú nara-ba 'To put it more accurately ...' (SA 2651.97a). The sentence can be imperfect, perfect, or (?)tentative. The meaning of -tá nara seems to be about the same as that of -tára (§9.3.3); we might consider treating the latter—synchronically at least—as an abbreviation of the former:¹⁰ Tookyoo e ittá nara, Teikoku-Hóteru o go-zónzi desyoo 'If you've been to Tōkyō, surely you know the Imperial Hotel'.

Of the structure S_1 nara S_2 , Kuno 1973.183 tells us that: (1) S_1 is presented as an assertion by someone OTHER than the speaker ('if, as you/they say, ...') about something which might or might not happen; (2) S_2 represents the speaker's "evaluation, supposition, will, resolution, request, or order"; and (3) unless S_2 is a request, command, desire (or the like) S_2 can not be "a state or action whose realization depends upon the future realization or completion of the action represented by S_1 ".

According to Mio (294) the nára-marked sentence can be stylized (V-i-másu nara) but this is rare for nominal sentences (N desu nara → N nára) and rejected for nominal tentatives (*N desyóo nara → N nára). The expression kore nára to iu hito 'a suitable person' seems to be the result of ellipsis: Kore nára [íi] ... 'if it be this one [it is suitable]'. For -[y]óo nara = -[y]oo monó nara, see §13.3. For the expressions N_1 nára N_1 and N_1 mo N_1 nára N_2 (dá), see §9.3.2.

Statistics in KKK 25.159-69 show that in modern written Japanese N/S + nára is about four times as common as N/S + nára-ba. Not to be confused with this expression is the use of the literary copula náreba to mean 'since (it is a matter of); seeing that' after a directly nominalized verb: iu náreba 'so to speak' (= íwába(¯)), tatakau náreba 'since I am to fight'. Yoshida would derive nára from a shortening of nár[eb]a rather than of the literary nára[ba] (Y 436). Dialects of eastern Japan often have dára for nára; examples from modern fiction will be found in Y 436.

10. But diachronically, -tá nara appears to be a later option in place of -tára; cf. Y 238.

18 HEARSAY-REPORTING

A sentence, perfect or imperfect (but not tentative), can be reported as hearsay 'I hear (= They say) that ...'. The sentence is directly followed by *sóo da*, set off by an underlying minor juncture that is optionally suppressed after a tonic sentence (automatically cancelling the accent on *sóo*) and is automatically suppressed after cancelling the underlying final accent of an "atonic" inflected form (which is pronounced as if a single word with *sóo da*):

Yobu *sóo da* 'They say he calls/will call'.

Yonda *sóo da* 'They say he called'.

Ookii *sóo da* 'They say it is big'.

Sensei *da sóo da* 'They say it/he is a teacher'.

Sensei datta *sóo da* 'They say it/he was a teacher'.

Sensei nó *da sóo da* 'They say it is the teacher's'.

The sentence cannot, of course, be extended into a question or the like before being reported (though the report itself can be questioned); nor can a command or a proposal be reported as hearsay. The sentence may be stylized before it undergoes hearsay-reporting as well as after; Mio 336 has an example of ... irassyaimásu *sóo de gozaimásu née*. When the subject of the hearsay sentence is being exalted, you can use *sóo de irassyaimásu* in place of *sóo de gozaimásu*: Go-sotugyoo *da/nasáru sóo de irassyaimásu né* 'I hear you are graduating'; Cf. Kiite mimásu to, kodomono kóro wa taihen *bizin datta sóo de gozaimásu* 'People tell us she [our mother] was quite a beauty when a child' (R). But *S *sóo de orimásu* is not used.

Instead of *sóo da* you can use various quotational devices (§21) such as *tó^[1]iu hanasí da*, *tó no kotó da*, *tó^[1]iu kotó da*, *tó ka* (§21.6), *tté*, or *tó*. The new sentences can all be extended with particles like *sá/yó/wá/né/ ...* (§15). Another common way to report hearsay is S n[ó] *da tó^[1]sá/yó*; cf. S n[ó] *da tó^[1]mo* 'Of course S'. There seems to be some doubt about *ká*: *Sóo da sóo desu ka* 'Do they say it is like that?' is accepted in the polite form, but it is of doubtful acceptability in the plain form (*)*Sóo da sóo ka*. On the other hand, *Sóo da tó^[1]no kotó {desu} ka* is accepted either way. There is no *(*desu*) *tté ka* or *(*desu*) *tó ka*, but *tté né{e}* appears. Many of the other sentence conversions appear to be permissible with the new ... *sóo da* sentences: ... *sóo de mo/wa* (§9.2.2, §5); *sóo na no de/ni* (§14.2); *sóo da kara/to/si/kedo/ga*, *sóo nara [-ba]* (§17); *sóo ni tigai ná* (§14.6.1), but not *... *sóo ni sugínai* (§14.6.2) [? nor other cases involving direct nominalization, §14.6]. Adnominalization is impossible (*... *sóo na hitó/hazu da*); when *ná* appears after *sóo* it represents {*dá*} *ná* as in *Sóo da sóo ná* 'So they say, don't they' and ... *kyokutan na ningen-húsin ni oti-iru sóo ná* 'they are said to fall into extreme distrust of their fellow men, you see' (SA 2660.54e).

Although perfect and gerund are possible (*Háha mo génki da sóo datta* 'They said mother was well too', *Háha mo génki da sóo de ansin sita* 'I was relieved hearing that mother is well too'),¹ tentative (*... *sóo daroo*) and infinitive (*... *sóo ni*) are not acceptable.² The negative is unusual: (?*)*Sóo da sóo zya ná* 'It's untrue that they say it is so'; cf. *Sóo zya ná sóo da*

1. Hogó-tyoo *da sóo de motíron íkite iru* 'It [= a rare bird on sale] is said to be a protected bird [species] so of course it is alive' (SA 2662.101b).

2. But Yoshida recognizes ... *sóo ni* (Y 342) and has apparently found at least two examples (Y 344), though he does not cite them. We have recognized ... *sóo ni tigai ná*.

'I hear it isn't so', ... kurúsiku náí n da sóo desu yó 'they say it isn't so painful' (SA 2650.44cd).³ The hearsay is sometimes introduced by a phrase such as N no hanasí de wa (N no hanasí ni yoru to, N ni yoru to) 'According to what N says' or Watasi no kiita tokoró de wa 'According to what I hear'; sentences beginning with such phrases usually end with ... sóo da.

In written Japanese you sometimes see the semi-literary equivalent of hearsay-reporting: [adnominalized sentence +] yósi da. Yósi 'report, reason' is here used as a postadnominal (§13.2); ... to iu muné da is used in a similar meaning 'it is to the effect that'. The device used to report hearsay in the older literary language was to add the literary copula nári at the end of a sentence, the sentence being left in its predicative form—without adnominalization; see §15.19. Cf. N₁ náru N₂ sometimes written where the spoken language would have N₁ tó^[b] iu N₂ (§13). See also -ge nari and -ge-na, §20. In northern Kyūshū, hearsay is reported with S ti ko (= S to iu kotó da), Zhs 6.19. The use of the morpheme sóo to report hearsay developed later than its use as an evidential (§20), the distinction being clearly drawn by the late Edo period; today it is still less common than the evidential (cf. Y 343-4).

3. An example in a rhetorical question: Kyúuryoo ga agatta sóo zya náí ka 'Didn't I hear you had a raise in pay?'

19 THE SEMBLATIVE: { | } ˉrasii

A perfect or imperfect sentence of any origin can have { | }rasii added to impart the meaning 'it seems that' or 'it is likely that'; the imperfect copula dá will drop in a nominal sentence:

Yobu { | } ˉrasii 'It seems that he calls (or will call)'.

Takái { | } ˉrasii 'It seems that it is expensive'.

Áme { | } ˉrasii 'It seems to be rain'.

Sízuka { | } ˉrasii 'It seems to be quiet'.

Watasi no { | } ˉrasii 'It seems to be mine'.

Asitá kara { | } ˉrasii 'It seems to be (starting) from tomorrow'.

The word rasii is optionally preceded by an underlying juncture.¹ When the juncture option is chosen, a preceding tonic phrase will retain its accent (unless it is a final accent, for that will automatically be cancelled) and rasii will be given a secondary accent; the cancellation mark will be inoperative because of the juncture. A preceding atonic phrase (including one automatically reduced from an underlying oxytonic phrase) will proceed to suppress the juncture and be said as a single word with rasii. When the juncture option is not chosen, the output will be exactly the same for a preceding atonic phrase; a tonic phrase, on the other hand, will lose its accent as a result of the operation of the cancellation marked by the minus, now not blocked by juncture, and it will be said as a single word with rasii. But when directly following a tonic noun, the juncture frequently disappears after rendering the cancellation mark inoperative, so that only the accent of the noun will be heard: Áme { | } ˉrasii will be heard as /amerasii/ (juncture option spurned), as /áme rasii/ (juncture option taken and secondary accent on rasii), and as /ámerasii/ (juncture option taken and then the juncture itself ignored). From the pronunciation /hanarasii/ you will not know whether what was intended is Hana { | } ˉrasii 'It seems to be a nose' or (= /hanárasii/) Haná { | } ˉrasii 'It seems to be a flower'. The notations of this book show the cancellation and accent options available for the surface pronunciation; but if the cancellation option is taken, you are not free to ignore the accent on rasii: áme (ˉ)rasii will not permit the pronunciation /amerasii/ with no accent.

The inpuɣ sentence can be perfect: Yonda rasii 'It seems that he called', Tákakatta (ˉ)rasii 'It seems to have been expensive', Sízuka datta (ˉ)rasii 'It seems to have been quiet', Watasi nó datta (ˉ)rasii 'It seems to have been mine'. Or, the semblative can be perfectivized: Yobu rásikatta 'It seemed that he called (would call)', Takái (ˉ)rásikatta 'It seemed to be expensive'; Sízuka (ˉ)rásikatta 'It seemed to be quiet', Watasi nó rásikatta 'It seemed to be mine', Áme (ˉ)rásikatta 'It seemed to be rain'. Or, again, both sentences can be made perfect: Yonda rásikatta 'It seemed that he had called', Tákakatta (ˉ)rásikatta 'It seemed that it had been expensive', Sízuka datta (ˉ)rásikatta 'It seemed that it had been quiet', Watasi nó datta (ˉ)rásikatta 'It seemed that it had been mine', Áme datta (ˉ)rásikatta 'It seemed that it had been rain'; Syóobu ga túita (ˉ)rásikatta 'The game apparently had reached a decision' (Ariyoshi 171).

Negatives can be rung on either or both of the sentences: Yobanai rasii 'It seems that

1. We must assume this, despite the complications of the resulting description below, in order to account for the lack of such patterns as *yobúrasii and *yondárasii.

he does/will not call', Yobu rásiku náí 'It does not seem that he will call', Yobanai rásiku náí 'It does not seem that he does/will not call', etc. And all combinations of perfect and negative appear to be possible: Yobanákatte (-)rasii 'He seems to have not called', Yonda rásiku nákatte 'It did not seem that he had called'. But doubt is cast on (?)Yobanákatte (-)rásiku nákatte 'It did not seem that he had not called (= There was no evidence that he had not called)'.

Like other adjectival sentences, the semblative sentences are open to various conversions, including the tentative Yobu rasii daroo 'I think it seems that he will call',² the concessives Yobu rásikute mo = Yobu rásikut'atte 'Even if/though it seems that he will call', the provisional Yobu rásikereba 'If it seems ...',³ the conditional Yobu rásikattara 'If it seem(ed) ...', and Yobu rasii nara [-ba] 'If it seems ...', as well as the gerund: Soo sitára sinbun-hanbáiten ga uti(-) ni renraku sita rásikute, mukae ni kite ture-modosáreta 'Then, the newspaper dealer apparently having got in touch with my family, they came to get me and I was taken back home' (SA 2678.47a); Mítuko wa tákusii de kake-tuketa rásikute, ma-mó-naku arawáreta 'Mitsuko soon appeared, apparently having rushed over by taxi' (Ariyoshi 31).

When a construction calls for a repeat of S + (-)rasii, including N (-)rasii, the second S is usually optional: ... Oosaka-ben rásikereba [] rasii hodó, ... 'the more it seems to be Ósaka dialect, the more ...' (Maeda 1961.149); ... tíisa na kodomo rásikereba [] rasii hodó, ... 'the more he seems a little child, the more ...'.

We accept semblative + hearsay, as in Áme ga húru (-)rasii sóo da = Áme ga húru (-)rasii tté 'I hear it seems it will rain', and probably also hearsay + semblative: (?)Áme ga húru sóo (-)rasii 'It seems they say it will rain'. Although both (-)rasii sóo da and (-)rasii yóo da are accepted,⁴ *rasi-sóo da (evidential) is rejected, as are *rasii hazu/tumori da. An example of N { } dá (-)rásiku omowaréru 'seems like it is N': Aité wa syakoo-kíssa ka náni ka no zyosei rásiku omowaremásita 'The other person seemed like a cabaret hostess or some such woman' (Tsuji-mura 64).

S (-)rasii can be followed by sentence-extenders ká, ká né, and sometimes even ká sira ('I wonder whether it seems') and ká mo sirenai ('maybe it seems'); S (-)rasii ni suginai 'It only seems that S' is acceptable but *S (-)rasii ni tigai náí 'It undoubtedly appears that S' is not. The semblative sentence can be stylized: S (-)rasii desu, S (-)rásyuu gozaimásu—but not *S (-)rásikute irassyaimásu since the semblative does not itself carry a personal reference. Nuclear focus is permitted: Yobu rásiku wa/mo áru (or náí), Yobu rásiku sae áreba, An intransitive mutative may occur, S (-)rásiku nátta 'It got so it appeared that S'; but not a transitive mutative, *S (-)rásiku sita 'They made it so it appeared that S'.

From the semblative of nominals you can freely derive lexical adjectives with the meaning 'is suitable to be, is worthy of, is very much the, is very like': gakusei-rasii táido 'an attitude worthy of (suitable to) a student, a student-like attitude', onna-rasii 'is womanly, feminine', kodomo-rasii 'is child-like', otoko-rasii 'is masculine, manly', baka-rasii 'is

2. Also the negative and literary tentatives, including such expressions as S (-)rasikaróo ga { } (-)rásiku nakaróo ga = S (-)rasii daroo ga { } (-)rásiku náí daroo ga 'whether it seems that S or it doesn't seem that S' and S (-)rasikaróo ga S-(a)nai (-)rasikaróo ga = S (-)rasii daroo ga S-(a)nai (-)rasii daroo ga 'whether it seems that S or it seems that S [does/is] not'.

3. But (-)rásikereba is often replaced by (-)rasii nara according to Y 316.

4. Also S-(a)nai (-)rasii yóo da, S (-)rásiku náí yóo da, S-(a)nai (-)rásiku náí yóo da, S (-)rasii yóo zya náí (or yóo ni miénai), S (-)rásiku náí yóo zya náí (or yóo ni miénai), S-(a)nai (-)rasii yóo zya náí (or yóo ni miénai). But rejected—for clumsiness?—is *S-(a)nai (-)rásiku náí yóo zya náí (or yóo ni miénai).

foolish, stupid'; Hito wa kessin site otoko-rasiku, gunzin-rasiku, syatyoo-rasiku naru no de aru 'A person becomes manly or military or executive-type by deciding to do so' (SA 2642.104d). The nominal is not always a pure noun; in wazato-rasii 'studied, unnatural' the adjective is made from the predicable adverb waza-to 'on purpose'. There are negatives in -rasikaranu: gityoo-rasikaranu gityoo datta 'was an unchairmanly sort of chairman' (SA 2685.62b), tyuugakusei-rasikaranu hankoo 'a crime unlikely for a junior high school student' (SA 2652.121e). But the more colloquial negative is -rasiku nai: Soko ni tikara(-) no komotta roozin-rasiku nai koe ga hiroma no kuuki o nami-datseta 'At that point a vigorous voice hardly to be expected from an old man stirred the air of the living room' (Y 321). The lexical adjectives, unlike the sentential conversion, are open to the evidential (§20): -rasi-soo da, -rasi-ge da 'seems suitable to be'. And they form derived nouns with -sa: otoko-rasi-sa 'manliness'. The sentence-converting semblative rasii has either a normal tonic accent (dropping, as expected, when attached to a tonic word) or a dominant accent that overrides a preceding accent, but the adjective-deriving -rasii is always dominant, so that a distinction is heard (optionally) for tonic nouns: /senseerasii/ can mean only 'It seems to be the teacher' (= Sensei (-)rasii), but /senseerasii/ can mean either that or 'He is suitable to be a teacher (etc.)' (= Sensei-rasii). For /gakuseerasii/ there is no disambiguating pronunciation for the semblative, since gakusei 'student' is atonic.

There are also three adjectives that attach -rasii directly to the base: Kitana-rasii 'It is dirty-looking'—cf. Kitanai (-)rasii 'It seems to be dirty'; Kawai-rasii 'It is charming-looking'; Niku-rasii 'It is hateful-looking'—cf. Nikui (-)rasii 'It seems to be hateful, and contrast the homonymous Niku (-)rasii 'It seems to be meat', Niku-rasii 'It is worthy (= real) meat'. Suita(-)rasii 'is sweet, loveable' is an idiomatic phrase, or perhaps a derived adjective (as Kenkyusha treats it), from the semblative applied to the perfect of suku 'likes, loves'.

The meaning of the semblative is very close to that of adnominal + yoo da (or yoo ni mieru) and its colloquial synonym mitai da, § 13.2. Sometimes the semblative is used in a meaning very close to that of hearsay (soo da);⁵ other times it seems closer to the evidential (-soo da) but the meaning centers on surmisal, deduction, or inference and can be translated as 'likely' (cf. hazu da). The subject of the evidential sentence is usually third-person, but it can be first-person when "oneself" is looked at as if from the outside; cf. Y 319.

We can perhaps tag the difference in meaning of the several forms as follows: ... yoo da INDIRECT JUDGMENT, ...-soo da APPEARANCE or TENDENCY or IMMINENCE, ... (-)rasii PRESUMPTION or INFERENCE, ... hazu da LIKELIHOOD or EXPECTATION. Yoshida (337) studied the relative frequency of "appearance" expressions in works of two modern writers; out of a combined total of 1236 occurrences, the approximate percentages are as follows: .7095 yoo da, .1456 -soo da; .1116 rasii; .0146 huu da; .0098 mitai da; .0072 -ge ni; .0016 toori da.

Sometimes Rasii will be heard as a complete sentence, probably to be regarded as an abbreviation of Soo (-)rasii 'It seems to be like that' = 'I guess so', e.g. Sore nara-ba rasii desu 'That will be fine, I guess'. Rasiku nai desyoo? 'Unlikely, what?' An example from an interview: Ren'ai tyuu [= to iu] monó, siran no?—Rasii desu ne 'Of love you know nothing?—Seems that way, doesn't it' (SA 2649.50b; replying is Imai Michiko, born in Tōkyō 1942). It has been observed that sentences with (-)rasii are sometimes produced as

5. And in the literary language PREDICATIVE + nai serves for hearsay as well as semblative; see §15.19.

modest replies to questions, even though the speaker is quite sure of his facts. Semblative sentences are often anticipated by expressions such as *dóo-mo*, *dóo-yara*, and *nán-de-mo* 'somehow' (cf. Y 318). Examples of adnominalized semblatives: *Minná^[r]yorokónnda n desu kedo, riyoo saretá rasii tokoró mo átte ...* 'We were all delighted but there were (situations=) times when we seem to have been used ...' (SA 2649.46b); *Hontoo ni kokorobosói (-)rasii tokí ga arimásu* 'There are times when he seems truly depressed' (Y 319); *Omae ga Tukida to náka no ii (-)rasii kotó wa ...* 'That you appear to be friendly with Tsukida ...' (KKK 3.279); *Kó-itizíkan tátu to, tabigéinin-tati ga ide-tátu (-)rasii monoótó ga kikoete kíta* 'After a short while you could begin hearing the sounds of the traveling entertainers apparently leaving' (Y 318); *Misé de katta rasii aka-zyóotin mo áru* 'There are red lanterns, too, that look store-bought' (Y 319); *Tookyoo to, Kyóoto kara kíta (-)rasii zyosei-kóosei []* 'It's high-school girls who seem to have come from Tōkyō and Kyōto' (SA 2837.31d); *Gyosen rasii sirá-ho(-)* 'A white sail that appears to be a fishing boat ...' (KKK 3.279); ... *hozyutú-tyoo ga ... koosyá-tyoo ni, hanasi-kakete iru (-)rasii kóe ga kikoete kíta* 'The sound of a voice came [down] that seemed to be the gunnery lieutenant addressing the chief anti-aircraft gunner' (KKK 3.279). The following examples have the literary attributive form (-)rásiki: *Muron tegákari (-)rásiki monó wa áru* 'Of course there IS an apparent clue' (Sa 2668.30c); *Sore rásiki monó o kan-zimásu né, yoyaku wa simasén ga* 'You feel something like that, not making reservations' (Tk 2.278b); ... *kangó-hu ya, sore rásiki monó ni kansatu o tayori-sugirú no wa ...* 'the excessive reliance on nurses and such-like persons for observation [of patients] ...' (SA 2666.115e). Cf. Kenkyusha's example *Íkura mátte ité mo sore rasii hitó wa kónakatta* 'I waited and waited but no one looking anything like him came'. *Sore-rasii N* may sometimes translate as 'a likely N': *sore-rasii kónkyo* 'a likely (reliable/plausible) basis' (SA 2673.131c) = *konkyo-rasii kónkyo* (see below).

A nominal sentence will suppress the imperfect copula when the semblative is applied, *N fda* rasii; but the copula will appear in the perfect, *N dátta* rasii, as in this example: *Iwamoto sensei te no wa, nakanaka ganko-mono dátta (-)rasii desu ná* 'This Professor Iwamoto seems to have been quite a stubborn man' (Tk 3.165b). And you may come across the informal copula in its more formal, uncontracted version, *N de áru (-)rasii*: ... *sono miti no biggu-syóotto (oomono) de áru (-)rásikatta* 'he was apparently a big shot (a VIP) in his field' (SA 2671.95c). Suppression of the imperfect copula will account for the structure HONORIFIC INFINITIVE (o-V-i or an equivalent verbal noun prefixed by go- or o-) + (-)rasii: *Nippon-kazyuu-kyóokai wa tokusei no zísyo o o-moti [] rasii* 'The Japan Fruit Juice Association seem to have their own special dictionary' (SA 2649.110a); the subject exaltation (o-moti dá= o-moti ni náru or mótte irassyáru) is here used sarcastically, the question at issue being what constitutes fruit "juice". And we will probably do well to assume the ellipsis of a pro-predicative copula in the following examples: *Enpitu no óreta sín de [] (-)rásiku káite átta* 'It was written apparently with the lead from a broken pencil' (Y 321); *Káre [] (-)rásiku, ... itta* 'Characteristically, he said ...' (Y 322); *Ákiko wa iká-ni mo Kyóoko [] (-)rasii to omótta ga ...* 'Akiko thought "How very like Kyōko [to say a thing like that]"' (Ariyoshi 255). When the semblative is applied to *S nó da* 'It is that S' (§ 4.2), the imperfect copula drops, leaving *S nó [] (-)rasii* as in *Mítiko ga soko ni irú no (-)rasii* 'It appears to be that Michiko is there' (Y 318).

The expression N_1 -rasii N_1 means 'an N worthy of the name' or 'a particular N worth mentioning': ... ziken-rasii ziken ni butukaranákatta ... 'did not run into any particular incident worth mentioning' (SA 2664.92d); ... hannoo-rasii hannoo ga nákatatta 'there was no reaction to speak of' (or 'there was no real reaction') (SA 2681.27a); ... hukyoo-rasii hukyoo o keiken site inai 'has not experienced a real depression' (SA 2673.44a). This is not the semblative as such, but a semblative-derived adjective, as described earlier; the accent of -rasii always dominates the attached noun, and that must be a single pure noun (*A tó B -rasii A tó B 'a pair A and B worth mentioning' is ungrammatical), which can not itself be modified, though the repeat of the noun (preceded by an underlying juncture) can include an adnominal phrase, and the expression as a whole—or perhaps the repeated noun, independently—can be modified by an adnominal phrase: Honkaku-teki na haiuee-rasii háiuée ga nozomasii(¯) 'What is needed is a real highway worthy of the name'; Kuruma ga yo[n]-dai narande hasiréru hodó no haiuee-rasii honkaku-teki na háiuée ga nozomasii(¯) 'What is needed is a real highway worthy of the name that four cars can run on side by side'. Cf. Alfonso 1063-4.

Elsewhere (Martin 1967.271 n. 36) I have suggested that (¯)rasii is an abbreviation of ár- + -a-si-, the latter being a complex suffix consisting of the deverbative -a that underlies negative and tentative forms + the adjective-forming -si-, itself perhaps an abbreviation of -sa ári. On this see also Martin 1967.267 n. 30. Notice also (-)tarasii, § 3.13. (A list of adjectives derived with the complex suffix -a-si- will be found in KKK 7.263-4.) Examples of the semblative conversion can be found in the Man'yō-shū⁶ but the modern use began in the Muromachi period, according to Yoshida, who observes that it was written almost exclusively after nouns until the late Edo period (Y 323). Satō (1.309) implies that the sentential conversions (such as V-ru/A-i rasii) did not appear until after Muromachi times, for which only N rasii is attested.

6. In this early (Nara-period) usage, rasi(-) followed the predicative forms of verbs, including the true predicative of ár- which coincides with the attributive áru rather than the infinitive-used-for-predicative ári.

20 THE EVIDENTIAL: -SOO/-GE DÁ

It is possible to put sentences into EVIDENTIAL conversions which impart the meaning 'looks to be/do' by attaching -soo dá¹ (or, more old-fashioned and less widely heard, -ge dá) to the infinitive of verbals, to the base of most (all?) adjectives, and to most but not all adjectival nouns:

Yobi-soo da 'He seems to be about to call'.

Waru-sóo da 'It looks bad'.

Zyoobu-soo da 'He looks sturdy'.

A pure noun can be used only when predicated with the formal uncontracted copula: *koo-séiseki de ari-sóo da* 'looks to be good results'. Tonic bases produce tonic evidentials, with the accent on -sóo/-gé; atonic bases produce atonic evidentials. (The accent optionally drops from -gé.) Evidentials can be made on most subject-exalting forms, including *o* + adjective or adjectival noun: *Honto ni o-zyoobu-soo désu née* 'You truly seem to be of sturdy health, I'd say' (SA 2672.62b). The evidentialized sentence can be stylized (-soo *désu*, -soo *de gozaimásu*) and it can be made subject-exalting: *Íi monó o o-morai ni nari-sóo de irassyaimásu/ gozaimásu née* 'It looks as though you are going to get something nice, doesn't it'.

The resulting sentence can be made perfect (Yobi-soo *dátta*); but tentative forms are rejected (Y 403): *Yobi-soo *daróo*, *Yobi-soo *dátta daroo*. The evidential sentence can be adnominalized as an adjectival noun (Yobi-soo *na hitó* 'a person about to call'), yet it can retain the original marking of its adjuncts: *Áme ga huri-sóo na hí* 'A day when it looks like rain'; *Mondai ni nari-sóo na monó* 'Things likely to become a problem'; *Itiban wadai ni nari-sóo na no wa* 'The one that seems to be creating the biggest stir ...'; *Oosaká-zin no ii-sóo na kóttesu* [= *kotó desu*] *né* 'It's what you'd expect an Ōsaka person to say, all right' (Tk 4.229b); *Káno-zyo ga suwari-sóo na isu* 'The kind of chair she is likely to sit in'; *Háha ga o-kási o yari-soo na kodomo* 'A child that the mother is likely to give sweets to'; *Kimi ga yomi-sóo na hón zya náí no?* 'Isn't it a book (of the sort) you're likely to read?'. (The epitheme is not limited to extruded subjects, as might be thought from the examples in Alfonso 1066.)

The evidential sentence can be turned into a gerund -soo *dé* [*wa/mo*], infinitive -soo *ni* [*náru/suru*, V] and -soo *dé* [*sae áreba*], provisional -soo *nára*[-*ba*], conditional -soo *dáttara*, representative -soo *dáttari*. It can be extended with *ká*, *né*, *ká sira*, *ká mo sirenai*, etc. It can be made semblative -soo *rasíi* (somewhat redundant); -soo *ni sugínai* occurs but *-soo *ni tigai náí* is doubtful, though some accept *Zyoobu-soo ni tigai náí* 'You can't say he doesn't look sturdy'. (Also accepted: *Atira wa áme ga huri-sóo ni tigai náí*, as an abbreviation of ...-soo *ni miéru ni tigai náí*.)

Evidentials can be made negative, usually in these forms: -soo (*wa/*)*mo náí*, -soo *dé/ní wa/mo náí*, or -soo *dé/ní wa/mo miénai* (cf. remarks in §8). The form -soo *ni náí* looks odd when we consider that there is no corresponding *-soo *ni áru*, but it can perhaps be explained in terms of the formation of the literary copula: the expected -soo *n[i] ár[-i]* is

1. As usual, *dá* may drop before certain sentence-extenders (§15): *Omosiro-sóo [] né ...* 'Looks interesting, huh ...' (KKK 3.251); *Kyóo-áme ga huri-sóo [] yó* 'Today it looks like rain' (KKK 3.251). In place of -soo *dá* you may run across sentence-final -soo *ná* in the speech of old people or those using dialects (cf. Y 403); this is not to be taken as -soo [*da*] *ná* but as a sentence-final occurrence of the adnominalized copula after an adjectival noun.

replaced by -soo $n[i]t[e] \acute{a}r[-i] \rightarrow$ -soo dá, but -soo ní $\{wa/mo\} \acute{a}razu$ has simply replaced $\acute{a}razu$ by náí. According to Hayashi 139, the evidential of an adjective or an adjectival noun is made negative in the form -soo de $\{wa\}$ náí (uma-sóo de náí 'is not appetizing', zyoobu-soo dé wa náí 'is not robust-looking') and the evidential of a verb is made negative in the form V-i-soo mo náí or V-i-soo ní $\{mo\}$ náí: Máda owari-soo mo náí 'There is still no sign of its ending'; Kono hen dé wa mitukari-soo ni náí 'It looks unlikely to be found around here'; Zyuuiti-gatú^[1] tooka, tyót-to tákoo de wa mirare-sóo mo náí deki-gotó ga átta 'On November 10th a little incident happened that is unlikely to be seen in any other school' (SA 2665.24a); Ryóokoku no tairitu wa, yooi ni osamari-sóo ni náí 'The confrontation between the two countries would not appear to be easily resolved' or 'There is little evidence that ... will easily be resolved' (SA 2635.3). Alfonso 1066-7 gives the patterns V-i-soo mo náí, A-soo dé mo náí or A-ku nasa-sóo da. Jorden (BJ 2.123) says the following sentences are interchangeable: Dekinasa-sóo desu 'It looks impossible', Deki-sóo zya arimasén 'It doesn't look possible', and Deki-sóo ni wa miemasén 'It doesn't look as if it will be possible'. ISJ (6.15.286) has the example Sonna kotó wa tootei deki-sóo ni wa omoénaí 'Such a thing doesn't appear to be likely after all'. In Y 405 there is actually an example of V-i-soo ga náí: Iká ni ízyutu ga susundé mo, kore wa deki-sóo ga náí 'However much the medical arts may progress, there is no likelihood that this can be'; cf. ... sore o zikkoo zuru kotó ga deki-sóo de nákatta 'it did not seem likely you would be able to accomplish it' (Y 448).

It is also possible to ring the evidential on a negative sentence: Ibikí de wa nasa-sóo datta 'Apparently it wasn't (that he was) snoring' (Ariyoshi 307); Riyuu wa hitótu de wa nasa-sóo da ga, ... 'There seems to be more than one reason, but ...'; Dóo-mo sóo de wa nasa-sóo da 'That seems very unlikely, somehow' (Tanigawa 172); Sono tegami no tyoosi da to, átte mo omosíróku nasa-sóo da wa 'From the tone of the letter it appears a meeting would not be much fun' (Y 404). As these examples show, it is usual for náí to attach -sa before adding -sóo: Nasa-sóo da 'It looks (to be) missing'. The same irregularity is true of Yói (= Íi) 'It is good'; Yosa-sóo da 'It looks good'. By way of contrast, notice that the excessive forms (§9.1.9) are Nasa-sugiru but Yo-sugiru. Mio (141) says it is usual not to insert -sa- with negativized VERBALS turned into evidentials or excessives (iwa-na-sugíru 'too seldom says', ... kíte i-na-soo na yoosu o míru to 'when I saw that it appeared he had not arrived'), but many speakers optionally insert -sa- in these two situations, too: iwa-nasa-sugíru, kíte i-nasa-soo na yoosu. Yoshida (407) says that na-sóo da is a Meiji usage and that the newer nasa-sóo da is more popular in the Shōwa era. (But *yo-sóo never occurred for yosa-sóo.) The examples in Y 407 include these: Soo-site túma kara tokidoki monotarina-sóo na mé de nagameraréru no desu 'Then [he] gets given a look of dissatisfaction from his wife every now and then'; Watakusi ní wa ... wakarana-sóo da né 'I just can't seem to understand ...'; Tái-sita kotó wa nasa-sóo da 'It doesn't seem to be of any great importance'. Other adjectives ending in -na-i, whether clearly derived from negatives (nasake-náí 'is heartless') or not (kitanáí 'dirty') are sometimes heard with the inserted -sa- before -soo da, but we will go along with Mio (141) in rejecting these as ungrammatical. Kazama 99 accepts -sa-soo and -sa-sugíru for those adjectives clearly derived from N ga náí—such as tayori-náí, akke-náí, darasi-náí, etc.—but rejects the -sa- for all other cases, such as osanáí, hakanáí, sukunáí, kitanáí, and even the etymologically negative kudaranaí and tumaránaí. He observes that speakers are uncertain about the etymology of the slang word egetunáí 'is vulgar, coarse' and therefore accord it either treatment. The pseudo-literary

forms Nakari-sóo da (contracted from Náku ari-sóo da) and Yokari-sóo da (from Yóku ari-sóo da) sometimes appear in print; but they strike most speakers as odd. Cf. Mio 134, 140.

The negative infinitives -soo [ní/dé] mo náku and -ge [ní/dé] mo náku are not uncommon: Bukka wa sagari-sóo mo náku, simin-séikatu wa iyóyo kurúsiku nari-sóo da 'With no sign of prices about to go down the livelihood of the citizenry appears to be more and more distressing'. Since it is possible to negativize either the underlying sentence or the evidential, we can wonder whether examples will turn up of double negatives such as these: ?V-(a)na[sa]-soo mo náí, ?V-(a)na[sa]-soo ni miénai; ?A-ku nasa-sóo mo náí, ?A-ku nasa-sóo ni miénai.

Evidentials made on semblatives are rejected (*Áme ga húru rasi-sóo da), but semblatives are made on evidentials from underlying verbal sentences: Áme ga huri-sóo (–) rasíi 'It seems to be looking like rain'. Even though the evidential already means 'looks as though', the sentence can be converted into the putatives of §9.1.11: Áme ga huri-sóo ni miéru/omowaréru/ ... 'It seems/appears to look like rain' or Áme ga huri-sóo ni [watasi wa] omóu 'I think it looks like rain'. What about (?)Áme ga huri-sóo (–)rásiku omowaréru?

Among the adjectival sentences that can be made evidential are the facilitative conversions (§9.1.8): Si-niku-sóo da 'It looks difficult to do'. Martin 1968.51 suggests that desideratives are excluded (*Iki-ta-soo da) unless verbalized (§7.2): Iki-ta-gari-soo da 'He looks as though he wants to go'. But this is true only for straightforward declarations; under various conversions the desiderative will turn up: Iki-ta-soo na kao o site ita 'He looked as if he wanted to go', etc. On ii-ta-ge 'apparently wanting to say', see below. Notice that for vowel verbs (Ve-, Vi-) and for one class of consonant verbs (Vs-) the form V-ta-soo da 'looks desirous (to do)' and the form V-ta sóo da 'did as I hear tell' will look the same in kana spelling. For tonic verbs, the forms will differ in accent:

tabe-ta-sóo da	ori-ta-sóo da	hanasi-ta-sóo da
tábeta sóo da	órita sóo da	hanásita sóo da

For those speakers who make atonic desideratives on atonic verbs (the standard we are following), there will be a difference of accent in all instances:

yame-ta-soo dá	abi-ta-soo dá	kasi-ta-soo dá
yameta sóo da	abita sóo da	kasita sóo da

But for those who make all desideratives tonic, the forms from atonic verbs will converge in accent:

yame-ta-sóo da	abi-ta-sóo da	kasi-ta-sóo da
yameta sóo da	abita sóo da	kasita sóo da

Speakers who do not commonly use the old-fashioned -ge and prefer Natukasi-sóo da for Natukasi-gé(–) da 'It is nostalgic-looking', may have traces of the form in clichés like monou-gé(–) ni 'listlessly, languidly', ake-hiro/-ppiro-ge (na) 'open, frank' (there is no *ake-hiro/ppiro-i), kotó-mo-nágé ni² (kotaéru) '(answers) nonchalantly', and hito-mo-nage (na) '? (is) unembarrassed'. Ig 57 gives examples of imi-ari-ge (na) '(is) meaningful-seeming, pregnant (with meaning)' and kimari-waru-ge (na) '(is) awkward-looking'. The expression ... to ii-ta-ge 'apparently wanting to say' is common: Sohutó-boo no ríbon ni tuma-yóozi o hasánda daihyoo ga, "Konna dai-kánkei o úkete íi monó daroo ka" to ii-ta-ge ni, mózi-mózi si-nagara bara no hanátába o uke-totta 'The delegate, with a toothpick stuck in the ribbon of his felt hat, hesitantly took the bouquet of roses, looking as if he wanted to say

2. (Accentuation options according to NHK.) Also nani-goto mo na-ge ni?

“How can I accept such a big welcome” (SA 2660.36c); Túmari sore-daké,^[1] konpyúutaa no riyoo ga susunde iru to ii-ta-ge no yóo de aru ‘It is as if he appeared to want to say that the utilization of the computer is, after all, advanced to that extent’ (SA 2661.26d—for ná → nó before yóo, see p. 766). Siranu-ge ‘apparently ignoring’ can be treated as idiomatic: Konna musúu(¯) no hígekí mo siranu-ge ni ... ‘Apparently ignoring countless tragedies of this sort ...’ (SA 2674.63a). But Y 206 cites an example with a dialect form of the perfect: ... sirananda-ge ni ‘as if [one] had not known’. More examples of -ge: Káre-ra wa, hazime wa urayamasi-gé(¯) na manázasi de mi-tumeru ‘At first they stare with an envious look’ (SA 2647.118a); Kore ní wa Nissan wa human-ge dá ‘With this, Nissan seems to be displeased’ (SA 2668.124d); ... tokui-gé(¯) ni hanásu ‘speaks with pride’ (SA 2652.119a); Kono se ga hikúku, hutótta, hitó-kuse ari-gé(¯) na tura-gámae no zínbutu wa ... ‘This short, fat, sinister-looking character ...’ (SA 2674.104c). The negative of -ge da is -ge náí: Sono tosí no háru wa, ítu mo no Sínsyuu ni ni-ge náí atatakái soosyun de átta ‘The spring of that year was an early one warmer than seemed appropriate for Shinano’ (Y 350). This is the source of nanige-náí ‘is nonchalant (as if it were nothing)’ and sarige-náí ‘is unconcerned (as if it were not so)’.

From the basic meaning of the evidential ‘looks (appears)’—as in Kono yukí wa tumori-soo da ‘It looks as though this snow will stay’ (Ariyoshi 143)—there come uses that translate as ‘seems about to, is on the point of, will’ (often prefaced by íma ni mo ‘at any moment’) and as ‘is likely to, ought to, could be expected to’ (= ... hazu da). The implication is that the happening is IMMINENT or IMPENDING:³ ... de-sóo de dénai ... ‘is about to emerge and then doesn’t’ (SA 2650.97a); Zyookyaku ni tótte wa “oohuku-bíntaa” no tosí ni nari-sóo da ‘For the passenger [on public transportation] it’s going to be a year of getting it from all sides’ (SA 2660.42b); Húne ga sizumi-sóo ni náru to, nezumi wa itiháyaku nigéru ‘When a ship is about to sink the rats are quick to desert it’ (SA 2671.29b); ... ki ga tooku nattyai-sóo da [= nátte simai-sóo da] ‘is about to lose consciousness’.

The domain of the evidential seems to be limited to a single predicate. In the following sentence, for example, the evidential at the end is not intended to carry back through the infinitive(-used-for-gerund) to include the first of the two passives: Káiro no tikáku no syooson dé wa, Isuráeru no supái ni sare, korosare-soo ni narimásita ‘In a small village near Cairo he was taken for an Israeli spy and was nearly killed’ (SA 2664.100c); the transitive mutative supái ni suru is here loosely used as a putative. In the following sentence the evidential should not be assumed to apply to more than the final adjectival noun: Hossóri sita karadá-tuki(¯) de sinkeisitu-sóo de aru ‘He has a slender build and looks nervous’ (SA 2666.59d).

The expression ari-sóo sometimes calls for special translations: ari-sóo na kotó ‘a probability’, ari-sóo mo náí kotó ‘an improbability’, ari-sóo na hanasí de ... ‘according to a likely story ...’, ari-sóo mo náí zíken ‘an improbable incident’; Obóete imasén ga, ari-sóo na kóttesu né ‘I don’t recall it, but it seems likely to have happened’ (Tk 2.135b); Ari-sóo na sínri dá né ‘Likely psychology, isn’t it’ (Tk 3.144b). But it can also be used as the expected evidential conversion of a sentence expressing existence or possession: Igirisu no Tyáaruzu óozi ga óoi o tugu máde ni wa, máda sootoo no nensúu ga ari-sóo da ‘There would seem to

3. In this meaning, the evidential can not be made negative (Y 405); ...-soo ni/mo náí can deny only the ‘likelihood’ meaning, as shown by examples in Y 406: Tote-mo, uti(¯) no o-káasama yurúsíte kudasari-sóo mo náí n desu mono ‘But my mother is hardly likely to give me permission’.

be a considerable number of years before Prince Charles of England will succeed to the throne' (SA 2664.100c).

The -ge forms are reported used for -soo by speakers in Gumma and Saitama, who also say *V-ru gé da* for the same meaning: *Áme ga húru ge da* 'It looks like rain' (Zhs 2.22). Two forms reported from Gumma are *nasa-gé* = *nasa-sóo* 'appearing to be lacking' (Zhs 2.130.7) and *yosa-gé* = *yosa-sóo* 'appearing to be good' (Zhs 2.155.8). Standard speakers find the -ge forms old-fashioned; cf. the literary forms in §15.20. Sentences with -ge nari were used as early as Heian times (Y 349); the modern usage stretches from Muromachi to the beginning of the Edo period, is largely limited to western Japan and is considered very colloquial (cf. Kgg 89.36-7). Sentence-final -ge-na is used to report hearsay or conjecture in dialect examples from modern fiction found in Y 349, including one of ... *kámi-sama zya [= da] gé-na de, ...* 'is said to be a god ... and'.

The most widely accepted etymology says that -soo < -sau is the Chinese loanword meaning 'aspect, phase; physiognomy', but some would derive the evidential from the adverb *sóo* < *s[i-k]á[k]u* 'thus' (Y 404), the presumed source of the hearsay conversion.⁴ And -ge is the nigoried form of the noun *ke* (= *kéhái*([~])) 'indication, symptoms'.

The -ge forms made from atonic verbs, adjectives, and adjectival nouns are also atonic: *karu-ge*, *human-ge*. According to the patterns used in this book, those made from tonic verbs, adjectives, and adjectival nouns are optionally atonic or oxytonic: *natukasi-gé*([~]), *tokui-gé*([~]). For the tonic forms MKZ^s generally prefers a penultimate accent: *natukasí-ge*, *tokuí-ge*. But MKZ^s has a number of exceptions: *ita-gé*, *nibu-gé*, *niku-gé*, *osi-gé*, *samu-gé*, *samu-gé*, *sema-gé*, *yowa-gé* (despite *hosí-ge*, *huká-ge*, *tuyó-ge*); and, unless misprints, *kanasí-ge* from atonic *kanasi-* and *nemutá-ge* from atonic *nemuta-*.

4. But it has also been proposed that both the evidential and the hearsay might have arisen from a reduction of *samá* 'appearance', by way of *sam[a] > saũ* (with nasality) > *sau* (Gekkan-Bumpō 1/8.50-1).

21 QUOTATIONS

A sentence can be quoted by adding the particle *tó* '(says/thinks) that'. (The accent and juncture of phrases marked by *tó* are discussed on p. 1003.) The sentence quoted can be negative, desiderative, etc.; it can be perfect, tentative, etc.; and the quotational verb that follows can undergo all conversions independently of the quoted sentence.

The quoted sentence is typically followed by an INFORMATION-PROCESSING verb having to do with saying, writing, thinking, judging, or the like: *iu* (pronounced /yuu/) 'says'—and numerous connotationally marked synonyms such as *nukasu* 'impudently says', *morásu* 'reveals, lets it leak (that)', *yodómu* 'stammers (that)', *tubuyáku* 'mutters', *hozáku* 'grumbles', *sasayáku* 'whispers', *sawágu* 'clamors', *yobu* 'calls', *ikkatu suru* 'roars, thunders (that)', *zekkyoo suru* 'screams, cries out (that)', *homéru* 'praises', *hínan suru* 'criticizes, complains', *kusásu* 'disparages, belittles (saying that)', *unuboreru* 'flatters oneself (that)', *áisatu suru* 'greet(s) (with the words)', *sidoo suru* 'counsel(s)', *unnun suru* 'comment(s)', *kotaéru* = *henzi suru* 'answer(s)', ... ; *káku* 'write(s)', ... ; *omóu* 'think(s), feel(s)', *kangaéru* 'think(s), opine(s)', *sir-u* 'find out, learn, know', *wakáru* 'find out, understand', *ísiki suru* 'is aware/conscious (that)'; *kitai suru* 'expect(s) (that)', *nozómu(-)* 'hope(s)', *sin-zíru(-)* 'believe(s) (that)', *sinpai suru* 'worry(ies) (that)',¹ *syutyoo suru* 'claim(s) (that)', *hándán suru* 'judge(s) (that)', *dantei suru* 'conclude(s) (that)', *dangén suru* 'affirm(s) (that)', *bunseki suru* 'give the analysis (that)', *setumei suru* 'explain(s)', *akíraka ni suru* 'make it clear (that), announce, reveal', *kimeru* 'decide(s) (that)'; ... ; *zannen-gáru* 'regret', *senden suru* 'advertise (that)', *husigi-gáru* 'wonder, be curious (that)' (SA 2662.96c), *mezurasi-gáru* 'marvel (that)' (SA 2672.60), *akireru* 'be amazed (that)', ... ; *míru* 'see (that)', *kiku* 'hear/ask (that)'; *omoéru* 'it is thought (that)', *kangaeraréru* 'it is thought (that)', *kan-zirareru* 'it is felt that', *mitomerareru* 'it is recognized that', *nagameraréru* 'it is viewed that'; ...²

Obviously the number of such verbs is quite large; it is not always necessary to postulate a particular tie between the quotation and a given verb, since we can often assume an ellipsis of *tó* *fitte* 'saying that' or *tó* *tomótte* 'thinking/feeling that' as in these examples: *Okureté wa naránai to, isóide arúita* 'I hurried my steps, feeling I mustn't be late' (Hayashi 184); *Hataraita tameta kityoo na kane dá kara to, sassoku^[1] tyokin sita* 'Since [I realized] it was precious money I had saved up from working I put it in the bank at once' (Hayashi 184); *Kono háru koso wa to saigo no oikomi-bénkyoo o site imásu ga ...* 'He is pursuing last-minute studying with the idea that this spring is It' (SA 2662.106a); *Yotto-zuki no káre wa, issyo ni noroo to bóku(-) o sasotta* 'He, the great yacht-lover, invited me to ride with him' (SA 2650.59d). See below for further discussion of this sort of ellipsis. With verbs that more specifically involve the processing or reproduction of information, how-

1. And, perhaps as a propredicated verbal noun, *sinpai dá*: ... *táizi ni warúi eikyoo o oyobosú no de wa náí ka to sinpai desu* 'I am concerned whether there might not be a bad effect on the unborn child' (SA 2689.122ab).

