ACKNOWLEDGMENTS

When a work takes over a decade to complete, the author enjoys the benefit of ideas, material, counsel, and encouragement from many quarters. I have tried conscientiously to acknowledge specific sources, published and unpublished, throughout this study. Let me here mention a number of persons who have contributed in various ways to the successful completion of the book. Much that I have learned of the Japanese language has been inspired by the work of my teacher the late Bernard Bloch and others of his students, such as Elizabeth F. Gardner, Masako Yokoyama Lounsbury, and John J. Chew, Jr. In particular, I have benefited enormously from the studies of Eleanor Harz Jordan, whose steady encouragement and criticisms are much appreciated. Without the devoted collaboration of Hamako Itō Chaplin, who has provided invaluable aid at every turn, neither this nor other recent works on Japanese would have been possible; some of the most intractable problems have found solutions through insights she has provided. Other members of the Japanese language faculty of Yale University—Chie Chao, Kaoru Ohta, and Tatu-hiko Tateyama—have also been of great help, and I have learned much from their kind tutelage.

Parts of the research for this work, which was begun with assistance from the U.S. Office of Education in 1961, took place while I was a visiting professor at the University of Washington in 1962–63 and at the University of Hawaii in 1965–66 and 1969–70; students and colleagues at both institutions have provided valuable information and criticism. In particular, I have incorporated specific material and ideas offered by Setsuko Aihara, Norito Fujioka, Ritva Sinikka Hayasaka, Irwin Howard, Thomas E. Huber, Shōzō Kurokawa, Leatrice Mirikitani, Zino Song, Hisami Konishi Springer, Emiko Sugita, Cecilia Y. Takaki, and Harvey Taylor. Helpful suggestions on the manuscript were made by Yale Graduate School students David Hughes, Patrick O'Connor, S. R. Ramsey, Karen Sandness, and J. M. Unger.

Other scholars who have influenced the content of this book, by their writings or through personal advice, include Anthony Alfonso, Mantarō Hashimoto, Shirō Hattori, Teruo Hirayama, Yasuo Isami, Yukio Ishigaki, Lewis S. Josephs, Haruhiko Kindaichi, Susumu Kuno, S.-Y. Kuroda, James D. McCawley, Akira Mikami, Roy A. Miller, Masaru Nagano, Keiichirō Okutsu, Takeshi Shibata, I. F. Vardul, Sae Yamada, and Kanehiko Yoshida.

Finally, I would like to thank Marian Ash of Yale University Press for handling problems of publication and Elinor Clark Horne for her editorial and typographical help.

This book is affectionately dedicated to Norah and James, who were very patient.

June 1975

S.E.M.

This Tuttle edition has been prepared in order to make the book more widely accessible to students of Japanese. Nearly a thousand corrections and additions have been made to the first edition of 1975. I am grateful for the helpful reviews by N. Akatsuka, C. Kitagawa, B. Lewin, G.B. Mathias, P.G. O'Neill, M. Shibatani, and G.E. Wenck. I appreciate also the observations made by various other readers, and I look forward to further comments from those who use the book, for your remarks can improve future editions.

January 1988

S.E.M.

CONTENTS

0. Notational conventions: spelling, punctuation, accent, juncture.	15
0.1. Names and citations.	15
0.2. Words; spaces; hyphens.	16
0.3. Syllables and moras.	17
0.4. Phrasing and juncture.	17
0.5. Accent in words and phrases.	18
0.5.1. Inherent word accents.	18
0.5.2. Variations in inherent word accents.	20
0.5.3. Variations due to vowel unvoicing.	20
0.5.4. Word accent within phrases.	21
0.5.5. Regressive cancellations.	23
0.5.6. Other accent cancellations.	24
0.5.7. Accent shifts in certain verb forms.	24
0.5.8. Accent in dialect forms.	25
0.6. Miscellaneous conventions.	25
1. Sentence construction: nuclear sentences (predicates) and expanded sentences (simplexes); sentence conversions.	28
Chart One.	32
Chart Two.	33
2. Predicate adjuncts.	34
2.1. Order of adjuncts.	35
2.2. Marking of adjuncts: noun postpositions ("particles").	38
2.2a. Unmarked adjuncts.	50
2.3. Focus of attention: backgrounding ("subduing") and foregrounding ("highlighting") of adjuncts.	52
2.3.1. Uses of wá.	60
2.3.2. Uses of mó.	66
2.3.3. Other particles of focus: máde, sáe, súra, dáni; sika; nárade-wa.	70
2.3.4. Kóso.	83
2.3.5. Some etymological speculations.	87
2.4. Restrictives and quasi-restrictives.	90
2.4a. Yúé [ni].	137
2.5. The distributive (zútu).	138
2.6. The comparator (yóri); comparisons.	140
2.7. Collectivizers; implied plurals.	143
2.8. Linkage of adjuncts; nominal conjoining.	154
2.9. Nádo; nánka; nánte.	160
2.10. Dá ka, dáta ka.	166
2.11. Dé mo; d'átte.	167
2.12. Mítai (da/na/ni).	172

3. Expansion constraints; noun subcategorization.	176
3.1. Classes of predicates; subjects, objects, case valences; subjectless sentences.	183
3.2. Direct objects: transitivity, action, emotion, motion.	186
3.3. Direct objects of action verbs: kinds of affect.	188
3.4. Indirect objects: beneficiaries; dative valences.	191
3.5. Existence, location, and possession; quasi-possessives.	193
3.5a. Desiderative and quasi-desiderative predicates; cathexis.	198
3.6. Reciprocal valences.	201
3.7. Ablative, allative, and instrumental valences.	205
3.7a. The set-opener ablative and the set-closer allative.	212
3.8. Locative constraints; stasis.	216
3.8a. Case valences with relexicalized nuclei.	221
3.9. Thematization.	224
3.9a. Subject delay.	234
3.10. Identification and proredication.	237
3.10a. Epithematic identification.	253
3.11. Multiparous sentences; multiple surface-adjuncts.	254
3.11.1. Multiple surface-objects.	255
3.11.2. Multiple surface-subjects; the "genitive" as a surface phenomenon, genitivization; kinds of genitives.	256
3.11.3. Thematization and focus of extruded genitives and of truncated possessives.	267
3.12. Inherent verbal features: aspect and volition.	272
3.13. Postnominal verbs and adjectives.	282
4. Voice conversions.	287
4.1. Causatives.	292
4.2. Passives.	294
4.3. Passivized causatives.	299
4.4. Potentials.	300
4.4a. Spontaneous potentials and passives.	307
4.5. Intransitives derived from passives.	307
4.6. Transitivity sets.	308
4.7. Derived passive-potentials.	311
4.8. Derived pseudo-causatives.	312
4.9. Semantic skewing.	312
5. Nuclear focus and restriction: split nuclei.	316
5.1. Nuclear focus with <i>wá</i> and <i>mó</i> .	317
5.2. Nuclear focus with <i>sáe</i> and <i>sika</i> .	322
5.3. Restricting the nucleus with other elements.	323
5.4. Loose reference.	326
5.5. Further remarks on focus and restriction, etc.	329
6. Exaltation.	331
6.1. Subject exaltation.	336

6.2. Circumlocutions.	338
6.3. Object exaltation.	342
6.4. Euphemisms.	345
6.5. Exaltation in dialects.	351
6.6. Donatory verbs.	352
7. Desideratives.	355
7.1. Desiderative adjuncts.	357
7.2. Desiderative verbalization.	358
7.3. Verbalization of affective and cathectic adjectives and adjectival nouns.	359
8. Negation.	366
8.1. Negating the adjuncts.	366
8.2. Answering negative questions.	368
8.3. Multiple negatives.	368
8.4. Negating the predicate.	370
8.5. The negative precopular noun: -(a)zu (= the literary negative infinitive).	376
8.6. Other negative forms borrowed from the literary language.	381
8.7. Further remarks on negation.	384
8.8. Lexical negatives.	388
9. Adverbializations.	392
9.1. The infinitive.	392
9.1.1. Verbal infinitive + ní + verb.	401
9.1.1a. Verbal iteration with infinitive + ní.	407
9.1.1b. Iterated verbal infinitives.	408
9.1.2. Verbal infinitive + -'sídai (da).	411
9.1.3. The concurrent-concessive (nágará).	412
9.1.4. Verbal infinitive + -'tútu.	417
9.1.5. Verbal infinitive + -'gati dá.	418
9.1.6. Verbal infinitive + -'tate dá.	419
9.1.7. Other adverbial nominals from verbal infinitives.	421
9.1.7a. Verbal infinitive + 'kko náí.	426
9.1.7b. The literary negative infinitive -(a)zu + -'zímái.	428
9.1.8. Facilitatives and propensives.	428
9.1.9. The excessive (-sugiru).	434
9.1.10. Verbal infinitive + auxiliary verb.	438
9.1.11. Conversions of adjectival and nominal infinitives.	455
(1/2) Intransitive/transitive mutative.	455
(3) Subject-adverbial.	466
(4) Nuclear-adverbial (= derived adverb).	467
(5) Evaluative.	468
(6) Transitive putative.	469
(7) Intransitive putative.	469
9.1.12. Verb dropping.	470
9.1.13. Direct adverbialization of nominals.	472

9.2. The gerund.	475
9.2.1. The predicated gerund.	491
9.2.1a. Sentence-final gerunds.	494
9.2.2. Gerund focus.	496
9.2.3. Verbal gerund + kará.	507
9.2.4. Verbal gerund + auxiliary verb.	510
(1) -te [i]ru, -t[e] óru, -te [i]rassyáru, -t[e] o-ide n[i] náru.	514
(2) -te áru, -te gozaimásu.	523
(3) -te oku, -t' oku.	529
(4) -te simau, -timau, -tyau.	533
(5-6) -te [i]ku; -te kúru (máiru).	536
(7) -te míru; -te go-ran.	541
(8) -te miéru.	544
(9) -te miséru; -te o-me ni kakéru.	545
(10) -te súmu; -te sumásu.	546
9.2.5. Auxiliary constraints and sequences.	547
9.3. Conditions: the provisional, the literary hypothetical, and the conditional; the literary concessive.	552
9.3.1. The provisional: -réba.	559
9.3.2. Conjoining parallel sentences with the provisional.	562
9.3.3. The conditional: -tára.	564
9.4. The representative: -tári.	566
9.5. Literary perfects: -i-tú/-túru; -i-nú/-núru, -í-ki/-si.	574
9.6. The literary perfect resultative: -éři/-éru; [-ni]-k-éři/-éru.	575
9.7. Phrasal postpositions.	577
10. Favors.	597
11. The perfect.	602
12. Tentatives and hortatives.	605
12.1. The tentative; daróo.	605
12.2. The hortative; the literary hortative.	610
12.3. The literary tentative.	615
13. Adnominalizations; typically adnominal and adverbial words.	616
13.1. Adnominalization grammar.	619
13.1.1. Extruded adjuncts as epithemes.	624
13.1.2. Epithematization of adjuncts extruded from converted sentences.	630
(1) Epithemes extruded from voice-converted sentences.	632
(2) Epithemes extruded from favors.	637
(3) Epithemes extruded from desiderative and quasi-desiderative sentences.	639
(4) Epithemes extruded from facilitative-propensive sentences.	640
(5) Epithemes extruded from intransitivizing resultative sentences.	644
(6) Epithemes extruded from mutative, putative, and evaluative sentences.	645

13.1.3. Existential, locative, and possessive adnominalizations; epithemes extruded from multiparous sentences.	646
13.1.4. Extruded genitives as epithemes.	651
13.1.5. The adnominalization of proredications and identifications.	652
13.1.6. Subject marking and focus in adnominalized sentences.	659
13.2. Postadnominals.	664
13.2.1. Monó.	725
13.2.2. Tokoró.	727
13.2.3. Tokí.	730
13.2.4. Yóo.	731
13.2.5. Wáke.	733
13.2.6. Mamá, manmá.	735
13.2.7. Hazu.	736
13.2.8. Tumori.	738
13.2.9. Tamé.	739
13.3. Tentative and hortative adnominals; -[y]oo monó/món nara.	740
13.4. Possessive nominals.	741
13.5. Restricted nominals; adnouns (=prenouns).	742
13.5a. Adjectival nouns.	754
13.6. Quantity nominals.	766
13.7. Adverbs.	782
13.7a. Conjunctions.	817
13.8. Precopular nouns.	821
13.9. Predicative and attributive forms borrowed from the literary language.	831
13.10. Pseudo adnominals; predicate-prone adjectives.	840
14. Nominalizations: general and specific.	841
14.1. Kotó.	841
14.1.1. Experiential nominalizations: kotó ga áru/nái.	846
14.1.2. Kotó ni náru/suru.	849
14.1.3. The circumlocutionary potential: kotó ga dekíru.	850
14.1.4. Verbal + kotó ga + adjective or adjectival noun.	851
14.2. Nó (da).	851
14.2.1. N[ó] de.	856
14.2.2. Nó ni.	857
14.2.3. Post-appositional nó.	860
14.2.4. Cleft sentences.	863
14.3. Verbal nouns.	869
14.4. Verbal-noun renominalizations: ̄tyuu dá, ̄gó(-), ̄zén; ̄zumi.	881
14.5. Infinitive-derived nouns.	883
14.6. Direct nominalizations.	889
14.6.1. Ní [wa/mo] tigai nái.	905
14.6.2. Ní [wa/mo] suginai.	906
14.6.3. Ní [wa/?mo] kimatte iru.	907
14.6.4. Ní kagíru.	907
14.6.5. Ní [mo] koto-kaite.	907

14.6.6. Verbal iteration with direct nominalization + ní.	908
14.7. Abstract lexical nominalizations of adjectives and adjectival nouns (A-sa, AN-sa; A-mi, AN-mi).	909
14.8. Abstract lexical and sentential nominalizations of verbs (V-i-yoo, V-i-kata).	911
15. Sentence extensions.	914
15.1. Né[e], ná[a].	916
15.2. Sá.	918
15.3. Yó.	918
15.4. [] Wá.	920
15.5. Zó, zé.	922
15.6. Ká.	923
15.6a. Yá.	932
15.7. Ká né[e]/ná[a]; (ká, dá, -tá) í/é.	934
15.8. [] Ká mo siren[ai].	935
15.9. Ká sira.	936
15.10. Kké.	937
15.11. Tté; káte.	938
15.12. Ná; nákáre.	942
15.12a. -Mái, -mázi/-máziki; -(a)mási _{1,2} .	942
15.12b. -Bési/béki, -béku; -bekárazu/-bekarazáru; -béi, -bé[e], -bé ná.	943
15.13. Kotó and nó; nánte.	944
15.14. Tó mo.	946
15.15. Ttára, tteba[a]; tó, ttó, tó ka.	947
15.16. [] Zya náí [ka/no], [] zya arimasén ka (=zya náí desu ka), [] dé wa gozaimasén ka.	947
15.17. Dá no.	949
15.18. Yára.	951
15.19. Nári; ná{ri} [to (mo)].	953
15.20. Literary and dialect sentence-extensions.	957
16. Commands and requests.	959
16.1. The imperative.	959
16.2. Circumlocutions.	963
16.3. Negative commands and requests.	966
17. Conjunctivalizations.	968
17.1. Sentence + kará/mon[ó]; V-rú kará ni wa, V-tá kará [ni] wa.	968
17.2. Sentence + tó.	974
17.3. Sentence + sí.	975
17.4. Sentence + ké[re]do, mono-no, monó[-o].	977
17.5. Sentence + gá.	979
17.6. Literary tentative + gá.	981
17.7. Literary tentative + ní.	982
17.8. Sentence-final tentative + ní.	982

Contents	13
17.9. Sentence + nára [-ba].	983
18. Hearsay-reporting.	984
19. The semblative: [l] ʔrasí.	986
20. The evidential: -soo/-ge dá.	991
21. Quotations.	996
21.1. Special uses of quotations.	1003
21.2. Ttára, ttéba.	1016
21.3. Tó[te], tté.	1017
21.4. Sentence + tó ^[v] suru/náru: periphrastic putatives, subjective mutatives.	1018
21.5. Literary tentative + tó.	1020
21.6. Tó ka; tó yara.	1021
21.7. Adverbial, interjectional, and mimetic quotations.	1022
22. Stylizations.	1026
22.1. Polite stylization.	1029
22.2. Honorific (hyperpolite, elegant) stylization.	1035
22.3. Other stylizations: formal spoken, literary, formal written, and epistolary styles.	1038
23. Interjections; afterthoughts; minor sentences of various types.	1041
24. Connectors and sentence-openers; opening ellipsis.	1045
25. Apposition.	1048
26. Names, titles.	1055
27. Iterative devices.	1060
28. Elliptical expressions.	1063
29. Demonstratives; deictics and anaphorics; pronouns.	1066
30. Usage constraints; agrammatisms; idioms; lexical compounds.	1081

A REFERENCE GRAMMAR OF JAPANESE

0 NOTATIONAL CONVENTIONS: SPELLING, PUNCTUATION, ACCENT, JUNCTURE

The Japanese in this book is spelled in roman letters; the standard pronunciation is easy to infer. A serious student of Japanese must be prepared to read the language in a variety of forms, including the two kinds of romanization distinguished here. In the Bibliography and in the spelling of proper names within English sentences, we use the Hepburn romanization, which tells us to "pronounce the consonants as in English and the vowels as in Italian"; elsewhere the Japanese words and sentences are written largely according to the conventions of the book *A Manual of Japanese Writing*, by Chaplin and Martin, conventions which are almost identical with the system used in *Spoken Japanese*, by Bloch and Jordan, and differ from those used in *Beginning Japanese*, by Jordan and Chaplin, primarily in neglecting to distinguish nasal from oral *g* and in writing "ei" for most instances of what is usually pronounced "ee" in most parts of Japan.¹ In recent loanwords the bilabial *f*- is represented by *hw*, as in *hwírumu* 'film' and *hwán* 'fan' and *byúhhwe* 'buffet', except that *fu* is written *hu*, as in *hurai-pan* 'frying pan' and *sutáhhu* 'staff'. In this transcription "ti" represents the syllable that Hepburn writes as "chi"; for the non-affricated pronunciation of such English loanwords as that for 'DDT' we will separate "t" and "d" from the vowel by an apostrophe: *d'ii-d'ii-t'ii* for what Hepburn writes as *dídítí*. (In *A Manual of Japanese Writing* this was written *d^{ei}ii-d^{ei}ii-t^{ei}ii*, taking a hint from the kana spelling, where a small "i" is inserted after the syllable for "te" or "de", as if we were to write *deⁱi-deⁱi-teⁱi*.) The apostrophe is also used to indicate the beginning of a syllable where doubt might arise (see §0.3). The word spelled *iu* 'says' is pronounced /yuu/; our spelling follows the native tradition, which is based on the underlying form. In explaining certain etymologies the symbol " is placed in front of a voiceless consonant to show secondary voicing (nigori): "p is pronounced /b/, "t /d/, "k /g/, "s /z/. (But in the Middle Korean forms cited on p. 89, the symbol " represents the accent of which modern Seoul length is a reflex.)

0.1. NAMES AND CITATIONS

In the Bibliography and within Japanese sentences a Japanese family name directly precedes the personal name and title (if these are present), but in the English translations you will find the order reversed according to the foreign custom. This means that the translation of a sentence talking about a man referred to as *Tukisima Syúnziroo* will call him *Shunjirō Tsukishima* and if he were to turn up as the author of a book listed in the Bibliography you would find him listed as *Tsukishima Shunjirō*.

Certain authors and works that are quite often cited will be referred to by abbreviations, for which the full forms can be found in the Bibliography. This accounts for the frequent mention of "KKK" for *Kokuritsu Kokugo Kenkyūjo* (National Language Research Institute), of "K" for *Kindaichi Haruhiko*, of "H" for *Hirayama Teruo's Zenkoku akusento jiten*, etc. Many of the example sentences were culled from weekly magazines, such as *Sandē-Mainichi* ("SM") and especially *Shūkan-Asahi* ("SA"), and some are from monthlies

1. But the pronunciation *ei* is still heard in the *Ryūkyūs*, *Kyūshū*, southern *Shikoku*, parts of the *Kii* peninsula, and the *Izu Islands* (H 1968.95).

such as *Chūō-Kōron* ("CK").² Others are from the works of modern novelists such as Funabashi Seiichi ("Fn") or Kubota Mantarō ("Kb"); but many examples from fiction are taken from secondary sources, such as Ishigaki Yukio ("Ig"), Yoshida Kanehiko ("Y"), and I. F. Vardul ("V"), and are so cited. A good many examples were transcribed from tape recordings of radio and television; these are marked "R". Unmarked examples are mostly the result of elicitation from native speakers, but a few were taken from written sources that I now find difficult to identify.

In making the English translations, I have tried to take into account the surrounding context of examples from primary sources; this accounts for the translation of titles such as *sensēi* by 'you' in more than one sentence. But I have not gone to the trouble of checking the original context of examples quoted from secondary sources, since an inaccurate reconstruction of unexpressed elements will seldom affect the grammatical point under discussion. The purpose of the English translations is simply to help the reader find meaning in the Japanese examples; I apologize to those authors and translators who may be distressed at my clumsy treatment of familiar sentences.

0.2. WORDS; SPACES; HYPHENS

When a Japanese writes a sentence he leaves no spaces between the words. If pressed to do so, he will insert a space only where it is possible to hesitate; such points of hesitation represent the surface manifestation of boundaries (called "junctures" by linguists) which separate short phrases within the sentence. In our transcribed sentences, however, you will find the spaces are placed to show a generous division into WORDS as defined partly by rules of accent and partly by versatility of distribution. Rules of accent placement are discussed just below and also later in the book, where you will find grammatical criteria for the various word classes that are needed to describe the sentences.

Hyphens call attention to the internal structure of a word for any of a number of reasons. When cited in isolation the verb *ir-u* 'needs' has a hyphen to remind you that the infinitive is *iri* and the negative *iranai*; otherwise you might confuse it with *iru* 'stays', which has the infinitive *i* and the negative *inai*. The lack of a hyphen in *kéizai saiken* 'to reconstruct the economy' reflects the underlying juncture that separates the expression into a two-word phrase; the presence of a hyphen in *keizai-séikatu* 'economic life' tells us that this is a compound noun made up of the nouns *kéizai* 'economics' and *seikatu* 'life', and in *keizái-zin* 'business man' and *keizai-teki* 'economical' we are reminded that the final elements are suffixes. Although I have tried to use the hyphen with some measure of consistency, especially within lists, do not be dismayed to find the same word written sometimes solid, sometimes with a hyphen, or even—under special circumstances—as two words.

Within a word the morpheme divisions are not marked. When you see (or, for that matter, hear) *sikí* there is no obvious way to tell whether you are confronted with a one-morpheme word such as that for 'ceremony' (written with a single Chinese character) or a two-morpheme word such as that for 'the four seasons of the year' (written with two Chinese characters). But in certain compounds the hyphen proves helpful: *siká-i* means 'dentist', being a compound of the two-morpheme noun *sika* 'dentistry' and the one-morpheme

2. The reference "(SA 2653.46c)" is to be read 'column c (third from top or third from right) on page 46 of issue No. 2653 of *Shūkan Asahi* [= the issue of 21 November 1969]'.

abbreviation of the two-morpheme noun *isya* 'doctor'; *sikái* means 'city council', a two-morpheme noun. The two words sound, of course, exactly the same; you cannot hear a hyphen.

0.3. SYLLABLES AND MORAS

In reciting poetry or spelling out the sound of a word, a Japanese will allow an equal amount of time for each vowel, so that a long vowel (here written double) counts as two timing units or MORAS: *Tookyoo* (*Tōkyō*) is pronounced as four moras *to-o-kyo-o*, *kéizai* 'economics' is pronounced *ké-e-za-i*. When a consonant occurs without a following vowel, it is treated as a separate mora: *sinbun* 'newspaper' is pronounced *si-n-bu-n*, and *gakkoo* 'school' is pronounced *ga-k-ko-o*. The Japanese term for mora is *onsetu* and this is often loosely translated as "syllable". In speech the Japanese may run two moras together to make a single syllable, so that the difference in length between *Tookyoo* (*Tōkyō*) and *Kyóoto* (*Kyōto*) owes only to the extra mora, both words consisting of two syllables. We can think of two-mora syllables such as those heard in *Too-kyoo*, *kéi-zai*, *sin-bun*, and *gak-koo* as HEAVY (or LONG) syllables in contrast with the LIGHT (or SHORT) syllable that consists of a single mora, such as *ko* or *kyo* or *o*. Foreign loanwords and mimetic expressions even contain EXTRA-HEAVY syllables made up of three moras: *hóon* 'horn', *booi* 'boy, bellboy', *siin* 'scene', *siin-to* 'very quietly'. The accent never lands on the added mora (or moras) of a heavy syllable. When you see *tooí desu* 'it is far' you know that the syllable structure is *too-í-de-su*. The adjective *óóí* 'is much, are many' is pronounced either as three syllables *o-ó-i* or as a heavy syllable followed by a light syllable *óo-i*; *óóí* is the common *Tōkyō* version, but *óóí* is more widely heard elsewhere.³ For the verb meaning 'covers' *Tōkyō* has both the historically expected atonic version *oou* (two syllables *oo-u*) and a tonic variant *oóu* (three syllables *o-ó-u*). In general, our notation indicates syllable structure only by implication, but you will notice that an apostrophe marks the beginning of a syllable in certain cases where doubt might arise: *tán'i* 'unit' has three moras, *tani* 'valley' has two; *ko'oo* 'response' consists of a short syllable followed by a long, *kó'o* 'likes and dislikes' consists of a long syllable followed by a short. (But in *páat'ii* 'party' the apostrophe shows that the *t* is not to be affricated; the word contains two long syllables *páa-t'ii*.)

0.4. PHRASING AND JUNCTURE

The transcriptions in this book provide a good deal of information about accent and phrasing. If anything, you will probably feel overwhelmed with more information than you want, though you may eventually find reasons to feel grateful for certain of the notations which seem irritating at first. Freely ignore as much of the notation as you see fit. The devices are intended to be helpful for those interested, not to browbeat those seeking other information; each reader will have his own needs.

3. Hamako Chaplin freely varies the pronunciation of the infinitive of *ookii* 'is big' between *oókiku* (four syllables) and *óokiku* (three syllables), but only the latter is recognized by the dictionaries. All sources give only *oósiku* as the infinitive of *oosii* 'is brave'; there is no **óosiku*. *K* implies that *ookii* and *oosii* differ in number of syllables, but *H* implies they are the same. Etymologically, the former word is built on a morpheme reduced from two syllables *o[p]o-* (identical with the base of *óóí*), while the latter is a reduplication of a one-syllable morpheme *o-* 'male'.

Every spoken phrase of Japanese displays a tune that is chosen out of a limited stock of arrangements of stretches of lower and higher pitches. The phrases are separated by boundaries we call "junctures". A major juncture (marked by the double bar ||) tells us that the phrases on either side are pronounced rather independently of each other, with full value for each accent phrase. A minor boundary (marked by the single bar |) warns us that the pattern of the later phrase is somewhat altered by the preceding phrase; for example, if there is a fall of pitch it begins from a lower plateau. Depending on speed and emphasis, you may hear the same sentence spoken with somewhat different phrasings. In slow and deliberate speech the sentence will be broken into shorter phrases; in hasty speech phrases will be run together, with the major junctures reduced to minor and the minor junctures often dropping altogether. Some of our examples, especially those taken from recordings, are transcribed with typical junctures, but most are not. An appropriate phrasing can usually be inferred from the other information given.

Our punctuation conventions follow familiar English patterns. The capitalization of proper names and of the first word in a sentence conveys no phonetic information; commas and semicolons are used for logical rather than phonetic purposes, though they will often coincide with a major juncture. The original punctuation is usually retained for examples cited from written texts, even when it raises questions; you will find side comments on this from time to time. The sentence-final period is deferred until the end of the English translation, which is set off by inverted commas ('...'), but a final question mark is included within the English translation ('...?'), and also at the end of the Japanese sentence whenever the original text contained the mark. The triple dot (...) is used to show omissions in a citation and at the end of a list to show that the list is not exhaustive. To save space the triple dot is often omitted, however, when it can easily be supplied by the reader.

0.5. ACCENT IN WORDS AND PHRASES

In order to appreciate the devices marking accent and juncture, it is necessary to take a brief look at certain facts about the way Japanese is spoken. Readers who find themselves puzzled by notations may wish to consult the following information for guidance.

0.5.1. *Inherent word accents.*

In addition to the consonants and vowels that make up its moras and syllables, each Japanese word has an inherent accent pattern, a tune that is appropriate to it in certain critical contexts. Those words which are TONIC are characterized by an inherent fall of pitch; the point of fall is here marked with an acute accent (´) over the vowel. PROTONIC words fall to a lower pitch right after the first syllable: Nára 'Nara', Tíba 'Chiba', Ákasi 'Akashi', Méguro 'Meguro', ótukisama 'the moon', Ámano-hasidate 'Amanohashidate'. When the first syllable contains two vowels or a vowel followed by n, the fall may be heard within that syllable: Kóobe 'Kōbe', Kyóoto 'Kyōto', Sínbasi 'Shimbashi', Kyúusyuu 'Kyūshū', Dóitu 'Germany', Súisu 'Switzerland', náiti 'Japan proper'.

MESOTONIC words have their fall of pitch somewhere in the middle of the word; the first syllable is pronounced rather low, but it often rises when it contains two vowels or a vowel followed by n: Nará-si 'Nara city', Tibá-ken 'Chiba prefecture', Koobé-eki 'Kōbe station', Akásaka 'Akasaka', Nagásaki 'Nagasaki', Harázyuku 'Harajuku', Iidábasi 'Iidabashi',

Ootémati 'Ōtemachi', Sinzyú-wan 'Pearl Harbor', Sendágaya 'Sendagaya', Taihéi-yoo 'Pacific Ocean', Ikebúkuro 'Ikebukuro', Akihábara 'Akihabara', Meguró-ku 'Meguro ward', Sinagawá-ku 'Shinagawa ward', Ikebukuró-eki 'Ikebukuro station', Nisi-Ogikubó-eki 'Nishi-Ogikubo station'.

OXYTONIC words have the fall of pitch on the last syllable, but if that contains a single vowel you will hear the fall only when the word is immediately followed by a particle or copula: inú desu 'it's a dog', onná wa 'as for the woman', otokó mo 'the man also', ootoó ni 'for my younger brother', Kitizyoozí e 'to Kichijōji', zyuitigatú made 'till November'. If the final syllable contains two vowels or a vowel followed by *n*, you may be able to hear the fall of pitch even without a following particle: koohii [desu] 'it is coffee', Ryuukyúu [mo] 'the Ryūkyūs [also]', Tyoosén [de] '[in] Korea', takái 'it is expensive', yasúi 'it is cheap', kurói 'it is black'.

ATONIC words have no fall of pitch even when followed by a particle. All the syllables are pronounced rather high except for the first, which usually starts off low: kore [wa] '[as for] this', Shibuya [e] '[to] Shibuya', Gotanda [ni] '[to] Gotanda', Sinagawa [kara] '[from] Shinagawa', Otyanomizu [mo] 'Ochanomizu [also]'. If the first syllable consists of two vowels or a vowel followed by *n* you may hear a rise: Oosaka [mo] 'Ōsaka [also]', Taihoku [e] '[to] Taipei', Kanda [de] '[in] Kanda'.

The inherent accent of a simple word cannot easily be predicted; it is something to learn along with the consonants and vowels. But there are rules by which you can predict the accent of compound words, which are newly created every day, and these rules are mentioned in the appropriate sections of the book. Simple verbs and adjectives show only two TYPES of basic accent: atonic or tonic. If you know the basic type, you can predict the accent of a given form of the verb or adjective by rule or by analogy with similar forms of the same type. Most simple verbs and almost all adjectives are the TONIC type. On the other hand, many nouns of three or four moras—especially and most importantly those written with two Chinese characters—are atonic. Recent loanwords from English will usually either follow the English patterns or put the accent on the third mora from the end (or one mora earlier if that mora is the second part of a long syllable).

If we leave aside certain special types and particular exceptions, the accentuation of compound nouns ($N_1 + N_2$) can be described as follows:

(1) If N_1 is tonic, the accent is removed. (Otherwise we know the structure is a syntactic reduction rather than a compound noun.) The accentuation of a compound noun depends on the last element.

(2) If N_2 contains more than one syllable and has an accent on any mora other than the last, that accent is retained as the accent of the compound.

(3) Otherwise the inherent accent is ignored and a new accent is put on the first syllable of N_2 provided that noun contains more than two moras; if N_2 is only one or two moras in length the new accent retreats to the LAST syllable of N_1 .

(4) There are a number of ATONICIZING SUFFIXES which exceptionally remove all inherent accents without imparting a new accent. Some of these are derived from free nouns; those of native origin are mostly oxytonic. There appear to be no more than fifty of these suffixes, but the list may be growing, since several of them (such as *-sya* 'vehicle' and *-kin* 'money') exhibit the regular pattern as well as the atonicizing pattern, which is probably the newer variant.

0.5.2. Variations in inherent word accents.

In different parts of Japan the same word may be heard with different accent patterns, but the rapid spread of mass communications has led to wider and wider use of the standard accents of Tōkyō speech, and these are what we mark in this book. But even within the standard language certain words are said with more than one pattern; older speakers and younger speakers sometimes differ on the pattern they choose for a given word, and one and the same speaker may find himself freely varying the accent of certain of his words. In this book we attempt to show all possible varieties of accent in standard use for each word by placing an accent mark over the vowel at each point where a speaker might choose to locate the fall of pitch. In pronouncing the word *kokoró* [mo] ‘the heart [also]’, some people will say *kokoró* [mo] with the accent on the last syllable of the noun, while others—probably the majority—will say *kokóro* [mo], with the accent in the middle. In pronouncing *zyúúsán-niti* ‘thirteen days’ a given speaker may find himself sometimes saying *zyúusan-niti* with an accent on the first syllable and sometimes *zyuusán-niti* with the accent on the second. Certain tonic words are optionally pronounced as atonic, and this is shown by placing a raised minus sign in parentheses at the end of the word: *éiga*(⁻) ‘cinema’ is prototonic for some speakers, atonic for others. The word *zidóo-sya*(⁻) ‘automobile’ may be said by a given speaker sometimes with no fall of pitch and sometimes with the fall at the second syllable just as some English speakers will sometimes put the heavy beat of the English accent at the beginning of ‘AUTomobile’ and other times put it at the end ‘auto-moBILE’. The expression *dóno-yóo na* ‘what kind of’ will be said as either /*dónoyoona*/ or as /*donoyóona*/, and that is why we write a single hyphenated word rather than two words. A phrase like *kanemótí*(⁻) *mo* ‘the rich man also’ may be heard with any of three patterns: *kanemóti mo*, *kanemotí mo*, or *kanemoti mo*. Though some patterns are more common than others, our notation offers no prescriptions. As a rule of thumb, the foreign learner would do well to prefer the atonic variant of a noun (whenever one is available) and the tonic variant of a verb or adjective, since this appears to be a trend toward which the language is moving. In Nagoya and Gifu all adjectives are treated as tonic, as are all vowel verbs (Gekkan-Bumpō 2/2.169); this means that all passives, causatives, and desideratives (and negatives?) are tonic, even when they are made on an underlying verb that is atonic.

0.5.3. Variations due to vowel voicing.

In Tōkyō speech when the high vowels *i* and *u* appear between voiceless consonants they are usually unvoiced (whispered): *kusá* ‘grass’, *sítá* ‘tongue’, *syuppatu* ‘departure’, *kippu* ‘ticket’, *tukau* ‘uses’, *hitóri* ‘one person’, *hutari* ‘two people’, *kikái* ‘machinery’, *títí* ‘father’, *tutúmu* ‘wraps’, *susumu* ‘advances’, *sisoo* ‘thought’, *hisyó* ‘secretary’, *syusyoo* ‘prime minister’, etc. When the unvoiced vowel is to carry an accent in certain verb forms, most Tōkyō speakers choose to shift the accent over to the following vowel, so that *kíta ka* ‘came?’ is made to sound like *kitá ka* ‘wore?’ Other speakers leave the accent alone, even while unvoicing the vowel; the listener must infer the location of the accent from the surrounding pitch levels. We might show this variation by writing *kitá* ‘came’, *kittá* ‘cut’, *húttá* ‘rained’, *túkú* ‘arrives’, *túkete* ‘attaching’, and the like; but instead we will minimize the clutter of accent marks by regularizing our transcription to accord with those speakers who retain the basic accent (*kíta*, *kittá*, *húttá*, *túku*, *túkete*, etc.) and ignore the

common variant which delays the accent.⁴ Whenever you actually see two accent marks on a verb form, you will know that the basic verb has both tonic and atonic treatments; but two accent marks on an adjective form sometimes indicates variant treatments of certain classes of tonic adjectives, as explained in Martin 1967. (Only the more prevalent accentual variants are shown.)

After a voiceless consonant Tōkyō speakers often unvoice *i* or *u* at the end of a tonic phrase: *Motíron desu* 'Of course', *Yósi* 'OK', *Háyaku* 'Hurry up', *Nagásaki* '(It's) Nagasaki'. When the accent is expected on the immediately preceding syllable, you will hear no fall of pitch; the only signal that the phrase is tonic will be the whispering of the final syllable itself: *Arimásu* 'I've got some', *Kore desu* 'It's this'.

0.5.4. Word accent within phrases.

Within a single phrase the pitch can fall only once. And some phrases have no fall of pitch; they rise and stay up to the very end: *kore wa* 'as for this', *sono teeburu mo* 'that table also', *akai denwa o tokau* 'I will use a red (=public) telephone'. That is because the component words are inherently atonic—or because the final word is oxytonic and its final accent must vanish when there is no further syllable left to carry the fall. When an oxytonic noun or adverb appears at the end of a phrase, we will show that it has an inherent accent by placing the accent mark in the appropriate place, but we will put brackets around the mark to indicate the automatic cancellation by which it sounds as if it were atonic:

Hutarí^[] *imásu* 'There are two people'. Cf. *Hutarí* *ga imásu* 'There are the two people'.

Takusán^[] *tábeta* 'I ate lots'. Cf. *Takusán desu* 'It's lots'.

Ik-kái^[] *itta* 'I went one time'. Cf. *Ik-kái datta* 'It was one time'.

Iti-dó^[] *sita* 'I did it once'. Cf. *Iti-dó datta* 'It was once'.

When you have used up the single fall of pitch allowed within a phrase, each basic accent expected to turn up later is automatically cancelled; once your tune goes down, it stays down. We will show this by putting brackets around the cancelled accent marks. But in the extremely common and familiar situations of noun + particle and noun + copula we will normally forgo reminding you of the cancelled accent. By recalling the phrases *Yokohama máde* 'as far as Yokohama' and *Yokohama desu ka* 'is it Yokohama?' we know that the particle *máde* and the copula *desu* are basically prototonic; accordingly, we will not bother to indicate the cancelled accents in *Nágoya máde* (= *Nágoya máde*) 'as far as Nagoya' and *Nágoya desu ka* (= *Nágoya desu ka*) 'Is it Nagoya?' Moreover, we will mark the final accent of an inherently oxytonic particle only when it is heard. From the phrase *Yokohama kará desu* 'it is from Yokohama' we know that the particle *kará* is basically oxytonic so we will not bother to indicate the cancelled accent in *Nágoya kara desu* (= *Nágoya kará desu*) 'It is from Nagoya'. The phrase *koko dé mo* 'in this place also' tells us the locative particle *dé* has an accent—as do all one-syllable particles—but we will not mark the accent when it is cancelled at the end of a phrase: *koko de asobu* = *koko de*^[] [*l*] *asobu* 'we will play in this place'.⁵

4. But the phrasal postpositions *ni tüké*, *ni tükí*, and *ni tükéte* are cited with both accentuations in §9.7, though elsewhere we write *ki o tükete* for what Tōkyō speakers usually say as *ki o tükéte*.

5. But in discussing particles or citing them in isolation we will usually mark the accent, especially for those such as *tó* or *nó* or *máde* which might otherwise be misread as English words. And sentence-final particles such as *né* or *yó* are written with the accent to indicate that a minor juncture may precede them.

An atonic phrase often drops its final juncture and gets pronounced as if part of the following phrase: Akai [l] denwa o [l] tukatta 'I used a red telephone' consists of three underlying phrases but these are normally run together and pronounced as if one long phrase akaidenwaotukatta. An oxytonic phrase cancels its final accent before juncture and therefore gets treated as an atonic phrase when the juncture, in turn, drops out: Hutatú [l] tukatta 'I used two' is run together and pronounced hutatutukatta, with no fall of pitch. Other tonic phrases, in which the fall of pitch is not exposed to cancellation, will retain their accent under similar conditions and the juncture will less readily drop. Should the juncture drop, later tonic words will automatically lose their accents. Instead of brackets around the cancelled accent marks we will sometimes use parentheses, to indicate that the dropping of the juncture is optional; the two phrases need not be run together, though that may be the common practice: Kaesánai yóo desu 'Apparently they're not going to return it' can be pronounced Kaesánai | yóodesu in two phrases (with a reduced fall in the second), but commonly it is run together as a single phrase Kaesánaiyoodesu. In the sentence Kagami míte kudasái 'Look in the mirror', the brackets around the first accent show that it is automatically cancelled, being at the end of the phrase, which is a short version of kagamí o and is run together to form a single phrase with míte; the parentheses around the final accent tells us that we can pronounce the sentence either as two phrases kagamimíte | kudasái or as a single phrase kagamimítekudasai, the latter version being more likely.⁶

The inflected forms of verb and adjective are usually marked for the actual accent heard in the sentence, not for the basic accents from which this derives. The information given will permit you to infer whether the underlying verb or adjective is basically tonic or atonic. There is actually an inherent final accent on the ending of what appear to be unaccented forms of the "atonic" verb, but this will be heard only when a particle follows and we usually omit the suppressed accent, writing Itta ka 'Did you go?' but Itta (=Itta^[r]) 'I went' and Itta kodomo wa ... (=Itta^[r] [l] kodomo wa) 'The child who went'. Inflected forms of "atonic" adjectives are similar, but the final accent is usually heard one mora earlier: Akái ka 'Is it red?' and Akai denwa ... (=Aká^[r] [l] denwa) 'A red telephone'—but Tooí ka 'Is it distant?' and Tooí kuni ... (=Tooí^[r] [l] kuni ...) 'A distant land'. In the infinitive form made with the suffix -kú the final accent, when called for, may optionally occur one syllable early if a particle is attached: Akákú mo náí. 'It isn't red, either' but Akaku nátta (=Akakú^[r] [l] nátta) 'It became red'.⁷

Some verbs and adjectives permit variant accentuations of either type, tonic or atonic. The imperfect and perfect forms of the atonic verb (like suru 'does' and sita 'did') and the imperfect and infinitive forms of the atonic adjective (such as akai 'is red' and akaku 'being red') will have basic accents on the endings (for the verb -rú and -tá; for the adjective -í and -kú but with a shift of the accent back one mora under certain circumstances); we will ignore this except when the form is followed by a particle or copula. The verb simésu(˘) 'reveals' is treated as either tonic or atonic, and that is what the notation tells us. When a particle is added, for example ká, the two available pronunciations are marked: simésú ka. Other forms will also show two pronunciations, e.g. the conditional simésitára.

6. But in certain very common situations, such as those illustrated here, we will not always put parentheses around the later accents; the reader can infer them from earlier discussions.

7. Alongside Tooku nátta (=Tookú^[r] [l] nátta) 'It became distant' we find three versions of Tóókú mo náí 'It isn't distant, either', depending on whether the double o is taken as one heavy syllable or two light ones as well as on the option of anticipating the accent on -kú.

Certain particles are attached with an underlying juncture (optional or obligatory) which kills the basic final accent on such forms as *suru* and *sita*, *akai* and *akaku*. The particle *tó*, for example, whether used as a quotation marker or in the meaning ‘when(ever)’, is attached like *ká* by many Tōkyō speakers, especially the younger ones, who say /*surúto*/ and /*sitáto*/ for what other and more traditional speakers say as /*suruto*/ and /*sitato*/. Instead of showing this option every time it is available, we will follow the traditional speakers and ignore the common variant in our notation; rather than write “*surú*(⁻) *to*” we will write “*suru to*” and let the reader remember that the other version is possible. Thus when you see “*munasii*(⁻) *to*” you will know that the adjective enjoys variant INHERENT accents, independent of its occurrence with *tó* in the given sentence. Some speakers will say /*munasíto*/ because they treat *munasii* as tonic everywhere, others because they accentuate all atonic forms of verbs and adjectives before *tó*. In general we have tried to let our notation maximize the accentual distinctions and for that reason we choose to ignore those systematic variants which obscure the differences between tonic and atonic verbs and adjectives. (See the remarks on accentuating the desiderative forms, §7, and compound verbs, §9.1.10.)

0.5.5. Regressive cancellations.

Many of the words we call restrictives and quasi-restrictives in §2.4 have basic patterns that DOMINATE in that they take precedence over earlier accents within the phrase; such a pattern is indicated by putting a raised minus at the beginning of the dominant word, after the space that separates it from the preceding word. When you see a word like ⁻*dó*ko or ⁻*gú*rai you know that all preceding words in the same phrase will lose their accents (if any), so we do not bother to put brackets around the cancelled accent marks: *iti-zíkan* ⁻*gú*rai (= *iti-zíkan* ^[1]*gú*rai) ‘about one hour’ is pronounced *itizikangú*rai, *iti-zíkan* ⁻*hán* (= *iti-zíkan* ^[1]*hán*) ‘an hour and a half’ is pronounced *itizikanhán*, and *iti-zíkan* ⁻*gú*rai (= *iti-zíkan* ^[1]*hán* ^[1]*gú*rai) ‘about an hour and a half’ is pronounced *itizikanhangú*rai. Not all of these dominant words have accents; some are atonic: *ní*motu ⁻*na*mi ni atukatta (= *ní*motu *na*mi ni atukatta) ‘they treated them like baggage’ is pronounced *ní*motunami ni [] atukatta. And some are oxytonic, with a final accent that will be automatically cancelled unless followed by a particle or copula: *Hanbún* ⁻*da*ké desu ‘It is (exactly) half’ is pronounced *hanbundaké*desu and *Hanbún* ⁻*da*ké herasoo ‘Let’s reduce it by half’ is pronounced *hanbundake* [] herasoo.

The little word *nó*, regardless of which of its many meanings it is expressing, has a unique effect. It cancels the final accent of a preceding oxytonic noun (as if it were a juncture), except under certain circumstances. The circumstances permitting the oxytonic noun to retain its final accent require a retained juncture AFTER *nó* either in the surface form as pronounced or at that level of structure put together just before arriving at the surface form—at the point when last-minute phrasing options are to be selected. Predicting these circumstances is tricky, so we will put brackets around those final accents that are to be cancelled: *I*ké^[1] no mawari o mawaru ‘We will go around the pond’, *Ki*no^[1] no úryoo wa ‘Yesterday’s rainfall’, *Ni*ho^[1] no tetudoo wa ‘Japan’s railroads’, *O*to^[1]ko no gakusei wa ‘Male students’. When the final accent of an oxytonic noun fails to be cancelled before *nó*, you can usually expect a new phrase to begin after *nó*: *Hu*ta^[1]ri no sensei wa ‘The two teachers’ is usually pronounced *hutarino* | senseewa. But sometimes the two phrases will collapse into one at the last minute: *Yu*ki no yoo⁽²⁾ desu ‘It looks like snow’ may be

pronounced yukíno | yóodesu as expected, but the commonly heard version is yukínoyoodesu. (If the dropping of the juncture had been called for when packaging the constituents at an earlier stage, we would expect *yukí^[r] no yóo^[r] desu = *yukinojóodesu.)

When a dominant word follows an atonic word, application of the regressive cancellation is vacuous, since there is no accent for it to cancel. But we will usually indicate the accentual dominance of the word by the raised minus even when it has no work to do: kodomo ˉnami, nisen-en ˉgúrai, etc.

0.5.6. Other accent cancellations.

In certain expressions accents are cancelled, obligatorily or optionally, for reasons that can be rather complicated to explain. Obligatory cancellations are indicated by brackets around the accent mark: Hitótu mo kawanákatta 'I didn't buy even one', Hitóri mo kónakatta 'Not a soul came', Dáre mo inai 'No one is there'. Optional cancellations are shown by parentheses around the accent mark: Nan de mo ii 'Anything will do' can be pronounced as nándemo | íi, as nandémo | íi, or as nandemo [l]íi.

0.5.7. Accent shifts in certain verb forms.

The accentuation of a given inflectional form is predictable, once you know whether the verb or the adjective is treated as basically tonic or atonic. The accent will not necessarily fall on the same syllable in every form of the paradigm; the imperfect endings -ru (for verbs) and -i (for adjectives) attract the accent of tonic bases to the syllable just before the ending: tábe(te) 'eating' but tabéru 'eats', tákaku(te) 'being expensive' but takái 'is expensive'. Yet for certain verbs, when the accent is expected on the vowel before the ending, it is shifted back to an immediately preceding vowel; the two vowels are treated as a single "heavy" syllable. The relevant information is stated below.

(1) The following verbs always treat the vowel dyad as a single syllable, forcing the accent in the imperfect (-ru) and the provisional (-reba) to retreat one mora: káer-u 'returns' (and huri-káer-u 'looks back'), káesu 'returns it' (and most tonic compounds with -káesu such as hiki-káesu, kiki-káesu, etc.); gotta^k/gáer-u 'gets confused'; hirugáer-u 'flutters, reverses', hirugáesu 'reverses/waves it'; háir-u 'enters', máir-u 'comes/goes'; tóoru 'passes', tóosu 'lets pass' (and tonic compounds with -tóoru and -tóosu). The infinitive, too, will place the accent a mora earlier than expected (káeri, tóori, etc.) as will the imperative (káere, tóore, etc.). The gerund and related forms (the perfect, etc.) of the potentials will also place the accent a mora earlier than expected: káerete (from kaeréru), háireta (from hairéru), tóoretara (from tooréru), etc.

(2) In the following verbs, the vowel dyad is OPTIONALLY treated as a single syllable; most (but not all) Tōkyō speakers move the accent back one mora from its expected location in the imperfect:⁸ aturáeru 'orders', humáeru 'treads', kangáeru 'thinks', koráeru 'withstands', kotáeru 'answers', matigáeru 'mistakes', modáeru 'agonizes', osáeru 'restrains', sakáeru 'flourishes', tagáeru 'violates' (NHK also recognizes an atonic version), tonáeru 'chants, advocates', toráeru 'captures', tukáeru 'clogs up'; otoróeru 'is inferior', totonóeru 'prepares'; si-káesu 'redoes'; ? Also tonic compounds with -káeru (such as ki-káeru, si-káeru, nori-káeru, hiki-káeru)⁹ and with -tigáeru (such as iki-tigáeru), §9.1.10. The

8. And also in the provisional (kotáereba) and, with the exception of si-káesu (si-kaesánai), the negative forms: kotáénai, kotáénakatta, etc.

9. A distinction is maintained between huri-káeru 'transfers (money)' with the infinitive huri-káe

infinitive and the imperative of these verbs (with the exception of *si-káésu*) call for the accent to fall on the first vowel of the dyad in any event, but when the particle *ro* is added to the imperative both options are available: *humáe yo* and *humáe ro* both mean 'tread!' and the second form permits two different accentuations.

(3) Assuming that our lists are comprehensive, all other verbs with vowel dyads treat the two vowels as separate syllables so that the second vowel freely takes the accent: *aéru* 'dresses (vegetables)', *haéru* 'grows', *kamaéru* 'builds', *kanaéru* 'grants (a request)', *kitaéru* 'forges', *naéru* 'withers'; *miéru* 'seems', *maziéru* 'mixes'; *huéru* 'grows'; *hoéru* 'barks', *kazoéru* 'counts', *koéru* 'gets fat', *kokoroéru* 'realizes', *oboéru* 'remembers', *omoéru* 'seems', *soroéru* 'arranges', *suéru* 'sours'; *ureéru* 'grieves'; *siiru* 'coerces', *hikiiru* 'leads'; *naóru* 'recovers', *naósu* 'repairs', *taóru* 'plucks', *taósu* 'topples'; *koóru* 'packs up'; This group includes the short potentials made from tonic verbs: *aéru* 'can meet', *haéru* 'can crawl', *kaéru* 'can raise', *kuraéru*(-) 'can eat', *naéru* 'can plait', *naraéru* 'can learn'; *kisoéru* 'can vie', *koéru* 'can love/beg', *toéru*(-) 'can inquire', *tukuroéru* 'can mend'; *kuéru* 'can eat', *nuéru* 'can sew';

(4) The following verbs are optionally atonic. When the tonic option is chosen the dyad is treated as two syllables and the second vowel freely takes the accent: *amaéru*(-) 'coaxes', *kakaéru*(-) 'embraces', *kosaéru*(-) 'concocts', *kuwaéru*(-) 'adds', *saraéru*(-) 'dredges', *sasaéru*(-) 'supports', *takuwaéru*(-) 'hoards' (K also has *takuwaéru* and NHK has *takuwáéru*), *tataéru*(-) 'brims with; praises', *tukaéru*(-) 'serves', *tutaéru*(-) 'communicates' (K also has *tutáéru*), *uttaéru*(-) 'complains about' (K and NHK both also have *uttáéru*); *tuiéru*(-) 'is wasted', *katuéru*(-) 'hungers' [obsolescent], *mi-suéru*(-) 'gazes'; *moyoósu*(-) 'holds (a meeting)';

0.5.8. Accent in dialect forms.

Much of the information on dialect forms is taken from secondary sources which failed to note the accent. In isolated citations I have simply omitted information on accent; but in general, especially for sentence examples, I have marked the accent as if the sentences were said by a Tōkyō speaker, as an aid to identifying the component words. This compromise notation is less than satisfactory from a scholarly point of view, but there are two facts which make it seem better than marking no accent at all. One is that sentences with dialect vocabulary and grammar are sometimes heard from the lips of Tōkyō speakers, either reading aloud or playing dramatic roles, and few speakers are capable of making the subtle adjustments necessary for an authentic and consistent version of someone else's dialect; none of the accentuations indicated here is totally artificial. Moreover, the accentuation across the various dialects is far from random; there is a correlation by word types, so that a speaker of a given dialect will find that the Tōkyō markings provide him with a fairly consistent clue to many of his own pitch falls, even when these occur on a different syllable from the one heard in Tōkyō.

0.6. MISCELLANEOUS CONVENTIONS

Brackets and parentheses are also used to mark various asides and shortenings in

and *huri-káer-u* 'looks back' with the infinitive *huri-káeri*. (NHK lists only *huri-kaéru* for 'transfers', but H and K give both versions.) To the list add *hikaéru* 'refrains' and *sonaéru* 'provides'.

explanatory passages, according to familiar conventions which should cause no difficulty for the reader. In discussions of pronunciation, brackets sometimes enclose a quasi-phonetic transcription, as when we say that *ee* is pronounced [e:], slashes sometimes enclose a quasi-phonemic transcription, as when we say that *ei* is to be pronounced /ee/. A slash between two forms is the familiar convention to show optionality: *a/b* 'either a or b'; *a(/b)* 'either a or possibly b'; *a/b/c(/...)* 'a or b or c or possibly others unmentioned'. When more than two sets of options are shown in a single formula, they are usually to be taken as independent of one another: *Dáre ni/ga kodomo ga irú/áru ka* 'Who has children?' tells you there are four Japanese versions of the sentence.

The asterisk * precedes an unattested form. In historical discussions this refers to a form hypothesized to have existed despite the lack of direct evidence, but in descriptive discussions an asterisk often marks a sentence (or other formation) presented as an example of ungrammaticality which is intended to shed light on the structure of those sentences which are grammatical.¹⁰ Arrows are used to show synchronic relationships, typically those of sentence conversion: $a \rightarrow b$ 'a yields b, a is converted into b, a underlies b' or ($*a \rightarrow b$) 'b will replace the unacceptable a'; $b \leftarrow a$ 'b is a conversion from a, b results from a process applied to a'. When one form has replaced another historically, a different kind of arrow is used: $a > b$ 'the earlier form a developed into the later form b'; $b < a$ 'the historical source of b is the earlier form a'. (In citing certain underlying forms, $<$ and $>$ are also used to mark accent shifts.)

Abbreviations for grammatical terms are generally explained where they first occur; they will all be found in the Index. Some very frequent designations are S 'sentence', N 'noun' or 'nominal sentence (=predicated noun)', A 'adjective' or 'adjectival sentence (=predicated adjective)', V 'verb' or 'verbal sentence (=predicated verb)', VN 'verbal noun' or 'verbal-noun sentence', AN 'adjectival noun' or 'adjectival-noun sentence', PcN 'precopular (=quasi-adjectival) noun', AUX (or Aux) 'auxiliary'. Although V is also used as an abbreviation of 'vowel' (in contrast with C 'consonant'), it should be clear when this is to be taken as 'verb'. VI stands for intransitive verb, VT for transitive verb; VNI for intransitive verbal noun, VNT for transitive verbal noun. In addition to representing 'adjective' the letter A is also used in situational formulas, where A B and C stand for three different people, X Y and Z stand for three different things, and P and Q stand for two different places.

In the Japanese transcriptions square brackets enclose elements that are potentially or theoretically a part of the sentence, though not necessarily present in the example as given. When the brackets have a notch (or superimposed hyphen) † † the material enclosed is optionally sayable; when the brackets have a double notch (or superimposed equal sign) ‡ ‡ the material enclosed must be suppressed. Unnotched brackets can be taken either way; usually they are to be considered optional. They are used, for example, to show various colloquial contractions, as in *Míta n[o] desu* 'I've seen it' or *Kaeró[o]!* 'Let's leave!'; but sometimes contraction is indicated by an apostrophe: *Mátte 'ru* = *Mátte [i]ru* 'I'll be waiting'. We must be careful not to use the apostrophe after the letter *n* unless the nasal forms a mora: the dialect contraction *sen[éb]a* cannot be shown as "sen'a" because it is pronounced /sena/. In mentioning certain endings, a basic form is cited that sometimes includes parentheses or brackets; the hortative is given as *-[y]oo* because the *-y-* originated

10. Degrees of unacceptability are suggested by marking a sentence with (?), ?, (?*), (*), *.

by epenthesis, the negative is cited as -(a)nai because the -a- is part of the original formation.

In examples cited from written sources, the bracketed material was usually not present in the original text, but was added here to help explain the overt forms. When the brackets enclose a blank “[]” what is omitted is either left unspecified or is presumed to be obvious.

Certain short Japanese words have romanized forms that are identical with English words, and this can cause momentary confusion. Whenever it is possible to differentiate such words by writing the basic accent of the Japanese forms, I have done so: *nó*, *tó*, *máde*, *sité*, *tamé*, But for atonic nouns such as sake ‘rice wine’, sore ‘that’, are ‘that’, etc., the accent marking is not available; I have tried to avoid letting such words fall into positions within English sentences where they will mislead the eye of the reader, and I believe there will be few occasions for discomfort.

1 SENTENCE CONSTRUCTION: NUCLEAR SENTENCES (PREDICATES) AND EXPANDED SENTENCES (SIMPLEXES); SENTENCE CONVERSIONS

In this book we attempt to describe the wide variety of sentence types used by Japanese speakers to express meanings within the context of situation and discourse. We will concentrate on the sentence, rather than the situation or the discourse, though occasional attention is paid to the larger setting. Although we will not try to find an overall definition of "sentence" as such, some light will perhaps be shed on what might go into such a definition as we look at particular sentences and sentence types. The term "sentence" is used quite loosely—to refer both to relatively simple clauses and to extremely involved concotions. In general we will explain longer sentences in terms of combinations of shorter sentences; yet a number of shorter sentences will be accounted for as reductions of something larger. In order to explain the structure of certain sentences we rely heavily on the concept of ELLIPSIS—the suppression of words or phrases presumably intended by the speaker and understood by the listener. Typically the suppression is optional, and the omitted material can be freely supplied to render the spoken sentence more explicit; when the ellipsis is obligatory, our interpretation assumes that a change has taken place (or is taking place) in the history of the language. But in some instances our assumptions, while valid within their narrow frame of reference, will prove historically false: we may be accounting for modern structures in ways that oversimplify the actual histories. Ellipsis is shown by putting brackets [] around the omitted stretch; for those omissions regarded as optional we can (when we wish to be precise) use brackets with a single cross bar { } and for those regarded as obligatory we can use brackets with a double cross bar † ‡. Although this grammar does not seek to cover the history of the language, likely origins are suggested for some of the phenomena examined. At times our historical perspective will be perversely narrow; at other times we take a demandingly wider view.

In the main this work is simply a descriptive taxonomy of modern Japanese sentences. The framework for the taxonomy is partly arbitrary and thus can make no claim to ultimate reality beyond the needs of the work itself. It is my belief, however, that the major categories posited to describe the sentence structures are in some way functional parts of the Japanese language that can eventually be validated, directly or indirectly, not only as psychological realities but also as historical entities. I have sought to find order in the relationships that seem to obtain between the categories and in the ways the categories combine to yield the surface forms of the sentences I have examined. Though the reader may occasionally be dismayed by rules and formulas and algorithmic charts, this is not a "formal" grammar in the strict sense. Nor is it an attempt to relate the structure of Japanese to any notion of "universal" grammar; for, despite the concepts and terminology¹ that have been freely borrowed from descriptions of other languages (and other descriptions of this language) as well as from discussions of grammar in general, the ideas presented here were developed through working independently with the sentences themselves. I have stuck fairly closely to the SURFACE forms of sentences; as far as possible I have chosen

1. If the reader misses familiar labels for particular categories of the grammar, he will probably find them listed in the Index, with a cross reference to the corresponding terms used in this book or a definition in those terms.

to avoid tackling the fascinating, but tricky, questions of relating these sentences to the elements of natural logic (whether universal or language-specific) that may be expressed within them.

The various sections of the book were written and rewritten at different times over a period of many years. I have not hesitated to retain conflicting explanations of a single phenomenon when I felt there was something worth considering in each; but I have tried to pull the sections together as much as I could and to call attention to my own inconsistencies whenever they have come to my attention.

At the outset I tried to catalog the sentence types of Japanese in three major steps, each encompassing a number of diverse operations. The first step was to take a relatively small stock of "nuclear sentences" (or predicates) and build them into a relatively large number of "simplex sentences" (or expanded nuclear sentences) by plucking a pure noun from the nuclear "nominal" sentence (N dá 'It's N') and preposing it as an adjunct to some given nuclear sentence, marking whatever grammatical relationships might obtain between the two by a postposition of "case" relationship—either the core cases of subject or "nominative" (gá), direct object or "accusative" (ó), and indirect object or "dative" (ní); or, the peripheral cases of allative (é 'to'), ablative (kará 'from'), instrumental (dé 'with'), locative (ní/dé 'at'), and reciprocal (tó 'reciprocally with'). Within the operations of the same Step One, the noun could be delimited by one or more RESTRICTIVES such as daké 'only', the DISTRIBUTIVE (zútu 'distributively each'), the COMPARATOR (yóri 'than'), and a few other categories reduced from larger entities (nádo, mítai, dé mo, etc.); it could also be given FOCUS by the attachment of such particles as wá or mó and a few others of similar function. The essential notion is that a nuclear sentence—Yobu 'Someone calls someone', Ookii 'It's big', Hón da 'It's a book'—will stand as a complete utterance in Japanese, though it may be expanded to give further information: Háha ga yobu 'Mother calls', Kodomo o yobu 'Someone calls the child', etc. In Step Two, simplexes with the same nucleus can be combined to yield larger simplexes by sharing the predicate: Háha ga kodomo o yobu (or Kodomo o háha ga yobu) 'The mother calls the child', etc. Also, still within Step Two, it is possible to conjoin (by such markers as tó 'and', ká 'or', etc.) two or more nouns that serve jointly in the SAME role: Háha to kodomo ga yobu 'Mother and child call someone', Háha to kodomo o yobu 'Someone calls mother and child', etc.

Thus, the first two steps should yield an enormous basic repertoire of simple sentences of the type some linguists have called "kernels". Step Three takes these sentences and exposes them to a number of operations whereby they are converted into many different forms. Most of these sentence CONVERSIONS enhance the underlying sentence with some category of meaning—such as Negative, Perfect, etc.—though some serve primarily as devices to relegate a sentence to a lesser role, as when Nominalization permits a sentence to function as a noun. To a large extent these sentence conversions correspond to what some grammarians have called "generalized transformations"; those readers who find it easier to think of "converted" sentences as "transformed" sentences are invited to do so.

As I worked on certain problems it became evident that at least two additional steps would be necessary. Step Four accounts for Thematization—roughly speaking, the source and expression of a "topic" for the sentence—and Epithematization, the source of a target for Adnominalization. These rather complicated concepts are explained in the relevant sections of the book. Finally, I set up Step Five to account for the peculiarities of those sentences that express Propredication and Identification, as explained in the appropriate

sections. Step Five, in turn, can serve as a source for all the nominal nuclear sentences (with the possible exception of a few non-predicable adverbs and the like) that were assumed in the beginning.

From this overview it will be obvious that the present framework is inadequate in terms of any of the currently popular theories of grammar, and I have not tried to adjust the framework to such theories, since each theory is in its way inadequate to account for such a wide sweep of data as I wish to encompass. It seems to me that recent attempts to apply insights of linguistic theory to Japanese (or even to English, from which most of the theoretical speculation stems) have been hampered by the lack of anything approaching an adequate description of the language. Perhaps this book will help fill some of the gaps in our information about the ingredients available to the Japanese speaker when he cooks up new sentences.

A word should be said about three areas of inadequacy in the present treatment, even within its own loose frame of reference. Firstly, I have assumed that all modification of nouns and of predicates is the result of sentence conversions of adnominalization and adverbialization, respectively. The devices work admirably—up to a point. But there remains a relatively small residue of non-predicable adnouns (or “prenouns”) and adverbs that can be fitted into such an explanation only at the cost of arbitrarily positing certain nuclear sentences that are otherwise unneeded: there is no **Góku da* ‘It is very’. Moreover there are subtle problems within the processes of adnominalization and adverbialization that require special treatments. These leaky parts of the framework are patched up by explicit discussions in the appropriate sections of the book.

Secondly, I started off by positing only three types of nuclear sentences—verbal, adjectival, and nominal. It soon became apparent that among what looked like predicated nouns were some words that had special verbal properties and others that had special adjectival properties; these were set up as subcategories of VERBAL NOUN and ADJECTIVAL NOUN. (These terms are technical designations within the present treatment; since “verbal noun” is used to mean different things in other grammars, some readers may prefer to think of these categories as “nominal verb” and “nominal adjective”.) The subcategorization of nominals, however, turned out to involve a good deal more than distinguishing just these two obvious types; the subject is treated extensively in § 3, where the reader will find criteria to distinguish most of the major parts of speech, including various kinds of “pure” nouns.

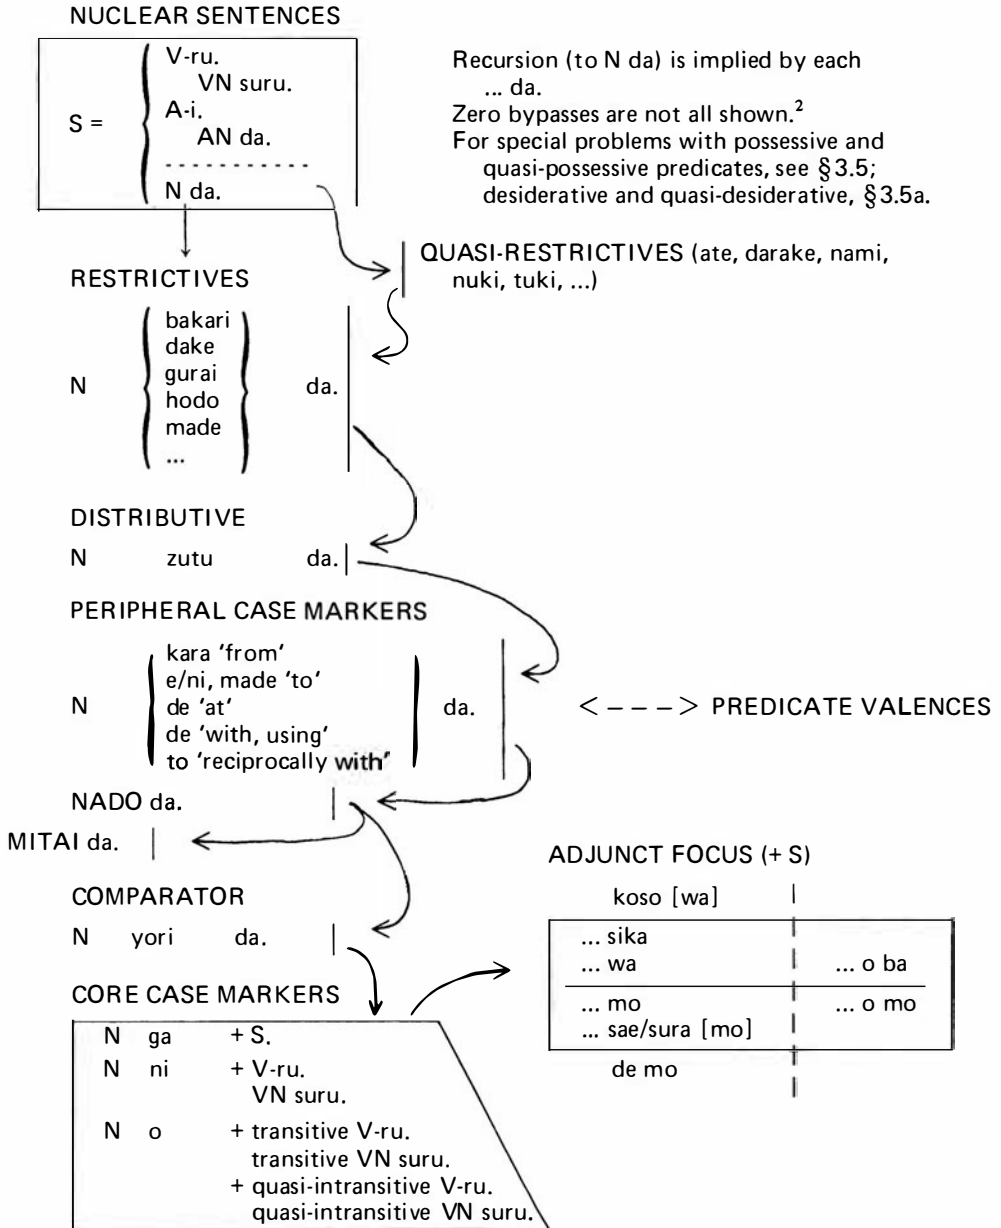

Thirdly, I cite the nuclear (and the simplex) sentences as full-blown, usable surface utterances, in the relatively unspecific “imperfect” form, sometimes called “nonpast” or “present”. But this form, like the “perfect” form, is the result of a process applied to a more abstract entity, here called the INFINITIVE. For convenience we assume that our conversions depart directly from the imperfect forms (such as *Háha ga kodomo o yobu* ‘Mother calls the child’ or *Hón ga ookii* ‘The book is big’, for example) rather than from the underlying infinitive forms (*Háha ga kodomo o yobi ...* ‘Mother call child ...’, *Hón ga óokiku ...* ‘Book be big ...’). Although the argumentation for the basic nature of the infinitives is quite convincing (see particularly § 5), it will perhaps be easier to appreciate if approached from the outside rather than from within. When a Japanese speaker expresses a sentence conversion, what he actually manipulates—if anything—will be known only when we have more revealing techniques of psychological testing; the non-linguist foreigner (and perhaps the Japanese himself) is likely to find the imperfect forms the best point of departure in studying the conversions.

The order of presentation follows, to some extent, the order shown in the following two charts. These are to be regarded as rough maps of uncertain terrain, at best, and they may prove misleading to the unwary. The flow chart of STEP ONE gives a picture of how a noun can be marked in various ways before joining with a nuclear sentence to form an expanded sentence. I have not illustrated STEP TWO, whereby anything up to a maximally expanded simplex can be created by combining compatible single expansions of the same nuclear sentence so as to share the predicate (Háha ga yobu + Kodomo o yobu yielding Háha ga kodomo o yobu or Kodomo o háha ga yobu etc.) and by conjoining adjuncts that enjoy the same case marker (Háha ga yobu + Kodomo ga yobu yielding Háha to kodomo ga yobu or Kodomo to háha ga yobu—among other possibilities). In STEP THREE, the major sentence conversions are ordered and numbered according to a rough scheme of applicability, spelled out in detail in the appropriate sections of the book. Chart Two includes STEP FOUR and STEP FIVE, since the epithematizations of Step Four are needed to account for the conversions of Adnominalization and Nominalization in Step Three, and the Propredication of Step Five will perhaps explain the special nature among the nuclear sentences of those nominal sentences containing pure nouns. The chart suggests that Identification is a special case of Propredication; that suggestion is discussed in §3.10.

If the charts are confusing, they should be disregarded; the reader is invited to plunge directly into the description and look back at the charts at any point where they might be helpful in following the argument. Given a surface sentence, you can glance through the charts to see what operations may have gone into its creation, and in what order they were applied. Given a simple sentence that you wish to convert into more complicated structures, you may need advice on how to approach the problem of ordering your operations; the charts will not answer your questions in detail, but they provide a quick reminder of the common patterns available. By following the arrows you will find that it is appropriate to apply subject exaltation (káku 'writes' → o-kaki ni náru 'someone exalted writes') before applying the desiderative (kaki-tái 'wants to write' but o-kaki ni nari-tái 'someone exalted wants to write'), though the parenthesized arrow from desiderative to subject exaltation allows for the less common pattern kaki-tákute irassyáru. On conversions applied to infinitive and/or auxiliary, to gerund and/or auxiliary (in the structures indicated by AUX in Chart 2) see §9.1.10 and §9.2.4, respectively.

CHART ONE

STEP ONE: From nucleus to simplex.

STEP TWO: Conjoining simplexes with shared nucleus:

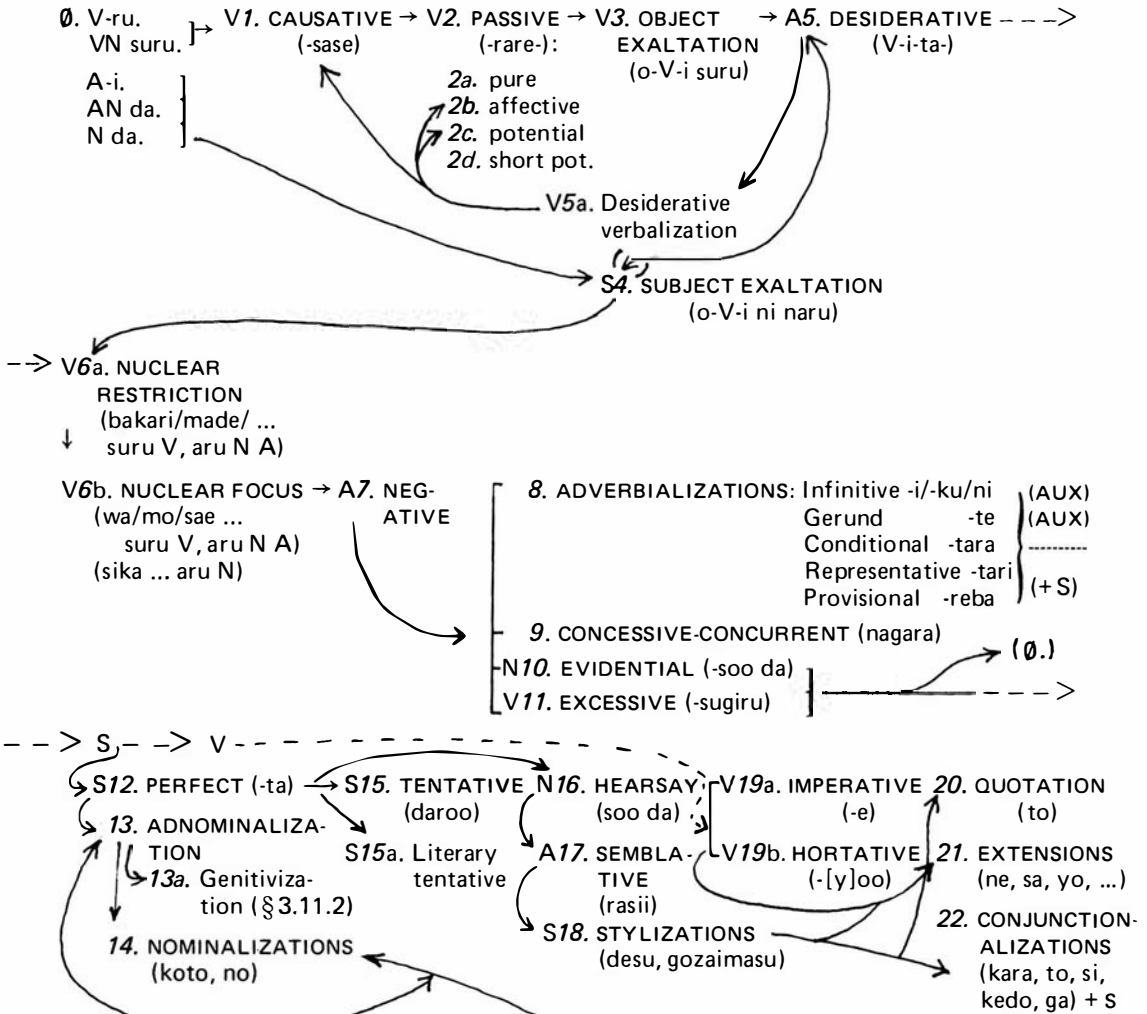

- (1) with identical case marker (or none)
- (2) with different case markers

2. Since zero is always an option, the only misleading arrows are when a bypass is obligatory, as when you are not permitted to add a core case marker after selecting the comparator. These and other details are explained in the text.

CHART TWO

STEP THREE: From nuclear or simplex sentence to converted sentence.

Major recursions and constraints are shown in the chart; others are discussed separately. Zero bypass is permitted at every point. Each conversion (or set of conversions) is numbered. Before the number, N V A or S means that the output is Nominal, Verbal, Adjectival or Same as the input sentence. (After suru, V means 'when applied to verbal nucleus'; after aru, N A means 'when applied to nominal or adjectival nucleus'.)

STEP FOUR: Extruded } → Thematization : Epithematization ← { Extruded
 Intruded } Intruded

STEP FIVE: (S) → Propredication (→ N) } (→ 0. N da)
 Identification

2 PREDICATE ADJUNCTS

Although the nuclear sentences of Japanese can be used as complete utterances, cited as they are in a finite "imperfect" form that means something like 'it happens' or 'it is', such utterances are relatively vague in content. To make the nuclear sentence more explicit, you can expand it by prefacing one or more ADJUNCTS, or "build-up" phrases. These adjuncts may be marked by one or more particles. The particles are often called postpositions because they are placed after the word (typically a noun) that they mark, conveying the kind of information that is sometimes carried in English by prepositions. In §2.2 certain of these postpositions are considered in detail, with a subcategorization of various uses of each. The postpositions examined are those which, among other uses, sometimes mark the CASE relationships (or "valences") that obtain between particular predicates and particular "arguments"—pure nouns serving as adjuncts. Adjuncts that are not normally marked with one of these postpositions are here considered to result from one of the conversions of adverbialization (with or without some overt marking)—as if a reduction from a nominal sentence rather than the product of proredication, though that is elsewhere suggested for an alternative view. But ellipsis of case markers also occurs, leading to another kind of "unmarked adjunct", as described in §2.2a. In §2.3 we will examine certain particles that serve to focus emphasis, notably *wá* and *mó*. In §2.4–5 we explore the distribution of those particles that serve to delimit a noun; those such as *daké* 'only' which can also be used as epitheme (i.e. serve as the target of an adnominalized sentence) we will call RESTRICTIVES, those more limited in distribution such as *~óki* (') 'skipping (every so many)' we will call QUASI-RESTRICTIVES. The number and variety of these will come as a surprise to most readers. The quasi-restrictive *~zútu* we will call the DISTRIBUTIVE; it is given separate treatment, as is the somewhat similar COMPARATOR *yóri* 'than', discussed along with expressions of comparison in §2.6. Certain quasi-suffixes or quasi-restrictives which serve to specify a plural or a collective are considered in §2.7, where you will also find a discussion of devices available to express grammatical number. In §2.8 the conjoining of nouns is described, and the following three sections deal with somewhat related phenomena in attempting to account for *nádo* and its synonyms, for *dá ka*, and for *dé mo*. Finally, §2.12 discusses the peculiar pseudo-restrictive *mítai*.

It is usually assumed that forms of the copula (such as *dá*, *ná*, *nó*, *ní*, *dé*, etc.) and the various postnominal particles (such as *gá*, *ó*, *kará*, *máde*; *~gúrai*, *~dógoro*, etc.) are attached to the noun to make a single phonological word, with no juncture between. That is why some writers of romanized forms will separate the noun from the copula and/or the particles by a hyphen rather than a space. But under various circumstances a minor juncture may be heard between a noun and the following copula or marker. A tonic noun phrase is sometimes emphasized by optionally inserting the minor juncture (here noted by a single bar) when a marker is focused with *wá* or *mó*: *Nagásaki* [l] *kará mo*, *Sátoo san* [l] *tó wa*, *Tyúugoku* [l] *~gúrai wa*, The accent of the marker is suppressed when the juncture is absent, except in the instance of those particles that, as indicated by the raised minus in front of *~gúrai*, cancel the accent of the attached noun—yielding, in this case, /tyuugokugúraiwa/. Forms of the copula will sometimes be preceded by a juncture (or, in written texts, a hyphen) when the noun phrase is a sentence that has been quoted or

directly nominalized, as in this example: *Koŋo titi ni site, kono ko ári, NÁ no de aróo ka. Sore tó mo, kono ko ni site, kono titi ári, NA no de aroo ka* 'Is it a matter of "Like father like son"? Or is it a matter of "Like son like father"?' (SA 2651.72c).

By ellipsis, forms of the copula will sometimes begin a sentence, as described in §24: *Dá kara* or *De áru kara* 'Therefore'; *Dá ga* or *Dá kedo* 'However'; *Dé mo* or *D'átte* 'Still'.

In written Japanese, at least, it is possible to insert parenthetical material freely before a marker: *Sinzukú-syo (móto no Yodobasí-syo) NO máe o ... '... in front of the Shinjuku (formerly Yodobashi) Police Station'* (SA 2651.24d). Compare the insertion of parenthetical material before collectivizers mentioned in §2.7.

Kuno (1973) notices an interesting "stutter" effect which is sometimes heard when *wá* or *mó* is added to a one-mora particle. I am unfamiliar with this phenomenon, but Hamako Chaplin tells me that she has heard it. Apparently there is always a minor juncture in the surface form: *Kyóoto ni | ní wa = Kyóoto ni wa 'in Kyoto', Nára de | dé mo = Nára de mo 'in Nara too' (not intended for 'even being in Nara'), otóosan to | tó wa = otóosan to wa 'with father', ...* Perhaps the first particle is repeated in order to permit the juncture to surface so as to lend extra emphasis to the following focus particle, which otherwise could not easily be set off by juncture. Or perhaps this is just a way of adding *wá/mó* as a quick afterthought.