2. Kuno 1973.213 points out that S *tó* does not presuppose the factuality (truth) of S and thus is appropriate with 'said, felt, thought, asserted' etc. Some verbs will allow only S *kotó* o (*wasureru* 'forgets', *omoi-dasu* 'remembers'), some will allow only S *tó* (*iu* 'says', *gokai suru* 'misunderstands', ...) and some will allow either (*kiku* 'hear', *sin-zíru(-)* 'believes', *utagau* 'doubts', *nagéku* 'deplores', *zihaku suru* 'confesses', ...).

ever, we will probably wish to assume a direct tie with the quotation: ... *moraenái ka to irai suru* (= *tanómu*) 'asks whether one might not receive ...'; *Ití, ní, san to kazoé ro* 'Count one, two, three!' (SA 2670.95b); ... *tasúkete kure to sugáru(-)* to ... 'when implored to help'; "*Katte kuré [yo]"* to *segámu/sebíru* 'He badgers me to buy it for him'; ... *iranai tte kotowáta n da* 'I declined, saying I didn't want it' (Tk 4.297a).

The quotation stands in an adverbial relationship to the information verb,³ which will sometimes take a direct object: ... *hitóbito wa, kore kóso Bukkyóo-to no tóku mappoo no tokí ga kíta to, yó(-)* no *syuumatu o sín-zita(-)* 'people believed it to be the end of the world "precisely now the millenium preached by the Buddhists had come"'. This sort of sentence could, of course, be regarded as the ellipsis mentioned above, with the information-processing verb treated as independent of the quotation. But certain examples will be seen to parallel the putative (§9.1.11): ... *ni-sén san-zén to iu békko no mózi o kioku suru kotó o óoki na hutan to kangaéru* 'They think memorizing, say, two or three thousand separate letters to be a big burden' (Ōno 1966.236); *Hoka no hitó wa sore o teinei-sugiru to tóru ka mo sirenai ...* 'Other people might take that as too polite ...' (Tsumijura 79); *Sore o onná wa hakuzyoo da to iu* 'That is called, by women, faithlessness' (SA 2649.109b)—a more esoteric interpretation is possible 'That is called FAITHLESSNESS in women' (cf. p. 269); *Kimi wa bóku(-)* o *máda bóttyan da to kangaéte 'ru rasii ga ...* 'You still think of me as "Sonny-boy", it seems, but ...' (Natsume Sōseki). Notice that the transitive putative *Haná o utukúsiku omóu* 'I feel the flowers to be beautiful' can be paraphrased as *Haná o utukusii to omóu* as well as *Haná ga utukusii to omóu* 'I feel that the flowers are beautiful'. This suggests that we must speak of at least two quotation conversions: the TRANSITIVE quotation and the INTRANSITIVE quotation, paralleling the putatives. Here are examples of the TRANSITIVE quotation: ... *kotobá o hontoo ni doogú da to omóttara ...* 'if you think language to be really a tool' (Fukuda in Ōno 218); *Koko o byooin da to omótte wa ikenai* 'You mustn't think of this place as a hospital' (SA 2672.23c).

The quotation can be separated from the quoting verb by juncture and by any adjuncts that are appropriate to the quoting verb, the subject of which may appear after (instead of before) the quotation: ... *tó || hazime wa | [watasi wa] | omoimásita* 'At first I thought that ...'. This can well be regarded as a kind of thematization (see §3.9), since the more usual version—the unmarked form—would place the quotation directly before the quoting verb, especially when short. Thematized quotations tend to be long. Thus you will often hear in newscasts such item-closers as ... *tó, [soori-dáizin ga/wa] kono yóo ni nobemásita* '... unquote, this is what he [the prime minister] stated'. Sometimes a delay in the underlying subject of the quoting verb may reflect an afterthought: *Sosite, yunyuu(-)noosánbutu ga yasúi no wa danpíngu ni gen'in suru to, watasi ní wa kangaeraréru* 'And the cheapness of imported farm goods is due to the [practice of] dumping—it seems to me' (SA 2670.108c).

Sentences can be quoted directly, but it is usual to make the quotation indirect, with appropriate switches in deictic reference, such as pronouns, honorifics, locations, etc. Questions as well as statements can be quoted both directly and indirectly: *Yobú ka to iu, Ookii ka to iu, Dáre datta ka to iu*. The verb of saying is likely to be *kiku* 'asks (= inquires)', especially if the question is quoted indirectly.

3. Unlike *S ká* 'whether S', *S tó* can never be marked by *gá* or *ó*. Anaphoric reference to a quotation can be made with the adverb *sóo*: ... *de wa nái ka to || soo omoimásu* 'surely it is ..., so I think' (R).

Commands and prohibitions can be quoted directly (though the English translation is often indirect): Ari-ttake tukae to iú no de wa náí 'It's not a case of telling you to use all there are'; Dá kara, dóo si ro tó wa iwanai 'So I don't tell people what to do' (SA 2635.104); ... Amerika-séihu ni dóru o kín ni kae ro to yookyuu dekiru no wa kakkoku-séihu -daké de aru tamé, ... 'since the only ones who can demand of the American government that dollars be exchanged for gold are the other governments ...' (SA 2676.45b); Káason zyósi wa, kín-zé yo to iu 'Miss [Rachel] Carson tells us to ban them [= pesticides]' (SA 2684.45b); Kéti-keti surú na yó tté ittá n desu kedo né 'He told me "Don't be stingy", you see, but ...' (SA 2672.62a). (But ... ro yo is usually replaced by ... yo, as noted in § 16.1.) There is a special way to quote a command indirectly: V-ru yóo ni {tó} + some quoting verb such as iu 'says', tanómu 'requests', or even denwa o suru 'phones [requesting]'. Chamberlain (1888.277) points out that the COMMAND forms of such a quotation, e.g. V-ru yóo ni {tó} itte kudasái, are not too common; instead, for 'Tell him to do it' you use the causative to produce a somewhat vaguer sentence Sasete kudasái 'Get him to do it'. Similarly, Saseyoo 'Let's get him to do it' would be a translation of 'Let's tell him to do it' that is more usual than the literal Suru yóo ni {tó} ioo. The quoted command can be affirmative or negative: Kúru/Kónai yoo ni {tó} itta 'He told us to come/not come'; Suru/sinai yóo ni {tó} motómota 'We requested them to do it (not to do it)'.⁴ Strictly speaking, this indirect command quotation is perhaps to be taken as a conversion of the imperative (-é etc., § 16.1). But the "imperative" meaning is not always obvious: ... ningen ni saiwai o motarásite kureru yóo ni nozómu(¯) ... 'hopes/desires that they [= the gods] will favor the human being by providing blessings' (Ōno 1966.54); ... wakái hitóbito ga kono hón o yónde kudasáru yóo ni to kiboo site iru 'I am in hopes that young people ... will kindly read this book' (Ōno 1966.240); see also the examples of ... yóo ni that are cited on p. 1003. Actually the meaning of yóo ni is basically 'so that (it will)' or 'so as to (do)'—a mutative ní, § 9.1.11—and a great variety of verbs can follow: Byooki ni naránai yóo ni yáru n desu 'You do it in order not to get sick'; Wasuremono náí yóo ni go-tyúui kudasái 'Be careful not to forget anything'; Dénsya(¯) ni okurenai [or ma ni áu] yóo ni isóida 'I rushed so as not to be late [so as to be on time] for the train'; Túmari kúgatu no sin-gákki ni Gaburiéru ga hutatabi kyoodan ni tátu kotó ga náí yóo ni, zíken o katazukeyóo to no íto de aru 'In brief, it is a scheme to dispose of the incident so that Gabrielle will not take up her teacher's platform again in the new term in September' (SA 2649.24e). V-ru yóo ni suru is often equivalent to V-ru kotó ni suru 'decides/arranges to V', and V-ru yóo ni nátte iru means much the same as V-ru kotó ni nátte iru 'it is arranged that/for V'. Cf. Konó-goro(¯) wa syare o ukkári iwanai yóo ni site 'másu 'Lately I am trying not to say any inadvertent puns' (Tk 2.236b). We might also regard the indirect command quotation as a normal optional conversion from the circumlocutions involving favors, though it is not at all unusual for the favor wording to be retained in a quotation: V-te kureru/yaru

4. To sum it up: you quote commands and prohibitions in either of these ways:

<i>(quasi-)directly</i>	<i>indirectly</i>
V-e [yo] to	V-ru yóo ni [to]
V-e ro [yo] to	
V-rú na [yo] to	
	V-(a)nai yóo ni [to]

The final tó or ní (or ní tó) can be followed by the focus markers wá, mó, sika, etc.—for example, when a negativized quotation verb is to be emphasized. The ní of yóo ni will sometimes drop, leaving a direct adverbialization (§ 9.1.13). But if ní drops, the structure is closed; tó will not follow.

yóo ni {to} iu. Notice that the "in-giving" and "out-giving" often has to be reversed in keeping with the deictic switches appropriate to indirect quotation. It is especially common to quote desideratives (Iki-tai to omóu 'I think I'd like to go'), auto-suggestions (Ikoo to omóu 'I think I'll go'),⁵ and tentatives (Ikú daroo to omóu 'I think he'll go'); cf. §21.5. For an elliptical construction that looks as if a quotation of the conditional, -tára [ii] tó omóu, see §9.4; a similar case is -té wa [ikenai] to omóu 'think it won't do'.

The quotation can be subdued: ... tó wa (iwanákatta). It can be highlighted: ... tó mo (iu); ... tó sae (iéba); ... tó sura.⁶ It can be restricted by bákari, -gúrai, máde, and daké (but apparently not by hodó or kóso), and also by dé mo 'or something'. It can be marked by sika. Examples: Kono-aidá no Kita-Betonamú-gun no sensí-sya wa, yónhyaku to MO, gohyakú to MO tutaerárete iru 'Recent casualties of the North Vietnamese forces are reported to be four hundred or five hundred dead' (SA 2673.22d); ... ká to BÁKARI omótte 'wondering just whether ...';⁷ Damasáreta to BÁKARI NI ikári(⁻) o buti-make, ... 'Harping on his having been deceived he vented his anger, ...' (SA 2670.23e); Muzukasii(⁻) to BÁKARI itte imásu 'All he ever has to say is that it is difficult'; Íma (Kono tokí) ka to BÁKARI [omótte]... 'Thinking now (this) is the best time to ...'; Sóo da to DAKÉ itta 'He only said yes'; ... tó DE MO ióo ka 'Shall we say, perhaps, that ...'; ... yahári "iti-dó míte simatta ningen" no isíki to DE MO itta monó o kan-ziru kotó ga dekíru '... you can also feel something like a sense of "a person seen once and done with"' (SA 2681.101b); Itíbu no báka na hitóbito no hukóo o sukuu tamé ni, matomo na oozéi no hitóbito o hukóo ni otosi-ireté mo yói, tó DE MO kangáete irú no daroo ka 'Can he be thinking that in order to save a group of stupid people from unhappiness it is all right to plunge the mass of upright people into unhappiness, or something?' (SA 2664.33d); Nán desu tte. Watasi ga warúi to DE MO iú n desu ka 'What? Are you by any chance saying I'm to blame?' (Ariyoshi 215); Génki da to GÚRAI káitara dóo desu ka 'How about writing at least that we are in good health?'; ... tó MADE dantei surú no de aru 'He concludes even that ...' (SA 2656.26d); ... áru gaikóo-kan wa "Dáre mo ga káre no seisinbyóo-i ni nari-tagáete iru" tó MADE kokuhyoo sita monó da 'a certain diplomat used to criticize him [= Sihanouk] harshly even to the point of saying "Everybody wants to become his psychiatrist"' (SA 2680.18e); Kátute wa, zensoku de sinu monó nási, to iú no ga isya no zyoosiki de átta ga, kono kusuri no ran'yoo de sibóo-ritu ga takamátta to MADE iwarerú no de aru 'At one time it was common knowledge among doctors that nobody dies of asthma, but [now] it can be said that actually the death rate has risen as a result of the indiscriminate use of this medicine' (SA 2649.40e); Hi o otte sinkoku ni nári, "Sinde simau" tó MADE iu 'Things growing more serious as the days go by, he reaches the point of saying "I'll die"' (SA 2673.110a); ... hana de asirátta to MADE WA ikanái ni sité mo ... 'even if it isn't going so far as being snooty ...' (Maeda 1962.43); Midasi o yame ro tó MADE WA iwanákatta kedo

5. Sometimes the meaning of a quoted hortative is 'with the intention/desire to do' or 'for the purpose of doing': Yuugure ni nátte, básu de zen'in ga KAEROO TO syuugoo site míru to, dóo mo hutari tarinai 'At dusk when everybody gathered at the bus TO GO HOME, we somehow seemed to be two people short' (SA 2653.59b). The hortative + tó must not be confused with the literary tentative + tó (§21.5), even though the forms may be the same.

6. S tó sae iéba 'if you say just S' differs little in meaning from S tó^[i] sae sureba 'if you just say S'.

7. Alfonso 724-5 says S tó bákari omótte ita means 'all I could think was S' or 'I felt sure that S'; sometimes the best translation is 'I always thought that ...'. Alfonso 729 says S tó bákari ni means 'as much as to say, as much as to make you think; as if to say'. In addition to his examples, you will find examples of S tó bákari [ni] in KKK 3.203. For tó^[i] iwan bákari, see p. 614.

mo 'They didn't go so far as to tell us to cut out headlines but ...' (Tk 3.226a); Ageru tó MADE WA iwanákatta 'I didn't say I'd give it to you'; Bóku(¯) wa góo da to MADE WA omowánai kedo né, ... 'I don't go so far as to (=I don't actually) think it is karma, you know, but ...' (Tk 4.282b); ... kon-tikisyóo (= kon-tikusyóo) to MADE wa omowánakatta ga ... 'I didn't quite go so far as to think "Damn bastard!" but ...' (SA 2678.47b); Kogítte no séido ga náí daké ni, Nihón no hóo ga kanzen na kyassuresu-táisei ni tikái to SAE ieru 'Just from lacking the check system, Japan can even be said to be closer [than America] to a complete cashless system' (SA 2662.38c); Kono Zítoo zyotei no kenkoo na yuukén na kanzyú-sei wa, Nára ˉzídai no zyosei no seikatu-kánzyoo o daihyoo suru tó SAE itte yóo yóo ni omowaréru 'It seems that we might well say even that this vigorous, brave sensitivity of Empress Jitō is representative of the feelings of life of the women of the Nara Period' (Ōno 1966.93); Kono otokó wa Dénbee no kodomo tó SIKA kangaerénai 'We can only think that this man is Dembē's son' (SA 2671.107c); Sáo to sika omoemasén né 'That's all one can think, isn't it' (Tk 3.259a); Náni ka "seizyoo na hándán" o kuruwaséru gen'in ga átta to SIKA kangaerénai 'It can only be thought that there was some factor to derange his "normal judgment"' (SA 2637.27c); "Noo-kóménto, syókúmu ˉzyoo no himítu" to SIKA kotáénakatta 'The only reply was "No comment, it's a confidential office matter' (SA 2649.106d); Konna dai-kásyu wa, kono-yó(¯) ni inai tó SURA bóku(¯) wa omótte irú no de aru 'I can hardly believe there is such a great singer as this in this world of ours' (SA 2653.61a).

Since tó marks the quotation as adverbial, there is no *... tó ga/o. And since the pro-predication ... tó da is usually nominalized as ... tó no kotó, there is no *... tó no ˉnóŋ ga/o, either. This perhaps also accounts for the fact that there is no *tó nádo, only ... nádo tó: ... báka da nádo to wa yúmé-sara omótte inai zíko o ... 'oneself, of whom one would never dream of thinking "I'm a fool" or the like' (Maeda 1962.25); Kóndo no Syoogatu^[r], mósi atarasíi gomú-in o osita gazyoo ga todóitara, insatú-dai(¯) o ketítta ná, nádo to omowánai yóo^(r) ni negai-tái 'If this January you should get a greeting card with a new rubber stamping, please don't think such thoughts as "so he's too stingy to have it printed, eh"' (SA 2658.39d).

The quotation can be propredicated ... tó da; it then (usually) nominalizes with kotó and becomes ... tó no kotó da, a synonym of the hearsay report ... sóo da 'They say that ..., I hear tell that ...', §18.⁸ By turning the propredication into a question ... tó ˉdaŋ ka, you can suggest vagueness or doubt: Iki-tai tó ka itte imásu 'They are saying they want to go or something'; for other uses of tó ka see §21.6.

A colloquial synonym of tó is [t]té,⁹ a less colloquial form is tóte, attached to nouns and tonic inflected forms as a particle (kore tóte, Nagásaki tote; yómu tote, hanásita tote) but attached with an optional juncture after the basically oxytonic forms of the "atonic"

8. The hearsay report is usually unattributed as to source, whereas a quotation implies knowledge of the identity of the source whether mentioned or not; but it is possible to attribute the source of hearsay by mentioning it in a separately included sentence, as in the direct nominalization used to introduce the hearsay in Káre ga iú ni wa, ... sóo de ... 'He says that ... and ...' (SA 2793.132a).

9. As found twice in this sentence: Yokuzitu, bóku(¯) ga káeru tokí^(r) ni, sore o hitótu kureru TTE iú n de né, iranai TTE kotowátta n da 'The next day when I left they said they'd give me one of them, but I declined saying I didn't want it' (Tk 4.297a). This and other examples call into question Yoshida's suspicion that té for tó is somehow "feminine" (Y 442). Konoshima (1970.25) says that [t]té for tó is common in eastern Japan; it appears frequently in the Kyōto speech reported in Inokuchi.

forms: ittá { | } tóte = ittá tote or itta tóte '(saying) that one went'. See § 15.11, §21.3; notice that [t]té also serves as an abbreviation of tó iu and tó itte. Many speakers agree with BJ 2.120 (fn. 2) in using tté for tó only before verbs of SAYING, not verbs of THINKING; yet examples of tté omóu can be found: Húra-hura arúite 'te kane ga torérya (= toréreba) itiban ii syóobai da tte omótte kíta n da né 'I started thinking the best business was if you could get money by just strolling around' (KKK 3.73); ... sono tísiki o kyuusyuu sú beki da tte omoimásu né 'I think, you see, that we should absorb that knowledge ...' (SA 2673.47).

An abbreviation of tó^[r] yuu (= tó^[r] iu) → tyuu or ttyuu is common in many parts of Japan (e.g. Kyūshū) though little used by Tōkyō speakers: Kodomo, gakusei tyuu no wa, idai na kanoo-sei ga áru 'The child, the student, such a one has great potential' (SA 2678.48c); Kangáete míru tyuu to, ... 'Now that I think about it ...' (SA 2678.47a); ... tyuu kótte (= to iu kotó de [su]) 'It is a matter of ...' (SA 2686.46c—speaking is Kishige Riichi, mayor of Asuka village, Nara); Dóo iu kotó ka ttyuu to, ... 'If you wonder what's happening, ...' (Tk 4.163a—a speaker born in Fukui prefecture who had lived in Taiwan); ... "Soko wa omáe-táti no háiru tokoró zya néé" ttyuu 'says "You kids got no business in there!"' (SA 2678.47b). In parts of northeast Honshū the abbreviation goes one step further, eliminating the palatal semivowel (and often shortening the vowel): toyuu → tyuu → tu [u]. You will also find tó⁽ⁱ⁾ iu abbreviated → téé or [t]tee or [t]te, as in these examples: ... íma no yo-nó-naka tee monó ga ... 'this world of today' (Maeda 1962.149); Nyuuin téé no wa, dókusyo(-) ní wa ii kikái(-) desu yó 'Being hospitalized, you see, is a good opportunity for reading' (Tk 2.99a); Siatu tee to báka ni suru keikoo ga arimásite né, ... 'Speaking of finger pressure (treatment) there's a tendency to overdo it, you know, ...' (Tk 4.103b); Atasí-dómo o-kási no koozyóo(-) e itte, tyokoréeto no úmi o mimásu to, kore kui-tái ttee ki ga simasén yó 'When we go to a candy factory and look at the sea of chocolate, we have no urge to eat the stuff' (Tk 4.190a); Zenzen naku-naru tte kotó wa náí ga, usukú wa náru né 'It isn't that it completely disappears, but it DOES grow faint, doesn't it' (Tk 4.274b); Anná no [] dóo tte kotó [] náí wáke desu yó 'I mean there's nothing special about one of that sort' (SA 2686.26e)—the first ellipsis is of wá (or ní wa), from underlying gá/ní, the second is of gá; ... sínpo tte monó ga náí to omóu n desu 'there's nothing in the way of progress, it seems to me' (SA 2685.122d). Cf. the abbreviation tē ná for tó^[r] iu yóo na (p. 1005).

In western Japan (Zhs 4.17) the quotative particle is frequently dropped altogether, leaving the quoted matter as a direct adverbialization to the quoting verb, with no special marking: ... tyót-to de mo ii {to} yodómu to ... 'stammering [that] even a little would do' (SA 2647.88c); ... Ryuukiti {to} iu hitó ... 'a man named Ryūkichi' (SA 2657.46a); ... yameyoo {to} omoimásita '(I) thought I would quit' (SA 2657.45a); Móo yosóo omóu 'I wanna quit now' (R). Cf. Doi 228 (citing ... ~mái {to} omóu 'think I won't') and 271-2. Omission of the quotation particle, a practice called to-nuke (or tonuke-kótoba), is particularly common in Shikoku, Hiroshima, and Okayama (cf. Miyara 1954.153, Maeda 90-1, Zhs 5.15 n. 2). The optional dropping of tó after V-ru yóo {ni} is prevalent even in Tōkyō, where it is more often dropped than not. See also §2.2a.

Quotation is a recursive device in Japanese as it is in English ('He said that she said that I said that ...'). Here are examples of a quotation within a quotation: Koomei-too wa toritugi-ten ni, sono hón o kotowáre to méi-zita(-) to utagawarete iru 'It is suspected that the Kōmei-tō ordered the agencies to turn the book down' (SA 2665.32b); ... Huziyama-

Ginkoo too-dori wa, "Wasi wa rakkan site iru" to katatta to tutaeráretá ga, ... 'the President of the "Fujiyama" Bank was reported to have said "I am optimistic" but ...' (SA 2685.17c—the bank is fictitious, as the nippy name suggests; the passage is from a satire).

A nominal sentence sometimes drops the copula imperfect dá: Kúro o síro [da] to syutyoo suru 'claims that black is white'. (Cf. Mikami 1963.145.) But the ellipsis is not obligatory, and dá is often present: Zibun o syuusai da to kangáeru 'thinks of oneself as a genius'. When the quotation involves NAMING (cf. §21.1) the noun is directly quoted with no copula: Tanaka to moosimásu 'I am (named) Tanaka'; Kono gensyoo o hooden to yobu 'This phenomenon is called electric discharge'; Ano sunáku wa nán to iimásu ka 'What is the name of that snack bar?'; Sintároo to nazúketa 'He was given the name Shintarō'. In such sentences the tó is functioning as an essive itself; note the distinction drawn between OBJECTIVE ESSIVE (ní) and SUBJECTIVE ESSIVE (tó) in §13.5a, and compare otokó to umarete 'being born [as] a male'. Quotations with N dá tó, on the other hand, can be regarded as a subjective adverbialization of the directly nominalized finite sentence.

The COPULA is normally made on the OBJECTIVE essive: ní + ár- yields the literary nár- and also the adnominal colloquial forms ná/nó; ní-te + ár- contract into the colloquial forms dá/dé etc. But it is also possible to make a copula on the subjective essive: tó + ár- > tár-i/tár-u, p. 754. And uncontracted forms of tó^[1] áru will occasionally be seen, especially tó^[1] átte, which sometimes means 'with/at the thought of' or 'on the grounds of (its being)': Inhure-zídai to átte, zisan-hózen ni motte-kói to iu hanasí mo áru ga ... 'In [what is recognized to be] inflationary times some say it [= investing in rare books] may be just the thing for protecting one's estate' (SA 2684.117c); ... moo ziki kaihoo sareru to átte, sen'in-táti no aida ni hót-to(⁻) sita kúuki ga nagárete ita '... as it became apparent that they would soon be liberated, an air of relief floated among the crewmen' (SA 2674.129a); Hazímete no kaigai-ryókoo to átte muné o wáku-waku sasete itá ga, syuppatu ga tikazúku ni turete hukitu na kotó bákari ga atamá ni ukande kíta '[The thought of] its being my first trip abroad was making my heart leap with excitement, but as the departure drew near one sinister thought after another came floating into my head' (SA 2670.29d); Bankoku-haku kaisai tyuu to átte haikán-sya wa baizoo de áru 'While the International Exposition is being held, the number of visitors to the temple is doubled' (SA 2647.60); Hokaku-yóogu issiki(⁻) mo nisen-en mo áreba totonoeráeru to átte, oosyúu-hin(⁻) no hotóndo wa moti-nusi humei 'A single set of the seized [fishing] equipment can be procured for a couple of thousand yen, they say [or: it appears], so most of the seized property (is of unknown ownership =) goes unclaimed' (SA 2665.126c); Syóobai to átte wa, itasi-kata mo arimasén ga né 'If it's business, there's nothing we can do about it, you see' (Tk 3.190a). The expression is sometimes contracted to t'átte: Sore nára nigeyóo t'átte, nigásu monó ka 'Then you want to flee, but how can I let you go?' (SA 2793.106c). On other uses of átte, see p. 490. N tó^[1] áreba is also fairly common: Meirei to áreba ... 'If it be a command ...'; Hituyoo to áreba ... 'If it prove necessary; should the necessity arise ...'; Nán to mo hén na "kooyoo" mo átta món da ga, sin-séihin to áreba, kono téido(⁻) no "huku-sáyoo" wa, tukímono na no ka mo sirenai 'There was quite a "strange effect", but when it comes to new products such "side effects" are perhaps inevitable' (SA 2681.119c). And nán taru (<náni tó áru) sometimes appears where you would expect nán de aru (or just náni [da]): Nippon-zín wa, booken no nán taru ka o ríkai(⁻) siyoo to sinai 'I don't pretend to understand what the Japanese mean by adventure' (SA 2679.150). The surface phrase made from tó + iu often functions as a kind of copula: N tó^[1] iu N (or N tó no N, p. 1011) = N de áru N (>N no N), N táru N (<N to áru N). Cf. §21.1.

Quotations of content are often adnominalized to a word like *muné* 'effect, purport' before adnominalization to the vehicle of the message: *Niti-yóobi made ni káeru to iu muné no tegami o yokósita* 'He [sent me a letter saying =] wrote that he would be home by Sunday'.

Often a sentence + *tó* can be regarded as an ellipsis of *tó*^[1] *itte* 'saying that ...' or *tó*^[1] *omótte* 'thinking that ...', though the quotative verb may be attenuated to little more than a grammatical device: *Senséi wa erái n da kara to, wága-koto no yóo ni ootoó wa káta o ikaráseta* 'The professor is so extraordinary that his younger brother lifts up his shoulders as if he had something to do with it'; *Móo osói kara to tati-agatta* '(It was late so =) Realizing the hour, I got to my feet'. For more examples of quasi-quoted causal sentences, see §17.1. Sometimes the ellipsis is of *tó*^[1] *site* '(treating it) as': *Ningen to umaretára hito no tamé ni tukusánakereba naránai* 'When you are born as a human being you must do all you can for the sake of other people'. A similar example: *Onná ga "o-mekasi" o suru tó wa, utukúsiku náí hitó mo utukusii yóo ni to iroiro té o kuwaéru(=) kotó de aru* 'What is meant by a woman's "dolling up" is applying all sorts of tricks so that even a person who is not beautiful is treated as beautiful' (Ōno 1966.28)—though perhaps this is best viewed as ... *yóo ni {site} tó {omótte}* 'thinking to make it so that ...'.

The quotation-marker *tó* is appropriately attached with no juncture to the quoted sentence as if a particle;¹⁰ but there is a common tendency to break it off as a separate element, often set apart by major juncture on both sides, as if it were an inserted interjection: *S ll tó ll iimásita* 'He said—[and I] quote—"S"'. The second juncture can be reduced (*S ll tó ll iimásita*), leaving *tó* to function rather like a conjunction. This is somewhat similar to the modern use of *Ké{re}do {mo}* ... 'But ...' as a sentence-introducer (like *Sikási* ...) in addition to its use as a conjunctivalizing particle (§17.4). Sometimes a bit of hearsay or an opinion will be flatly stated and then qualified by a sentence that says it is a quotation: ... *Tó omoimásu ga* ... 'Or so I think, anyway ...'. But a sentence-introducer *tó* may also be a reduction from [*Soo*] *suru* to 'Then ...' as in this example: *Tó, O-kíta san mo inái no ka* 'Well, then, is O-kita not here, either?' (Kb 123a).

21.1. SPECIAL USES OF QUOTATIONS

The device of quotation is put to a number of special uses that call for comment.¹¹ Some of these are given separate attention in the sections that follow; we will describe a variety of other uses in this section.

- (1) In identifying something or someone by name, designation, or the like,

10. So that a preceding "atonic" inflected form will display its underlying final accent (*surú to*, *sitá to*, ...); but a more conservative version of Japanese, that in general followed here (as in the accent dictionaries), attaches *tó* to inflected forms with an underlying minor juncture that cancels the final accent, before disappearing itself (*surú | tó* → *suru tó*, *sitá | tó* → *sita tó*) so that the accent is on the *tó*, though that *too* will go unheard unless immediately followed by a particle or the copula (... *tó wa*, ... *tó mo*, ... *tó da*). *Tó* is attached to a noun as a particle, with no juncture: *inú to* (*wa*).

11. The attenuated use of quotation as a purely grammatical device is not unknown in other languages. An example from an eight-year-old speaker of English who lives at my house: 'It's not exactly WHAT YOU'D CALL finished yet, Dad, but ...'.

Japanese use the expression X to iu N dá¹² 'It is the N which we call X = it is the N (called) X , it is the N of X ': Sága to iu matí 'the city of Saga', Sátoo Tároo to iu hitó 'a man named Tarō Satō', hukyoo to iu zyootai 'the condition known as a depression', áki to iu kisétu 'the season (we call) autumn', Tyuuo-Kóoron to iu zassi 'the magazine Chūo Kōron', Yukíguni to iu yuumei na syoosetu 'the famous novel (titled) Snow Country', Mónako to iu tíisa na kuni 'the little country of Monaco', ...¹³ From this we get the expression Nán to iu ími desu ka 'What meaning is it? = What does it mean?' Compare the use of koo iu/itta, soo iu/itta, aa iu/itta, and dóo iu/itta as synonyms of konna, sonna, anna, and dóнна to modify nouns (§ 13.5); also soo iu utí(-) ní mo 'meanwhile'. The expressions N to iu monó/yátu, N to itta monó/yátu, and N [t]te[e] monó/yátu 'the thing (or one) we call N ' sometimes are used to mean 'Ns in general', as in inú to iu monó 'dogs (in general)', but often they mean just '(as for) N ': Keizái-kai no hendoo to iu monó wa íssyu no aranami dá ga ... 'The vicissitudes of the economic world are a kind of troubled sea [for us] but ...'; Tabémónó^[1] no azi to iu monó wa nenrei tó ka, karada no tyoosi ni yotte daibu tigatte kúru yó⁽¹⁾ na ki ga suru 'I feel that the taste of food is something that comes to differ greatly depending on one's age and the state of one's health' (SA 2665.104a); Atasya éiga(-) de tózan(-) tee monó o míte 'ru n desu ga né, ... 'I see mountain climbing in movies but ...' (Tk 4.46a); Kono kigoo ttee yátu ga, ... 'This wielding of pen/brush ...' (Tk 2.147b); Ningen te monó wa, taitei zén'i no doobutu désu kara né 'The human being is in general an animal of good will' (Tk 2.301b).

The expression kore to iu/itta [monó] means '[a thing] in particular, to speak of, worth mentioning', usually followed by a negative: Kore to iu mé-ate mo nási ... 'With no particular aim ...'; N wa kore to itta tokutyoo mo náí ga ... 'There's nothing especially distinctive about N but ...'; Kore to iu hón ga náí 'I have no book(s) to speak of'; Soo, betu ni, kore to iu hanasí wa náí n desu kedo né 'We don't so much talk about anything in particular, you see' (R). This expression can also be said with the gerund, kore to itte N = kore to itta/iu N : Kore to itte sangyoo mo náí 'There really isn't any industry to speak of' (SA 2688.38a). A similar expression is made by following an INDETERMINATE (an interrogative-indefinite word) with ... tó iu N + negative '(nothing) definite, in particular', as in these examples: Dóko to iu ate wa náí 'I have no definite destination in mind'; Doo to iu riyuu wa arimasén keredo mo 'There isn't any reason in particular, but ...' (SA 2654.44d); Kore daké nara dóo to iu kotó mo nákatta ga ... 'If this were all, there wouldn't be much to it, but ...' (Gd 1969/9.72b). A variant of this appears in the following sentence: Tokubetu ni | dóo † | † koo | to iu séito de wa | nákatta 'He was nothing special as a pupil' (SA 2640.107b).

The expression N_1 to iu N_1 means 'each and every N ' or 'every single N ', as in these examples: Yagate^[1], rekóodo wa mirion-séaa ni nári, kekkón-siki to iu kekkón-siki de, kono utá ga utaware, tyoodo syukkón-ka no yakumé o hatasi-hazíméta 'Before long the record became a million-seller and this song, getting sung at each and every wedding, started to play the role of a veritable wedding march' (SA 2652.67a); O-niwa no haná to iu haná wa komakái áme ni nure sizukú o túkete issoo akarui iró ni hae-átte imasu 'Every single flower in the garden is wet by the fine rain and has drops on it so that it shines all

12. Also, for those speakers (from such places as Ōsaka and Hiroshima) who often drop the quotative particle, X iu N dá as in this example from an Ōsaka speaker: ... giri^[1] [] iu món ga arimásu kara né 'for there is such a thing as giri (obligation), you know' (Tk 3.290b).

13. Sometimes the best English translation is an apposition: ... Ásahi to iu dai-sinbun ... 'a major newspaper the Asahi' (Tk 3.228a).

the brighter' (KKK 3.106). The repeated noun can carry with it a single adjective: *ookii kii to iu* {*ookii*} *kii* 'each and every large tree'; *omosirói hón to iu* {*omosirói*} *hón* 'every single interesting book'. But any other kind of modification (including a single adjectival noun) must precede the entire expression: *óoki na kii to iu kii* 'each and every large tree'; *kityoo na hón to iu hón* 'every single rare book'; *omosíróku nái hón to iu hón* 'each and every uninteresting book'; *watasi no hón to iu hón* 'every single one of my books'. When the noun is not countable, the meaning is intensive or insistent: *kón'ya to iu kón'ya* 'this very night'; *kyóo to iu kyóo wa* 'this very day' (Okitsu 1.114).

In *Sore to iú no mo ... kará de áru* 'THAT is owing to the fact that ...' we could omit ... to *iú no ...* with little difference of meaning. In the following example, *N to iú no wa ... baai dá* means 'By *N* we refer to a situation (such) that ...': *Kei-kásitu to iú no wa, dáre de mo ari-gati na kotó de, siká-mo kázi ni náru kanoo-sei mo usui baai désu* 'By petty negligence we refer to a situation that is apt to happen to anyone and that has little likelihood of leading to a fire' (SA 2669.105c). In this sort of expression, *iu* can be stylized: ... *Tyóoan ni tukimásita. Kono Tyóoan to iimásu no wa, motíron, Tóo no miyako de ...* '[he] arrived in Ch'ang-an. This Ch'ang-an, of course, was the capital of T'ang China and ...' (R). Notice also the interjectional uses of *Nán to iu ...* 'What a ...!' as in *Nán to iu ii o-ténki desu né* 'What nice weather it is!'

In some of these quasi-appositional uses, the perfect *itta* can replace the imperfect *iu*, especially when the identification is in the nature of a description: *Akai syátu ni, hosomé(¯) no zubón, gomuzóori to itta hucusoo {dá[tta]}* '[He was] attired in a red shirt with narrow trousers and rubber zori' (Gd 1969/9.101). Notice that ... *tó iu yóo* na freely abbreviates to ... *té na*, as in ... *té na tyoosi de* 'in a tone such as to say ...', but ... *tó iu yóo ni* does NOT abbreviate to **té ni*. You will also find ... [t]te *yóo na*, which can abbreviate to [t]té na as in *Gomakásu tte na yátu wa imasén* 'There isn't any so-and-so likely to swindle you' (Tk 4.103a), and ... [t]te *yóo ni*, which does NOT abbreviate. The contractions *tyuu* < *tó iu* and *tyuutára* < *tó iutára* (= *ittára*) and *tyuute* < *tó itte* are largely confined to western and southern Japan; *tuu* < *tó iu* is sometimes heard in northern Honshū.

(2) With *náru* 'becomes' and similar mutative verbs (including perhaps *yamá to tunda* 'it piled up mountain-high = a whole heap accumulated'), *tó* is virtually equivalent to *ni* '(changing) so as to be': *Kóto ni kookuu-syóokoo to náru to ...* 'Especially when one gets to be an air force officer ...' (lg 35); ... *kekkon no aité to naréru onná o ...* 'the women who could become one's partner in marriage' (Ōno 1966.160); *Káno-zyo wa sore ni mutyuu to nári, kuusoo no sékái wa kiete itta* 'She became absorbed in it [= school] and her imaginary world gradually faded' (SA 2639.35d); ... *Man'yóo-gana o syooryaku site káku no ga syuppatú-ten to nátte ita* 'The writing of *Man'yō-gana* in abbreviated forms formed the point of departure' (Ōno 1966.204). From a weather report: ... *háretari | kumóttari || tó | narimasyóo* 'it will become fair with cloudy periods'. What little difference of meaning distinguishes *tó náru* from *ni náru* is often a matter of personalized or subjective reaction: the 'we' in the translation of *Yagate sensoo to nátta* 'Before long we were at war' (SA 2794.70c) is an attempt to convey this effect; perhaps a more telling translation would be 'Before long we found ourselves at war'. The following passage (explaining legal indemnity) has examples of both *N tó náru* and *N ni náru*: *Ínoti to iu monó wa, kane de kaeru monó de wa arimasén. Másite, tórihiki(¯) no TAISYOO TO NÁRU monó de mo arimasén. Nedan nádo tukeraréru monó de wa arimasén. Táda, kói arui-wa kasitu*

ni yotte ínóti ga ubawáreta tokí⁽²⁾ ni, songai-báisyoo no TAISYOO NI NÁRU daké desu 'Life is not a thing that can be bought with money. Still less is it something to be treated as an object of bargaining. It's just that it becomes an object for compensation when a life has been taken owing to design or negligence' (SA 2684.123a). Sometimes ... ^[L]tó náru translates as 'it amounts to ...' or 'it constitutes ...': ... syákai no taisei no kihon to náru búbun ni made oyonde kúru 'it [= the invasion of loanwords] extends even to the parts that constitute the basis of the social structure' (Ōno 1966.162). And sometimes ... ^[L]tó náru to, ... ^[L]tó náreba, ... ^[L]tó náttara, or ... ^[L]tó nátte wa following a noun or directly nominalized sentence will translate as 'when it comes to (the situation of) ..., if it happens that ...': ... sono búraku ni iku to náru to ... 'If you go to the villages there ...' (Ig 38); Kane o uke-totta to náru to, súbete wa hyoohen sita 'When he had received the money, everything took on a new look' (Ig 38); Sake to náttara mé ga náí n desu kara 'When it comes to wine, I am all too fond of it' (Y 444); Íma to nátte wa ... 'When we come to the present ...; And now ...'. Compare the expressions with ... ^[L]tó suru (§21.4); ABC o syú to site means much the same as ABC ga syú to nári 'mainly ABC'. The expression nán to náreba 'If it comes to saying "what [for]"' means the same thing as Náze ka to iéba 'If one says why' = 'That is because ...' or 'The reason (for that) is ...'. With highlighting, N ^[L]tó mo náreba means 'when it comes to N itself/himself, typically enough (or: not unexpectedly)': Daigaku no kyóosi to mo náreba, sasuga ni iroiro na kotó o omoi-tuku monó da 'The college teachers themselves, typically enough, have lots of ideas (= suggestions)' (SA 2648.35c); Ittóo-sya to mo náreba syawaa-rúumu ga túki, booi ga syokuzi o kyakuseki ní made "demaē" site kureru 'The first-class car itself has a shower-room attached and a waiter will give you "take-out" meal service right to your seat' (SA 2660.12b).

(3) Similar to the preceding expressions, ... ^[L]tó kítara or ... ^[L]tó kíte wa 'When it comes to ..., As to ...' is virtually equivalent to wá as the marker of a subdued theme: Anáta to kítara, zúibun, Yosio san ni go-néssín né 'You are awfully keen on Yoshio, I must say' (Y 444); Ore to kíte wa, hitosuzi-nawa(¯) de ikanákatta. Omae to kíte wa hutasuzi-nawa(¯) de wa iku ¯mái yó 'I was a tough customer; you'll be a tougher one' (Y 444).

(4) With quantity words, especially those that refer to time or frequency or distance, the particle ^[L]tó—often followed by a negative—is sometimes equivalent to hodó: Hyaku-méetoru to ikanai utí(¯) ni ... 'Before we had gone a hundred meters ...'; Sán-pun to {mo} kakaránakatta 'It didn't take three minutes'; ... yónde mikka to kakaránaí 'It wouldn't take three days to read it' (SA 2657.120b); Ití-nen (Ik-kánen) to tuzukanai 'It won't last a year'; Toosen site ma mo náí, ik-kágetu to tatánaí tokí desu kara né 'For it is [= was] a time shortly after being elected, less than a month' (SA 2660.48c); Káre-ra [to] dooyoo [ni], watasi mo hyakú-nen to wa ikínaí 'Like them, I will hardly live a hundred years, either' (SA 2657.120a); Is-syun to madóu 'I am perplexed for a moment'; Úso happyakú to narabete káku 'He writes eight hundred lies in a row'; Hanasí ga yamá to áru 'I have a heap of things to say'; Nán-nen to kuroo-kéiei o tuzukete iru bóku-táti no si no zassi ... 'Our poetry magazine that we have been struggling to keep going for some years now' (CK 985.326); Sono tabí ni, hando-bággú kara, nisen-en sanzen-en to, hette iku 'Every time [she bet] her handbag would shrink by two or three thousand yen' (Fn 299a); Ni-dó^[L] sán-do to naosáseta 'I had it altered two or three times'. A somewhat unusual extension of this usage: Sookan wa Syóowa(¯) sánzyuu yo-nen to hurúí 'It [the comic

magazine Manga-sánde] is so old it was founded “way back in 1959” (SA 2676.22a). We can compare such expressions as Nanbyakú-nin to iu hodo [no hitó] ‘several hundred people’, hotóndo/kanarazu to itte yói hodo/kúrai ‘(to the extent we may say) almost all/always’ (see §9.2.2, p. 499). Notice also the final tó of: A dá to ka B dá to ka tó iroiro na syúru ga áru ‘There are various kinds such as A and B (and so on)’.

(4a) A specific quantity is sometimes quoted in adnominalizing it to a general quantity: ... nokótte iru 4960^[1]maki no o-kyoo no uti^[1](-), sánzyuu ní-syu hyakú^[1]sán-maki to iu wázuka no makimono ni ... ‘of the 4960 scrolls of scripture preserved ... a small number of scrolls to the extent of (some) 103, of 32 types, have ...’ (Ōno 1966.204).

(4b) A time word + tó iu monó ‘a matter of (so much time)’ is a way of saying ‘for (about) ...’: Kono ni-sankágetu to iu monó^[1], zenzen áme ga huránakatta ‘We have had no rain for the past several months’; Kono ní-sánniti to iu monó^[1], tabénaí de sugósita ‘I’ve had nothing to eat for the last few days’; ... kono itinén-kan to iu monó^[1], ... ‘for the past year or so’ (SA 2635.106). Sore kara to iu monó means ‘for a while after that’: Sore kara to iu monó^[1], iroiro na arubáito ni hi o sugósita ‘For some time after that I passed the days with various part-time jobs’ (SA 2637.56c); Sore kara to iu monó^[1], tokidoki dódokoro ka, hima sáe áru to Akutagawá-ke(-) o otozúreta(-) ‘After that for some time I visited the Akutagawa household not just once in a while but whenever I had a spare moment’ (SA 2640.61b); Sore kara to iu monó wa, kao wa hukanai ‘I haven’t wiped my face since then’ (Okitsu 1.214). And V-té kara to iu monó means ‘in the (short) time since ...’: Sakunen gógatu, Noto-hántoo ga kokutei-kóoen ni sitei sareté kara to iu monó^[1], Noto-búumu ni isoo hákusya(-) ga kakeráreta ‘In the short time since the Noto Peninsula was designated a national park in May of last year the Noto boom has been spurred on all the more’ (SA 2647.117e); Kyooiku-dai ga sai-zyúusyoo hunsóo-koo ni nátte kara to iu monó^[1], ... ‘from the time when the Education College became the most seriously disrupted school ...’ (SA 2651.28e). More examples will be found in Alfonso 1026, all subdued with ... wá.

(5) Quotations are sometimes used to emphasize DIRECTION: Atti-kótti to uro-tuku ‘I wander around here and there’; Uti(-) no hoo e to órite itta ‘He went down toward home’; Tugi kara tugi e to ... izyuu suru ‘We keep moving from one place to another’; Ina-saku wa ... toobu-Nihón e to sidai ni hiromátte itta ‘Rice cultivation ... gradually spread to Eastern Japan’ (Ōno 1966.218-9); ... kízoku no konran wa yagaté hurúi taisei no hookai é to susunde iku ‘the disorder among the nobility eventually leads to the breakdown of the old structure’ (Ōno 1966.212); ... senkyoku ga kyuu o tugeru to, níwaka ni yoosai no simá e to kawatta ‘... as the military situation became critical it suddenly turned into a fortress island’ (SA 2670.44c); Syasoo no keikan mo awái midori no suiden kara kói midori no gomu-báyasi e to uturi-kawatta ‘The very scene out the train window changed from paddy fields of light green to dark green rubber-tree groves’ (SA 2660.12a); Hahaoya wa tugi kara tugi e to otokó o kae, ... ‘His mother kept taking up with one man after another and ...’ (SA 2661.125c); Sosite gízyutu wa háado-úea kara sóhuto-úea e to susunde kíta ‘And technology has progressed from hardware to software’ (CK 985.61); Hassya -gō(-) ma-mó-naku, rokéto no sisei wa yuudoo-seigyo-sóoti de yoko-muki ni kaerare, tikyuu o mawaru kidoo é to tonde yukú no de aru ‘Shortly after launching, the position of the rocket is changed sideways by remote control and it flies along a track that will circle the earth’ (SA 2666.24b); Kore mo atarasii hénka ga, higasi(-) kara nisi é to hiromátta kekka de áru ‘This too is a result of the spread of innovations from the east

to the west' (Ōno 1966.220); ... syooryóo(⁻) kara tairyóo(⁻) e, táŋki kara tyóoki e to rinsyoo-zíkken o okonai, ... '... conducting clinical experiments ranging from small quantities to large, from short periods to long ...' (SA 2651.22e); Ue e ue é to tumi-kasanátte iku monó mo áreba ... sita e sita é to nóbite iku monó mo áru 'There are both those that pile higher and higher up and those ... that spread farther and farther down' (Maeda 1962.168); Dáre mo ga tookú e tookú e to iki-ta-gáru zidai de áru 'It is an age when everyone wants to go farther and farther away' (SA 2639.62b); ... toobu-Nihón no hatuon ga nisi e nisi é to hiromátta ... 'the pronunciation of Eastern Japan spread farther and farther to the west ...' (Ōno 1966.220); Áto kara áto kara to tyúumon(⁻) ga kúru 'Orders keep pouring in'; Úteki (= Amadare) ga usiro kara usiro kará to suberi-otite iru 'The raindrops keep sliding down from behind'; Is-sekí no bóoto ga zyooryuu kara karyuu e, karyuu kara zyooryuu é to, ittári kítari site nagasí-zuri o site irú ga ... 'There is a boat that comes and goes, drift-fishing [= trolling] downstream and upstream, upstream and downstream over and over ...' (SA 2662.48b). The effect of the emphasis is to make the direction of motion or change more vivid and immediate; notice how in the last few examples the direction is said with various kinds of iteration, to express persistence. In the following example *tó* emphasizes the change of state marked by ... [yóo] ni + mutative verb (§9.1.11): "Utukúsi" ga nikusin-teki na aizyoo kara, karén-sa(⁻) ni taisúru aizyoo o arawásu yóo ni to utúta tamé ni ... 'Because [the adjective] "utsukushi" had shifted, from physical love, to express affection toward the pathetic ...' (Ōno 1966.63). But other examples have a mutative verb with (N kará) N é to: ... Nanbókú-tyoo(⁻) zídai o héte Murómati zídai ni náru to, kekkon no keisiki wa, mukotorí-kon kara yometorí-kon e to kawatte iku 'Then when we pass through the Divided Court period and enter Muromachi times, the forms of marriage gradually change from the groom-taking marriage to the bride-taking marriage' (Ōno 1966.96); ... huan kara iradatí(⁻) e, iradatí(⁻) kara ikarí(⁻) e, ikarí(⁻) kara nikusími(⁻) é to, samázama(⁻) ni kanzyoo ga hénka sita '... from apprehension to irritation, from irritation to anger, from anger to hatred—my feelings kept changing from one to another' (SA 2676.41b).

(5a) Before *sagasu* 'searches for' a direct object will sometimes appear to be emphasized with *ó* *tó*, but it seems likely that between the particles there intervenes an ellipsis of some transitive verb hortative *ó* [] *tó* as in these examples (where the ellipsis is filled with a suggested verb): ... *dáre ka ii hitó o* [yatoóo] *tó sagasita wáke desu yó* 'Let me tell you, I really looked for someone suitable [to hire] ...' (SA 2665.44a); *le* no *súbete ga títí* no omoide ni tunagarú no de, atarasíi toti o [kaoo] *tó sagasite mituketá* no ga kono toti {da} 'Everything in the house carried memories of my father, so I looked with the idea of [buying] a new piece of land and this property is what I found' (SA 2661.138). The result of the ellipsis is to leave the particle sequence *ó* *tó* in the surface structure. The full representation of what is unexpressed would perhaps be N *ó* [VT-oo] | *tó* | [omótte] *sagasu*.

(6) With *miéru* 'it seems' and *obosíi/obósiki* '[that] looks/appears to be' (usually adnominal, but sometimes adverbialized *obósiku*), quotation is used to show appearance: *Nihon-zín to wa miénai* 'He doesn't look like a Japanese'; *Gaizin to obosíi/obósiki monó* 'a person who looks to be a foreigner'; ... *nán to, sono sinbun, késa, máda, dáre mo míte inai to obósiku*, ... 'somehow that newspaper this morning still had not been read by anyone, it appeared, and ...' (Kb 194b—the commas from the text). Alfonso 1972 says that *TÓ* *miéru* means 'seems to be' with the added implication that it

IS that way too, like as not; while N^[r] miéru, he says, means 'looks like' but probably IS NOT. He has some good contrastive sentences to back the observation up. Note the suggested derivation of N^[r] ni omowaréru (etc.) from N^[r] dá^[r] tó omowaréru on p. 469.

(7) The somewhat literary expression ... tó mo tukánai means something like 'not quite arriving at, not quite making it; not exactly; manqué': Áse to mo aká to mo tukánai nióí 'a smell that was a cross between sweat and dirt'; Zyoodán to mo honki tó mo tókazu ... 'Half joking and half serious ...' or 'Not exactly joking and not exactly serious, either ...'; ... honne tó mo zyoodán to mo tukánai kotobá o kutibasiri-nágara, ... 'while blurting out words that are neither quite serious nor quite jesting' (SA 2677.114c); Ókite iru n desu ka i.—Ókite iru to mo tókazu, nete 'ru tó mo tókazu ... 'Are you up?—Not exactly up and not exactly in bed ...' (Okitsu 1.213); ... tó, benkai tó mo honne tó mo tukánai tyoosi de tubuyáku no datta 'They would grumble "..." in a tone of not quite excuse and not quite truth' (SA 2659.41d); Óoki na aki-kan ni tundora no koké(¯) tó mo kusá to mo tukánai monó ga osi-komáre, ... 'In a large empty can there was stuffed something from the tundra that wasn't quite moss nor was it quite grass, either, and ...' (SA 2670.92a). Although common in pairs, the expression occasionally turns up alone: umekí to mo tukánu kotobá o 'in words that were not quite a groan' (Ig 35). And more than two 'not-quotes' are possible: Tosima Yosio san ga bannen, syoosetu tó mo ésee to mo hyooron tó mo tukánai zitú ni omosirói monó o kakaremásita ga, ... 'In his later years Yoshio Toshima wrote some very interesting things that aren't exactly novels, nor essays, nor criticism' (SA 2835.20e). Each earlier tó mo is presumably followed by ellipsis of {tukánakereba} if we follow the explanation suggested in §9.3.2.

(8) The expression (negative +) ... tó mo kagiránai means something like 'who knows (who can tell) but what', 'we can not exclude the possibility that', 'there is the possibility that', or 'may; might (very well)' (cf. ká mo sirenai): Sonna kotó ga náí to mo kagiránai 'Such a thing might happen'; Sikási zibun no karada no náka ni wa, ákuma mo súde inai tó mo kagiránai 'It is not impossible, however, that in one's own body some devil may be living' (Ig 1962.84); Ítu-nandoki(¯) dáre ga kónai to mo kagirimasén 'Someone may come at any moment'; Kóoku d'atte, kore kara nyuusatu suru wáke da kara, abura ga déru kanoo-sei no takái tokoró wa gaikoku no oote [= ooté-suzi] ni torárete, kásu o tukamasarénai to mo kagiránai 'Even in the mining areas bidding will now start, so that they [= the Japanese firms] may very well have the places with the highest oil potential taken by the big foreign operators and be left holding the ("dregs" =) crumbs' (SA 2666.23a). Compare ... ni kagíru (§ 14.6.4) and ... [? only affirmative +] ... tó wa kagiránai 'it does not necessarily follow that': Kanemóti(¯) wa kanarazú-símo koohuku tó wa kagiránai (Kenkyusha) = Kanemóti(¯) ga kanarazú-símo koohuku da tó wa kagiránai 'The rich man is not always (necessarily) happy'; Daigákú-sei da ga kanarazú-símo kanemóti(¯) no musuko da tó wa kagiránai 'He is a university student but it does not necessarily follow that he is a rich man's son'; Gámen(¯) ni ikizúku no wa, sono seisakú-sya no séisin bákari [de aru] to wa kagiránai 'What breathes on canvas is not necessarily just the creator's spirit' (Ig 1962.84). The following three examples are from Hayashi 139: Máiniti(¯) áu to wa kagiránai 'We don't necessarily meet every day'; Otona ga kodomo yóri kasikói to wa kagiránai 'Grownups aren't always wiser than children'; Anzen-títái ni ité mo anzen da tó wa kagiránai 'You're not always safe even in a safety area'.

(8a) Some expressions similar to the preceding are S + tó wa ienai 'you can hardly say that S, S is far from being the case', S + tó wa miénai 'it hardly appears that S', S + tó

wa omoénaí/omowarénaí 'it hardly seems that S'. Two examples from Hayashi 139: Sinbun ga túne ni sínzitu(⁻) o tutáete(⁻) iru tó wa ienai 'You can hardly say the newspapers always report the truth'; Kanemótí(⁻) ga koohuku da tó wa ienai 'Rich men are far from happy'. Two examples from Kenkyusha: Kimi wa gozyúu to wa miénaí 'No one would take you for fifty'; Guu-zen tó wa omoénaí 'It can't be mere chance'.

(9) A somewhat formal equivalent of gerund + mó is quotation + mó: V-ru tó mo [literary V-i tó mo] = V-té mo, A-i tó mo or A-ku tó mo = A-kúte mo, N tó mo = N dé mo [literary N nári to mo]. Examples: Ínoti ni kakawáru to mo 'Even at the cost of one's life'; Osoku tó mo 'At the latest'; Sukúnáku to mo 'At the least'; Óoku to mo 'At the most', Kónaku to mo yorosii = Kónakute mo íi 'You need not come'; Ituká(⁻) yóri okureru kotó wa áru to mo háyaku wa náí daroo 'It may be later than the 5th but not earlier'. With indeterminates the literary tentative + tó mo is equivalent to [dé] mo or -té mo: Dóko e ikoo tó mo = Dóko e itté mo 'Wherever one goes' (cf. §21.5); Dótira to mo íi = Dótira de mo íi 'Either will do'; Ima-máde nán to mo nákata 'It was OK (perfectly normal) up to this point'. Nán to mo '[not] any at all' is also sometimes used as an intensifier 'utterly, quite': Nán to mo komátta 'I was in quite a fix'. The adverb tasyoo 'slightly' also occurs followed by tó mo (equivalent to dé mo) as in the example ... sottyoku ni itte, tasyoo tó mo búngaku ni kokóro no áru hitó ni wa tae-gatái búnsyoo da ga ... 'frankly it is an intolerable sentence to anyone with the slightest feeling for literature' (KKK 3.125). And we find, equivalent to V-(a)náku to mo = V-(a)nákute mo, the particle tó mo following the literary negative infinitive (= the derived negative precopular noun, §9.5): V-(a)zu tó mo, as in Kokugo no senseí ga osiete kurezu tó mo [= kurenákute mo], zibun de benkyoo surú no ga atarimae dá ... 'it is appropriate to study (such things) by oneself even if the Japanese language teacher does not teach them to one' (Maeda 1962.202). The literary copula form nárazu to mo (= zya nákute mo) is found in such expressions as Tíisa na l kodomo nárazu to mo 'Even if it isn't a little child ...'. As with -té {mo} the focus particle sometimes drops: iwazu to sireta 'it was clear without one's saying it'; ... sonna daigákú-sei ni wa betu ni koten o yomásezu to [?mo] manga o yomásete okéba íi no de wa náí ka 'wouldn't it be better to set such university students to reading comics rather than have them read any of the classics in particular?' (SA 2640.104d). The word zéhi-tomo(⁻) 'by all means' is perhaps best treated as a lexical adverb derived from zé-hi to mo (= zé-hi de mo). We might want to regard this usage as an abbreviation of ... (S) tó itté mo since that fuller expression is sometimes used as a purely grammatical device ('however'—see below), as are ... tó iéba and ... tó ittára 'speaking of' (cf. §21.2), and (S) tó sité mo ('though', §21.4). See also N nári to [mo] and N tári to mo, §15.19.

(9a) S tó itté {mo} is sometimes equivalent to INFINITIVE + -té (mo) 'even though' (cf. N tóte mo = N dé mo, § 21.3): Huyú to itté mo Hiroshima no sámu-sa wa tái-sita kotó wa náí 'Even in winter (= huyú de mo) the cold weather in Hiroshima is never extreme'. But sometimes the best translation for N tó itté mo is 'as (examples of) N(s) go': Suisoo to itté mo, kore wa tyót-to sukéeru ga ookíi 'As [fish] tanks go, this one is a bit large in scale (= size)' (SA 2677.61a). A special case is INDETERMINATE + tó itté {mo}: ... dóko to itte {mo} (= dóko de mo) bún no keisiki ní wa arawarénaí '... it does not appear anywhere in the form of the sentence'; Gimu-kyóoiku wa nán to itté mo ... kokumin-kyóoiku no kitei de áru 'Compulsory education is, after all, the basis of popular education ...'. For ... tó itté [mo] íi hodo/kúrai, see p. 499.

(9b) S tó iú no ni 'although it be said that S' means little more than S nó ni 'despite

(that) S': ... rokugatú da to iú no ni máda zyánppaa o ki-kónnda otokó datta 'It was a man who ... and was still bundled up in a jumper even though it was June' (Kb 213a).

(9c) S ^[t]tó iú no de 'it is said that S and so' can mean virtually the same thing as S nó de 'S and so, since/as S'; examples will be found in KKK 3.175-6. (Cf. Nagano 1970.183.)

(9d) S ^[t]tó itte irú no de 'is saying that S and (so)' is often to be taken somewhat literally, but it usually shortens into S [t]té n de¹⁴ and the translation is sometimes 'on the grounds that S' (= S ^[t]tó iu wáke de, S ^[t]tó itte): Músyá san ni mísetara, "Áa, sóo" te n de, roku ni mínai n desu 'When I show it to Musha (= Mushakōji) he says "Ah yes" and barely glances at it' (Tk 4.294a); Kono hóo ga omosirói kara tte n de, ... 'On the grounds that this was more interesting ...' (Tk 4.213a); Tyuugaku nánka de koosoku ni ihan sitári suru to, misesime no tamé ni te n de, teigaku ya taigaku no syóbun o kúu séito ga irú keredo mo, ... 'In high school some students violating the school regulations get suspended or expelled, for the explicit purpose of serving as object lessons' (Tk 4.199b).

(10) The expression ^[t]tó wa—often contracted to ^[t]táa—can be regarded as an abbreviation of ^[t]tó iú no wa in such sentences as these: Tomodati ^[t]tó wa [or Tomodati ^[t]táa] dáre no kotó ka 'By "a friend", just who do you mean?'; Kawaisóo taa horeta tte kotó yo 'What's pitiful is to have fallen in love' (= Kawaisóo to [iú no] wa horeta to iu kotó da yó); Doowa-kyóoiku to wa nán[i] na no ka 'Just what is this "co-harmonious education"?' (SA 2672.136b). Some Hokuriku dialects (e.g. Toyama) use the abbreviation tya < té wa = ^[t]tó [iú no] wa: Takusañ kakaséru tya, nán-mai hodo desu ka 'When you say you will have us write a lot, about how many pages do you have in mind?' (SA 2672.107b). When ^[t]tó wa is sentence-final, it marks an exclamation of surprise or incredulity, rather like S + nánte (§ 15.13a) as in Anó-hito wa kónndo no syatyoo ^[t]tó wa! 'To think that he will be our new boss!' and these examples from Hayashi 153: Kodomo ni makeru ^[t]tó wa 'To think of a child getting the better of me!'; Daihyoo ga kimi da ^[t]tó wa 'Imagine the representative being you (of all people)!. X ^[t]tó wa A o iu means 'By X we mean A'.

(10a) S ^[t]tó wa ié-fo do [mo] is a fancy way of saying 'though S': Káno-zyo no kokóro wa ore no monó {da} ^[t]tó wa ie, sore -ízyoo ni sukósi mo sinten sinai 'Though her heart was mine, beyond that we made no progress' (SA 2642.37c); Tasyoo no tatemasi ga átta to wa ie, tatémóno wa toozi no mamá ^[t]tó wa 'Although there have been some additions the building remains much the same (as it was then)' (SA 2688.26a).

(10b) The expression ... ^[t]tó no N is an adnominalization of ... ^[t]tó da and is the equivalent of ... ^[t]tó iu N: ... zenkoku-senkyó-ku wa zenpai site huken-tan'i-ippon ni aratame-tái to no ikoo ga túyoku kentoo -tyuu de áru 'Under close study is the idea of abolishing nationwide electoral districts and changing to a single prefecture (and metropolis) unit' (KKK 3.167); ... kore o sekkyoku ni mitomu -bési [= mitomeru -béki da] to no tuyói íken ga ári ... 'there is a strong opinion that this should be positively recognized and ...' (KKK 3.167); ... "renpoo-zyoohoo-séntaa" o tukúru -bési [= tukúru -béki da] to no kankoku o dásita '... put out a recommendation that a "joint intelligence center" be set up' (SA 2662.35d). And sentence + ^[t]tó no kotó da is equivalent to ... ^[t]tó iu kotó da 'I hear (or They say) that ...', one of several ways to report hearsay. In Kanazawa people often end sentences with ... ^[t]tó koto ('... I tellya'); see p. 945. The quoted hortative -[y]oo ^[t]tó is adnominalized to a summational epitheme of purpose or aspiration: ... syóten(-) mo

14. Just as S ^[t]tó itte irú no da shortens into S [t]té n da: ... motte ike té n da 'You're being told to take it ...' (Okitsu 1.317).

hanbái-moo ni kumi-ireyoo tó no nerai de, ... 'with the aim of trying to weave the book-shops into a sales network ...' (SA 2677.31a).

(11) A number of well-worn clichés that are used as sentence-openers come from abbreviated quotations:¹⁵ ... –To iu to? 'Which means [what]?, And that means?' (SA 2677.117c); To iú no wa ... (kará da) 'And that's because ...'; To iu wáke de mo náí ga ... 'Not exactly that ...'; Tó wa mata dóo-site ... 'Why do you say that ...'; Tó mo suréba = Tó mo suru to 'Sometimes ..., Yet ...' (cf. §21.4); Tó wa itté mo ... (SA 2639.97a) = Tó wa ié-_[i]-do [mo]} ... 'Even so ...'; Tó wa ii-nagara ... 'Granted that ...; Nonetheless ...'; Tó wa iu mono-no ... 'Nevertheless ...' (SA 2661.33c). And a number come from unabbreviated quotations, as well: Dótira ka to iéba = Dótira ka to iu to 'If anything, rather ...'; Nán to itté mo 'Say what you will; anyway' [cf. Dóko made itté mo 'Go where you will' = 'Everywhere (you go)']; Sore to iú no wa, ... 'In particular, ...; To be specific ...'; Sore wa sóo to {site} 'Be that as it may ...; By the way ...'. Quotation is a purely grammatical device in Dá kara t[o]te = Dá kara to itte or Sáreba to itte 'Just because of that ...' = 'Even so ...; And yet ...; But then ...; For all of that ...'. Similar are other "saying" expressions that do not contain quotations as such: Sikási sóo wa itté mo ... 'But even so ...', Soo iéba ... 'If you put it that way ..., Oh yes ...', Iú máde mo náí ga ... 'It goes without saying that ...'.

(12) The expression ítu to wa náku (or ítu to wa nási ni) means 'before one knows/realizes it, in no time at all'; compare the dephrasal adverbs nan-to-náku and doko-to-náku, both of which mean 'somehow' as does nan-to. An indeterminate number + tó náku means 'quite a number of ...'; íkutu to náku = íkutu mo: Soko ni kyodai na tánkú ga íkutu to náku ári, ... 'In that place there were quite a few huge tanks, and ...' (SA 2672.96c). The expression V-ru tó mo náku (or V-ru tó mo nási ni, § 14.6) means '[does it] unawares, without knowing it' or 'without intending (premeditating) it, casually, off-handedly': Kiku tó mo náku nusumi-giki suru 'unintentionally eavesdrops', Kúru to mo náku kíte simatta 'I didn't mean to come, but just happened to'. An indeterminate + tó mo náku is usually to be translated 'not [any] in particular': Ozyóosan wa sono uti(-) no dáre ni to mo náku kóe o agete sakénda monó da 'The young lady raised her voice and shouted to no one in particular among them' (Shibata 1961.174); ... dáre ni iu tó mo náku, hitori-gótó no yóo ni koo itta 'not particularly speaking to anyone, she spoke thus, as if to herself' (Kb 69a). These expressions, along with yóru-to-naku hirú-to-naku 'night and day', are derived from the colloquial negative of tó áru, the copula built on the subjective essive.

(13) The nominal expression N tó mo aróo monó/hitó (with the literary tentative of áru) is the equivalent of N dé mo áru hazu no monó/hitó and means 'one with the status (caliber) of N' or 'N of all things/people (surprisingly)': Eisiki-zin to mo aróo hitó-tati ... 'Those who are intellectuals (of all people) ...'; Syatyoo no ókusan to mo aróo monó ga ima-zibun hitóri de konna tokoró e o-ide ni nátte wa o-uti ni sumánaku wa gozaimasén ka 'If you go into such a place alone at this time, wife of the company president as you are, won't there be trouble at home?' (Mio 96); Daigaku no kyoozyú-kai to mo aróo monó ga, zyuudai na bámen(-) de konna arísama(-) dátta n desu 'On an important stage such was the spectacle of (what pretends to be) an association of university professors of all things!' (SA 2671.30a). Cf. ... tó áru (?= ... tó site áru) > ...-táru, § 13.5a.

15. Cf. the summational quotation that picks up the opener in this example: To iu kotó wa, tiryoo-hoo wa náí to iu kotó desu ka 'What you mean is you're telling me that there is no treatment?' (SA 2647.106b).

(14) *Tó mo* is used as a sentence-final extension to mean 'of course' or 'indeed' (§ 15.14). This could be regarded as an abbreviation of some quotation, perhaps with ... *omoéru* or ... *ieru* as the omitted verb.

(15) *N + tó^[r]iu tó* (*N + tee tó*; *N + tó^[r] iéba/ittára*) is a roundabout way to state a theme that is virtually the same as *N + wá* (as subdued theme); similar is *N + dá^[r] tó* (or *N + nára/dáttara*). Cf. § 21.2. *N tó^[r] iú ni wa* (with direct nominalization of the "saying" sentence, § 14.6) seems to be a somewhat bookish equivalent. Cf. [*tó i*]ttára arimasén, § 9.3.3.

(15a) *S + tó^[r] itté mo ii-sugi dé wa náí* means 'it is no exaggeration to say that': *Káre wa sékái saidai no kagákú-sya de áru to itté mo ii-sugi dé wa náí* 'It is not too much to say that he is the greatest scientist in the world'.

(16) In place of *V-ru tokoró da* 'is about to do' you can quote the hortative (*V-[y]oo to iu*) and adnominalize the "saying" sentence to the postadnominal *tokoró*: *Dekakeyoo to iu tokoró desu ga ...* 'I am just about to go out, but ...'.

(16a) The expression ... *tó^[r] iu/itta tokoró desu (né)* [or *desyóo*] means 'I would say that ...' or '... and that's the way things are' or '... and that's how matters stand'. See Alfonso 1166.

(17) In place of *S yóri {wa}* 'rather than do/be' you can quote the sentence (*S tó^[r] iu*) and adnominalize the "saying" sentence to the postadnominal *yóri*:¹⁶ *Hannoo wa yowái, to iú yóri, hotóndo ga kyóomí o simésite(-) kuremasén desita* 'Rather than the reaction being weak, hardly anyone showed interest' (SA 2662.24b); *Mu-kánsin to iú yóri génzai no nooson-kéiei ga, sono hituyoo o mitomenái no desu* 'Rather than indifference it is that the present rural management fails to recognize the necessity' (KKK 3.231); *Zyuugatú ni háitte, kyuu ni suzúsiku nátta. Suzusii to iú yóri, hada-samúi hí no hoo ga oói* 'Entering October it has suddenly become cool. Rather than "cool", chilly days are in the majority' (SA 2649.97a); *Nihon-zín ni tótte ... Sina-go o búnsyoo to site kaki-konasu kónnan wa, kónniti watási-táti ga, Eigo ... o kaki-konasu kónnan to, hodo-tóoku(-) náí to iú yóri wa músiro, kúroo wa isoo óokikatta ni sooi náí* 'Rather than the difficulty for the Japanese to manage to write Chinese as sentences being not far from the difficulty we have in writing English today, the hardship must surely have been far greater' (Ōno 1966.199). This should be distinguished from situations that require the "saying" in order to carry the intended meaning as in *Zitugyoo-ka to iú yóri mo gakusya to iu hoo da* 'He is more of a scholar than a businessman' or *Seikoo to iú yóri wa hu-séikoo de áru* 'It is a failure instead of (= rather than) a success' (= *Seikoo de nákute hu-séikoo de áru*, Morishige 186) and resumptive sentences that begin *Tó iú yóri wa* 'Or rather [than saying that]' (see Alfonso 1113).

(18) *S + ká to omóu yoo ni* 'so as to make you think (whether =) perhaps' means something like 'just as if', being the infinitive form of the somewhat less common *S ká to omóu yoo da* 'It is just as if ...'. (Is this limited to perfect and imperfect?) *V-tá ka to omóu to* 'when you think whether ... did' means 'as soon as'; cf. *-rú ga hayái ka*, § 14.6. For *S₁ ká to omóu to S₂* 'If you think *S₁* then *S₂* = Not only *S₁* but also/even *S₂*', see p. 927. For *S n[o] zya náí ka to omóu* 'I'm of the opinion that ...', see p. 948.

16. After an "atonic" inflected form (such as *iu*), *yóri* attaches directly as a particle or, optionally, with the juncture appropriate to a postadnominal—taking away the inherent final accent (*iú*) before disappearing. You can say either *N to iú yóri* or *N to iu yóri*.

(19) A kind of emphatic iteration is achieved by S_1 to *ieba* S_1 {*gá/kédo*} 'really does/is S all right [but ...]; does/is all too (= more than enough)': Hataraku to *ieba* hatarakú ga 'He really works, all right, but ...'; Kangáeta to *ieba* kangáeta kedo 'I gave it more than enough thought, but ...'; Ookii to *ieba* ookii ga 'It's more than big enough, all right, but ...'; Kessaku [dá] to *ieba* kessaku dá ga 'It is indeed a masterpiece, but ...'; Sízuka [da] to *ieba* sízuka da kedo 'It's nothing if not quiet, all right, but ...'; ... amari to *ieba* amari na moosetu ga séken ni rúhu site óri, ... 'entirely too great a fallacy is widespread in the world ...' (Maeda 1962.194); ... husigi to *ieba* husigi de áru 'is strange indeed' (SA 2688.107d). Notice that *dá* usually drops, even after adjectival nouns. The repeated S can enter into any appropriate conversions and can be modified by an adverb: ... bakabakasii to *ieba* mattakú^[1] bakabakasii sensoo-kígeki da ga ... 'it is indeed quite a silly war comedy but ...' (SA 2688.108b). Somewhat different is S to *ieba* *ierú* (keredo) 'one COULD say ... (but)': Motíron bóku(-) wa náni mo siranákatta no da kara syoo ga náí to *ieba* *ierú* keredo, dé mo ... 'Of course one COULD say that I had no choice since I knew nothing, but even so ...' (CK 985.377).

(20) KKK 23.27-8 contains some examples of sentence-final *tó* where the quotative origin seems obscure so that the result is merely emphatic—perhaps similar to a common use of Korean quotations that I have elsewhere translated as an assertive or insistent 'I tell you' or 'Let me tell you' or 'Mind you': Kore de yósi to 'This is enough!'; Móo yamet' okoo to 'Let's stop now!'; Dái iti-ban 'mé ni wa kono ... (oo) ... Tyuu-nánbei no keizai-kóozoo to iu monó ga Amerika to kuraberu to taihen tigai ga áru to 'First of all this, uh, economic structure of Latin America is something quite different from (that of) America'. It is not always clear, we are told (p. 28), that a sentence with final *tó* is best treated as an abbreviated quotation rather than as emphatic, e.g.: Sono kazoku-séikatu mo kanarazú-símo sore zya(a) katei to iu kotobá de motte(e) ningen-kánkei ga súbete setumei dekíru ka to iu to sóo wa ikanai to 'When it comes to whether you can necessarily explain all human relations in terms of the home, the family life, uh, I don't think you can'. Similarly, with *ká* *tó*^[1] 'I wonder' (short for *ká* *tó* omóu?)—KKK 23.53-4: ... sono tamé ni wa (ee) kotobá ni túite hutatú no mén ni tyakumoku suru kotó ga hituyoo dé wa nákaroo ka to '... for that I wonder (uh) I wonder whether it isn't necessary to make one's observations about words from two aspects'; ... (oo) náni ka kenkyuu-kíkan to iu monó ga kokumin no seikatu *tó* wa uita tokoró ni (ee) gakusya ga atumáru to itta yóo na kotó ni nátte simaú no de wa náí daroo ka to '... (uh) with the emergence of some kind of research agency as a part of life of the people (uh) I wonder if we wouldn't just end up with (a group of) scholars getting together'; ... kekkyokú kono ningen ga ziyúu to zinken o kakutoku suru tamé ni tatakatte kíta rekisi da to iu kotó mo *ierú* n zya náí ka to 'I wonder if, after all, it couldn't be said to be a history of man fighting along to gain freedom and human rights'. Sometimes the initial consonant is doubled for emphasis (cf. tté): Siranáí tto 'I just dunno!'; Móo neyóo {t}to 'Now to bed!'. (The doubling usually induces an accent on the preceding syllable but that may be paralinguistic here.) Apparently tté can freely be used in this sort of sentence; Kenkyusha has the examples Sóo daroo/desyoo tte 'I can quite imagine that; I shouldn't wonder!'

(21) Number + *tó* {*wa/mo*} náí leads to such quasi-idiomatic expressions as hutatú to {*wa/mo*} náí 'is unique' and hutarí to {*wa/mo*} náí 'is peerless'. Any number that consists of '2' + counter can appear: ni-satú to {*wa/mo*} náí '(a book) is unparalleled', hutá-ma to {*wa/mo*} náí '(a room) is unmatched', etc. There is a similar expression with

an adverb that is not a number: *matá to náí* 'is unparalleled, unique'; other negatives can replace *nái*: *Matá to dekinái kotó da* 'It is something that can never happen again' (SA 2659.49d). Cf. *ni-dó tó^[1] + NEGATIVE* 'not ... again': ... *ni-dó to kono onná ni átte wa narán zó* 'You must not see this woman again!' (SA 2649.105c); *Déte ike! Bóku(⁻) no máe ni ni-dó to arawaréru na!* 'Get out! Don't let me see you ever again!' (SA 2655.122b).

(22) For ... *tó^[1] ittára arimasén*, see §9.3.3.

(23) Hortative (—or literary tentative?) + *tó^[1] iú no ni* can mean 'just when it is about to': *Kore kara dandán yóru ni nátte ikoo to iú no ni Áiko san nánka hitóri de irarerú mono ka* 'With the night about to set in now how can Aiko remain alone?' (Mio 94).

(24) For *S kara^[1] + tó^[1] itte* 'just because S' see §17.1.

(25) For *S + tó/tté sá!* see §15.2. And notice (20) above, of which this would seem to be a special case.

(26) The expression (N/S +) ... *tó^[1] iú ka sore {wa}* ... 'if you/we ask about ... it' is one of the many roundabout ways of introducing a theme (cf. §3.9).

(27) Nouns can be paired with infinitivized quotations (N *tó* ii) to mean 'whether (we speak of) N₁ or N₂ = both N₁ and N₂': *kóe to ii sógata to ii* 'whether in voice or in figure = both her voice and her figure' = *kóe ni sé yo sógata ni sé yo, kóe ni si ro sógata ni si ro*; *mé no iró to ii, kíba no rétu to ii* 'both the eye color and the fang occlusion'; *hukusoo to ii, táido to ii* 'both in attire and in attitude'; *Táimingu to ii, seiryoo to ii, nakanaka rippa na azitéetaa de aru* 'Both in timing and in vocal resonance he is a thoroughly splendid agitator' (Gd 1969/9.109); ... *tikágoro no toohú(⁻) to ii, hanpén to ii, nán-to "danti-sáizu" bákari na no daroo* 'lately whether it's beancurd or fishcake, somehow there's only the "tenement-size" (for sale) [= they are cut small]' (SA 2653.50d). Similar is *X to ii Y to itté mo = X to itté mo Y to itté mo* 'whether (we speak of) X or Y', virtually equivalent to *X dé mo Y dé mo* 'whether X or Y': ... *Kyoowa-too to ii Minsyu-too to itté mo tái-sita sooi wa náku, ...* 'Whether it be the Republican Party or the Democratic Party there are no great differences, and ...' (Tk 4.215a).

(28) The expression *S tó^[1] tówazu(⁻)* 'without inquiring S' means 'regardless whether S, even if S': ... *nitiyoo, saizitu de áru to tówazu(⁻)* 'even if it is Sunday or a holiday' (SA 2670.107a). Cf. *N o tówazu(⁻)* 'irrespective of N', pp. 152, 591. The expression *S/N₁ tó^[1] iwazu S/N₂ tó^[1] iwazu* 'without saying S/N₁ and without saying S/N₂' means 'whether S/N₁ or S/N₂; not just S/N₁ but also S/N₂': *Nihon-go to iwazu gaikoku-go to iwazu dóna kotobá de mo sóo na n desu* 'It's the same in every language—whether Japanese or a foreign language'; *Senséi to iwazu isya to iwazu kangáe wa onazi desyóo* 'Not only the teacher but the doctor too thinks the same way, you see'. See Kenkyusha for more examples.

(29) There are a few other expressions with ... *tó {wa} ...-azu*, e.g.: *Kisyá to wa na-nórazu(⁻) hanasi-kaketá no da ga, ...* 'I approached him without calling myself (= revealing myself as) a newspaperman and ...' (SA).

(30) The expression *N o monó to mo sezu* (cf. §21.4) means 'in spite of (undaunted by) N': *Yóru zyuuítí-zi, Watanabe san wa enkai no tukaré o monó to mo sezu tonneru no náka e itta* 'At eleven at night, Mr Watanabe went into the tunnel [to work], undaunted by fatigue from the banquet' (SA 2668.60e).

(31) The expression *ári tó^[1] arayúru (kotó/monó)* 'each and every (thing), all sorts of (things), the catalogue of (things)' seems to preface the adnoun *arayúru* by

quoting the existence verb in the form literary infinitive (used for predicative) and the entire expression works as a phrasal adnoun despite the minor juncture within it (after $\text{ári } \overset{[r]}{\text{tò}}$).

(32) For ... $\overset{[r]}{\text{tò}}$ iwan bákari 'all but saying', see p. 614.

(33) Idiomatic quotations include: are yó | are yo to iu ma ni || ... 'in no time at all; before your eyes; before you can say ("that! that!" =) Jack Robinson' (SA 2659.132e); ún to mo | sún to mo | iwanai 'says neither ún (yeah) nor sún (inch?) = says neither yes nor no; makes no response': Tegami o dásite mo, ún to mo sún to mo itte kónai 'I sent a letter but got no (yes-or-no =) reply back' (SA 2670.43a). Is the etymology entangled with un-sun-káruta, name of a card game < Portuguese um 'one' and sum[mo] 'summm'?

(34) Sometimes $\overset{[r]}{\text{tò}}$, like ní, is used to mark an adverbialization: siawase $\overset{[r]}{\text{tò}}$ = siawase ní 'luckily' (from siawase 'luck', abstract noun and adjectival noun); wariái $\overset{[r]}{\text{tò}}$ = wariái {ní} 'comparatively'. See §21.7 for more on this. And see §13.5a for the use of $\overset{[r]}{\text{tò}}$ as the adverbial form of subjective adjectival nouns (AN táru/ $\overset{[r]}{\text{tò}}$).

21.2. TTÁRA, TTÉBA

Quotation is a common way to mention a topic for comment: X $\overset{[r]}{\text{tò}}$ ittára (iéba,¹⁷ iu $\overset{[r]}{\text{tò}}$, itté wa¹⁸) 'When it comes to X, As for X'. From this come the colloquial particles ttára and ttéba.¹⁹ Kore ttára/ttéba ... 'When it comes to this ...; As for this ...'. The particle ttéba is used almost exclusively by women. Because of the indirection, this sort of topic citation is fairly polite. Anata tteba! 'Oh you!'—with accent-flattening from anáta tteba—is often said by a woman exasperated with her husband.

Sentence-final ttéba (§15.15) can mean two things: (1) 'I tell you', a strong statement as in Iyá da tteba! = Iyá da yo! 'But I don't like it!'; (2) = {nasái} yo, a command, as in Bóku(¯) ga koosyoo site yarú kara moo sibáruku o-mati ttéba '(I tell you) I'll negotiate for you so you wait a little longer'. Sometimes the final vowel is lengthened: Mátte ttebaa! 'I told you to wait!'

Sentence-final ttára can have the same two meanings, but they are expressed with stronger feeling: Iyá da ttara! 'But I DON'T like it!'; Káesite, káesite, káesite ttara! 'You gimme that back!'; Misé ro ttara 'Show me, I tell you!'

The first t- in these colloquial particles is automatically suppressed after n, as is that of tté: Súgata san ttara /súgatasantara/. For ttára náí = [to i]ttára náí, as in Káre no hyooban no wáru-sa ttara nákatta 'He had the worst reputation!' (KKK 25.78a), see p. 565. An equivalent expression is ttátte [= $\overset{[r]}{\text{tò}}$ itt'átte = $\overset{[r]}{\text{tò}}$ itté mo] náí: Dóo-mo bakabakasii ttatte arimasén ya 'How utterly stupid!' (Okitsu 1.245). Notice that /... ttettara/ is to be interpreted as ... tte 'ttára = ... $\overset{[r]}{\text{tò}}$ ittára 'if/when one says that ...', a quoted condition used as one of the many devices to introduce a theme, as in this example: Omoi-dasú no tte 'ttara sá, sore kóso arihureta tabémónó na no né 'What it reminds me of, precisely, IS a very common food' (Morishige 148). Sentences such as Isogasii tteba isogasii n da ga ná 'I'm busy, all right, but ...' (Morishige 231) seem to mean the same as S₁ kotó wa S₁ ga/kédo.

17. Or iyá[a].

18. Or ittyá[a].

19. Also ttéeba (Tk 4.317b) and (below) ttébaa.

21.3. TÓ[TE], TTÉ

The particle *tó*, sometimes extended to *tóte*, can occur at the end of a phrase as if an abbreviation of ... *tó*^[t]*omótte* 'thinking that ...' or ... *tó*^[t]*itte* 'saying that', followed by a predicate that usually expresses action. A special—but perhaps questionable—use of *tóte* that it does not share with *tó* is after the perfect *-tá*, with the meaning 'even (do)ing': *S-tá tóte* = *S-té mo*.²⁰ For this meaning it is more colloquial to attach *-t'átte* to verbal sentences, *-kut'átte* to adjectival sentences, and *d'átte* to nominal sentences. See the discussion in §15.11.

The use of *d'átt'átte* to mean *dé mo* 'even' is condemned by Kazama (203 ff) as pleonastic; *d'átte* alone is quite enough. But *dátta tte* of course can occur as a quotation with the interpretation *dátta tó*^[t] [*itte*] '[saying] that it was', just as you can use *V-tá tté* and *A-kátta tte* for the perfect forms of *V-rú tté* and *A-í tté*.

KKK 3.123 gives two examples in which *N tóte mo* is used to mean *N dé mo*; compare the similar use of *N tó*^[t]*itte mo*, §21.1.(9a). MKZ 614a cites an example of *V-rú tóte* that is equivalent to *V-[y]oo to site* 'trying/starting to do': *Mizu o kumú tóte ido e ótita* 'I fell in the well trying to draw water'. Perhaps this usage could be regarded as an abbreviation of ... *tó*^[t]*omótte* 'thinking that (I would draw water ...)'.²⁰

In addition to the uses mentioned above (equivalent to *tóte*), *tté* is also used as a variant version of the quotation-marker *tó*, as an abbreviation of *tó*^[t]*itte*, and as an abbreviation of *tó*^[t]*iu*—as in this example: *Husigi na onná da náa, kimi tte onná wa ...* 'You're an odd girl, you are' (Kb 381a). Sentence-final *tté* sometimes marks a fragment with the quoting nucleus omitted. Thus *Íi tté!* 'Say when!' (in pouring a drink or the like) means something like *Íi to itte kudasái* 'Please say "That's enough" [when I have poured all you want]'. The expression *soo iú no tté no wa* (CK 985.372) means *soo iu {mo}nó to iu {mo}nó wa* 'each and every such (one)', with *tté* representing a contraction of *tó*^[t]*iu*. For the Kansai use of *káte* for *tóte*, see §2.11, §15.11. On *S kará t[o]te* = *S kará tó* (*itte/omótte*), see §17.1. An example of *S tóte* 'on the grounds that S = because S' in formal written Japanese is cited in LF 87. For *S tté/tó sá!* see §15.2.

Both *tóte* and *tté* are attached in the same way as *tó* (whether marking a quotation or a conjunctive), with optional underlying juncture when following an inflected form. If attached with no juncture, the last syllable of an "atonic" verb or adjective will be accented (*surú tó*, *sitá tóte*, *amái tte*); when attached with an underlying juncture, the juncture will disappear after suppressing the preceding accent (*suru tó*, *sita tóte*, *amai tté*), and thus there will be an accent on the particle itself unless (for *tó* and *tté*) it is suppressed by an immediately following juncture. Both *Tó ...* and *Tté ...* can be used as conjunction-like sentence-introducers, "Quote ..." (or, rather, "... Unquote").

20. Perhaps this usage, which is found in the written-style colloquial, can be regarded as elliptical for *S-ta* [*kotó*] *tóte*, a treatment suggested by the following example (in which *kotó* could have been omitted): *Íma-sara(˘) itte míta kotó tóte [= itte míte mo] si-kata ga áru ˘mái* 'It would be of no use to say it at this late date'. Compare *S-ru kotó tóte* 'because S' (in which *kotó* can NOT be omitted): *Yóku syooti site iru kotó tóte, sugu ni setumei site yatta* 'Since I know it well, I explained it to him right away'; *Narénu kotó tóte sikuzitta* 'Being unfamiliar with it, I blundered'.

21.4. SENTENCE + ^[1]TÔ SURU/NÁRU: PERIPHRASTIC PUTATIVES,
SUBJECTIVE MUTATIVES

A statement can be followed by ^[1]tô suru to mean 'supposes that, considers (it) that, treats it as (true that)': Yobu/Yonda to suru; Ookii to suru; Senséi {da} to suru. The copula optionally (but commonly) drops, even after an adjectival noun: Sízuka {da} to suru. A few other mutative verbs also occur with ^[1]tô (which is substituting, as it were, for ní): S to kimeru 'decides/determines that (or for it to be) S', ...

From the gerund of N {da} ^[1]tô suru we get N [da] ^[1]tô sité {wa} 'considering it to be N, considered as N'; cf. N ni sité {wa} 'for/as N', p. 229. In honorific speech itasimásite may replace sité in these expressions.²¹ N ^[1]tô sité wa sometimes contracts to N ^[1]sityá[a]: Menseki to sityáa, dai-tósi desu yó 'In size, it [= Kyōto] is a metropolis, you see' (Tk 2.308a); Wazyutu-ka to sityáa, zettai ni seikoo sinai hitó desu ná 'As a storyteller, I guess I am a complete failure' (Tk 3.249b). Sono gen'in wa oku to site, ... '(Leaving) the reason for that aside, ...' (SA 2679.116b) seems to have a direct nominalization, gen'in o oku [kotó/nó] 'putting aside the reason'.

The expression X o Y ni suru means 'converts X (in)to Y, makes X into Y, makes X [be] Y, decides that X shall be Y, assigns X to [the category of being] Y'; the more subjective expression X o Y to suru means 'considers/treats X as [being] Y' and sometimes it can be translated 'finds/discovers X to be Y': Sánzyuu o kosite simau to nikutai-teki ní mo sore-hodo onná o hituyoo [da] to sinai 'When I got past thirty I didn't find women so necessary even physically' (SA 2639.35d).

The sentences that result can be turned into other sentences by the usual operations, such as applying a passive conversion: "Imi-kótoba" to iéba, kekkonsiki-zyoo nádo de, tukaú no o sakéru ^[1]béki da to sareru kotobá 'By "tabu words" is meant words about which it is considered that one should avoid using them in wedding halls and the like' (Ōno 1966.45); Mooko-go mo, zyuusan-séiki no kiroku ga hurúi to sareru 'Even for Mongolian, documents of the 13th century are considered old' (Ōno 1966.191). Sentence + ^[1]tô sarete iru will commonly translate as 'It is considered/assumed that ...'. But N ^[1]tô sareté wa may be a subject-exalting version of N ^[1]tô sité wa, grammatically an anomaly in that what is exalted is the ^[1]tô-marked noun (there being no specific subject for the suru): ... are wa héika to sareté wa, téinei na o-tumori zya náí ka siran 'I wonder if that, for His Majesty, wasn't intended to be polite' (Shishi Bunroku in SA 2658.125b).

We can regard sentences with ^[1]tô suru as periphrastic putatives or as SUBJECTIVE (transitive) mutatives, in direct contrast with ní ^[1]suru, the OBJECTIVE (transitive) mutatives (§9.1.11): Táda, byoozyoo ni yotté wa, anzei o hituyoo to si nyuuin suru baai mo arimásu 'But sometimes, depending on the patient's condition, rest is considered important and he is hospitalized' (SA 2684.122e). Special uses of the forms include these:

(1) Hortative V-[y]oo ^[1]tô + suru (or kimeru, kuwadatéru, kétéui suru; tutoméru, dóryoku(-) suru) means 'decides (plans; endeavors) to do', and Mása ni ... siyoo ^[1]tô suru means 'is about to (begin), is going to (do)'. Cf. V-[y]oo ^[1]tô iu tokí ni or V-[y]oo ^[1]tô iú no

21. In N ^[1]tô itasimásite, the verb itasu is functioning not as an object-exalting counterpart of the subject-exalting nasáru but rather as a polite euphemism for suru; you are unlikely to run across ... ^[1]tô nasátte/nasaimásite because the reference of the verbal element is essentially impersonal. For ... ^[1]tô sité as the adverbialized form of subjective adjectival nouns, see §13.5a; the somewhat literary flavor of these expressions makes it unlikely that you will find itasimásite for sité.

ni 'when ready (about, fixing) to do', §21.1.(23). The translation of V-[y]oo ^[1]to suru is often 'tries/goes/starts to do', especially when followed by some frustration or interruption: Tegami o kakóo to sita tokoró e denwa ga kakátte kíta 'Just as I was going/trying/starting to write a letter, a phone call came'; Túma ga áto o oóo(¯) to sitára, ... 'If the wife starts to follow ...' (SA 2672.22c). But often the translation is simply '(when) about to do/happen', and involuntary verbs freely occur:²² Zizóo-bon no nigiwái mo, yooyaku kore kara hazimaroo to site iru 'The bustle of the Jizō festival [too] is finally about to begin now' (KKK 25.80b); ... kuraku naróo to suru tokí ni 'when it was about to get dark ...'; Móo natú mo sugiyóo to site itá no ni ... 'Although summer was just about over ...'. Observe that Haná ga sakoo to site iru 'The flower is about to bloom' is in no way deviant, though (*)Haná ga sakoo would be odd unless taken as a literary equivalent of sakú daroo 'may bloom'. The hortative sometimes appears in its literary form -(a)n < -(a)mu, e.g. in Tatakai wa mása ni kaisi sen [=siyoo] to site iru 'The battle is about to begin'. For more examples, see §12.2.