2.1. ORDER OF ADJUNCTS

Ōide (1965.107-8) has compared the Japanese sentence to the furoshiki, that marvelous carryall kerchief which will expand or contract to just the size needed for the traveler to carry his belongings—and which can be tucked neatly away when not in use. It is of little concern that the contents may get rumpled in transit (or that the parts of the sentence may lose their overt signals of reference), since they can always be pressed out at the end of the journey (as the listener can infer the missing marks of reference). The English sentence, on the other hand, is like the unwieldy suitcase of the West—too big and too small at the same time, cruelly heavy, and cluttered with verbal coat-hangers piously designed to keep the contents unwrinkled to the very end of the journey.

Mikami (1963a.66) describes the Japanese sentence as a dragon that is "many-headed but single-tailed" (*tatoo-tanbi*) and that phrase is a good simile for the point of view taken by many Japanese grammarians who impute an equality among the adjuncts of the predicate. In general, the view taken here is similar, although we will have occasion to call attention to certain facts which seem to indicate that there is, after all, a kind of primacy enjoyed by the underlying subject of the simplex.

Japanese is usually said to have a "free" word order with respect to the adjuncts. This means that so long as you put the predicate (the nuclear sentence) at the end, where it belongs in a well-planned sentence, you are free to present each of the build-up phrases early or late as you see fit. To be sure, such freedom will not always be available when we are talking of a sentence that is the result of various conversions, rather than a simplex; thematization, for example, will place an adjunct at the beginning of the sentence (§3.9).

But even within the simplex we can ask what makes the speaker see fit to choose one order rather than another; we can also ask which orders are more frequent. From a study of such questions we suggest that there is a neutral or "unmarked" order that is the normal or colorless way to present the information contributed by the adjuncts. Tentatively

we will assume that the neutral order is illustrated in this somewhat simplified diagram:

1	2	3	4a	5	6	7a	8
Time (locatives)	Place (locatives)	Subject N gá	Reciprocal N tó	Instrumental N dé	Ablative N kará	Allative N é	Object N ó:
			4b Nondirectional datives N ní			7b Directional dative N ní	(8a Affective) (8b Traversal) (8c Cathetic)

As explained later, it is not clear that the time and place (either marked as locatives or directly adverbialized) belong in the simplex, as such, but with respect to each other they stand in opposite order from the neutral English order, so that 'here and now' translates into Japanese as *íma koko*. Notice how a letter written in English will begin with place and date; the Japanese letterwriter ends his letter with date and place, in that order.

By "subject" (or "nominative case") we refer to the use of *gá* to mark a noun as agent, perceiver, cathector (= emotion experiencer), attributee, or identifier. *Gá*, of course, has many other uses—e.g., to mark the possessed in a possessive sentence, here regarded as something more than a simplex to begin with, as explained in §3.5 and elsewhere. Similarly, *N tó* marks not only the reciprocal—considered an adjunct in the simplex—but also the "comitative", here considered an abbreviation of *N tó issyo/tómo(ˉ) ni* 'together with', in turn an adverbialization of a separate nominal sentence that contains a reciprocal. It is possible that the reciprocal should be given two positions in the neutral order: directly after the object (thus final position) when the predicate is a transitive verb; directly after the subject (as above) with other predicates. I have assumed that the (intransitive) reciprocal (4a) is incompatible with (4b) the datives of BENEFIT (= *no tamé ni*), of CONFRONTATION (= *ni tái-site*), and of REFERENCE (= *ni tótte*); and that (7b) the dative of DIRECTION (= *ˉate ni*) is in complementary distribution with the allative (7a). On the several kinds of dative, see §3.4.

Data supporting the "neutral" order here posited will be found in a number of studies, notably Miyajima 1962 and Saeki 1960. (I have followed Saeki rather than Miyajima in assuming that the dative precedes the accusative and that the ablative precedes the allative.)

Other kinds of adjuncts occur. In addition to time locatives ("when it happened"), there are temporal references of DURATION ("how long it happened") and of FREQUENCY ("how often it happened"). Duration is occasionally marked as if a traversal object; more often it is directly adverbialized (*san-zikan arúku* 'walks for three hours'); and sometimes it is stated as a conjoining of ablative and allative phrases (*sán-zi kara rokú-zi made arúku* 'walks from 3 o'clock till 6 o'clock'), as explained in §3.7 and §3.7a.

You will probably never come across a natural sentence that contains all of the possible adjuncts, clearly marked and in the neutral order. There are at least two reasons. To begin with, a Japanese prefers sentences that are not overly explicit; a few adjuncts are enough to suggest what the others might be. And then in a typical sentence the overwhelmingly

common devices of focus and thematization serve to obscure (and often extrude) one or more of the adjuncts.¹

The order suggested above is the result of comparing the relative order of two or three adjuncts in a given sentence. But natural sentences are often more complicated than one might think. Take, for example, this part of a longer utterance: ... *konaidá mo Oosaka kara yógísya de onná-no-ko o turete, ása no gó-zi ʔhán ʔgóro koko e túita hitó ga arimásu* 'just the other day there was someone who arrived here with a little girl at 5:30 in the morning on the night train from Ōsaka' (Tk 2.321a). The first phrase *konaidá mo* 'lately even/too' is, I believe, a highlighted thematization of the time locative extruded from the sentence ... *hitó ga arimásu* 'there is a person'. The subject of that sentence (*hitó*) has been epithematized from the subject (= agent) of the adnominalized sentence [*hitó ga*] *Oosaka kara yógísya de onná-no-ko o turete ása no gó-zi ʔhán ʔgóro koko e túita* '[the person] arrived here with a little girl at 5:30 in the morning on the night train from Ōsaka', a sentence with an adverbial phrase *onná-no-ko o turete* 'with a little girl' that is the gerundized form of *onná-no-ko o tureru* 'brings along a little girl' and properly (i.e. neutrally) belongs at the beginning of the sentence; the remainder of the sentence (*Oosaka kara yógísya de ása no gó-zi ʔhán ʔgóro koko e túita*) has reversed our neutral order of instrumental and ablative and has placed the directly adverbialized time expression right before the allative. We would have expected the colorless version of the sentence to be: ... *ása no gó-zi ʔhán ʔgóro [hito ga] onná-no-ko o turete yógísya de Oosaka kara koko e túita*. It is possible that the ablative was placed before the instrumental under the influence of such paraphrases as *Oosaka kará no yógísya de* 'by the night train (that is) from Ōsaka'—as implied by our original English translation—or *Oosaka no yógísya de* 'by the Ōsaka night train'. Since novel or critical information is saved for the end of a Japanese sentence, the reason for delaying the time locative is perhaps to emphasize the inconvenient hour of the arrival; and the added outrage of dragging a child along through the night may account for the delay in expressing the adverbial phrase of accompaniment. But an alternative explanation would treat the constituents of the entire sentence as more equally conjoined: the sentence [*hitó ga*] *Oosaka kara yógísya de onná-no-ko o tureta (= turete kíta)* '[the person] brought a little girl by night train from Ōsaka' attached (by way of *-te* 'and') to the sentence *ása no gó-zi ʔhán ʔgóro [káre-ra ga] koko e túita* '[they] arrived here at 5:30 in the morning'. Under this interpretation the overt adjuncts are in neutral order except for the switch between ablative and instrumental. It is also possible that the speaker intended to thematize the ablative, either to go with the adnominalized sentence ending in *túita* 'arrived' or even as a second theme to share with *konaidá mo* the embedding sentence that ends in *arimásu*: 'just the other day from Ōsaka there was a person who ...'. Close semantic ties between adjunct and verb will sometimes favor a neutral order that differs from what is suggested above, e.g. the instrumental in *Tennóo o pisutoru de úte!* 'Shoot the Emperor (with a pistol)!' (SA 2817.101ab), where *pisutoru de útu* '(pistol-)shoots' functions as if a simple verb.

If, as has often been suggested, we consider the spoken sentences as representations of some underlying "natural logic" that is the result of a sort of "predicate calculus", we will want to consider all possible adjuncts as present in the underlying form of each simplex, once we have decided just which simplexes lurk beneath our surface sentence in all its spare and murky

1. Incidentally, Mikami (1963.70) suggests that the best way to disentangle a long written sentence is first to mark off the quotations, and then find the topics; I would have thought the first order of business would be a search for the conjunctive links and the predicates.

glory. The omission of particular adjuncts has been compared to the process of "pronominalization" in languages such as English, where typically an argument (= a predicate adjunct) once stated is later referred to by an anaphoric pronoun such as "it" ("he", "she"), "they", "this", "that", or "those". But there is no compulsion to omit any given adjunct in a Japanese sentence; nor does Japanese suffer from the severe strictures against repetition of a noun phrase that English insists upon. A suitcase is harder to pack than a furoshiki.

2.2. MARKING OF ADJUNCTS: NOUN POSTPOSITIONS ("PARTICLES")

Some of the build-up phrases can be SPECIFIED by particles that narrow (or sharpen) the grammatical relationship of the phrase to the rest of the sentence. Specification by attaching particles does not affect the freedom of order; that is controlled by relative emphasis (§ 2.1). The relational particles have a number of uses and meanings, so that it seems best to start by summing them up in a list which includes disparate uses and meanings that will appear at different points in the grammar.² The list thus includes not only all of the specification markers but also some other markers (such as the essive *ní* that underlies the copula and also underlies certain other particles—*dé*, *nó*, and *ní*—as explained later) which overlap in form and/or meaning. It is not clear to what extent the following breakdown of uses can be said to be grammatical as well as semantic, if indeed it is possible to draw such a distinction to begin with.

gá

1. "direct surface-subject" of a VERB:

- (1) active agent = initiator of a process (including *kagu* 'smells' and *míru* 'looks').
- (2) causative agent = instigator of a process; see § 4.1.
- (3) the one affected by a mental process = he who perceives or reacts (with *omóu* 'thinks/feels', *míru* 'sees/regards', etc.).
 - (3a) the emotionally affected (= the cathectic subject, with a desire, like, dislike, or fear; see § 3.5a).
 - (4) that which exists or is located (with *áru*, *iru*, etc.—with stasis, § 3.8).
 - (5) that which is possessed (with *áru* etc.) or quasi-possessed (with *ir-u* 'needs', *wakáru* 'understands', etc.); see § 3.5.
 - (6) the recipient:
 - of a gift (with *morau*, etc.);
 - of a favor (with *-te morau*, etc.)—the beneficiary;
 - of a disfavor (with the ADVERSATIVE PASSIVE, § 4.2)—the maleficiary, the disobliged, the discommoded, the inconvenienced.
 - (7) the affective object of a transitive verb when it has undergone PURE PASSIVE (§ 4.2) or INTRANSITIVIZING RESULTATIVE (*-te áru*, § 9.2.4(.2)).
 - (8) the cathectic object of a verb of emotion under the PURE PASSIVE conversion.
 - (9) optionally replacing *ó* for the direct object of a verb under the DESIDERATIVE conversion.

2. The list should be glanced over for future reference; unless a particular item catches his eye, the reader will probably wish to move on to the next section, returning to consult this section from time to time as he continues through the book. Under certain of the headings you will find example sentences and explanations which did not conveniently fit into later sections.

(10) optionally replacing *ó* to mark the direct object of a verb under the FACILITATIVE conversions (§9.1.8).

(11) optionally replacing *tó* to mark the reciprocal under the FACILITATIVE conversions (§9.1.8).

(12) optionally replacing *ní* to mark the dative under the FACILITATIVE conversions (§9.1.8).

(13) optionally replacing *dé* or *ní* marking the locative (of place or time) under the FACILITATIVE conversions (§9.1.8).

(14) optionally replacing the usual markers of the allative ('to') and perhaps the abative ('from') under the FACILITATIVE conversions (§9.1.8).

(15) optionally replacing the instrumental marker *dé* under the FACILITATIVE conversions (§9.1.8).

2. "indirect subject" of a VERB:

(16) the possessor or quasi-possessor (= *ní*).

3. "genitives" of various kinds—through ellipsis (§3.11.2-3):

(17) genitive.

4. "direct surface-subject" of an ADJECTIVE or ADJECTIVAL NOUN (or PRECOPULAR NOUN):

(18) attributee of an attribute.

(19) cathectic object of an adjective of emotion; cf (9) above. See §7.1, §13.1.2.(3).

5. "indirect surface-subject" of an ADJECTIVE or ADJECTIVAL NOUN (or PRECOPULAR NOUN):

(20) cathectic subject of an adjective of emotion.

(21) subjectival genitive—through ellipsis, see §3.11.

6. "direct surface-subject" of NOUN + COPULA:

(22) the Identifier of an identificational sentence (§3.10).

(23) the Identified of an identificational sentence (§3.10) under those conversions (such as the provisional and certain adnominalizations) which neutralize the marking of Identifier and Identified.

7. "orphaned subject" stranded by elliptical propredication (§3.10):

(24) orphaned subject.

8. "emphatic locative" =

(25) the Identifier of a time or place in an elliptical identificational sentence (see end of §2.3.1).

(26) *íma ga íma* 'right now' (= *tyoodo íma*), *íma ga ima-máde* 'up to this very moment'—usually treated as idioms; cf. p. 267.

9. antithesis—in *tokoró/nó ga* 'but'.

10. S + *gá* 'but/and' (§17.5); by ellipsis *Gá ...* 'But ...'.

11. literary tentative *-[y]oo + gá/tó* 'whether ... or ...' (§17.6).

12. *hóo ga* (§3.9, pp. 231-2).

13. *Sore ga ...*, *Hayái hanasí ga ...* (§24).

14. N ni *sité kara ga*; V-*té kara ga*—see *kará* 8.

15. N ni *sité ga* (= 14)—see §9.2, p. 487.

16. [dialect] = *nó* 3 (pronominal 'one/fact/it')—see Note at end of this section.

ó

1. direct object = the affected of a verb; see §3.3: AFFECTIVE object, CATHECTIC object.
2. place traversed, with quasi-intransitive (= motion) verbs, both those that imply total traversal (*wataru* 'crosses over', *tóoru* 'passes by/through', etc.) and those that imply partial traversal (*arúku* 'walks', *tobu* 'flies', etc.): TRAVERSAL object.
3. (= *kará*) place departed from (with quasi-intransitive verbs of leaving such as *déru* 'leaves', *tátu* 'departs', *oríru* 'descends from', etc.): ABLATIVE object.
4. time spent: TEMPORAL object, as in *Tookyoo de issyoo o kurasu* 'lives all one's life in Tōkyō'; *nanazyuu-néndai o ikíru* 'living (in) the seventies' (SA 2660.58—heading), *Tukí e mo ... ryokoo ni ikeru yoo na zidai o ikíru no da kara* 'For we live in an era such that we can travel all the way to the moon' (CK 985.372); *Niti-yóobi o iti-niti neta* 'I stayed in bed the whole day Sunday'.
5. "orphaned object"—stranded by ellipsis (§9.1.12, §14.3, §28; §3.10, §13.1.5): *Iti-kiro no miti o [] yónzyuu gó-hun mo kakáru hazu ga nái* 'Covering a one-kilometer route shouldn't take a whole 45 minutes!' (SA 2642.32d)—the ellipsis is something like [*arúku no ni wa*] 'to walk'; *Yukí no náka o [] dóo-mo osóre-irimasita* 'Thank you for coming [to officiate at the wake] in the midst of the snow' (Ariyoshi 34).
6. antithesis: S + *monó-o*, §17.4; S + *nó o*, §14.2; *Sore o, ... 'Despite that ...'* (= *Sore ná no ni*).

ni³

0. essive ('being') = copula infinitive, §9.1.11, a predicator of nouns; those uses marked E below can be treated as this, as probably also can those marked (E).
1. indirect object (with verbs of giving, informing, etc.); DATIVE OF BENEFIT 'for' = [no *tamé*] *ni* 'being for the sake/case of'; DATIVE OF CONFRONTATION 'toward, with respect to' = *ni* [*tái-site*] 'being opposed to, confronted with'—as in *háha ni sínsetu da* 'is kind to mother', *sake ni yowái* 'is easily affected by drink', *keiken ni tobosii(-)* 'is wanting in experience', *keiken ni tómu* 'abounds in experience'. See §3.4; for the DATIVE OF DIRECTION, see 5 below.
 - 1a. pseudo-reciprocal use of dative of confrontation '[coming in contact] with' (N *ní/tó* + *áu* 'meets', *wakaréru* 'parts', *niru* 'resembles', *kuraberu* 'compares', ...)—see §3.6.
 - 1b. objective stimulus; reason, cause (cf. *dé* 6, *kará* 5) *binboo ni kurusímu* 'suffers from poverty' (cf. *binboo de kurusímu* 'is distressed at one's poverty'), *byooki ni nayámu* 'agonizes over being ill' (cf. *byooki de nayámu* 'is afflicted with an illness'), *kodomo ni odoróku* 'is surprised at the child' (cf. *kodomo de odoróku* 'is surprised by the child'), *kodomo ni gakkári suru* 'is disappointed in the child', *te-búsoku ni komáru* 'is embarrassed by a shortage of personnel', (*áme de*) *miti ni mayóu* 'is confused about the road (owing to the rain)', *kosame ni nureru* 'gets (pleasantly) wet in the shower' (cf. *áme de nureru* 'gets drenched from the rain'); *Monó no neagari ni kurasi-níkuku nátta* 'With the rise in prices of things life became difficult' (cf. ... *de* ... 'Due to ...'); *Inaká-mati no tetudóo-in no mizime na seikatu no saimoku [sic] ni, kankyaku wa warau* 'The onlookers laugh at the petty details of the wretched life of a railroadman in a country town' (Ig 1962.70); *sore ní* 'by that, for that reason'; cf. §17.1 V-rú *kará ni wa*, V-tá *kará [ni] wa*.

3. Sometimes contracted to *n[i]* before *t*, *d*, or *n*: *kore n[i] tomonátte, sóto n[i] déru, byooki n[i] náru*. The particle sequence *ní wa* is sometimes pronounced *nyá[a]*, as in *Yasumi no hí nyaa, ...* 'On days off, ...' (BJ 2.139.17). According to Jorden (BJ 2.141 n17) this is more common in the speech of men. In such phrases the kana spelling "niya" is to be interpreted as *nyá[a]*.

1c. ‘(dependent etc.) on’ with *yoru* ‘depends/relies’, *sitagáu*(⁻) ‘conforms (with), is consequent (upon)’, *motozúku* ‘is based’, (Is this from 5?)

1d. ‘from/by’ an agent (= *kará* 4, but with subtle differences of nuance requiring further study), as in *sensei ni/kara piano o naráu/osowaru* ‘learns piano from a teacher, studies piano with a teacher’, *hito ni/kara nyúusu o kiku* ‘hears the news from others’, *tomodati ni/kara hón o kariru* ‘borrows a book from a friend’, *háha ni/kara tegami o morau* ‘receives a letter from one’s mother’. See §10 (favors), §4.2.

1e. ‘by = at the hands of’: marks the underlying agent in a passive conversion, §4.2 (can also be expressed by *ni yori*; cf. *kará*).

1f. ‘by = at the instigation of’: marks the instigator of a passivized causative.

1g. marks the underlying agent of a causativized conversion.

?1h. pseudo-agent ‘by/at’, with *tutoméru* ‘works for, is employed by’—*ginkoo ni tutoméru* ‘is employed by the bank’, cf. N [no *tamé*] *ni tutoméru* ‘endeavors for N’ (8),

2. indirect subject: possessor or quasi-possessor (= *gá*); see §3.5.

2a. [now obsolete] a highly exalted subject: *Tennoo-héika ni wa nízyuu iti-ni^[1]siti-zi nízip-pun kyuuzyoo o go-syutumon* ‘His Majesty the Emperor left the palace at 7:20 on the 21st’ (Nagano 1970.183).

3. specific time ‘at’: see §3, §9.1.13.

4. static location (LOCATIVE) ‘at’ (with *áru* ‘is’, *súmu* ‘lives’, *iru* ‘stays’; *mótte iru* ‘possesses’, etc.); see §3.8 for special problems.

5. DATIVE OF DIRECTION = [⁻ate] *ni* ‘being aimed at’; target ‘to’, direction ‘toward’ (= *é*).

5a. change of position (MUTATIVE-LOCATIVE) ‘onto, into, ...’—probably to be treated as an automatic reduction of locative *ní* + mutative use of the essive *ní* (6), ‘so as to be at/on’: with *noru* ‘boards, mounts’, *oku* ‘puts, places’; perhaps *tasu* ‘adds (to), *kuwaéru*(⁻) ‘adds (to), *kasaneru* ‘piles on’, *itáru*(⁻) ‘arrives (at), reaches’, *sugíru* ‘exceeds’, *kosu* ‘exceeds’,

E 6. change of state (MUTATIVE) ‘into’, ‘so as to be (something new)’: with *kawaru* ‘it turns into’, *kaeru* ‘turns it into’, ..., and especially *náru* ‘becomes’, *suru* ‘makes it (into)’—see §9.1.11. But the following expressions are perhaps better treated as examples of 8 (purpose): *onná o hisyó ni tanómu* ‘asks (= hires) a woman to be one’s secretary’; *heyá o zimú-syo ni kasu* ‘lets a room out as an office’; *monó o miyage ni kau* ‘buys a thing for a souvenir’; *Amerika o réi ni tóreba* ‘if we take America as/for an example’; (The adjuncts are freely permutable.)

E 6a. ‘(treated) as’ (PUTATIVE or EVALUATIVE, §9.1.11).

(E) 7. antithesis: S + *nó ni* ‘despite that S’; see §14.2.2.

(E) 8. purpose ‘for’ = no *tamé* [ni] (see §13.2, §9.1.13, cf. §17.1): *iwái (o-iwai) ni* ‘as a celebration, in order to celebrate’; V-i *ni iku* ‘goes to V’, VN [si] *ni iku* ‘goes to VN’ (§9.1.1). Does *tabéru no ni yóí* ‘is good for eating’ belong here? See also 6 above; §14.2.2.

E 9. appearing to be (= *da tó*): with *omowaréru*, *miéru*, etc.—see §9.1.1.

E 10. manner ‘-ly, -wise’: see §9.1.11.(3).

(E) 11. enumerative ‘and’: see §2.8 on conjoining. Cf. *Sore ni* ‘And (then/also)’.

12. See §14.6 (directly nominalized S + *ni tigai náí*, *ni sugínai*, *ni kimatte iru*, *ni kagíru*, *ni koto-kaite*); §17.8 (*daróo ni*); §17.7 (literary tentative + *ní* with several meanings); §9.1.1a (*V₁-i ni V₁-ru*);

(E) 13. DATIVE OF REFERENCE = *ni* [*tótte*] ‘taking it as being (with reference to)’ → ‘for’ (cf. 1): *Anáta ni tiisa-sugírú kara ...* ‘Since it is too small for you ...’; *Tosiyórí ni wa muzukasii desyoo ga, wakái hitó ni wa heiki désu* ‘For old people it’s probably too hard

but for young folks it's nothing at all'.

?E 14. N ní wa ní-syu áru 'There are two kinds of N'; Hitótu ni wa ... (moo hitótu ni wa ...) 'For one ... (and for another ...)'; ... haná no sukí na hitó ni wa akunin wa náí ... 'there are no evildoers among those who love flowers' (Tk 2.64a); Gokai ní wa iroiro na monó ga áru ga ... 'There are various kinds of misunderstandings ...' (Nagano 1966.89); Sibusawa san ni nite 'ru hitó ni, Yamada Koosaku san ga áru 'Someone who resembles Mr Shibusawa [among the others who resemble him] is Mr Kōsaku Yamada' (Tk 4.21); Watasi no tizin(¯) ni Q [Kyúu] to iu hitó ga iru 'Among my acquaintances there's a man named Q' (Nagano 1966.75); Hurúi zínzya ya terá ni wa utukusii tatémóno ga óói 'There are many beautiful buildings among the old shrines and temples' (this ni could also be interpreted as locative or possessor). See pp. 251–2.

E 15. the CORELATIONAL MUTATIVE (465–6): yuuméi-zin o yuuzin ni mótu 'has a celebrity for a friend', ...

16. Problematic: génki ni ahúrete iru 'is overflowing with pep', kiboo ni mítite iru 'is full of hope' (? 1b); [no yóo] ni tátu 'is useful' (? 4 metaphorical); go-sankoo máde ni 'for your reference/information' (? 8); is-syúukan [¯góto] ni iti-dó 'once a week (? 0, ? 3); zyúu-nin ni hitóri wa 'one out of ten persons' (? zyúu-nin [no uti(¯)] ni [áru] hitóri 'one [who is] in [the midst of] ten'); mizu ni oboréru 'drowns in water' (? 4, ? 1b); zyúu-zi no basu ni okureru 'is late for the ten o'clock bus' (? 13); hitó-iki ni nómu 'drinks it at a gulp'; kamí ni tutúmu 'wraps it in paper' (cf. kamí ni káku 'writes it on paper' 5a); kyoosoo ni kátu/makeru 'wins/loses at the competition' (? 4 metaphorical); N ni husawasii 'is suitable for/as N = makes a nice N' (? 6, ? 9, ? 8); mé ni miéte 'visibly, remarkably', mé ni miénai tokoró de 'in a place invisible to the eye' (SA 2647.119e), mé ni/de miénai hodo tiisái 'so small it is invisible to the eye' (mé ga miénai 'the eyes cannot see = is sightless' would be used only of a blind person); Sono sukáato wa ... gaisyutu ní mo hakemásu 'I can wear that skirt ... for stepping out, too', Nán ni tukaimásu ka 'What will you use it for?' (? 8); ... tizyoo gozyuu-méetoru no táka-sa made zyoosyoo surú no ni seikoo sita 'succeed-ed in rising to a height of 50 meters above the earth (= off the ground)' (SA 2647.4).

E 17. odoróita (etc.) kotó ni 'to my surprise (etc.)'; sinai kotó ni wa 'unless' (pp. 396, 552); dáre no syookai ni 'at whose introduction'.

dé

0. [< ní-te] = gerund of copula or essive, §9.2. The uses marked E below can be treated as this. But it has been suggested that only those uses for which the polite désite can be substituted (§22.1) are appropriately considered the COPULA gerund as such.

1. general locative of place: dynamic location '(happening) at' (with verbs); location of a scope of reference (with adjectives, etc.). Cf. kará 9.

2. material '(made) out of' = kará 3 (but preferred to kará in speech): kamí de tukúru 'makes it (out) of paper', kí de dékite iru 'is made (out) of wood'.

3a. means, instrument 'by, with, using': o-hási de tabéru 'eats with chopsticks', enpitu de káku 'writes in pencil'.

3b. vehicular means '(riding) on (a vehicle)' = ni notte: kuruma de iku 'goes by car'. Cf. kará 10.

3c. means of communication or information 'through (the medium of)' = o tuu-zite: sinbun de yómu 'reads it in the newspaper', rázio(¯) de kiku 'hears it on the radio', térebi de míru 'sees it on television'; eigo de hanásu 'speaks in English', kana de káku 'writes in

kana'; kookúu-bin de okutta 'sent it (by) air mail'.

3d. pseudo-agent, with passive: denwa de okosaréru 'is awakened by the telephone'; Nippón wa mawari o úmi de kakomarete iru 'Japan has its circumference surrounded by sea' (lg 1962.72). Or is this cause (6)? Cf. §4.2; Alfonso 950-1; BJ 2.306.

?E 4. impersonal (institutional, group) subject—always agent?: Wá-ga syá [= sinbún-sya] de wa síkyóku(¯) no kóozí(¯) o isóide iru 'Our newspaper expedites notices from branch offices'; Keisí-tyoo de happyoo sitá no to kui-tigatte iru 'There is a discrepancy with what the Metropolitan Police Office published'; Tóo yakkyoku de zisin o mótte o-susume simásu 'This [= Our] drug store recommends it to you with confidence'. Cf. Alfonso 991, where dé is said to be used more frequently than gá when the subject is an institution or moral entity; the examples given are Hitáti de uri-hazímeta ... 'Hitachi has begun selling ...', Kimi no utí(¯) de ... katta zidóo-sya(¯) 'The car your family bought ...', Ano kaisya de ... kooín o atúmete iru 'That firm is gathering workers ...', Gakkoo de meirei suru kotó ... 'What the school is ordering ...', Ano misé de kookoku o dásite imasu 'That shop is putting out ads'. Yoshida speaks of “collaborators” and (Y 399) gives the examples: Utí(¯) ¯zyuu de hisyó ni iku 'The whole family flees the summer heat', San-nín de utyuu-ryókoo suru 'Three men go on a space trip'. Cf. 9 (exclusive agent).

?E 5a. 'within' a time or limit: iti-nítí de dekirú 'gets it done in one day', yáku nízyuu gó-hun de owatta 'finished in about 25 minutes', wázuka mikka de modótte kita 'returned in a mere three days', Ano nan-zíken o is-syúukan de kaiketu sita 'They got that difficult matter settled in a week'.

?E 5b. 'by' (a time): gó-zi de owaru 'it will be over by five o'clock' (máde ni or just ní would be more common).

E 5c. máde de 'doing till then': see pp. 489-90.

E 5d. Kotosi wa ní-nen ¯buri de Toodai no síkén ga átte, ... 'This year for the first time in two years Tókyō University [entrance] examinations are taking place, and ...' (SA 2673.16a).

E 5e. Nippon-zíkan de || késa | mimei || ... 'Before dawn this morning, Japan time, ...' (R); Ootoo wa sánzís-sai de osanáí ko to túma o nokósite, kootuu-zíko de sokusi simásita 'My younger brother at the age of thirty was (instantly) killed in a traffic accident, leaving behind wife and small child' (SA 2684.123a)—the second dé is cause (6).

E 6. cause or reason (= no tamé; cf. ní 1b): soko dé 'for that reason'; byooki de yasúmu 'stays home with illness'; Nán de sindá daroo 'I wonder what he died of/from'; hisyó-ti de sirarete iru matí 'a town known as/for a summer resort'; kane de komáru 'is embarrassed by the money' (cf. kane ni komáru 'is embarrassed for [= lacks] money'); eigo de hito ni suguréru 'surpasses others in English'; S nó de, §14.2.1; ti de yogorete iru 'is stained with blood', áse de nurete iru (bissyóri da) 'is wet (is drenched) with sweat'.

E 7. sán-bon de zyuu-en 'ten yen for three (pencils, etc.)'; náma de tabéru 'eats it raw'; minná de ikoo 'let's all go together' (? 4, ? 9); anáta no kangáe de wa 'in your opinion'; Íma [no zyootai/kotobá] de iéba ... 'Put into today's terms ...' (SA 2672.118c); Sore ga, Ginza ¯átari o tuke-mátuge de arúite 'ru zyosei ga, konó-goro(¯) íkura mo iru 'But, lately there are ever so many women strolling around the Ginza in false eyelashes' (Tk 2.103a).

E 8. Kore de o-simai (dá) 'This is all; This is all that's left'; Sikén wa kyóo de o-simai désu 'Examinations are over with today'; Moo sukósi de wasureru tokoró datta 'I was just about to forget'; Zikan de haráu 'We pay by [according to] the hour'.

E 9. exclusive agent: Zibun de iú no mo hén da ga 'For me to say it is odd = Even

if I do) say so myself'; Syuuzen wa || kariru hoo de || sinakute mo || ii desyoo | né 'The repairs wouldn't have to be made by the tenant, would they?' (BJ 2.201.23); Ii sigoto wa minna^[1] zibun-tati de tori, wareware ni wa saitei no sigoto sika sasenakatta 'All the good jobs they took themselves, and wouldn't let us do anything but the most menial jobs' (SA 2678.42e); Atasi-tati de ato de tabemasu kara '[Don't worry—]—we women will eat it later' (Kb 45a); Katyoo made wa onna de zyuubun dekiru to omoimasu 'Up to the job of section head a woman can get along quite well, I think' (SA 2672.62c); Hitotu no hakama o oya to ko de tukau, omosiroi kyoogen desu né 'It is an amusing farce in which father and son use a single hakama (formal skirt)' (SA 2659.49b)—perhaps to be taken as 4 (group subject); Hutari de ikoo 'Let's go just the two of us'. More examples will be found in V 1967b.44. Cf. Alfonso 992, who speaks of "exclusive amount" but gives as examples only agents.

tó

0. subjective essive⁴ '[thinking it] to be': §13.5a, §21.4, §21.7; for quotative uses, see §21, §17.6, etc.

1. 'and': see §2.7.

2. RECIPROCAL '(reciprocally) with' (cf. ni 1a); 'from' (N to tigau 'differs from N, is other than N'); 'with = against' (A ga B to tatakau/arasou 'A fights/struggles with B', A ga B to ronsoo suru 'A argues with B'). See §3.6.

3. COMITATIVE N to [issyo/tomo(-) ni] '(together) with N'. See §3.6.

4. S + to 'when, if, ...': §17.2.

5. S + to '(saying/thinking) that S' (=0.): §21.

no⁵

1. 'of'—see §13.4 (possessive nominals), §3.11.3.

2. (subdued) subject in adnominalized sentences—see §13.1.5–6.

3. pronominal 'one/fact/it' etc. in nominalizations—see §14.2, §15.13; also §15.17. (Historically, a truncation of monó?)

4. '(which) is (a case of)' = na (from ni[-te] aru) in certain adnominalizations of the copula; see §13. (Historically, a reduction of ni aru?)

5. an obligatory reduction of no^[1] no (4 + 3) 'the one which is' or (if the derivation is not ultimately the same) of no^[1] no (1 + 3) 'the one of (or belonging to) ...'.

kara⁶

1. SOURCE '(starting) from': a PLACE (koko kara 'from here') or quasi-place (kokoro)

4. The distinction of subjective essive (to) from objective essive (ni) will be drawn repeatedly in this book. Cf. Kinoshita 21: "'TO wa gaiken-teki ryoo-teki de, NI wa honsitu-teki de aru 'TO is phenomenological and quantitative, NI is intrinsic'. I use "subjective" to refer to what is subject to variations in individual perception rather than judgment; I use "objective" for that which is independently judged (or intersubjectively verifiable). Japanese grammarians (e.g. Mabuchi 212) sometimes use the corresponding Japanese terms syukan-teki 'subjective' and kyakkan-teki 'objective' in precisely the opposite way. Caveat lector.

5. Sometimes contracted to n[ó], especially before t, d, or n: ore n[ó] tokó 'my place', boku-ra n[ó] tokó 'our place' (Ariyoshi 20). And since /nn/ automatically reduces to a single /n/ all trace of the contracted n[ó] is lost in Tatibana san [] tokó wa 'Mr Tachibana's place' (Ariyoshi 71). No wa sometimes shortens to naa; N te[te] naa = N to iu no wa (an example in Okitsu 1.96).

6. For some speakers prototonic kara. The particle is also pronounced kkará (or kkára): mukasi kkará

kara ai-súru ‘loves from/with one’s heart’); a TIME (kore kara ‘from now on’, kinóo kara ‘since yesterday’); an ORDER in sequence (go-ban \bar{m} é kara ‘from the fifth one’); a SUM (sanzen-en kara suru ‘it costs at least 3000 yen’) or other QUANTITY (hyakuman-nin kará no kankóo-kyaku ‘over a million tourists’); a VIEWPOINT: kázu kara iu to (kázu kara iéba) ‘when it comes to numbers, from the standpoint of numbers, in terms of number’; kanzyá-suu kara ittára ‘speaking from the point of numbers of patients’ (SA 2649.39d); búnsyoo kara site (suru to, míru to) ‘judging from the (sentence) style’; kono kotó kara wakáru yoo ni ... ‘As is clear from this fact ...’; Sikási, betu no kákudo kara kangáeru to, ... ‘But, when considered from a different angle, ...’ (Tanigawa 139). Notice that where English prefers to begin AT a time, Japanese prefers to begin FROM a time: yó-zi kara hazimaru ‘it starts at four’. Perhaps this accounts for yuugata kara dekeru ‘will go out toward evening’ (BJ 2.45). Some uses seem a bit obscure: ... kónniti kara wa yoménaí hodo ... ‘to the extent that they cannot be read (by us) today’ (Ōno 1966.205); ... syóki no katákána o yómu kotó wa, kónniti kara wa nakanaka muzukasii no de aru ‘reading early katakana is extremely difficult (for us) today’ (ibid.). On kará used for gá to mark the agent of “verbs which express the idea of TELLING or INFORMING”—hanásu, tyúui suru, tutaéru(̄), tegami o okuru, denwa o kakéru, etc.—see Alfonso 993. Vardul (1967.42), noting that the predicate must be affirmative, interprets certain of these examples of kará as ‘(doing it) oneself’: Anáta ga ienai to iú nara watasi kara kotowátte yarimasyóo ‘If you can’t say it, I will refuse him myself’; Okáasan ni wa ore kara hanásite okoo ‘I’ll let mother know, myself’. But when the act need not rely upon the volition of either party, it is possible to use both negative and affirmative predicates (ibid.): Teki kará no koogeki mo náí kawari ni kotira kará mo koogeki suru tikaará(̄) o usinatte itá kara de aru ‘It is because, to make up for the lack of any attack from the enemy, our side had also lost the strength to attack’; Watasi kara nakigoto o kikaserú no sae, hu-yúkai ni omowaréru desyoo ‘You even seem unhappy that I let you hear me weep’. To Vardul’s examples we can add: ... yoozi ga áttara zibun no hoo kara iku ... ‘when there was some business to attend to THEY would decide when to go do it’ (SA 2642.44d); Watasi kara ii-tai kotó wa ... ‘What / want to say is ...’. But these may be extended uses of the “set-opener ablative” (§3.7a): Anáta kara itte kudasái means both ‘YOU say it [for us] = YOU do the talking’ and ‘You tell it (your way) first’; Watakusi kara hanásite mimasyóo ka means ‘Shall / try speaking [for you/us]?’ or ‘Shall I be the first to speak? = Shall I say my piece first?’ According to Vardul the predicate for the set-opener ablative must be affirmative: “Arukimasyóo” to, Mitiko kara aruki-dasita ‘Saying “Let’s walk”, Michiko was the first to start walking’ (V 1967.42).

2. ‘(leaving/removing) from’ a place—cf. ó 3.

3. (= dé 2) ‘(composed) of’ (X to Y kara nátte iru ‘is composed of X and Y’), material ‘(made) out of’. Notice that Dantai wa A to B (to C) kara nátte iru ‘The group consists of A and B (and C)’ amounts to the same thing as Dantai ní wa A to B (to C) ga áru.

4. (= ní 1d) ‘from/by’ an agent. Hun’iki kara náni ka ga umareru ‘Something is hatched by the atmosphere’—or is this 5?

‘from way back’ (Tk 3.35a, Kb 389a); hazime k kara ‘from the start’ (Maeda 1962.209); ima k kara ‘from now on’ (Kb 141b); kóndo k kara ‘from this time’ (Fn 131b, Kb 329a); kono-aidá k kara ‘from not long ago’ (Kb 140a); asa k kara ‘from morning’ (Tk 2.307a, Zhs 2.179); o-híru k kara hazimatte ‘beginning at noon’. Cf. -té [k]kara, §9.2.3. The vowel of a preceding k-syllable (especially ku) sometimes drops in rapid speech: ... gaikok[u] kará no | atúryoku desu | née ‘it’s pressure from abroad, you see’ (R); kok[o] kará wa ‘from here on’.

5. (= dé 6, no tamé ni) cause, reason: Ryóoke no syakai-teki tii no mondai kara kono kekkon no hanasí wa hadan ni nátta 'The marriage talks were broken off because of the (difference in) social position of the two families'; Kisyá^[j] no tukaré kara súgu nemutta 'I fell right to sleep with weariness from the train'.

6. S + kará—see §17.1 ('because').

7. V-té + kará—see §9.2.3 ('after doing').

8. N ni sité kara ga/mo/sae = N dé sae mo 'even (being) N': Senséi ni sité kara ga/mo/sae, kyoositu de nóndari tábetari surú n da kara, gakusei ga gyoogi ga wáruku náru no mo móttö-mo daroo 'When even the teachers are eating and drinking in the classroom, we can surely expect the students to worsen in deportment'.⁷ In these expressions, ni sité is a bookish equivalent of the copula gerund ní-te > dé; the expressions with mó and sae are thus parallel to dé mo and dé sae. But the synonymous expression with gá is not easily explained; cf. literary V-té kara ga = V-ta to sité mo 'even if, say' (Meikai kogo jiten 260c).

9. [dialect—e.g. Tottori] dynamic location (= dé 1).

10. [dialect] vehicular means (= dé 3b).⁸

máde

1. 'to, up to, until' a place or time or order; máde ni 'by' (a time or order), 'so as to be till a time or a place' (mutative §9.1.11); for other uses see pp. 210, 212. On máde ni ≠ máde de ≠ máde, see pp. 489-90.

2. 'even'; ní made 'even at/to/etc.' See §2.3.3.

é

1. target 'to', direction 'toward'. This is replaced by ní for many speakers; but note that when the sentence is adnominalized, ní drops: úmi e no miti 'a road to the sea' = *umi ni no miti → úmi no miti [ambiguous]; Éki e no miti o osiete kudasaimasén ka 'Please show me the way to the station'. Cf. discussion on pp. 207-9.

2. In downtown Tōkyō é replaces ní in a number of uses, e.g.: Go-syūugi o kamí e [= ni] tutúnde ... 'Wrapping the gratuity in paper ...' (Okitsu 1.268); sinbun ni/e ni déru 'appears in the newspaper', ensoku ni/e iku 'goes on a picnic', kokuban ni/e káku 'writes it on the blackboard', náka ni/e ireru 'puts it inside', ue ni/e oku 'puts it on top', yamá ni/e noboru 'climbs on the mountain', hito ni/e kasu 'lends it to people', hito ni/e ageru 'gives it to people', góruhu ni/e iku 'goes golfing' (but not in góruhu o sí ni iku 'goes to play golf'). A sentence like Anáta ni/e agemasyóo ka could, however, be taken as ellipsis for Anáta e/ni [watasite] agemasyóo ka 'Shall I hand it over to you?' Similar cases: Kotira é/ní mo kootya o kure ná 'Let me have some tea too', atira-sama é/ní mo ... 'him too', Tanaka-san no hoo e/ni mo ... 'let Tanaka have some too'. A more surprising case: Atamá mo yókatta si, ginkoo é [= ní] de mo tutómete ireba, katyoo kúrai ni wa

7. The only authentic example I have culled is a bit murky in meaning: Dái ití-mon ni sité kara ga, zyóonai no teizi-ban [sic] de tóppu o símete irú no wa, nizyuu-nen ˉgó(ˉ) ni zitugen, [surú no] de áru 'Even the very first question, what is occupying the top of the display board in the room is [something] to be realized after 20 years' (SA 2678.37c—the comma in the original text is to mark the ellipsis shown in brackets in the romanization).

8. An example of hune kara máitta 'came by boat' is found in Diego Collado's *Ars Grammaticae Japonicae Linguae* (1632), according to Ishigaki Kenji 183; this is presumably a Kyūshū form.

náttá desyoo 'He had a good head on his shoulders, too; if he'd worked for a bank, say, I bet he would've become a section head at least' (SA 2665.118d).

The source of some of these morphemes is unclear, though I have elsewhere (Martin 1968) suggested Korean cognates for the essive *ní* and the subject marker *gá*, relating the latter to the morpheme *ká* which serves both languages as a postadnominal noun meaning 'the question of ...', an intermediate stage perhaps being *-n-ka* with the adnominal marker *-n-* that is found in a number of the languages of northern Asia.

Each of the particles *tó* and *nó* is probably a convergence of several different etyma. Thus some of the uses of *tó* ('with'—perhaps 'and') are likely to be cognate with the Altaic comitative case marker, despite the apparent lack of a descendant from that etymon in Korean; other uses (the subjective essive, 'thinking/saying that ...') may be the deictic *tó* = *só* 'that'—there are cognates in the Korean deictics—or developments from the focus marker *-do* 'even/indeed (being)', for which we cite Ryūkyū and Korean cognates in §2.3.4; while still other uses ('when/if') may be truncations of *tokí* 'time' and/or *toko[ró]* 'place, circumstance', both of which enjoy Korean cognates.

Some uses of *nó* ('the one which ...' etc.) may result from a shortening of *monó* 'thing (etc.)'; one use (as subject marker) remains obscure in origin though it also may be from *monó*; the adnominalized forms of the copula *nó/ná* are variant reductions of *náru* = *ní áru* (attributive form of the literary copula, made up of essive + auxiliary 'be'); other uses, including the genitive 'of', result from ellipsis involving one or more of the preceding forms, as explained in appropriate sections of this work.

The particle *é* < *pé* is usually assumed to have developed from the noun *hé* < *pé* 'vicinity' (now found mainly as a suffix *-be*), sometimes taken to be an early loan from Chinese but perhaps to be ascribed (along with *herí* 'edge?') to the verb *hé-ru* < *p(é)*- 'passes by'. The particle *ó* < *wó* is obscure in origin. An emphatic object-marker *bá* which occurs in the Ryūkyūs and also in northern Honshū suggests that *wó* may have come from *bá*, by assimilation of the vowel to the initial labial; it has been speculated that *wó* and the focus particle *wá* < *pá* are divergent developments in the same etymon.

It is reported that *é* is sometimes pronounced *wé* in dialects (e.g. Nagano, Zhs 2.473) and *ó* is sometimes pronounced *wó*.

The etymology of *máde* is discussed on p. 137 (§2.4). The origin of *kará* is a puzzle. I know of only one good suggestion, that described in Ōno 1966.181, according to which the particle is related to the morpheme *-kara* that appears in *ya-kará*(-) 'tribe' and *hara-kara* 'siblings'⁹ and to the morpheme *-gara* that appears in *tomogará*(-) 'group of fellows' and in *kuni-gara* 'national character' and *hito-gara* 'personal character'—with *gara* 'pattern, character' itself to be considered a truncation?—for which there are Mongolian and Manchu cognates *kar(e)*, *har(e)*, etc., to which we can relate the Korean *kyēlay* 'tribe'. (Note also the obsolete *kará* 'stalk, stem; handle; spatula' as well as *kará* 'husk, shell' and *kará* 'empty'; *karada* 'body' may be connected.) But I wonder if the particle may not, instead, turn out

9. Also in the old word *úkara* 'relatives' (said to be from *umi-kara* with the noun derived from the infinitive *umi* 'giving birth'), best known in the compound *ukara-yákara* 'people around one'. *Ya-kara* contains *ya* = *ie* 'house', and *hara-kara* contains "belly". Ōtsuki would take *-kara* as a variant of *kó-ra* 'children' in these words.

to be somehow related to the Korean verb *ka-* 'go' with a possible cognate in the Japanese verbs *kí-* < *kó-* 'come' and/or *kayow-* 'commute, go regularly'.¹⁰ See also the discussion on *nágará*, §9.1.3.

Above I have suggested that some uses of *nó* may result from a shortening of *monó*. But very disturbing to this notion—and to the speculations about origins of the subject particle *gá*—is the use in dialects of *gá* for those constructions where the standard language uses the pronominal *nó* 'the one/fact that... (etc.)'. This first came to my attention in the Kōchi dialect, and I confirmed with a native speaker such forms as *atarasii ga ga = atarasii no ga* 'the one which is new (as subject)' suggested by Doi 1958.267-8. Since then I have come across the usage in reports of a number of different dialects: *un ga = úmu no o* 'giving birth' (Ishikawa, Zhs 3.113); *kuru ga noo = kúru no o* 'coming' (Zhs 1.26, Niigata—*noo = née?*); *moro ga morote = moráu no o moratte* 'receiving what one receives' (Ishikawa, Zhs 3.121); *atarasii ga koote = atarasii no o katte* 'buying a new one' (Toyama, Zhs 3.30, 35); *ii ga tanomu zo = ii no o tanómu yo* 'Be sure to get me a good one' (Ishikawa, Zhs 3.181).

According to Kgg 82.41a n.13, in Matsuzaki-machi in Kamo-gun of Shizuoka prefecture, *gá* is used for pronominal *nó* in the two senses 'the one that' ...' and 'the act of ...'—as it is in Kōchi: *Gakko e ikú GA o kirau* 'I hate to go to school', *Watasi ga tabe-tái GA wa ringo no aói GA da* 'What I like to eat are the green ones of the apples'. But it is not used for *S no da* 'it is a fact that ...' (equivalent to literary *surú nari*, not to be confused with *su nári* 'they say ...') for that is said by direct nominalization *S fnoþ da*: *Gakkoo e ikú da = Gakkoo e ikú no da*. Yet in Niigata we find *S ga da*: *Nai ga da = Nái no da* (Zhs 2.336). And in Niigata and Toyama even *nó de* 'since' and *nó ni* 'despite the fact that' can be said with *gá* for *nó*: *si-tái ga de = si-tái no de* 'since I want to do it' (Zhs 2.341)—Niigata), *nai ga dee = nái no de* 'since I have none' (Zhs 3.79—Toyama); *kono attui ga nii = kono atúi no ni* 'despite its being hot like this' (Toyama, Zhs 3.42; on 3.45 we find *atui ni*).¹¹ The use of *ga ni* for purpose, like the standard use of *nó ni*, may be treated as ellipsis (see p. 858) *V-ru ga/no {tame} ni*: *mi ni yuku ga ni = mí ni ikú no ni* 'in order to go look at it' (Zhs 3.62—Toyama); this also occurs in Shikoku, according to Doi 1958.271. From Ishikawa these are reported: *iku ga ya tee = iku no da to (itte)* 'saying I would go' (Zhs 3.173—*ya* is the copula); *yatee ga de = yari-tái no de* 'since I want to do it' (Zhs 3.180).

In Chiba *n[o] ga* is apparently used to mean *no [mo]nó* 'the thing of ...': *hoka n ga de = hoka no monó de* 'being something else' (Zhs 2.220 fn); *yoso n ga wa = yosó no [monó] wa* 'a different one' (Zhs 2.223).

In central Niigata prefecture for *S no da* you hear *S ga n da* and this has become known as "Echigo no gan-kotoba" according to Zhs 2.29.

The use of *gá* to mean 'the one that belongs to' is found in older Japanese; one of the

10. Aston 49 says "*kara* is contracted for *ka areba* 'since this is so', ...' and suggests it must have been earlier *NO kara*, deriving *ono-zukara* and *te-zukara* from *-n-tu-kara* with the old (locative-)genitive marker *-tu-*. According to Ishigaki Kenji the original meaning of the particle was abstract 'according with', whence there developed use to mark a traversal object. The ablatives of place and time were always marked by *yóri* before the *Kokin-shū* (Ishigaki K. 149-50, 153). *V-té kara* first appeared in colloquial texts of 1593 (id., 171-2).

11. Gengo-Kenkyū 47.66-7 (1965) reports that nominalizing *gá* and *gá ni/de* are common in the Suzu dialect of the Noto Peninsula.

examples in Meikai kogo jiten (204c.10) is ... Kakinómoto [no] Hitomaro ga nári = K. H. no monó de áru 'is one of K. H.'s', cited from a note in the Kokin-shū.

In general, the various dialects of Japanese use case markers in very similar ways; a few differences have been noted in the lists above. For the allative *é* (or *ni*) and the dative *ní* (or *é*), there are three different etyma which have figured prominently in the development of the language. Fluctuations in the use of *é* and *ni* have been described above and elsewhere; the third etymon is a group of variants that derive from the noun *samá*, which now means 'appearance' but earlier had the meanings 'way, method' and 'direction' (equivalent to *katá*). The forms are SA (originally an earmark of the Kantō plain but now of the entire northeast, according to Zhs 2.19); SANE and SINE (East Kyūshū); SAMYAA, SANYAA, SAN (West Kyūshū); SAME, SAN, SE (South Kyūshū). Cf. Zhs 6.17 n10. Shimmura says SA was a dialect form in literature of the Muromachi period (1338-1573). And a sixteenth-century proverb is quoted by Maeda 1961.137 and Zhs 5.15 to the effect "Kyōto E, [Northern] Kyūshū NI, and Kantō SA".

It is interesting that we can find examples of *sa* used for *ni* in other uses, in addition to the dative and allative:

(1) dative: *hotoke-sama sa agete* 'giving it to Buddha' (Miyagi, Zhs 1.170).

(2) allative: *yakuba sa itta* 'went to the government office' (Fukushima, Zhs 1.278); *saihu sa ire-be* [= *ireyoo*] to site 'when I tried to put it in my purse' (Iwate, Takeda 1970.60).

(3) mutative: *N sa naru* 'becomes N' (Aomori, Zhs 1.64 etc.).

(4) purposive: *V-i sa iku* (etc.) 'goes to V' (Iwate, Zhs 1.94, 96); *asobi sa kitara* 'if you come for a visit' (Miyagi, Zhs 1.160); *si sa kite* 'coming to do it' (Yamagata, Zhs 1.240); *mukee sa igu bee* (= *mukai ni ikoo*) 'let's go to meet him' (Fukushima, Zhs 1.264); *mi sa itte* 'going to see' (Fukushima, Zhs 1.275). This is not to be confused with a northeastern use of *sa* as an abbreviation of the dialect particle *sakai* 'because (of)' (= *kará*), nor with the sentence-final *sá* of §15.2.

In §13.5 you will find a few Ōsaka forms such as *dóna i* = *dónna ni* 'in what manner' that appear to be the essive (or adverbialized copula) *ni* with the initial nasal suppressed. Similar Ōsaka examples of [n]i in other uses are also found, e.g.: *saki i* = *saki ni* 'ahead = first' (temporal locative, Zhs 4.202), *tabi i det[e]* = *tabi ni déte* 'leaving for a trip' (purposive, Zhs 4.227), *otumu i* = *atamá ni* 'onto the head' (mutative locative, Zhs 4.202), Maeda 1961.139 says that Ōsaka also has *i* as a variant of *e*, used in situations where *ni* would give a different meaning as in *Soko e suwan-nahare* = *Soko e suwari-nasái* '(Move and) sit there', cf. *Soko ni suwatte [i-]nahare* = *Soko ni suwatte i-nasái* 'Stay seated there'—Ōsaka will also allow *dé* for *ni* in the last example (Maeda 1961.140).

We have noted the confusion between *é* and *ni* among standard speakers, some of whom distinguish these particles part or all of the time, while others relax the distinction or lack it altogether. The latter category includes most modern Kyūshū speakers, who lack *é* and use *ni* instead. In modern Ōsaka, according to Maeda 1961.141-2, when the dative is used with a donatory verb the particles are distinguished depending on whether the recipient is a superior or is an inferior such as oneself; we can presume this reflects examples like *senséi E ageru* 'I give it to the teacher' and *úti NI kureru* 'he gives it to me'.

A fourth etymon for the dative-allative is *ge* 'to a person', found frequently in Chiba (Zhs 2.206n), but also in Kanagawa (Zhs 2.304 n1), and other parts of the northeast Kantō area (Zhs 2.26). Zhs 2.26 says this form is probably a contraction of an old particle or pseudo-restrictive (–)gári 'to (where one is)' as found in the example *kimi gári ikéba* 'if I

come to my lord' (MKZ 154a). (The Niigata form *sonna ni*, Zhs 2.365, must have a different source, perhaps the evidential *-gé* of §20.)

In the Ryūkyūs a particle *saa[n]i* is used for the instrumental and material uses of standard *dé*, and the northern Ryūkyū particle *syi* (Martin 1970.111b) in some of its uses may have come from a contraction of that, unless all uses are derived from the infinitive of 'do' (cognate with standard *si*). Cf. Hōgen-gaku gaisetsu 130, which states that in the Ryūkyūs *[n]kai* is used for 'to a place' and *nkai, nai, or nee* for 'to a person'; all these forms are probably reductions from *nakai*, which means '(in)to' and perhaps derives from a reduction of *[no] náka [n]i* 'to inside of'. But reflexes of simple *ní* are found in all Ryūkyū dialects, I believe, as expressions of the personal dative and some of the other meanings found in the standard language. In the northern Ryūkyūs (Martin 1970) there are also such forms as *k[h]atyi < kati* 'to(ward)' (= *é*) and *gadi ? < gade < kade* 'up to, as far as' (= *máde*).

The pronominal use of *nó* 'one/fact/it' (*nó* 3 above) is expressed by *gá* in some of the dialects, as we have observed. In Okinawa (cf. Hōgen-gaku gaisetsu 131) there is a particle of similar use that has the shape *si*, which must derive from an earlier *su*, since it has an unpalatalized sibilant. This particle appears in the northern Ryūkyūs in such expressions as *was[i]* 'mine', *nas[i]* 'yours', and *qar ga si* 'his/hers' (Martin 1970.123).

2.2a. UNMARKED ADJUNCTS

Not all adjuncts are marked; a few, adverbs par excellence, are never followed by a relational marker, as noted in §13.7. Other unmarked adjuncts are the result either of direct adverbialization of a nominal (§9.1.13—a process we can treat as ellipsis of the essive or copula infinitive *ní*) or of the application of a marker of focus, such as *wá/mó*, that regularly suppresses the subject marker *gá* and the object marker *ó* and sometimes *ní* (in several of its uses).

The surface versions of sentences—what we hear and see—often contain an optional omission of a marker, the result of ellipsis. The object particle *ó* is very frequently dropped, especially in dialects; the subject particle *gá* somewhat less frequently,¹² and the so-called "topic" particle *wá* still less frequently. In western and central Japan (most noticeably in Hiroshima) the quotative *tó* '[saying/thinking] that ...' drops readily before a quotational verb. Maeda (1961.82 ff) suggests that the ellipsis of *ó* is quite old and the other droppings are more recent but gradually gaining in frequency. For Ōsaka, he gives frequencies as high as the following for ellipsis within discourse:

dropped <i>ó</i>	.91
dropped <i>tó</i>	.88 before <i>iu</i> 'says'
	.75 before <i>omóu</i> 'thinks'
dropped <i>gá</i>	.60
dropped <i>wá</i>	.36

On the frequent dropping of *ó* and quotative *tó* by Kansai speakers, see also Zhs 4.17.

12. But when *gá* marks an underlying (semantic) object, the frequency of omission is probably the same as for *ó*.

In the standard language, the quotative *tó* will not normally drop, except for oblique requests, where *V-ru yóo ni* [to] *iu* 'asks one to V' is more often heard without *tó*; and dropping of *ó*, *gá*, and *wá* is less common. But you will run across other omissions of expected relational particles from time to time; it is not always easy to tell, especially in written texts—and with atonic adjuncts, even in speech—whether a given expression is to be taken as a lexical compound or as a loose phrase with dropped markers. *Kankei ga náí* 'has no relevance' shortens to *kanke[i] náí* 'is irrelevant' and *kakkoo ga íi* 'has a nice appearance' shortens to *kakko[o] íi* 'is attractive'. Sometimes it is unclear just which marker may have been omitted, since the grammar will allow more than one valence: *Yuukoku [ni/ga] tikái ga máda hi ga kurete inai* 'It was close to evening [or: Evening was close] but the sun had not yet gone down' (SA 2674.110a).

Examples of dropped *gá*: ... *rekisi-syoku [ga] yútaka na, ottóri to sita matí da* 'it is a quiet town, rich in historical color' (SA); ... *iro [ga] azáyaka na hánkati* 'a bright-colored handkerchief' (SA 2793.95c); ... *en-suto no sinpai [ga] náku sutáato dekíru no wa* 'to be able to start without fear of killing the engine' (SA 2684.23b—the first word is an abbreviation of *enzin-sutóppu*); ... *monogókoró [ga] túite* ... 'reaching the age of discretion' (R); *Sensei [ga] máda o-sake o nónde 'ru tokí datta* 'It was when you were still drinking' (Tk 3.214a); *Saihu [ga] karappo no rentyuu ga* ... 'Those whose pocketbooks are empty ...' (SA 2835.7); *Hanasi [ga] kawarimásu ga, ... '(Not) to change the subject, ...'* (R); ... *kázoku [ga] issyo ni* ... '(having) one's family with one'; *Dái wa moo tukéru hituyoo [ga] náí desu né* ... *Sore nára, dái wa hituyoo [ga] arimasén né* 'There's no need any more to attach a title [to a painting] ... Then, there's no need for a title, is there' (Tk 3.258b); ... *sen-nen [ga] iti-niti no gótoku* 'a thousand years (is) like a day' (Ishigaki Kenji 55); ... *anáta to atasi to [ga] mé no tuke-dókoró ga onazi de átta kotó wa, omosirói n desu* 'I think it is interesting that you and I had the same point of view' (Tk 3.198b); *Tyót-to hén datta no wa sono ik-kái daké de, áto wa doko e itté mo kimoti [ga] yókatta* 'Only that once was it a bit odd, wherever else I went it felt good' (Tk 3.75a); *Bóku(⁻) wa hoosoo [ga] kirai, koogi(⁻) [ga] kirai, taidan mo kirai de né* 'I hate broadcasts, I hate lectures, I hate dialogs (= interviews), too' (Tk 4.279a); *Kaimaku [ga] semáru bankoku-haku de, Nippón-iti sabisii otokó wa dáre daroo* 'With the International Exposition about to open, who do you think is the saddest man in Japan?' (SA 2670.22b); *Atamá nánzo, sirói no ga o-ari de náí desu né.—Sirói no [ga/mo] arimásu yó. Óoi ni áru n da, waki no hoo ni* 'You have no white [hairs] on your head or anything, I see.—I've got white ones all right. There are lots, toward the part' (Tk 3.179b).

Kuno has suggested that the *gá* which marks an underlying subject is never dropped in an independent sentence, though it may be dropped when the sentence is adnominalized or adverbialized; what appear to be unmarked subjects in independent sentences are, he says, *wá*-marked themes with the *wá* omitted. I have found no convincing counterexamples, but in some cases the unmarked theme may simply be unmarked from the start, with either *wá* or *mó* appropriate. The following adnominalized sentence seems to omit both *wá* and *mó*: *Anná no [wa] dóo tte kotó [mo] náí wáke desu yó* 'I mean there's nothing special about one of that sort' (SA 2685.26e).

Examples of dropped *ó*: *Sore o saikin, kusuri [o] káu no ga urúsáku nátta n de, yametá n da* 'But lately it's become such a hassle to buy drugs that I've quit' (SA 2792.29d); *Néko wa hooziro no sú(⁻) [o] neraú n da né* 'The cat has its eye on the bunting's nest, you see' (Tk 4.291a); ... *honto ni kinodókú na kotó [o] simásita yó* 'I really did a pitiful thing (to him) ...' (Tk 3.105a).

The locative marker *dé* drops in a few expressions of the type *Nihón [de] saidai no N* ‘the largest N in Japan’; see § 13.5, § 13.7. And the stative locative marker *ní* often drops in expressions of the type *watási wa Tyúugoku [ni] taizai* ‘while I was staying in China’ (cf. § 14.4, § 25).

Here are examples of ellipsis of the allative marker *é* under subdued thematization (§ 3.9): *Kyookai wa yóku ittá wa* ‘I went to church a lot’ (Tk 2.129b); *Kyúusyuu e wa ikú ka mo siremasén keredo mo, Hokkáidoo wa ikimasén* ‘I may go to Kyūshū but I won’t go to Hokkaidō’ (Tk 4.209a). *Ueno nánzo e wa, irassyaimasén ka.—Ueno wa ikimasén. Tatta iti-dó itta ná* ‘(Don’t you =) Do you ever go to Ueno [Zoo]?—I don’t go to Ueno. I’ve been only once’ (Tk 2.140b).

In a few expressions the reciprocal marker *tó* and/or the dative marker *ní* will often drop: *N {to} dooyoo, N {to} tomódomo(=)* (§ 3.6); *N {ni/to} sokkúri* (§ 3.6, § 25); *N {ni} soo’oo* (§ 25); The following example drops the dative marker after the first adjunct and the subject marker after the second: *Anáta [ni] seihuku [ga] niáu wa yó, nán te iu to, mottai-nái kara kiyoo nánte* ‘When I said something like “The uniform looks good on you”, he replied something like “I might as well wear it since it would be a waste not to”’ (SA 2655.39d).

2.3. FOCUS OF ATTENTION: BACKGROUNDING (“SUBDUING”) AND FOREGROUNDING (“HIGHLIGHTING”) OF ADJUNCTS

The particles *wá* and *mó* signal opposite focus: *mó* highlights, *wá* subdues. Attention is concentrated by *mó*, it is shifted elsewhere by *wá*. Choosing *wá* for an adjunct at the beginning of a sentence is like raising a stage curtain or lowering a backdrop in preparation for a scene. We can speak of the function of *wá* as backgrounding or “out-focusing” and that of *mó* as foregrounding or “in-focusing”. But generally we will speak of a phrase marked by *wá* as SUBDUED, and one marked by *mó* as HIGHLIGHTED.

When indeterminates (i.e. interrogative-indefinite words) are in a tonic phrase marked by *mó* and followed by a negative predicate, the entire phrase is stripped of its accent:¹³ *Dáfe mo inai* ‘There is no one there’, *Náhi mo náí* ‘There is nothing’; *Dóko de mo hataraité imásén* ‘I’m not working anywhere’ (BJ 2.152.H), *Dóre ní mo iremasén desita* ‘I didn’t put it in any of them’ (ibid.). But *dónna/dóno N mo* will usually retain its accent: *Dónna | haná mo | saite imasén* ‘There’s no kind of flower blooming’ (BJ 2.151.H). And if the indeterminate is followed by a highlighted gerund, the accents will normally persist: *Dóko ni | oité mo || kamaimasén* ‘It doesn’t matter wherever you put it’, *Nán-do | míte mo || kamaimasén* ‘It doesn’t matter how often you look at it’ (BJ 2.141.F). But you will sometimes hear these longer stretches losing their accents, too: *Dóo suru kotó mo dekimasén* ‘There’s nothing can be done about it’ is often said with only the final accent remaining. Certain of the quantity words obligatorily lose their accents when marked by *mó* and followed by a negative: *sukósi mo náí* ‘doesn’t have even a little’, *hitóri mo inai* ‘not even one person is present’, *hitótu mo náí* ‘hasn’t even one’,

Virtually any predicate adjunct can be backgrounded or foregrounded. The only exceptions are certain adverbs such as *góku* ‘extremely’, which never takes focus; on the focus of adverbs, see § 13.7. Focus can be applied to gerunds (*-té wa/mo*, § 9.2.2) and to

13. But *ítu mo* ‘always’ is an exception, for reasons explained below. And the accent suppression is optional for *iku-tu, iku-ra*,

infinitives (-í wa/mo, §9.1). The latter situation, however, calls for special consideration, since the resulting forms are limited to constructions with the semantically empty (or dummy) auxiliaries *si-* 'do' and *ár-* 'be', constructions which split the sentence nucleus in order to highlight or subdue the nucleus itself, as explained in §5. As we will remark below, the PROVISIONAL form (-réba = -té wa) contains a built-in variant of *wá*, a variant that optionally can be used also with the conditional -tára [ba] and, by category slippage, with the present-day provisional of the copula *nára* [ba], which comes from the literary conditional; as well as with the direct-object marker *ó* [ba], at least in Literary Japanese. Literary Japanese also has a concessive form -ré-do = -té mo, which contains a built-in synonym of *mó*, as is explained below.

The subdual and the highlighting are expressed by adding *wá* or *mó*, respectively. These particles attach to the phrase, directly following any particle that marks the adjunct, EXCEPT when the particle is *gá* or *ó*. In standard spoken Japanese these two particles are obligatorily suppressed when focus is applied (for exceptions with *mó* see below), so that where we would expect *N *gá* wa/mo and *N *ó* wa/mo (by analogy with N *ní* wa/mo, N *kará* wa/mo, N *é* wa/mo, etc.) we find only N wa/mo: the opposition of the prime cases of subject vs. object is neutralized. The marker for the other core case the dative, often drops when subdued, but I am not sure that the option is always available: *Míta mé* [ni] wa onazi suika dé mo, suika ni yotte nakámi ga tigau 'To look at they may be the same watermelon but the inside differs with the watermelon' (SA), presumably a dative of reference (*méni* [tótte]), cf. *míta mé ni ii* 'is nice to look at'. See also §3.9, p. 227. Examples of optionally dropped allative marker N [*é*] wa will be found in §2.2a.

In the Ryūkyūs, at least in certain dialects spoken in Okinawa and in Yonaguni, the appropriate reflexes of *gá* wa, *gá* mo, and *gá* zo (= ~~gá~~ *kóso*) all occur. In written Japanese we find the expected *ó* mo,¹⁴ but there is no *N *gá* mo, and in place of *N *ó* wa you find N *ó* ba (though not *N *gá* wa). But the function of *ó* ba differs from that of *wá*, being closer to the meaning of *kóso* 'indeed' (often equivalent to colloquial *sá!*) since it pinpoints the spotlight on the object, rather than shifting attention away: *Watakusi no káko o ba kaerimimásu to ...* 'As I look back upon my past ...' (in a formal speech); *Kánsya* (°) *no í* (°) *ó* ba arawasimásu 'I express my feeling of gratitude'; *Kono rippa na seinen ó* ba, *anáta ni go-syookai itasi-tai to zon-zimásu* 'I would like to introduce this splendid young man to you'. Like many another literary expression *ó* ba can be used as a jocular variant in the colloquial: *Sitúrei o ba itasimásu* 'I bid thee good-bye!'

Since *wá* and *mó* are opposites, we expect them to be mutually incompatible; accordingly we must reject such a text example as *... tango *wá* mo hakkíri sinai 'nor is the vocabulary clear' (Mikami 1963a.62) as a mistake, probably an attempt to substitute *mó* for *wá* in the proofreading—or, at best, a blend of two sentences (such as tango wa hakkíri sinai + tango mo hakkíri sinai) that would be rejected by the writer or speaker upon reflection.

14. Examples: ... to iu *múzan na zíkenga ókíte, kootuu-ziko no gekizoo nádo de hitóri ya hutári no siboo ni wa donkan ni nátte iru watási-táti o mo sasuga ni odorokáseta* 'A tragic event happened in which ... and it startled even us who had grown callous at the death of an individual or a couple with the sudden increase in automobile accidents' (SA 2666.36a); ... *Amerika dé wa kono hoohoo o hikítúgi réedaa o mo kuwáete* (°) *harikéen-taihúu—no sínro o hakátta ga ...* 'In America they have extended these methods and have added radar, too, in plotting the course of hurricanes—typhoons—and ...' (KKK 3.212). For more examples, see KKK 3.235. A similar example of *ó* made will be found in §2.3.3, along with examples of *máde ga*. Examples of *nani* [w]o mo occur in the romanized version of Aesop's Fables (413, 414), published in Amakusa in 1604; there are examples with ordinary nouns, too: "fagiuomo" = *házi o mo* 'even shame'.

But a sequence of *mó* wa is possible under certain circumstances, which require us to undergo more than one cycle of derivation. The most prominent situation is when the *mó* is part of a generalizing expression built on an indeterminate, perhaps as a reduction of ... *dé* mo 'even being' as suggested in §9.2.2: *dáre* mo '[not] anybody', *náni* mo '[not] anything', etc. Alfonso 769 lists acceptable examples with *dé* mo wa: *Dáre* ni de mo wa dekimasén 'Not just ANYBODY can do it', *Dóko* ni de mo wa utte imasén 'These aren't sold just ANYPLACE'. (In these expressions the accent may appear on any member: *Dóko* ni *dé* *mó* *wá*—if it is on the last syllable the accent is automatically cancelled by the juncture.) Another such situation is with the generalized NUMBER words: *Ikutu* mo wa *nái* 'We do not have an indefinite number of them (though we DO have some)', cf. *Ikutu* mo *nái* 'We haven't got very many of them'. Additional examples of *mó* wa: *Tooi* tokoró da kara *nán-do* mo wa kaerénai 'It is such a faraway place that I can't return just any number of times'; *Kantan* dá kara *súgu* dekimásu—ni-zíkan mo san-zíkan mo wa kakaránai 'It is so easy I can do it right away—it won't take any two or three hours!'; *Mittú* -bákari hituyoo dá ga, *tóo* mo nízyuu mo wa iranai 'Just three are necessary; we don't need a whole ten or twenty!'; *Iti-nihai* nára sake mo noméru ga, *nán-bai* mo wa noménai 'I can drink a cup or two of sake, but I can't drink very much'. (More examples: Okutsu 1974.175, 177.)

The focus permits us to make a difference of meaning between *ítu* mo *sinai* 'always refrains from doing it' and *ítu* mo wa *sinai* 'doesn't ALWAYS (= usually) do it' just as there is a difference between *máiníti*(⁻) *sinai* 'refrains from doing it every day' and *máiníti*(⁻) *wa sinai* 'doesn't do it EVERY day'. (But **Dáre* mo wa *sinai* 'Not everybody does it' is rejected.) This use of *wá* to play up adverbial contrasts is a frequent source of confusion for the foreigner: *sukósi* dekiru 'I can DO it a bit' is not the same as *sukósi* wa dekiru 'I can do it A LITTLE (but not much)'. Cf. *ítu* ka WA, aa itta zíken ga okíru to omótte 'masita yó 'I thought such an incident would arise SOONER OR LATER'(SA 2660.39b). An added problem with these *mó* expressions is that they cannot undergo propredication (§3.10) unless somehow quantified. Exceptionally, however, the TIME expression with *mó* is just the opposite in this respect, and that is one of the reasons that Japanese grammarians would prefer to treat *ítu*-mo as a single lexical unit:

ítu mo da 'it is always'

**nán*-zi/nan-doki mo da 'it is ever so many o'clocks' BUT:

nán-do/íku-tabi mo da 'it is ever so many times'

**dóko* mo da 'it is everywhere'

nan-kásyo mo da 'it is ever so many places'

**náni* mo da 'it is everything'

íku-tu mo da 'it is ever so many'

nán-X mo da 'it is ever so many X'

**dáre* mo da 'it is everyone'

nán-nin mo da 'it is ever so many people'

To say the things forbidden on the left you would use ... *dé* mo da. There is a difference of meaning between *ítu* mo da 'it is always (= usual)' and *ítu* de mo da 'it is any time'. But to say 'it is anywhere' you have to choose between 'it is somewhere' (*dóko* ka da §15.6) and 'it is everywhere' (*dóko* de mo da). On the other hand, in the negative form both the left and right columns are possible:

dóko mo zya *nái* 'it isn't anywhere'

nan-kásyo mo zya *nái* 'it isn't ever so many places = it isn't very many places'

náni mo zya *nái* 'it isn't anything'

íku-tu mo zya *nái* 'it isn't ever so many = it isn't very many'

BUT:

ítu mo zya náí 'it isn't always' (NOT
'it isn't ever')

*nán-zi/nán-doki mo zya náí 'it isn't ever so
many o'clocks'

Cf. nan-zíkan mo da 'it is ever so
much time' : nan-zíkan mo zya náí
'it is not ever so much time = it
isn't very much time'

BUT:
nán-do/íku-tabi mo zya náí 'it isn't ever so
many (= very many) times'

The question arises whether it might be possible to generate a double *mó mó*, but all attempts to do so have failed the test of acceptability; we will have to say there is no *... *mó mo*, nor any *... *dé mo* [dé] *mo*, much less *... *wá wa* or *... *dé wa* [dé] *wa*.¹⁵ Accordingly, the following sentence must contain a misprint of a double for a single *wá*: *Mori Óogai wa wa semái ími de no búnsi de wa náku ... 'Mori Ōgai is not a literary man in the narrow sense but ...' (CK 985.292a.8). But an unmarked quotation will sometimes lead to a double-*wá*: *Dé wa, hái.*—*Dé wa wa yokei da* 'Well then, yessir.—The "well then" can be left out' (Fn 164a).

While ... *wá da* is relatively rare, though not unknown—*tóo no renzyuu wá desu né* 'the [political] party men, you see' (Tk 4.212a)—and perhaps needed in our grammar for further derivations, sentences with ... *mó da* are not uncommon: *Zyánbo ni nakú no wa zeikan daké de wa náí. Kookuu-gáisyá ya ryookoo-dairíten(¯) no séerusú-man mo da* 'It isn't just the Customs who are crying over the jumbo [jets]; it's also the salesmen for the airlines and the travel agencies' (SA 2670.139e); *Kono zubón mo desu ka?* '(Do you mean) these-trousers too [go to the laundry]?' (BJ 2.46). These examples result from propredication (§3.10). We would require a source with ... *mó da* in any event for certain further derivations: a sentence such as *watasi no íkutu mo no mondai* 'the ever so many problems that I have' contains an underlying structure *mondai ga íkutu mo [áru no] da* 'the problems are [existent to the extent of] ever so many'.

A similar sort of recycling will account for the occurrence, in certain types of colloquial sentence, of *mó ga*; the *mó* has been attached to the noun (N *mó da* 'it is also/even N') and then a subject is built on this: *Dáre mo káre mo ga ...* 'Anybody and everybody ...' (Miyara 1954.33); ... *nisen-nin mó ga atumáru ...* 'all of 2000 people gather' (SA 2830.88c); ... *nán-nin mo nánzyúu-nin mo ga, arúi-wa kizu-túki, arúi-wa kootai site hisómu(¯) góo ga ...* 'the trenches where soldiers by the dozens hid, either wounded or in retreat' (SA 2670.45a); *Taidan wa dáre mo ga dekiru monó de wa náí* 'Not just everyone can do dialogue interviews' (Endō 245); *Minsyu-syúgi to iu kotobá nara-ba dáre mo ga sitte iru* 'When it comes to the word "democracy" everybody knows it' (KKK 3.211); *Sikási kyósoo-áite ni náru monó ga, tán ni kyuyuu nómi de wa náku, kyóosi mo ga sono taisyoo to saremásu* 'But it is not just classmates who become rivals in competition, teachers also get treated as targets of it [the competition]' (Matsuda 24); ... *dáre de mó ga keiken suru kotó ga dekiru* 'anybody can experience it' (Nagano 1966.127). Another example of *dáre de mó ga* will be found on p. 170; I have also found an example of *dáre si mo ga*: *Sore wa dáre si mo ga tyuunen ni náreba iti-dó wa kangáeru kotó da* 'That's something that must occur to everyone when he gets middle-aged' (Endō 264). Examples of *máde mo ga* and *sáe mo ga* will be found in §2.3.3. We might expect a similar recycling to yield

15. There are Old Japanese examples of *wá mo*: ... *híru wa mo ura-sábi kurasi, yóru wa mo iki-zúki akasi ...* 'the days, I worry them through till dusk; the nights, I sigh them through till dawn' (Man'yō-shū 210).

*N mó o (or even *N mó o ba) but native speakers are adamant in insisting such phrases be reedited to N ó mo.^{15a} Even the mó ga examples are not without critics: dislike for the sentence Dáre mo ga odoróite ita 'Everyone was surprised' (though "it is often seen in newspapers") is expressed in SA 2658.39b, which points out that you don't say *Náni mo ga náí or *Dóko mo ga ippai da. Cf. Alfonso 747-8 with the example Dáre mo ga sitte iru 'Everyone knows it'; examples from the speech of the Emperor's brother Tōkahito and of the critic Tokugawa Musei will be found in Tk 2.123b.

Recycling may occur for other particles as well: ... nan-dánkai mo ni hiyaku sita ... '(which) has jumped over ever so many stages' (Yoshida 1973.11). From the point of view of what we hear on the surface, mó may turn up either before or after any particle other than wá (which it occurs before but not after), depending on whether the speaker wants to highlight the entire phrase or the noun only. In this respect, at least, mó differs from wá, for wá closes the phrase to any further internal structure.

It is sometimes assumed that because wá is—mistakenly, in my opinion—taken as the marker of a "topic" (= THEME), phrases with wá belong in the theme position, i.e. at or near the beginning of the sentence. It is true that themes (§3.9) are very often subdued with wá, but any of the adjuncts can be so subdued without moving to the thematic position. Below are examples in which the wá phrase follows the direct object (more examples will be found in §3.9a); the first three examples are marked for juncture to show how the ó-phrase has undergone thematization: Sonna báka na | híhan(⁻) o suru ningen o || watasi wa || keibetu simásu | yó 'I simply DESPISE a person who makes such stupid criticism'; Tatóe(⁻) (l) kutuu o tomonátte mo || nikutai-teki na zyuusokú-kan o || onná wa | motoméru no | yó 'Women SEEK a feeling of physical fulfillment even if it is accompanied with anguish'; Soko no tokoró o || watasi-ra wa | mayoimásu | né 'THAT's the place we get CONFUSED, you see'; ... "Nissin-kóoku" to káita, sono insatú-butu o watasi wa mótte imásu 'the printed matter with "Nisshin School Ward" written on it is in my possession' (Shibata 1965.39); Kúniko no é o Ayao wa mukasi kara míte iru 'Ayao has been looking at Kuni-ko's painting for a long long time now' (lg 1965.70); Kono háru írai, súde ni zyuú-súu-tuu no syookái-zyoo(⁻) o, Sáeki(⁻) wa kuuhi site iru 'Just since spring Saeki has run through a dozen or more letters of introduction with no results' (lg 1965.69); Óita háha no karada no, onná de aru utukúsi-sa o Kúniko wa koohuku ni kan-zita 'Kuniko felt the womanly beauty of her aged mother's body to be a blessing' (lg 1965.76); ... kore o wakati-gaki tó wa iwanai 'this we do NOT call word-spaced writing' (Shibata 1965.183).

Normally we do not expect to find a theme in an adnominalized sentence (§13.1). At one time I took the position that within an adnominalization any adjunct might be highlighted but only the subject could be subdued—with the subdual achieved by substituting nó for gá (§13.1.6). Accordingly, while admitting that you could say such things as otokó mo nómu o-sake 'liquor that the man, too, drinks' and utí(⁻) dé mo o-sake o nómu otokó 'the man who drinks liquor at home, too', I predicted that parallel sentences with backgrounding would be absent except for otokó no nómu o-sake 'liquor that the man DRINKS'—the others maintaining their simplex forms o-sake o nómu otokó and utí(⁻) de o-sake o nómu otokó, etc. But now I question and largely reject that position, as can be seen from the discussion in §13.1.6. In any event, my earlier view would have to be adjusted to allow for the adnominalization of sentences that point up two contrasts: Sake

15a. Yet an acceptable example is offered in Nihongo-kyōiku 16.85 (1979): Dótti mo o kobánda 'I opposed both'.

wa nómu ga tabako wa nománai otokó da 'He is a man who drinks but doesn't smoke'; Otokó wa nómu ga onná wa nománai o-sake da 'It is a liquor that the man drinks but the woman doesn't'; Inú wa tabéru nikú desu ga, ningen wa tabénai nikú desu 'It is meat that dogs will eat but it is meat that men won't eat'. We must also take account of subdual in sentences adnominalized to certain postadnominals such as kotó, nó, or hazu; though most such cases will probably turn out to be subdued themes.

Another example of wá within an adnominalization: ... meisi to site sono mamá^[1] kotei surú ni wa igi-teki ni hu-tékítoó na monó mo, sukúnáku nákatá 'And there were quite a few that were semantically unsuitable to be directly fixed as nouns the way they were' (Sakakura 301)—surú ni is a direct nominalization equivalent to surú no ni 'for the doing', and the backgrounding by wá is applied to bring out the negative prefix in hu-tékítoó 'unsuitable' for which ... surú {no} ni is the complement. And this example has both high-lighting (of gerund) and subdual (of adverbialized copula) in an adnominalization: ... mimi de kiité mo kantan ní wa wakaránai katakana-éigo 'Japanized English that is NOT easily understood even when HEARD BY EAR' (Ōno 1966.238). The following example is an adnominalized conjoined sentence that subdues the subject of the first predicate and highlights the subject of the second, both of which are the "possessed" of the epitheme (syoonen 'youth'), which is an extruded genitive serving as subject of the larger sentence: Gakkoo no seiseki wa wáruku, taisoo mo hu-tókui datta syoonen ga, ítu-no-má-ní-ka, kéizi no sitá o makaseru hodo "atamá^[1] no íi doroboo" ni hensin site ita 'A youth who had bad grades and was none too good at athletics, either, had all too soon turned himself into enough of a "clever thief" to set the detectives' tongues clicking (in admiration)' (SA 2645.110). There are also quasi-idiomatic cases, as in íma wa mukasi no {1} haiyuu mítai ni 'like an actor of days gone by'.