(1a) Hortative -[y]oo + ^[1]tó {mo} sinai means 'has no intention of doing = is reluctant to do, is not about to do, shows no signs of (going to be) doing': Dá ga, tyósyá wa kekkon suru kotó ga dekinakatta no de wa nákute, siyoo to sinái no de aru 'But it isn't that the author couldn't get married, it is that she has no inclination to do so' (SA 2664.91-2); ... káno-zyo wa tonari no kítin ni kakúreta kiri déte koyóo to sinákatta 'she stayed hidden away in the next-door kitchen and showed no signs of coming out' (SA 2670.92c); Sikási, Ándoo san to wa umá ga áu to iú no ka, Ándoo san go-zísin, hoka no isya ni maru-de kakaróo to nasaránai n desu 'But perhaps because I seemed to hit it off with Mr Andō, Mr Andō himself was not the least inclined to consult other doctors' (SA 2656.26b)—note the subject-exalting nasáru used for suru. For more examples see §12.12. Similar in meaning is V-[y]oo ^[1]tó {mo} omowánai: Watasi wa nemuroo to omowánakatta 'I had no thought of sleep' (lg 1962.85).

(2) Perfect (-tá) + ^[1]to suréba means 'if, say, one should' or 'if at all', much like -tá no dé wa, -tá n[o] zya (§9.3): Matigái nádo wa okosánai hazu dá ga, mósi, okósita to suréba sore ní wa tokubetu no riyuu ga aróo 'This should cause no error or the like, and in the event it does, there will be some special reason for that'. Imperfect (-rú) + ^[1]to suréba means 'if (at all)', much like -rú no dé wa, -rú n[o] zya (§9.3): Iku to suréba, asitá ni náru desyoo 'If we're going at all, it will be tomorrow'; Génka ga takái to suréba, urinikú to iu kotó mo kangáeru hituyoo ga áru 'We must also consider the fact that if the manufacturing cost is at all high they will be hard to sell'; Yusyutú-hin(¯) ga hotóndo soakú-hin(¯) da to suréba, kuni no sin'yoo o usinau 'If exports are quite shoddy, the nation is discredited'; Seiseki ga wárukatta to suréba [or Warúi seiseki dátta to suréba] nyuugaku wa muzukasii(¯) 'If you've got bad grades, it's hard to gain admission (to the school)'.²²

(3) S + ^[1]to sité mo (= S ^[1]to itté mo, §21.1.(9)) means 'granting/granted that ...': Sáiban de múzai to kimatta to sité mo káre no sin'yoo ga kaihuku dekinai daroo 'Even if he is found not guilty in court, I doubt he will be able to regain his reputation'; ... íma íkite ita to sité mo ... 'even if (they were) alive today' (Tk 3.230b); ... tatóeba gésuto wa nakama-dóosi no yuuzyo-syútuen da to sité mo, taihen na aka-zi no hazu da '... even if,

22. Yet Yoshida (166) claims that V-[y]oo ^[1]to suru with subjects that are inanimate (and thus involuntary) is rare in the spoken language, and not very common in the written language, either.

say, for guests you have complimentary appearances by friendly colleagues, you can still expect to run heavily into the red' (SA 2677.115c). Cf. S + ^[r]nité mo 'regardless of S, even if S', § 14.6.(18).

(4) The expression X o kotó/monó to mo sinai means 'makes nothing of (= disregards) X'; cf. §21.1.(30). For V-ru kotó to suru, see p. 843 (§ 14.1). We can compare Senséi to sité wa dooi dekinai 'The teacher, quā teacher (= [in his role] as teacher), can not agree' with Senséi ni sité wa ^[r]tišiki ga sukunái 'For a teacher, he is singularly lacking in knowledge'. Neither the putative (^[r]tó suru) nor the mutative (^[r]ni suru) are to be taken literally here.

The distinction between ^[r]tó suru and ^[r]ni suru is sometimes hard to draw, as we have seen. The distinction between ^[r]tó nāru and ^[r]ni nāru—the INTRANSITIVE mutatives, subjective and objective respectively—is even finer; many speakers appear to treat N ^[r]tó nāru as a fancy or semi-literary version of N ^[r]ni nāru, with no particular feeling of the subjective versus the objective in spite of the difference in choice of ^[r]tó or ^[r]ni. If a difference is felt, the expression with ^[r]tó will be used for situations that are less real, less enduring, or less substantial—to parallel the distinction of ^[r]tó suru from ^[r]ni suru. The various specific uses of ^[r]tó nāru are treated in §21.1.(2).

It is possible to separate ^[r]tó or ^[r]ni from suru (as from nāru) with various focus and restrictive elements: ... ^[r]tó DE MO suréba 'If we suppose, say, that ...'; Tantyoo-sa o sakeyóo to DE MO sitá no desu 'I tried at least to avoid monotony'; Hotóndo kozin-kyóozyu ni tikái kyooiku o óoku no séito ni ataeyoo ^[r]tó SAE site iru 'They even try to give masses of students a training that is close to virtually individual instruction' (CK 985.62). Whenever suru itself can take a personal subject, exaltation is possible; examples of V-[y]oo to nasáru are cited in Y 167.

21.5. LITERARY TENTATIVE + ^[r]TÓ

The literary tentative (§12.3) + ^[r]tó occurs, often in contrasting pairs, with the same meaning as the literary tentative + ^[r]gá (§ 17.6) 'whether ... (or)': Anáta wa ikoo to iku ^[r]mái [or ikanakaróo] to sore wa kamawánai, watasi wa iki-tái n desu 'It makes no difference whether you go or not, I want to go anyway' [= ... itté mo, ikanakute mo ...]; Kimi ga iki-takaróo to dóo daroo to bóku(⁻) wa kamawánai 'It makes no difference to me whether you want to go or not'; Kueyóo to kuenakaróo to [= Kúete mo kuénakute mo] búngaku o sinái de wa irarenai hitó-tati da 'They are people who must engage in literary pursuits whether they can eat (= make a living at it) or not'; Kore daróo to kore zya nakaróo to kamawánai = Kore dé mo kore de nákute mo kamawánai 'It doesn't make any difference whether it is this or not'; Kore daróo to are daróo to kamawánai 'It doesn't matter whether it is this or that'; O-kane ga aróo to nakaróo to [= átte mo nákute mo] kai-tai monó wa kai-tái n desu 'Whether I have the money or not, what I want to buy I want to buy'; Tatóeba, túi kono-aidá made, kodomo wa sazukari-mónó(⁻) dáttá. Íma de wa umoo to umu ^[r]mái to katte ni náttá 'For example, until quite recently [having] a child was a godsend. Now it has become a matter of choice whether to have a child or not' (SA 2672.128ab); Soori-dáizin ga korosareyoo to dóo siyoo to, zenzen, mu-kánsin né 'I couldn't care less whether the prime minister gets killed or not' (Fn 201b). Although this is most common for such adjectivals as ^[r]nái, ^[r]sukunái, and desideratives (V-i-tai), occasionally other adjectives are heard: Ookikaróo to tiisakaróo to ... 'Whether it be large or small ...', Takakaróo to yasukaróo to ... 'Whether it be expensive or cheap ...'.

Sometimes, usually with an indeterminate (like *náni* 'what') in the sentence, there is only one tentative, the equivalent of *-té mo* (cf. Alfonso 867): *Dáre ga nán to iyoo to, ... = Dáre ga nán to itté mo* 'Regardless what anybody says ...' (SA 2677.34d); *Dóko e ikoo to kimi no katte da* 'It's up to you where you go'; *Dóo siyoo to ii de wa nái ka* 'Isn't there any way that it's all right?'; *Nakoo to waraoo to kamáu mōn ka? Dóo naróo to kamawánai.* 'Should it matter whether I cry or laugh?—It makes no difference what I do'. A somewhat similar use is *-[y]oo + ní mo*; see §17.7.

Notice that *-[y]oo tó* is sometimes followed by *mó*: *Dóko e ikoo tó mo = Dóko e itté mo* 'Wherever you go' = 'Everywhere (you go)'; *Dónna ni sabisikaróo to mo = Dónna ni sabisíkute mo* 'However lonely one may be'. Compare the optional absence of *mó* in statements of permission: *Itté {mo} ii* 'You may go' (p. 480). A rare case of polite stylization will turn up: *itasimasyóo to itasimásu mái to* 'whether I do it or not' (Mio 281).

When an adjectival noun is put into this expression first affirmatively and then negatively, in the second part you can omit not only the repeated adjectival noun but also the appropriate copula form *dé*, provided the copula in the first part has reverted to its formal (uncontracted) form *de áru*: ... *sore ga kanzen de aróo to nakaróo to, ...* 'whether healthy or not' (SA 2664.33b). The formula: *AN₁ de aróo to {AN₁ de} nakaróo to*. If, however, we start off with *AN₁ daróo to*, there can be no ellipsis; we must finish up with *AN₁ de/zya + nakaróo to, nái daroo to, or áru mái to*. If we start off with *AN₁ dé mo* we will have to end with *AN₁ de/zya nákute mo*; if we start with *AN₁ d'átte*, the conclusion will have to be *AN₁ de/zya nákut'atte*.

21.6. TÓ KA; TÓ YARA

The particle string *tó ka* 'something to the effect that; or something' can be added at the end of a sentence to make a vague synonym of the hearsay conversion: *Byooki ni site iru tó ka = Byooki site iru sóo da* 'I hear he's ill (or something)'. It can also be tacked on to a quoted noun to add a touch of vagueness: *Tanaka tó ka iu hitó* 'a man called Tanaka or something' or 'a man called, I believe, Tanaka'. *Tó ka* can be used in citing items on a list, with optional omission after the last item: *A tó ka B tó ka C {tó ka}* 'A and/or B and/or C'. The meaning of *N tó ka* is sometimes close to that of *N dé mo* 'N or the like': *Kí to ka, kusá to ka, teatari-sídai {ni} tabéru* 'We eat plants or grasses, or whatever is at hand'; *O-kéikoo tte, dónna?—O-hana tó ka o-ryóori to ka desu né* 'By lessons, what sort do you mean?—I mean flower arranging and cooking and the like, you see' (SA 2672.64c). *N tó ka nán to ka* means 'N or something (or other)': *Bunsi-seibutúgaku to ka nán to ka no kake-góe de, ...* 'With much noise about molecular biology or something (like that) ...' (SA 2677.112c); *"Onná no sóno o arasu otokó-tati" to ka nán to ka iu kóe ga, tikágoro tómi ni tákaku nátte iru* 'Voices saying "Men are intruding into women's domains" and the like have suddenly grown loud of late' (SA 2672.117c)—the quoted sentence is an epithematic identification. From this usage, the sentence-opener *Nán to ka {site}* 'Somehow or other, Anyhow ...' is derived.

In writing, at least, case-marking particles occasionally follow *tó ka*: *Sikási sore wa óoki na yamá to ka kawá to ka ga áru kara to iu wáke de wa nái* 'But that doesn't mean it is because there are mountains and rivers or the like'; ... *homéru tte iú no wa tokí to ka baai tó ka o sootoo erándari sinai to sunnári uke-totte moraenai kotó ga óói no de wa nái ka* 'When it comes to offering praise unless you are careful in selecting your times and

places, it will often happen that you can not get it accepted smoothly, don't you think' (CK 985.391); Tyuuo-kóoron to ka Kaizoo tó ka ni ronbun ya kansoo o káku yóo na hitó wa ... 'The sort of people who write articles and impressions for Chūō Kōron or Kaizō ...' (Tk 2.210b); ... iegará(¯) to ka umare tó ka o omon-zíru(¯) yóri wa ... 'rather than value one's family standing or birth or the like' (Ōno 1966.83); Dá kedo, watási-táti ni suréba, ano Kirisutó-kyoo to ka Búkkyyoo to ka ní⁽ⁱ⁾ wa, kairitu ga áru n desu né 'But as WE see it your Christianity and your Buddhism have (their) commandments, you know' (SA 2671.18c). This is in keeping with the notion that a ká-question is a nominalization treated as a pure noun (§ 15.6). When followed by a quoting verb, a nominal sentence retains dá: Kore dá tó ka are dá tó ka {o} iwaretyau to ... 'When you get told that it's this or it's that ...'. But N dá tó ka can be used (in much the same sense as N tó ka) even in the absence of a quoting verb: Soko de suteizi-dezain da to ka kosutyuumu-dezain da to ka erokyúusyon o narátte, ... 'There I studied stage design and costume design and elocution, ...' (Tk 2.323b). The following passage has four phrases of the type N [dá] tó ka; the copula is omitted in the second and fourth instances: Mata, keisatú-hoo(¯) no mondai dá tó ka, kyooikú-hi no mondai tó ka, suto-kinsíhoo(¯) dá tó ka, arúi-wa gunzin-onkyúu-hoo(¯) tó ka, soo iu mono no náka ni ... 'Again, there's the question of the Police Law, and the matter of educational expenses, and there's the Anti-strike Law, and the Military Pension Law; (and) among all such things ...' (Tk 4.213b).

Instead of tó ka you may find tó yara: ... tettei-teki ni térebi ni yoru "Sin-zidai no sénkyo" to yara o osieyoo to iu "Gendai-senkyo-zemináaru" naru benkyoo-kai ga hirakaréru ... 'a study group that constitutes a "modern-election seminar" is held with the idea of teaching [what might be called] the "new-era election" that is thoroughly based on television' (SA 2640.130). More examples of tó yara are cited in KKK 3.226. In Kyōto the meaning of ... tó ka ... tó ka is carried by ... kanno ... kanno [? < ká + nó] (Zhs 4.232); in western Kyūshū, by ... te ro ... te ro (Zhs 6.24). See also § 15.16, § 15.18. Cf. dá no (§ 15.17).

21.7. ADVERBIAL, INTERJECTIONAL, AND MIMETIC QUOTATIONS

Extending the use of quotation to show manner, a number of adverbs occur only in the quoted form: hu-to 'unexpectedly; unintentionally' (the Chinese characters in Kenkyusha represent a false etymology, cf. MKZ^s 981c); onozu-to 'spontaneously' (= onozukara); wáza-to 'on purpose'; siká-to 'definitely, firmly'; sésse-to 'frequently, diligently'; wariq-to = wariái to 'relatively'; ói-sore-to 'readily' (< 'saying "oh that!"'); ari-ári to 'vividly' (from ári 'existing'); akaáka-to 'brightly'—cf. kúdo-kudo {to} 'tediously'; ...

In addition, there are four special classes of interjectional and mimetic quotations that call for comment:²³

(1) Those that are quoted with tó + iu (or some other verb), but also occur alone as interjections; these end in glottal catch, pronounced as /t/ in -q tó:²⁴ aq (to iu) 'Oh!'—

23. See also § 13.5a for the subjective adjectival nouns (marked by táru/tó), some of which are old Chinese mimetic adverbs.

24. In this book you will find these words sometimes written ...q(-)to, but more often ...t(-)to. Other cases of "tt" are usually reductions of such sequences as ...tU-t... or ...tI-t... at a morpheme boundary, as in words borrowed from Chinese or made up of morphemes borrowed from Chinese. After

whence aq to iu ma ni 'in an instant' (perhaps from áa 'ah' or, ultimately, from a-re 'that'); kyaq (to iu) 'Oh how surprising (or frightening)!'; waq (to iu) 'Boo!'; waaq (to iu) 'Oh how nice! Goody-goody!'; zaaq (to huri-dasu) '(pours down) copiously'.

(2) Those that do not normally occur except "quoted" with ¹tó suru/náru; they end in a glottal catch (-q to suru/náru 'makes with a "...'" effect'): gyoq to suru/náru 'acts/gets startled, frightened'; haq to suru/náru 'acts/gets startled, taken aback'; hoq to suru/náru 'acts/gets relieved'; muq to suru/náru 'acts/gets indignant, miffed; seems/gets stuffy, close'; ?zoq to suru 'shudders'—see below.

(3) Those that only occur adverbially with -q tó /tto/ or with -n tó: dóq(̄) to 'bursting out suddenly; stampeding'; gúq(̄) to 'suddenly, with a jerk; tightly; considerably'; káq(̄) to 'suddenly arising; opening up'; kiq tó 'surely, I bet'; móq to 'more' (from moo 'more'); hyóq to 'by chance'; yaq tó 'at last, with much difficulty'; sáq(̄) to 'suddenly'; suq to 'straight (out); up quickly; relieved'; soq tó 'quietly; secretly'; ti-ḡq tó = tyoi tó 'a little bit'; tyóq to 'a little bit; please; say!'—whence tyót-to da 'is slight' as in tyót-to no kaze 'a slight cold'; zaq tó 'roughly; sketchily'; ziq tó 'steadily, intently; quietly, patiently'; zuq to 'all the way; directly; considerably' (also zuuq to); dén(̄) to 'conspicuously (placed)'; kitín to 'accurately, punctually, neatly'; tan tó 'lots'; tón(̄) to 'utterly; completely'; tyan tó 'perfectly, regularly, neatly, safely, comme-il-faut'; ún(̄) tó 'with great force; copiously; lots'.

(4) Other mimetic words that can occur as adverbs alone and also with tó (suru/náru): bon'yári, bon'yári {to} suru 'absent-minded, vague'; hakkíri, hakkíri {to} suru 'clear, precise'; ottóri {to} 'quietly, generously'. When these forms occur alone with suru, as in bikkúri suru 'is startled', they look as if they might be verbal nouns, but the words must be adverbs since they can not be followed by the object-marker: *bikkúri o suru; cf. sanpo o suru 'strolls'. When you can apply focus, the appropriate particle (wá/mó etc.) is better attached to the adverb: bikkúri wa/mo suru rather than (*)bikkúri si wa/mo suru. Examples: Tái-site gakkári mo sinákatta n desu 'I wasn't so terribly discouraged' (SA 2666.44b); Té o aratte míru to, naru-hodo, núru-nuru mo béta-beta mo sinái de, sekken no yóo ni kirei ni araeta 'When I washed my hands [with it], I found that I could wash them clean as with soap, without any slimey or sticky feeling' (SA 2656.60c). You may, however, run across (?) bikkúri si sae sureba as well as bikkúri sae sureba 'if he is just startled'.

Although dictionaries carry a good many of the mimetic adverbs that are in common use, new ones keep turning up, as well as unexpected variants of older forms. A few that I have found missing in many dictionaries:

gappóri (zeikin o tóru) [MKZ^s] '(takes) lots (of taxes)'.

húnwaka = húwa-huwa [MKZ] 'soft, floating': Tóire no náka made húnwaka to attakái wága-ya ... 'Our home that is warm [with central heating] floating all the way into the toilet ...' (SA 2659.118b).

kutyá-kutya to gámu o kámi, ... 'smacking their chewing gum' (SA 2654.133b)—[Shimmura: = kusyá-kusya 'rumpled'].

kwáq(̄) to hiráite 'opening wide' (SA 2666.85c) = káq(̄) to with expressive labialization?

an atonic morpheme the (-)tó carries a basic accent, but many of these adverbs never occur in a position for the accent to be heard (i.e. before wá, mó, or dá); and some (like certain other basically oxytonic adverbs) have been reinterpreted as atonic.

hin'yári 'cold' (cf. hiya-hiya): Kúuki ga hin'yári to site huyú da náa 'the air is cold and it's winter' (SA 2662.42c).

ninmári 'smirking' [Shimmura, MKZ⁵] (cf. niko-niko, nikkóri): Yobi-koo no keiei-sya ga ninmári suru wáke da 'No wonder the operators of cram schools are all smiles' (SA 2663.27a); ninmári waratta 'smirked' (SA 2666.19e).

sin to 'silent, quiet' [Shimmura, MKZ⁵]: sin to site iru 'is still', sin to sita tokoró 'a quiet place', sin to sízuka ni náru 'becomes quite still' (cf. sini 'death', sízuka 'quiet'; sitóyaka 'gentle', sitó-sito 'gently').

The expression suttóbu (SA 2670.116b, MKZ⁵ 586b) looks like a contraction from súq(-) [to] tobu 'springs up'.

These interjectional and mimetic words form a set with special phonetic characteristics. Some are very old and widely used; others are ephemeral creations, perhaps the property of a single comedian. The phonetic system utilizes syllables and moras in ways that facilitate the creation of new variants from established forms; that is one reason dictionaries do not cover this part of the vocabulary comprehensively. Phonetic symbolism helps make connotational variants that differ only in vowels or in choice of initial consonant by taking advantage of series such as these:

- (1) s sy t ty z zy d
- (2) p py h hy b by
- (3) k ky g gy

One group of mimetic words is built upon single syllables by applying various expansions, with and/or without reduplications, as in the following set, all meaning something like 'puffing' (together with extended senses, e.g. 'suddenly'):

CVq	páq to	CV-CV	?pá-pa
CV:	páa	CVq-CV	páp-pa = páq-pa
CV:q	páaq	CV-CVq	pa-páq
CVn	pán	Cvq-CVq	pap-páq = paq-páq
CV:n	páan		

A large group of dissyllables enter into variant formations of the following types:

CV ₁ CV ₂ -to	háta to, --, --	'with a slap; suddenly'
CV ₁ CV ₂ -CV ₁ CV ₂	háta-hata, páta-pata, báta-bata	'flap, slap; hastily'
CV ₁ n/qCV ₂ ri	--, pattári, battári	'with a bang; suddenly'
CV ₁ CV ₂ n	--, patán, batán	'with a thud; suddenly'
CV ₁ CV ₂ q	--, --, batáq (to)	'with a slap; suddenly'
CV ₁ qCV ₂	háta to (nirámu), --, --	'(slapping with one's eyes = glaring)'

Although you should not feel free to make up new formations yourself, be prepared to run into them. You will come across odd sounds in some of these mimetic morphemes, of types seldom found in the rest of the vocabulary: gyággya (= gyáq-gya) 'squalling, bawling'; kwátya-kwatya or gwátya-gwatya 'splattering in large messy droppings'; zázza (= záq-za) 'pouring'; wóoq to 'with much commotion (?)'; gyuíq to 'with a jerk'. A number of the two-syllable mimetic adverbs will attach the postnominal verbs -meku or -tuku; see §3.13. And a few enter into other derivations, to be found in the lexicon.

By meaning the mimetic adverbs can be divided into three groups:

PHONOMIMES (gisei-go) are attempts to imitate sounds: wán-wan 'bow-wow', káa[-kaa] 'caw', pyúu[-to] 'whizzing', ...

PHENOMIMES (gitai-go) try to describe the manner or looks of a situation: kusyá-kusya 'all crumpled, rumped', pótú-potu 'in small drops/spots, sporadically', gúru-guru 'round and round', dossári 'in large quantity', ...

PSYCHOMIMES (gizyoo-go)²⁵ are intended to express one's inner feelings or, sometimes, one's physical reactions: muq-to 'offended, sullen', gakkári 'disheartened', múzu-muzu 'itchy', ...

But a word may be used with more than one meaning, and it is not always obvious which group a given adverb belongs to.

Many of the mimetic adverbs are simply ways of intensifying a verb and are best learned in context with particular verbs: Tyoosyuu no kao o zíro-ziro mite ... 'Staring (fixedly) at the audience ...' (Tk 3.252a); ... haiyuu san wa anmari gésó-geso ni yaseté 'tya komarimásu né 'if an actor is too skinny it won't do' (Tk 3.244b); ... ránpu ga páq-to(¯) túku 'the light pops on' (Tk 3.235a); Seiyoo o gurúq-to mawatte kíte, ... 'After travelling around the Occident ...' (Tk 3.234a); Sono uti(¯) ni, mukóo(¯) kara náni ka tíra-tira to hikáru monó ga miéte kíta 'Meanwhile from across the way there began to appear something flashing' (Tk 3.284a); ... sura-suráq to kotáeru 'answers smoothly' (Tk 3.215a); ... ban-tya o gábu-gabu nóndari site kíte ... 'gulping down coarse tea' (Tk); ... kenbutu wa wáq-to(¯) kíta ... 'the audience came in droves' (Tk 3.220a); ... tana kara óoki na nímotu ga bóku(¯) no senaka e basáq-to okkótte ki-yagátta 'from the rack a big piece of luggage came tumbling down thump on my back' (Tk 3.120a); Náni ka wakaránai monó o pyúq-to tukámu ... 'suddenly grasps something not understood ...' (Tk 3.260b).

Not infrequently these mimetic adverbs correspond to the use of expressive gestures by speakers of European languages; such gestures often correspond also to sentence-final particles of the interjectional type, such as né and yó, as pointed out in §15.

Often you will see the mimetic part of the word written in katakana, with tó in hiragana; this is especially common for phonomimes, much as quotes are often used in English ('the cow went "moo"'). But a number of adverbs that originate in mimetic (or quasi-mimetic) morphemes have lost the feel of being special vocabulary and their meanings have been rather widely extended; these are most often written in hiragana throughout, especially such words as tyóttó = tyóq to, móttó = móq to, zuttó = zuq to, kittó = kiq tó, tyántó = tyan tó, úntó = ún(¯) tó; hakkíri, yukkúri, Of those words ending in -tó, Saeki 1960.11 suggests that only the following seventeen be treated as lexical adverbs to be written solid: huto, hyóttó, kittó, móttó, onozuto, tantó, titó, tittó, tóntó, tyántó, tyóttó, úntó, wázato, yattó, zattó, zittó, zutto.

25. I take the term (and the concept) from H. Kindaichi in Ōno 1967.29-30.

22 STYLIZATIONS

Sentences can be “stylized” in two ways, to show respect (POLITE STYLE) or deference (HONORIFIC STYLE) toward the person to whom the sentence is spoken. The honorific style is also called the HYPERPOLITE or ELEGANT style, and these terms may be less confusing than “honorific”, which I am using in a somewhat restricted, technical sense; what I have called SUBJECT EXALTATION (§6.1) is sometimes called “honorific speech”, and what I have called OBJECT EXALTATION (§6.2) is sometimes called “humble speech”.

Use of the honorific style is a bit like the insertion of “sir” in American prep-school speech; if overdone, it sounds unnatural. Polite stylization is common at the end of a sentence or followed by a particle extension (such as *ká*). Polite sentences that are adnominalized (-*másu* N da and negative -*masén* N da) or adverbialized (-*másite* and -*masén* de or [Mio 213] -*masén* desite,¹ -*másitari* and -*masén* desitari, -*másitara* and -*masén* desitara, -*máseba*/-*masúreba* and -*masén* nara) sound more deferential than the usual polite style and are not too common, except when used as sentence fragments: *Arimásitara née* ‘If I only had some, you see’. But see §17.4 for -*másu* (or *désu* etc.) + *monó* ‘but ...’—a womanly protest.

Mio observes that polite stylization is not ordinarily used with NONFINAL forms—other than ... *gá* ‘but’ and the like, except:

- (1) with an HONORIFIC final clause, so that each part of the complex sentence is upgraded one style, so to speak;
- (2) with an incomplete sentence fragment that “picks up” the stylization we would have expected to find at the end of the full sentence; and
- (3) before an interrupting pause, often accompanied by ... *né*.

Mio says that polite stylization is still less common with adnominalizations—other than the rather special cases of *nó* de and *nó* ni (§14.2.1-2)—and largely limited to sentences with a final honorific-styled clause. I have caught the following examples: *Másu kan-zimásita no wa ...* ‘The first thing I felt was ...’; [*koko*] de *yatte orimásu sigoto* ‘the job I am doing here’; *íma moosimásita yóo na ími de* ‘in a sense like that I have just mentioned’; *Kinóo^[1] mairimásita tokoró wa née* (*kírei* de *gozaimásita*) ‘The place we went yesterday, you see—(it was lovely)’.

The polite stylization at the end of a complex sentence will induce similar stylization within the sentence before various linking elements, to varying extents depending on the individual element (cf. Mio 248-9). Below are tables of percentage for several linking elements; the order gives us a rough idea of the looseness of connection of each element. There are four columns of figures: the first shows the percentages found by Mio 252; the following three are from KKK 25.170, where ratios are separately taken for conversational passages, other passages, and overall text.

1. But *-*masénai* de and *-(a)*nái* desite are apparently used by no one, not even sentence-final as questions or (with optional *yó*) statements in female speech.

LINK	MIO 252	KKK 25.170		overall
		conversation	other	
gá	94.5 ²	87.7	98.2	94.9
kéredo	86.0	63.6	57.1	62.5
món desu kara	76.0	48.9	100.0	74.7
kará	73.0			
sí	58.0	41.7	61.1	53.3
nó de	28.0	13.3	24.5	21.9
nó ni	20.0	33.3	14.3	20.0
tó	7.3	21.5	25.3	23.7
-tára	6.0	0.0	35.3	19.7
-té mo			4.5	1.7
-te			4.5	1.2
-réba			0.0	0.0

Although there are some questions on the statistics, the general picture is quite clear. (The large difference between the two studies with respect to *tó* may indicate that the KKK study included the quotational *tó*, which Mio—and we—would exclude.)

Mikami (1963a.27-8) suggests that nonfinal stylization is more likely to occur (if at all) when the action is clearly about the speaker or the hearer. He also says (1963a.25ff) that stylization is applied by starting from major breaks and going on to minor breaks—both within the sentence and in the larger paragraph. In order of RESISTANCE to stylization he lists five stages: (1) gerund conjoining (*sité*); (2) conditionals (*sítára*, *suru tó*); (3) ... *nó de*, ... *nó ni*; (4) predicative + conjunction (presumably *gá*, *kará*, *kéredo*, *sí*); (5) sentence-final. Mikami (1963a.27) says that V-i ni iku (§9.1.1) does not stylize the V (in fact there is no *V-mási as such anywhere) nor does V-rú/-tá *kará ni* [wa] (§17.1) despite the acceptability of V-i-másu/-másita *kara* without *ni*. An example of ... *arimásu ka sira* will be found in §15.9, p. 937.

Mio (354) says the gerund is never stylized before auxiliaries (**simásite iru*, **simásite imasu*, **simásite orimásu*), hence (there being no **simásite kudasáru*) not before *kudasái* in polite requests (**simásite kudasái* → *site kudasaimáse*). The stylized gerund is used sentence-final (see §9.2.1a): *Soo iu íken mo arimásite ná* 'There are some such opinions, you see' (SA 2686.48a). When applied to semantically tenuous gerunds (such as those in the phrasal postpositions of §9.7: ... *ni atarimásite*, *tukimásite*, etc.), the stylization seems to add a touch of elegance.

Mikami (1963a.25) points out that the polite infinitive *-mási-i* is not actually used for anything, except to build the gerund *-másiite* (and related forms); it is of interest to observe that, unlike the situation without stylization, you can not substitute the infinitive for the gerund in loosely linking two sentences: *Utí(-) e káeri/káette góhan o tábeta* 'I returned home and ate' but *Utí(-) e kaerimásiite/*kaerimási* *góhan o tabemásiita*. Mikami (1963a.30) also says that while speakers accept both plain gerund + exalting polite (*O-uti e káette mesiarimásu ka*) and exalting plain or polite gerund + exalting polite (*O-uti e o-kaeri ni nátte/narimásiite mesiarimásu ka*), it is a bit "rude" to follow the unexalting polite gerund by the exalting polite: "*O-uti e kaerimásiite mesiarimásu ka*".

2. I.e. only 5.5 percent of sentences that end in *désu* (etc.) have *dá* (etc.) rather than *désu* (etc.) before *gá* 'but' within them.

Although *N désite*³ and *N de gozaimásite* will be heard, neither **A-í desite* nor **A-í de gozaimásite* are acceptable, being replaced by *A-[k]u gozaimásite* or just *A-[k]ute*. Instead of *N désite* you may hear *N de arimásite*: *Atakusi wa íma de mo kookoku-syasinka de arimásite, nyuudo-syasinka to iwareru kotó wa ...* 'I am still (an advertising =) a commercial photographer; and to be called a nude-photographer, well ...' (SA 2680.47b).

Hyperpolite stylization is unusual for adnominalized sentences, especially those with adjectival and precopular nouns, but it is sometimes found before a postadnominal or in a quasi-final sentence fragment: *O-samuu gozaimásu utí(-) ni* 'Despite the cold weather'; *Nami^f no sízuka de gozaimásita kotó wa* 'The fact that the waves were calm'; *Sore ga hontoo de gozaimásita baai wa* 'The situation where (= If) that was true'. The polite perfect copula *désita* may appear—though infrequently—before such postadnominals as *séi* [ka], *tamé*, *kawari*, etc., yet it almost never occurs adnominal to an ordinary noun (i.e. an extruded epitheme). And *-masén* (*desita*) NOUN is said to be quite rare—under one percent of stylized adnominalizations; the stylization is largely limited to the AFFIRMATIVE adnominalizations, with the perfect (*-másita*) making up the bulk (about 70 percent) of the cases and the imperfect (*-másu*) occurring in most of the remaining 30 percent of the examples. (But we find examples such as ... *zikan ga gozaimasén no de wa ...* 'since I lack the time', with a postadnominal.)

In their discussions of what they call *keigo* ("respect language" in O'Neill's translation), Japanese often lump sentence stylizations together with the conversions we are referring to as subject and object exaltation; they also include lexical honorifics, and polite euphemisms (or genteelisms) such as *tabéru* (and now *itadaku*) for *kúu* 'eats', *motoméru* for *kau* 'buys', *naku-naru* 'passes away' for *sinu* 'dies', *yorosii* for *yói/íi* in the sense 'satisfactory', *oisii* 'delicious' for *umái* 'good (tasting)' (the latter is more used by men and the former by women), *o-naka ga suku* for *hara ga her-u* 'gets hungry', etc.—called *teinei-go* ("polite words") by Mio (333). In this broad sense of *keigo*, Tsujimura (216) lists five uses to which it is put: (1) to observe relative social status, (2) to seek favor or patronage, (3) to keep one's distance, (4) to maintain one's "dignity", (5) to show affection.

It is open to question whether a speaker starts from some "basic" style (or form) and then upgrades or downgrades that so as to reach the level he wishes, or whether he freely enters the system at any point and then moves on from there. If the former, is the basic style the one represented by *N dá* (called *dá-tai*) or that represented by *N désu* (called *désu-tai*)? We have followed most modern grammarians in assuming that the *dá-tai* is basic; but observe that a sentence ending in *dá* itself (with no final particle or other element) is semantically marked as rude or rough and the connotationally unmarked version will suppress the imperfect copula: *Kore wa hón []* rather than *Kore wa hón da*.⁴

We have pointed out elsewhere (§15) that there are many devices utilized to personalize a sentence and the interplay between them is subtle and elusive.

3. Examples of *désite* will be found in §9.2.1a and in *Terase* 129-30.

4. The word *dá* goes back to the Muromachi period (Y 399); from Edo times it has been considered coarse, but more recently it has started creeping into the impersonal *de-áru* style of treatises and reportage (402). When not at the end of a sentence, of course, there is usually no feeling that *dá* is a "marked" form, since it can not be omitted.

22.1. POLITE STYLIZATION

Polite stylization is typically produced by attaching the bound auxiliary *-másu* to the infinitive of verbals, by attaching to (the imperfect or perfect of) adjectivals the word *désu*, and by changing *dá* to *désu* after nominals. An alternative to *V-i-másu* attaches *désu* to the verbal imperfect: *Yobú desu* = *Yobimásu*. This form seems to be gaining popularity among younger *Tōkyō* speakers; you will also hear *dátta desu* for *désita*—or perhaps for *dátta no desu*: *Ítu mo ohanasi-tyuu dátta desu yo* ‘Your line’s been busy (all day)’; *Erái otóosan datta desu né* ‘He was a splendid father, wasn’t he’ (Tk 2.94b); ... *sono tugí ga atasi dátta desu né* ‘and the next was me, you see’ (Tk 4.300a); *Mukasya [= Mukasi wa] sóo datta desu né* ‘That’s the way it used to be, all right’ (Tk 3.325a); *Utida san no koogi-buri wa, dóo iu húu datta ka* ‘What was your lecture style like, Mr Uchida?’ (Tk 3.98a). An example of *N dé wa átta desu* (= *N dé wa arimásita*): *Tó-ni-kaku insyoo-teki na rasuto-siin de wa átta desu né* ‘Anyway, it WAS an impressive last scene, wasn’t it’ (Tk 2.125b).

The negative is traditionally built on the polite form (*Yobu* → *Yobimásu* → *Yobimasén*), but it is increasingly popular to reverse the order of the conversions: *Yobu* → *Yobanai* → *Yobanai desu* (whence the double negative *Yobanai de wa nai* ‘It isn’t that one doesn’t call’, cf. remarks on the negative gerund, p. 477). Similarly, the perfect is traditionally built on the polite (*Yobu* → *Yobimásu* → *Yobimásita*) but the reversed order is increasingly popular (*Yobu* → *Yonda* → *Yondá desu*); the reversed order is especially favored for adjectivals, and some speakers would completely reject *Ookii desita* in favor of *Óokikatta desu*. The forms with verbal/adjectival + *désu* are often considered to be abbreviations of verbal/adjectival + *nó desu* (§ 14.2); this may be the historical origin, but synchronically the two should be kept distinct. Tsujimura (126, 128 n. 5) tells us these forms have been spreading since Meiji times, but (198) the verb forms such as *káeru desu* = *kaerimásu* have been slower to spread than the adjective forms, including verbal negatives.⁵ The following examples of *-(a)nai desu* are from the speech of Miss Yoshinaga Sayuri (b. *Tōkyō* 1945) in an interview in SA 2645: *Goori-teki zya nai desu yó* ‘It isn’t logical, I tell you’ (48d); (*Imootó-san to kenka suru?—*) *Imootó to wa sinai desu né* ‘(Do you quarrel with your younger sister?—) I don’t, not with my sister’ (48d); *Sóo wa omowanai desu* ‘I don’t think so’ (50c). And from Miss Itō Yukari (b. *Tōkyō* 1947): (*Séetaa améru ka.—*) *Sore wa dekinai desu* ‘(Can you knit sweaters?—) That I can’t’ (SA 2651.46b). An example from the speech of Saga Sen (b. *Tōkyō* 1914): *Bóku(=) wa sake [o] nomán desu kara, ...* ‘I don’t drink, so ...’ (SA 2650.42b). And from an interview with Shishi Bunroku (b. *Yokohama* 1893) shortly before his death in 1969: *Mínai desu né* ‘I don’t watch it [= television comedy]’ (SA 2658.127d). An example from Hatano Akira (b. *Kanagawa* 1911): *Nai desu ná* ‘I have none’ (SA 2678.46b). There are quite a few examples in the speech of Okayama-born Kihara Michiko in her interview in SA 2640.42-6, e.g.: *Sinai desu* ‘I don’t’ (42d); *Sonná no, nai desu yó* ‘I haven’t any like that’ (43b); *Sóo de mo nai desu yó* ‘That’s not true, either’ (43c).

5. One use of *V-rú desu* is to combine an expression of respect (in the form of a subject-exaltation conversion on the *V-ru*) with polite friendliness: *Sore zya, taitei no ningen yóri wa óoku mawatte irassyáru desu né* ‘And you’ve been around more than most people, haven’t you’ (Tk 2.260a). Examples of *V-rú desu* (even *áru desu*) and *V-i-másu desu* will be found in Y 466, where the forms are described as “not very *Tōkyō*-like—at most, *hama* talk”. Y 477 says that women tend to use (V/A) *n desu*, where men are more likely to drop the *n*.

In addition to *yobimásu* and *yobú desu*, Tsujimura observes that *yobimásu desu* is “used by merchants” (211). Sometimes one gets the feeling that *désu* can be added to just about anything to lend a touch of politeness.⁶ It should be noted that *désu* is often underarticulated and sometimes reduces to *’s[u]* as in the following examples (SA 2657.143): ... *sukunái n ’su yó* ‘... are few!’; *Mattakú^l menboku-nái ’su yó* ‘I am thoroughly ashamed of myself, I tell you’. The speaker, to be sure, is a *rakugo* comic storyteller. But here are more examples: *Sorya katyoo no meirei de yattá n ’su yó* ‘I tell you I did that at the section head’s orders’ (SA 2688.145a); *Muzukasii ’su ná* ‘It’s hard, you know’ (SA 2679.150—*katakana su*); *Assi-ra [= Watasii-ra] kankei náí ’su yó* ‘Makes no difference to us [taxi drivers whether the companies raise the fares or not]’ (SA 2666.37a); *Ánta wa nán ’su ka* ‘What are you doing here?’ (SA 2669.37a—policeman harassing bystander); *Sóo ’su yó née* ‘That’s true enough, all right’ (SA 2689.161b—*katakana su*); *Sóo ’s’ e < Sóo [da]sse = Sóo desu yó/né* (Ōsaka, Zhs 4.205); *Sóo ’s’ a ná[a] = Sóo desu wa náa* ‘That’s true, isn’t it’ (Okitsu 1.227, 248). The following paradigms show some of the possibilities for each category in polite stylization:

	AFFIRMATIVE	NEGATIVE
IMPERFECT	<i>Yobimásu.</i> <i>Yobú desu.</i> <i>Ookii desu.</i> <i>Hón desu.</i>	<i>Yobimasén.</i> <i>Yobanáí desu.</i> <i>Óokiku arimasén.</i> <i>Óokiku náí desu.</i> <i>Hón zya arimasén.</i> <i>Hón zya náí desu.</i>
PERFECT	<i>Yobimásita.</i> <i>Yondá desu.</i> ⁸ <i>Ookii desita.</i> <i>Óokikatta desu.</i> <i>Hón desita.</i>	<i>Yobimasén desita.</i> ⁷ <i>Yobanákkatta desu.</i> <i>Óokiku arimasén desita.</i> <i>Óokiku nákkatta desu.</i> <i>Hón zya arimasén desita.</i> <i>Hón zya nákkatta desu.</i>
TENTATIVE	<i>Yobimásu (n) desyoo.</i> <i>Yobú desyoo.</i> ⁹	<i>Yobimasén desyoo.</i> <i>Yobanáí desyoo.</i> ¹⁰ <i>Yobimásu ~mái.</i>

6. Thus the following ingratiating sentences from Suzuki Kenji, an NHK announcer (SA 2676.46ab): *Hái, yarimásu desu yó; ... yarimásita desu né; Ironna tegami ga kimásu desu né.* A less exuberant example: ... *sono mama^[j] zyósyu to site nokorimásita desu* ‘I remained on as an assistant’ (SA 2689.53b).

7. On the Meiji usage of *-masénkatta* and *-masénanda = -masén desita*, see Mio 217 and Tsujimura 161, 162 (n. 5-6); cf. the dialect form *-(a)nanda = -(a)nákatta*, p. 372. Here is an example: ... *sukósi^[j] mo hosigáři wa nasaimasénanda* ‘hadn’t the least desire for it’ (Fn 53a). According to Y 467, the form *-masén desita* appeared in Meiji times and came to replace *-masénanda* (also *-masinanda*) by way of the form *-maséndatta*. The contraction *-masen(an)da (= -masén desita)* in Mie and Nara (Hōgen-gaku gaisetsu 406) should not be misconstrued as some strange combination of *-masén + dá*.

8. Mio 224 observes that *-másita desu* is “unrefined”, and its abbreviation *-mási[t a d]esu* is even more so. Examples will be found in n.6 above.

9. For an example of *arimasyoo = aru desyoo*, see p. 615 (§12.3).

10. Tsujimura 117 quotes Mio as favoring *-(a)nái desyoo* over *-masén desyoo*; that preference despite *-masén desita* and the dim view taken of *(*)-(a)nái desita*.

	Ookii desyoo.	Óokiku arimasén desyoo. Óokiku náí desyoo. Óokiku arimásu ~mái.
	Hón desyoo.	Hón zya arimasén desyoo. Hón zya náí desyoo. Hón zya arimásu ~mái.
PERF. TENT.	Yobimásita desyoo. Yondá desyoo. ¹¹ Ookii desita desyoo. Óokikatta desyoo. Hón desita desyoo. ¹² Hón datta desyoo.	Yobimasén desita desyoo. Yobanákatatta desyoo. Óokiku arimasén desita desyoo. Óokiku nákatatta desyoo. Hón zya arimasén desita desyoo. Hón zya nákatatta desyoo.
HORTATIVE IMPERATIVE	Yobimasyóo. Yobimáse. Yobimási. ¹⁴	Yobimásu ~mái. ¹³ Yobimásu na.

The imperative is usually limited to subject-exalting verbs (*kudasaimáse*, *nasaimáse* etc.) so that **ikimáse* will not be heard from a standard speaker, for he will instead say *irassyaimáse* or *o-ide* (*ni nátte*) *kudasaimáse*. According to Tsujimura 204 the imperative *-máse/-mási* is used only with these verbs: *irassyáru*, *nasáru*, *kudasáru*, *ossyáru*; *asobasu*, *mesiagaru*, *mésu*. But I believe you will see other verbs in the form *V-i-máse* in advertisements from time to time. Y 284 says *-máse* is limited in Tōkyō to subject-exalting verbs, but in Shikoku is widely used for all verbs (e.g. *ikimáse* 'go').

Though not common, adnominalization of *-másu* occurs (particularly with postadnominals), as in *Go-kóohai kudasaimásu yóo ni o-negai itasimásu* 'Please use your good offices on my behalf', and sometimes a pseudo-literary ATTRIBUTIVE form *-masúru* is written (Mio 220): *Sore ni Wakáyama ni orimasúru háha ga are bákari táyori ni itásite(-)* 'And I will depend to that extent on my mother who is in Wakayama'; *Taku é de mo máitte iru yóo ni itasóo ka to zon-zimasúru no de gozaimásu* 'I am wondering whether I should decide to come and stay perhaps at your house'; *Koko ni híroo simasúru {no} wa, ún o tén ni makásete no dai-bóoken {da}* 'What we will reveal here is a great venture with one's fate entrusted to heaven' (SA 2666.16—for the direct nominalization, see § 14.6). And, in appropriate literary fashion, the form is extended to some conjunctivalizations that we do not usually consider adnominalizations (since the colloquial uses *dá*, not *ná/nó*, for the copula): *Sore ni gisei no tamé o omótte mimasúru to, gesyuku ni okimásu no wa ikága de gozaimasyóo* 'And thinking of the victims' welfare, how about putting them in a boarding house?' (As *okimásu* in the last part of the example shows, the use of *-masúru* is only an

11. Mio 224 says *-mási* 'roo is "little used now"; Mio 233 gives examples of *gozaimási* 'roo.

12. But *desita desyoo* is considered "ingratiating" by some; apparently there is no corresponding **desita desu*. Nor is there **desita daroo*, though *desita* 'roo will be heard from male speakers (cf. fn. 8): *Hu-yúkai desita 'roo né* 'It must have been unpleasant' (SA 2660.47a—Iizawa Tadashi).

13. But often replaced by: (1) *Yobanai kotó ni simasyóo*; *Yamemasyóo* 'Let's not'; (2) *Yobanai tumori desu* 'I think I won't'; cf. § 12.1.