From what has been said it follows that any or all of the adjuncts can be subdued or highlighted, and our grammar must admit all possible combinations of focus-marked phrases, however far we must look to find the situation that will fetch each of them:

N wa N wa N wa V	N mo N mo N wa V
N mo N mo N mo V	N mo N wa N wa V
N wa N mo N mo V	N mo N wa N mo V
N wa N wa N mo V	N wa N mo N wa V

(By "N" here we mean noun or noun + case marker, with the understanding that gá and ó are obligatorily suppressed, as noted earlier. The marker ní is also sometimes suppressed—at least when the phrase is thematized; see p. 227.)

In the following example of three wá-marked adjuncts in a row, the first and last are subdued adverbials: ... Kokugo-singíkai, monbú-syoo to iu monó ga áru kágiri WA, sore WA, osóraku WA eien ni áru ka mo siremasén ga, ... 'As long as the institutions of the Language Council and the Ministry of Education are with us, that, I daresay, may exist forever' (Fukuda in Ōno 1967.204). The sentence Sikási káno-zyo wa wareware ní wa, tití wa sinda to itta 'But she told us her father was DEAD' (Ig 1962.89) has three instances of wá-marked adjuncts following each other, but the third is embedded in a quotation, so for our purposes here it will count as an example of two in a row.

Past discussions of the particle wá have typically dwelt on the somewhat narrow question of when to use gá and when to use wá; the title of Imbrie's insightful 1914 treatise

is simply "Wa and Ga". And in 1973 Kuno devotes two carefully written chapters to the differences between *wá* and *gá*. Following Kuroda's observations, Kuno tells us that when the particle *gá* marks the subject of a statement, that subject may either represent part of a NEUTRAL DESCRIPTION, as when the sentence answers the question 'What happened?', or an EXHAUSTIVE LISTING, as when the sentence answers the question '[Just] who did it?'. If the predicate expresses a PERMANENT STATE, N *gá* can express only the exhaustive listing; that is why *Watasi ga isya da* 'I [and only I] am the doctor' does not answer the question 'Who am I?' but rather 'Just WHO is the doctor?' (the ordinary question *Isya wa dáre* 'Who is the doctor?' will be answered with *Isya wa watasi da* 'The doctor is me'). If the subject is quantified, however, N *gá* can be taken as a neutral description even for a permanent state: *Hutarí ga Nihon-zín da* 'Two of them are Japanese' (or, 'Two [and only two] are the Japanese'). With predicates that do not express permanent states (instead expressing action, existence, or temporary states) N *gá* is ambiguous as to whether it represents the neutral description ('What happened?') or the exhaustive listing ('Just who did it?'). But with a first-person subject (*Watasi gá*), or with other persons who are described as moving or located with respect to oneself, the interpretation as neutral description is apparently precluded because "It seems that the speaker is not allowed to look at his own action or existence objectively, and describe it as if it were a new event." According to Kuno, if there is more than one N *gá* in the sentence that might be taken as exhaustive listing, only the earliest (the leftmost) will receive that interpretation. (Possible exceptions like *Dáre ga dáre ga kowái* 'Just who is afraid of just whom?' are slightly removed from normal patterns.) Moreover, "The distinction between the thematic *wa* and the descriptive *ga* and the exhaustive listing *ga* neutralizes in subordinate clauses. All three are realized as *ga* ...'. What this helpful description of Kuno's boils down to is that N *gá* in all sentences MAY localize the emphasis (so that the question is about N, not S) and in certain situations can ONLY do that, as in the unsubordinated identificational sentence; but in many situations it is not required to do so: most sentences with N *gá* are ambiguous as to whether they are answering questions localized on N *gá* or questions about the sentence as a whole (or localized on some other adjunct), just as sentences with N *ó* are usually ambiguous in the same way—unless the localized emphasis has been preempted by a specifically interrogative adjunct elsewhere or by an N *gá* that can only be interpreted as 'N and N only'.

Although to some extent I have broken with traditional views of *wá* and *gá*, I feel it is important to consider some of the factors that have favored the persistent discussion in terms of that dichotomy. First, the traditional question points to the special nature of the SUBJECT (= *gá*-marked adjunct) in the surface structure of the sentence. To be sure, at a deeper level of structure—following the view of modern Japanese grammarians that the sentence is "a dragon that has many heads [= adjuncts] but a single tail [= predicate]"—we can assume a simple dependency for the various meanings of the surface subject (*viz.* agent, attributee, identifier, etc.) that seems little different in importance from various kinds of direct and indirect objects, etc.; but a closer examination will reveal a number of reasons to assign special primacy to the subject in Japanese—and perhaps in all languages. Some of these reasons are:

- (1) Separate from thematization, there is a process of SUBJECTIFICATION, whereby under certain conversions various adjuncts are marked as if the subject (see §7.1, §9.1.8).
- (2) Virtually any predicate can take a subject but objects are more restricted—by the

transitivity of the verb, for example. Direct objects are highly verb-specific; there are only certain things one can “tweak” though anyone with fingers can play the game.

(3) In the “neutral” surface order (see §2.1) the subject precedes indirect and direct objects.

Probably related to the latter point is the fact that both ellipsis and thematization appear to be more common for subjects than for objects. And so, we can ask whether a careful study would not show that *wá* (in all its functions, here put together as “subdued focus” or “backgrounding”) more often represents a subdued SUBJECT *gá* → *wá* than any of the other cases—perhaps even than all combined? In any event, from the remarks about the primacy of subjects that we made above, it follows that *gá* → *wá* is almost bound to be more common than *ó* → *wa*, unless the amount of subject ellipsis in a text should prove overwhelming.

I once wondered whether statistics might show, conversely, that *ó* → *mó* is more common than *gá* → *mó*, but the evidence does not support this speculation. From the statistics on modern written Japanese in KKK 25 it appears that *mó* marks a thematized subject almost seven times as often as a thematized object; and *wá* marks a thematized subject THIRTEEN times as often as it marks a thematized object, bearing out my remarks on *wá* above, which were written before these statistics had come to my attention. It is interesting to figure some ratios from the raw figures given in KKK 25.74–90:

<u>Percent of set</u>	<u>Surface particle</u>	<u>Percent of subset</u>	<u>Syntactic role</u>	<u>Percent of roles</u>
.3519	<i>wá</i>	.7595	thematized subject	.6119
			thematized object	.0475
			thematized other	.0458
			non-thematized ^a	.2949
.1114	<i>mó</i>	.2405	thematized subject	.4131
			thematized object	.0629
			thematized other	.0293
			non-thematized ^b	.4947
.3206	<i>ó</i>	.5973 (of which .0437 are not direct object)		
.2161	<i>gá</i>	.4027 (of which .0143 are not subject)		

a. This includes adverb, gerund, infinitive, etc. + *wá*.

b. This includes adverb, gerund, infinitive, etc. + *mó*.

From these statistics we conclude that the subject is focused and thematized rather more often than not—almost 56 percent of the time; that the object is overwhelmingly NOT focused—being marked by *ó* almost 90 percent of the time; and that the ratio of all subjects to all direct objects is about three to two. It should be kept in mind that we have excluded statistics on less common markers of focus, restriction, etc., and that the grammatical analysis in KKK 25 differs in a number of ways from the one in this book. Moreover, the figures largely reflect unreduced surface sentences; this means, among

other things, that extruded epithemes are not counted for the roles they play in the adnominalized sentences from which they were extruded. Statistics on these roles would be of considerable interest, but unfortunately none are available.

An illuminating discussion of the Ryūkyū reflexes of the *wá/mó* opposition will be found in Chamberlain 1895, especially p. 39: AGGREGATION [= *mó*] is the opposite of Isolation [= *wá*]. While the latter process singles out a word and puts it in a place by itself, Aggregation joins it to other words and shows that there is nothing special or peculiar about it, somewhat as "too," "also," "and," "even," do in English.

And, p. 29: "Isolation" corresponds to the use of an emphatic accent, or to such phrases as, "with regard to," "*quant à*," or [mén] and [dé] in Greek (when two "isolated" words are opposed to each other antithetically). Perhaps its grammatical nature may be still more aptly illustrated by such current expressions as *Le convoi, quand part-il? Cette guerre, qu'en pensez-vous?* where *le convoi* and *cette guerre* are, so to say, lifted out of the regular context of the sentence, and put away in a place by themselves. What we should term the subject of the sentence is sometimes thus isolated; but as often as not it is some other word, and sometimes a whole phrase.

No attempt is made by Chamberlain to disentangle thematization from focus; thus by "isolation" he refers primarily to SUBDUED THEMATIZATION, while subsuming simple backgrounding or subdual under that heading; and he is probably unaware of the existence of HIGHLIGHTED thematization, as well as peripheral forms of focus marking.

It is sometimes claimed that there are dialects which do not distinguish *gá* from *wá* (or its local equivalent *yá*), e.g. A waji-jima in Wakayama (Zhs 4.23). I suspect that what is involved, however, is a phonetic convergence that produces identical surface representations such as *kazzya* and *ussya* for *kaze ga/ya* and *usi ga/ya* (Zhs 4.25); cf. *ame 'a = áme* [g]a in Mie (Zhs 4.51). Notice that *bá*, an etymological reflex of *wá*, is used to mark the direct object—perhaps as an abbreviation of *ó ba?*—in widely scattered parts of Japan, e.g. the Ryūkyūs, Kyūshū (Zhs 6.17 n10), and (Zhs 1.21) northeastern Honshū (including Chiba, Zhs 2.225, 244).

2.3.1. Uses of *wá*.

The tag translation of *wá* usually favored by the foreign student is 'as for'; sometimes, especially when the phrase is a subdued theme, the translation 'guess-what' will bring home the flavor of the shift in focus. In addition to the application of *wá* to a theme—optional, since the theme could be left unsubdued or could be highlighted with *mó*—there are three distinct situations that will lead the speaker to choose backgrounding with *wá* for one or more of the predicate adjuncts. And, interestingly enough, none of the resulting sentences will be grammatical if *mó* is substituted for *wá*.

Thus these three situations will conjointly indicate the meaning of *wá*—and, by exclusion, also of *mó*, serving to define the difference between the two markers. The highlighting or subdual of the THEME, on the other hand, puts the difference between the two into minimal contrast.

The three situations are these:

(1) You are asking—or answering—a question about some other part of the sentence: *Anó-hito wa dáre ga yonda* 'Who called him?'; *Anó-hito wa dáre o yonda* 'Whom did he

call?' Notice that Anó-hito wa ... would normally call for major juncture (for that is usual before an interrogative) and thus look like an instance of thematization; but since *Anó-hito mo ll dáre ga (or dáre o) yonda is unacceptable, we must conclude that here the major juncture is not diagnostic of a theme but rather is called for (more or less obligatorily) to reinforce the shift of focus onto the interrogative word. This use of wá is so common that a fragmentary sentence N wa ... will usually be interpreted as ellipsis of an interrogative adjunct along with the predicate; thus O-namae wa ... 'Your name?' is short for something like O-namae wa nán desu ka (or ... nán to ossyaimásu ka) 'What is your name?'—cf. Sikási, sono zissai-teki zígyoo wa to iu to, ... 'If you ask what about (= When it comes to the question of) practical undertakings ...'; Kóokai(¯) no hoo wa to iéba, ... '[If you ask about =] When it comes to the matter of the voyage' (SA 2679.150). That may be the origin of the common greetings Konniti wa 'Today [how are you] = Hello' (said from late morning till evening) and Konban wa 'This evening [how are you] = Good evening = Hello' (said from dusk on); since these are greetings, they are usually said with a deadpan intonation that removes the basic accent of kónban and kónniti, utter seriousness being the appropriate stance for most Japanese formality. The implied question can be yes-or-no, often áru ka or its negative: Yuubin wa?—Nái 'Mail?—None' (SA 2674.91a); Kore kara kurasikku-gítáa o kokorozásu hitó-tati ni náni ka tyuukoku wa [arimasén ka] '[Do] you have] any advice for those who aspire to the classical guitar in the future?' (SA 2679.119de). Advertisements and slogans sometimes take advantage of the appetite-whetting characteristics of subdued focus: Sen-en de bíiru wa nomi-hóodai 'For a thousand yen—all the beer you can drink' (CK 985.268). Since every statement potentially answers a question, it follows that virtually ANY sentence may contain an adjunct with wá. But wá almost never follows a question word such as dáre 'who', náni 'what', ítu 'when', etc., for you do not want to focus attention AWAY from the heart of your question.¹⁶ Yet you may find times when this rule ("Avoid wá after a content-interrogative") is overridden by the third use of wá—to set off an item in contrast. Some speakers will apparently accept the sentence Dáre wa moratte dáre wa morawanai to iú no wa yóku nái 'It isn't nice to talk about who gets some and who doesn't', but most speakers will feel more comfortable with gá instead. An authentic example: Dóko ni dónna tabemónó-ya ga átte, soko no náni WA taihen kékkoo da o-nédan mo mata kékkoo da to ka, ... '(talking of) what kind of eating places are where and what they have there that is handsome but so is its price, and ...' (CK 985.393). Something of this sort probably accounts for such clichés as these: náni wa | tó-mo-are (= tó-mo-kaku = tó-ni-kaku) 'anyhow, in any case, nevertheless'; náni wa | sáte-oki 'above everything, first of all'; náni wa | náku to mo 'at least, only' as in "Náni wa náku to mo Edo murásaki" 'All you need is Edo Purple [brand of seaweed]' (CK 985.380); ítu

16. Both the juncture and the initial accent of the interrogatively used indeterminates (dáre, dóre, náni, dóko, ítu, dóo, etc.) may be part of the realization of the interrogative sememe, since for many speakers the words are atonic when they are used in generalized expressions such as dáre de mo 'anybody at all' and dáre mo '[not] anybody'. It is unclear to me at the moment whether the generalized phrases are to be accounted for in terms of a suppression of underlying accent or whether the interrogative phrases, together with the generalized, are to be derived from abstract underlying forms that are atonic (*dáre as an equivalent of dáre ka 'somebody' or, better, of hito 'a person') and acquire their initial accents and concomitant major junctures as a representation of the interrogative meaning. The indefinites such as dáre ka 'somebody' are clearly derived from full nominal questions—Dáre [da] ka 'Who is it?'—as explained in § 15.6.

to wa | nási ni 'before you know it, in no time at all' (SA 2659.33d); nan-to-wa-nási ni = nan-to-náku 'somehow or other; vaguely'. It is not inevitable that a content interrogative will subdue some other adjunct; even N *gá* INTERROGATIVE occurs: Kore kara Karúizawa ga dóo kawarú ka 'How will Karuizawa change next?' (SA 2642.46a); Mírai no Nihon-go ga dóo náru ka wa, ... 'The question of what will happen to the Japanese language of the future ...' (Shibata in Ōno 1967.104); Onná-no-ko no kao ga dóo, tosi ga dóo, to itta misé ya [= zya] náí 'It isn't an establishment of the sort where you worry about how the girls look or how old they are' (SA 2793.123b).

(2) You are denying something about some other part of the sentence. Thus Tabako wa náí 'There aren't any cigarettes' negatively answers the question (or the possible question) Tabako ga áru ka 'Are there any cigarettes?' What is being denied is the statement contained in the NUCLEUS (here existence vs. non-existence). Compare the sentence Tabako ga náí 'It is cigarettes we're out of' which does not deny any statement of the nucleus (existence vs. non-existence) but instead answers a question about the subject of a negativized statement: Náni ga náí ka 'What don't we have? = What do we lack? What are we out of?' Notice that Tabako mo náí 'We haven't any cigarettes either/even' is not used to deny the statement questioned as Tabako mo áru ka 'Do we have cigarettes too/even?' (the appropriate denial being Tabako wa náí) but rather to confirm the negation of a questioned negative statement Tabako mo náí ka 'Haven't we any cigarettes either/even? = Do we lack cigarettes too/even?'. (The answer to the negatively put question Tabako wa/ga náí ka 'No cigarettes?' will usually omit the adjunct: Náí 'No cigarettes' or Áru 'Yes, there are'.) The polarity of *wá* and *mó* is nicely displayed in sentences that deny permission vs. those that grant it: -té wa ikenai 'mustn't do it' vs. -té mo ii 'may do it', the particles (especially *mó*) imparting an optional emphasis; see §9.2.2.

Observe these examples that use adjunct subdual in order to play up the negative:¹⁷ Sikási kore wa, karada ni ii ka dóo ka, isya ní WA máda kiite inái 'But I haven't yet asked the doctor whether this is good for the body (= one's health) or not' (CK 985.368); ... kosi o orósu isu o mitukeyoó to sitára, aita isu WA maru-de náí 'when I tried to find a chair to sit in there just wasn't a single vacant one' (CK 985.269); Góhan WA nákereba náí de sumimásu 'If there's no rice, we'll get along without it' (SA 2684.18d)—cf. §9.2.4 (10); ... isyoku no hitó da ga, hakusi-goo WA tótte inái kara, Dóitu de wa hutuu, kyóozyu(¯) ní mo narénaí '... is an unusual person but in Germany he could not actually become a professor since he lacks a doctor's degree' (SA 2656.153b); Zí no kakéru hitó wa é WA kakénaí 'People who can write can't draw' (SA 2663.44d)—cf. Zí no kakéru hitó wa é MO kakéru 'People who can write can draw, too'; Syobun-nákama no D [D'ii], É [ii] kyóoyu(¯) wa itigatú^[1] ituka ni "taisyo-ú-tódoke" o dásita mama^[1] gakkoo é WA déte kónai 'Instructors D and E of the group under disposition sent in their resignations on January fifth and haven't shown up at school since' (SA 2665.26c); Móo áto e WA hikenai 'Now we can't retreat' (SA 2671.28b); ... sore tó WA sirazu ... 'not realizing it to be that' (Shibata 1961.85); Ooyake ní WA sarenaí ga, kono kíti ga erinto-kíti de aru kotó wa tásika da 'It is NOT made public, but the fact is beyond question that this base is an elint [electronic

17. The *wá* in question in each sentence is written in capital letters, but this should not be misinterpreted as calling for special stress, intonation, or juncture. Such phenomena occur, but we are disregarding them in this book; in any event, the particular sentences given here do not illustrate the situations where the special stress would be appropriate.

intelligence] base' (SA 2685.29d)—the focus is applied to a passivized (*sareru*) transitive mutative (*ni suru*) conversion, §9.1.11; *Genbaku ga dékite mo, unpan-syúdan no misáiru ga nákereba, yakú ni WA tatánai* 'Even if they make an atom bomb, without a missile as a means of delivery, it won't be of any use' (SA 2678.136c); *Kéredo mo, dékite simatta monó wa, móto ni WA modoránai* 'But what has been accomplished will not return to its former state' (SA). The last example might be regarded as an instance of loose reference (§5.4), i.e. meaning *móto ni modóri wa sinai* (what, other than *móto*, COULD it return to?), as might many of the other examples.

By "negative" we refer to a semantic category that encompasses more than just the negative conversions of §8. An example of subdual to play up a lexicalized negation represented by the prefix *mu-*: *Dái yón-syoo de wa, sore máde no toozyoo-zínbutu to WA mattakú^[1]MU-KÁNKEI no húuhu ga toozyoo suru* 'In the fourth chapter, a married couple appear who are totally unconnected with the characters in the story up to that point' (SA 2688.89a). And the predicate *tigau* 'it differs' is similar: ... *Tooei no monó to WA tigatta omosíro-sa ga áru* ... 'has a delightful quality different from Tooei's films' (SA); *Mukasi tó WA tigatte* 'Different from days gone by ...' (SA 2689.17a); *Hón ya éiga(¯) de míru no to WA tigatte* ... 'Different from what you see in books and movies ...' (SA 2673.47a). The verbal noun *taisyo* 'contrast' is apparently also similar; in the following example it has been lexicalized (§3.8a) into an adjectival noun with the suffix *-teki* and then adverbialized (§9.1.11): ... *Súwán séntyoo-ra to WA taisyo-teki ni*, ... 'in contrast with Captain Swan and his group ...' (SA 2674.129e). Expressions of difficulty (i.e. lack of easiness) have negative implications: ... *yooi ní WA hanzi-gatái kotó datta* 'it was a matter difficult to judge' (Fn 237b). The negative domain for purposes of focus is thus somewhat larger than that for *sika* (see p. 80) or for *dókoró* (see p. 931). We might do well to include, for example, certain privative verbs; that would help explain the subdual of the object of the gerund in this sentence: *Kyuusyó(¯) WA hazusite útta no ka* 'Did you shoot aiming AWAY from vital spots?' (SA 2681.128d)—perhaps freely to be translated as 'Did you shoot so as not to kill?' There is also the precopular noun *betu* 'separate/distinct (from)' with its reciprocal valence (§3.6): *Kore tó WA betu ni*, ... 'Apart from this, ...'; *Pikáso to WA mattakú^[1] betu no gaka* 'An artist quite distinct from Picasso'. And several other words that contain the morpheme *betu*, e.g. the precopular noun *békko(¯)* 'separate': ... *kokugo-séisaku to WA békko(¯) no tokoró de*, ... 'quite separately from the policies toward the national language' (Kaneda in Ōno 1967.271). Sometimes with *betu* the reciprocal adjunct is highlighted: *Hámako zísín wa, tití to MO betu no kantén(¯) ni tátte irú no da to kangáeta* 'Hamako felt herself to have quite a different viewpoint from her father' (Fn 236b). Notice also the use of *wá* in ... *kázín ni WA naisyó(¯) de* ... 'without letting anyone in the family know about it' (Endō 115).

(3) You are supplying information about the points of contrast between grammatically parallel adjuncts in two sentences, e.g. between two subjects or two objects. In English you will normally use stress (=accental prominence) to call attention to the two ITEMS in contrast, but Japanese subdues both the items (with *wá*) in order to play up their points of DIFFERENCE: *Kore wa ookii ga, sore wa tiisái* 'THIS is big, but THAT is little'; *Ryóori wa ore ga surú ga, kaimono wa ootoótó ga suru* 'The cooking is done by ME and the shopping by my little BROTHER'—or, reversing the adjuncts to prevent any assumed thematization of the *wá* phrases; *Ore ga ryóori wa surú ga, ootoótó ga kaimono wa suru* 'I do the cooking and my little BROTHER does the shopping'. Notice that a sentence like

*Kore mo ookii ga, sore mo tiisai 'This too/even is big but that too/even is little' will generally be rejected not merely as anomalous but as ungrammatical. A sentence like Kore mo ii ga sore mo kamawanai 'This is OK but that is all right too' is different in structure; although Kore wa ii ga sore wa kamawanai is possible, the meaning is not 'This is good but that (by contrast) is all right', a semantic incongruity, but rather 'This (in contrast with your expectations or denial) is good, and that (in contrast with other expectations or denials) is all right', a more likely sentence being Kore wa ii ga sore mo kamawanai 'This is good, to be sure, but that is all right too'. Other possibilities include [?] Kore mo ii ga, sore wa kamawanai 'This too/even is good and that—in contrast with your expectations or denial—is all right'.

In the following example the first wa subdues a thematized subject ('dog') and the other two point up the contrast between two different verbal nouns (syoo = syooben 'urinating' and dai = daiben 'defecating'): Uti(-) no o-inu-sama wa oogata no korii de, syoo wa sanpo no toki ni suru ga, dai wa doo sita wake ka, niwa no undoo-zyoo de suru 'Our "Sir Dog" is a large collie and he does his sprinkling as he walks but for some reason he does his dirtying on the playground in the (public) gardens' (SA 2671.118d). An example in which the subdued time of an adnominalized sentence is balanced by the subdued time of the predicate of the matrix sentence: Mae wa ik-ko niyakuen mo sita no ga ima wa hanne(-) [de], ... 'What before cost a whole two hundred yen each is now half price, and ...' (SA 2679.115a).

Perhaps the expression "grammatically parallel adjuncts" used above is too strict, since it is ultimately MEANINGS that are put in contrast. The following sentence uses a subdued ablative balanced by a subdued dative(-allative) so as to play up the contrast between antonymous predicates: Seisan-sya KARA WA takaku kai, syohi-sya NI WA yasuku uru. Kono syok-kan [= syokuryoo-kanri] wa ii seido da 'They buy from the producer [= rice farmer] at a high(er) price and sell to the consumer at a low(er) price. This Food Control is a good system' (SA 2684.20c).

Are all three of these situations to be regarded as phases of a single situation? It has been suggested that perhaps "contrast" is always involved, and that will serve as an argument in favor of the traditional view that there are two and only two uses of wa—to mark "topics" and to show "contrast". But when we consider that the negative answer to the question Sora ga(/wa) kumotta ka 'Did the sky cloud up?' is Sora wa kumoranakatta 'The sky didn't cloud up' it is clear that there is no contrast with any other adjunct—for what, other than the sky, COULD cloud up? Thus, "contrast" in such a sense must be broken up into three specific kinds in any event: contrast with the grammatically parallel counterpart in a paired sentence, contrast with an interrogated adjunct within a single sentence, and contrast with a negativized nucleus of a single sentence. Since we regard questioned statements as an interrogativization of the entire sentence and not just the nucleus but leave open the possibility that the negativization may apply to the nucleus instead of (or as well as) to the sentence as a whole, it might be possible to regard interrogative and negative as aspects of the same thing—shall we call it the UNCONFIRMED?—and treat the contrastive pairing of sentences as a kind of contingent confirmation, i.e. UNCONFIRMED + UNCONFIRMED = JOINTLY CONFIRMED, that being the meaning of the construction.

There are a number of other factors that go into the selection of subdued focus. The tendency to subdue a THEME (see §3.9) reflects the fact that backgrounding suggests the

OLD (the KNOWN) where normal marking of subject and object (*gá/ó*) and the like presents the NEW (the UNKNOWN). Thus a subdued subject or object (N *wa*) often is understood as definite (SPECIFIC) 'the N' or general (GENERIC) '(any) N' where the unsubdued N *ga/o* will often be taken as indefinite (UNSPECIFIC) 'a/some N'.

Quantity words are sometimes subdued or highlighted for reasons not immediately obvious:¹⁸ *Syúu ni san-kái WA kúru* 'I come A GOOD three times a week' (SA 2662.97a); *Hahaoya ga tukí ni iti-dó WA Kóobe e yoosu o mí ni iku kotó ni nátte imásu ga, ...* 'We have it arranged so that his mother goes to Kóbe once a month, AT LEAST, to see how things are, but ...' (SA 2676.30d).

On the obligatory subdual of the Identified in an identificational sentence when, as in the unmarked situation, the Identifier N *gá* is predicated (becoming N *dá*), see § 3.10.

There are certain puzzling occurrences of N₁ *wa* N₂ that are to be explained as subdued thematization of various kinds of genitives, as described in § 3.11.3. But there are also sentences which apparently subdue a genitive without actual thematization, since the phrase is buried in the heart of the sentence, as illustrated by this example of a partitive (or, conceivably, a locative) genitive *Tookyoo nó* 'of/in Tōkyō' that has been subdued to *Tookyoo wá*: *Sendatté¹ no yóru kú-zi ˘góro, Tookyoo WA Den'entyoohu-ekimáe(˘) no róotarii de, éiga(˘) no rokéesyon ga okonawarete ita* 'The other evening around nine, in the traffic circle in front of Tōkyō's Den'en-chōfu station there was a movie being shot on location' (SA 2681.117a). And here, perhaps, is a similar case: *Watasi wa, daigaku WA gengogák-ka o demásita* 'It was the linguistics faculty of the university that I graduated from' (Shibata in Ōno 1967.69)—in the translation the major stresses go on 'linguistics' and 'I'. For further discussion of phrases of this type, and examples with highlighting (N₁ *mo* N₂), see p. 664.

Vardul (52) presents some examples of an "emphatic GA" which might seem to call in question our treatment of all instances of *gá* as marking a basic case and all instances of *wá* as the result of some secondary process. The examples, from various modern authors, are these: *Itiniti-itinití GA || nán to mo | kakkoo no tukánai || kawai só na | sógata de || seikatu site iru* 'Day after day I'm [?] living an indescribably ugly and pitiful existence' (Ishikawa Tatsuzo); *Sore yúé ni || gózen ˘tyuu no yo-zíkan GA || otitukanai kimoti de átta* 'For that reason the whole four hours till noon I was disturbed' (Ishikawa Tatsuzo); *Akari no túku made GA || myóo ni | otitukenákatta* 'Until the light came on I was strangely upset' (Shiga Naoya); *Sá | sá || dóozo || o-agari asobasite || koko GA || itiban sususii kaze ga | kimásu | wá* 'Come come, please come up here, HERE is where the coolest breeze comes' (Ishikawa Tatsuzo); *Hi¹ [l] názo wa || bóku(˘) ga taku yo || atúi | tokí ni wa || sore ga [l] káette || hisyó no | ryoohoo ná n da. || Áto GA || susúsikute || báka ni | kurasi-ii | zé* 'The fire and all / take care of setting; at hot times that is, surprisingly, the best way to cool off; afterward it's so cool you feel mighty comfortable' (Fujimori Seikichi).

These examples all involve TIME or PLACE, they smack of written-style versions of speech, and they are probably best explained by ellipsis of somewhat unusual sentences like these: *Itiniti-itinití GA ... seikatu site iru* [AIDA DA]; *... yo-zíkan GA ... kimoti de átta* [AIDA DA]; *Akari no túku made GA ... otitukenákatta* [TOKÍ/AIDA DA]; *... koko*

18. Cf. Aston 51: "Frequently the force of *wa* is very faint, and its presence or absence makes no appreciable difference in meaning."

GA ... kaze ga kimásu (= kúru) [TOKORÓ DA] né; Áto GA ... kurasi-ii [TOKÍ NI NÁRU] zé—or could this one be explained as from Áto ga susuzíi?

What we propose is that these sentences can all be regarded as identificational, with the *gá*-marked phrase being the identifier of the omitted abstract noun of time or space. (For a somewhat different explanation of what is omitted, see §3.10a). The unusualness of the sentences is due to the special emphasis put on the identifier, since the more usual form of the identificational sentence puts the identifier into the essive predicate and obligatorily subdues the identified (see §3.10): ... otitukenákatta aida wa ... akari no túku made da; ... kaze ga kúru tokoró wa ... koko da.

The sequence *dé wa* in any of its uses optionally contracts to *zyá[a]*: Tyúugoku no hōo zya, dōnna hitó ni o-ai dēsita ka 'What sort of people did you see (when you were) in China?' (Tk 2.261a). Cf. remarks on the negative copula *de/zya náí*, §8.

2.3.2. Uses of *mó*.

The particle *mó* is usually translated 'even' or 'also', with appropriate adjustment of 'also' to 'either/neither' in negative sentences. These two translations seem to correspond to two distinct uses of highlighting: to call attention to the phrase in relationship with SOME other ('also, too') or ALL other ('even') similar phrases, which may or may not be explicitly mentioned. Extending from the 'also' meaning, pairs of grammatically parallel phrases can be translated 'both ... and ...', with adjustment to 'either ... or ...' or 'neither ... nor ...' in negative sentences.¹⁹ Such constructions are reductions from a double sentence with identity of nucleus, specifically a pair conjoined by the provisional as described in §9.3.2, where we suggest that *Tabako mo mátti mo áru* 'We have both cigarettes and matches' is to be treated as a reduction of *Tabako mo áreba mátti mo áru* 'If [it be true that] we have CIGARETTES EVEN, then [it is true that] we have MATCHES AS WELL' and *Úmi e mo yamá e mo ikanai* 'We will go neither to the sea nor to the mountains' is to be regarded as a reduction of *Úmi e mo ikanákereba yamá e mo ikanai* 'If [it be true that] we do not go TO THE SEA EVEN, then [it is also true that] we will not go TO THE MOUNTAINS EITHER'. Thus a surface sentence such as *A mo B mo yobu* can be ambiguous—in theory, at least—to the extent of ten meanings:

- (1) Both A and B call someone.
- (2) Someone calls both A and B.
- (3) A too (as well as C) calls B too (as well as calling D).
- (4) B too (as well as C) calls A too (as well as D).
- (5) Even A (as well as everyone else) calls B too (as well as calling C).
- (6) Even B (as well as everyone else) calls A too (as well as calling C).
- (7) A also (as well as C) calls even B (as well as calling everyone else).
- (8) B also (as well as C) calls even A (as well as calling everyone else).
- (9) Even A (as well as everyone else) calls even B (as well as calling everyone else).
- (10) Even B (as well as everyone else) calls even A (as well as calling everyone else).

The ambiguity results from these factors: case-marking is neutralized with the application of highlighting so that either A or B might be the subject (though more frequently

19. This use need not be limited to pairs; if more than two parallel phrases are included, the translation will be something like 'A and B and C, all three' or 'A (n) or B (n) or C, none of them'.

the subject precedes), the other remaining to be interpreted as the object; highlighting itself has two meanings, depending on whether the intended cross-reference is specific or general; and a pair of highlighted phrases may represent a reduction of two sentences connected by a provisionalized form of the same nucleus. When ALSO and EVEN appear in the same translation, the entire sentence stands in an implied relationship of a similar sort with some unstated provisionalized sentence that contains a specific parallel highlighted phrase (C mó) understood for the 'as well as C' part in parentheses above.

Some of the sentences may be disambiguated by a difference of junctures. Notice how the English translation shifts with the negative: A mo yobanai 'A doesn't call someone either' or 'Someone doesn't call A either', A mo B mo yobanai 'Neither A nor B calls someone' or 'Someone calls neither A nor B = Someone does not call either A or B', etc.

Although we assume that a parallel pair of highlighted adjuncts represents a reduction of predicate-identical sentences conjoined by the provisional S-réba (by way of optional ellipsis of the provisional form), there are other ways of conjoining predicate-identical sentences such as the gerund (§9.2) and the infinitive used as equivalent to the gerund (§9.1): ... kázu wa, heru kotó mo ári, huéru kotó mo áru 'the number ... sometimes decreases, sometimes increases' (Ōno 1966.170); Térebi mo náku, sinbun mo náku, zassi mo náku, rázio(¯) mo náí 'There's no television, no newspapers, no magazines, no radio—nothing' (SA 2684.101a). But when there is ellipsis of the first predicate, we will arbitrarily assume that the missing form is the provisional: Kuti kará mo hana kará mo ti ga huki-dásite kúru 'Blood starts to pour both from the mouth and from the nose' (SA 2679.39a); Kono kuni dé wa dóko made itté mo yamá ni mo nó ni mo kí ga náí 'In this country [= Greece] wherever you go there are no trees either on the mountains or in the fields' (SA 2677.72a); Tyúugoku wa hazímete?—Hazímete. Senzen ní mo sentyuu ní mo itte 'nai '[Was this] your first time to visit China?—Yes, it was. I didn't get there either before the war or during the war' (SA 2679.46c). The example Mukasi mo íma mo kodomo no kokóro wa sonna ni kawaranai ... 'Children are not all that fickle, neither today nor (were they) in years gone by' (SA 2676.20a) seems to have thematized the highlighted pair after they were conjoined; the immediately preceding stage would be kodomo no kokóro wa mukasi mo [sonna ni kawaranákereba] íma mo sonna ni kawaranai. Perhaps the earlier examples too have thematized the highlighted pairs in question.

A pair of highlighted adjuncts may get stereotyped with use and acquire idiomatic meanings: Mi mo huta mo náí kotó o kuti ni sité wa naránai 'You mustn't say things that have "neither content nor lid" (= that are lacking in substance)' (SA 2651.69d). For expressions such as N mo kusó/hetima/hé mo náí 'surely not N', see p. 899.

When we come across N₁ mo N₂ mo PREDICATE it is normal to assume that we are faced with the reduction of conjoined sentences as described here, and the two nouns will be objects (with obligatorily dropped ó) or subjects (with obligatorily dropped gá) of the predicate unless they are in a directly adverbial relationship (such as time). Thus in Kippu mo yakusoku mo irazu ... 'With neither ticket nor reservation required' (SA 2673.137b) and Móo yokú mo tóku mo náí 'I no longer find anything in it of (desire or profit =) interest' = 'I have lost all interest' (SA 2687.141e—cf. the noun yokutokú(¯) 'self-interest') each of the adjuncts in the highlighted pairs has obligatorily dropped the gá which marks the possessed, the immediate subject (= underlying object) of the verb of possession. And in Tabako mo sake mo yameta 'I've given up both cigarettes and liquor' the marker ó has

obligatorily dropped in each of the highlighted adjuncts. But the surface structure N_1 mo N_2 mo sometimes comes from other sources; in the following example the first adjunct has an obligatorily dropped *gá* and the second an obligatorily dropped *ó*: ... *Ráosu seihú-gun mo té mo dasénai* to iwareta '... and the Laos government forces [themselves] were said to be unable to do a thing (about it) (SA 2673.23b)—the highlighted object is an instance of loose reference, encouraged by the idiomatic meaning of *té o dásu* 'turns one's hand to'.

Although the conjoining is usually of a pair (as in *Hutarí wa gakkoo no kotó MO uti no kotó MO wasureta* 'The two of them forgot both about school and about home'—SA 2652.119b), there are examples of larger conjoinings: *Sóra ni MO, tutí ni MO, kabe ni MO otó ga nái* 'There wasn't a sound anywhere—not in the sky, not on the earth, not in the walls' (SA 2669.89b); *Ása MO, hirú MO ban MO, syokuzi no zikan ga tikazúku to ...* 'Morning, noon and night, when mealtime approaches ...' (Maeda 1962.206); *Kore wa mukasi MO íma MO, nisi MO higasí(¯) MO kawaranai nínzyoo de aru* 'This is human nature which does not change in either past or present, in either east or west' (Ōno 1966.115); *Zen-zen-zénpu MO zen-zénpu MO zénpu MO, koibito MO, minná^[1] soo iimásita yó* 'That's what they all said—my ex-ex-ex-husband, my ex-ex-husband, my ex-husband, my lover[s?], all of them' (SA 2685.46c). The expression *sore mo kore mo* (*minná*) '[both that and this =] each and every one of them (, all)' implies more than the two adjuncts expressed. The adverb *ití-mo-ni-mo-naku* 'readily, without a quibble' is from the phrase *ití mo ní mo náku* 'with neither one nor two'.

When followed by a negative, *mó* (or indeterminate + *mó*) often is translated as 'at all': *Ori-tatamérú kara basyo MO toránai* 'Since it can be folded up it takes no space at all' (SA); *Ore wa móo daigaku é MO ikanai tumori da* 'I don't intend to go (to the university =) to school any more at all' (SA 2651.25d). Alfonso (740 ff) notes that a number + *mó* translates as 'not even' when followed by a negative but 'all of' when followed by an affirmative predicate, as in *Iti-zíkan mo kakaránai* 'It doesn't take even an hour' and *Iti-zíkan mo kakáru* 'It takes all of an hour' or 'It takes one whole hour'; cf. *zyúu-nen mo sinai utí(¯) ni* 'within ten years'. Sentences with *mó* and a following negative sometimes suppress the accents of adjuncts in order to emphasize the negation; this is especially common when the earlier stretch includes an indeterminate: *Dáre ni áu hituyoo mo nái* 'There's no need to see anyone' will sometimes be heard as *Dare ni au hituyoo mo náí* (but never as **Dare ni áu ...*).

Adverbs are sometimes highlighted to emphasize unexpectedness ('surprisingly enough'): *kooun ní mo* 'luckily enough, by an extraordinary stroke of good fortune', *ígai(¯) ní mo* 'most unexpectedly', *mezurásiku mo* 'curious to tell', *háyaku mo* 'quickly indeed'; *Saiwai ní mo síkén o pásu sita* 'I was fortunate enough to pass the exam'; ... *guuzen ní mo Nihon-zín wa sono yóo na ten ni ki ga túku yóo⁽¹⁾ ni nári ...* 'quite by accident the Japanese came to notice such matters ...' (CK 985.295). On *-kú mo* as an abbreviation of *-kú mo átte*, equivalent to *-kute mo*, see §9.2.2. And there are other examples of highlighting for some sort of subtle emphasis that easily evades the translator: *Kóndo de Amerika MO naná-kai -mé [da]* 'This will be my seventh time in America' (SA 2664.97a).²⁰ Cf. Alfonso 742.

20. Perhaps the flavor of *mó* can be captured by an introductory 'Why, ...' in the English. Cf. Aston 54: "*Mo* is in many cases nothing more than exclamation of surprise, and has no specific meaning." But in *O-hima ga áttara uti no hoo ni MO o-asobi ni dóo-zo* 'Please come to visit at my house (too)

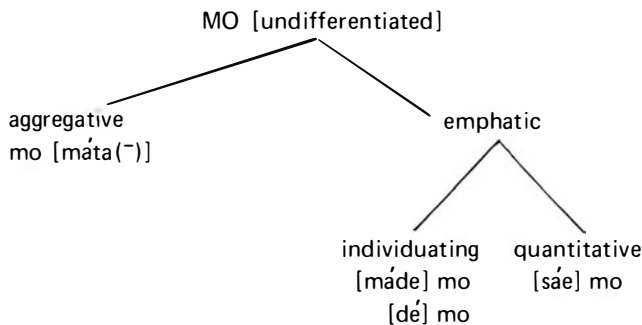

Alfonso 740 remarks on the tendency to highlight a nominalized sentence before certain predicates: S *nó* mo toozen/atarimae dá 'It is (only) natural (that S)'; S *nó* mo husigi zya náí 'It is not (is hardly) strange (that S)'; and we can add S *nó* mo doorí da 'It is (but) natural/reasonable (that S)'. Cf. p. 248. A similar type: S *nó* kará⁽ⁱ⁾ mo akíraka na yóo⁽ⁱ⁾ ni 'As is clear from the very fact that S ...'.

Sometimes the reference of *mó* is loose and the sentence implies highlighting of the nucleus rather than of the adjunct(s): Ní-nen no tokí no seiseki MO warúi; benkyoo MO sukí de wa náí 'Sophomore year his GRADES are bad; he is not fond of STUDY, either' (SA 2652.118b—the meaning is ... seiseki ga wáruku mo áru; ... benkyoo ga sukí de mo náí). See §5.4. Perhaps loose reference will account for the highlighting in this sentence: Kóoti ni sún-de iru hitóbito ga óó-i no de, Betonamu no tokusyu-bútau no héisi-tati ni kao MO yóku nite iru 'The people living in the highlands are numerous and (in) their faces much resemble the troops of the Vietnamese special forces' (SA 2673.23c).

Loose reference may be the best explanation also for such examples as Mígi ni mo itta yóo ni ... 'As I have (already) said above'; cf. ... mígi ni yooyaku mo sita hoohoo no syatei o hirogeru to tómo(¯) ni, hoohoo to sité no konpon-sei huhen-sei o mi-kiwametái no de áru 'While widening the range of the methods that I have (already) outlined above, at the same time I wish to ascertain their essentiality and universality as methods' (Morishige 165—yooyaku is a verbal noun, and the nuclear focus is masked by ellipsis: yooyaku [sí] mo sita). In the following sentence, it is unclear whether loose reference is a better explanation than simple emphasis: Sábaku(¯) no náka no tokai désu kara, dóoro mo suite 'rú desyoo 'It [=Phoenix, Arizona] is a city in the middle of the desert, so the STREETS (even/too?) should be empty' (SA 2664.96e).

Elsewhere I suggest that we might account for the two principal meanings of N *mó* by different types of ellipsis: N mo [máta(¯)] 'also' versus N [máde] mo 'even' or perhaps N [dé] mo 'even'. Norito Fujioka has suggested to me that a third meaning should be differentiated from the latter: 'all of (a quantity)', a meaning that we could perhaps account for as an ellipsis of N [sáe] mo as in ití-doru [sae] mo 'even a dollar'.

A componential treatment of the meaning of *mó* might take a form somewhat like this:

But there would seem to be some overlap in the usage of *máde* and *sáe*, so that I am uncertain whether the elliptical interpretations can be maintained as anything more than

when you have the time' the highlighting adds a conventional touch of modesty to the invitation. On the literary abbreviation N ní mo áre → N ní máre, see p. 962.

suggestive. The individuating *mó* will sometimes best translate as ‘the very’ or ‘itself/one-self’ as in *ínóti mó kákete* ‘at the risk of my very life’. And sometimes the appropriate translation is the unstressed indefinite article (singular ‘a’, plural ‘some’): ... to *iú no ga kyootuu-íken datta ga, náka ni wa tugí no yóo na kóe mo* [] ‘It was the consensus that ... but in the midst there were some voices [heard] as follows’ (SA 2673.110c—the ellipted predicate might be *áru* or *átta* or *déta* or *kikoeta*).

The view of *wá* and *mó* presented here can be visualized as a sort of seesaw or teeter-totter, with the focus particle at the fulcrum:

Notice that usually what occurs after *wá* is NEW information (Kore wa enpitu desu—sore WA pén desu ‘This is a pencil—that is a pen’) and what occurs after *mó* is OLD information (Kore wa enpitu desu—sore MO enpitu desu ‘This is a pencil—that is a pencil, too’).

2.3.3. Other particles of focus: *máde*, *sáe*, *súra*, *dáni*; *sika*; *nárade-wa*.

In the meaning ‘even’ *sáe* is a stronger equivalent of *mó*, and *sáe mo* is used for still heavier emphasis. The meaning ‘even’ is also conveyed by *máde* or *máde mo*, and we might consider accounting for the two principal meanings of *mó* (‘also’ and ‘even’) by saying that *mó* ‘even’ is really a shortening of *máde mo*; a similar explanation is needed—even more obviously—to detach *máde*₃ ‘even’ from *máde*₁ ‘up to’, an approximate synonym of the allative marker *é*. Thus we would be attributing all instances of ‘even’ to an underlying *máde mo*^[1] that is frequently abbreviated to *máde* and even more frequently abbreviated to *mó*. The suggestion is not intended to be historically realistic, and it could be upheld only to explain *mó* attached to nuclear adjuncts; the occurrence of *mó* after gerunds (*-té mo*) would be treated as a special case of simple *mó* even though the meaning would seem to be more ‘even’ than ‘also’. But the *mó* of *-té mo* is something of an oddity, in any event; the force of the polarization with *wá* (as in *-té wa*) is probably responsible for the appearance of *mó* where we would have reason to expect something like *tó* as in the literary opposition of *suré-ba* to *suré-do*, from a more abstract *suré* “-pa/-to as shown later (pp. 87, 89). Compare the colloquial *sit’átte* = *sité mo* (15.11).

Examples of *máde* as a focus particle: ... *taityuu-kánkei kaizen ni kóo MADE tikará*(⁻) *o irerú no wa* ... ‘That all this stress is laid upon improving relations with China ...’ (SA 2668.118c); *Burúutasu, o-mae MADE ka* ‘Et tu, Brute?’—also (SA 2668.98a) quoted as *Burúutasu yó, o-mae mó ka*; *Sosite, kikoo MADE MO kawatta* ‘Then even the climate changed’ (SA 2660.12a); *Itizi wa hutobóoru o tanosímu hodó NI MADE kaihuku sita Bureibáagu-si datta ga* ... ‘At one time [South African heart-transplant patient] Mr. Blai-berg had recovered even to the point of enjoying football but ...’ (SA 2641.118)—on the truncated identification sentence, see §3.10a; *Amerika dé wa konpyúutaa ga, túi ni daidokoro NÍ MADE háiru* ‘In America the computer at last gets even [or: all the way] in- to the kitchen’ (SA 2660.21); *Húró*^[1] *no náka DE MADE dókusyo*(⁻) *suru* ‘He even reads

while in his bath' (SA 2551.71c); *Uti*⁽¹⁾ *DÉ MADE* *hón o yómu hituyoo wa náí* 'There's no necessity to read books even at home'; *Moo hitótu wa, Asida san názo wa, konaidá áru syuppan-syukugákai no séki DE MADE saigunbí-ron o buppanásite*(⁽¹⁾) *oráreta* 'For another, Mr Ashida I believe recently was arguing for rearmament even at a party celebrating the publication of a new book' (Tk 2.244a); *Básu ga áru no ni, tákusii DE MADE ikanákute mo íi* 'We need not go by taxi when there's a bus'.

Although ordinarily the case markers *gá* and *ó* will be suppressed, in written Japanese you will find both *máde ga* (also *máde mo ga*) and *ó made*; notice the difference in order:²¹ *Koomei ga kawattá kara to itte, dentoo MÁDE GA kawaru hazu arimasén* 'Just because they've changed the name of the school it doesn't follow that all the traditions, too, will change' (SA 2665.127e); *Hooka-gurúupu rokú-nin no uti, yo-nín MADE GA osanáí tokí ni tití ya háha o naku-si, keihúbo ni sodateráreta kinodókú na katei-zízyoo no náka de seityoo si, seikatu site iru* 'Of the six in the arson group, fully four had lost father or mother when very young and had grown up living in the pitiful family circumstances of being raised by step-parents' (SA 2652.121b); ... *yáku sanman-mai urete iru mae-uri no naná-wari MADE GA dantái-kyaku da sóo da kara ...* 'Since up to seventy percent of the advance sales of around thirty thousand tickets are to customers in organized groups ...' (SA 2671.111d); ... *ís-sai ya ní-sai no akanboo MADE MO GA ... [utatta]* 'even babies one or two years old ... [sang]' (SA 2654.58b); *B [Bíi] kun no sono táido ga, myóo ni zisin ári-ge na ué ni, hoka no kodomó-táti made mo ga, B kun no ii-bun ga móttö-mo da to iu húu ni unazúku*(⁽¹⁾) 'Young B's manner was wonderfully self-assured, so that even the other children, too, nodded in agreement that what he was saying made sense' (SA 2830.98bc); *Mósi kityóo MADE GA korosaretári, arúi-wa soozyuu hunoo no zyootai ni náttari site itára, notte ita nanázyuu san-nín no séiméi*(⁽¹⁾) *wa nákatta 'roo* 'Had the captain himself been killed, or had the plane gone out of control, the 73 persons aboard would have lost their lives' (SA 2673.138d); *Ittai kono-saki, náni ga tobi-dásu no ka to, naga-nen éiga*(⁽¹⁾) *de mesí o kútte kita renzyuu Ó MADE kyoohu-zyóotai ni otosi-irete iru* 'It has plunged into fear even the group that has been earning their food from the movies for many years, with them wondering just what will turn up from now on' (SA 2664.103a).

And, with the object marker suppressed: ... *kensa-iinkai [o] MADE móokete ...* 'setting up even an investigating committee' (SA 2668.123d)—loose reference, so a better translation would be 'going so far as to set up an investigating committee'.

Focus in the following examples is applied to a mutative conversion of a nominal sentence (*dá* becoming *ní + náru*, §9.1.11): ... "*Yoaké*⁽¹⁾ *no koohii*" to iu *kási ga, hitótu no syakai-teki ryuukoo ní MADE nátta* '... the lyrics of "Coffee at dawn" even became a social fad' (SA 2654.58b); ... *daigaku no owari góro kara hutori-hazime, nanázyuu hatí-kiro ni MADE nátta* 'I started getting fat about the end of college and got up to 78 kilograms' (SA 2651.16c).

Máde can occur before or after case particles other than *gá* and *ó*: *Kodomo MÁDE NI kureta* 'You gave some to even the child' means much the same thing as *Kodomo NÍ MADE kureta* 'You gave some even to the child'. But a time word + *máde ní*⁽¹⁾ often means 'by (the

21. Yet as a postadnominal (§13.2) *máde* can be FOLLOWED by *ó*: ... *zínzi kara keiei no bánpan*(⁽¹⁾) *ni itáru máde o kanzen ni kontoróoru site ita* 'They had perfect control over everything from personnel matters all the way to overall business operations' (SA 2689.17a). But this is the set-closer allative (§3.7a, p. 209), also found in ... *máde o mo: ... sasi-simesite iru zízitu made o mo dooitu to kangáeru kotó wa dekinai no dé wa náí ka* 'surely one can hardly go so far as to consider as identical the facts shown' (Kokugogaku 23.83).

time)' and a time word + ní máde means 'even at (the time)': yó-zi MADE NI dekiru 'it will be done by four o'clock', ása yó-zi NI MADE kane ga naru 'the bell rings even at four in the morning'.

Even when ní is used to mark the underlying agent of a passive, replacing the gá marker of the unconverted active sentence, máde can follow (as well as precede?): Syooneen-mánga NI MADE koogai-móndai ga tori-agerareru génzai, ... 'Today when the problem of pollution is taken up even by children's comics ...' (SA 2688.36a). In Okutsu's example íkura komátte mo aitu ní made wa tasúkete morai-taku náí 'However much of a fix I may be in, I don't want to have HIM help me' the subdued focus (wá) is used to anticipate the negative.

Place word + máde would seem to have at least two interpretations: one is a simple equivalent to the allative é or ní so that Asoko máde iku can mean just 'I will go over there' (= Asoko e/ni iku); the second means 'all the way to' or 'even to' and thus might be regarded as an optional reduction from é máde, so that Asoko máde iku can also mean 'I will go even (or all the way) over there' = Asoko é made iku. Dóko máde mo means both dóko mo 'everywhere/nowhere' and 'to everywhere/anywhere/nowhere' = dóko é (dé) mo.

Apparently *máde máde 'even until' never occurs, being replaced by (PLACE) é/ní máde and by (TIME) máde mo. But kará máde 'even from' (and máde kará?) is possible: ... Toohoku ya Kánsái(¯) kará made hwán ga osi-kákete kíta kaizyoo ... 'the auditorium to which fans had come crowding in all the way from the Northeast and Kansai even' (SA 2674.94a).

Like daké, máde is sometimes used as if a postadnominal, probably a reduction of S no máde: osoku náru MADE 'until it gets to be dark'; ... toden ni notta MADE wa yókatta ga, ... 'It was all right as far as managing to get on the streetcar, but (then) ...' (Shibata 1961.180); ... sinbun-kísyá wa, sore o tyuuzitu ni hoodoo sita MADE no kotó daroo 'the journalists will have done no more than report it faithfully' (SA 2662.28a). See §13.2 for more examples. Go-sankoo máde ni 'for your information' may belong here by way of ellipsis: go-sankoo [ni naru] máde ni 'being to the extent of your considering', perhaps with the infinitive of the copula used in an elliptical mutative conversion itself: Go-sankoo [ni náru] máde ni [site] 'making it to the extent of your considering'. See also V-ru máde = V-(a)nai uti, pp. 387-8.

The expression ... ni itáru máde occurs in written Japanese as an equivalent of simple máde 'until; all the way to; to the point where' after time and place words and after directly nominalized sentences (§14.6), as well as in tandem with kará (cf. §3.7a).

The particle sáe²² < sápe is said to be a variant of the verb infinitive só[p]e 'adding on'. If that is the correct identification, we should perhaps call só[p]e the variant and assume that the original /a/ assimilated to the -p-, which later weakened and dropped. The etymology is supported by ámari-sae 'moreover', usually abbreviated to ámassáe(¯); the form ámatusae looks like a reading pronunciation of the abbreviated form, spelled ...tu-sa ... in kana.²³ In any event, if sáe was originally a verb infinitive, that would account for the

22. Also pronounced sée: ... náo kore de yome sée kúryaa [= yome sáe kúreba] íi n da 'now if only the bride will arrive!' (Okitsu 1.466).

23. K 1966.182 calls amatusae a "mistake" brought about by the failure of earlier orthography to distinguish the use of kana tu for -q- (doubling of oral consonant) from its regular use for the syllable /tu/.

freedom with which *mó* attaches to it. (Apparently **sáe wa* does not occur.) The etymology suggests that the basic meaning of *sáe* is 'additionally, in addition, what's more, on top of everything else' as in the example *Miti ga kurai ué ni áme sae huri-dasita* 'The road was dark and on top of that it started to rain, too'. A more frequent meaning is one of analogous entailment ("by mentioning this all others follow or all else follows"), and the usual translation is 'even'. In these two meanings, *sáe* can be followed by *mó* or replaced by the more literary synonym *súra* {*mo*}. But in a third meaning '(if) just', only *sáe* can be used; neither *sáe mo* nor *súra* {*mo*} will be accepted. In the third meaning, the particle *sáe* is used to narrow the focus on an adjunct—or on the nucleus itself (§5.2)—in anticipation of the provisionalization (§9.3.1) of the nucleus: *Hima sáe áreba* 'If there just be time', *Kusuri sáe nómeba* 'If you just take your medicine'; *Káre to sae hanaséreba ii* 'If I can just talk with him it'll be OK'; *Anáta kara sae itte kureréba káre wa kikú desyoo* 'If YOU just say it, surely he will listen'; *Káre no ié e sae ikéba wakáru desyoo* 'If we just go to his house we can find out'. That such expressions are slightly stilted follows not only from the fact that *sáe* is less than thoroughly colloquial but also from the fact that the provisional itself is uncommon in modern speech except for certain set constructions—being replaced, for its other uses, by various other forms as explained in §9.3: the subdued gerund (-*té wa* §9.2.2), the conditional (-*tára* §9.4), or the conjunctionalization -*ru to*^[1] (§17.2). These replacements can NOT be used in the phrases translated '(if) just'. Examples of *ó sáe*:²⁴ *Rúpo no náyoo wa watasi no yóo na, súde ni zyu-u-súu-nen mo seisin-ka o senmon ni site iru ningen Ó SAE odorokaséru ni taru [= tariru] monó de aru* 'The content of the report is enough to startle even a person such as me, one who has specialized in psychiatry for more than ten years' (SA 2673.42a); *Ámátusáe(-), Sugáwara wa káta o itámete, yakyuu Ó SAE akiraméneba naránu mi to nátta* 'Moreover Sugawara injured his shoulder and had to give up even baseball' (KKK 3.55); *Sono ten Ó SAE sirabéreba mondai wa kaiketu suru* 'If you just check that aspect the problem will be solved'; *Iyarási-sa O SAE kan-ziru kotó ga áru* 'I sometimes even feel a disgust'; ... *baai ni yotté wa haradatási-sa O SAE oboéru kotó ga áru monó da* '... on occasion it is natural to remember a feeling of irritation, too' (Maeda 1962.196).

Although typically *gá* will drop when *sáe* is added, I have elicited examples such as *Tanaka san sáe ga [= máde ga] soo iú n desu kara ...* 'Well since even Mr Tanaka says so ...'; and I have come across a few examples of *sáe mo ga*: *Getemono -ízyoo no getemono de áru zinniku SÁE MO GA, tyósya ni yoréba tokubetu no kotó de náí* 'Even human flesh—more repulsive yet than other repulsive things to eat—is nothing special [according] to the author' (SA 2679.105a—most dictionaries have missed this common meaning of *getemono* 'delicacies generally considered repulsive'); *Sore SÁE MO GA ...* 'Even that ...' (Maeda 1961.42:3); *Sore -dóko ka kaki-simesarete iru kágiri de wa, "Kore kará no keigo" zísín SAE MO GA, wareware no ití-mi no yóo de wa náí ka* 'Quite to the contrary, even [the official publication] "The future of Keigo" would seem to be a party to our ideas' (Maeda 1962.179); *"Surángu" ... to iu syó SAE MO GA ... to nóbeta iru* 'The book "Slang" actually even says " ... "' (Maeda 1962.185). But **gá sáe*^[1] and **sáe o*^[1] apparently are not used.

24. Although *sáe* is normally attached to a preceding particle without a juncture and thereby loses its inherent accent, a juncture is sometimes inserted in order to lend special emphasis to *sáe*; in such versions, an accent on the syllable before the juncture will disappear and the juncture itself will then vanish, so that you hear *kore o sáe* (from *kore ó* [1] *sáe*) rather than *kore ó sae* (from *kore ó sáe*).

The sequence \acute{o} $\acute{s}\acute{a}\acute{e}$ is classed with \acute{o} ba and \acute{o} mo as “literary” by Ishigaki (lg 18) who also gives examples for \acute{o} $\acute{s}\acute{u}ra$ (see below) and \acute{o} $\acute{k}\acute{o}so$. For more examples of \acute{o} $\acute{k}\acute{o}so$ and examples of $\acute{k}\acute{o}so$ ga/\acute{o} , see §2.3.3a.

It may be possible, by recycling, to get a sentence like (?) Kusuri $\acute{M}\acute{O}$ $\acute{S}\acute{A}\acute{E}$ $nomimas\acute{e}n$ ‘I won’t even take medicine either’ or (?) Kusuri o $n\acute{o}mu$ $ko\acute{t}\acute{o}$ $\acute{M}\acute{O}$ $\acute{S}\acute{A}\acute{E}$ $kyozetu$ $suru$ ‘I refuse to take even medicine, too’—cf. Kusuri o $n\acute{o}mu$ $ko\acute{t}\acute{o}$ $\acute{S}\acute{A}\acute{E}$ $\acute{M}\acute{O}$ $kyozetu$ $suru$ ‘I refuse even to take medicine’; we might even therefore run across something like (?*) Kusuri $\acute{M}\acute{O}$ $\acute{S}\acute{A}\acute{E}$ $\acute{M}\acute{O}$ $kyozetu$ $suru$ ‘I refuse even to take medicine, either/too’, but I have no examples.

Some instances of $\acute{d}\acute{e}$ $\acute{s}\acute{a}\acute{e}$ are focused case (instrumental— $n\acute{a}ihu$ de $\acute{s}\acute{a}\acute{e}$ $k\acute{i}reba$... ‘if you just cut it with a knife ...’, or locative— $Nihon$ - go wa $koko$ $\acute{d}\acute{e}$ $\acute{s}\acute{a}\acute{e}$ $osiete$ $imasu$ ‘Japanese is taught here too’); others, given in §9.2.2, represent a focus applied to the copula gerund, including special uses of $\acute{d}\acute{e}$ to mark the subject—Uses 4 and 9 in §2.2. Some of the latter examples (Use 9) are reminiscent of the use of $n\acute{i}$ $\acute{s}\acute{a}\acute{e}$ to mark the focused possessor in a possessive or quasi-possessive sentence (§3.5) such as $Watasi$ $n\acute{i}$ $\acute{s}\acute{a}\acute{e}$ $wak\acute{a}ru$ n $desu$ $kara$ ‘Why, even I understand it’.

A literary equivalent of $\acute{s}\acute{a}\acute{e}$ $\{mo\}$ is $\acute{s}\acute{u}ra$ $\{mo\}$. Henderson suggests an etymology that would make $\acute{s}\acute{u}ra$ an abbreviation of $sur\acute{u}$ $nara$ ‘if it be doing/considering’;²⁵ that led me at one time to feel that $\acute{s}\acute{u}ra$ mo probably would not occur, since $nara$ could only be followed by ba , a variant of $w\acute{a}$, though I found no instance of * $\acute{s}\acute{u}ra$ ba . But then I came across a fair number of examples of $\acute{s}\acute{u}ra$ mo : $Simoda$ no $gootoo$ $\bar{z}\acute{i}ken$ wa , $sinbun$ $n\acute{i}$ $\acute{s}\acute{u}ra$ mo $d\acute{e}nakatta$ ‘The Shimoda robbery didn’t appear in the newspaper, even’ (lg 68); $Sik\acute{a}si$, $m\acute{o}haya$ $sono$ “*totemo*” to iu $ko\acute{t}\acute{o}b\acute{a}$ $\acute{s}\acute{u}ra$ mo $sitabi$ ni $n\acute{a}tte$ $k\acute{i}te$... ‘But by now even the word “*totemo*” has gradually subsided and ...’ (Ōno 1966.15); $M\acute{u}siro$ $sono$ $sooi$ $kara$, $so\acute{r}\acute{e}zore$ no $zidai$ ya $sy\acute{a}kai$ no $tokusei$ o $m\acute{i}ru$ $ko\acute{t}\acute{o}$ $\acute{s}\acute{u}ra$ mo $dek\acute{i}ru$ $\bar{r}asi\acute{i}$ ‘It seems rather as though from those differences we could even see the peculiarities of each age and society’ (Ōno 1966.77); ... $so\acute{r}\acute{e}$ $n\acute{i}$ $\acute{s}\acute{u}ra$ mo $h\acute{o}oben$ to iu $ko\acute{t}\acute{o}$ ga $\acute{a}tte$... ‘even in that there is what is called pious fraud’ (Ōno 1966.98); ... $Sy\acute{o}ow\acute{a}$ $\acute{s}\acute{a}nzyuu$ $suun\acute{e}n$ - kan no $bunken$ $\acute{s}\acute{u}ra$ mo $yomikonasi$ - $kir\acute{e}nai$ $zyootai$ ni oi - $k\acute{o}mi$, ... ‘... drives them [= young students] into a state where they can’t make out even the documents of the (past) thirty-odd years of the Shōwa era, and ...’ (Ōno 1966.238); $Sas\acute{a}yaka$ na $sizuk\acute{u}$ $\acute{s}\acute{u}ra$, $nagare$ - $yuk\acute{e}ba$ $\acute{u}mi$ to $n\acute{a}ru$. $\acute{A}i$ no $t\acute{i}isaki$ $waz\acute{a}$ $\acute{s}\acute{u}ra$ mo , $t\acute{i}$ o ba $k\acute{a}mi$ no $kuni$ to $nas\acute{a}n$ ‘Even a tiny drop will flow along to become the sea; even little acts of love, too, will turn the earth into a land of gods’ (KKK 3.61— $t\acute{i}isaki$ = $t\acute{i}is\acute{a}i$, $nas\acute{a}n$ = $nas\acute{a}mu$ = $nas\acute{o}o$, literary for colloquial $n\acute{a}su$ $dar\acute{o}o$); $Kaizyoo$ $kar\acute{a}$ wa , $Nisioka$ $h\acute{a}kase$ no $kono$ $h\acute{i}han$ ($\bar{~}$) ni $t\acute{a}i$ - $site$ $\acute{s}\acute{u}ra$ mo , $sansei$ $t\acute{o}$ mo $hantai$ $t\acute{o}$ mo , isi - $hy\acute{o}oozi$ o $suru$ $hit\acute{o}$ wa $in\acute{a}katta$ ‘From the meeting (hall) there was no one to voice an opinion even with respect to this criticism made by Dr. Nishioka (SA 2650.121c—for $\acute{s}\acute{u}ra$ and $\acute{s}\acute{u}ra$ mo after a full-fledged gerund, see §9.2.2); ... o - $tagai$ no $ziy\acute{u}u$ (sei - $teki$ $n\acute{o}$ $\acute{s}\acute{u}ra$ mo) o $sontyoo$ $suru$ $ko\acute{t}\acute{o}$... ‘respecting each other’s freedom (even sexual)’ (SA 2672.118d)—for sei - $teki$ [$n\acute{o}$] $n\acute{o}$ where you would expect sei - $teki$ $n\acute{a}$ no , see p. 763);

25. But the old variant $\acute{s}\acute{o}ra$, a “masculine” version used from Heian times through Kamakura days according to Terase 108, would be difficult to account for with that etymology. Satō (2.88–93) says that $\acute{s}\acute{u}ra$ was common in the Nara period, infrequent in Heian days, but then perked up again (and acquired the variant $\acute{s}\acute{o}ra$), gaining a new lease on life with the Kambun tradition of Kamakura times.

... konna rikutu ga makari-tooreba, seisin-syoogáisya e no íryoo(¯) wa óroka, zinken súra mo ubaware-kanenái daroo '... if this sort of argument prevails, the psychologically disturbed will inevitably be robbed of even their human rights, to say nothing of their medical treatment' (SA 2670.33c).

Still more surprising are the examples of *súra* ga in KKK 3.61-2: *Nihón yori siranai wareware súra ga ... yomímónó de átta* 'Even we who know of nothing other than Japan enjoyed the reading material that ...' (the sentence involves some kind of proredication); ... *seyoo-búnmei—sore o umi-dásita hónke honmoto no seyóo-zin sura ga hotóndo moteamasi-kámete iru monó—o ...* 'Western civilization—something that even occidentals of the homeland that gave birth to it find almost unmanageable'.

Classical examples of *súra* [w]o and *súra* ni are listed in dictionaries (e.g. MKZ). But there are also modern examples of *ó sura*: *Nagái nagái aida watási-táti wa kokyuu ó sura tomete ita yóo ni omóu* 'For a long long time it seemed even our breathing was stopped' (lg 18). The phrase marked by *ó sura* can be thematized: *Nittoo wázuka yonhyakú-en. Sono yón-wari o sura byooin wa pín-hane site iru to iu* 'The daily allowance [per patient] is a mere four hundred yen. And even forty percent of that, they say, is raked off by the hospital' (SA 2672.26d). And *súra* apparently will follow other case particles: *Huransu, Itaria, Igrisu nómi narazu, Nisi-Dóitu DE SURA koo-teki kígyoo(¯) wa hizyoo ni óoi* 'Not only [in] France, Italy, and England, but even in West Germany public enterprises are quite numerous' (SA 2684.106d—locative).

Examples of *súra* {mo} after verb gerund and of *súra* after copula gerund will be found in §9.2.2; examples of *súra* after a quotation (*tó sura*) will be found in §21. Examples of *súra* {mo} used for nuclear focus (*V-i sura suru*, *A-kú sura áru*, *N dé sura áru*) will be found on p. 324; for other conversions, see p. 330.

The sequence *A-kú sura* will occur as the result of focus applied to a transitive mutative conversion (*A-ku ... suru*): *Koino no izi-wárú ga káette Sadamura o tanósiku sura site ita* 'Koino's ill temper actually served to delight Sadamura' (lg 68).

Another literary equivalent of *sáe* {mo}, less common today than *súra* {mo}, is *dáni* {mo}. In the literary language, there are two principal meanings. One is rather close to *sáe*, *súra*, or *dé mo* and translates as 'even'; the sentence often continues with a NEGATIVE predicate: *Hikarí ya áru to míru ni hótaru no hikarí dani nási* [= *Hikarí ga áru ka to omótte míru to hótaru no hikarí sae mo nási*] 'When she looked hoping for a light there was not even the light of a firefly' (Taketori-monogatari, Ishii 1958.78). The second meaning is similar to the colloquial expression (*sémete ...*) *daké de mo* 'at least'; the sentence often continues with a HORTATIVE or IMPERATIVE predicate, as in the often cited example from the *Kokin-shū*: *Hana^[1] no iró wa kasumi ni kómete misezu to mo* [= *misénakute mo*], *ká(¯) ó dani nusúme* 'Though the flower will not show its colors hidden in the mist, steal at least its fragrance!' (Notice the sequence *ó dani*, of which a number of examples can be found in the dictionaries.)

The two colloquial examples of *dáni* offered in Henderson 70 are questionable. In the first example *íma dani* probably should be *imada(-)ni*, the literary adverb *ímada* = *máda* 'still' + essive *ni*; and *ittá n dani* in the second example must be a dialect version of *ittá no ni* or *ittá no ná no ni*. But the particle *dáni* will sometimes appear in a colloquial setting: ... *íkko dani sinái* 'take no notice whatsoever' (Tk 2.81); *Koko ní wa yúumoa no henrin dáni gozaimasén né* 'There is not even a glimpse of humor here' (SA 2658.126a)—perhaps

a more stylized translation is called for: 'Scant trace of humor see we here'). In the following examples what is written as /dani/ means something like *daké de mo* and might well be regarded as an abbreviation of *da[ké] ni*, as I have indicated by my apostrophe in the romanization: ...soozoo suru da' ni ... 'at the very notion' (Fn 406a); Reien no suramúka(-), omóu da' ni hada-samúí 'The very thought of a memorial park turning into a slum gives one the shivers' (SA 2648.44).

In older Japanese /dámó/ appears as an abbreviation of *dá[ni] mo*, with a meaning something like *dé mo* or *dé sae mo*. In modern texts the form will turn up in clichés like ... íkko da' mo ataerarenai 'won't pay the least attention' (SA 2676.139a) and *musoo dá' mo sinákatta* 'I hardly dreamed': ... *musoo dá' mo hu-kánoo na kotó de aru* 'it is something impossible beyond dreams' (Maeda 1962.90).

The particle *síka*(-) 'except for; [not] any other/more than' is atonic for many speakers, who say *kore sika* 'except for this' and *káre sika* 'except for him'; other speakers treat the particle as prototonic, saying *kore síka* and *káre síka*. But some of these speakers will shift the accent back onto the last syllable of an atonic noun (*koré sika*) as a side effect of unvoicing the vowel of the first syllable of the particle. In writing example sentences we will generally show only the atonic version.

The colloquial variants {k}ká(-) and the Tōkyō variants *síkya*(-) and {k}kyá(-) are similar.²⁶ There is also an old-fashioned synonym *hoka* as in *Koko ní wa sáidaa hoka utte imasén* 'They sell nothing but "cider" here' (Hozaka 338). *Hoka* is also used with the affirmative to mean 'besides'; it is perhaps to be treated as a written-style ellipsis ... {no} *hoka*: *Seisi-kóozyoo HOKA íkutu ka no koozyóo(-) ga ári*, ... 'Besides a paper factory there are a number of other factories, and ...' (SA 2649.92b). Below we mention the use of *síka*(-) as a synonym of the postadnominal *hoka*.

Síka(-) is peculiar in that it is always followed later in the sentence by a negativization of the nucleus of the adjunct to which it is attached. As explained below, for this purpose "negative" includes rhetorical questions and *damé da* 'is unsatisfactory, no good' (but not *iyá da* or *kirai dá* 'dislikes'): *Kono hón sika damé da* = *Kono hón daké^[i] ii* 'Only this book will do'. *N *sika da* is ungrammatical even when embedded in a negative: *N *sika da to wa iwanai*, *N *sika no hazu zya/ga náí*, *N *sika no tumori zya náí*; *N *sika zya náí* is also rejected, in favor of N *dé sika náí* (§9.2.2).

Under certain circumstances the negative can be delayed and put on a predicate later than the one to which the *sika*-marked adjunct is attached: ... *siti-go sika káku nóoryoku(-) ga nákatta* 'had the ability to write only seven words' (Ōkubo in Ōno 1967.128); *Watakusi-dómo wa hudan Nihon-go sika tukatta kotó ga náku, hoka no kotobá o tukatta kotó ga arimasén* 'We have usually only used Japanese and have never used any other language' (K in Ōno 1967.11); *Watasi sika kúru tumori wa arimasén* = *Watasi daké^[i] kúru tumori desu* 'Only I am intending to come'. Apparently all such cases involve the grammar of possession, regardless of whether the *sika*-marked adjunct is the possessor or (as in the first example) an object of the sentence adnominalized to the possessed.²⁷ Other examples: *Namae*

26. The double-k reduces automatically after n: *Go-nín ka kónakatta* 'Only five persons came'; do not confuse this with the question particle *ká*. An example of *síkya*(-) from the speech of the novelist Shishi Bunroku: ... *bóku(-) n tókó zya, hitóri síkya inái kedo mo*, ... 'at my place there's only one (daughter), but ...' (Tk 3.34ab).

27. See §3.11.2 (p. 265) for an unexpected inversion of a specificative genitive in which the

sika káku hituyoo wa náí = Namae daké^[r] káku hituyoo ga áru 'It is only necessary to write one's name'; (?) Okane sika morau mondai wa náí = O-kane daké^[r] morau mondai ga áru 'The only problem is to get the money'. An example with the quasi-possessive grammar of a potential: ... Syóowa(¯) zyuukyúu-nen no gógatu írai, Tookyoo de, Tookyoo-Sinbun sika yuukan o mótu kotó ga dekinaku nátta no da ga ... 'From May of 1944 it got so that in Tōkyō only Tōkyō Shimbun could have an evening edition' (Kb 244a).

With multiple negatives (§ 8.3), the meaning is hard to grasp: Namae sika kakánai kotó ga áru = Namae daké^[r] káku kotó ga áru 'I sometimes write only my name' is clear enough, but it is questionable whether the meaning of (?) Namae sika kakánai kotó wa náí comes through as the expected equivalent of Namae daké^[r] káku kotó wa náí 'I never write only my name' (better said as Namae daké wa ... in any event) or as a tongueslip for the simpler sentence in either of its versions Namae sika kakánai kotó ga áru or Namae sika káku kotó wa náí.

A sentence containing 'except for' + NEGATIVE means the same thing as 'only' + AFFIRMATIVE, and that can be expressed in Japanese by ... daké + AFFIRMATIVE, or by the colloquial synonyms of daké that seem to be somewhat restricted in their occurrence: kirí or more commonly kkirí (which automatically reduces to kirí after n); variants kkiśí and giri are also reported. Though there are two ways to translate English 'only' + AFFIRMATIVE, namely daké + AFFIRMATIVE and síka(¯) + NEGATIVE, there is only one way to translate English 'only' + NEGATIVE and that is with daké + NEGATIVE: Kore daké^[r] motánai 'lacks possessing only this' cannot be said as *Kore sika mótu.

There are at least two anomalous types of 'only' sentence in which either síka(¯) or daké (or both) can be used with no difference in logical meaning: N ni sugínai 'is nothing more than N' and métta ni sinai 'seldom does', both of which contain formal negatives with attenuated meanings. Thus N ní sika sugínai, N daké ni sugínai, and N daké ni sika sugínai all mean 'it is nothing more than just N' and differ only in subtle emphasis. Both métta ni sika awánai and (*)métta ni daké^[r] awánai mean 'we meet but seldom'; but the latter version is rejected by many speakers. Notice that Senséi to sika hanásite wa ikenai translates as 'You must not speak with anyone but the teacher' and means virtually the same thing as Senséi to dake hanasánakereba ikenai 'You must speak only with the teacher'.

While daké can be applied to more than one adjunct of a single predicate, síka(¯) requires a negative predicate for EACH occurrence. Note the resulting possibilities:

Watasi fgaʒ sika hón o yománai = Watasi daké [ga] hón o yómu 'Only I read the book.'

Watasi fgaʒ wa hón [o] sika yománai = Watasi fgaʒ wa hón daké [o] yómu 'I read only the book'.

*Watasi fgaʒ sika hón sika yománai → Watasi daké [ga] hón daké [o] yómu 'Only I read only the book = I'm the only one who reads only the book'.

Similarly, with multiparous sentences (§ 3.11):

Zóo fgaʒ sika hana ga nágaku náí = Zóo daké [ga] hana ga nagái 'Only the elephant has a long nose'.

Zóo fgaʒ wa hana fgaʒ sika nágaku náí = Zóo fgaʒ wa hana daké [ga] nagái 'The elephant has only his nose long'.

specifier is focused with sika, whereby N₁ ga N₂ sika náí converts to N₂ sika N₁ ga náí 'there is no N₁ but N₂'.

*Zóo ɸgaɸ sika hana ɸgaɸ sika nágaku náí → Zóo daké [ga] hana daké [ga] nagái
 'Only the elephant has only his nose long = The elephant is the only one that has his nose as the only long thing about him'.

More examples of síka(̄): Kono otokó wa Dénbee no kodomo tó sika kangaeráenai 'We can only think that this man is Dembē's son' (SA 2671.107c); Saikin wa kore-gurai sika tanosímí(̄) wa náí desu né 'Lately there's nothing else anywhere near so enjoyable as this' (SA 2662.97c); Máiban(̄) no yóo ni hossa ga ókite mo, senaka o tataku gurai sika té wa náí 'About all you can do is thump [the child] on the back when the nightly attack [of asthma] occurs' (SA 2649.42c); Watasi no kotó o o-tétudai-san ɸgurai ni sika omótte inái n desu yó 'They think of me as nothing but a housemaid, I tell you' (SA 2671.130c— an older lady complaining of life with her son's family); Naru-hodo, onná tte sono téido(̄) ní sika kangaerárete inái no ka to omótta n desu kédo né 'I felt "When it comes to women do they really think no more of them than that?"', you see, but ...' (SA 2672.61); Hyakusyóo ni sika dekinai hyakunen-sénsoo da 'It is one of those hundred-year wars that only the farmer is capable of' (SA 2724.7).

For daké there is also a literary synonym nómi, which you will sometimes hear in clichés, as in N nómi-nárazu = N daké de/zya náku(te) 'not only N but ...'. In written materials you will also find nómi used for daké as a postadnominal (§13.2) as in this example: "Kóndo wa, ítu atumaróo ka?" to, saikai o yaku-súru nómi no utiawase ni nátte simatta 'We ended up arranging just to promise to have another meeting, saying "When will we get together next?"' (SA 2652.64a).

And {k}kirí is sometimes used as a synonym of postadnominal daké also: Kore máde ni ... suu-hon ni tyoi-yaku de syutuen site iru kirí da kara, ninki no hodó mo, máda-mada mití-súu da 'Up to now he has only appeared with bit parts in a few films ... so the extent of his appeal is still very much an unknown quantity' (SA 2662.134); Gozyúú naná-sai no roozín(̄) wa hyakusyóo desita to kotaéta kirí de atta 'The 57-year-old man [a prisoner of war] would answer nothing but "I was a farmer"' (SA 2647.88c); Atasi, keiba nánte—iti-dó, itta kotó ga áru kkirí, pápa ni turerarete 'Horsereading is, uh, something I've been to only once—with my daddy' (Fn 292a); Mizu o nómu kkirí de monó wa taberaréin n desu 'He takes nothing but water, unable to eat anything'.

But {k}kirí and nómi cannot always be substituted for daké, and sometimes máde is a closer synonym: Sore ga honto no myúuzikaru de, ima-máde no Nihón ni wa nákatta daké (= máde, *kirí) no kotó desyoo 'That is a real musical, something that we just haven't had in Japan before' (SA 2664.36c). For -ta {k}kirí and -i-kkirí, see §9.1.7.

When {k}kirí is attached to *kore*, *sore*, and *are*, the expected meanings may be replaced by derived senses, and the particle is sometimes pronounced girí, so that these phrases are perhaps best thought of as lexically derived adverbs in all occurrences: kore-[k]kirí, -girí 'this (much) only; this time only, never again' with further extensions in Kore-kkirí no hanasí da 'This is (just) between you and me' (Kenkyusha); sore-[k]kirí, -girí 'just that (much); (never) since then' — Móo zyuu-súunen mukasi no hanasí. Sore-kirí awánakatta 'It's (about something that happened) over ten years ago now. Since then I haven't seen him at all' (Tk 2.71); are-[k]kirí, -girí '(never) since then'. These expressions can be followed by sika: Bataa wa móo kore-girí sika nákatta no 'This is all the butter there was' (Hozaka 1960.341).

The expressions ... daké átte/ni 'as might be expected (of); if only because (of being)' can be applied to a noun or, as a postadnominal (§13.2), to an adnominalized sentence. Examples can be found in Kenkyusha.

In the spoken language *daké* and *sika*(⁻) are to some extent mutually exclusive with the case markers *gá* and *ó* but you will run across *daké ga* and *daké o* at least in written Japanese; *daké wa* occurs freely in speech, but **sika*(⁻) *mo/wa* is unacceptable. I have no example of (?)*daké mo* and Okutsu 1974 says it is ungrammatical. (Examples of *ó sika* and *sika ga* are given below.) When *daké* occurs together with a case particle other than *gá/ó* the order seems to be optional (*daké ni* or *ní dake*), presumably with a slight difference in meaning. And the same freedom holds for *daké sika* (below), so that for 'a letter comes only from mother' you can say *Háha daké sika kara tegami ga kónai*, *Háha daké kara sika tegami ga kónai*, or *Háha kara daké sika tegami ga kónai*.