14. *V-i-mási* is a Tōkyō pronunciation; in Ōsaka only the *V-i-máse* version is used (Maeda 1961.218). The latter version is also heard in older and uptown Tōkyō speech, the version with final *i* being newer and "downtown" (Y 262, Tsujimura 203). Yoshida would explain the *i* form as the infinitive used as a command.

elegant option.) I have spoken of these forms as “written”; yet KKK 23.153 (iv) gives a spoken example that includes ... wareware wa arúi-wa kázoku de arimasúru to ka arúi-wa syotái de arimasúru to ka arúi-wa máta utí(¯) nánte iu kotobá mo tukaimásu ... ‘we use words like “family”, or “household”, or “home” ...’.¹⁵

Notice that -másu ¯mái (= -masén desyoo), the negative tentative, is apparently never replaced by *-masúru ¯mái. And there seems to be no use of *-masítáru ...; nor, despite -táreba (kóso) §9.3.1, can we find an example of *-másitareba (kóso).

The provisional form (virtually limited to sentences whose final predicate is honorifically stylized) is either -máseba or -masúreba. But Tsujimura 203 says that -máseba is “not standard” and that -masúreba has never been common, even in earlier periods.

In origin the polite forms are made by adding an auxiliary verb ¯más- to the infinitive -i- (cf. §9.1.10), with the conjugational irregularities similar to those of su(ru) ‘do’; unlike other infinitive-auxiliaries, ¯másu is accentually dominant over both tonic and atonic infinitives even for the conservative speakers.

Several etymologies have been suggested for the auxiliary -más-. The best would seem to be by way of these attested forms (cf. Tsujimura 201): -mas-u[ru] < -mas-su[ru] < -mar[a]-su[ru]/-mai-su[ru] < mawira-su[ru]. Mawira-su[ru] is an old verb meaning ‘humbly presents’, used early as a humble (i.e. object-exalting) auxiliary. The origin of this verb, in turn, is no doubt the subjunctive -a form of the old verb mawir-u ‘goes, comes, etc.’ (whence modern máir-u) + the verbal auxiliary su[ru], whose presence is attested by the negative -masén[u], cf. sen[u] = sinai.¹⁶

Tsujimura 193-4 lists five suggested origins for désu: (1) de arimasu; (2) de gozaimasu; (3) de, su[ru]—i.e. copula gerund + verbal auxiliary; (4) de owasu; (5) de sooroo. Synchronically we need the first explanation anyway because of dé wa/mo arimásu; and it will suffice to explain historically both the Tōkyō form and the Ōsaka form dásu: Tōkyō is dé [arimá]su, Ōsaka is d[é] arim[á]su.¹⁷ But the Kyōto form dōsu will have to be explained as an abbreviation from d[é]g[o]zaim[á]su or from d[é] o[wa]su/omasu.¹⁸ Since these are all relatively modern forms, the divergent developments are not surprising, especially in view of the reputation of Kyōto speakers for greater elegance than is found in the speech of Tōkyō and Ōsaka. According to Lewin (128-9) dá was contracted from de ári in Muromachi times (i.e. sometime during the 15th or 16th centuries) and désu was contracted from de arimásu or de sooróo in Edo times (after 1603).

Polite forms in some of the dialects are the result of contractions and assimilations of various sorts. For example, V-i-masu will often drop the nasal V-i-[m]asu, intrude a palatal

15. The -masúru forms are used for both attributive and predicative functions in formal speeches, according to Gekkan-Bumpō 1/8.56 (1969).

16. Yoshida (284) suggests a possible blend with the old verb másu, a subject-exalting euphemism for ‘stays’ or ‘goes’, and/or with the verb máusu < mawósu ‘tells; humbly does’, the source of modern móosu ‘(humbly) tells/does’.

17. This is not necessarily in conflict with Maeda’s explanation (1961.149) that dasu came from de yasu, since yasu is a shortening from [ar]i[m]asu.

18. But these descriptions are misleading. Dásu is a contraction of de omásu, still used in Ōsaka; dōsu is a contraction of de ósu, ósu being the Kyōto contraction of omásu. Omásu (not to be confused with orimásu ‘stays’) is a polite Kansai verb used as an equivalent of arimásu (the plain form being áru) and sometimes also of imásu/orimásu.

semivowel V-i-yasu, and sometimes reduce to V-yasu. And that will account for such Ōsaka forms as these: ... to omowareyasu = omowaremásu (SA 2678.205a); ... to iu iikata o itasiyasu [= itasímásu] (SA 2678.205-6); kiyan na (Zhs 4.191) < kiyas[_u] na < kiyasu na < ki[m]asu na = kimásu ná; iiyasu mon naa (Zhs 4.192) = iimásu kara náa; nariasita (Zhs 4.197) = narímásita; narihen wa (Zhs 4.192) = narimasén wá. (I here assume a different development from that explaining the negative forms on p. 376.) In place of dé arimásu (or its contraction desu, Ōsaka dásu, and the Kyōto equivalent dósu) you will sometimes find dé^[r] yá[n]su: Zyumyoo ga nóbite kíta sóo de yansu ga, ... 'They say life (expectancy) is getting longer, ...' (SA 2679.105d); ... genkyoo de yásu ná 'is the chief culprit, you know' (ibid.); ... o-kage de yansyóo = o-kage desyóo 'is probably due to that' (id.205a). You will also find de omásu, the uncontracted form of dásu = desu: Kázitu, kansan to sita doobutú-en no gorira-gáaden de no kotó de omásu 'It happened a few days ago in the quiet Gorilla Garden of the zoo' (SA 2671.118a). And de ósu, the source of Kyōto dósu, also appears (Shūkan-Yomiuri 1289.67).

The Tōkyō polite copula desu, which we will assume is a contraction of dé [arimásu], has been borrowed into dialects as a variant of more authentic local developments such as Ōsaka dásu < d[é om]ásu and Kyōto dósu < d[é] ósu (ósu being the Kyōto equivalent of Ōsaka omásu = arimásu). The final -su on these forms, and also on other polite and hyperpolite forms such as go[w]asu < goza[r]imásu, is often lisped or assimilated to a following consonant. The lisp is especially characteristic of Kyōto women's speech, where you may hear a voiceless interdental fricative [θ] as well as the totally swallowed s > h. Here is a list of parallel forms from Ōsaka and Kyōto speech, expanded from Maeda 1961.19, with the Tōkyō equivalents on the left:

TŌKYŌ	ŌSAKA	KYŌTO
désu	dásu; desu	dósu, ¹⁹ dóh; desu, déh
zya arimasén	ya omahén	ya ohén/oohén ²⁰
arimásu	omásu	ósu, ²¹ óh
V-i-másu, -masén	V-i-másu, -mahén	V-i-másu/-máh, -mahén ^{21a}
désu ka	dák ka; dék ka	dósu ka, dóh ka; desu ka, déh ka
arimásu ka	omák ka	ósu ka, óh ka
V-i-másu ka	V-i-mák ka	V-i-másu ka, V-i-máh ka

19. But notice the contraction in ... nó '[o]su = ... nó desu.

20. Zhs 4.240. The ya in these forms is from dé wa > dé [w]a > dé ya > dyá₁ > ya₁; cf. dé á[ru] > dyá₂ > yá₂ (= dá).

21. Though sometimes thought to be contractions of o- + arimásu, the verb o[ma]su goes back to omasu/owasu, an old honorific for 'go, come, be (animate or inanimate)', ultimately derived from o- + ma[w]ira-su, the likely source of -másu itself. Cf. Makimura 131-2. O[ma]su is used as an equivalent of iru/óru as well as áru (Zhs 4.20). And it serves as an auxiliary (comparable to áru) in other constructions, e.g.: Yohodo donari-tóo omásita ga, ... 'I very much wanted to shout, but ...' (SA 2671.118c) —equivalent to donari-tá[k]ju [wa] arimásita = donari-tákatta desu. The negative of the V-te ya sentence (in which ya is to be taken as the copula, equivalent to dá—see §9.2.1) is V-te ya omahén (= V-te zya arimasén); these are Ōsaka forms of an intermediate degree of politeness (Maeda 1961.227).

21a. Also reported (Y 290) is -mehen, but I am uncertain whether it is localized. Corresponding to -másu, Y 290 cites examples of -ma, taken as shortenings of -ma[h]u.

désu kara	dás sakai; dés sakai ²²	dós sakai, ²³ dés sakai ²⁴

Examples of dialect polite forms: Kane ga mokuteki ya omahén 'Money is not the object' (SA 2678.65cd, Ōsaka); Kane o tóru kotó ga mokuteki ya omahén né 'Taking money is not the object' (id.); Rokotu no hyoogén(¯) ya ohén 'It's not a frank expression' (Shūkan-Yomiuri 1289.67a, Kyōto); Tosi-kasa no monó ga ikán to sin'yoo ná sákai si-yoo ga ohén [= si-yoo ga arimasén] 'We are at a loss because they [= the potential backers] lack faith in how we older fellows will do [as mountain climbers]' (SA 2680.114e, Kyōto); Móo arasimahén yaro [= Móo arimasén desyoo] 'There wouldn't be any more' (Ōsaka, Zhs 4.197) < ár[i w]a simasén[u] + yaro = daróo; ... yarasimahén yaro [= yarasimásén desyoo] 'probably wouldn't do it' (Zhs 4.197); Zyettó-ki no séi desu yaro ná 'It's because of those jets, you know' (SA 2678.65e, Ōsaka); Sore mo toozen déssyaro 'It [= the accident] was only too likely to happen' (SA 2678.128a, Toyonaka); ... narimásita yaro [= náтта desyóo, narimasita desyóo] 'must have become ...' (Ōsaka, Zhs 4.195); O-turi oo osse [= óo[k]u osu e = óo[o] gozaimásu yó] 'You've given me too much change!' (Kyōto, Inokuchi 101); Yorosi osu [= Yorosi[ku] osu = Yorosyuu gozaimásu yó] 'That's quite all right'; Akimahén e [= Ikemasén yó] 'That won't do' (Kyōto, Inokuchi

22. Zhs 4.211.

23. Zhs 4.232.

24. Zhs 4.233.

25. The doubled sibilant in these forms reflects a more general habit; cf. tossyóri < tosiyóri, nittyo[o] < nitiyoo. And notice the contraction in ... nó [do]ssyaro (Zhs 4.234).

26. Maeda 1961.75. We can add -mayo (Y 290).

27. Zhs 4.232. It is said that dósse is masculine, dósu e feminine (SM 2795.102).

28. Zhs 4.229.

29. But -manne is said to be from -masu no e/yo (Inokuchi 274).

269); Kora, uti no kodomo dónne ya [ʔ = dósu no e ya = désu yó] ‘This is my child’ (Kyōto, Inokuchi 95).

Y 263 cites examples of -massu, -massen, -masse (imperative), and -massyoo from written versions of Kyūshū speech. In southern Kyūshū the polite verb forms are made with V-i-mosu (Zhs 6.25). In eastern Kantō and neighboring areas sentence stylization is said to be largely lacking (Kindaichi Kyōsuke 1959.178).

22.2. HONORIFIC (HYPERPOLITE, ELEGANT) STYLIZATION

Nominal sentences are made honorific by changing dá to de gozaimásu; the negative is dé {wa} gozaimasén. But if the subject is to be exalted, de irassyaimásu will replace de gozaimásu: Tanaka senseí de wa irassyaimasén ka ‘Aren’t you Dr. Tanaka?’ Adjectival sentences are made honorific by adding gozaimásu (negative gozaimasén) after the infinitive; obligatorily before the affirmative and optionally before the negative, the infinitive A-ku appears in the Kansai abbreviated form A-‘u (= A-[k]u) which is altered through crasis with a preceding vowel as follows:

...u-‘u	...uu	wáru-‘u = wáruu
...i-‘u	...yuu	óoki-‘u = óokyuu, okási-‘u = okásyuu
...o-‘u	...oo	kúro-‘u = kúroo
...a-‘u	...oo	táka-‘u = tákoo

But further contraction takes place in óo[k]u > óoo > óo gozaimásu ‘are many’ and too[k]u > tooo > too gozaimásu ‘is distant’; we would expect yówa[k]u > yó[w]oo > (?)yóo gozaimásu ‘is weak’ to sound the same as yó[k]u > yóo gozaimásu ‘is good’, but I have been unable to confirm either that form or kówa[k]u > kó[w]oo > (?)kóo gozaimásu ‘I am afraid’. In western Japan these k-dropping forms are widely used for the adjective infinitive in ALL expressions; and the long final vowels are often shortened. If the subject is to be exalted, A-kute irassyaimásu will often replace A-[k]u gozaimásu: O-isogásikute irassyaimasén ka ‘Aren’t you busy?’

Strictly speaking, the only verbal that takes honorific stylization is Áru → Gozaimásu.³⁰ For other verbals, nominalization is necessary (Yobú no de gozaimásu); but sometimes the nó is dropped (Yobú de gozaimásu). Like -másu, gozaimásu is less common in adnominalized or adverbialized conversions, but we find the forms gozaimásite (gerund), gozaimásitara (conditional), gozaimásitari (alternative), and gozaimáseba or gozaimasúreba (provisional—but these forms are not in use, as mentioned earlier). The corresponding negative forms are gozaimasén de[site], gozaimasén desitara, gozaimasén desitari, and gozaimasén nara. In modern Japanese gozáru itself is virtually unused, but you will hear it on the kabuki stage and in samurai films—with REGULAR conjugation, so that gozarimásu is used for gozaimásu. The plain forms are sometimes employed for humorous effect: Tote-mo watasi

30. But there are those who use orimásu (for iru ‘stays, is’) and mairimásu (for kúru ‘comes’—also iku ‘goes’?) sometimes merely as honorific stylization rather than for object exaltation, especially with an impersonal subject or as an auxiliary; this is more common in writing and in Kansai speech but it seems to be spreading. On such usage and similar uses of itasu, móosu, and itadaku, see §6.4. Y 267 cites examples of female speakers in novels who use V-i-másite gozaimásu, but observes that in meaning the usage corresponds to the perfect V-i-másita, for which the ladies have substituted the auxiliary construction V-te áru, with polite stylization of the verb gerund and honorific stylization of the auxiliary.

nádo, oyobu tokoró de wa gozaránu 'The likes of me could ne'er match it [= his enthusiasm]' (SA 2669.91b). The verb even appears in the imperative form in the compound noun *nandemo-gozáre* = *nandemo-kói* 'Jack of all trades'. And *gozarimásu* will sometimes turn up outside the theater, too: *Sóo de gozarimásu ka* = *Sóo desu ka* (Fn 150b). For the form *gozaimásuru*, borrowed from the literary attributive, see the remarks on *-masúru* in the preceding section; the example with *N de arimasúru tó ka* could have been said with *N de gozaimásuru tó ka*. In western Japan *gozaimásu* is often reduced to *gozánsu*: *Otótosi Sanhuransísuko e itta tokí wa, omosíroo gozánsita né* 'Visiting San Francisco year before last was most enjoyable, you know' (SA 2659.120e—traditional theater man Matsumoto Gennosuke); ... *yó[ku] gozánsita* 'was good' (SA 2689.42b). A further reduction to *go[zaim]ásu*, usually spelled *gowásu* (with intruded labial semivowel *-w-* after rounded *o*), is also common in western Japan and elsewhere (e.g. Nagano, Zhs 2.567): ... *ne-kónde simoota no de gowasu* [= *ne-kónde simatta no de gozaimasu*] 'fell asleep' (KKK 25.76a). This is sometimes further reduced to *g[ozaim]ásu* = *g'ásu*: *Ée, are wa úmo g'ásita* 'Yes, he was good (at it)' (Tk 2.15a—*úmoo* < *úma[k]u*); ... *okásyuu g'ásita né* 'it was odd, you know' (Tk 2.18b). By combining the forms found in Zhs and in Fujiwara 125, we can make the following table of dialect variants for *goza[r]imásu*:

gozaisu	goze[e]su ³¹	gozasu ^{31a} gozyasu	goasu gaisu goisu	gowasu gesu ³² gosu gasu
gozansu	gozyensu ³³	goansu gonsu gansu gan ³⁴		
[go]zeensu ³⁵ [g]ozaimasu ³⁷ [goz]ansu ³⁸	gozensu ^{36,33}			[g]owasu ³⁹

Paradigms for the honorific stylization are shown in the following chart. The left column displays the affirmative sentences; the right column gives the corresponding negative sentences.

31. Ishikawa, Zhs 3.112.

31a. And *gozassu* appears in Tk 3.296b.

32. Iwate, Zhs 1.125.

33. Ishikawa, Zhs 3.110 (etc.).

34. Cf. *gan-kotoba*, p. 48.

35. Zhs 1.83-4.

36. Zhs 1.86.

37. Kyōto, Zhs 4.245; 'ozaimahén 4.230. For the copula Y 471 (in a chart based on Kindaichi Kyōsuke) includes the forms *de [go]zaimásu*, *[de] 'zaimásu*, *'zaimásu*, *'zamásu*, and *'zánsu*; another line of development listed includes *de go[z]ánsu*, *de gó[n]su*, *de gá[n]su*, *deá[n]su*, *dá[n]su*.

38. Chiba 2.323—or is this from *arimasu*?

39. In *N de owasu* = *N de gozaimásu* (Tk 2.4a).

IMPERF.	Gozaimásu. Óokyyu gozaimásu. Hón de gozaimásu. ⁴⁰ Yobú (no) de gozaimásu. Yobimásu de gozaimásu.	Gozaimasén. Óokiku/Óokyyu gozaimasén. Hón de wa gozaimasén. Yobú (no) de wa gozaimasén. Yobanáí (no) de gozaimásu. Yobimasén de gozaimásu.
PERF.	Gozaimásita. Óokyyu gozaimásita. Óokikatta de gozaimásu. Hón de gozaimásita. Yondá (no) de gozaimásu. Yobú (no) de gozaimásita.	Gozaimasén desita. Óokiku/Óokyyu gozaimasén desita. Óokiku nákatta de gozaimásu. Hón de wa gozaimasén desita. Yondá (no) de wa gozaimasén desita. Yobanákatta (no) de wa gozaimasén.
TENT.	Gozaimasyóo. Gozaimásu desyoo. Óokyyu gozaimasyóo. Hón de gozaimasyóo. Yobú (no) de gozaimasyóo. Yobimásu de gozaimasyóo.	Gozaimasén desyoo. Gozaimásu máí. Óokiku/Óokyyu gozaimasén desyoo. Hón de wa gozaimasén desyoo. Hón de wa náí de gozaimasyóo. Yobú (no) de gozaimasén desyoo. Yobanáí (no) de gozaimasyóo. Yobimasén de gozaimasyóo.
PERF.	Gozaimásita desyoo. ⁴¹	Gozaimasén desita desyoo.
TENT.	Óokyyu gozaimásita desyoo. Óokikatta de gozaimasyóo. Hón de gozaimásita desyoo. Yobú (no) de gozaimásita desyoo. Yondá (no) de gozaimásita desyoo.	Óokiku/Óokyyu gozaimasén desita desyoo. Óokiku nákatta de gozaimasyóo. Hón de wa gozaimasén desita desyoo. Yobú (no) de wa gozaimasén desita desyoo. Yondá (no) de wa gozaimasén desyoo. Yobanákatta (no) de gozaimásu desyoo.

Since the only verbal which will undergo honorific stylization is *Áru*, and it can not be made into a proposal or a command, we find no honorific hortative or imperative as such. *Yobimásu de gozaimásu/gozaimasyóo* occur, but the perfect and the gerund can not be made in this fashion: **yobimásu de gozaimásita* → *yobú de gozaimásita*, **yobimásu de gozaimásite* → ? *yobú de gozaimásite*. (Cf. Mio 47.) And the use of *-másu de gozaimásu desu*) to shopkeepers soliciting favor.⁴²

40. And (in the speech of entertainers, at least) ... *de gozaimásu* is sometimes truncated: ... *de gozai*. (Okitsu 1.415 has an example.)

41. As in Niwa ni iké ga gozaimásita desyoo 'There was a pond in the garden, you see' (Tk 2.142b). Mio 233 gives examples of *gozaimásita* 'too but implies that it is little used.

42. But the late Shishi Bunroku in an interview (SA 2658.125) quotes himself as using such forms in a luncheon conversation with the Emperor: Sono-uti héika ga, kumá ga goyoo-tei no kinzyo ni déru to ka iu yóo na hanasí o sarete né, kitune mo óói to ka né. Sore de "Ano kitune wa BAKASIMÁSU DE GŌZAIMÁSU" tte ittyatta 'Meanwhile His Majesty was talking about how bears appear near his villa and how there were lots of foxes, too. At that I found myself saying "Those foxes can bewitch one"'. Throughout the interview the Emperor is referred to with the usual subject exaltation, often the passive in the speech of Shishi Bunroku but regularly o-V-i ni náru from the interviewer, Iizawa Tadashi (id. 125b): Héika wa kitune ga bakásu kotó ni, kyóomí o o-simesi ni narimasén desita ka

For VERBAL sentences, the ordinary speaker will normally not go beyond the polite forms available in the polite paradigm (yobimásu, yobimásita, yobimásu desyóo) unless he has syntactic reasons to make a nominalization (yobú no desu → yobú no de gozaimásu or yobimásu no de gozaimásu): Kekkon sité mo zenzen aénai nánte hígeki ga okóru n zya gozaimasén koto? '[For the couple who both work] there arise such tragedies as not being able to see each other at all even though they are married, you know' (SA 2640.21a)—a rhetorical question with kotó, §15.16. But the speaker will take advantage of exaltation, euphemisms, and formal words to add additional touches of politeness.

In addition to the forms found in the paradigms given above, you will run into various hybrid combinations, e.g. Iroiro omosirói hanasí ga gozaimásu n desu keredo mo ... 'There are, to be sure, many interesting things (said) but ...' in which the higher stylization is put on the "content" verb of existence rather than on the semantically weak nó da 'it is a fact that'; cf. Iroiro omosirói hanasí ga áru n[o] de gozaimásu keredomo If both parts are highly stylized, the result will be Iroiro omosirói hanasí ga gozaimásu n[o] de gozaimásu keredo mo but such excessive politeness comes on a bit thick.

22.3. OTHER STYLIZATIONS: FORMAL SPOKEN, LITERARY, FORMAL WRITTEN, AND EPISTOLARY STYLES

In addition to the stylizations that pervade everyday speech, there are a number of style options that occur only under special circumstances. In making a public address, a speaker will avail himself of forms and stereotyped phrases borrowed from the literary language while avoiding modern slang, colloquially vivid or mimetic expressions, and abbreviations. The copula will revert to the uncontracted forms de áru (impersonal) and de arimásu or de gozaimásu (personal—i.e. explicitly recognizing one's audience). At major breaks within the sentence, the infinitive will often be preferred over the gerund. Instead of the colloquial tentative, you will hear the literary tentative: áru daróo/desyóo will be replaced by aróo/arimasyóo (or by gozaimasyóo), náí daróo/desyóo will be replaced by nakaróo or by áru/arimásu mái, and hayái daróo/desyóo by hayakaróo or by háyaku aróo/arimasyóo (or háyoo gozaimasyóo). And the tentative will be allowed to modify nouns, especially postadnominals such as kotó, hazu, monó, hitó, etc.; recall that the colloquial language will adnominalize only the imperfect or perfect forms of a sentence, so that the formal tekitoo de aróo monó 'ones probably suitable' will have to be rephrased as tekitoo da to omowaréru monó 'ones that are thought suitable', tekitoo ni omowaréru monó 'ones that appear suitable', tekitoo na hazu no monó 'ones that are likely to be suitable', or just tekitoo na monó 'ones that are suitable'. In formal writing, subject and object markers (gá and ó) often drop; and the various types of ellipsis described in Martin 1970 (and in §9.1.12, §28) are common, as are direct nominalizations (§14.6).

By the LITERARY style we refer to the set of well-established traditions called Bungo, in which most literary compositions were written until modern times. Many of the less esoteric forms of the literary style are used in the formal written and epistolary styles;

'Didn't his Majesty show an interest in the foxes bewitching people?'; Tennoo-heíka no o-hanasi ní wa, yúumoa wa o-ari désu ka 'Does His Majesty the Emperor have humor in his conversation?'; Héíka wa dóo iu o-kotoba o o-tukai ni náru n desu ka 'What sort of language does His Majesty use?'

some will be found in proverbial sayings and idioms that are used in the midst of otherwise colloquial speech. The most important of these forms are treated elsewhere in this study.

The FORMAL WRITTEN style is a rather sparse version of the literary language with a number of favored set forms—not unlike those found in the “business-letter” jargon, the bureaucratese, and the legalistic phraseology (“whereat and whereby” the lawyer is able to pursue his craft) that plague some kinds of modern written English. The formal written style of Japanese has been described in some detail by Lehmann and Faust (LF); they also provide information on the epistolary style, as do a number of other sources.

The principal characteristic of the EPISTOLARY style is the omnipresent auxiliary verb *sooróo* (historically spelled *sahurahu*), a verb that originally meant ‘serves’, etymologically related to the noun *samurai*.⁴³ This auxiliary, often pronounced with short vowels as *soro*, is attached to the infinitive: V-i, V-(a)zu (the literary negative infinitive), A-ku, N ni. The resulting forms can be shown as parallels to the colloquial equivalents (on the left):

káku ‘writes’	káki sooroo
kakánai ‘does not write’	kákazu sooroo
aku ‘it opens’	aki sooróo
akanai ‘it does not open’	akazu sooróo
takái ‘it is high’	tákaku sooroo
tákaku náí ‘it is not high’	tákaku náku sooroo
áru ‘it exists’	kore-ári sooroo
náí ‘it does not exist’	kore-náku sooroo
N dá ‘it is N’	{ N ni kore-ári sooroo N ni góza sooroo N ni sooróo (LF 128)
N de/zya náí ‘it is not N’	{ N ni kore-náku sooroo N ni árazu sooroo

Although some of the inflected forms of *sooróo* are in use—*soorawába* ‘if’, *sooraéba* ‘since’, *sooraédo mo* ‘although’—it is rare to find the gerund (for which the appropriate form is *sooróote*, cf. Kansai *haróote* = *harátte*) or the tentative (*soorawán* < *soorawámu*), the latter being replaced by the affirmative V-ru *béku sooroo* (normally only with meaning ‘will’; cf. *béku*, § 15.12b) and the negative V-ru *máziku sooroo* ‘will not’ (cf. *máziki*, § 15.12a). The difference between what the colloquial would mark as perfect or imperfect (past or nonpast) must generally be understood from context; to make a specific perfect, you can adnominalize your sentence with the attributive perfect ending *-táru*: V-táru *monó ni {góza} sooróo* (LF 129).

43. If we follow Satō (2.318-9) the etymological development is *sooroo* < *saurapu* < *saburapu* < *samorapu*. The island of Toshima, not far from Tōkyō, still has *sooróo* forms, but they are used for emphasis rather than politeness (Zhs 7.19); the auxiliary sometimes appears reduced to *soo* or *ssa*, and the latter is thought by some to be connected with the sentence-extending particle *sá* used so widely in Tōkyō. The auxiliary is also found (as a sentence-extender) on the island of Oki, off Shimane prefecture, as *S sara* < *saaraa* < *saurau* < *sa[p]ura[p]u* (Zhs 8.28).

Si 'do' (suru) is generally replaced by itasi, and that may be omitted after a verbal noun, or replaced by ái-nari or kore-ári:

Soodan {itasi} sooróo	}	'(Someone) consults/consulted'.
Soodan ái-nari sooroo		
Soodan kore-ári sooroo		

Itasi sooróo is used for both 1st and 3rd person subjects; for the 2nd person ('you') an auxiliary is called for: (infinitive V-i+) nasáre, kudasáre, asobasare, nási-kudasáre (+ sooróo). This means that su[ru] itself is little seen; but serare sooróo is used for the passive (LF 127). For '(I) humbly do' tatemáúri sooroo is the equivalent of colloquial itasimásu.

Corresponding to the colloquial V-te iru (both resultative and continuative) there is V-i óri sooroo, using the auxiliary [w]óri attached to the infinitive. Other auxiliaries to be encountered include V-i tatemáúri sooroo, roughly the equivalent of V-i-másu (polite 'does'), and V-i káne sooroo 'can not'. Desideratives are common: V-i-taku sooróo 'wishes to do', V-i-taku náku sooroo 'does not wish to do'. There can follow certain postadnominal expressions, of which MKZ lists these:

...-i sooróo	tokoro 'but' (= S ga)	
	aida	}
	mama	
	ni tuki	
	yosi 'according to report ...; since we hear that ...' (= S sóo de)	
	ya 'question' (= S ka)	
	zyoo 'with respect to; in view of; although' ⁴⁴	

There are also a few nouns that are used as postnominal particles, notably N gí(̄) '(it is a matter) concerning'—an equivalent of N wá or N ni kán-site wa or kotó N ni kán-site wa that is particularly common with the first person (watakusi gi); cf. Henderson 103. Commands are stated either as requests or as nominalizations with sentence-final kotó.

44. Not to be confused with the quasi-restrictive ̄zyoo 'with respect to' (written with the character for ué 'above'), this morpheme basically means 'item, provision' and it is used both as a postadnominal after the imperfect (see §13.2) and as an adverbialization based on the infinitive in the expressions ... tó wa iú { | } zyóo and ... tó wa ii-zyoo 'although' (the equivalent of ... tó wa ié-do {mo}).

23 INTERJECTIONS; AFTERTHOUGHTS; MINOR SENTENCES OF VARIOUS TYPES

Ideally, people talk in well-edited sentences, put together according to fairly well established patterns of the sort we have been discussing in this book. But in practice the speaker often indulges in false starts, self-interruptions, parenthetical asides, uncompleted sentences or phrases, illogical connections, inadvertent slips of the tongue, and other disconcerting behavior. Conversations can be extremely fragmentary, as in these two (the first on the street, the other on a telephone):

Zya, sayonára. Asita né. — Asita né. Hiruma? — Yóru. 'Well, goodbye. See you tomorrow. — See you tomorrow. During the day? — No, in the evening.'

Mósi-mosi. — Bóku. — Damé. — Zya. 'Hello. — It's me. — Not now. — OK.'

Several kinds of minor sentence call for comment. We have observed the optional ellipsis of the imperfect copula *dá*, which sometimes leaves a noun standing naked, as a one-word sentence. Written Japanese, especially in headlines and the like, will often suppress various forms of the auxiliary *suru* by which verbal nouns are predicated, as well as forms of the copula used to predicate pure and adjectival nouns. The omitted forms are normally the imperfect, perfect, or gerund: *suru*, *sita*, *site*; *dá*, *dáta*, *dé*.

Names, kin terms, titles, and second-person pronouns often stand alone in a vocative function—to call a person's attention, or sometimes just to emphasize one's words or to personalize the communication. But these words also appear in many ordinary situations. Certain other words and phrases, on the other hand, are characteristically set off from the rest of the discourse by major junctures and are often accompanied by special voice qualifiers or intonation features. (Cf. the glottal catch, or abrupt shut-off of vowel, discussed in § 15.) These elements stand outside the domain of the well-formed sentence itself; we will call them INTERJECTIONS or INTERJECTIONAL PHRASES. They are used (1) to express the speaker's emotional reactions—pleasure, relief, surprise, disbelief, hesitation, disgust, etc.; (2) to call attention; (3) to respond to a question, a command, or (as when *ie* 'no' is used for self-abnegation) a social transaction; (4) to hold the floor when fluency fails and one is searching for a desired expression: *Sosite || ano are desu | né || ...* 'Then, uh, I mean, you see ...' (R). Mimetic adverbs such as *wán-wan* 'bowwow' are sometimes used as interjections, but they will not be discussed here. Interjections come from varied sources. Some are taken from deictic elements (*kóre!* < *kore* 'this') or from short verbal forms (*máte!* 'wait', *mí ro!* 'look!'); others are stereotyped phrases, or truncations therefrom: *sibáruku* [*desita*], *arigato*[*o gozaimásu*], *yóo koso* [*irassyaimásita*], *tadá¹ima* [*kaerimásita*], etc. The origins of some interjections are in doubt; we can guess that *má*[*a*] may be a shortening of *mázu* 'first; in general; well now; anyway' or of *íma* 'now' (or of both), and that *sá*[*a*] comes from either the old deictic *sá* = *so*[*re*] or (by contraction) from the auxiliary *sooróo* < *sa*[*p*]*ura*[*p*]*u*. Although others seem like little more than grunts or shouts—*á*[*a*], *yá*[*a*], *yó*[*o*]*—*they may have originated as shortenings of more legitimate etyma; *óo* 'yea' is, after all, a Chinese loanword. Elsewhere we have observed the use of an adjective base or an adjectival noun as an exclamation: *O sámú* 'Oh how cold!'; *Damé* 'No good!'

The list of interjections below is far from complete. I have not attempted a semantic analysis, but the English translations will suggest the lines such an analysis might take.

INTERJECTIONS

áá, á, áq 'oh, good gracious, my goodness'	íya háya, íya móo 'gee; well'
óó, ó, óq 'oh'	másaka 'surely not!; no way!'
yáa, yá, yáq 'oh, gee; well; hi!'	nóo 'no'
wáa, wáq 'hurray'	sasuga 'as expected! I might have known!'
hurée 'hurray'	kó wa iká ni 'lo and behold!' (from a
banzái 'hurray'	literary analog of kore wa dóo)
ára, áraq 'oh, good gracious, my goodness'	kore-wa kore-wa 'oh, how nice (of you)'
óya 'goodness, oh dear, oh my'	kore-wa sitári 'good heavens'
óya óya 'tsk tsk!'	yáre-yare 'thank god, hallelujah'
kóre 'here, say'	simátta 'dammit, damn it; oh dear; god'
kóra 'hey there'	baka-yároo 'damn'
sóre 'look, look out, see'	kono-yároo 'damn'
hóra/sóra 'look, see, remember'	kuso 'shit, dammit'
dóre 'now, let me see, I wonder'	kusottaré 'shitface, (you) scum' ¹
ná[a]ni(-) 'what, why, pooh'	náni-kuso 'shit, dammit, hell'
súwa 'great heavens; great scott'	kon[o]-tikusyó[o], tikusyó[o] 'damn
ói 'hey, man, guy'	beast = damn you/it/him'
óoi 'ahoy, hallo'	máa, má 'well, say; dear me; please (do)'
yóo 'hello; bravo'	máa-maa 'come come; could be'
appáre 'bravo; good show'	sáa, sá 'come (let's); now (there); well let
simeta 'I've got it! good!'	me see'
mósi-mosi 'say, hey, hello'	íza 'now (let's)'
óorai 'all right, OK; go ahead (you're safe)'	ee-to 'well, let me see now, uh, er'
sóo 'yes, true'	ano né 'uh, er; hey; say'
óo 'yea, yes'	wássyo[i] 'heave-ho'
háa, áa, háq 'yes'	dokkói 'hold on, just a minute (there)'
háí, áí 'yes'	dokkói-syo 'heigh-ho, heave-ho'
hée, ée 'yeah, yes'	yói-syo 'yo-heave-ho, yo-ho'
iésu 'yes'	hákkusyó, hákkusyon, hákkusyoo 'ker-
ookée 'OK'	choo, ah-choo' (with a sneeze)
yósi 'OK; fine'	sayonara, sayo[o]nára 'good-bye' (from
ún, n 'uh-huh, yes, yup, yep'	'if it be so')
hún 'yes' (see Inokuchi 198)	ábayo 'bye(-bye)' (from sá árabá 'if it be
[hu-]hún 'hm(ph), pshaw'	so' + yó)
ha-háa 'ah yes, very well'	sárabá 'farewell' [literary] (from sá árabá
iie, ie (lg 87) 'no, nope'	'if it be so')
íya 'nay; rather'	...

You will find that certain speakers of Japanese punctuate their phrases with má[a]—often spoken in a lower register—much as speakers of English will use 'uh' while searching for the next word: Sosite || máa || ... Dé wa || kekkyokú^[1] || máa || ... Tokoró-ga || máa || ...

1. And other insulting nouns, often accompanied by the pejorative suffix -mé: baka or baka-mé 'fool', koziki or koziki-mé 'beggar', etc. See p. 830 (§13.8).

Kéredo mo | máa || ... hizyoo ni | máa || ... kotó desu kara | máa || ... soko de | máa || ... soko kara [|] máa || ... soko o | máa || ... sóro-soro | máa || ... (all from a single short stretch in a TV discussion).

Interjections typically appear before a full well-formed sentence, but sometimes they are interpolated as a side comment. There are a number of other elements that often serve as INTERPOLATIONS, thrown in at any point where the phrasing leaves an opening: ano[o], sono[o], are[e]; are désu/dá [yó/né], are desyó[o], are zya náí [désu] ka; dá [né/ná/yó],² dé [né/ná], désu [né/ná/yó];³ ká; ún, n; sóo; tté; soko dé da; A string of several interpolations may be run together. Sometimes ano and (especially) sono are anticipations or summations of genuine adnominal phrases, rather than marking empty pauses. It is not always easy to decide how a given occurrence is to be taken: aité no sono | zyootai to iu monó | né || 'the other fellow's, uh, condition, you see' (R); ... ano || otokó^[1] no || sono | kimoti ni || sono | nátte || sosite | sono nékutai || ... 'uh, the fellow's, uh, he got in the mood and then his necktie ...' (R). On longer interpolations, such as nán to iú ka {ná/sira}, nán te iimásu ka (= nán to ittára ii ka, lg 87), and nán to moosimásu ka 'what shall I say, how shall I put it', see KKK 23.160-3. We have observed in §15 how some of the particles extending a sentence seem to function as a kind of mirror image of interjections that are put before (or sometimes inserted within) the sentence.

A quite common feature of everyday speech is what we will call AFTERTHOUGHTS. This is a way of providing additional information without turning back and reediting an entire sentence that has already been put into words. What you do is simply supply the missing elements that would have been inserted earlier if you had gone back and resaid the entire sentence. The afterthought is tacked on at the end of the sentence intonation, usually with a lowering of the voice register and a flat "vocative" type of intonation. Often what is supplied is the information that would have been thematized had it been put in the sentence earlier. We can divide examples into several types, depending on what the afterthought represents in the underlying sentence:

(1) underlying subject: Sekkati désu né. Senséi wa 'Quick-tempered; aren't you, professor' (V 39); Dóo sita no desu ka, anó-hito wa 'What's happened—to him?' (V 40); Kigeki-teki na zínbutu da né, ano otokó wa 'A comical character, he is' (V 40); Soko ná no desu mondai wa 'That's just where it is, the problem' (Tanigawa 23); Zúibun बातúí monó -rasii desu yó, sore wa 'Looks real thick, that one' (SA 2655.37b); Yuumóa o kaisínai wáke desu ná, onná to iu monó wa 'It's that they don't understand humor, you see—women' (SA 2653.46c); ... hidói zya náí ka minná^[1] 'aren't you just terrible, all of you!' (CK 985.392); Dé mo, anmari tuyói desu yó, kaki-ppuri ga 'But it's too forceful, I tell you—your way of writing' (SA 2671.25d); Zúibun kawarimásita né, Yokosuka mo né 'It's all so changed, isn't it, Yokosuka and all'; Syóowa(-) zyuukú-nen no háru desita ka ná, dai-gékizyoo ga minná^[1] heisa ni nátta no wa 'It was the spring of 1944, I guess, wasn't it—when all the big theaters got closed' (Tk 3.244b).

(2) underlying direct object: Mí ro, mí ro. Ano boosi o 'Look at it, look at it; that hat' (V 39); Anáta sitte 'ru? O-tonari no ókusan o 'You know her?—the woman next door' (V 39); O-kiki nasái, ano kotori no utá o 'Listen to it, that bird's song' (V 40);

2. Sore wa, dá, omae ga ikenái n da yó 'That, uh, you mustn't, I tell you!' (KKK 3.258). See also §15.

3. Watasi wá desu né, ... 'I, you see, ...' (Tk 3.64a). See Y 468-9.

Bóku(¯) ga damásu? Kimi o? 'I'm bamboozling? You?' (SA 2671.22b); Bóku(¯) wa sukí na n da náa, kotobá ga gissíri tumáttá sibai tté no ga 'I like 'em, you know—those plays packed solid with words' (SA 2668.105c).

(3) other underlying adjuncts from the simplex: O-kiki ni narimasén desu ka, Huru-ya kara 'You haven't heard from them—the Furuya people?' (V 39); Dóo sita no, ima-zibun 'What have you done now, at a time like this?' (V 40).

(4) adverbial elements: Sore dé mo o-níi-san no kotó o wasureté wa irassyaránakutte yó. Kit-tó^[1] 'But you won't forget about your older brother. Surely (not)' (V 39); Íi zya náí desu ka, nakanaka 'Isn't that nice—really quite?' (Tk 3.225a); Hazukasíi desu yó, mattakú^[1] 'I am ashamed—utterly'; Sono tokí mo tésuto datta desyoo, tábun 'That time too must have been a test (filming)—no doubt' (Tk 3.300); Sore nára nígeta no desyoo ka. Watasi o kiratte 'In that case, I wonder if she ran away—out of dislike for me' (V 39); Anáta, seibutugákúsya ni nari-tái? tennoo-héika mítai ni 'Would you like to become a biologist?—like His Majesty the Emperor' (SA 2663.42c); Zibun hitóri de oyóide 'masita, Kurasaki-reiyon no suiéi-bu e itte 'I would swim by myself—going to the swimming facilities at Kurashiki Rayon' (SA 2638.44a); Dáre ga itiban hihyoo-ka desu ka, anáta ni túite 'Who is the best critic—of you[r work]?' (SA 2663.44a); Kore, omosirói hanasí desu né, kiite 'ru to 'This is an interesting story, you know—while you're listening to it' (SA 2676.48d); Áa, daibu tosi-torimásita né, bókú-ra no átta kóro yori wa 'Oh [the photograph shows] he's aged quite a lot, hasn't he—from the days when we saw him' (Tk 3.259a).

(5) adnominal elements: Byúhhwe desu né, íssyu no 'It's a buffet, you see, sort of' (SA 2658.124c); Sore wa yumé^[1] no iti-búbun da yó. Bóku(¯) no 'That is part of the dream—my dream' (V 39).

The device of afterthoughts is put to effective use in slogans and public admonitions: Dásu na (–) supíido 'Speeding—No!'; Minná de nakusóo (–) abunai hámono 'Dangerous blades—let's all get rid of them!'; Hosi-garimasén—kátu made wa! 'We will forego desires—till victory!' (a relic of World War II).

Sometimes more than one element may be given as afterthought: Sukí ka, kimi wa, heyá ga? 'Like it?—do you? the room?' (Kb 319a). Even though the afterthought was not part of the planning of the sentence, sometimes it is spoken very quickly and you may find it hard to detect from the phrasing or intonation. I once heard a student thank a stranger for taking a picture of the two of us by saying quite fast Aríгато dó⁽²⁾[o]-mo ozi-san in the same order as the English 'Thank you very much, sir' rather than the well-edited Japanese order we would expect: Ozi-san || dóo-mo | aríгато[o gozaimásu]. A common way to ask Íma [wa] nán-zi [desu ka] 'What time is it now?' is Nán-zi | Íma.

There are some good examples of afterthoughts from various dialects in Fujiwara 71-5.

24 CONNECTORS AND SENTENCE-OPENERS; OPENING ELLIPSIS

Many of the conjunctions listed in § 13.7a can begin a sentence, as a transitional link to the preceding discourse. In addition to the single words and short phrases given there, you will find many other well-worn phrases that are used to open a sentence and somehow connect it with what has gone before. (Cf. KKK 23.90, from which several of the items listed below were taken.) Some of these expressions refer directly to the act of speech (or of writing) itself:

li-kaériba ..., li-kaéru to ... 'In other words ...'.

Ippan-teki ni itte ... 'Speaking in general terms ...'.

Hoka dé mo arimasén ga ..., Hoka dé mo náí n desu ga ... 'All I want to say is ...'.

Oozáppa ni itte ... 'Loosely speaking ...'.

Gái-site iéba ... 'Generally speaking ...'.

Betu no kotobá de iéba ... 'Put in other words ...'.

Tatóete iéba ..., Tatóete iu to ..., Tatoéru nara-ba ... 'Figuratively speaking ...; So to speak ...'.

Kantan ni itte simaéba ... 'To put it simply ...'.

Tan-teki ni itte mireba ... 'To put it bluntly ...'.

Syooziki^[1] itte/ittára/iéba ..., Syooziki^[1] ... 'To tell the truth ...'.

Zitú o iu to ..., Zitú wa ... 'To tell the truth ...'.

Ari-tei(¯) ni iéba ... 'To tell the truth ...'.

Sen-zi-tuméréba ..., Sen-zi-tuméru(¯) to ... = Sen-zi-túmete(¯) iéba ... 'What it boils down to is ...; Reduced to essentials ...'.

Náo hitótu take-kuwaete iéba ... 'To add one further note ...' (Maeda 1962.74).

Wadai ga kawatte 'rú [n desu kedo/ga] ... 'Not to change the subject but ...' = 'To change the subject ...' (R).

Tyót-to hanasí ga soremasú ga ... 'This is a bit off the track but ...'.

Tyót-to hanasí ga yokomiti ni soremasíta ga ... 'I've gone off on a tangent, but ...' (R).

[Watakusi ga] omóu ni ... 'In my opinion ...'.

Omóeba ... 'Come to think of it ...'.

Kangáete miru to ... 'Upon reflection ...'.

Tanómu kara ... 'As a favor to me ...'.

O-negai {dá kara}, ... 'As a favor to me ...'.

Tyót-to ukagaimásu ga ... 'May I inquire ...'.

Uketamawaréba ..., Uketamawarimasúreba ... 'I understand (am told) that ...'.

Moo ik-ka^[1] moosimásu to ... 'To repeat, ...'.

Nán-ben mo moosimásu keredo mo ... 'I repeat myself but ...'.

Saki-hodo no hanasí desu keredo (sore wa) ... 'I refer back to what was said earlier'.

Móttö wakari-yásuku iéba ... 'To make it easier to understand ...' (Tk 3.139a).

Móttö kuwásiku iéba (iu to) ... 'To put the matter more precisely ...'.

Tyót-to mi-nikúí ka mo siremasén keredo mo ... 'This may be a bit hard to read, but ...' = 'I'm sorry about my handwriting'.

Kotowátte okú^(o) ga, ... 'Let me remind/warn you that ...; Bear in mind that ..., Remember, ...; Mind you, ...'.

Some refer to the speech situation directly or indirectly:

Íi k o da kara ... 'Be a good little boy/girl and (do that for me)'.

Tokí ni ... 'By the way ...'.

Are desu ga ... 'Uh (what I want to say is) ...'.

... no kotó desu kedo (are wa) ... 'I am speaking of ... and'.

Yokei na kotó desu ga ... 'My remarks are uncalled for, perhaps, but ...'.

Sukósi hanasí wa hurú ga ... 'This isn't new, but ...'.

Réi no mondai desu ga (are wa) ... 'About the matter in question ...'.

Zéngo simásita keredo ... 'I've got things out of order, but ...'.

Sáigo ni narimásita ga ... 'Now in conclusion ...'.

Totyuu ni narimásita ga ... 'Excuse the interruption'.

Sóo wa iu mono-no ... 'Nevertheless ...'.

Sóo wa itté mo ... 'Even so ...'.

Soo iéba ... 'Speaking of that ...'.

Kore n-i} tai-site ... 'In this connection ...'; 'By way of contrast ...; On the other hand ...'.

Others are more like adverbial or transitional elements within a sentence:

Dóo iu monó ka ... 'For some reason or other ...'.

Dóo sita kotó ka ... 'Somehow or other ...'.

Nán to sita kotó ka ... 'Somehow or other ...' (lg 87).