I have been unable to elicit **gá daké*^[1] but here are elicited examples of *daké ga/o* and of *ó daké*^[1]: *Pásu no áru hitó daké ga hairemásu* 'Only those who have passes can enter'; *Pásu no áru hitó daké o irete kudasái* 'Admit only those who have passes'; *Pásu no áru hitó o daké ireru to iú no wa mondai zya náí ka* 'Isn't it a problem admitting only those with passes?' In unelicited examples I have found only *daké ga/o*: *Kore daké ga tanosímí*(⁻) [*da*] 'This is my only pleasure' (SA 2662.97c); *Okaasán-gáta daké ga utí*(⁻) *ni iru hirumá*^[1] *no zikan ni, sore o motte korárete mo saigo made zikkúri yómu okaasán-gáta wa sukunái* 'Even though having it [= a student behavior pledge to sign] brought during the day when only the mothers are home, there are few mothers who read it through carefully to the end' (SA 2655.39e); *Gurúupu no náka ni súu-nin*(⁻) *no onná-no-ko ga iru to, sékkusu daké o mé-ate ni, otokó no huuten ga atumáru* 'When there are a number of girls in the group, male hippies will join with only sex in mind' (SA 2650.105c—{site}^[1] is understood after *mé-ate ni*, see p. 470; *Zyón no kao daké o utúsita tanpen-éiga* "Sumáiru" ... 'the short film "Smile" that showed nothing but John's face' (SA 2670.134); *Áru kóoi o okonau, soo iu sonzai no si-kata daké o kakunin site iru* 'All that is recognized is the way such a creature does a certain act' (SA 2681.59e).

Although **gá sika* does not occur, there are examples of *ó sika*: *Heitai ó sika osieta kotó wa náí* 'I have taught none but soldiers'; *Koohii o sika nománakatta kara* 'I only had coffee'; *Sankiti wa, sono aida dé mo, Hánsuke ni sono yokogao ó sika mise-tuzukenákatta* 'Sankichi, even during that time (= all the while), continued to show only his profile to Hansuke' (Kb 194a). And I have even found an example of *daké o sika*: *Sono yóo na yoohoo daké o sika motánai itígun*(⁻) *no gó* 'a group of words that have only that sort of use'. But more commonly the *ó* drops: *Sore [ó] sika kangáete 'masén kara né* 'For that's all they ever think about' (SA 2671.21b); ... *hutakoto-míkoto sika hanasánai keredo mo* ... 'says but a few words, yet ...' (Tk 3.38a). And **sika o* is rejected, though I have found an example of *sika ga* that is apparently acceptable, if a bit strange: *Sákusya*(⁻) *no mé ni sibirárete iru n desu kara, sákusya*(⁻) *ni mi-yaburarete zínbutu bákari sika ga déte kónai* 'Since they are tied to the author's eyes, there come forth nought but the characters that are seen into by the author' (Fukuda in Ōno 1967.221).

Examples of *sika* after other case markers: *Máda Tanaka san ní sika hanásite arimasén* 'Mr Tanaka is the only one that has been spoken to (= told) yet' (dative); *Sikási, yóozi de aru aida wa, dáre mo oyá to site*^[1] *no húbo to sika de-awanai* 'But while a baby everyone relates only with his father and mother [in their role] as parents' (SA 2684.120c—reciprocal *tó*); *Iti-dó dé ii kara, benzyó de sika otituita kibun ni narénai yóo na ié kara hanárete súde mi-tái* 'At least once, I'd like to try living away from home where the toilet is the only place you can feel relaxed' (SA 2672.122ab—locative *dé*); ... *oozéi no ba no náka de sika tanosiménai* ... 'they can enjoy themselves only in the midst of a crowd' (SA 2654.235e—locative *dé*); *Sore máde térebi de sika siranákatta yokuboo-táisyoo* ... *ga mé no máe ni arawárete kúru kara da* 'It is because objects of desire that up till then they had known

only from television ... now began appearing before their eyes' (SA 2647.119c—instrumental *dé*);²⁸ *Mósi hi-góohoo de sika ikenai to sureba, hoka ni syúdan ga arimásu ka* 'If you (find you) can go only by illegality (is there any other means =) well that's the only way you can go' (SA 2677.153d—taking *dé* as the instrumental rather than, say, the instrumental use of the copula; *hi-góohoo* is an abstract noun as well as an adjectival noun); *Hokkáidoo kara sika kite imasén* 'They are all (here) from Hokkaidō' (ablative); *Watasi wa Níkkoo e sika itta kotó ga arimasén* 'I've only been to Níkkō' (allative); ... *zyosi-kárezzi ni dansi-gákusei wa, róbii made sika hairénakatta* ... 'in the women's colleges ... male students could come in [the dormitories] only as far as the lobby ...' (SA 2670.112c—*made* is allative 'to', not focus 'even').

I assume that (?) *N *mó daké* probably does not occur. And *síka*(⁻) never precedes another particle. (The *dé* of ... *sika de* and the *nó* of ... *sika no kotó de* are forms of the copula.) That fact, which includes the rejection of **sika mo/wa*, suggests that the particle *síka*(⁻) somehow already contains the particle *wá*, and that is what is claimed in the etymology offered by Ōtsuki, who derives *síka*(⁻) by contraction from ... *síki*(⁻) *wá*.²⁹ Now *síki*(⁻) 'nothing but just this little' occurs today in only a few expressions—notably *koré-siki*(⁻) 'just this', *soré-siki*(⁻) 'just that', and *aré-siki*(⁻) 'just that', said to be prevalent in downtown Tōkyō, where they can apparently (?) be followed by *wá/mó* and by *gá/ó*. The etymology of *síki*(⁻) itself is in doubt; Ōtsuki suggests it is a variant of *soko* 'bottom' but there is no good explanation for what might have happened to the vowels. Another possibility is a reduction from something like *sukósi* with assimilation of the first vowel: *suk[ós]i > siki*. In western Kyūshū a particle *siko* is apparently used as equivalent to *daké* (Zhs 6.24); this would support either of the suggested etymologies, but still not account for the first vowel. Not beyond the realm of speculation is the possibility that the particle is cognate with Korean ... (s)sik 'each' (= Japanese ... *zútu*), despite the difference in meaning. The word *ítu-sika* 'in no time at all; quickly, early' does not contain the particle *síka*(⁻); rather, it is said to be the emphatic literary particle *sí* (better known in combination with *mó* as *sí-mo* and probably by origin the infinitive of *suru*) + the interrogative particle *ká*, here used for emphasis (see p. 930).

The "negative" which follows the *sika*-phrase is a semantic category, for it includes things which are not formally marked as negative in the sense of §8: rhetorical questions (Kore *sika áru mon ka* 'Surely there is only this'); the auxiliary (-i-)kaneru 'cannot' (§9.1.8), a synonym of *-ru kotó ga dekinai*; and *damé da* 'it is no good', an adjectival noun which is a synonym of the adjective *ikenai* that is derived from the negativization of *ikeru* the potential of *iku* 'it goes'. (In western Japan the non-potential negative *ikan[u]* = *ikanai*, or a synonym *akan*, is used instead of *ikenai*.) It is possible to negativize *damé* and say *damé zya nai* 'it isn't no-good', to deny *damé da*; but you can not negativize *ikenai*, so that instead of **ikenaku nai* you will say *wáruku nai* 'it isn't bad'. (The adverb *kessite* 'absolutely [not]' also requires a following negative, but neither the auxiliary *kaneru* nor *damé* will fill the bill. And the negation that follows ... *dógoro* 'hardly' must be either negative in FORM or a rhetorical question.)

28. But N *dé sika nai* is a focus of the copula; see §5.2.

29. Other etymologies that have been suggested include *siká* 'so' (the literary adverb) and *sik* [iri w]a; see Gekkan-Bumpō 2/5.33 (1970). Apparently no one has thought of suggesting the emphatic *sí* + particle *ká*, to be considered with *sí mo*; cf. *yóri ka/mo*.

The two particles meaning 'only' can occur together as ... *daké sika* or ... *daké kka*, presumably with some subtle difference of meaning from that of each used alone:³⁰ *Atakusi wa sono máe no rássyu tte iú no DAKÉ KKA mite* 'nai n desu 'I've only seen the earlier rushes [=rush prints of the film]' (Tk 2.39); *Sen'é^un-ken DAKÉ SIKA hatubai sinákatta* 'They only put thousand-yen tickets on sale' (SA 2685.119c); *Góku syoosúu no senmon-ka DAKÉ SIKA yománaⁱi kenkyúu-si ...* 'a scholarly journal that only a very few specialists read' (SA 2651.20c); ... *kono mizuúmi DAKÉ ni SIKA inai sakana ga génzai mo takusánⁱ ite*, ... 'Even today there are many fish that exist only in this lake' (SA 2680.100a); ... *húuhu no kotó wa, húuhu DAKÉ ni SIKA wakaránaⁱi n da* 'only husband and wife know what is between them' (Fn 324a).

We expect to find each of the following, but some sequences are little used:

daké kkiri: *Kore daké kkiri desu* 'This is all there is'. (?)

kkiri daké: little used.

kkiri sika: *Kore kkiri sika/kka náⁱ yó* 'There's just this, is all'.

kkiri daké⁽ⁱ⁾ sika: *Sékái zyuu ni kore hitótu kkiri daké⁽ⁱ⁾ sika náⁱ monó desu yó* 'This is the only one there is at all in the whole wide world, I tell you'.

daké kkiri sika: little used.

From what has been said about the semantic similarity between *sáe* and *mó* and between *sika* and *wá*, we do not expect to find *...*sáe sika* since the separate effects of the two particles would be incompatible; still less to be expected is *... *sika(¯) sáe*, since the first particle closes the noun phrase to further marking. But *sika(¯)* can follow the focus particle *máde* (as well as the allative *máde* illustrated earlier), as shown by this example: ... *to iu kotó made sika wakaránakatta* 'understood no more than that ...' (SA 2679.41c).

Both the gerund (§9.2.2) and the infinitive (as heart of the nucleus §5) can be highlighted with *mó* or backgrounded with *wá*. Accordingly we would expect to find the following acceptable, if not particularly frequent, and examples can be found for all but the two that are asterisked (see §5):

V-te { *sae*
 sika + NEG (+ AUX)

V-i { *sae* [si- →]su-(réba)
 **sika* si-na-

A-kute { *sae*
 sika + NEG

A-ku { *sae* ár-(eba)
 **sika* ná-(kereba)

N [ní-te →] dé { *sae*
 sika + NEG

N [ní →] de { *sae* ár-(eba)
 sika ná-(kereba)

Although as nuclear focus *A-ku sika na-* appears to be unacceptable, *A-ku sika* may turn up when *A-ku* represents the nuclear-adverbial conversion of §9.1.11: ... *sáika ni túite*

30. According to Miyawaki 122 *daké* has a neutral connotation, something like "this is it and I'm neither glad nor sorry about it", but *sika(¯)* has a marked connotation of regret "I wish it were not so" or of distress "it shouldn't be like this".

wa góku tíisaku sika hurenákatta 'mentioned very little with respect to the disasters' (SA 2837.26cd).

You may notice that an occasional oddity in written form looks ungrammatical though it sounds all right when spoken. When you first run across ... no kao o sité sae suréba it is puzzling why the author did not write ... no kao o Sí sae suréba, but it turns out that is not what he intended to say. Instead, the romanized form might well be ... no kao o sité ' sae suréba with the lonely apostrophe showing that the sentence is an optional contraction of ... no kao o site [í] sae suréba; the missing í is the infinitive of the auxiliary i-(ru) 'be' and the sentence derives from an underlying form ... no kao o site iru 'is making a face that is ...'.

The word síka(¯) occurs also as a postadnominal, roughly equivalent to hoka {wa} 'other than ...'; it is always followed by a negative, typically náí or sikata ga náí, as in these examples:³¹ ... tabénakereba sinde simau sika náí 'unless you eat you're bound to die' (SA 2640.105c); Kangaéru wakamonó(¯) o ooen suru sika náí 'One cannot help but support the young person who is using his head' (SA 2655.41); Koo náreba, teityakú-ritu o ageite iku sika arimasén 'If this happens, we can't help but raise the fixed rate' (SA 2642.40e); Saígon e iki-tákatta ga, móo kikoku suru sika náí yóo da 'I wanted to go to Saigon, but it seems there's now no choice but to return to Japan' (SA 2685.101b); Mósi, dóo sité mo iyá nara, tomodati to asobasenai yóo ni suru sika náí 'If you just can't stand it [= the local brogue acquired by the children] all you can do is make it so they are not allowed to play with their friends' (Shibata 1966.10); ... to iu kotobá o tukau sika hoohoo no náí genzyoo ná no de aru 'is in a situation where there is no way out of using the word "..."' (SA 2677.32c); Soo suru sika si-kata ga náí = Soo suru hoka si-kata ga náí 'That's all you can do' (cf. MKZ 779b under hoka). See also Alfonso 731-2.

But perhaps this use is to be explained as an ellipsis of S $\text{f} \text{no} \text{f}$ síka(¯) náí.

The expression nárade-wa is the backgrounded negative gerund of the literary copula nári, and is roughly the equivalent of de/zya nákute wa 'if it is not' (= zya náí to, zya nákereba). We would expect the expression to lose its accent after a tonic noun, but it is common to insert a juncture (Nagásaki | nárade-wa) and there are those who treat the expression as a restrictive (§2.4), with dominant accent (Nagásaki ¯nárade-wa).³² Kenkyusha has some examples where the expression is used much like síka(¯) to mean '(none/nothing) but' or 'without (its being)', followed by a negative: Gúzin(¯) nárade-wa sonna guron o sin-zúru monó wa náí 'None but a fool would buy such a foolish argument', Kiséki(¯) nárade-wa ínoti o mattoo-súru kotó ga dekinákatta 'Nothing short of a miracle could have saved his life'. Another example: Kéredo mo, yappári wá-ga kuni wa, naniwa-busi nárade-wa yó no akenu kuni de áru 'But after all our country is one in which the dawn [of the New Year] will not break without some *naniwa-bushi* singing [on television]' (SA 2662.32d).

But more common than this "adverbial" use, according to Morishige 180-1, is the con-

31. "Atonic" inflected forms will have a final accent before sika for certain speakers (surú sika) but not for others (suru sika), whom we follow here. Both groups of speakers agree in their treatment of tonic inflected forms (yómu sika).

32. I have also heard naradé-wa: ... Hakodate naradé-wa no | azi desú 'it is a flavor that can be had nowhere but in Hakodate' (R).

struction N_1 *nárade-wa* no N_2 as in the following examples: *Kono yóo na iró ya katati no kago wa Índo nárade-wa no monó de aru* 'Baskets of this color and shape are unique to India' (SA 2670.77); ... *Táwaa kyakusitú-kai nárade-wa no kakutyoo to kihin o motome-másita* 'we have sought a tone and elegance that are unique to the guest-room floors in the Tower' (SA 2666.120—from an ad for the new Imperial Hotel); *Yamasuso no take no hayasí ga huyú^[1], yuki o itadaite taóyaka ni kóobé(⁻)* o taréru samá wa síki no megumi [no] *yútaka na Nihón nárade-wa no utukusii sógata desu* 'The way the bamboo groves at the foot of the mountains bow their heads gracefully under the snow in winter is a beautiful scene unique to Japan which is rich in seasonal blessings' (from *Asahi Shimbun* 1968); *Taidan-kéisiki o tótta tyosaku wa sukúnáku náí ga, taidan nárade-wa no omosíro-sa ya hanasi-té^[1](⁻)* no o-syáberi no azi ga déte iru hón wa maré(⁻) de áru 'There are quite a few works that have taken the dialog form, but rare are the books in which there appears the interest unique to dialog and the zest of the speaker's chatter' (SA 2669.93a); *Betonamu ya Kanbózia de wa kessite mirarénu, Ráosu nárade-wa no kookéi da* 'It is a scene unique to Laos, (one) that could never be seen in Vietnam or Cambodia' (SA 2688.39d); *Káraa nárade-wa no namanamasii hakúryoku(⁻)* ... 'The vivid impact that only color (TV) gives ...' (SA 2687.3); *Kono byooki wa kúuraa ga katei ní made híroku hukyuu sita Amerika dé wa hizyoo ni mezurasii. Óhwisu wa suzusii no ni utí(⁻)* e káeru to átukute yaririkénaí to iu *Nihón nárade-wa no byooki to itte íi* 'This complaint is quite rare in America where air conditioners are widespread even in homes. It can be said to be an illness peculiar to Japan where you go home from a cool office to an unbearably hot house' (Gd 1969/9.208c).

Two examples of the adverbial use of *nárade-wa* from the Muromachi period will be found in Satō 1.323.

2.3.4. Kóso.

The particle *kóso* 'precisely, indeed' is used to emphasize certain adverbializations, notably those expressing causality: *Dá kara koso* 'precisely because of that' is roughly equivalent to the more relaxed *Dá kara sá*. When the provisional (*-réba*) attaches *kóso*, it is interpreted with the causal meaning that in the colloquial language it otherwise lacks; for examples of *...réba kóso* = *...rú kara kóso/sá* and of the unusual *...táreba kóso* = *...tá kara kóso/sá*, see §9.3. (An example of *... tte 'ttára sá sore kóso* will be found in §21.2.)

Kóso also occurs at the end of a noun phrase, and the noun phrase is often thematized (§3.9). As illustrated by the examples in KKK 3.51, the particle is used to spotlight adverbial reference to TIME (*Rainen kóso wa* 'Precisely next year', *kóndo koso* 'next time indeed', *íma koso* 'right now'), to PLACE (*... no náka ni/de koso* 'precisely within ...'), and to CAUSE (*sore yúé ni koso* 'precisely for that reason'); from the last comes the sentence opener *Sore de kóso* 'Precisely by that ...' (cf. *Sore kóso* 'Indeed ...'). In set phrases other adverbial elements are sometimes spotlighted by *kóso*: *Yóo koso* [*irassyaimásita*] '([You have come] nicely indeed =) Welcome! How nice to see you!' Set phrases of the type *Kotira/Watakusi kóso* 'It is indeed I (who should express appreciation, apology, etc.)' are probably to be regarded as Identifiers in an elliptical identificational sentence of the type $N \text{ } \{gá\} \text{ } kóso \text{ } X \text{ } da$ (or possibly $N \text{ } kóso \text{ } \{ga\} \text{ } X \text{ } da$, see below) = $X \text{ } wa \text{ } N \text{ } kóso \text{ } da$ as in *Warúí no wa watakusi kóso desu* 'It is I who am at fault'. Sometimes the best English translation of *kóso* is 'to be precise (about it)', especially in sentences with loose reference (§5.4).

It is not entirely clear whether postnominal *kóso* is better treated as a particle of focus—

with *wá*, *mó*, *sáe* {*mo*}, and *síka*(⁻)—or whether it belongs with the restrictives (*daké*, *máde*₂, *dógoro*, etc.) and quasi-restrictives (*ámari*, etc.). The sequence *kóso ga* is found: *Kono yokkyuu kóso ga ... kihon-teki na sasáe de aru* ‘Precisely this desire is the basic support (for ...)’ (Ōno 1966.195); *Sore kóso ga seisin-iryoo no gán na no da* ‘The stumbling block to psychotherapy is precisely that’ (SA 2678.131c); *Sono | un’ei to kánri | íkan koso ga, || kónniti || kangaerarenakereba | naránai | mondai ná no de aru* ‘The problem that must be considered today is precisely the state of operations and management of them [= Japan’s public corporations and organizations]’ (SA 2684.105e)—for N [no] *íkan*, see §25; ... *ningen o syúzin to suru | gízyutu no | kenkyuu | kaihatu kóso ga | motomerárete ōri*, ... ‘what is needed is precisely the research and development of a technology that will treat man as the master and ...’ (SA 2660.117c); *Bíkutaa wa “Méezyaa da” to syookai site kuretá ga, káre koso ga, Kyanon-kíkán de na o utta Kyánon syóosa datta no de aru* ‘Victor introduced him saying “This is the Major” but he was the very Major Cannon who had made a name with the Cannon organization’ (SA 2641.17); ... *soo iu “izyoo” to “seizyoo” tó no taemá^[1] náí kintyoo-kánkei koso ga káre-ra o soozoo é to kari-tátete iru kotó ga wakáru* ‘We understand how it is precisely the incessant strain between “abnormal” and “normal” that drives them toward creativity’ (SA 2666.26c)—for *é to*, see p. 1007; *Kore kóso ga ínoti yori taisetú na monó da* ‘Precisely this is more important than life itself’.

I have been able to elicit examples both of (?) *kóso o* and of *ó koso* (but not of **ga koso*): (?) *Kore kóso o kime-te to site kenkyuu site miyóo* ‘Let us investigate precisely this as the deciding factor’; *Kore ó koso kime-te to sinái de, zíken no kaiketu ga dekíru to omóu no ka* ‘Do you think you can resolve the matter without treating as the deciding factor precisely this?’ I have found text examples of *ó koso*, but not of (?) *kóso o*: *Hensyúu-sya wa sono kotó o koso nagéku ˘béki daroo* ‘The editors must surely deplore precisely that fact’ (SA 2685.104b); *Sono kotobá ni tadóri-túku made no wazurawásikute hukuzatu de tagai ni muzyun si-atta déeta no taigun-buri [sic] ó koso watasi wa siri-tákatta no ga, sore-kiri^[1] denka wa damátte simatta* ‘Precisely the great mass of data that would lead one to [understand] those words, [data] irksome and complicated and mutually contradictory, was what I wanted to know, but His Excellency said no more’ (SA 2685.101c).

Examples after other case markers: *Kono kyóozyu(˘) to tómo(˘) ni arúite kíta kyoozyú-kai ni koso mondai ga áru* ‘There is something questionable about just such a faculty group who have walked along with this professor’ (SA 2668.123c); *Koo iu komyunikéesyon de koso genmitu no hyoogén(˘) ga kanoo de áru* ‘Precisely in this sort of communication is rigorous expression possible’; *Kurusii kéiko no náka ni koso, dai-sénsyu ga umarerú no da* ‘It is precisely in the midst of agonizing practice that great athletes are born’ (KKK 3.51); ... *konna baai ní koso zyúnbi sareta ...* ‘was provided precisely for such situations’ (Maeda 1961.216); *Mé ni koso miénai ga, áki ga kíte iru* ‘You can’t see it with your EYES, exactly, but autumn is here’ (Hayashi 187—he calls this “highlighting”); *Makumahon-Ráin made koso ga || Tyúugoku no | ryóodo da* ‘It is precisely all the way up to the McMahon Line that is Chinese territory’; *Koko máde koso {wa} || tadasii to | ierú ga ...* ‘Precisely up to here it can be said to be correct but ...’; *Koko kará koso {wa} || tadasii to | ierú ga ...* ‘Precisely from here on it can be said to be correct but ...’; *Daigaku kará koso | manéku ˘béki de atta* ‘I should have been invited by the university itself’; *Nyuu-Yóoku e koso | iku ˘béki de atta no ni* ‘It’s (precisely) New York I should have gone to (but I didn’t)’; *Soko dé koso | zibun no íken o | hakkíri | hanásu ˘béki datta no ni* ‘THERE’s where I should

have made my views clear (but I didn't)'; Syúzin to koso | soodan sú beki datta no ni 'I ought to have talked it over precisely with my husband (but I didn't)'; Hitogoto ní koso | kiku ʔbéki de aru 'We must take (= understand) it as of no concern to us'.

The evidence given above indicates that kóso probably belongs with the restrictives. But when it occurs together with a restrictive or quasi-restrictive, apparently kóso must come last: Konna tyuusyutú-hoo(ʔ) ní wa teisuu ókí(ʔ) ní koso ími ga áru 'With this sampling process it is precisely every other number that has significance'; Gakunén-matu ʔgóro ni koso tetudátte morai-tákatta no ni 'I wanted to have assistance precisely at the end of the school year (but I didn't get it)'; Kúgatu ʔgóro koso kekkoo dekiyóo (= dekirú daroo) 'It is precisely September when we will be able to take decisive steps'; Yóru zyuuní-zi ʔsugí koso kiken da 'It is dangerous precisely after midnight'; Káku-sya no bútyoo(ʔ) ʔízyoo koso seikatu o zisyuku sú beki da 'Precisely those of the rank of division head and above in each company should exercise self discipline in their lives'; Nensyuu itimán-doru ʔíka koso genzei no taisyoo ni sú beki da 'Precisely those incomes of under ten thousand dollars a year should be made the object of tax reduction'; Tosin ʔígai koso kóokyo ni husawasíi basyo da 'It is outside the heart of the city that is the suitable place for the palace'; Hankoo ʔg^[l](ʔ) nízyuu yo-zíkan ʔínai koso zyuuyóo-si-sareru ʔbéki da 'Precisely (the time within) the twenty-four hour period after the crime is committed should be accorded great importance'; Kaisei ʔírai koso tyuumoku sú beki da 'It is precisely AFTER the revision that we must be alert'; Sikén ʔígo koso hontoo ni zibun no sukí na benkyoo ga dekirú 'It is precisely from after the exams that one can do the studies one likes'; Ik-kágetu ʔkágiri [no keiyaku] koso, bóku(ʔ) ní wa tyoodo tugoo ga íi 'Precisely one month('s agreement) is just right for me'; Ténisu o surú no mo, ni-san-zíkan ʔgúrai koso karada ni íi ga, go-zíkan mo roku-zíkan mo si-tuzúketete wa yóku náí 'In playing tennis precisely two or three hours is good for the body but if you keep playing for all of five hours or all of six hours it isn't good'; Iti-zíkan hodo koso tekitoo dá ga, san-zíkan wa oo-sugiru 'Indeed about an hour is suitable but three hours is too much'; Tanaka san ʔgúrai koso kúru ʔbéki da 'Precisely Mr. Tanaka, at least, should come'.

For daké and bákari, however, I have managed to elicit both orders when kóso is used; many speakers will perhaps reject kóso daké/bákari and a number of speakers will feel uneasy with the other order as well: (?) Anáta daké koso watasi no kimoti o wakátte kureru to omótta no ni ... 'Here I had thought precisely you would be the only one who would understand my feelings (but ...)'; (?) Kane daké koso ga zínsei no mokuteki da 'It is just money that is the goal of men's lives'; (?) Kore kóso daké wa dóo-sité mo wasurerarenai 'Just precisely this I can never forget'; (?) Mittú ʔbákari koso hituyoo dá ga, too mo nízyuu mo wa iranai 'Precisely only three are required, and we don't need a whole ten or twenty'; (?) Kore kóso bákari wa zettai ni hituyoo da 'Just precisely this is absolutely essential'.

Similar reservations obtain for ʔátari kóso: (?) Mittú ʔátari koso tyoodo tekitoo da; sore ʔízyoo wa oo-sugiru 'But three will be just right; any more would be too many'.

Although *dókoró kóso does not occur, it is possible to elicit kóso ʔdókoró 'hardly precisely' when the kóso-marked expression is taken as a propredicative ellipsis: Kyóo koso [] ʔdókoró ka raisyuu mo sí wa sinái daroo 'A far cry from "today's the day", they won't do it even next week, I bet'.

I have elicited nádo kóso and ʔzútu kóso but not *kóso nádo or *kóso ʔzútu: Dáizin nádo koso massáki ni tátte hataraku ʔbéki da 'Precisely the cabinet ministers must stand

in the vanguard of our labors'; Hitóri ni mittú zútu koso tyoodo tekitoo da 'Precisely three for each person is just right'.

I have been unable to elicit *yóri koso 'precisely than' or *koso yóri 'than precisely'. (Yóri koso will appear as the literary version of kará koso 'precisely from'.)

We also find koso followed by wá: ... kondo koso wa to kitai sitá ga ... 'we were expecting surely THIS time [there would be a good script—after two disappointing ones] but ...' (SA 2657.118c); Kono háru koso wa to saigo no oikomi-bénkyoo o site imásu ga ... 'He is pursuing last-minute study with the idea that this spring is it' (SA 2662.106a). (KKK 3.51 has examples of Sore koso wa ... and Rainen koso wa ...)

Although modern speakers reject *koso mo and *mó koso MKZ lists an archaic usage of ... mó koso to express possibility: Sode no nuré mo koso sure 'The sleeve may get WET', in which koso is applied AFTER highlighting the nuclear focus. As this example shows, after koso Literary Japanese typically requires the predicate to be in the LITERARY CONCESSIVE form -ré[-do] without the -dó.³³ When put into a larger sentence (MKZ 289c: Yorokóbi koso sure, okóru hazu ga náí 'He will be indeed delighted AND unlikely to get angry') the literary concessive can readily be replaced by -rú ga or the like (including -té mo); see KKK 3.52 for a purported example. And even when the literary sentence stands alone, there is often a bit of 'but' flavor to justify sticking a final gá on the end of the colloquial translation: Kokóro sú beki kotó ni koso áre = Ki o tukénakereba naránai kotó koso desu [ga ...] 'It is indeed (or: of course) a matter requiring caution' (MKZ 289c), a sentence in which the literary copula nári has been split into its components the essive ní and the auxiliary ár-i to permit nuclear focus (or restriction) with the insertion of koso. More colloquial examples of nuclear focus/restriction with koso are given in §5.3. Examples of gerund (-té) + koso will be found in §9.2.2.

I have elicited one example of saé koso but not all speakers are happy with it: (?) Konna kotó sae koso obóete iréba, ansin désu 'If I can just remember precisely that, I'll be relieved'. Both *síka(-) koso and *koso sika are rejected.

In the uncommon idiom aisó mo koso mo tukíru (also: aiso-mo-koso-mo tukíru) = aisó[o] ga tukíru 'is disgusted', the word koso is apparently an idiom-bound noun made up of the native prefix ko- 'small' + the Chinese loanmorph soo 'thought' by association with the noun aisó[o] 'affability' which consists of the Chinese loanmorphs ai 'love' + soo 'thought'. Thus it has no connection with the koso under discussion in this section. The adverb sá-koso {to} 'just like that; presumably' attaches koso to the deictic sá 'like that, so'. In Mie and Tokushima, koso is said to be used where the standard language uses sika (Sakai 47b).

The origin of koso is unclear but one possibility is that the word developed as a variant of kotó 'thing; word' (cf. English 'the thing is ...'); notice the "newish" uses of kotó as an exclamatory sentence extension (§15.13). And compare the etymological suggestion (in §2.3.5) that mó may come from a truncation of monó, a word that shows great similarity to kotó in uses and meanings. But Tanaka Kimiharu (in Gekkan-Bumpo 69/11; cf. Kgg 81.35) suggests that koso comes from ko[re]so 'emphatically this'; cf. uses of zó, §15.5. Ōtsuki gives the implied etymology kó [wa] só [nari], the literary equivalent of

33. Traces of this phenomenon can still be found in Tokushima and Toyama prefectures and in northern Kyūshū (H 1968.150, 165-6).

ko[re wa] so[re da] 'This is it'. Is the Ainu ... kusu 'because' (cf. Ryūkyū ... kutu 'because') in any way related?

2.3.5. Some etymological speculations.

We have remarked that the particle *wá* is related to the *ba* which appears in *ó ba*, *-tára ba* (also *nára ba*), *-réba* (also *-kéreba*), and *-táreba*. We have observed too that *wá* can be attached to the infinitive, yielding *-í wa*, *-kú wa*, and [*ní wa* →] *dé wa*; it also attaches to the gerund, yielding *-té wa*, *-kúte wa*, and [*ní-te wa* >] *dé wa*; The provisional forms that end in *-réba* and *-kéreba* permit abbreviated variants *'rya[a]* and *-kérya[a]* or, by further contraction, *'kya[a]*. The gerund + *wá* can abbreviate to *-tya/-zya*, *-kutya*, and *zyá[a]*. The verb infinitive optionally takes the variant *yá* instead of *wá*, and *-i ya* and *-e ya* freely abbreviate to *-ya[a]*. Similarly, the particle sequence *ní wa* sometimes contracts to *nyá[a]* (and the kana spelling *ni ya* is often to be interpreted as *nya*); *Watasi nya náni mo wakáttya inái n desu* = *Watasi ní wa náni mo wakátte wa inái no desu* 'I just don't understand it at all' (SA 2664.42e); *Soko de Nihón nya sakana ga óói n da kara sakana no ryóori o orósoka ni sityáa ikan* [= *sité wa ikenai*] 'Now Japan has lots of fish so you mustn't neglect the proper cooking of fish' (SA 2669.48a). The contractions could be explained as a dropping of the initial *w* of *wá* with a subsequent epenthetic *-y-* induced by the preceding front vowel; or, again, the explanation might be palatal assimilation of the nonpalatal semivowel. The particle is heard as /a/ after nouns that end in a vowel, as *nákaa* = *náka wa*; a preceding /o/ or /u/ assimilates, as in *sótaa* = *sóto wa*, *bókaa(-)* = *bóku(-) wa* (Tk 4.171b), *ait[u]aa /aitsaa/* = *aitu wa*, ... *táa* = ... *tó wa*, ... *náa* = ... *nó wa*, etc. And the long /aa/ is subject to further reduction at times, so that you may hear *kónda* for *kóndaa* = *kóndo wa*, as perhaps in this example: ... *kónda Yooróppa e irassyáru n desyoo* 'I understand you're going to Europe soon' (Tk 4.42b). But *kónda* is also a Tōkyō variant for the unfocused noun *kóndo* 'this/next/last time' as can be seen clearly in this example: *kónda no sénkyo zya* ... 'in the coming election' (Tk 4.209a—from a speaker born in Shiba). When the /a/ that represents *wá* is added, a front vowel often reduces to /y/, as *korya* = *kore wa*; but the interjections *kora*, *ara*, and *hora* < *sora* (from *kore wa* etc.) show a variant treatment with the /e/ dropping, instead.

A better explanation for these contractions may be to say that some or all are made on a variant form of the particle itself, namely *yá*. That form appears as the basic, or only, shape of the particle in a number of dialects, notably those of the Ryūkyūs—where, however, there are normally a number of other morphophonemic adjustments in attaching the particle to various shape types. And *yá* appears in a few set phrases in the standard language, e.g. *káta(-)ya* 'on the one side [in *sumō* wrestling]' (= *katáppoo wa*).

In Literary Japanese and in some of the dialects (e.g. Shodon in the northern Ryūkyūs) there is a sentence particle *yá* (§ 15.6a) that has some of the interrogativizing functions handled by *ká* in standard Japanese; both interrogative particles are present in the kinds of Japanese just mentioned, and *yá* is preserved in a number of clichés used in modern Japanese, e.g. *íma ya* 'now indeed'. In standard Japanese the particle *yá* is used to mark selective (= nonexhaustive) conjoining of noun phrases (§ 2.7), somewhat as *tó* is used to mark exhaustive conjoining and *ní* is used to enumerate; compare the use of the interrogative particle *ká* to conjoin alternatives 'or'.

Now the question arises whether the *yá* that interrogativizes and conjoins is historically to be identified with the *yá* that substitutes for *wá*. My opinion leans to the negative; at

the same time, I have doubts about identifying the interrogative *yá* with the Korean particle *ya* of the same meaning, for I suspect that each may be a secondary creation of quite independent origin. Let us defer the question, and ask this instead: Are the two particles *wá* and *yá* that are used for focus to be identified as variants of the same etymon or are they of different origins? I favor identifying them as a single etymon, and I think that we can explain the development of *yá* from *wá* (earlier *pá*) as parallel to the development of Ryūkyū *yu* from (?*)*yo* from *wó* (earlier *bó?*), the direct-object marker. In both cases the nonpalatal semivowel has palatalized or dropped in intervocalic position.

Traditional kana spelling indicates that *wá* comes from proto-Japanese *pá*, and that would seem to be amply confirmed by the "nigoriéd" form *bá* mentioned earlier, though we might entertain the possibility that *bá* could be a doublet-relic of the proto form of *wá*. (Modern INITIAL *w-* comes from proto-Japanese *b-* just as modern *h-* comes from *p-*, but the /*w*/ of the particle is not "initial" since particles attach directly with no juncture; and intervocalic *-w-* can come from either *-p-* or *-b-* of the proto language, though the latter is uncommon.) If, following this out, the *-ba* forms were primordial rather than the result of the *nigori* (= voicing) that is part of the compounding process (an example will be seen in *tó/-dó* just below), it would lend added weight to an etymology which associated the particle with the noun *ba* 'place, situation'. But since proto-Japanese apparently did not permit voiced consonants at the beginning of a word we may wish to consider the noun *ba* as a relatively late truncation of some such compound as, say, **ari-ba* = *tati-bá* 'location-place'. If so, the originally bound morpheme for 'place' or 'situation' would be a basic *pá* that could serve as a basis for the focus particle, and that morpheme might well be cognate with the Korean quasi-free noun *pa* 'thing, circumstance, way' perhaps from Middle Korean *pa* 'way (to do)' for which we could reconstruct Korean-Japanese **pa*. (Ōtsuki, however, would derive *ba* from *hanima* < *pani-ma* 'red-earth place' with the second syllable of *pani* an old noun *ni* meaning 'earth', leaving *pa-* probably to be explained as a relic of a word family of Korean-Japanese that has meanings such as 'red' and 'bright'. We might also ask whether *ba* is not simply a doublet version of *ma* 'interval, room'.) A more interesting possibility would be to consider *wá* < *bá* as a nounlike derivative from *wi-* < *bi-* = *wor* < *bo(-r)-* 'be'; that is, *wi-á* > *wá* 'being ...'. The modern Okinawan copula *yañ* would seem to be clearly an amalgam of the particle *ya* + the auxiliary *a-ñ* (equivalent to Literary Japanese *ári*) as we can see from the negative form: *kii yañ* 'it is a tree' :: *kii ya arañ* 'it is not a tree'. That *yá* < *wá* < *bá* might earlier have derived from a verb of existence would be very natural.

What about *mó*? The particle occurs quite generally in normally expected reflexes for all varieties of Japanese. The only puzzler is the Miyako form *mai*, which I have suspected to be an abbreviation of *madi*, the Ryūkyū reflex of *máde*—that particle having perhaps replaced the simple *mó* in somewhat the same manner that standard Japanese uses *máde* 'even' as a kind of reduction of *máde mo* 'even up to'. But Meikai kogo jiten lists *mé* as an Azuma (= Eastern) version of *mó* in Old Japanese, and that too must be explained—perhaps as a blend of two particles *mó* + *í* or *yó*? And notice that *dó ma* is used for *dé mo* in Kyūshū (Zhs 6.17 n7), *mota* for *mata* in Toyama (Zhs 3.70), *mátto* for *mótto* in a number of places (Chiba Zhs 2.209, Kanagawa 2.322, Shizuoka 3.356), *máa* for *móo* in Niigata (Zhs 2.341) and Yamanashi (Zhs 2.434); perhaps *mó* is from *má* with labial assimilation of the vowel. Still another possible origin for Miyako *mai* would be a contraction from

m[o] á[r]e; cf. Yamanashi denma{ri}, demari (and Old Japanese demare, demari) < ní-te mo áre (Zhs 2.424 n2).

I wonder whether mó may not itself be a truncation of the word monó 'thing', a noun that has been put to use in so many different grammatical devices, of which the one most relevant here is N sono-mónó 'the N itself' (see § 25). Monó was used in former days to mean 'that' (= are) in the Kantō area, according to Zhs 2.24. Possible Korean cognates for mó include these groups of words: (1) man 'just'; tã-man < MK "tamøn 'only'; mankhum = MK 'ma-'kõm 'as much as'—but these may be derived from the negative auxiliary mã-l- 'desist', cf. kũ man V 'stop V-ing', -l mangceng < MK "man"tyeng 'even though', and see below. (2) -(y)na-ma 'but anyway' (not attested in MK); -man(yn) < MK -ma(lõ)nõn, -manõn 'but' (perhaps to be interpreted as -ma-nõn or -man-yn). (3) mãl < MK "mal 'word' (if this is from *man by dissimilation and from **mõn with the appropriate vowel). (4) ā-mu 'any' < MK amũ, "amo < proto-K "a-mo (with "a- cognate to the Japanese auxiliary á-r- 'be'); perhaps mu- 'wh-' = MK mũ(sũ)-. The fourth etymology is the most promising, in my opinion. Not to be connected is Korean macë/a 'even', for the MK form mōcə/ō points to a likely derivation from the infinitive of the verb MK mēc- 'cease' = MK mō'chũ/ō- (whence modern machi- 'finish') = MK mōz- (whence possibly MK 'mōs 'most'), MK mōcōmak and MK mō'chõm = macimak 'end'; cf. also mēmchwu- 'stop', mēmũl(y)- 'stop at' and mã-l- 'refrain; finish'.

To be considered in connection with mó is the particle tó with a nigori form dó and what may well be a variant of that, zó.³⁴ These particles mean 'indeed' or 'even' and can be regarded as partial synonyms of mó in one of its two uses—that of focusing attention on the phrase in relationship to all other similar instances. The only relics of these particles in standard Japanese are kére-do {mo} 'but', ... tó^[1] ié-do mo 'even if (we say)', and the like—and perhaps nádo/názo 'et cetera' (if this is from náni tó^[1], see § 2.8) and sentence-final zó (§ 15.5). The Ryūkyū reflex dú (which differs from the conjoining and reciprocal/comitative tú, a reflex of tó) is used to reinforce the emphasis on reflexes of the subject particles nó and gá, yielding nu/ga du, and also attaches directly to a noun that is used as emphasized direct object or as complement of the copula: N du yaru 'it is N' = standard Japanese N dá < N ní-te á[ri]. Compare the "subjective" copula tó ár-i > tár-i (§ 13.5a). In at least some varieties of modern Okinawan the particle du (often automatically pronounced ru, since many speakers have difficulty maintaining the d/r distinction) can freely follow almost ANY adjunct to add a lively emphasis, with the sentence ending in an attributive form -ru (identical in sound with du for those speakers lacking the d/r distinction), which can be used alone to add emphasis to a sentence, even without a du-marked adjunct earlier.