Dóo sita wáke ka ... 'For some reason or other ...'.

Dóo [sité] mo ... 'There is no denying that ...', 'In ever so much ...'.

Hizyoo ni zannén na kotó de ... 'It is very regrettable but ...'.

Síte iu to ... 'If forced to say ...; If one must say something ...; If anything ...'.

Náze ka to iéba ..., Náze nara ..., Náze nareba ... 'The reason is ...'.

Dótira ka to/tte iu to ... 'If anything ...; If a choice is to be made ...'.

Dótira ni sité mo ... 'Either way ...' (Lit. Izure ni sité mo ...).

Mósi ka sitára (suru to) ... 'Perchance ...', 'On the chance that ...'.

Mósi mo no kotó ga áttara ... 'Perchance ...'.

Mán-iti no kotó ga áttara ... 'Perchance ...'.

Náni ga dóo átte mo ... 'When all is said and done ...': ~ Taiheiyoo-sénsoo wa Nihón ni tótte, máinasu datta 'All in all, the Pacific War was bad news for Japan' (Tk 2.122).

Nán da [ka/i] ... 'I don't know why but ...'.

Site mireba (miru to) ... 'And so we see that ...' (SA 2668.40b).

Toozen no kotó da ga ... 'Naturally enough ...'.

Íi ka ..., Íi ná ..., Yósi ... 'OK, ...'.

Tó-ni/mo-kaku [mo] ... 'Nonetheless ...'.

Tó-mo-are ... 'Nonetheless ...'.

Soko de ... 'Thereupon ...'.

Sore wa sóo to ... 'Be that as it may ...'.

Sore wa sore to sité mo ... 'Be that as it may ...'.

Sore tó mo, ... 'Or (else) ...'.

Náisi wa, ... 'Or, ...' (Tanigawa 145).

See also the sentence-introducers with *nágara* in §9.1.3; adverbializations with ... *kotó ni* (p. 842); direct adverbializations (§9.1.13); sentence-introducers derived from quotations, §21.1.(11).

A number of introductory phrases optionally drop the first word or two:

- [dekíru] nára-ba ... 'If possible ...; Preferably ...'.
 [soo] suru to ..., s'u to ..., to ... 'Well then ...'.
 [soo] site ... 'And then ...'.
 [soo] suru utí ni ... 'Meanwhile ...'.
 [[soo] suru] tokoró ga ... 'But ...'.
 [[soo] suru] to tómo(¯) ni ... 'At the same time ...'.
 [[soo] suru] kusé ni ... 'Nonetheless ...'.
 [sóo] ká to itte ... 'If that surprises you ...; If you wonder about that ...; By way of explanation ...'.
 [sóo] ká to omóu to ... 'If that is questioned (wondered at) ...' (SA 2640.24a, Fn 265a).
 [sóo] da to suru to ... 'Granted that, ...; If so, ...': Da to suru to, tyotto-sita seizi-ka yá⁽¹⁾ né [= dá né] 'If so, he's a petty politician' (SA 2663.20c).
 [sóo] da to sureba ... 'Granted that, ...; If so ...' (CK 985.314).
 [sóo] dá ga/kedo ... 'But ...'.
 [sóo] désu ga/kedo ... 'But ...'.
 [sóo] dá kara ... 'So ...'.
 [sóo] désu kara ... 'So ...'.
 [sóo] de áru kara ... 'And so ...' (Fn 223a, beginning a paragraph; SA 2669.47b).
 [sóo] de arimásu kara ... 'And so ...' (SA 2672.18a).
 [sóo] dá kara to itte ... 'On such grounds ...'.
 [sore] dé ... 'Then ..., So ...'.
 [sore] dé wa ..., [sore] zya[a] ... 'Well, then ...'.
 [sore] dé mo ..., [sore] d'átte ... 'But ...; Even so, ...'.
 [sore] ná no ni ... 'Nonetheless ...'.
 [sore] ní mo kakawárazu ... 'Regardless [of that] ..., Nevertheless ...'.
 [sore] nára = sonnára 'If so, ...'.
 [sore] bákari/daké ka ... 'Not only that but ...; What's more ...'.
 [sore] bákari/daké de náku ... 'Not only that but ...; And what's more ...'.
 [sore] to iu wáke de ... 'For that reason ...' (SA 2661.24a).
 [sore] to iu kotó wa ... 'That refers to ...'.
 [sore] to iú no wa ... 'That refers to ...'.
 [sore] kara ... 'After[ward], ...; Then ...'.
 [sore] de áru ga yúé ni ... 'For that reason ...' (Tanigawa 48).
 [sore] to site mireba ... 'Seen in that way ...'.
 [sore] to sureba ... 'So considered ...'.
 [[sore] to] dóozi(¯) ni ... 'At the same time ...; Then ...; Also ...'.
 [[sore] ni] yotte ... 'Accordingly ...; Hence ...'.
 [[sore] ni] sitagátte(¯) ... 'Consequently ...; Accordingly ...'.
 [sore ni] túite/tukimásite wa ... 'In this connection ...; Consequently ...'.
 [sóo/sore] de/zya nákereba ... 'Otherwise ...'.
 [sóo/sore] de/zya náku [t]te mo ... 'Even so, ...; Anyway ...'.
 [sono] totan ni ... 'At that moment ...; Whereupon ...' (Shibata 1961.187).
 [sono] tamé ni ... 'Therefore ...'.
 [sono] doorí de ... = dóori-de 'For that reason ...' (SA 2672.24c).

25 APPOSITION

When one noun stands next to another, we expect the two of them to combine into a compound noun, dropping the juncture between and usually assuming a new accentuation. If that does not happen, we know that one of the following statements is probably true: (1) a case marker (*gá, ó, ní, tó*) has dropped (§2.2a); (2) a conjoiner (*tó, yá, ká, ...*) is unexpressed (§2.8); or, (3) the adnominalized copula (*ná, nó, de áru*) is suppressed, on which see also §13.1.5 and §13.5a. The third explanation will account for such examples as these: ... *ní-sánniti*(⁻) [*no*] *utí*(⁻) *ni* ... 'within two or three days' (Kb 89b); ... *nooryoku-syákai* [*no*] *Amerika de* ... 'in America the meritocracy (= the society that prizes ability) ...' (SA 2665.21e); *Syuytyakú-eki* [*no*] *Singapóoru ni tikazúku ni turete* ... 'As we drew near to Singapore, the terminal station ...' (SA 2660.16); *Kyóori* [*no*] *Niigata e káette* ... 'Returning to his home town of Niigata ...' (R); ... *syooogyoo-tósi* [*no*] *Oosaka no hitó no kotobá* ... 'the language of the people of Ōsaka the commercial metropolis' (Miyara 1954.176); *Tyuukintoo-kínmu* [*no*] *keikén-sya* ... '... a person with work experience in the Middle East' (SA 2665.19e); *Béi-So* [*no*] *syunoo-káidan* ... 'the American-Soviet summit talks' (R); *Syakaiminsyu-too* [*no*] *kakuryoo* ... 'The Social Democratic ministers ...'; ... *syusyoo* [*no*] *sokkin dé* ... 'those who are close to the Prime Minister and ...' (SA)—*sokkin* = *sokkín-sya*; *Koré-ra* [*no*] *Man'yóo-syuu no réi ni wa* ... 'Among these examples from the Man'yōshū ...'; *Nihon-zyósei* [*de aru*] *Ono Yóoko to kekkon* [*site*] *Írai* ... 'Since marrying the Japanese woman Ono Yōko ...' (SA); *Watási-táti* [*no*] *Ísi wa*, ... 'We physicians ...' (SA 2689.122c); *Wareware* [*de áru*] *Nihon-zín wa* ... 'We Japanese ...'; ... *watási-táti* [*no*] *zyosei wa* ... 'we women' (SA 2661.111a); *Bóku-táti* [*de áru*] *sutáhu ga* ... 'we [men who are] the staff' (SA 2652.64c); ... *káre-ra* [*no*] *husái ni yuusyoku o syootai sarete*, ... '... got invited to dinner by that couple and ...' (SA 2656.62c); *Koko* [*no*] *Dóitu de mo* ... 'Even here in Germany ...' (SA 2672.96c); *Kátute no gekisén-ti* [*de aru*], *koko* [*no*] *Guamu-too ní wa*, ... 'In this place (= Here on) Guam Island, onetime battleground, ...' (CK 985.198). In such expressions as ... *koko* [] *saikin* ... 'lately now' (SA 2689.119a) and *Koko* [] *zyúu-nen* ^[1] *ízyoo mo* ... 'For over ten years now ...' the ellipsis would appear to be obligatory.¹

The suppressions of the copula result in a kind of apposition. Quite similar is the ellipsis that results from omitting the *nó* that represents a GENITIVE OF SPECIFICATION (or of scope-narrowing), as in these examples: *Rokugatú* [*no*] *gosyuu no térebi wa* ... 'Television during the fifth [*sic!*] week in June ...' (SA 2685.115c); *Sángatu* [*no*] *hazime* {⁻*góro*} *ni* ... 'At the beginning of March ...'; *Rainen* [*no*] *hazime kara* ... 'From the beginning of next year ...'; *Sángatu* [*no*] *sue ni* ... 'At the end of March ...'; *Zyuukyuu-séiki* [*no*] *matu kara* ... 'From the end of the 19th century ...' (Martin 1970.443); ... *rokugatú* [^[1]*no*] *hatuka* [*no*] || *ka-yóobi made ni* || ... 'by Tuesday, the 20th of June' (R);

1. As it is in *zyúu-nen* [] *konó-kata* '(the period of) these past ten years', not to be confused with *zyúu-nen kara konó-kata* '(during the period) since the year ten'; *konó-kata* is a relational time noun. The ellipsis is usual in *sá-yu* [] *izure o tówazu*(⁻) 'regardless whether it's left or right'. The extent of the noun phrase to which the apposition applies is not always obvious: *Ákiko wa kón'ya to asitá* [^[1]*iti-niti* ⁻*bun no kaimono o site kitó* [= *kaerímiti*] *ni túita* 'Akiko did a day's shopping for the evening and the morrow and then started home' (Ariyoshi 175) probably puts *kón'ya to asitá* in apposition to the entire phrase *iti-niti* ⁻*bun no kaimono*.

Meizi-ísin [no] tyokuzen ... 'Right before the Meiji Restoration ...'; Syuusen [no] tyókúgo(¯) ... 'Right after the end of the war ...'; ... Nikkatsu no hookai [no] sunzén(¯) to iu tokí mo tokí,^[2] ... 'Right on the brink of Nikkatsu's collapse, ...' (SA 2664.103c); Nisi-Dóitu [no] kokkyoo ni ... 'At the West German border ...'; Sángatu [no] tooka ... 'March 10th'; Nízuyu ití-nen [no] natú,^[3] ... 'In the summer of (Shōwa 21 =) 1946 ...' (SA 2671.39a).

Other kinds of genitive are sometimes represented by ellipsis, too:

(1) Táido [no] ikán ni yotte kimaru 'It is decided on the basis of how one's attitude is'; kari-kata [no] ikán de wa ... 'by the manner of borrowing' (SA 2677.53c); Sono un'e to kánri [no] ikán koso ga, kónniti kangaerénakereba naránai mondai ná no de aru 'The problem that must be considered today is precisely the state of operations and management of them [= Japan's public corporations and organizations]' (SA 2684.105e). Ikán is a noun (ikán o mondai ni suru, ikán ga mondai ni náru) derived from the literary adverb iká-ni 'how' (cf. that elegant equivalent of dóo 'how', iká-ga < iká-ni ka).

(2) Ígi [no] moositate ... 'A statement of dissent = a formal objection, an exception'; Ísi [no] tooitu ga dékita 'a consensus formed'; síngi [no] hikinobasi 'prolongation of deliberations'.

(3) Sanhuransísuko [no] okiai no Arukatorasu-too 'Alcatraz Island off-shore from San Francisco' (SA 2673.114d).

(4) ... ikkai [no] syuzyutusitu-dónari no kanrí-situ de ... 'in the office next to the operating room on the first floor' (SA 2666.112c).

(5) ... yákusya [no] atogaki ni yoru to, ... 'according to the translator's postface' (SA 2676.97c).

(6) ... Kántoo [no] dai-sínsai no mae-no-tosí ni, ... 'the year before the great Kantō earthquake' (R).

(7) Kokuden [no] Okatímati 'the Okachimachi station of the National Railway'.

(8) Satoo-séiken [no] || kono | hatí-nen || ... 'These past eight years of the Satō regime ...' (R).

(9) Kákkoku [no] | kisyá-dan wa ... 'the corps of international reporters' (R).

Certain examples involve quantification with a specific number: Súusúrohu-ra [de aru] san-nín wa ... 'Suslov and two others ...' (SA 2673.131a); koko zyúu-nen 'these past ten years' (see §13.7). Others show quantification with some word meaning 'all' or 'general' (cf. §13.8):² Syákai [no] zenpan ga ... 'The whole society ...'; Syákai [no] ippan ní wa ... 'In society as a whole ...'; Kyúusyuu ittai o hukúmete ... 'including all of Kyūshū'; Nagásaki ittai ni ... 'in the Nagasaki area as a whole'; ... kóogyoo zentai ni ... 'all of industry' (Martin 1970.443); ... kono íssyo zenpén o ... 'the whole of this volume' (Maeda 1962.1); Nihón zéndo 'all Japan' (but Nihón zénkoku is usually tightened into the compound Nihon-zénkoku). The quantifying word often has the prefix zen- 'all' or iti- 'one (whole)';³ káku(-) 'each' also turns up: Syákai kákkai kara ... 'From each society ...'. The expressions iti-men 'all over, the entire surface, full of' and íppai 'all over (around)' are

2. The expression útyuu [no] zentai 'the entire universe' is put into further apposition in ... útyuu zentai itáru-tokoró ni nagárete óru 'is flowing everywhere in the entire universe' (TK 3.159a).

3. As in ... kotosi | ití-nen no | siawase o | inorímásita 'they prayed for happiness for all of this year [on New Year's Day]' (R). These types should be distinguished from the direct adverbialization of a place noun found in zénkoku [de] itiyoo 'alike throughout the country', zénkoku [de] itiritu (no/ni) 'uniform/uniformly throughout the country'.

similar in meaning to the quasi-restrictive \bar{i} ppai 'full' (§2.4) but they are preceded by an underlying juncture (which may be dropped as a surface option): *Sóra iti-men ni hosi ga déte iru* 'The sky is full of stars'; *mádo^(r)ippai ni* 'all over the window'. The expression *N | hitótu da* 'it all depends on N' resembles both \bar{s} idai and daké in meaning: *Anáta no okonai hitótu desu* 'It all depends on your behavior'; ... *kokumin no nétui hitótu de aru* 'It entirely depends on the enthusiasm of the people'. This expression must be derived from some sort of ellipsis, but the exact nature is unclear. The dá can, apparently, be replaced by *ni kakátte iru*.

The expression *N | sen'yoo* 'for the exclusive use of N' resembles the quasi-restrictive \bar{y} oo 'for the use of', but is separated from the noun by an underlying juncture: *hokóo-sya sen'yoo no sígunaru* 'a signal for the pedestrians' (Tsukagoshi 100); *zyósi | sen'yoo no syáwaa* 'a shower for women'.

The expression *NUMBER | soko-soko* 'only about ...' is used only for round numbers, generally rather small, that refer to money, time, or countables: ... *hyakú soko-soko dátta káado no hakkoo-gínkoo wa ...* 'the banks issuing (credit) cards, which were only about a hundred in number ...' (SA 2660.25a) ← *hyakú | soko-soko*; *Han-tósi^(r) soko-soko no kotó da* 'It is a matter of only about a half year' ← *Han-tósi | soko-soko*; ... *sánzís-sai soko-soko no koomú-in da ga, ...* 'is a civil servant around thirty years of age' (SA 2676.106b); ... *tukí ni zyuuróp-pon soko-soko sika tukurénai n desu* 'for we can only make about sixteen films a month' (Tk 3.236a); *Hyakuen soko-soko* 'Only about a hundred yen'. This expression is similar to several of the restrictives (§2.4). It may well derive from a reduction of *NUMBER mó | soko-soko ni [site]* 'letting even NUMBER be just around there or there'—cf. *Ása-han mo soko-soko ni tobi-dásu* 'dashes out with a hasty breakfast' (Kenkyusha). For the use of *kakkíri* 'exactly' in *kú-zi kakkíri* 'exactly nine o'clock', and possibly *kokkíri* as a synonym, see §13.7.

Sorézóre 'each one, individually, respectively' (< sore-"-sore) is sometimes used as a quantifier in apposition: *hito sorézóre ni yorimásite* 'depending on the particular person'; *koré-ra sorézóre no N* 'these respective N'; *Kákuzin sorézóre no risoo ga áru* 'Each has his own ideal' (Kenkyusha); Similar is the use of *kózin* '(as an) individual': *Kore ga Kéinzu kózin no kangáe de atta* 'This was Keynes's individual thinking' (SA 2672.49d); *Kane wa káre kózin ga moratte ita wáke de wa náí* 'He did not receive the money as an individual' (SA 2686.26c).

Words for 'self' are common in apposition: *Watakusi zísín ..., Watakusi zibun ...* 'I myself ...'; *Mákino-san go-zísín wa ...* 'Mr Makino himself ...' (Tk 3.207b); ... *to iu kotó^[r] zítai ga ...* 'the very fact that ...' (SA 2684.105b); ... *gíin mízukara ga ...* 'the Diet members themselves ...' (Tk 4.14a); ... *tennóo mízukara ga ...* 'the emperor himself' (Shiba 89); ... *gakkai mízukara ga ...* 'the society itself' (SA 2670.34a); ... *taisyuu mízukara ga sánka⁽⁻⁾ suru kotó ni yotte minóru⁽⁻⁾ to surú nara-ba ...* 'if we consider that it bears fruit according to the participation by the masses themselves' (SA 2674.43a). The expression for 'self' may itself be an appositive phrase: *Watakusi ZIBUN ZÍSIN ...* 'I myself (in person) ..., I my very own self ...'; *Koré-ra no zyookén⁽⁻⁾ wa súbete ningen SORE ZÍSIN no zyookén⁽⁻⁾ de átte ...* 'These conditions are the conditions of the human being himself ...'; *Kónkai no sippai wa, seisaku \bar{z} yoo no monó de wa náku, seizi-táikei SORE ZÍSIN no kekkan ni yoru monó to ieyoo* 'The failure this time can be said to be due to defects in the political system itself, rather than the policies'; *Én no káti SORE ZÍTAI ga mondai ni nátta* 'The very value of the yen itself became an issue'.

The word *sono-mónó* '(in) itself; the very ...' (< *sono monó* 'that thing') is put in apposition after nouns and also after adjectival nouns: ... *kono na sono-mónó ga* ... 'this name itself' (Maeda 1962.97); ... *tobaku sono-mónó ni tái-site wa* ... 'with respect to gambling itself' (Tk 4.170a); *Wareware no sonzai sono-mónó ga* ... 'Our very existence ...'; *Sooretu sono-mónó datta ga* ... 'It was brave(ry) indeed' (SA 2671.93c).⁴ *Kore/sore/are* can be followed by *sono-mónó* or by *zítai*, *zísín*, or *zibun*—all with much the same meaning; but **watakusi/soitu/aitu sono-mónó* are replaced by *watakusi/soitu/aitu zísín*. (Yet *sono-mónó* can be used after other words of personal reference: *gakusei sono-mónó* 'the student as student'.) *Zubári sono-mónó* means 'frankness itself' and it is a reversible phrase: *zubári sono-mónó no ii-kata* = *sono-mónó zubári no ii-kata* 'calling a spade a spade'; *Mása ni sono-mónó zubári desu* = *Mása ni zubári sono-mónó desu* 'You hit the nail (right) on the head; You said it!'

Like *nádo* 'and the like' (§ 2.9), the expression *sonó-ta* 'and other(s)' directly follows a noun: *Taigúu(¯) sonó-ta ni mo mondai ga áru* 'There are problems in treatment and other things'; *zakka sonó-ta ga* ... 'notions and other goods'; The noun *hoka* will sometimes follow a noun directly, as a shortening of ... [no] *hoka*, with the same meaning as *ígai* 'outside of': *Zyuugyóo-in, syootái-kyaku hoka no tatiiri o kinsi suru* 'Entry by others than employees and guests is forbidden'.

The word *sokkúri* 'just like' is a precopular noun (optionally an adjectival noun, KKK 44.49), often found in apposition with a pure noun: *Wáni sokkúri no kao to kíba o site iru* [= the pike] has a face and fangs just like a crocodile' (SA 2666.84c); ... *Yamamoto Húziko sokkúri no onná ga arúite iru* 'a woman is walking along who looks just like Fujiko Yamamoto' (SA 2662.110d); ... *Nihón no koogyoo-dánti sokkúri no keikan o mísete iru* 'it presents a scene just like the industrial areas of Japan' (SA 2659.43b); *Éiga(¯) no syuzin-koo sokkúri da* 'He is just like a movie hero'. This usage is an ellipsis N {to/ni} *sokkúri*; the full form can be seen in these examples: ... *kore to sokkúri no hanasi ga* ... 'a story identical with this' (SA 2650.92d); ... *mattakú^[1] watasi no bóohu* [= *naku-natta titi*] *ni sokkúri de atta* 'he was the spit and image of my late father' (SA 2659.69c). A very similar expression is N {ni} *iki-utusi dá* 'is a living picture of N, closely resembles N'. The predicable adverb *sa-nagara* 'just like (that)' can anticipate a simile (*Sa-nagara(¯) N no yóo da* 'It is just like N') or be used in direct apposition with a noun:⁵ *Zitubutu sa-nagara(¯) no móderu/misemónó* 'a model/show just like the real thing', *Nihón no "tuyu" sa-nagara(¯) no áme ga* ... 'a rain just like the tsuyu of Japan'. The precopular noun *soko-noke* (from *soko* [e] *noke* 'Get out of the way!') is used in direct apposition with a noun to mean 'surpassing N': *Honsyoku soko-noke no wázyutu desu* 'It is better storytelling than you

4. On AN |*sono-mónó da* 'is the quintessence of AN' and AN |*kiwamari náí* 'is ever so AN', see §13.5a, p. 759. In print I have seen "*sono kotó*" used after an abstract noun; that is an ill-advised substitute for *sono-mónó*, which is appropriate after abstract nouns as well as other kinds. But it is more polite to use *sonó-hito* for people: *Akutágawa |sonó-hito mo* 'Akutagawa himself'. Notice also S *kotó zítai* 'the fact itself, that S'.

5. Apparently with obligatory suppression of *ni* or *ga*: *Zigokú^[1] ni/ga* *sa-nagara(¯) no sanzyoo da* 'It is a horrible scene worthy of hell itself'. A similar obligatory suppression of the case marker (probably *ni*) is found in the expression N |*suresure* 'very near to, just grazing N' (a precopular noun): *seiyoo suresure no tokoró ni áru hyoogén(¯)* 'expressions that are just a shade from correct usage' (Nagano 1970.217); *Zikan suresure ni ma ni átta* 'We made it barely in time'; *Yuusyoo suresure no tokoró made itta* 'I had got to where victory was within my grasp'; *atama^[1] suresure máde no mizu* 'water almost up to one's head';

hear from a real professional' (Tk 2.13b). This should not be confused with N [o] *sotti-noke* [ni *surú* no] da as in ... *sigoto sotti-noke désu* 'we forget all about our work [= neglect our work]' (Tk 2.93a), from *sottí e noke* 'put it aside over there'.

The word *tappúri* 'full' is basically an adverb. One of its uses is to modify a following quantity as in these examples from *Kenkyusha*: *tappúri zyuugó-hun* 'a good quarter of an hour', *tappúri zyuú-máiru* 'a good ten miles', *tappúri ní-syoo* 'a full measure of 2 *shō*'. When *tappúri* stands after a noun, the meaning is 'being full of N', and the expression is treated as an adjectival noun:⁶ ... *zisin tappúri na táido ni* ... 'with an attitude full of self-confidence' (Tk 4.312b); ... *hiniku tappúri ni koo káite irú no de aru* 'they write like this, full of sarcasm' (SA); *Kózukai/Ryohi tappúri* ... 'All kinds of petty/travel expenses ...'.

The word *takenawa* '(being at) the height, (being in) full swing' is an adjectival noun (optionally a precopular noun) which basically occurs as a predicate: *Tataikai ga takenawa de áru* 'The battle is at its height', *Tataikai ga/no takenawa na toki* ... '(When) at the height of the battle ...'; *Yóru ga takenawa ni náru made hanásu* 'talk on till the night is far advanced' (the examples are from *Kenkyusha*). But sometimes *ga* is dropped, leaving N | *takenawa*: *Syuryoo-siizun takenawa dá ga* ... 'It is the height of the hunting season ...' (SA 2660.49c); ... *bangumi-séisaku takenawa no íma wa* ... 'right now when the preparation of new programs is at its height' (SA 2657.154).

See §13.7 for pseudo appositions involving direct adverbializations (such as those found in *sizyoo saikoo no* ... 'the highest in history', *zínruí hatú no* ... 'mankind's first ...', *sékái dáí-iti no* ... 'the Number One ... in the world', *Nisi-Dóitu ití no* ... 'the foremost ... in West Germany') and for *sásuga* [no] N and *iroiro* [no] N.⁷

Various kinds of ellipsis that leave two nouns juxtaposed are described in Martin 1970. Examples of a few types to be kept in mind: *Gendái-zin* [to/ni] *KYOOTUU no zyuudai-móndai de aru kotó wa* ... 'Things which are important problems common to the modern man ...'; *Kyóoto* [ni] *KOYUU no kotobá* ... 'Words peculiar/native to Kyōto ...'; *Káre* [ni] *TOKUYUU no, ano kutibúe*(⁻) *o, narasítá no da* 'He sounded that peculiar whistle of his' (Fn 290a); *Káre* [ni] *DOKUTOKU no yari-kata de* ... 'In his own individual way ...'; ... *zyoodai-go* [ni] *DÓKUZI*(⁻) *no seikaku* ... 'characteristics original to the ancient language' (Mabuchi 193); *Káre* [ni] *ITIRYUU no gyakusetu da* 'It is a paradox of his own'; *Maku-ái*(⁻) *ni haiyúu-táti* [ni] *YUKARI no sina o utta* 'During the intermission they sold things [souvenirs] connected/associated with the actors' (SA 2676.40a); *Tosí* [ni] *SOO'OO ni* 'appropriately for one's age', *mibun* [ni] *SOO'OO na kurasi* 'a life fitting one's status'; *syuunyuu* [ni] *SOO'OO no seikatu o suru* 'leads a life appropriate to one's income', *tíi* [ni] *SOO'OO no koosai o suru* 'engages in social intercourse that is appropriate to one's position';⁸ ... *koko dé mo súde ni, kónniti* [to] *DOOYOO no zyootai de átta kotó wa* ...

6. Optionally a precopular noun: *Zisin tappúri no hanasi-káta o suru* 'He talks full of confidence'. The adverbialized adjectival/precopular noun competes with the adverb (directly adverbialized): *Zisin tappúri* {ni} *hanasi-dasita* 'He started talking full of confidence in himself'. A similar expression with *manmán*(⁻) 'brimming full' (§13.5a) is apparently limited to a single idiom: ... *zisin manmán*(⁻) *no hyoozyóo*(⁻) *o miséru* 'shows a visage brimming with confidence'.

7. Here is another example that may be of the same type: *dáisyo* [] *suuzyuk-kásyo* 'some tens of places large and small' (SA 2686.29b). Or is *dáisyo* functioning as a pure noun 'big (ones) and little (ones)'? See also *husyoo* | NAME 'unworthy I ... by name', p. 751 (§13.5); *dán-zyo* | *kyoogaku* 'coeducation' (etc.), p. 752.

8. *Soo'oo* is both an adjectival noun and a verbal noun; *soo'oo no* N can be taken as proredication

'the fact that there too already it was the same situation as today' (Tsuji-mura 1967.84); ... motínusi [ga] HUMEI da 'the ownership is unknown = it goes unclaimed', ... yukue [ga] HUMEI ni náru = yukue-húmei ni náru 'the destination becomes unknown = disappears'. Notice also ík-ko [ga] gozyúu-en no ringo ... 'apples that are fifty yen apiece'. In kono gakka [no] tantoo no kyóozyu(¯) 'the professor who covers this work' (Kenkyusha) and ... Eigo [no] tantoo no senséi to hanásu kotó ga óokatta '... did a lot of talking with the teacher in charge of English' (SA 2666.10), the deeper derivation is N o tantoo suru N; the overt *nó* represents adnominalized proredication. (Tantoo is a transitive verbal noun.) Certain set phrases will not permit the dropped particle to surface: *bízi* | *réiku* 'rhetorical flourishes, eloquence' comes from a structure N \bar{t} \bar{t} \bar{t} N. (It is also said in a single phonological word, as a syntactic reduction: *bízi* \bar{r} \bar{e} \bar{i} \bar{k} .)

A common type of apposition puts a specific noun phrase after a generalized or indefinite noun phrase:⁹ *dóko ka késiki no íi tokoró* 'some place where the scenery is nice', *dáre ka Eigo ga dekíru hitó* 'some person who can speak English', *ítu ka hima na tokí* 'sometime when you are free', *náni mo kyóokun ¯rasii monó* 'nothing in the way of proper training' (R), If these expressions are to be explained as ellipsis of the adnominalized copula, we must also assume inversion, since the meaning is *íi tokoró no dóko ka* 'some place that is a nice place' rather than *dóko ka no íi tokoró* 'a nice place that is some place'.¹⁰ The problem is similar to that posed by titles (§26): *Sátóo soori-dáizin* 'Prime Minister Sató' is probably better interpreted as *soori-dáizin no* [= *de áru*] *Sátóo* 'Sató who is prime minister' rather than *Sátóo no* [= *de aru*] *soori-dáizin* 'the prime minister who is Sató'. Cf. *syoogun léyasu(¯)* 'Ieyasu the Shōgun', where the title is being treated as an epithet. On the other hand, the following examples of N₁ || N₂ may well be stylistic inversions of something like N₂ [to iu] N₁ or N₂ [de áru] N₁: *Ningen Henrii-Míraa no, kaksáreta itímen(¯)* 'It is a hidden phase of Henry Miller the man' (SA 2681.105e); ... *kankoo-tósi Bénisu* ... 'the tourist city of Venice' or 'Venice the tourist city' (SA 2686.49b). Cf. *Áporo | tuki-ryókoo* 'Moonshot Apollo' or 'the Apollo moonshot'. Something more like English apposition is seen in PRONOUN || NOUN: ... *sono síki o tóru no ga, káre Kumágaya Hírosi da* '... and he, Hiroshi Kumagaya (in person), is conducting them' = 'and they are conducted by the well-known H. K. (= *káno K. H.*)' (SA 2666.104a).

Complex numbers are made up of scope-narrowing phrases that go from the larger to the smaller and thus could perhaps be regarded as ellipsis (obligatory) of the genitive of specification: *níman yónsen sánbyaku ití-mai* '24 301 sheets'. But some other explanation

from *soo'oo site iru*. *Sootoo* is similar in its grammar; from these two words are derived the precopular nouns *sore-sootoo* = *sore-soo'oo* 'corresponding'. Cf. *¯sootoo*, §2.4.

9. The opposite might appear to be true in ... *suteru monó ga náni mo nákata no ka* ... 'apparently because there was nothing to be thrown away ...' (SA 2665.117a) but the case marking (ga) tells us that the following *náni mo* must be adverbial. This is not the pseudo apposition coming from anaphoric reprise of a theme (described below), but rather a quantification, in which *náni mo* 'nothing' functions like *hitoto mo* '(not) even one'.

10. But such examples as *Náni o báka na kotó o itte 'rú n da ná* 'What nonsense are you talking?!' (Okitsu 1.251) suggest that a better solution is that of the scope-narrowing multiple adjuncts of §3.11.

may be more suitable, e.g. níman [ni] yónsen [ni] Dates and times seem clearly to include an optional [nó] in moving from larger to smaller areas of specification: Syóowa(¯) [no] zyúu-nen [no] sángatu [no] tooka [no] gógo [no] hatí-zi 'eight o'clock p.m. on the tenth of March of the year Shōwa 10 (1935)'. But further quantification (hatí-zi zíp-pun 'ten minutes after eight') must be handled some other way.

Expressions of the type A tó B {tó} dótira mo (or ryoo hóo(¯)) 'A and B both', A tó B tó C {tó} minná^[1] 'A and B and C all of them', are a special case of counting, and are to be treated in the same way as kamí ití-mai 'a sheet of paper'.¹¹ This can be noun + directly adverbialized number, as in Kamí [ga] ití-mai irimásu 'I want one sheet of paper', or it can be an apposition (Kamí ití-mai [ga] irimásu 'I want one sheet of paper') that must be assumed to involve inversion from ití-mai no kamí 'paper which is one sheet (in quantity)'; cf. § 13.6. An example of a number ('all') in apposition to a phrase that contains the apposition N sonó-ta: ... heyá sonó-ta íssái o kaizoo suru ... 'renovating all the rooms and other things' (Tk 4.27a).

Another kind of pseudo apposition is the result of anaphoric reprise of a theme (as described in § 3.9—cf. KKK 23.151-2); this could be thought of as apposition of adverbial phrases (since that is what the case-marked nouns function as): Koo itta siki no monó [wa], SORE wa kóoka arimasén 'This type of thing, it won't be effective'; Kono hitéi-kei to iu yóo na katati mo KORE mo yahári ná yóo de arimásu 'Nor this form like a negative, it doesn't seem to be there, either'. Among theme-reprises are list summarizers, such as ABC kono zénbu 'ABC all' and resumptive generalizers: Nómu monó mo kúu monó mo NÁNI MO náku ... 'They had nothing to eat or drink (or anything) ...' (SA 2648.61c); Tyoosén no heigóo-si kara NÁNI kara kangáéru to né 'When you think of it from the viewpoint of the history of the annexation of Korea and all ...' (Tk 3.5a); Niwa wa, iké kara NÁNI kara minná (sono nióí made) omoi-dasita 'I recalled the garden, starting with the pond and everything, all of it, right down to the way it (all) smelled' (Kusakabe 1968). Something like this lurks in the background of nádo and its synonyms, § 2.9. And some of our conjunctive phrases, such as sore ni 'to that = additionally, and also' have similar origins: Nomímono wa, Nihon-syu, bíiru, SORE NI Santórii no kaku-bin no zidai '[It was] an era when what one drank was sake, beer, and Suntory (whiskey) in the square bottle' (Gd 1969/9.95).

Still another type is the apparent apposition of a question or an alternative question to a summational postadnominal, as if a copula or quotational pseudo-copula were omitted: S ka [to iu] N, S ka [no] N. Ishigaki suggests S ka [ni túite no] N. Examples (from Ig 1962.88): Ittai, zibun ga ítu kara konna huukei no náka ni itá NO KA, Mótoko no KIOKU wa mattaku náí 'There is not the least memory for Motoko of just when she got into this kind of state' (... no ka to iu kioku ...); Korétika ga hatásite ítu miyako e kaeri-tuitá KA, seikaku no [= na] KOTÓ WA wakaránai 'It is unclear precisely when Korechika finally made it back to the capital' (... ka to iu kotó ...).

11. An example: Míru monó [to/ya] kiku monó [ga], súbete mono-sabísiku ... 'Everything I see or hear is dreary to me' (Tk 3.224a); an alternative explanation would be ... monó [no] súbete [ga] ... but I believe the comma in the text indicates the first interpretation was intended. The "number" can be questioned, and that is the explanation for this sort of sentence: Maa, niwatori to tamágo(¯) to dótti ga saki da tte kotó ni mo narimásu ga, ... 'Well, it gets to be a question of which came first, the chicken or the egg ...' (Tk 3.206a). Notice that a case or focus particle can follow the last item in the list whether it is marked with the optional tó or not.

26 NAMES, TITLES

Japanese like to mark a name by attaching a TITLE that specifies some category or role or place in a hierarchy. If the title is short and common, it may be attached as a suffix; you will recall that suffixes of one syllable (whether containing one or two moras) will typically accentuate the preceding syllable—the last syllable of the noun to which they attach—after removing whatever basic accent the noun would have in other contexts, but some suffixes form atonic phrases and there are fixed expressions that ignore the productive patterns. Some titles are not attached as suffixes; they are separated from the name by an underlying minor juncture: Takáhasi zyo-kyóozyu ‘Assistant Professor Takahashi’, Óotani Sátoko urakata ‘Lady Abbess Satoko Ōtani’ (Tk 2.267b). These are UNREDUCED titles. Common titles such as senséi ‘Dr’ or ‘Maestro’, zyósi ‘Ms’, kyóozyu(̄) ‘Professor’, etc., are usually reduced by dropping the juncture. In Yamada senséi (or Yamada zyósi) the dropping of the juncture might be just the usual surface adjustment whereby a minor juncture rather freely drops after a short atonic phrase, since the family name Yamada is atonic; but the lack of juncture after a tonic name, as in Takáhasi senséi (or Takáhasi zyósi⁽¹⁾), clearly indicates that what is involved is a syntactic reduction.¹

The predilection for titles perhaps accounts for the way place names are so often stated. Cities, for example, often are cited with ‘si ‘city of ...’ attached to the name: Kóobe = Koobé-si, Kawasaki = Kawasakí-si, Kamakurá(̄) = Kamakurá-si, etc. Tōkyō, however, enjoys unique status as a “(capital) metropolis” so it attaches ‘to: Tookyoo = Tookyóo-to ‘the metropolis (or capital city) of Tōkyō’. And you will find Ōsaka and Kyōto referred to both as cities (Oosaka = Oosaká-si, Kyōoto = Kyootó-si) and as “municipalities” with the suffix ‘hu (Oosaka = Oosaká-hu, Kyōoto = Kyootó-hu). Prefectures are designated by the suffix ‘ken: Saitama(̄) = Saitamá-ken, Míe = Mié-ken, Kanágawa(̄) = Kanagawá-ken, Yamánasi = Yamanasí-ken, Gúnma = Gunmá-ken, Isikawa = Isikawá-ken. Some place names function in more than one role: Nagásaki = Nagasakí-si ‘the city of Nagasaki’ or Nagasakí-ken ‘the prefecture of Nagasaki’; Hirosima = Hirosimá-si ‘the city of Hiroshima’ or Hirosimá-ken ‘the prefecture of Hiroshima’. Mountains usually have fixed designations with the suffix ‘san (or -yama) attached: Eberesutó-san ‘Mt Everest’ (Eberésuto); Asama-yama ‘Mt Asama’; Húzi-san² ‘(Mt) Fuji’—also called, poetically, Húzi-no-yama and these days sometimes even “Huziyama”, borrowing back the English version in order to name sophisticated things like lounges in jumbo jets. River names are typically marked by the suffix -gawa (from kawá ‘river’): Tone-gawa ‘the (river) Tone’, Yodo-gawa ‘the (river) Yodo’, Kamo-gawa ‘the (river) Kamo’, Sumidá-gawa ‘the Sumida

1. According to Akinaga (in K) at least some of these expressions are at times treated as if they were quasi-restrictives: Takáhasi ̄senséi = /takahasisenséi/—and therefore, by analogy, /yamadasenséi/ = Yamada ̄senséi. Certain speakers, I believe, make a difference in meaning between a phrase of noun + title and the quasi-restrictive version, using the latter to refer to a frequently mentioned or well-known personality. Akinaga lists the atonic example of kootyoo ‘school principal’ as well as the tonic examples of tennóo ‘Emperor’, koogóo ‘Empress’, hooóo ‘Pope’, séntyoo ‘ship Captain’, kóosyaku ‘Prince’, táisi ‘Ambassador’, and dáizin ‘cabinet Minister’ (but this is usually ...dáizin with the particular ministry specified). Hamako Chaplin uses the quasi-restrictive accentuation for Raisyáwaa ̄táisi ‘Ambassador Reischauer’.

2. The accentuation is irregular, as if it were ‘Mr Fuji’ instead of ‘Mt Fuji’; we expect *Huzi-san.

(River)', Teemuzú-gawa 'the Thames', Misissippí[i]-gawa 'the Mississippi (River)'; in a few names this is -kawa, e.g. Ara-kawa 'the Arakawa'. There are a good many other geographical suffixes—such as 'wan 'bay', 'kai 'sea', '-too 'island', etc.—as well as political subdivisions such as 'ku 'ward', 'tyoo or -mati 'town, section', etc. Temples are designated with 'zi/-zi or -dera, but the accent is sometimes capricious, especially when the temple designation is used as a geographical or political unit, e.g. Kitizyoo-zí. Railway stations are designated by 'eki: Tookyoo = Tookyóo-eki, Ueno = Uenó-eki, Kyóoto = Kyootó-eki, Nagásaki = Nagasaki-eki. Modern institutions are sometimes designated by a free noun used as the second part of a compound noun, e.g. daigaku 'university' in Tookyoo-dáigaku, Kyooto-dáigaku, and Ekiben-dáigaku 'Hicktown University'.³ But if the designation gets long, it is often added as a title, preceded by the appropriate underlying juncture: Bósuton no Róogan kokusai-kúukoo made áto gó-hun, tyakuriku-kóosu ni háiru tokoró da 'Five minutes from Boston's Logan International Airport, they are about to enter their landing pattern' (SA 2673.137b).

Japanese personal names normally follow the family name, separated by an underlying juncture: Takáhasi | Yósiko 'Yoshiko Takahashi'. The juncture can be thought of as representing a dropped nó, such as we find in Japanese names of an earlier era: Huziwarano Mitínaga(⁀) 'Michinaga of the Fujiwaras'.⁴ Foreign names, on the other hand, are given in the order of the original language and usually run together as if a single noun, and the accent of the last element in the name prevails: Baanaado-Syóo 'Bernard Shaw', Seodoa-Ruuzubéruto 'Theodore Roosevelt', Dagurasu-Makkáasaa 'Douglas MacArthur'. Under certain circumstances a Japanese (or partly Japanese) name will be given a sophisticated foreign treatment; if Sátoo Yúriko were to become a TV personality, say, she might be presented as Yuriko-Sátoo and perhaps even change her name to Zyuurii-Sátoo 'Julie Sato' or the like. And names out of Japanese history are now often treated, optionally, as if they were compound-type foreign names: Asikaga-Yosímitu = Asikága Yosímitu, i.e. Asikága no Yosímitu; Tokugawa-léyasu = Tokúgawa léyasu(⁀), i.e. Tokúgawa no léyasu(⁀); Toyotomi-Hidéyosi = Toyotomi Hidéyosi(⁀), i.e. Toyotomi no Hidéyosi(⁀).

The most general title for people is san, a shortening of the formal version sama; there are also hypercoristic (endearing) versions tyan and tyama. Though often written with a hyphen, as if attached as a suffix, this title—variously translated as 'Mr, Miss, Mrs, Ms, ...'⁵—has no effect on the accent of the word with which it forms a phrase; thus it is a syntactic reduction (with obligatorily dropped juncture) and is best treated as a separate word, a "reduced title": Sátoo san/sama, Yamada san/sama, Harupo-Márukusu sama/san 'Mr Harpo Marx', Yósiko tyan/tyama 'little Miss Yoshiko', Kén tyan/tyama 'our Ken', With kinship terms the title is so common that it is perhaps advisable to write it as part of the word, with or without a hyphen: ozi(-)san 'uncle', otóosan 'father', okáasan 'mother', obáasan 'grandmother', etc.⁶ But ozi, o-tóo, o-káa, o-báa, etc., are also used without the

3. This is true of geographical terms as well: Noto-hántoo 'the Noto peninsula' is Nóto + hantoo, Tugaru-káikyoo 'the straits of Tsugaru' is Túgaru + kaikyoo. Actually, the term "preaccentuated suffix" often refers to a free noun of one syllable used as the second member of a compound; see p. 19. Place names and family names have inherent accentuations which are largely unpredictable and must be learned individually. (A helpful hint: many surnames of three or four syllables are atonic.)

4. Certain impersonal names can be explained in the same way: Bitámin(⁀) | Bii | Zyuuní 'Vitamin B-12'.

5. The traditional way to say explicitly 'Mrs Takahashi' is Takáhasi san no óku-san (or óku-sama); 'Miss Takahashi' is Takáhasi san no ozyóo-san/-sama.

6. Those kin terms with a basic final accent lose it when attaching -san: ootoó but ootoo(-)san,

title; and -sama, -tyan, and -tyama can readily replace -san in these words. The word ákatyan 'baby' (from 'little mister/miss red one') is a set form; on rare occasions you may hear ákatyama or ákasan. The title san can be followed by the collectivizer táti (§2.7): Yamada san táti (also Yamada sán-tati?) 'Mr/Ms Yamada and associates' or 'the Yamadas', Sátō san tati 'Mr/Ms Satō and group' or 'the Satōs'. The title sama can be followed by the collectivizers táti or ṽgáta: Yamada sama táti or Yamada samá-tati, Takáhasi sama tati; Yamada sama gáta or Yamada samá-gata, Takáhasi sama ṽgáta = /takahasisamagáta/ or Takáhasi ṽsamá-gata = /takahasisamagata/. The iterated title sama(-)sama⁷ is not plural, but emphatic, and at times sarcastic; it is to be translated something like 'most obliging' or 'indeed welcome (= to one's advantage, convenience, benefit)': Sore mo, ón no hukái, giri^[1] no hukái ohukuro sama(-)sama dá 'Yes indeed, she's your fine fine mother toward whom you owe so much obligation' (Fn 144b). Kenkyusha gives the example Soo site kureréba Kimura sama(-)sama da 'I shall thank Mr Kimura ever so much, if he is good enough to do so'.

The title kun is attached to the name of a colleague, male or female, or of someone who has been a colleague at work or at school. (But many agree with BJ 1.212 that "it is a man's word, and is usually used by men in reference to men". When not a direct second-person reference females freely use it of a male.) Kun can be attached as a syntactic reduction, a "reduced title" like sama/san, but after an atonic noun it enjoys optional treatment as a (preaccentuated) suffix 'kun: Takáhasi kun, Yamada kun or Yamadá-kun. The title sí is applied to prominent persons, especially foreigners (who need not be especially prominent), as a relatively formal title; though treated as a "reduced title" after a tonic noun—Sátō si 'Mr Satō', Níkuson si 'Mr Nixon', Goruda-Méia si 'Mrs Golda Meir', Gárubo si 'Miss Garbo', Guroria-Sutáinemu si 'Ms Gloria Steinem'—this is a (preaccentuated) suffix after an atonic noun: Yamadá-si 'Mr Yamada', Nakágawa Susumú-si 'Mr Susumu Nakagawa'. The title kun can be followed by the collectivizers táti, rá, and dómo:⁸ Yamada kun or Yamadá-kun will yield Yamada kun táti or Yamada kún-tati or Yamadá-kun tati, Yamada kún-ra or Yamadá-kun ra, and Yamada kun dómo; Takáhasi kun will yield Takáhasi kun tati, Takáhasi kun ra, and Takáhasi kun domo.

The title sí can be followed by the collectivizer rá: Yamadá-si ra, **Takáhasi sí⁽¹⁾ ra**. For women the title zyósi is often used instead of sí: kó|| Okamoto [|] Kánoko zyósi⁽²⁾ 'the late Miss K. Okamoto' (Tk 3.223). But neither term will be used for a woman who is prominent primarily because of her husband's position: Mrs Nixon is Níkuson huzin, and Mr and Mrs Nixon is translated as Níkuson (go-)husái. The rather formal word dóno(ṽ) is

imootó but imooto(-)san, musumé but musume(-)san. This seems to indicate that a dropped juncture cancelled the accent before vanishing, confirming the treatment of san/sama as a syntactic reduction. (Ozyóo-san is a fixed lexical item. Apparently there are no personal or family names with a basic final accent.) Notice also the irregularity of kozoo-sán from kozóo 'young Buddhist priest'. Some other unpredictable accentuations: osewa-sama 'trouble' (from o-séwa from sewá), oheya-samá(ṽ) 'concubine', okyaku-sámá 'guest', Osyaka-sámá 'Buddha', otera-sámá 'Buddhist priest', otori-sámá '(feast of) the Ōtori shrine', ...

7. For Hamako Chaplin this is atonic; MKZ gives sama-samá and K implies |sama-samá in the citations syóobai sama-sámá 'welcome business indeed' and kaisya sama-sámá '(our) most obliging company (= generous employer)';

8. The collective term syókun 'colleagues' is used as a term of address (like miná-san 'ladies and gentlemen') and as a kind of title after a few terms, e.g. gakusei syókun. The collective term syósi 'gentlemen' is sometimes used in a similar way, e.g. kyoozyu syósi 'professors'. There is also ryóo-si 'both gentlemen': Sugano Kén, Usuda Hiroshi ryóo-si ni yoru ... 'according to [Messrs] K. Sugano and H. Usuda'.

sometimes used as an unreduced title⁹ '... Esquire' or 'Mr ...' in addressing letters or the like: Takáhasi Tároo dóno(¯), Yamada Susumu dóno(¯). Other title-like words which may appear at the end of an address (unreduced) include kíká '(for the desk of =) To:' and óntyuu(¯) 'Messrs ...; (To) Whom It May Concern at ...'. An address is normally ordered from the general to the specific, with an underlying juncture between each component (perhaps to be thought of as the remnant of a dropped ... nó |), so that the name will come at the end, followed by the title etc.

Older gentlemen are sometimes referred to with the polite titles ˘roo or (˘)óo. The former is usually attached as a suffix (thus Takahasí-roo from Takáhasi); the latter seems to be used—at times—as an unreduced title, preceded by an underlying minor juncture: ... kó || Tooyama Mituru lóo wa ... 'the late [elderly gentleman] Mitsuru Tōyama' (Tk 2.157); Sasuga Syóo óo wa hiniku-ya de áru ... '(Old) Shaw is the cynic indeed ...' (Tk 2.115a); ... Muséi-roo no go-kóosetu o ukagai-tái n desu ga ... 'I'd like to ask your valued opinion, venerable Musei' (Tk 2.124a). The designation roozín(¯) 'elderly gentleman' is compounded with a name to refer to an older literary figure: Kubota-róozin from Kúbota, Kozima-róozin (Tk 2.198b) from Kozima.

Examples of unreduced titles, separated from the name by an underlying juncture: Kúbota soosyoo 'Master [haiku poet] Kubota'; Zissóozi kantoku '(Film) Director [Akio] Jissōji'; Béteran(¯) no Isikawa kamerá-man ga ... 'Veteran cameraman Ishikawa ...' (SA 2686.41b); Miyata Téru ana (SA 2670.25b) = Miyata Téru anánsaa 'Announcer Teru Miyata'; ... marason no Són sénsyu to Nán sénsyu ga déru n de ... 'Marathon champions Son and Nam appeared and ...' (Tk 3.76a); Síroki toosyu 'Pitcher Shiroki' (Tk 3.56); Hurusityóhu zen-syúsyoo ni yotte, ... 'According to ex-premier Khrushchev, ...' (SA 2673.131a); ... Áiti | zén | gaimu-dáizin ga || ... 'former foreign minister Aichi ...' (R).

The title kóosyaku 'Prince' is usually unreduced,¹⁰ but its abbreviation kóo is apparently treated as a reduced title: Kónoe Atúmaro kóosyaku (Tk 3.52); Kónoe Ayámaro koo (Tk 3.52). Hakusyaku 'Count' and its abbreviation háku are similar: Takáhasi hakusyaku; ... tokí no | sítyoo || Gotoo [|] Sinpei háku o | tasúketa '... helped Count Shinpei Gotō, mayor at that time' (Tk 3.212). And I presume that dásyaku(¯) 'Baron' and its abbreviation dán will behave the same way.

Once a person has been mentioned by name and title, later references may use just the title, as if a pronoun. When a mention of Sátoo sensei⁽¹⁾ 'Dr Sato' is followed later in the discourse by a reference to sensei, the appropriate translation is usually 'he' or 'him';¹¹ once Buráun zyósi⁽²⁾ 'Ms Brown' is introduced, later references to zyósi are appropriately translated as 'she/her'. Sí 'the person mentioned = he/she' (= dóosi 'said gentleman') is also used in this way, as if a pronoun; but kun and sama do not enjoy the privilege.

As suggested in §25, an explanation for the structure NAME | TITLE can be found in assuming an inversion from something like TITLE no [= de áru] | NOUN 'NOUN who is TITLE', so that Sátoo soori-dáizin 'Prime Minister Satō' is derived from soori-dáizin no Sátoo 'Satō who is prime minister' rather than taken as a straight ellipsis of Sátoo [no] |

9. The accent dictionaries give this as a reduced title: Takáhasi dono, Yamada dóno(¯).

10. But sometimes treated as a quasi-restrictive: Konoe-kóosyaku 'Prince Konoe'. See earlier footnote (p. 1055).

11. Unless we adopt the unctuous type of "nurses" fostered by the American medical establishment ("Doctor will see you now") and much favored by Madison Avenue ("Now watch busy home-maker wash shirt with Product X").

Soori-dáizin 'the prime minister who is Satō'. Of course, with a straight ellipsis (and no inversion), soori-dáizin Sátoo can be used to mean 'Satō as prime minister', with the role taken as an epithet rather than a title. That is the explanation offered in §25 for syoogun léyasu(⁀) 'Ieyasu the Shōgun'. Another example is dáizin Ámano san 'Mr Amano (when/as) the cabinet minister' (Tk 3.163). But there are also examples of the preposed title intended as identification rather than as an epithet: O-hanasi wa || Gakusyuuin-dáigaku | kyóozyu || Óono | Susumu san désita 'Speaking was Mr Susumu Ōno, professor at Gakushūin University (R). Notice the major juncture after kyóozyu(⁀) 'professor', representing an ellipsis of *nó* (= *de áru*) 'who is'. (The minor juncture before the word also marks a dropped *nó*.)

Sumō wrestlers are given professional nicknames, called sikó-na(⁀), that end in -yama, as if they were mountains; to this is attached the title 'zeki, an abbreviation of sekitorí '(champion) wrestler': Haguroyamá-zeki = sekitorí Haguroyama 'Haguro-yama the sumō wrestler'.

In written Japanese you may see a title separated from the name by parenthetical material: Kónkai no kóosi, Dokoo (Tosio—Toosiba syatyoo) san mo Táyo (Sigeki —Toore kaityoo) san mo kátute wa séito san datta 'The instructors of the present session, Mr (Toshio) Dokō (president of Toshiba) and Mr (Shigeki) Tayo (chairman of Tōyō Rayon) on former occasions were both students' (SA 2689.137a). Identical titles can be omitted for all but the last name in a paratactically conjoined group; an example of three names followed by 'si ra 'Messrs ...' is cited on p. 146. Sometimes what might be a title is little more than descriptive specification, to be treated as simple apposition: Zyóo-tati Béi kaiheitái-in ... 'American marines—Joe and his buddies—' (SA 2679.39a).

Full European names, as we have observed, are treated as compound nouns. In Chinese, Korean, and Vietnamese the surname comes first and the entire name is usually treated as a single word with thematic accentuation, the fall of pitch coming at the third mora from the end (one mora earlier when the third is one of the accent-avoiding moras): Moo-Tákútoo 'Mao Tse-tung', Syoo-Káiseki 'Chiang Kai-shek', Són-Bun 'Sun Wen (= Sun Yatsen)', Hoo-Tí-Min 'Ho Chi Minh'. When a shorter title is added to a European, Chinese, Korean, or Vietnamese name, the entire expression is often accentuated as if a compound noun, for the title is treated as a quasi-restrictive. Thus Huroorensu-Howáito (⁀)zyósi 'Miss Florence White' may be more often heard as /huroorensuhowaitozyósi/ than as /huroorensuhowáito |zyósi/; this is particularly true when the name is short: Howáito ⁀zyósi /howaitozyósi/ 'Miss White' rather than Howáito zyósi /howáito |zyósi/, Baanaado-hákase 'Dr Barnard' rather than Báanaádo hákase. Some speakers will extend this practice to longer titles as well: ... Warutohaimu-zimusóotyoo no |motó ni || ... 'under [UN] Secretary General Waldheim' (R). But apparently these expressions are more commonly broken into shorter phrases: ... Níkuson |daitóoryoo nol íkoo o || ... 'President Nixon's opinion' (R); ... Sóuru no |NHK || Sí Mizu | tokuháin ni |yorimásu to || ... 'according to NHK's Seoul correspondent Shimizu' (R); Amerika no || Kissínzyaa || daitóoryoo | hosá-kan wa || ... Kissínzyaa | hosá-kan wa || ... 'American presidential adviser Kissinger ... Adviser Kissinger ...' (R); ... Kánkoku no || Kin-Yóosyoku | gaimú-bu | tyookan wa || ... Kín | tyookan wa mata || ... Kín | tyookan wa | sára ni || ... 'South Korean foreign affairs minister Kim Yong-shik ... Minister Kim moreover ... Minister Kim further ...' (R); Howaito-Háusu no || Néssen | hodóo-kan wa || ... 'White House spokesman Nessen' (R); Tóru do | syusyoo ga || ... 'Prime Minister Trudeau' (R); Warutoháimul zimu-sóotyoo ga || ... 'Secretary General Waldheim' (R).

27 ITERATIVE DEVICES

One way to emphasize what you are saying is to repeat it. The repetition of a word or phrase or larger unit is called ITERATION, and Japanese use the device fairly often: *Kore da kore da!* 'This is the one (—this is the one)!'; *Aa, sore sore!* 'That's it (—there)!'; *Taihen da taihen da taihen da yó* 'It's terrible—terrible, terrible, terrible!'; *Asuko [o] |yameru |yameru tte litte itá kedo, ...* 'He kept saying he'd quit that place ...' (BJ 2.73.27); *O-dénwa siyoo siyoo to omoi-nágara túi [dekínakute go-men nasái]* 'I kept meaning to phone you and then I ended up not doing so [please excuse me]' (cf. BJ 2.326.31); *Áse o dasi-kitte, dasi-kitte, turai, turai* 'You sweat and sweat; it's tough, it's tough' (SA 2671.47a); ... *nódo ga kawaíte kawaíte, ...* 'thirsty, thirsty' (SA 2671.94b); ... *sabísikute sabísikute, tamarimasén* 'is terribly terribly lonely' (KKK 3.80); *Máiniti(¯) ga iyá de iyá de tamaranáí no* 'Every day is simply unbearable' (SA 2642.37); ... *kore ga, daizí de daizí de, táda kodomo no tamé ni íkite kíta háha de, ...* 'she is a mother who has lived only for her children, treating us with great care' (R); *Hazime wa muné ga dóki-doki sitá ga, nán-kai mo yatte 'ru utí(¯) ni omosírókute omosírókute yamerarenaku nátyatta* 'At first his heart was in his throat, but with repetition it got to be such great fun he couldn't stop' (SA 2652.121b); *Tokoró-ga, dandán dandán sono byoozyoo ga susumimásite, ...* 'But little by little her illness took its course, and ...' (R); ... *dandán dandán dandán ...* 'little by little by little'; ... *yukkúri yukkúri arúite ikú n da né* 'he walks along very slowly' (Tk 4.290a); *Móttö móttö taisetú na kotó wa, ...* 'A much much more important matter ...' (SA 2671.44b); *Ítu mo máe e máe e to susumu kotó no dekiru to iu kotó wa saiwai na kotó de aru* 'Being able to progress onward and onward all the time is a happy thing' (CK 985.60); *Tugí-tugi ni sita e sita é to rensetu site iku ...* 'They are connected continuously all the way down'; ... *ítu made mo itu made mo utai-tuzukéru* '(We would) keep on singing forever and ever' (SA 2650.59a); *Ítu mo itu mo ...* 'All the time ...'; *Áto kara áto kara ...* 'One after another, in rapid succession ...'; *Dé mo, nán-kai mo nán-kai mo tanomi-konda* 'But I kept up my earnest entreaty time after time' (SA 2640.61a); *Dóno aná mo dóno aná mo sitai ga tumátte ita* 'Corpses were stuffed into every hole' (SA 2670.46b); *Máiniti(¯) máiniti(¯) no sigoto ní mo, ...* 'Even in everyday chores ...'; *Sízuka ni sízuka ni arúku* 'We will walk very quietly'; *Hirumá míta Kawasaki to tigai, sízuka na sízuka na matí de atta* 'Quite different from Kawasaki seen in the day-time, it was a hushed city'; *Tíisa na tíisa na matí ...* 'A tiny little town ...'; *Zyúku ga áru kara, asobú nánte tote-mo tote-mo [...]* 'I've got private school, so there's little chance to play or anything' (SA 2635.41c—five-year-old boy talking).

Some of the iterations are, in translation at least, idiomatic: *Kúru o-múko-san, kúru o-múko-san ga minná naku-nattimatte* 'Bridegroom after bridegroom, they all passed away ...' (Okitsu 1.253); *Sóra wa kúru hí mo kúru hí mo haiiro [dá]* 'The sky was grey day after day' (SA 2670.135a); ... *íma ka íma ka to ... mátte ita* 'was waiting [wondering whether it would be at any moment =] eagerly' (Kb 234a); ... *sáigo ni, are yo are yo to iu aida ni, kimi ga tóppu ni nátte simoota ná* '... and at last, all of a sudden, you ended up at the top, didn't you' (SA 2651.42c); *Sáigo ni wa medétási medétási de owaru monogátari* 'Finally the story has a happy ending' (Ōno 1966.105); ... *medétási medétási no monogátari de owaru kotó no dekinai ... kónnan ...* 'difficulties that can not wind up as a story with a happy ending' (Ōno 1966.107).

The pattern *sono N₁ sono N₁* is used to mean 'each particular/individual N₁' or 'each and every N₁' (cf. *sorézore < sore-''sore ? < sore-ni-sore* 'individually, respectively'):¹ ... *Syuukan-Ásahi ni sité mo Bungei-Syúntyoo ni sité mo, sono góo sono góo ni yotte, naiyoo wa zénbu tigau* 'Whether it be Weekly Asahi or Bungei Shunchō, the content is completely different from issue to issue' (Tk 4.241b); *Kono yóo na gutái-rei wa, sono toti sono toti ni, musuu ni korogatte iru* 'Concrete examples of this sort abound all over the country' (Maeda 1962.124); ... *sonó-hito sonó-hito no syukan ni yotte* 'depending on the intuition of the particular individual' (Tsuji-mura 78); ... *sono-hi^[1] sono-hi^[1] no seiseki* 'the daily results' (SA 2663.48c); ... *sono-hi^[1] sono-hi^[1] o kurasu* 'lives through each day'; ... *sono zidai sono zidai no sesóo(-)* ... 'the social conditions of each individual age'. But occasionally the iteration of *sono N* may be merely emphatic: *sono-ba sono-bá(-)* de 'right then and there'.

In the iterative pattern *sono N₁ sono N₁* (= *dóno N₁ mo* 'whatever N') we can think of *sono* as a minimal specification of the noun; you will sometimes find other adnominal modifications, especially *V-ru*: *Áu hito áu hito ga áisatu sita* (= *Átta hito wa dáre de mo áisatu sita*) 'Everyone I met greeted me'; *Kúru monó^[1] kúru monó ni o-miyage o yatta* 'They gave presents to all comers'; *Míru monó^[1] míru monó ga mezurasií kara, akinai* 'Everything I see is so unusual my interest never lags'. And in *Suru kotó^[1] násu kotó^[1] sippai bakari datta* 'I failed in everything I did', the iterated pattern allows a synonym of the modifying verb.

In §2.7 we observed that a singular number can sometimes be iterated and turned into a quasi-compound to mean 'each and every' or 'every single (one)', as in *itimai-itimai no kamí* 'every single sheet of paper'. And we also observed reduplications such as *yamáyama* 'mountains' and *simázima* 'islands', to be entered in the dictionary as unpredictable lexical items, sometimes narrowed in meaning to 'each individual N': ... *koré-ra no ié-ie no totan wa Nihon-sei ná no da* 'the zinc on [the roof of] every one of these houses was made in Japan' (SA 2669.62e); ... *soré-ra no misé-mise(-)* wa ... 'those several shops, each one of them ...' (SA 2663.34d); ... *tihoo-tihoo no hoogén* 'the dialects of the various regions' (Maeda 1962.219); *Kotobá wa tihoo-tihoo de tigau* 'Language differs from region to region' (Kotoba no yurai 130); ... *yoosyo-yóosyo de* 'at every strategic position'. Some of the words derived by these patterns are virtually synonymous with iterations of *sono N*; ... *toti-tóti ni yotte koto-náru ga* ... 'it differs from place to place, but ...' (SA 2659.71b) means much the same thing as *sono toti sono toti de zúibun tigau*. And sometimes you will find *sono* + reduplicated noun: *Máa sono keesu-kéesu ni yotte tigaimásu* 'Why, it varies from case to case' = *sono kéesu sono kéesu ni yotte tigaimásu*.² Some of the reduplicated nouns have unpredictable nuances of meaning that show up in idiomatic translations: *ikura-íkura* 'just how much', *kázu ga ikura-íkura(-)* *húeta* 'the number increased a certain amount'; *setuna-sétuna ni ikíru* 'lives from moment to moment'; *omoi-ómói no sutáiru de* 'each in his own style' (CK 985.378—*omoi-ómói* is a precopular

1. But *sono tóki* 'that time' forms a compound *sonotoki-sonotóki*, as in ... *sonotoki-sonotóki no mondai o syóri suru to iu kotó ga* ... 'a matter of taking care of problems as they arise' (Tanigawa 20). There may be other lexicalized cases of this type. The appropriate adverbialization is *sonotoki-sonotóki DE*, in contrast with *sono tóki NI* 'at that time'.

2. In *baai-baai ni yotte* 'depending on the place' and *nendai-nendai ni yotte* 'depending on the age', for some reason the iterated atonic noun fails to pick up the appropriate compound-noun accent (**baai-báai*, **nendai-néndai*). Perhaps we should separate the iteration by a space rather than a hyphen. Similar examples: ... *sono syokuba-syokuba de* ... 'in each of those workshops' (R); ... *gakunen-gakunen dé wa* ... 'school year by school year' (Nagano 1966.140).

noun); *uta* no *aida-áida*(^[1])³ ni ... 'between each of the songs' (Tk 3.115b); *yuku saki-zaki de* 'in the various places one goes' but *saki-zaki* 'the distant future' (= *ato-ato* = *noti-noti*); *mae-mae kara* '(already) for a long time'; *moto-moto* 'originally, by nature; back where one started from (none the worse)'.³

Certain adverbs are iterated for emphasis, but pronounced as a single phrase, with the juncture dropping and cancelling all but the first accent; the resulting phrase is usually treated as a separate lexical item and we will write it with a hyphen: ... *ningen no énerugii no ooki-sa ni TÁDA-TADA bikkúri suru* 'We are simply startled by the size of man's energy ...'; *MÁDA-MADA arimásu* 'We've got lots more'. The adverbs *goku-goku* 'extremely' from *góku* and *yoku-yoku* 'extremely much; thorough(ly)' from *yóku* are similar, except that they have shed their accent. (Other cases of atonicization include *maru-maru* 'completely, entirely'—cf. *maru-máru* {to} *hutóru* 'gets plump'—*ato-ato* 'the distant future' and *mae-mae* 'for a long time already'.) The adverb *tokoro-dókoru* 'everywhere', on the other hand, has the regular accentuation of a compound noun. *Matá-mata*(⁻) = *matá-mo*{-ya} '(yet) again' is pronounced either atonicized or with the preservation of the final accent that must have been present in the earlier form of the (now atonic) adverb *mata* 'again'. The idiom *ása-na ása-na* 'morning after morning' has the earmarks of an iteration, but it is optionally accentuated as a compound noun *asana-ásana*; the adverb *yóna-yona* 'night after night' is a syntactic reduction (from an underlying *yó-na* | *yó-na*) and it is optionally atonicized *yona-yona*. And a similar expression meaning 'every morning and night' has three versions: *ása-na yúu-na*, *ásana(-)yuuna*, and *asana-yúuna*—as in ~ *no gongyóo*(⁻) 'religious services morning and night'. The mysterious *-na* of these words is an abbreviation of ... *no ma* 'the interval of ...', according to Ōtsuki, but the etymology ... *n[i]* [*w*]a 'as for in ...' seems more likely. The accentuation of the idiomatic expression meaning 'every inlet and bay = all parts [of Japan]' offers options that depend on whether the accent is shifted off the first vowel (because of its unvoicing between voiceless consonants) and on whether the idiom is treated as an unreduced phrase, as a reduced phrase (with dropped juncture), or as a compound noun: (*Nihón no*) *tú-tú urá-ura*, *tútú(-)uraura*, *tutu-uráura*.

The adverb *sirazu-sírazu* (*no utí*(⁻) *ni*) '(while) unawares' gives a compound-noun accentuation to a reduplication of the literary negative infinitive *sirazu* 'not knowing'. We have observed reduplication in the formation of various other adverbs (pp. 798-800); note also *tiká-zika*(⁻) *ni iku* 'goes up close', {*koré-kore*} *siká-zika* (*no* ...) 'such and such'. You will find intensive reduplication of verbs (made by preposing the infinitive) in *miti-mítite iru* 'is brimful' and *tumori-tumótte iru* 'is piled up high'; do not confuse this with the iteration of verbal infinitives discussed in §9.1.1b. Notice the accentual distinction between *máti-mati* 'waiting' (iterated verbal infinitive) and *matí-mati* 'town after town' or 'street after street'; the latter is probably the source of the precopular/adjectival noun *matímatí*(⁻) 'diverse'—cf. *kú-ku* (*táru* ...) 'diverse' or 'petty' from *kú* 'sector, section, ward'. See also *soko-soko* 'approximately' (§25).

Repetitions can sometimes be the result of a kind of interlaced sentence-joining that we have overlooked in our description: ... *nán*[*i*] *to náni ga íkura íkura de* ... 'just how much each item is' (Ariyoshi 62).

3. Some speakers may make a difference between *aida-áida*, with the productive accentuation appropriate to a compound, and *aida-aida* with an atonic accentuation that indicates a syntactic reduction (*aida* [|] *aida*), using the latter for spatial location: *hón no aida(-)aida* 'between the each of the books' but *sigoto no aida-áida* 'between each of the chores'.

28 ELLIPTICAL EXPRESSIONS

As we have had occasion to remark in several places, ellipsis is a pervasive phenomenon in Japanese sentence structure. Sometimes the ellipsis is a last-minute omission of an obvious word or phrase, easily supplied by the listener; at other times the general nature of the omission is obvious, even though the identity of the particular item(s) may be unclear—perhaps to the speaker as well as the listener. Some of the very deep omissions we have assumed in explaining parts of the grammar (such as the genitive) may be historical remnants or mere artifacts of the grammarian. In this section we will call attention to some of the more obvious types of omission at the surface level.

Two elements that are frequently omitted are the copula *dá* and the verb *suru*; these are easily dropped when the preceding element clearly signals which of the two is called for. If the sentence ends with a verbal noun, you usually supply *suru*; for other nouns, you supply *dá*.¹ After all, the major function of the copula is to predicate a noun, and the major function of *suru* is to predicate a verbal noun or some nonfinite verbal structure. Certain sentence-final particles either allow or require the omission of the plain imperfect *dá*, as explained in § 15: *Ryokoo ˉbákkari ʃdaʃ yó! ... hutarí de yattyaú kara kantan ʃdaʃ yó* ‘Nothing but trips! ... but two of us do it together so it is simple’ (SA 2635.41c).

When at the end of a sentence, we can not be sure except from context whether to interpret an omitted predicator as imperfect or perfect. At the end of the headline *Undóo* in *hutarí ga ihan o kú ni ʃsiteʃ zisatu []* we might supply either *suru* or *sita*, and correspondingly translate either ‘Two party workers commit suicide, anxious over [election] irregularities’ or ‘... committed ...’ (SA 2663.126). But the context makes it clear that the action is habitual in the following example, so that *suru* is called for: *Hirusúgi ni ókíte, sono mamá saúna ni tyokkoo []*. *Koko de ...* ‘I get up sometime after noon and immediately head for the sauna. Here I ...’ (SA 2662.97a).

In addition to the sentence-final forms *dá* and *suru*, the gerunds *dé* and *sité* are also sometimes omitted, often with a comma to mark their absence; examples will be found in § 9.1.12.² Sometimes it is clear that a specific predicate, already mentioned or about to be mentioned, has been omitted rather than repeated; the precise form of the omission can usually be determined from the grammar of the sentence: *Séigi ni tuyókerya séi ni mo ʃtuyóiʃ to iu wáke ka* ‘Perhaps the intention is to be (“strong”=) heavy on righteousness and on sex as well’ (SA 2685.116b)—cf. § 9.3.2; *Bútai wa hutatú ni wakáre, Tyóo ga ittai o ʃsikiʃ siteʃ, Soobai ga hoka no ittai o sikiʃ sita* ‘The outfit split in two, with *Chō* (?—or, the Leader?) commanding one group and *Sōbai* the other’ (Ig 1962.92); *Tóozí no hooritu dé wa otokó ga sán-zyuu ʃni náttetʃ onná wa nízyuu gó ni naránakereba, ziyúu no kekkon wa mitomerarenákatta* ‘By the laws of that time free marriage was not recognized unless a man had reached the age of 30 and a woman 25’ (Ig 1962.93); *Zéndo ʃwaʃ mizubítasiʃ(ˉ) ʃni náttatʃ* ‘All Japan [has been] drenched with rain’ (newspaper headline);

1. But the free verbal noun can also be used as a pure noun; the marking of the adjunct is what signals the intended predicate markers in *Káre no ryokoo [da]* ‘It is his trip’ and *Káre ga ryokoo [suru]* ‘He travels’.

2. Here is an example omitting both *dé* and *dá*: *Nisi-Dóitu no heikin (-) koosaku-ménseki wa itikéiei ˉátari ití-nóomin ˉátari hat-tyóobu [de], Huransu wa sono báí ˉízyoo [da]* ‘The average cultivation area in West Germany is 8 *chōbu* (= nearly 23 acres) and in France it is over twice that’ (KKK 23.155).

O-kúrumi no ryoo-sóde ga uwamuki ni {nátte}, kubireta tékubi ga soko kara tyúu(¯) ni nóbita 'O-kurumi's sleeves were turned up and her constricted wrists extended from there into mid-air' (lg 1962.92). In the last example, we know that what is omitted can not be *sité* because 'sleeves' is marked as the subject, not the object, so the mutative must be intransitive; compare the following two examples: Odori-ba no garasu no kéesu o máe ni {site}, wakái onná ga iru 'A young woman is standing with the glass case of the (stair) landing in front of her' (lg 1962.97); Kore o kawakiri ni {site}, sono-gó(¯) Kyóodo no syuugeki wa síba-siba kuri-kaesareta 'With this for a start, afterwards the Huns' attacks were repeated often' (lg 1962.97).

In certain expressions it is obvious that some finite form other than perfect or imperfect is called for: O-iwai o [siyoo] to omoi-nágara, ... 'While thinking we would have a party, ...' (SA 2687.120a); Ori-kara, "Dóo-zo go-zyoosen o [site kudasái]" to iu kotó ni nátte, hitóbito wa húne e nagare-komu 'At that moment it was "All aboard" and people streamed on the ship' (CK 985.268); O-teywaraka ni [site kudasái] 'Take it easy (on me) = Treat me gently'. It is not always obvious exactly which of several possible verbs a speaker might have had in mind (as well as whether the form is perfect or imperfect): ... to iú no ga kyootuu-íken datta ga, náka ni wa tugí no yóo na kóe mo [] 'It was the consensus that ... but in the midst there were [also] some voices as follows' (SA 2673.110c)—*áru?*, *átta?*, *déta?*; Narikin-syúmi ga dóo-mo [] né 'The taste of the new rich—well!' (SA 2663.19b)—apparently something like *utagawasíi* 'is questionable' is intended; Dé wa, teeburu-supíiti o [] 'Now, the table speeches' (SA 2669.140—the M.C. at a wedding)—perhaps *itasimasyóo* 'let us do' or *ukagaimasyóo* 'let us listen to' is intended; Sitúrei site, así o [].—Aa, dóo-zo dásite kudasái 'Excuse me, my feet ...—Oh, please put them out in a comfortable position' (SA 2666.44a)—what verb was intended?; ... yappári, kéizai no hóo o?—Zyáa náí n da.—Dé wa, búnka?—Dé mo náí n da. 'I suppose it's economics (he's studying)?—It isn't.—Then literature?—Not that, either' (Kb 325b). The last example displays other types of ellipsis, including the omission of a noun phrase before the predicating copula. Here are additional examples of that: [] Daróo 'I guess (so)' (Fn 338b); Nání? Kimi wa, wasi o karakáu ki ká né.—[] Dé wa arimasén ga, ... 'What's this, are you trying to tease me?—No, but ...' (Fn 388a)—perhaps what is omitted is *sore* 'that'; Yúki san wa, honto ni, O-túya san to hutarí ~kkiri de, irú no daróo ka.—[] Dé, gozaimasyóo. 'Are you really going to be with O-tsuya, just the two of you, Yuki?—I guess so' (Fn 436b—the commas, from the text, are probably not intended to signal pauses). Similar types will strand certain elements that normally require a word in front (minimally *sore* or *sóo*): Anáta ga purodyúusu site?—[] Mítai ni náttýatta n desu 'With you producing it?—[So] it seems' (SA 2666.24c); Ei, [] mamá yó! 'Well, I don't care!'—presumably *kono* or *sono* is omitted; [] Daké ka? 'Is that all?'—presumably *sore* is omitted. Compare the examples of "opening ellipsis" given in §24.

In §2.8 we suggested that direct, paratactic linking of noun phrases might be attributed to the omission of joiners such as *tó* or *yá* 'and'. The accentuation and meanings of certain idiomatic expressions indicate that they are syntactic reductions from such conjoined phrases: *hónke* [to |] *honmoto* 'the originator and origin = the original source'. A number of combinations of noun + noun that have not been tightened into compounds by applying the appropriate accentuation rule are to be treated as reductions of N_1 [no] | N_2 ; see p. 659 and Martin 1970.

A few odd cases of ellipsis I have collected: Anáta {no {kutu} } to onazi kutu ... 'The

same shoes as you(rs) ...'; Ore mo máda wákaku, zibun de iú no mo [] na n da ga, gaiken (= sotomi) wa sumáato na hōo de, Kéiko o kokóro kara ái-site iru 'I am still young, myself, and even though I shouldn't say so myself I look rather smart, and I love Keiko with all my heart' (SA 2642.36d); what is omitted is perhaps { | hén} 'strange'.

Elliptical expressions described elsewhere in this book include VN [si] ni iku (§9.1.1), [suru kotó ga] dekíru (§14.1.3), N o hazime [to site] (p. 472), V-té wa [ikenai] to omóu (p. 999), V-tára [íi] to omóu (p. 566), sappári [nái] (p. 386). Omission of case markers is discussed in §2.2a; often the only clue to such omissions is the phrasing or accentuation, which indicates that we are not confronting a compound: ninsiki [ga/no] husoku 'lack of information; being uninformed' (not *ninsiki-búsoku), kíu [ga/no] syoodai na ... 'magnanimous' (not *kiu-syóodai), etc.

There is a kind of ellipsis that is sometimes called GAPPING, which permits you to join similar adjuncts (or strings of adjuncts) to a single predicate by omitting the conjoined form of the predicate, such as the gerund, that you would expect after the earlier adjunct(s): Sin'ítiroo wa hidari-gawa ni [séki o símete], gakusei wa migi ni séki o símeta 'Shin'ichirō occupied the seat on the left and the student occupied the seat on the right' (V 1972.162); ... sidai ni hikúí íti e [[tó] oi-komárete], otóta(¯) íti e tó oi-komárete iki-soo da ... 'they seem to get gradually driven into a lower position, into an inferior position' (Ōno 1966.105).

It is difficult to explain certain ellipses as mere surface omissions. In the example kéizai, boeeki-móndai ni túite 'with respect to economic and trade problems' we would appear to have a shortening of keizai-móndai to/ya boeeki-móndai 'economy problems and trade problems' but notice that kéizai appears with its original accent as if it had never gone into the compound noun at all. In the example Amerika || Kanada-teki na | suizyun ni | ... tikazuíte iru | wáke de arimasu 'are approaching American and Canadian levels' (R) the meaning seems to call for Amerika-teki na suizyun to/ya Kanada-teki na suizyun; here -teki is being used almost as if it were a quasi-restrictive, like ¯zyoo. One solution to the problem posed by the prior example would be to treat ¯móndai as a quasi-restrictive—like ¯ziken 'incident'.

29 DEMONSTRATIVES; DEICTICS AND ANAPHORICS; PRONOUNS

Deictic words indicate location in space or time with respect to the speaker ("ME"), the person addressed ("YOU"), and others ("THEM"). Deictic reference is included in the meaning of certain paired verbs such as *kúru* 'comes (to me/us)'¹ and *iku* 'goes; comes (to you)', *kureru* or *kudasáru* 'gives (to me/us)' and *yaru* or *ageru* 'gives (but not to me/us)', etc. Deictic reference to speaker and addressee is often implied in the use of the various exaltation devices. The most specific deictic reference is included in the meanings of the personal pronouns such as *watasi* 'I/me', *anáta* 'you', and *káre* 'he/him' or *káno-zyo* 'she/her'; but, as we will see below, Japanese prefer to avoid the use of personal pronouns, especially with reference to the second person, and they often rely on the less specific reference of other deictic words.

There is a set of deictic demonstratives that show three degrees of distance from the speaker: proximal (ko-), mesial (so-), and distal (a-).² For each group there is also an indeterminate (*dó-* etc.) which is used as the interrogative or indefinite form. The demonstratives are formed by attaching various suffixes: (1) *-re* 'individual thing/person/event'³ and sometimes (except for *dóre*) 'relative time' or 'place'; (2) *-ko* 'place'; (3) *-tira* or *-tti* 'direction; alternative (of two)' and [elegant] 'person'; (4) *-no*⁴ adnominal; (5) *-nná* (contraction of *-no yóo na*) 'of such kind as'; (6) *-[k]ú* adverbial (typically of manner). The last suffix makes somewhat irregular forms, as shown in the chart and explained later.

CHART OF DEICTIC DEMONSTRATIVES

<i>proximal</i>	<i>mesial</i>	<i>distal</i>	<i>indeterminate</i>	
<i>kore</i>	<i>sore</i>	<i>are</i>	<i>dóre</i>	individual
<i>koko</i>	<i>soko</i>	<i>asoko, asuko</i> ⁵	<i>dóko</i>	place
<i>kotira, kottí</i>	<i>sotira, sotti</i>	<i>atira, attí</i>	<i>dótira, dótti</i>	direction; alternative
<i>kono</i>	<i>sono</i>	<i>ano</i>	<i>dónno</i>	adnominal
<i>konná</i> ⁶	<i>sonná</i>	<i>anná</i>	<i>dónna</i>	= <i>no yóo na</i>
<i>kóo</i> ⁷	<i>sóo</i>	<i>áa</i>	<i>dóo</i>	adverbial (of manner)

1. Also as an auxiliary: *denwa ga kakátte kúru* 'there is a phone call for me/us', *denwa o kámete kúru* 'phones me/us'.

2. There are differences in the way the three-way distinction is drawn in parts of the Ryūkyūs as compared with the standard language. Several scholars have suggested that perhaps originally Japanese had only two degrees of distance. Cf. Kgg 73.8b (1968) and Gōtō. Although modern Korean marks three degrees of distance, only two of the forms are likely cognates with Japanese and each of those is asked by one degree: *kē/ko/ky* corresponds to Japanese *so-* in meaning but to *ko-* in form, *cē/co* corresponds to Japanese *a-* in meaning but to *so-* in form, and *yē/yo/i* corresponds to Japanese *ko-* in meaning.

3. In dialects (such as those of the Ryūkyūs) which use the *-re* forms as common third-person pronouns, the accentuation is different from when they refer to things. It is interesting that K lists the pronunciation *koré*([~]) for 'this person' (= *konó-hito*). As interjections, these words usually are prototonic: *Kóre! Sóre! Áre!* The interjections *kóra, sóra, and ára* are contractions of *kore/sore/are + wá*. *Dóre* is also used as an interjection: *Bu-kíyoo da né; dóre, bóku*([~]) *ga mótte yaru* 'How clumsy you are! Here, let me hold it' (Kawabata: *Suigetsu*).

4. In rapid speech this sometimes contracts to *-n[o]* before *d, t, or especially n*: *son[o] náka no ...* (R).

5. Also (N. Kyūshū) *akko* (Tk 4.320a), *ako* (Tk 3.321a).

In addition to the set of colloquial demonstratives shown in the chart, there are a number of literary and semi-literary forms, together with a few relics of older demonstratives. We might wish to add to our chart those forms made with the suffix 'náta (originally a contraction of -n[o k]átá), which functions as an elegant equivalent of -tira: kónáta, sónáta, ánáta, and dónáta. In the colloquial language, dónáta is used as an exalting equivalent of dáre 'who', as is dótira—both often appending the title sama; and the second-person pronoun anáta or ánta was derived from ánáta, the distal form being chosen out of exaggerated deference. The literary forms kótí, sótí, and átí are now found only in compounds or derived forms; and (*)dóti does not appear even there.

When reference is specifically to location, the proximal (ko-) refers to what is near the speaker (ME), the mesial (so-) refers to what is near the addressee (YOU), and the distal (a-) to what is away from both. When the reference is to time, *kore* means 'the immediate/impending time', *sore* means 'that earlier/later time', and *are* means 'that remote time'; the temporal reference is largely limited to the ablative (kará 'from') or allative (máde 'till'), and the resulting forms are often treated as lexical units, as we will see below. In place of *kore*, *sore*, *are*, and *dóre* you will sometimes hear *koitu*, *soitu*, *aitu*, and *dóitu*; these are contractions of ko[no] yátu 'this rascal [originally slave]' etc., used as a slangy reference to people or things, but not to times. *Kore kará* can mean 'from now on' (= ima kara) as well as 'from this one' (= koitu kará) and *sore kará* can mean 'till then' as well as 'up to that one' (= soitu máde); but *dóre kara* can mean only 'from which one' (= dóitu kara) and 'from what time' must be said as ítu kara.

When reference is to context, the ko- usually refers to that which is immediately coming in the text,⁶ so- refers to something recently mentioned ('the latter') and a- refers to something earlier ('the former'). In this sort of reference, often called "anaphoric", the proximal so- is overwhelmingly the demonstrative of choice; we can regard so- as the semantically unmarked form of anaphoric reference, the neutral form that is the appropriate translation for 'that' or 'it' in the absence of special reasons. Among the special reasons for using the two marked forms are two psychological factors: IMMEDIACY or NOVELTY (ko-) and OBVIOUSNESS (a-). When a reference that would otherwise be made with so- is said with ko- the hearer's attention is alerted to its immediate presence, as if to say 'look!' When the speaker uses a- the hearer is reminded that the reference is well known to both speaker and hearer, perhaps as a result of having just been explained, or is widely known to one and all. These matters are described in considerable detail by Kuno and Hinds. To their descriptions we might add the following two points. Anó-hito or anó-ko appears to function sometimes as if a pure personal pronoun (equivalent to káre and káno-zyo), aside from its uses as distal deictic, as remote anaphoric, and as obvious referral. Since personal pronouns can

6. The final accent on konná, sonná, and anná is suppressed except before dá (and related forms); it is suppressed before ní.

7. The final accent on kóo, sóo, and áa is suppressed except before dá (and related forms including ní) and before wá, mó, or similar particles.

8. As in Tukuri-bánasi da to omóu ga, konna hanasí ga áru 'I don't think it is a true story, but there is an anecdote that goes as follows' (Nagano 1966.172). But sometimes the reference is to what has just been said; in a newscast Tanaka soori-dáizin ga kono-yóo ni nobemásita 'Prime Minister Tanaka said this [= the above or the following]' may be heard before or after the report of what he said.

be modified by demonstratives—*kono watasi mo* ‘even this person who I am’, *sono káre wa* ‘that he’ (Shiba 46), *sono káno-zyo ga* ‘that she’ (Tk 3.103)—it is possible to say *sono anó-hito* and *sono anó-ko* for ‘that him/her’, but not **sono ano otokó* for *sono otokó* ‘that man’. Secondly, we can note that the obvious referral of the *a*-series is sometimes the way to express what has been called ostensible taboo, of the sort represented in English by the insinuating “you-know-who” or “you-know-what”; the word *are* ‘that’ sometimes refers to the genitalia or to a sexual act: *Iká naru húuhu d’atte, go-nín no kodomo ga átte, go-dó sika are ga nákatta to iu húuhu wa náí kara né* ‘Because surely there’s no such couple with five children as would claim that “THAT” had happened only five times, you see’ (Tk 3.149a—*are* written in katakana). To be sure, what is meant to be obvious by the speaker may or may not be obvious to the hearer or reader. In one text (SA 2684.116a) the sentence *Are ga tabe-tái* ‘I want to eat that’ (with hiragana *are*) is so clearly a deictic reference that you can almost see the chin pointing to the food chosen, but it is followed the next day by *Are ga tabe-tái* ‘I want to eat THAT [same delicious thing again]’ (with katakana *are*), a referral obvious only to one recalling the preceding day’s choice. That which is widely known to one and all will sometimes be designated by *káno*, an older form of *ano*: *káno yuumei na N* ‘that well-known N’. Compare the use of *káre* ‘he’ and *káno-zyo* ‘she’ to mean ‘lover’ (often *káre-si*) and ‘mistress’, respectively. *Kyátu*, an abbreviation of *k[áno] yátu*, is a deprecatory or intimate equivalent of *aitu* ‘that one’.

Anaphoric words typically refer to specific adjuncts of an earlier sentence, often adverbialized to or conjoined with the sentence in which the anaphoric reference appears. But sometimes *sore* or *kore* will refer to an entire sentence or a whole situation; V 78-9 cites several good examples, and here is another: *Ama-iro no kamí no sika no yóo na musumé wa hisó-hiso to sara o arai, sore ga súmu to, okkasan to issyo ni káette iku* ‘The deerlike girl with the flaxen hair quietly washed the dishes, and when that was done she left with her mother’ (SA 2669.89a). Sometimes the reference is to a condition: *Omosirókereba sore de íi, to omóu* ‘He thinks it is enough if it is fun’ (SA 2640.11).

The *-re* words are a kind of pure noun, for they can be marked as subject (*kore gá*) or object (*kore ó*); unlike many other nouns, they are seldom modified or quantified, but that sort of structure is not totally precluded: *Háha wa ... ko no té e yo-tubu bákari sore o noseta* ‘The mother put four pieces of it [the candy] in the child’s hand’ (V 1967a.99).

In older Japanese the morphemes *kó* and *só* were used as demonstratives equivalent to modern *kore* and *sore*, and they are still found in clichés of the epistolary style (*kó wa, só mo, sómo-somo*); corresponding to modern *are* the older language also had *ká*, the source of *káre* ‘he’ (earlier ‘that one’). The literary adverb *ká-ku* means ‘in this way, like this’ and it is the source of modern *kóo*; corresponding to modern *sóo* ‘like that, so’ we find both *sá* and *siká*, the former perhaps a contraction of the latter. Modern *sóo* comes from *s[ik]á-[k]u*; *áa* and *dóo* are said to have been formed by analogy with *kóo*. *Ká* and *sá* are used in a few modern idioms such as *náni mo ká mo* ‘anything and everything’ and *sá mo nákereba* ‘otherwise’; they are also found in the adverbs *ka-/sa-hodo* and *ka-/sa-bákari* ‘to this/that extent’, *sá-made* ‘to that extent’, *sá-zo* ‘indeed’, *ka-yoo* ‘like this’ (= *kóo, káku*) and *sa-yoo* ‘like that’ (= *sóo, siká, sá*)—for which there is a short variant *sai*, often used by male clerks waiting on women: *Sai desu ka* ‘Really?’ (Okitsu 1.264). *Siká* is found in *siká-ku* ‘so’ (source of modern *sóo*), *siká-mo* ‘moreover’, *siká-si* ‘however’, and the literary verb *sikári/sikáru* < *siká ári/áru* ‘it is so’. Corresponding to the modern *asoko/asuko* ‘over there’ the literary language has *kásiko*. Both the colloquial and the literary use

itu for 'when' and nani for 'what' (with the optional contraction nan before d, t, or n—not to be confused with nan- = iku- 'how many' before any sound); the literary has tare for the colloquial dare 'who'. For the colloquial doko 'where' the literary language uses izuko/izuku (< iduko/iduku); literary izure (< idure) is the source of modern dore 'which (of more than two)', but it is also used to mean nani 'what', doko 'where', and dotira 'what direction'. In place of doko,⁹ the literary language uses iká-ni or iká-ga (< iká n[i] ka); ikán is an abbreviation of iká-ni that is also used as a noun 'the question of how/what' (= doko de aru ka);¹⁰ iká-ni can also mean donna ni, and iká na[ru] is a literary or dialect equivalent of donna. The morpheme ika- also appears in ika-hodo 'how much' (= dore-hodo(-)), ika-bákari 'to what extent' (= dono-gurai), and ika-yoo 'like what' (= dono-yoo). A related form iku- appears in modern iku-tu 'how many' and iku-ra 'how much', as well as iku-ta no 'a number of' and iku-baku 'what small amount, some' (= dore-hodo(-)); it also appears as a variant of nan- in making the indeterminate form of numbers that consist of numeral + counter: iku-zi = nan-zi, iku-nin = nan-nin, iku-niti = nan-niti, etc.

Certain combinations of demonstrative + other element turn up in this dictionary or that as separate lexical entries; it is a problem to decide which of such combinations can be justified treatment as a derived word (or idiomatic phrase), as opposed to the casual phrases one would expect to put together in any event. Several criteria would appear to be at work in the lexicographer's mind: (1) If the accent is different from what we would predict for the phrase, the item is separately listed: sonó-hoka 'the others' < *sono hoka, cf. sono oka 'that hill'. (2) If the shape of the forms is in any way unpredictable or asymmetrical, the items are separately listed (or at least the unpredictable item is): konó-goro(-) 'these days', sono-kóro 'those days', ano-kóro 'those days', itu-goro 'about when' (*itu -góro). (3) If in some uses, at least, the meaning or grammar is markedly different from what we would expect of the phrase, the item is separately listed: kore-kará 'from now on' differs in meaning from kore kará 'from this one', sore-máde 'till then' means something different from sore máde 'till that one'. (4) If only one or two of the expected demonstratives can occur before the second element, the item is separately listed: kono-yó(-) 'this world' and ano-yó(-) 'the other world' are not paralleled by *sono-yó(-) 'that world' and *dono-yó(-) 'which world'.

In the following highly tentative list, I have attempted to bring together what information I could cull from dictionaries and elicitation. Those forms that occur or are accepted have been spelled out, usually with no translation; definitely rejected forms are indicated by "—" in the expected positions. Blanks indicate lack of information or uncertainty. The information on accentuation may be unreliable with respect to atonic vs. oxytonic (final) accent, especially in the case of adverbs. It is unclear whether in certain cases the expected phrase exists alongside the derived lexical item, with a difference of meaning:

9. The tag translation of doko is 'how, in what manner', but it will often be translated 'what' or 'anything' when it is an adjunct of suru 'does': doko suru does not require so precise an answer as nani o suru 'does what'. 'Does it how/somewhat' is said as doko {ni} suru (or donna ni suru); the ni is required if mó or ká is attached, since doko-mo and doko-ka are used as adverbs with other meanings ('very' etc. and 'please').

10. Ikán to mo = doko-sité mo: ikán to mo syóti náí 'there's nought can be done' (Tk 3.83). Kore iká-ni is an idiomatic cliché expressing dismayed surprise: Haite kíta geta ga náí to wa kore iká-ni 'What's happened to the geta I arrived wearing?!' (Okitsu 233).

do we find *kore* ̄gúrai 'as much as this one' as well as *kore-gurai* 'this much'?¹¹

	<i>kore-máde</i>	<i>sore-máde</i>	<i>are-máde</i>	— (<i>ítu made</i>)
	<i>konó-goro(-)</i>	<i>sono-kóro</i>	<i>ano-kóro</i>	— (<i>itu-goro</i>)

11. In a context that would appear to indicate anaphoric + ̄gúrai I have recorded the form as atonic: ... *sore(-)gurai no ooki-sa nó ga* ... 'ones of about the size of that one'. A clear case of anaphoric + ̄daké (since the *ga*-marker precludes the adverb): *Tiisai kedo kekkyoku are daké ga otóosan no nokósite zaisan ná n da wa né* 'It's tiny but that's all the property father had, isn't it' (Ariyoshi 264).

12. Like the restrictive ̄gúrai itself, these words can function as quantity nouns as well as adverbs: ... *koko ni nyuuzyoo sita hitó no dono-kurai GA* ... 'about how many of those admitted into the place here ...' (Tk 3.255a).

13. *Mázu, Méizi ̄zidai ni kanzi ga dono-teido seikaku ni kakáreta ka* 'Just how accurately were Chinese characters written in Meiji times?' (K 1966.53). This is equivalent in meaning to *dóno téido(-) máde* 'up to what extent'.

14. SA 1671.19b. For conflicting data, see p. 789.

15. The kón- of kóndo 'this recent/present/next time' is the Chinese loanmorph meaning 'now', not related to ko- 'this'. The word kóndo has a Tōkyō variant kónda, which is not to be misconstrued as merely an abbreviation of kóndo wa or a mistake: Kónda wa ima-máde to wa tigatte, saikyóo-sya ga meizin ni náru wáke da 'This time, different from up to now, the strongest one gets to be champion' (Tk 3.135a); Kónda no tatakai dé wa, ... 'In the next match' (Tk 3.139a); ... kónda no náikaku wa, ... 'this present cabinet' (Tk 3.279b).

16. Hamako Chaplin distinguishes sono uti ni 'in that house' from sono-uti ni 'meanwhile'. (In her speech both 'house' and 'interval' are oxytonic uti except when unmodified, and then they are both atonic uti.)

17. The adverb 'at present, as of now'; cf. kono tokoró 'this place' (= koko).

18. The -[i]ra is a contraction of -yara, probably < yá ára[mu].

19. 'Since'.

20. 'Oneself'.

21. 'You'.

22. 'Me'.

23. 'You'.

Expressions made up of indeterminate + *ká* or *mó* are often listed as separate lexical items; the expressions with *ká* are indefinite ('some'), those with *mó* are generalized ('[not] any') and *mó* is usually expanded to *dé mo* when the sentence is affirmative ('any ...soever'). But some of these expressions are used in unpredictable ways and with unexpected meanings: *ítu mo* means 'always' whether the sentence is affirmative or negative and 'never' is said in other ways (with the adverb *kessite* 'absolutely [not]') or the conversion *S kotó ga náí* 'it never happens that S'). In addition to *náni ka* 'something', *dáre ka* 'someone', *ítu ka* 'sometime', *íku-tu ka* 'some number of', *íku-ra ka* (and *nán[i]-ra ka*) 'some amount of', etc., there are the following expressions made with demonstratives from our list: *dóko ka* 'somewhere, someplace', *dóre ka* 'some one (of three or more)', *dótira/dótti ka* 'one or the other', *dóno N ka* 'some one of the Ns', and *dóo ka* which originally meant 'somehow' but is now used mainly in the meaning 'please', with *dóo ni ka* used for 'somehow'. In certain dialects the adverbial forms in *-ku* (or *-[k]u*) are marked by *ní*, so that *háya[k]u ní* (or *háyo[o] ní*) corresponds to the standard *háyaku* 'early, fast'; the use of *ní* after *dóo*, *kóo*, *sóo*, and *áa* turns up in certain expressions even in the standard language. *Dóo ka* itself is used with *suru* to mean 'something is the matter, something happens, something goes wrong'; *dóo suru* means 'what happens' as well as 'how does it happen' (= *dónna ni suru*) and *dóo site* means 'what happening' as well as 'how'³³ (= *dónna ni site*) or 'how come, why' (= *nán de, náze*).³⁴ We usually prefer to write all these expressions as phrases with a space before *ká* or *mó*, primarily because most of them permit other markers to intrude: *dáre ni ka* (= *dáre ka ni*), *dóko e ka* (= *dóko ka e*), *náni kara ka* (= *náni ka kara*). The expressions with *mó* usually require case markers other than *gá* and *ó* to precede the *mó*: *Dáre ni mo agenai* 'I will give it to no one', *Dóko e mo ikanai* 'I will go nowhere', and even *ítu made mo* 'for ever' (with the temporal allative).

There are a number of idiomatic phrases made up of *dó-... mo kó-... mo* (with *kó-* picking up an accent);³⁵ these are emphatic ways of saying 'each and every' or '[not] any one of them': *dóre mo | kóre mo*; *dóitu mo | kóitu mo*; *dóo ni mo | kóo ni mo*; *dóo mo | kóo mo*; and the somewhat unusual *dóo náte | kóo náte* (Nagano 1966.155). Sometimes these

32. Meaning *dótti no hoo* (Okitsu 1.59).

33. Though 'how' is usually *dóo yatte* rather than *dóo site*.

34. Or (SA 2637.118b) *náze ni*. *Náze* is thought to be a variant of the older *názo* 'why' < *náni-yue zo*, rather than a corruption of *nán[i] de*.

35. But only in the shorter, idiomatic expressions. Thus the *ko-* words remain atonic in these examples: *Dóko no | koko nó to litte irú no wa || mendóo da kara, || mukóo(ː) e itte | mite ...* 'Not wanting to argue about the place, I went over there to see ...' (Okitsu 1.342); *Dóo surú mo | koo surú mo || náí | sá* 'It doesn't matter what happens' (Kb 35b); *Dé, || dóko e ikoo | koko e ikóo no | ageku || Mukoozima e ...* 'Then, lacking any better inspiration, I went to Mukōjima ...' (Kb 125a); *Dóo sita n desu ka?—Dóo sita mo | koo sitá mo || arimasén | yó* 'What happened?—Nothing (in particular) happened!' (Ariyoshi 24).

expressions are reduced to a single accent phrase, with the first accent suppressed, and they are then often treated as single lexical items: doonimo-kóonimo. A similar expression *dóo* {ni} ka | *kóo* {ni} ka 'somehow or other' can be reduced to doonika-kóonika or dooka-kóoka.³⁶ The expression *dóo no* | *kóo no* is explained in §14.2.3. Instead of *kóre*, the literary *ká{re}* is used with *dáre*: *dáre mo* | *ká{re}* mo 'anybody and everybody'. With *náni* the form used is *ká* or *kán{i}*: *náni mo* | *ká{ni}* mo or *nán de mo* | *ká{n}* de mo 'anything and everything'.³⁷ With *dóko* the form used is *ká{siko}*: *dóko mo* | *ká{siko}* mo 'anywhere and everywhere' (SA 2670.106c). But *dóko mo* | *asoko mo* and *dóko mo* | *koko mo* are also found. Most of these expressions, too, can be reduced to single phonological words and treated as pure nouns (which can be marked by *gá* or *ó*): *daremo-ká{re}mo*, *nanimo-ká{ni}mo*, *nandemo-kándemo*, *dokomo-ká{siko}mo*. Other combinations of demonstratives can be found: *sore mo kore mo* {minná} 'all these things'; *are ya kore yá (de)* '(what with) this and/or that, one thing and/or another'; *sonna-kónná (de/no)* 'of one sort and another' (§13.5). Also to be treated as single lexical items are *dáre-hitóri*(-) '[not] a single person' (= *hitóri mo*) and *náni-hitótu*(-) '[not] a single thing' (= *hitótu mo*), though NHK lists also *náni* | *hitótu*. Apparently there are no similar formations with the other indeterminates or with other numbers.

The term "pronoun" is often defined as a word which will substitute for a noun. In both Japanese and English certain nouns command high, general positions in our semantic taxonomy: *monó* (or *yátu*) 'thing/person', *kotó* 'matter/event', *hitó* 'person', *tokoró* (or *tókó*) 'place; situation; time', *toki* 'time', These words, which can be used in place of items from groups of more specific categories and terms that would be classified under them in the taxonomy, will typically occur modified by an adnominal demonstrative (*sono* 'that, the' or the like) or by an adnominalized sentence from which they have been extruded as epithemes (S *hitó* 'the person such that [he/him] S'). As an epitheme, the noun substitute par excellence is the postadnominal *nó*, translated as 'the one(s) that ...' when extruded from an adjunct of the adnominalized sentence and as 'the fact that ...' or 'the act of ...' when functioning as a summational epitheme.

When modified by demonstratives, the more general words for 'person' often function like the third-person pronouns of English 'he/him, she/her, it, they/them'—with the possessive forms 'his, her(s), its, their(s)'. With *hitó* and with *ko* (which means 'child' but is used by women in a more general way), some of the resulting forms are accentually irregular, and we will treat them as separate lexical items: *konó-hito*, *sonó-hito*, *anó-hito*; *konó-ko*, *sonó-ko*, *anó-ko*. In English the third-person pronouns are obligatorily marked for gender in the singular (he/him vs. she/her) but not in the plural; they/them can be any assortment of him(s) and/or her(s). The traditional Japanese forms are unmarked for

36. With much the same meaning there is also *dóo-sité mo* | *kóo-sité mo* or *doositemo-kóositémo* 'one way or another'. Cf. *áa mo si* | *kóo mo site* 'doing that and doing this = doing this and that'; *áa de mo ná* | *kóo de mo ná* 'is neither this nor that'.

37. We also find *náni ya ká{ni} ya* or *náni yara ká{ni} yara* or *nán yara kán yara* 'this or that, something or other'; *nán to ka ká{n} to ka*, *nán da no ká{n} da no*, and *nán da ká{n} da* 'this or that, something or other': ... *nán da ká da to warúguti ya*, *hiniku ya*, *iziwáru o sareté mo*, ... 'even though one gets slandered, mocked, teased with people saying one thing and another (= all sorts of things)' (SA 2672.117d). There is also *nán to mo ká{n} to mo*: ... *nán to mo ká to mo wakaránai* 'understands not one thing' (TK 3.256b). The -ni of *kán{i}* is usually taken to be by analogy with *náni*, but both may reflect an early use of the essive *ni*.

gender, though it can always be specified by a phrase such as *kono otokó* 'this man', and *onná-no-ko* 'that girl', etc. But the Japanese equivalents for the English pronouns are obligatorily specified for relative proximity, according to the system of deictic and anaphoric reference mentioned earlier. Because third-person reference is so often to the obvious, such forms as *anó-hito* are more common than the others (*konó-hito*, *sonó-hito*); as pronouns, perhaps *anó-hito* and *anó-ko* should be regarded as "neutral" or unmarked. Two modern pronouns, *káre* 'he/him' and *káno-zyo* 'she/her' were created originally to translate the sex-insistent pronouns of English; their use has spread so rapidly that they can now be considered a part of the colloquial language, though most people will not use them in semantically "unmarked" situations. In a recent study of interviews in popular journals, Karen Sandness came to the following conclusions about the usage of *káre* and *káno-zyo*: (1) foreigners are more likely to be referred to by these pronouns than are Japanese; (2) females are more likely to be called *káno-zyo* than males are likely to be called *káre*; (3) the Japanese men who are called *káre* are young. (She also notes that translation from a Western language increases the number of overt references to the subject but not necessarily the number of pronouns.)

It should be borne in mind that in many unmarked situations, the appropriate translation of an English pronoun is either zero (omit the reference) or a repetition of the noun. In English we avoid repeating a noun once it has been mentioned, substituting an anaphoric pronoun after the first mention. In Japanese there is no stricture against repeating the noun any number of times; on the other hand, obvious elements are freely omitted from a sentence. And that is why the English third-person pronouns are most frequently to be translated simply by omitting the relevant adjunct in the Japanese sentence.

The first person ('I/me') and the second person ('you') can be expressed by any of a set of connotationally marked pronouns, or by various circumlocutions; but the reference is often omitted, as with the third person. Other things being equal, a personal question with the subject omitted probably refers to YOU; a subject omitted from a statement is often 'I'.

In the ancestral language of the Japanese there would appear to have been a first-person pronoun *bá[nu]*, forms of which are still current in the Ryūkyūs; the later *wá-re*, *ware-ware* 'we', and *wá-ga* 'my, our' inherit a reflex of the first syllable, as does *watakusi* (and its various contractions), which is said to be from *wá[-re o] tukúsi* 'exhausting myself' (i.e. 'all of me?'). The earliest Japanese word for 'you' was probably *ná[-re]*; an extended form *na-muti* is the source (by contraction) of the literary pronoun *nánzi*(⁷) and the Amami pronoun *namyi*. Other words for 'you' and for 'me' are extended uses of demonstratives or of various nouns, but some of these are considered to be personal pronouns in most or all uses.

According to the results of one study (*Kōgo-bumpō no mondai-ten 202-3*), ninety per cent of the overt references to the first person were made with some word felt to be specifically a personal pronoun—such as *watasi*, *bōku*(⁷), *ore*, etc.; but only .28 of the overt references to the second person were made by such a word—*anáta*, *omae*, *kimi*, *o-taku*, etc.; and a mere .0152 of the overt references to the third person were made by pronouns such as *káre*, *are*, or *kotira-san*. The other overt references found in the study were made with name or kinterm (such as *ane* or *née-san* 'Big Sister = I', *née-san* 'Big Sister = You') or, for the second person, title (*senséi* 'Doctor' or 'Maestro' etc.) or name

and title. It has been observed that the use of one's personal name for self reference is more common with girls than with boys.

Perhaps the best known of the first-person pronouns is *watakusi*, which sounds a bit stiff unless shortened to *watasi*. Other common contractions are *atakusi* and *atasi*. The latter is usually thought to be limited to women's speech, and when the use is deliberate (as in writing) *atasi* will probably be a reference by a female to herself; but in rapid speech men may unconsciously use the same form as an abbreviation. Examples can be found in transcripts of the speech of Tokugawa Musei (e.g. Tk 2.123b). Examples of male use of *atakusi* are easy to find (e.g. Iizawa in SA 2659.49d, SA 2668.74b). Other versions of *watakusi* are generally taken as old-fashioned or as dialect: *watai*; *wate* (SA 2676.131c, Ōsaka); *wai* (SA 2676.128a, Ōsaka); *atai*; *ate*; *watti* (Mio 302); *a[s]si*,³⁸ *wa[s]si*; *Wasi* is a popular self-designation for rustic old men and for *sumō* wrestlers or baseball players of any age; but in rapid speech *wasya* = *watasya* = *watasi wa* is sometimes heard from others, as well: *Tō-ni-kaku, wasya kansin sita né. Watasi wa aikokú-sya desu yó* 'Anyway, I admired it. I am a patriot, you see' (SA 2679.50a).

The pronoun *bōku*(¹) is the first-person pronoun preferred by most males under neutral circumstances, though they will replace it by *wata[ku]si* in formal situations. *Bōku*(¹), a Chinese loanword for 'slave', gained popularity in Meiji days as student slang for '[Your] Servant = I/me' (K 1966.51), and for years it has carried a masculine aura that is still strong, though it is now said to be in use among college girls. In families with a male heir you may find the word used for 'the boy' = 'him' or even 'you', as in *Bōku tabēru?* 'Will Boy have something to eat?' Recently it has grown increasingly popular for boys and young men in speaking to each other to refer to themselves with the rough term *ore*, said to be from a contraction of *o[no-]re* 'oneself'. This is sometimes found in the variant *ōra*:³⁹ *Omāe wa ima, ōra o misē ni turete 'ku tte, ...* 'You just said you'd take me to the shop, ...' (Fn 173a). The plural form *orē-ra* (= *orē-tāti*) 'we/us' also occurs as *ōi-ra*; cf. *ōi-ra* = *ōi-tāti* 'nephews' or 'nephew and others' from *oi* 'nephew'. The word *uti*(¹) 'house, home' will sometimes be translated as a first-person pronoun in English: *uti*(¹) *no inū* 'our/my dog, the dog we have at our place'. As a genuine first-person pronoun, the word is prototonic, *úti* 'I/me', and is limited to the speech of Kansai women (according to MKZ⁵). The converse term *o-taku* 'your house/home' is also used to mean 'you (at your place); your office/company/...' and it seems to be spreading as a substitute for *anáta* 'you'. Cf. Suzuki 1973 and the remarks in *Kotoba no yurai* 45-6: "Lately *o-taku* is often used a second-person pronoun. [To the pronoun *anáta*] shop people will stick on *sama* and say *anáta-sama*, but this is overly polite, so *o-taku* has recently appeared." *Kotira* or *kottí* is a rather polite way of referring to oneself; *kottya* is a contracted version of *kotira*: *Aa iú no o erábu no wa, kottya mo rakú zya nái* 'I'm not pleased at electing that sort, either' (Niwa Fumio in Tk 4.270). The more literary *kóti* is also used; and *kóti-no-hito* is one way for a wife to call her husband (= *anáta*). *Kotitō-ra*(¹) originally 'we/us ourselves' is sometimes used as an equivalent of the singular *ore* (e.g. Okitsu 1.456 and passim); the form has also been listed without the suffix as *kotito*, which is a contraction of *koti*(¹) *no*

38. *Assi to kánai no hutarí ga ...* 'My wife and I, the two of us ...' (SA 2673.139d). *Asi mo ikusa ni yuki-tai* 'I want to go to war, too' (Shiba 21, quoting Masaoka Shiki).

39. And the dialect form *ura* (Zhs 4.315) may be a variant of this; *uraa* (Zhs 4.308 etc.) is a contraction of *ura [w]a = ore wa*. In parts of northern Honshū women too refer to themselves as *ore* (H 1968).

hitó. Kotira is also used for 'oneself' in contrast with 'the other fellow' (aité etc.): "Aité no o-kábu o ubáú" wa, aité no tokúí(¯) to suru tokoró o kotira de zikkoo site simau kotó da "To steal the other fellow's trick" means to perform oneself what the other fellow prides himself on' (Kotoba no yurai 41)—kotira de = zibun de, the dé marking exclusive agent. There are several literary words for 'I/me' which you may see in print, notably yó, sessya, and syóosei, all of Chinese origin;⁴⁰ the imperial 'we' of pre-war Japan was the pronoun tìn, now replaced by wáre, wareware, or watakusi.⁴¹ The literary midomo means 'I/me' or 'we/us' and sometimes 'self/selves'.

Before Japan's defeat in World War Two the word zibun '(one)self' was popular among military men as a first-person pronoun; the usage is still alive, and you will sometimes hear it from people who were not military men. Some men whose public self-image is bóku(¯) may nonetheless use zibun in talking to themselves or of themselves. But zibun is also used as a substitute for pronouns of the second and third persons; on zibun "lately coming into use" in place of anáta, see Kōgo-bumpō no mondai-ten 204. Zibun is common as a reflexive reference to any person (Káno-zyo wa zibun no kippu o katta 'She bought her own ticket') and it has the exalting form go-zibun as in Go-zibun de dekimásu ka 'Can you do it all by yourself?' It is not clear that reflexive reference with zibun is obligatory in Japanese in the same way as the corresponding references with '[one]self' are in English, since Japanese permits the repetition of identical nouns, including names, without pronominalization or omission, and the personal pronouns are much like names in this respect: "Nán da, nete itá no ka, ore wa?"—Káre wa káre ni itta "'What? Have I been asleep?"—He said to himself' (Kb 203a). Other terms for 'self' are zísín,⁴² often the second element in an apposition (including zibun zísín and zibún-táti zísín), óno or onore (both sometimes 'you' or 'me'), and mízukara,⁴³ which is also used as an adverb 'by oneself, by one's own efforts', close in meaning to onozukara (or onozu-to) 'by itself, of its own accord'. The reciprocal pronoun o-tagai⁴⁴ 'each other, reciprocally' has the honorific prefix o- used rather vacuously (the exalting form is o-tagai-sama); it is most often found adverbialized by predication with ní. The four distributive pronouns meaning 'each (its own), respectively' have the grammar of pure nouns but are often directly adverbialized: sorézore, meiméi, menmén, and onóono.

The "individual" demonstratives (kore, sore, are) will generally be taken as singular when referring to people and often when referring to things; specifically plural reference usually calls for attaching -ra (koré-ra, soré-ra, aré-ra) or, for people, -táti. But there is no *dóre-ra or *dóre-táti; dóre means either 'which one' or 'which ones', though you can ask specifically dóre tó dóre 'which and which ones' or dóno N-táti 'which [animate] Ns'. The final -ra of kotira etc. was originally the same suffix, which must have meant simply 'some (quantity of)' as we can see from its use in íku-ra and nán[i]-ra. The suffix may be a

40. As is sétu 'I/me [humble]': sétu názo wa 'the likes of me' (Okitsu 1.306).

41. We must not overlook the advent of mii 'I/me' and yúu 'you'; the former is carried among the entries of MKZ⁵. The male first-person pronoun waga-hai is literary.

42. And exalting go-zísín, as in go-zísín no seikatu 'your own life' (SA 2669.48c). There are also a number of lexical items which begin with the prefix zi- 'one's own', such as zi-taku 'one's own house; my house'.

43. Byoonin wa mízukara o írýoo(¯) no sotogawa ni oite, sóto kara sukui ga kúru no o mátu 'The sick person puts himself out of medical care and waits for help to come from outside' (SA 2671.99a).

44. Keiyaku wa o-tagai o koosoku suru monó de wa náku, ... 'The contract is not to bind each together but, (rather) ...' (SA 2686.44d).

truncation of *ar-á 'the existent = some', a hypothesized prehistoric noun form made from the verb ár-.

The personal pronouns are usually taken as singular. Plural reference calls for attaching 'táti (or the exalting -gáta, the humbling -dómo) as described in §2.7; but 'ra can also be used and it is common with káre, káno-zyo, kimi, omae, bóku, and ore, though 'táti also occurs with all these. Both anó-ko-ra and anó-ko-tati are used; anó-hito-tati is more common than (?)anó-hito-ra. Wáre has the plural wáre-ra or wareware, but the standard language lacks *wáre-tati, as well as *dóre-tati, though koré-tati, soré-tati, aré-tati and dáre-tati (= dáre-dare,⁴⁵ dáre to dáre) can be used with reference to people. (The reduplicated forms of the demonstratives have special meanings: kórekore 'come come!', korékore 'such and such', ?soresore 'so and so', sorézore 'respectively', dóredore 'now now!'—there is no *aréare or *kárekare.) Wáre (and the plurals wáre-ra and wareware) is a distinctly formal or literary pronoun for the first person, but certain dialects use wáre for the second person. The plural forms zibun-ra, zibun-táti, zibun-dómo, gozibun-táti, and gozibun-gáta are sometimes used even when the plurality would appear to be already obvious: Watási-táti wa zibun-táti no heyá ni imásita 'We were in our own rooms'. But it is said that zibun can be used with reference to all persons, genders, and numbers; cf. Kuno, Hinds. It is also said that if the antecedent of zibun is in the same sentence it must be the subject,⁴⁶ and that the antecedent must be animate and probably human. To be sure, we must always allow for personification: Tatóeba sén-nen(=) íkita sugi ga áru to site, sugi zisin wa nán no kioku mo náí kara, zibun ga nagaíki sita to wa omowánai 'Suppose there is a thousand-year-old cedar tree; since the cedar itself has no memory it will not know that it (itself) has had a long life—to which comes the question Anáta wa sugi to hanasí o sita kotó ga áru n desu ka 'Have you talked with a cedar tree about that?' (Tk 3.181b).

With the personal pronouns, the suffixes 'táti and 'ra make forms that are not necessarily plural in the same way we would expect from the English plural pronouns. As mentioned in §2.7, the reference of senséi-tati may be 'the teacher and others' as well as 'the teachers'; and, though the speaker is marked as male, the 'we' of bóku-táti or bóku-ra can include females. In the following passage "we" means "she and I", the young husband explaining his wife's absence: Ototoi no ban, déte ikimásita. Bóku-táti wakaréru kotó ni sitá n desu 'She left night before last. We have decided to split up' (Ariyoshi 304). In a Kawabata story (Izu no odoriko) there is a passage ... káre-ra 'dóosi de hanasi-atte ... 'they talked it over among themselves' in which káre-ra refers to a group of one male and three females. But I have not found a situation in which kánozyo-tati or kánozyo-ra (Nagano 1966.69) includes a male in the group; the reasons are perhaps sociological, in that if a male were in the group the expression would center on him and be káre-tati.

The neutral word for 'you' is anáta (with the relaxed variant ánta), but its neutrality is fragile, at best. Under most circumstances, reference to the second person is made obliquely, by using name or name-and-title or just title. The title may be a kinterm or a temporary status. When the bus driver wants the attention of a passenger he shouts

45. More commonly used to mean 'what's-his/her-name, so-and-so'.

46. And zibun can be used to refer to the underlying subject even when it is marked by ní under the causative or passive conversions. Since zibun can refer either to the subject of an embedded sentence or to the subject of the sentence in which it is embedded, there are a number of situations where the reference is ambiguous. For more details see Kuno 1972 and 1973, N. A. McCawley 1972, Perlmutter 1973, and Oyakawa 1973.

Okyaku-san! 'You there!' (or 'Sir!'); the maid in a hotel will refer to okyaku-sámá no heya' (the guest's =) your room'; and the salesperson in a shop may ask for okyaku-sámá no denwa-bángoo '(the customer's =) your telephone number'. When a student wishes to say 'you' to his teacher he should use senséi or surname + senséi, though lately surname + san is heard more and more; the teacher will usually call a student by surname + san or (')kun. Fellow students address each other by surname or (if well acquainted) personal name, usually followed by san or (')kun, though the dropping of the rather empty title seems to be gaining ground. To avoid the plural anáta-tati or anátá-gáta(=) you can add the collectivizer to the title (senséi-táti, senséi-gáta, etc.); or you can use miná-san or minasán-gata '(all of) you; (you) gentlemen, ladies, ladies and gentlemen'.⁴⁷ It is handy to remember that (... no) katá is a nice way to say 'person' and (... no) katá-gata can be used for 'you esteemed people (who/of ...)' as in gaikoku (or gaikokú-zin) no katá-gata 'you foreigners'. You will also hear dótira-sama mo for 'both/all of you': Dótira-sama mo, o-yasumi nasái 'Good-night, everybody'. Onoonó-gata means 'every one of you' (Okitsu 1.374).

The relatively intimate pronoun kimi (originally 'prince' or 'sovereign'—as in the national anthem Kimi ga yo) is mostly used by males speaking either to males or, under sufficiently intimate circumstances, to females; but it is said to enjoy a certain vogue among high-school girls, as well. The pronoun omae (plural omaé-táti) 'you' is deprecatory except when used to children or younger relatives within the family;⁴⁸ children outside the family are usually called by name + tyan (or san) or by such quasi kinterms as bóoya or bóttyan for boys and ozyóttyan or (old-fashioned) zyóttyan for girls. Children typically refer to unrelated grownups with kinterms assimilated to their apparent age: ozisan 'Uncle', obasan 'Aunt', oziisan 'Grandfather', obáasan 'Grandmother'. Reference to the second and third persons in Japanese is inevitably bound up with concepts of social status and with the system of kinterms, and there is considerable variation in traditions of usage, as well as the forms, in different parts of the country. In Ōsaka the word an-san, an abbreviation of anáta-sama is a polite word for 'you', not to be confused with áni-san 'Big Brother' or its variant án-tyan, which is sometimes used to mean '(young) hoodlum'.

A number of words for 'you' are seldom heard today. The pronoun kisama was originally complimentary but it has been considered insulting from as far back as 1832 (Kgg 81.52b). Another insulting pronoun is únu, once used by low-class samurai in talking to inferiors;⁴⁹ being a variant of óno = onore, it was also sometimes used of the first person.⁵⁰ The pronoun temae (or temee) is derived from the relational place noun 'this side (of)' and it has been used both as a humble word for 'I/me' and as an equivalent of omae 'you' in speaking to inferiors; the plural is temae-dómo (or temee-dómo). The pronoun [o-]núsi 'you' appears to be dialect or slang. O-kóto is an elegant word for 'you', according to MKZ⁵, and the same is true of ón-mi(=)—etymologically identical with ón-mi (= o-karada)

47. Also syókun 'colleagues', syósi 'gentlemen' (§26).

48. But omae-san and variants omae-han and oma-han are polite words for 'you' in certain dialects. Apparently omae can also be used in speaking to oneself of oneself: Másaka, omae wa katugárete irú no da 'Surely you're [= I'm] being deceived' (SA 2835.70c; male thinking to himself).

49. An example of the plural únu-ra 'you guys' will be found in a bit of vaudeville braggadocio in Okitsu 1.29.

50. An example with únu used first for second person and then for first: Yái, yánu si no Kóobee ttee no wa únu ka!—Hée—únu de—gozaimásu 'What, are YOU Kōbē the landlord?!—Yes, I am' (Okitsu 1.395).

'your body/health'—and the feminine epistolary *ón-moto* or *o-móto*, the latter used after the name in an address on a letter. In letterwriting a male may use *kiden* as a respectful 'you' to a male equal or superior. In letterwriting and the like a male will sometimes use *taikei* for 'you' to an older friend (Tk 2.109b); *ónsi* 'teacher (to whom I am indebted)' may be used for 'you' when writing to one's mentor.

The direction demonstrative *sotira* is used as an oblique reference to 'you' as well as 'your place/family', and it can be made more of a personal pronoun by adding the title *-sama* (*sotira-sama*); the literary version, *sotí*, is usually given a prototonic accentuation *sóti* when used as the pronoun of the second person. Notice also *soko no katá* 'you (there)' (Okitsu 1.319).

30 USAGE CONSTRAINTS; AGRAMMATISMS; IDIOMS; LEXICAL COMPOUNDS

This book has explored the ways in which Japanese put their sentences together; by explicitly following the rules and patterns discovered it is possible to create a wide variety of new sentences that have never been used before. Yet sometimes the sentences produced will be rejected by native speakers: they are grammatical and meaningful, but they are simply not said. The constraints that appear to operate in particular cases are difficult to generalize and much work remains to be done in exploring the situations for which a particular conversion may be awkward or unacceptable and in explicating the reasons for the unacceptability. As Nagano (1966.188) points out, the foreigner who has succeeded with O-mise simasyóo ka 'Shall I (= Would you like me to) show it to you?' and O-kasi simasyóo ka 'Shall I (= Would you like me to) lend it to you?' will feel confident he can say O-nose simasyóo ka 'Shall I (= Would you like me to) give you a ride?' But that sentence sounds odd to the native speaker, who would use Nosete {sasi-}agemasyóo ka to translate the English expression. Certain transitive verbs such as noseru 'gives a ride to' and otósu 'drops' (paired with intransitives noru 'rides' and otíru 'falls') function as quasi causatives and are subject to constraints similar to those for regularly formed causatives such as noraseru 'causes to ride' and otisaséru 'causes to fall'; but other superficially similar verbs such as miséru 'shows' (paired with míru 'sees') and kasu 'lends' (paired with karíru 'borrows') are free of the constraints of the related forms misaséru 'causes to see' and karisaseru 'causes to borrow', perhaps because they are paired with transitives. When object exaltation is applied to causatives or quasi causatives, the exaltation apparently spills over both subject and object. This is also true of subject exaltation under a favor conversion: O-nose ni nátte kudasaimasén ka (BJ 2.17.K4) is not used to mean 'Won't you give me a lift, please', which is said as Nosete kudasaimasén ka; the only way the longer expression could be taken would be as 'Won't you do me the favor of causing someone exalted to deign to ride?'.

The opposite sort of thing happens too: our rules tell us a sentence is ungrammatical, yet the native speaker is heard freely using it. In past days the conductors of streetcars were famous for saying Kippu no kiránai katá wa o-kirase kudasái 'Will those with unpunched tickets let me punch them, please' (NHK 1970.45), using nó where the grammar calls for ó if kippu is to be taken as the object of the negativized kíru 'punches'. It would be possible to defend the conductors from charges of ungrammaticality if we take kippu nó as adnominalized propredication and interpret the sentence as kippu no [[kippu o] kiránai] katá 'those [that I have not punched [their tickets]] with tickets', but that is perhaps not what the speakers intended. In long and involved sentences an early adjunct may be marked for case in anticipation of valence with a predicate that is selected or replaced (or converted) later in the process of putting the sentence together; see the end of §4.2 for an example. Certain questionable sentences are the result of syntactic blends or semantic analogies, as when the creator of zenzen arukóoru ˘nuki no kaisyoku 'a banquet with no alcohol at all' (KKK 23.28) used the modifying adverb zenzen 'at all' as if ˘nuki 'without' were náí 'lacks'. When an agrammatism is widespread our grammar must adjust to allow for it; instead of deploring the use of ó in kaisya o kubi ni náru 'gets fired from the company (= one's job)' we will say the expression kubi ni náru now has the

grammar of a verb of departure, like *déru* 'leaves' or *yasúmu* 'takes time off from' or *sotugyoo suru* 'graduates (from)', permitting us to mark the place departed from by *ó*.

Certain structures that are put together according to the rules of our grammar enjoy an autonomous existence once created, with new semantic and/or grammatical properties difficult to predict. These are IDIOMS that need to be entered in the lexicon separately from (or in addition to) the individual words out of which they are constructed. Idioms vary in the extent to which they reflect the properties of their components. Some participate freely in the same kinds of conversions as the underlying structures, being little more than semantic extensions of those structures. Others are so tightly knit that the internal structure permits few or no intrusions. Vardul points out that *hará ga tátu* 'one's belly [= temper] rises = one angers' (equivalent to the lexical compound *hara-dátu*) must be treated as an idiom because you can not say **káre no tátu hára* 'his temper that rises' (V 82).

Certain idioms will allow intrusions, especially of focus particles; *ki ni náru* 'feels uneasy' or 'has a mind to', for example, will readily permit focus to intrude: ... *dáre d'átte* ⁽¹⁾*Isigurá-si o hínan suru ki ní wa narénai* 'No one can be eager to criticize Mr Ishigura ...' (Maeda 1962.90). *Ki ga suru* '(I/you) have the feeling' is similar; it appears to have the grammar of a possessive, as in this example where the possessor of the feeling is marked by *ní* and intruded before *suru*: ... *to iu ki ga, watasi ní wa suru* 'I DO have the feeling that ...' (SA 2645.46d). *Ki ni ir-u* 'pleases one, one likes' (= *sukí da*), on the other hand, is not readily split: (?)*ki ní wa iranákatta* is more likely to be said as *ki ni irí wa sinákatta*. The noun [o-]kiiiiri 'one's favorite' is derived from the infinitive of the idiom: *kiiiiri no zidóo-sya*(⁻) 'the automobile one likes' (K 1966.162). And (*básu ni*) *ma ni áu* 'is in time (for the bus)' will take focus as a whole, *ma ni ái wa sinákatta* 'was NOT in time', rather than internally, **ma ní wa awánakatta*.

Certain nouns occur only in a fixed idiom or two: *tátu-se ga nái* 'is left without a leg to stand on; is put into a dilemma' (from *se ni tátu* 'stands on a shoal'); *ma ni ukéru* 'takes for true, accepts as truth'; *tyó/syó ni túku* 'gets underway, makes a beginning'; *maikyo ni itomá*(⁻) *ga nái* 'are too numerous to count/mention'; *kámpu náki made* {*ni*} 'thoroughly, scathingly, roundly'; *nitti mo sátti mo* (*tukánai* Kb 315b, *ikanai, ugokénai*) 'is in a pinch, is caught between two fires'; *múyoo*(⁻) *no tyoobutu* 'a white elephant'; And there are bound nouns which occur only in lexical compounds: *kokoromoto-nái* 'is apprehensive; is unreliable' contains a noun meaning 'at one's heart' (= *kokóro no motó*) that occurs nowhere else. *Yogi-nái* 'is unavoidable' contains a bound noun of Chinese origin meaning something like 'rule for margin'. It is said (Maeda 1965.185) that the idiom *ken mo hororo* (*no áisatu*) 'brusque (greetings)' is the result of recognizing that the *ken-* of *kéndon* 'harsh' and *kenken-googoo* 'clamorous' suggests the crying of pheasants, for which the mimetic expression is *horo-[ho]ro*. In the example *te-gúsune hiite kyaku o mátta no da ga* 'eagerly awaited the customers' (SA 2668.38c), the first word is a compound of *té* 'hand' + *kusune*, a noun designating an old pine-resin concoction used to strengthen bowstrings and the like. I do not know the origin of *túukaa* 'intimate understanding' (as in *túukaa no náka* 'a relationship where words are unneeded' and *Aitu to aitu wa túukaa da* 'They understand each other with a single word'), but it breaks into two elements in *túu to iéba káa to iú no wa* 'understanding each other instantly' (Okitsu 1.300).

An idiom with a dropped particle is often reduced to a single phonological phrase, retaining only the first of any accents; or, it may be treated as a compound lexeme, with

new accentuation: séppa [gá] | tumáru 'is cornered/pressed' is also said as séppa tumáru^[1] and as seppa-tumáru. Lexical compounds are characterized by accentuation that is often the mirror image of the type found in syntactic structures when they are reduced. If a syntactic phrase is pronounced as a single stretch, the first lexical accent in the phrase is preserved and the later accents are suppressed. But compound nouns either preserve the accent of the later member (kitá(-) 'north' + Tyoosén = Kita-Tyoosén 'North Korea') or, more often, assign a new accent to the first syllable of the later element (kitá(-) 'north' + Betonamu 'Vietnam' = Kita-Bétonamu 'North Vietnam'), unless the later element is one of the short "preaccentuated" suffixes that place the accent on the syllable before the final morpheme. That is the productive pattern; in addition, there are a number of "atonicizing" noun suffixes which make atonic compounds, and a few suffixes are ambivalent or idiosyncratic in behavior. When further elements are attached to the front of a compound noun the accent remains where it was placed by the process of attaching the last (right-most) element.

It is by accentual anomalies that we can differentiate syntactic reductions from lexical compounds. The example *tási seisei no gurúupu* 'a group with a vast array of talents' can be said with a minor juncture either before *seisei* or before *gurúupu*, but so long as it is not pronounced **tási-seisei* we are not dealing with a lexical compound. Other examples of idioms that are not to be misconstrued (nor to be misaccentuated) as lexical compounds include *zizyoo zibaku* 'falling in one's own trap', *tóoki sokumyoo* 'ready wit', Certain expressions permit the syntactic reduction as well as the lexical compound: *mi-yóo | mí-mane*, *mi-yóo mí-mane*, and *miyoo-mí-mane* all mean '(being) influenced by another's example' and come from *mi-yóo* [tó] *mí-mane*.

Accentuation leads us to treat as lexical compounds a number of expressions that at first glance might appear to be syntactic in structure: *anó-ko* 'that kid; he/she' (cf. *ano kodomo* 'that child'); *otókó-no-ko* 'boy' and *onná-no-ko* 'girl' (cf. *onná no ko* [domo] 'the woman's child', *onná no senséi* 'a female teacher' or 'the girl's teacher'); *yo-nó-naka* 'the world, the public' from *yó(-) no náka* 'midst of the world'; *oziiityan-obáatyan* 'grampa-n-gramma' from *oziiityan* {-to} *obáatyan* 'grandpa and grandma'; *ima-máde* 'up to now' ← **íma máde*; etc. On the other hand, the compound-like accentuation of phrases marked by restrictives and quasi-restrictives such as *gúrai* and *nuki* does not deter us from writing them as separate words, a decision made in consideration of the nature of the structures to which they freely attach. For more on the properties of certain idioms, see Tagashira 1973.

Abstract nouns in Japanese often carry some suffix or attached noun which may be unnecessary to translate as such. Nouns used in this way to make explicit a category designation that often goes untranslated in English include these:

zyootai 'state' as in *kyuusen-zyóotai* '(the condition of being) an armistice', *heiwa-zyóotai* '(state of) peace', *kootyaku-zyóotai* 'deadlock, standstill', *hoowa-zyóotai* 'saturation, saturated', *saimin-zyóotai* '(under) hypnosis', *sinkyuu-zyóotai* [*ni náru*] '[becomes] a vacuum', *taihai-zyóotai* '(state of) corruption, depravity', *doobutu no kenkoo-zyóotai* 'the health of the animals' (SA 2813.31b), *panikku-zyóotai ni nátta* 'went into a panic' (SA 2835.126b);

zyookén(-) 'condition' as in *ondo-zyóoken* 'the [condition of the] temperature';

guai 'condition' as in *kókóá no toke-gúai* 'the meltedness of the cocoa' and *Kín-tyan wa dóo da i, hutokoro-gúai wa* 'How about it, Kin-chan, how's your pocketbook?' (Okitsu 1.291);

gensyoo 'phenomenon' as in zísín no rooka-génsyoo 'her own growing old' (Ariyoshi 246);

taiguu 'treatment' as in Kokuzin wa mukóo(¯) de sabetu-táiguu úket' óru kara, ... 'The blacks are subject to discrimination over there, so ...' (Tk 3.59a);

mondai 'question, issue' as in zinsyu-móndai '[the issue of] race';

sikake 'device' as in bane-zíkake 'a spring, spring [works]' and tokei-zíkake 'clockwork';

undoo 'movement' as in roodoo-úndoo 'labor [as a movement]' and teikoo-úndoo 'the resistance [movement]'

tuzuki 'series, string' as in rokusatu-túzuki no "Kokugobunka-kóoza" to iu monó ga hakkoo sarete iru 'six "Lectures on Our Language and Culture" were published' (K 1966.65);

sóoti 'equipment, facility' as in danboo-sóoti 'heating (arrangements)' and LL-sóoti [erueru-sóoti] 'language laboratory (facilities)';

Suffixes include 'sya 'company' as in sinbún-sya 'newspaper (as institution/business)'; 'ryoku 'power of, -tion' as in soozóo-ryoku '[one's power of] imagination' and syuutyúu-ryoku '[one's] concentration'; In §26 we observed that Japanese often cite names, including geographical names, with titles or other specifying suffixes. Long strings of nouns are often used as proper names for institutions, titles of books, and the like; such a name is sometimes broken into shorter phrases, but the usual practice is to run the phrases together as a lexical compound.

INDEX

This index lists words, forms, and technical terms discussed or exemplified in the book. Cross-references are provided from terms used by other grammarians; usually the source is not cited, but terms taken from Bloch 1970 are marked "[BB]" and those from Jordan 1962-3 are marked "[BJ]". Other abbreviations used here or in the text will be found among the entries. As elsewhere, place names are spelled in the Hepburn romanization except when used as examples. The entries for infinitive-derived nouns usually give also the underlying infinitive except in a few cases where the basic accent is the same as that of the noun; these are marked "(N < V)". The entries are ordered alphabetically, but accent marks, spaces, brackets, and parentheses are ignored, as is the optional plural "(s)" on certain English entries. Homonyms are roughly ordered from bound to free: prefixes precede suffixes, adnouns precede particles, verbs and adverbs precede nouns; English terms come last. The English glosses provided for certain of the headings will help identify particular Japanese words. References are to page numbers; where the more important references in a list might escape your attention they are italicized. Most verbs and adjectives are entered only in the plain imperfect form, but citations may refer to other forms of the paradigm.

 Q = quotationalization 666; = quantifier 159
 -q 915; — to suru/náru 1023
 -q- 72
 q/n 798
 quality 193, 385, (expressed by AN) 617n
 quality nouns [BB] = adjectival and quasi-adjectival (precopular) nouns
 quantification — : in apposition 1049-50; of N 177-8; of time/place span 210
 quantified — : duration 216, nouns (conjoined) 159; subject with gá 58
 quantifiers 178, 182
 quantitative mó 69
 quantity: adv of — 801, 806-8; focused — 52 (mó), 65; specific — 410; starting from — 45; — expressed by PcN 617n; — N/nominal 93, 178, 182, 266, 619, 766-82, 783, 801, 822, (+ tó) 1006
 qar ga si (Ryūkyū; q = glottal) 50
 quasi-adjectival N = PcN 93, 179
 quasi adnoun 288, 752-3, 838
 quasi adverb 791
 quasi-apposition 231, 759
 quasi-compound 151, 1061
 quasi-copula (tō'iu) 618
 quasi-desiderative — : A 201; grammar 200, 237; predicates 198-201, 257
 quasi-free N (Korean) 88
 quasi-free VN 870
 quasi-idiomatic uses of — : wá within adnominalization 57; náku 373-4
 quasi-intransitive verb (= VQI): 40, 186-8, 206, 255, 276, 294, 297, 357
 quasi-literary causative 383
 quasi-mimetic 756
 quasi-particle 167, 915
 quasi passive 292, 625
 quasi-phonemic, -phonetic 26
 quasi-place 44
 quasi-possessed 38, (epithematized) 651
 quasi-possessive 193-8; — and adnominalization 649, 651; — grammar (of potential) 76, 304; — predicates 256-7; — S 74, 236-7; — V 191, 196, (made desiderative) 199, 297, 341 (exalting passive not used), 402
 quasi-possessor 39, 41
 quasi postadnominal 969
 quasi-restrictives 23 (accent), 34, 84, 90-137, 283, 284, 285, 380, 823, 830n, 881-3, 946-7, 953
 quasi-suffix 34, 145
 quasi-thematization 224, 228-30
 quasi VN 402
 question(s) 923-7, 932-5; implied — 61-2; insistent — with sá 918; neg — 62-3, 366, 368; neg reply to perfect — 518, 603; quoted — 997; localized — 58, 60; understood subject of — 184; yes-or-no — 61-2, 303; — asked with gerund 494-5; — following S kara ≠ S nó de 857; — in apposition 1054-5; — signaled by half-lengthening of final vowel 915; — with hearsay 984; — word (= content-interrogative) 61; questioned statement 64
 quotation 37, 90, 154, 229, 897, 914, 996-1016; quasi — 904; thematized — 231; unmarked — 50-1, 55; — of command 46; — of desiderative 356; — of imperative 961; — marked by tté 938; — marker 162; — ≠ quotationalization 666, 746-7; — V = information V 180; quotational = quotative quotationalization 621, 666, 667-724 passim, 727, 739; — with kotó 841-2; — with yóri 141
 quotative — : conjoinings 160; putative 646, 651; tó 50, 202, 330, (— omóu) 469
 quoted — : hortative 356; S 34; S kara 970