In addition to sentence-final zó (as in the colloquial) and postnominal zó, Literary Japanese has -do {mo} as in suré-do {mo} 'even though one does' and háyakere-do {mo}

34. It is sometimes assumed that the conjoining of nouns by tó 'and' must be a special case of the "comitative" use meaning 'with', but in view of the parallelism with mó that assumption bears reexamination; perhaps all cases of tó ultimately go together—as what I am calling the subjective essive—and the comitative itself is a special case. (Actually, the comitative turns out to be a secondary reduction from a phrase made up of an adverbialized predicate with a reciprocal valence; see § 3.6.)

< háyaku áre-do {mo} 'even though it is early'; we will call this the literary concessive (§9.3). In Literary Japanese *tó mo* is used after either the infinitive or the attributive in the meaning 'even if', and in the colloquial we find *S tó mo* 'of course S' and the semi-literary *V-[y]oo to {mo}* 'even if; whether'—see §21.1.(9, 14); §21.5. The colloquial particle *tté* (§15.11) is used both to mark quotations—like *tó*—and to mean 'even'; but we reinterpret the latter case as a contraction of the gerund *-té + átte* (p. 938) as in *sit'átte = sité mo = suré-do {mo}* 'even though one does'. Ultimately, then, our "emphasis" particle *tó* (with its variants *dó* and perhaps *zó*) may turn out to be specialized uses of the subjective essive *tó*, for which a proto meaning of 'that' has been suggested (cf. *tó-ni-kaku, tó-ni-mo káku-ni-mo*). But the Korean equivalent of *mó* in virtually all its uses is the particle /to/, clearly cognate with the Japanese etymon *tó*, so the association with 'that' may not hold up; the *tó* in *tó-ni-kaku* (etc.) is perhaps a variant of *só* 'that', for which there is a good Korean cognate *cē/co*. It should be mentioned that some grammarians, such as Fujitani and Tachibana, have derived *zó* from *só* 'that' (Sakai 43); compare the suggested derivation of *sí {mo}* from a variant of the morpheme for 'that' (Saji 40).

2.4. RESTRICTIVES AND QUASI-RESTRICTIVES

In addition to markers of case and focus, there are a number of other particles which will attach to a noun to form a single phonological phrase, yet permit the noun to be modified by an adnominalized sentence or to be conjoined with another noun. We will speak of (1) RESTRICTIVES, (2) QUASI-RESTRICTIVES, (3) the DISTRIBUTIVE (*zútu*), and (4) the COMPARATOR (*yóri*). Each of the true restrictives also occurs—in the same form and with the same meaning—as a postadnominal (§13.2), i.e. it can follow a verbal, adjectival, or nominal sentence to serve as an epitheme (typically of the summational type). When the adnominalized sentence is nominal, the *dá* that marks it as imperfect will change to *ná* and be retained, thus providing a contrast with the use of these words as restrictives attached directly to the noun:

AS POSTADNOMINAL

asanéboo na | daké 'just being a slugabed'
 asanéboo na | bákarí 'only being a ...'
 asanéboo na | hodó 'as much as to be
 a ...'
 asanéboo na | máde [mo] 'to the point
 of being a ...'
 asanéboo na | dókoro 'far from being a ...'

AS RESTRICTIVE

asanéboo daké⁽ⁱ⁾ 'just a slugabed'
 asanéboo bákarí⁽ⁱ⁾ 'only a ...'
 asanéboo hodo '(not) as much as a ...'
 asanéboo made [mo] 'even a ...'
 asanéboo *~*dókoro 'hardly a ...'

But a number of Japanese rarely use nominal sentences with these words as postadnominals, or at best use only adjective-nominals. For such speakers we could perhaps say that these words are always functioning as postadnominals, with obligatory suppression of the copula; the apparent difference in meaning, however, would argue against that conclusion, although it merits consideration as a possible explanation for the historical development of the word class itself. Notice that it is always possible to nominalize the nominal sentence and then attach the restrictive: *asanéboo na/no KOTÓ daké⁽ⁱ⁾* 'just being a slugabed', etc.

Although postadnominal occurrence provides a criterion for distinguishing the relatively

small group of restrictives from the relatively large group of quasi-restrictives, the differentiation is not easy, nor are the reasons obvious for making the distinction. In general the restrictives are more VERSATILE, in that they will attach to a larger number of the sub-categories of pure noun, and more RECURSIVE, in that they enter more freely into combinations with other restrictives and with the distributive, as will be shown below.

Some of the quasi-restrictives also seem to appear as postadnominals, but in somewhat different guise: in place of $\bar{d}\acute{o}ori$ and $\bar{g}\acute{o}ro$, for example, we find $t\acute{o}ori$ and $k\acute{o}ro$, with unvoiced initials.

When used as a postadnominal the restrictive is normally separated from the adnominalized sentence by the basic minor juncture that characterizes adnominalization; the juncture will often fail to surface after an atonic phrase, however, as explained elsewhere. After a noun, most of the restrictives and virtually all of the quasi-restrictives are accentually DOMINANT; the preceding noun loses its accent³⁵ and what is retained is the accentuation that is given here as basic to the restrictive, whether tonic or atonic. (To be sure, that accentuation itself is not always basic to the underlying etyma, since the accentuation of the phonological phrases in question is essentially that of a compound noun; the same rules used in assigning accent to compound nouns can be found at work here, but we will skip the details.) And the particles $hod\acute{o}$, $[k]kiri$, $m\acute{a}de$, $n\acute{o}mi$, $s\acute{a}e$ (which is said to be used as a dialect variant of $hod\acute{o}$), and $dak\acute{e}$ or $b\acute{a}kari$ 'only' (but not $\bar{b}\acute{a}kari$ 'approximately')³⁶ will lose their accents after a tonic noun, behaving like the case particles, as does the comparator $y\acute{o}ri$. The distributive has a dominant accent which optionally shifts back one syllable: $suk\acute{o}si$ $\bar{[']z\acute{u}tu$ = $/sukosiz\acute{u}tu/$ or $/sukos\acute{i}zutu/$. We will cite the form simply as $\bar{z}\acute{u}tu$.

By the definition used here, those words which are restrictives comprise the following set:

$\bar{a}tari$, (a) 'vicinity, nearby; somewhere near; in and around (a place)'

(b) 'or the like, of the sort, for instance'

$b\acute{a}kari$, (b) 'only, just' (= $dak\acute{e}$)—with the lively variants $b\acute{a}kkari$, $b\acute{a}[k]kasi$, $pp\acute{a}kasi$, ..., and the dialect versions $ba[k]ka$, baa , kaa ; $bari$, $baru$ (Zhs 1.64); $beeri$ (Zhs 1.94), be (Zhs 1.91); bee , $baari$, bai , $nbee$ (Zhs 2.181); Cf. also $are-pp\acute{o}ti$ de 'with nothing more than that' (SA 2685.120e), $kore-pp\acute{o}ti/-pp\acute{a}ti$ = $korenb\acute{a}kari$ (Fn 8b) 'just this much', $zyoorok\acute{u}-mon$ $ppoti$ no $z\acute{e}ni$ 'sixteen pennies' (Okitsu 1.451).

($\bar{[']dak\acute{e}$, (a) $dak\acute{e}$ 'only, just' (= $b\acute{a}kari$, $n\acute{o}mi$)

(c) ($\bar{[']dak\acute{e}$ ni , ($\bar{[']dak\acute{e}$ $\acute{a}tte$ 'just for being'

$\bar{d}\acute{o}koro$, $\bar{d}\acute{o}ko$ 'far from (being/doing), hardly' (on the accentuation, see

p. 931)

$\bar{d}\acute{o}osi$ '(those) in company with'

$\bar{g}awa$ 'the side of'

$\bar{g}\acute{e}nzai$ 'as of (a date or period [when ...])'

35. Sometimes modifying phrases are included, especially in idiomatic expressions: $hito$ ni $dek\acute{u}ru$ $kot\acute{o}$ $\bar{[']zyoo$ may be heard as $/hitonidekirukot\acute{o}zyoo/$, $zibun$ no $kurusikatta$ $zidai$ $\bar{[']zyoo$ may be heard as $/zibunnokurusikattazidaizyoo/$, and $subarasii$ $kot\acute{o}$ $\bar{[']z\acute{u}kume$ may be heard as $/subarasiikot\acute{o}z\acute{u}kume/$. But in general the juncture that separates adnominal phrases from the noun will surface and you will hear whatever accents are called for.

36. But there are speakers who (at least sometimes) use $\bar{b}\acute{a}kari$ for 'only'; and some speakers observe the cancellation of ($\bar{[']dak\acute{e}$ only under limited conditions. More data on the accentual patterns of $b\acute{a}kari$ and ($\bar{[']dak\acute{e}$ are needed.

- ̀góto 'each, every (instance)'
 ̀gúrai, ̀kúrai, ̀kkúrai, (b) 'to the extent of; at least; as ... as'
 hodó, (b) 'as much as (to be/do); insofar as'
 ̀igai 'outside of, except for'
 ̀izen 'before'
 ̀ízyoo 'over, above, more than; since'
 ̀kagiri 'to the extent (of/that); limited to, only'
 ̀kkiri, ̀kiri 'that being all and (not) beyond'
 máde 'till, as far as; even'
 ̀máe 'before (a time/event)'
 nómi = daké 'only, just'
 ? ̀súgata (some difference in meaning)
 ? ̀téido 'the level/caliber/limit of'—as postadnominal also atonic téido(̀)
 ? ̀zibun 'time (when)'—as postadnominal also atonic zibun(̀)
 ? ̀zíken 'the incident of'

As indicated by "(a), (b), (c)", some of the words occur with more than one meaning; only in the given meaning are they used both as postnominal restrictives and as postadnominals.

In view of the recursiveness of the process which puts these elements into sentences, we would expect to find sequences of the more versatile piling up to any non-repetitive depth, provided there are no semantic incompatibilities. It is not clear what limitations, if any, may apply to the acceptable sequences. Here is a set of four such words—gúrai, máde, (̀)daké, and ̀zútu—that seem to be acceptable in all possible orders when applied to a noun phrase like kono gaku 'this amount', producing nearly synonymous sentences that defy exact translation:

- (1) Kono gaku gurai made dake zútu wa kasite agerareru.
- (2) made gurai dake zútu
- (3) dake gurai made zútu
- (4) gurai dake made zútu
- (5) gurai made zutu daké
- (6) made gurai zutu daké
- (7) dake gurai zútu made
- (8) gurai dake zútu made
- (9) gurai zutu made daké
- (10) made zutu gurai daké
- (11) dake zutu gúrai made
- (12) gurai zutu daké made
- (13) zutu gurai made daké
- (14) zutu made gurai daké
- (15) zutu dake gúrai made
- (16) zutu gurai daké made
-

The first sentence might be translated something like 'I can lend each of you just up to this amount'; the translation of the others should vary slightly to reflect the order of applying the various words. I have cited the sequences with the final surface adjustments of accent for the sentence as spoken fast; at a slower pace, junctures might be inserted, leading to a somewhat different accentuation.

Below you will find a list of the restrictives and quasi-restrictives in alphabetical order.

There are several things to be noted about each item:

Which of the subcategories of noun will be used with it?³⁷

What is the grammar of the resulting phrase?

What is the combinability of the item with other items in the list?

The last question remains to be adequately explored; a rough index of combinability can safely be imputed on the basis of the versatility shown by the subcategories. In the list on the left we give twelve columns to represent twelve classes of pure nouns (following Isami, see §3):

- (1) Proper nouns: *Sátoo*, *Nagásaki*, ...
- (2) Human nouns: *hito* 'person', *kodomo* 'child', ...
- (3) Animate (nonhuman) nouns: *inú* 'dog', *tori* 'fowl', ...
- (4) Time nouns: *ása* 'morning', *háru* 'spring', *sán-zi* 'three o'clock', ...
- (5) Place nouns: *matí* 'town', *kuni* 'country', ...
- (6) Countable nouns (not otherwise categorized): *hón* 'book', *ié* 'house', ...
- (7) Measurable nouns: *o-sake* 'rice wine', *zikan* 'time', *o-kane* 'money', ...
- (8) Relational nouns: *máe* 'front', *migi* 'right', ...
- (9) Quantity nouns: *sukósi* 'a little', *zénbu* 'all', *sán-ko* 'three', *san-zíkan* 'three hours', ...
- (10) Mass nouns: *áme* 'rain', *kiri* 'fog', ...
- (11) Action nouns: *turi* 'fishing', *mane* 'imitating', ...
- (12) Abstract nouns: *séigi* 'justice', *bí* 'beauty', ...

A number is cited whenever the combination of the subcategory with the item is believed to be possible; special cases and doubts are indicated by parentheses and question mark. After these twelve columns there is coded a designation of the resulting grammar(s) of the phrase: N = noun, Adv = adverb, Adn = adnoun (prenoun), PcN = precopular noun (quasi-adjectival noun).³⁸ There are a number of difficulties. Many of the precopular nouns can be used also as pure nouns, meaning 'the one which/who ...' or 'the situation that ...' or the like, but they are not so used very often; we might wish to regard the noun use as an ellipsis of something like PcN {*nó* [*nó*]} 'the one which is PcN'. Items of that sort have been coded as "PcN, (N)". I have not subcategorized "N" but the subcategorization (especially "place" or "time") will sometimes be obvious from the translation. Directly in front of the serial number of the item you will find "+" for those which are also postadnominals.

I have indicated those voiced initials which derive etymologically from their voiceless counterparts (by writing "t...", "k..." or the like) only when the identification is obvious and probably to be treated as morphophonemically meaningful in the present-day structure. Notice that the symbol "p" means the basic form of the etymon will be h- in the modern

37. By definition restrictives and quasi-restrictives are attached only to PURE nouns (those that can be marked as subject/object by *gá/ó*). I leave unexplained a few examples, such as *hutuú* *ízyoo* 'more than usually', in which the restrictive follows a predicable adverb. The likely explanation is an ellipsis.

38. Most of the precopular nouns are defective in that they do not permit the adverbial conversion of the infinitive *ní* (§9.1.11); where you need an adverbialization the gerund is usually appropriate (... *~sidai de*, not *...*~sidai ni*) unless the word also has the grammar of an adverb (... *~dóori*). The lack of the adverbial conversion is not surprising; MOST precopular nouns (and probably most adjectival nouns and adjectives, for that matter) lack the form. What keeps a defective precopular noun from simply being a predicable adverb is that it cannot be directly adverbialized. Other infinitive conversions (PcN *ni náru/suru*, etc.) are generally possible.

pronunciation. Many of those voiced initials that are not marked probably also go back to a voiceless initial, unless they are borrowed from English or Chinese; and one of the Chinese loans (ʔzyuu) was originally voiceless (ʔtyuu) but now is to be carefully distinguished from the voiceless version, which has a different meaning. Those initial consonants which probably had voiceless origins are found in (ʔ)daké, ʔdárake, ʔgara, ʔgárami, ʔgata, ʔgóto, ʔgúrumi, ʔzukú(ʔ), ʔzúkume, ʔzútai, and ʔzútu. More information on etymologies will be found on pp. 136-7.

LIST OF RESTRICTIVES AND QUASI-RESTRICTIVES

Proper	Human	Animate	Time	Place	Countable	Measurable	Relational	Quantity	Mass	Action	Abstract	Grammar	Postadnominal

Here is a list of examples that I have collected for each of the restrictives and quasi-restrictives. (For many of the sentences not otherwise marked I am indebted to Hamako Chaplin and to Setsuko Aihara. A few are taken from dictionaries.)

(1) *~ágari* 'one who/which is) fresh from': yakunin *~ágari* no zitugyoo-ka 'a bureaucrat-turned-businessman'; ... geisya *~ágari* no saikun 'a wife who used to be a geisha who ...'; ... byooki *~ágari* mitai na hito ga, ... 'a person looking just out of sickbed' (Tk 3.121a); ... áme *~ágari* no miti ... 'a road after the rain'; Titioya wa, kono syokunin--*~ágari* desu kara ... 'Since my father had come from a background of, uh, this sort of vocation ...' (R: the dash represents a lexical-search pause within the phonological phrase).

(2) *~ámari* 'over, more than, in excess of': Kono is-syúukan *~ámari* ga abunai 'More than this one week will be dangerous'; Kono is-syúukan *~ámari* o yukkúri tanosímu 'I will relax and enjoy this week-and-a-bit'; Kono is-syúukan *~ámari*, káre ni awánai 'It's been more than a week now that I haven't seen him'; Sono tooka *~ámari* kintyoo no renzoku dátta 'I was on pins and needles for those ten days and then some'; Sukii-ryókoo no yúkai na ituka *~ámari* wa at-to iu ma ni tátta 'The more than five jolly days of the ski trip passed all too soon'; Sono tanosii tooka *~ámari* no kotó o yóku omoidasu 'I often recall those ten-plus pleasant days'; Kurusimi-nuita san-kágetu *~ámari* no kikan wa watasi no zínsei ni oite sukunakaránu eikyoo o ataeta 'The period of over three months that I agonized cast a not inconsiderable influence on my life'; ... saigo no gohyakú-zi *~ámari*, ... 'the last five hundred and some words' (Maeda 1962.203); ... tonai no nizyuk-kásyo *~ámari* de ... 'in more than twenty places within Tōkyō' (SA 2651.4); Kono nagái tooka *~ámari* o konna hēnpi na tokoró de ittai dóo yatte sugosóo to iú no ka 'How on earth can you tell me we'll spend these more than ten long days in such an out-of-the-way place?'; ... kansei *~gó*(*~*) *hutá-tuki*(*~*) *~ámari* tátta íma náo kookai sarezu ni iru ... '... that is still not being shown to the public when over two months have now passed since it was completed' (SA 2640.103a).

(3a) *~átari* 'vicinity, nearby; somewhere near; in and around (a place)': Kyóo mo réi no kooen *~átari* o hutari de sanpo site irú no de wa náí ka 'Let us take a stroll together again today in and around our usual park'; Kanemóti(*~*) no óoi sokora *~átari* o mawatte mitara, urerú ka mo sirenai 'If we go around that area where there are lots of rich people we may find it will sell'; Mukasi hatamoto-yásiki no átta tokoró *~átari* o hótte mita 'I excavated in the vicinity of where there used to be feudal households in the old days'.

(3b) *~átari* 'or the like, of the sort, for instance': Anó-hito *~átari* ni kiite go-ran, wakáru ka mo sirenai 'If you try asking him, for instance, he might know'; Tookyoo dé mo yuumei na ryoori-ya no Hamasaku *~átari* ni ikéba, kánari oisii monó ga taberarerú 'If we go to a restaurant like Hamasaku that is one of the best known in Tōkyō we will be able

to eat fairly delicious things'; Musiatúí kyóo \bar{a} tari kaminári ga ki-sóo da 'A muggy day like today is the sort that you can expect thunder from'; Sono kotó ni túite wa, syokuba dé mo sootoo hurúí Sátóo san \bar{a} tari ni kiité mo yóku wakaránaí to iu 'Even someone like Mr Sató who is fairly old around the shop doesn't know much about those things when you ask'.

(3c) \bar{a} tari 'per': Koko no ryóori wa takái. Kono hitóri \bar{a} tari ga, gosen-en mo suru 'The food here is expensive. This tab for one person comes to a whopping five thousand yen'; Heikin-syúunyuu wa, ik-ko \bar{a} tari, sanman-en de áru 'The average income per household is thirty thousand yen'; Orinpikku de katuyaku suru hitóri \bar{a} tari no sénsyu ni tuki, bakudai na o-kane ga kakátte iru 'For each person participating in the Olympics it takes a huge sum of money'. See also Alfonso 1141.

(4a) \bar{a} te '(the one) addressed to, aiming at': Sono kázoku \bar{a} te ni kíkí o uttaéru (\bar{a}) tegami o káku nádo ... 'To write a letter of complaint about the danger, addressed to his family ...' (SA 2672.25b); ... túma no titioya \bar{a} te ni tegami o kakimásita 'I wrote a letter to my wife's father ...' (SA 2673.66c); ... watasibune-gáisia no keiéi-sya \bar{a} te ni soo iu tegami o Tazima san ga táipu de úti, ... 'a letter to that effect addressed to the ferryboat company was typed up by Mr Tajima and ...' (SA 2674.86b); ... zibun no higó-sya \bar{a} te ni tegami 'a letter to his protector' (KKK 3.133); ... kono kúrabu \bar{a} te ni zyoohoo o nagáseba yorosii 'it is all right to leak information to this club' (SA 2658.63c); Kóndo kara wa soko ni káite áru atarasii zyúusyo \bar{a} te ni okutte kudasái 'Starting next time please send things to the new address written there'; Kono tegami wa móto ita tokoró \bar{a} te ni nátte irú no de, túku no ga osókatta no da 'This letter got addressed to where I used to be, so it was late in arriving'; Watasi ga móto ita hurúí zyúusyo \bar{a} te ni takusán no nengá-zyoo (\bar{a}) ga kíte ita 'A lot of New Year cards came to the old address where I used to live'; Watasi no tutómete iru kaisya \bar{a} te ni konna sina ga todokimásita 'Articles of this sort arrived addressed to the company where I work'; Uke-toru tegami wa zitaku \bar{a} te [no] ga óói 'Most of the letters I get are [ones] addressed to me at home'; Kyóo dásite tegami no náka ni, anó-hito \bar{a} te ga sán-mai mo átta 'Among the letters I mailed today, there were actually three addressed to him'; Tegami no kópii no náka kara, sonó-hito \bar{a} te o sagasi-dásite kudasái 'Look up the letter to him from our file (of copies of letters)'; Oobo-yóosi o, káki no zyúusyo \bar{a} te o-okuri kudasái 'Please send the application form to the address given below'.

(4b) \bar{a} te 'per': ringo o hitóri \bar{a} te sán-ko 'three apples apiece' (cf. \bar{a} zútu).

(5a) \bar{b} ákari 'about, approximately': Kono zíp-pun \bar{b} ákari ga turai 'This approximately ten-minute period is trying'; Kono zík-kiro \bar{b} ákari o sirabéru 'We will investigate about ten kilos of this'; Kono is-syúukan \bar{b} ákari, káre wa kónai 'He hasn't come for this whole week, about'; Kono hyaku-méetoru \bar{b} ákari ga nukatte iru 'This stretch of about a hundred meters is muddy'; Soko wa, tonari no ié ga tatemasi no tamé ni akete áru san-tubo \bar{b} ákari de, ... 'The place was about three *tsubo*'s of land left vacant for the next house to build an annex on, and ...' (Aya Kōda: Nagareru 355); Byooki dátta sono hutuka \bar{b} ákari wa tote-mo kurusikatta 'The two days or so that I was ill were terribly painful'; Minná ga atumátte tanosinda suu-zikan \bar{b} ákari no aida wa tatimati súgite simatta 'The several hours or so that we enjoyed getting together suddenly were over'.

(5b) \bar{b} ákari 'exclusively, all the time; only, just' (= daké, nómi): Ano mondai \bar{b} ákari o kangáete iru = Ano mondai o \bar{b} ákari kangáete iru 'I am thinking only of that problem' (V 36); D'átte, okásama wa Takizawa sensei no o-aite \bar{b} ákari nasutte 'ru n desu mono

'But you're spending all your time with Maestro Takizawa, mother!' (SM 1969/7/20.91); Hén na kotó bákari suru 'He is constantly doing strange things'; Amai monó bákari tábete iru 'They eat nothing but sweets'; Ootoótó ga suru kotó bákari oyá wa hómete iru 'What my little brother does is all my father ever praises'; ... kyooká-syo ni bákari tayótte ... 'relying only on textbooks' (Gd 1969/9.67a); Konó-hito bákari ga syabéru 'This person does all the talking'; Konó-hito bákari o kawai-gáru 'This person gets all the affection'; Téinei na kotobá bákari tukaú no né 'They always use polite words, you see'; Isya ga kínzita(¯) kotó bákari site ité wa, naoránai yó 'You won't get well if you keep doing things the doctor has prohibited'.

(6) ¯bari '(after) the fashion of': Sonó-hito ¯bari no é o káku ni wa, mótto syugyoo ga iru 'You need more training to paint a picture in his style'; Káre mo yuumei na Pikáso ¯bari no tyuusyo-ga o káku yoo ni nátta 'He actually got so he painted abstracts after the fashion of the famous Picasso'; Karada no ookii undoo-sénsyu ¯bari no yói taikaku o site iru 'He has a fine physique after the fashion of some large-bodied athlete'; Kono syoosetu wa, Edo-búngaku o daihyoo suru Tikámatu ¯bari no omosíro-sa ga áru 'This novel has the charm of the style of Chikamatsu who represents Yedo literature'; Yú kai na Sátoo san ¯bari ni káre mo yóku syabéru omosirói yátu da 'He is an interesting guy who talks a good deal after the fashion of jolly Mr. Satō'; Rippa na kásyu ni náru ni wa, taikaku no yói seiyóo-zin ¯bari ni yóku tabénakute wa ikenai 'To become a fine singer it is necessary to eat well after the fashion of the Occidental with his fine physique'; Mínobe to-tízi ¯bari no taiwa-tyoo '(it's) the tone of dialog characteristic of metropolitan Governor Minobe' (SA); Huransu no zyuukyuu-séiki no tyósyá Zóra ¯bari no syoosetu 'a novel after the style of Zola, the 19th-century French author'.

(7a) ¯betu 'classified by': nenrei ¯betu 'classified by age'; zidai ¯betu 'classified by period/era'; syúruui ¯betu 'classified by kind/variety'; hukén ¯betu [no] zinkoo 'population (listed) by prefecture'; ... hóteru wa mokuteki ¯betu ni wakeraremásu 'hotels are differentiated according to purpose' (Tsunagoshi 130b).

(7b) ¯betu 'excluding': syokuzi ¯betu 'without meals' (opposite of syokuzi ¯komi); téate ¯betu 'excluding allowances' (opposite of téate ¯komi); zéi ¯betu 'excluding tax' (opposite of zéi ¯komi); Dóndon takaku náru kootúu-hi ¯betu dá kara turai 'Since it excludes the steadily mounting transportation costs, I find it tough'.

(8a) ¯biki 'coated/plated/covered with': Zinkoo-teki ni goosei sita gómu ¯biki no reinkóoto da 'It is a raincoat coated with a rubber that was artificially synthesized'; Kiiroi róo ¯biki no kamí 'Paper coated with yellow wax'; Hí ni tuyói hooroo ¯biki [nó] ga óói 'There are many (which are) plated with fire-resistant enamel'; Atuku káketa hooroo ¯biki no nábe 'A pot thickly plated with enamel'.

(8b) ¯biki 'at a discount of': Ití-wari ¯biki de uré^[1] 'Sell it at a discount of ten percent'; Gó-bu ¯biki [no] ga óói 'Most of them are five percent off'; Sánzyuu san-pasénto ¯biki wa hutuu da 'A discount of thirty-three percent is usual'.

(9) ¯bun 'a portion (sufficient) for (... each)': ... hyaku-péezi ¯bun ni okéru "mái" no siyóo-ryoo ... 'the amount of usage of "mái" in every hundred pages ...'; Ik-kágetu ¯bun no eiga-kóokoku o ... 'A month's (coverage of) film advertisements ...' (Nagano 1968.177); ... nán-nen ¯bun mó no nyúusu ga kotosi ni syuutyuu sita ... 'enough news for several years was concentrated into this year' (R); ... iti-zíkan ¯bun no kane o harátte, kono umá ni nori, ... 'Paying for an hour's ride, I mounted this horse, ...' (Endō 213); Hitóri ¯bun íkura haraimasyóo 'How much do we each pay?'; Ití-nen ¯bun no sigoto ... 'One year's

work ...'; *Sénbei, mame-nezi, karín-too, hakka, sonna món desu kara né, naná-en gozís-sen nara dagasi-ya ík-ken ˉbun wa arimásu yó* 'It being (a matter of) rice-crackers, bean-twists, fried dough, mints and such things, [in those days] with seven yen and fifty sen you'd have enough to buy a whole candy shop!' (Tk 3.43b). When ˉbun is attached to something other than a number, we will treat it as a lexical suffix: *zoosi-bun* 'amount of new capital', *orikaesi-bun* 'the (proportion of) lapel', For ˉbun in fractions, see p. 767 (§13.6).

(10a) ˉburi 'after the absence of (an interval)': *Terebi-kánkei o nozoku geinóo-kai kara kanzen ni syatto-áuto sarete ita Tamiya Zíroo ga ití-nen san-kágetu ˉburi ni kamu-bákku sita* 'Jirō Tamiya, completely shut out from the entertainment world except for television, made a comeback after a year and three months' (SA 2658.110b); *Sibároku ˉburi de átta tizin(ˉ) ni ...* 'to a friend I had not seen for a while' (Nagano 1966.15); *Nán-nen ka ˉburi dátta = Nán-nen ˉburi ká datta* 'It was after some years'. But *hisasi-buri(ˉ)* with its formal variant *hisakata-buri(ˉ)* 'after a long time' is treated as a separate lexical item.

(10b) ˉburi 'the figure/shape/manner of': *Musuko no sono séizin(ˉ) ˉburi o míte tití wa yorokónda* 'Seeing that adult manner in his son pleased the father'; *Mígoto na séizin(ˉ) ˉburi ni dáre mo ga mé o mi-hatta* 'His admirably adult manner caught everyone's eye'; *Káno-zyo no kaigaisii hahaoya ˉburi ni, kodomó-táti mo mánzoku no yoosu da* 'Her figure of heroic mother appears to please the children, too'; *Búnsi-tati no hanayáida yakusya ˉburi ga sono hí no mimono dá* 'The feature of the day was the figure of splendid actor cut by the literary men'; *Káre no tanomosii riidaa ˉburi ni kokóro o hikareta* 'Hearts were captured by his manner of trustworthy leader'; *Káre no íta ni túita sikái-sya ˉburi wa ittai dóko de manandá n daroo ka* 'I wonder where on earth he learned his thoroughly at-home M.C. manner?'; *Musumé no kirei na hanáyome ˉburi ni háha wa yorokónda* 'The beautiful figure she presented as a bride delighted her mother'; ... *taihen na supíido ˉburi o simésitá no de, ...* 'as it [the typhoon] showed a terrific speed' (Kotoba no yurai 25). *Roku ni sirí mo sinai kotó o sittá ka ˉburi o suru hitó ga yóku gozaimásu ná* 'There are a good many people, you see, who pretend to knowledge of things they know too little about' (Okitsu 1.148).

(10c) ˉburi = ˉbun 'a portion (sufficient) for': *mikka ˉburi/ˉbun no syokúryoo(ˉ)* 'food enough for three days'. [Dialect?]

(11) ˉdai 'the level/mark of': *Sinbun sika kaenai zyuu-en ˉdai ...* 'at a level of ten yen, a sum that will buy little but a newspaper'; *Eikoku no sénsyuu (Zimu-Píitaa) ga ni-zíkan nízip-pun ˉdai de hasítta ...* 'an English athlete (Jim Peter) ran it in two hours and twenty minutes' (Tk 3.80b).

(12) ˉdai '(one that is) the size of': *Kogata-torákku ˉdai no sí-ki no énzin ...* 'Four engines each the size of a small truck' (SA 2670.139a); *Nikai-date-bíru ˉdai no gúnzi ˉyoo tuusin-éisei ...* 'A military communications satellite the size of a two-story building ...' (from a newspaper); *Ní ˉbun no ití ˉdai no syasin* 'A photograph half size'; *Uzura no tamágo(ˉ) ˉdai [nó] ga óói* 'There are a lot the size of a quail's egg'; *E-hágaki ˉdai ga tekíto daróo* 'About the size of a picture postcard would be suitable'; ... *han-péezi ˉdai no sinbun-kóokoku ...* 'a half-page newspaper ad' (SA 2684.119a).

(13a) *daké* 'only, just' (= *bákari, nómi*): *Káre wa, kirei na hitó daké ni sínsetu ni suru* 'He only behaves nicely toward good-looking people'; *Hurúi kí daké^[1] kirimásu* 'We will only cut the old trees'; *Konó-hito daké ga kíta* 'Only this person came'; *Konó-hito daké o táyori ni suru* 'I will/can only rely on this person'; *Mainen sono hí daké^[1] nómu kotó ni*

site iru 'I make it a principle to drink just on that one day each year'.

(13b) (̀)daké '(to) the amount/extent of; exactly; at least': Tábeta sono ryóo (̀)daké^[1] enérúgii ga ahuréru yóo ni kan-zirareru 'You can feel energy overflowing to the extent of the amount you have eaten'; Koná wa tukau bún (̀)daké^[1] kitit-to hakarimásita 'I carefully measured the exact amount of flour to be used'; Zyuuen-kítte o nihyakú-en (̀)daké^[1] kudasai 'Let me have 200 yen worth of ten-yen stamps'; Sono náka de yokei na monó (̀)daké^[1] nokósita kudasai 'Leave whatever of the things you don't need'; Yakusoku sita gáku (̀)daké^[1] tásika ni motte kimásita 'He surely enough brought the exact amount he had promised'; Kono gáku (̀)daké ga modótte kita 'Exactly this amount came back'; Kono gáku (̀)daké o tyokin suru 'I will deposit exactly this amount'; Benkyoo suréba, sono ryóo (̀)daké^[1] éra ku naréru to omótte iru 'I think by studying I will improve myself to the full extent that I do it'; Hanbún (̀)daké^[1] herasoo 'Let us reduce it by half'; Sasuga wa káre (̀)daké^[1] no kotó wa áru 'It is indeed worthy of him' (Kenkyusha). The words dóre-dake(̀) 'how much', kore-dake 'this much/many' (cf. kore daké 'only this'), sore-dake 'that much/many' (cf. sore daké 'only that'), are-dake 'that much/many' (cf. are daké 'only that') are lexically derived adverbs, as explained on p. 789 (§ 13.7), and so are ari-[t]take 'all (as much as) there is' and kubi-[t]take 'up to the neck = head over heels (in love)'.

(13c) (̀)daké ni, (̀)daké^[1] átte 'just for being': Dá ga sikási, sasuga wa tensai-gáka Takizawa Eizi-kun no sákú(̀) (̀)daké^[1] átte, korya subarasíi hyoohón-zu da 'Yes but just being a work of the highly talented artist Eiji Takizawa himself makes this a splendid specimen drawing' (KKK 3.64); Anó-hito wa né Edokko (̀)daké ni zadan ga zitú ni umái 'Like the true Yedoite that he is he is a good conversationalist' (Kenkyusha); Sabisíkatta áto (̀)daké ni hídoku urésíkatta 'She felt terribly happy—all the more so (for its being) after she had been so lonely' (Fn 287b).

(14) (̀)dárake '(one that is) smeared/filled with, a mass/mess of': Háha ga huton o tukútte irú no de, heyá^[1] no náka wa sono wata-bókori (̀)dárake desu 'Mother is making a quilt, and the room is filled with the cotton dust from (the stuffing of) that'; Mattakú^[1] dóko o muité mo, iyá na yátu (̀)dárake da 'Wherever I turn the place is full of dreadful people'; ... koo nátte miru to Ákiko wa dóo site ii ka wakaránai kotó (̀)dárake datta 'things having come to this pass, Akiko was filled with doubts as to what she should do' (Ariyoshi 27); Kono sakana wa karada (̀)zyuu hosói honé (̀)dárake desu 'This fish is full of tiny bones throughout its body'; Zyúutan wa, máda sákki kobósita hai (̀)dárake no mamá desu 'The carpet is still smeared with the ashes spilled a while back'; Ahurika wa yasei no doobutu (̀)dárake desu 'Africa is full of wild animals'; Niwa o kirei na haná (̀)dárake ni site okú no ga yumé desu 'It is my dream to get my garden so it is a mass of pretty flowers'; Akai bara ga sukí na no de, káno-zyo no heyá wa kabin ní mo, káaten ni mo, beddo-kábaa ni mo akai bara (̀)dárake desu 'Since she likes red roses, her room is filled with red roses—in vases, on the curtains, on the bedcovers even'; Heyá^[1] no náka wa, sákki tundé kíta haná (̀)dárake ni nátte iru 'The room is filled with the flowers that I cut a while back'; ... kaku ni hazureta tokoró (̀)dárake, ... 'are full of passages that violate the rules, and ...' (K 1966.24); ... doró to ti (̀)dárake desita 'they were covered with mud and blood' (SA 2676.128c); Kodomo no zidai ní wa, karada (̀)zyuu kizu (̀)dárake datta 'During my childhood I was a mass of scars all over my body' (Tk 3.42b); Kuni ga assen site kureta toti wa, izure mo matí no nantoo, siókaze ga móro-ni ataru isí ya iwá (̀)dárake no toti bákari [da] 'The land that the government has negotiated for us is all just land to the southeast of the city,

covered with stones and rocks at the complete mercy of the sea wind' (SA 2689.147b); Kono heyá wa kitanái gomí $\bar{d}\bar{a}$ rake da 'This room is covered with filthy dust'; Kitanái gomí $\bar{d}\bar{a}$ rake na heyá da 'It is a room covered with filthy dust'; ... suné ni kizu $\bar{d}\bar{a}$ rake no ... monó 'a person [covered with scars on his leg =] with a guilty conscience' (SA); Watasi ní wa yómu kotó mo dekinái yóo⁽¹⁾ na muzukasii(̄) hón $\bar{d}\bar{a}$ rake da 'It is loaded with such difficult books I can't even read them'; ... oogesa ni iu to náni mo ká mo ga hazukasii kotó $\bar{d}\bar{a}$ rake mítai ni omóeta no da '... to exaggerate, it seemed as though everything was smeared with shame' (CK 985.371).

(15) $\bar{d}\bar{e}$ '(one that is) a product/graduate of': Kyoosoo no hidói nyuugaku no muzukasii(̄) Toodai $\bar{d}\bar{e}$ dá kara, eriito-ísiki ga tuyói daroo 'Because he is a graduate of Tōkyō University where the severe competition makes admission difficult, he has a strong feeling of being elite'; Sínbasi to iu rékki to sita ikísúzi(̄) $\bar{d}\bar{e}$ (̄)dakē⁽¹⁾ átte odori ya syamisen wa honsyoku désu 'Just from being a product of the high-class geisha world of Shimbashi, she is an expert at dancing and playing the samisen'. Cf. Anó-hito wa Miyázaki no de dá sóo da ga Tookyoo no de dé wa ná no ka 'He is said to be from Miyazaki, but I wonder if he isn't from Tōkyō'; Nóoka no de da 'He is from a farm(er's) family'; Inaka kara pot-to de no onná ga yuuwaku sare-yasúí 'Girls blushing from the country are easily seduced'. Do not confuse with the suffix $\bar{d}\bar{e}$ in Kono hón wa yomi- $\bar{d}\bar{e}$ ga áru 'There is plenty of reading in this book', Tabe- $\bar{d}\bar{e}$ ga áru 'There's quite a lot to eat', Aruki- $\bar{d}\bar{e}$ ga áru 'It is a lot of walking', etc.

(16) $\bar{d}\bar{e}ki$ 'produced (by/at/in)': Kiru monó ni zeitákú datta kúge ga óoku sún-de ita Kyóoto $\bar{d}\bar{e}ki$ no rippa na orímóno(̄) de gozaimásu kara 'It is a splendid fabric produced in Kyōto where used to live the nobles who were extravagant in what they wore (and that is why it is so expensive/desirable/ ...)'; Ryoosan $\bar{z}\bar{i}dai$ no íma $\bar{d}\bar{e}ki$ no kabin dá kara tumaránai monó da 'It is a vase produced in the present era of mass production so it is a worthless thing'.

(17) $\bar{d}\bar{o}koro$, $\bar{d}\bar{o}ko$ 'far from (being/doing), hardly (a question of)':³⁹ Taihen, taihen, ban-góhan no soodan $\bar{d}\bar{o}koro$ zya náí desu yó 'Terrible, terrible, we can hardly discuss dinner (under such circumstances)!'; Isogásikute sukí na góruhu $\bar{d}\bar{o}koro$ zya náí 'I'm so busy my much enjoyed golf is out of the question'; Anó-hito ni wa, episóodo ga óoku, yóku wadai ni noboru Sátóo san $\bar{d}\bar{o}koro$ no sávagi zya náí 'He's a far cry from Mr Satō who keeps getting talked about for his many scrapes'; Isogásikute íma wa kono sigoto $\bar{d}\bar{o}koro$ zya náí 'I'm so busy this job is out of the question for now'; Iyóiyó kawá o watareru to iu tyokúzen(̄) ni damé ni nátta no wa, hainiti-móndai ga ókíte, ryokoo $\bar{d}\bar{o}koro$ zya náku náttayatta 'Just before we were at last able to cross the river what spoiled things was an anti-Japanese incident that arose so that travel became unthinkable' (SA 2659.50a).

(18) $\bar{d}\bar{o}mari$ 'up to (the limit of—an amount, a weight, a distance)': Kono gáku $\bar{d}\bar{o}mari$ ga datoo to omowaréru 'Up to this amount seems proper'; Zootóo-hin(̄) wa, kono gáku $\bar{d}\bar{o}mari$ o datoo to mi-nasite iru 'Gifts are regarded as proper up to this amount'; Íma yóku benkyoo site okanai to, kimi no syóorai wa, kimi no kirai na hira-syáin $\bar{d}\bar{o}mari$ desu yó 'Unless you apply yourself to your studies now, your future will be limited to that of your despised ordinary clerk'; Tumaránai kakari-tyoo $\bar{d}\bar{o}mari$ de wa, sararii-man no issyoo wa yarikirénai ná 'If limited to being a dull chief clerk, the white-collar worker's life is unbearable, you see'; Watakusi ga íma daséru niman-en $\bar{d}\bar{o}mari$ de,

39. See also $\bar{d}\bar{o}koro$ ka, § 15.6.

súbete o makanátte kure 'Take care of all the expenses within the sum of twenty thousand yen that I can pay now'; Kono básu wa sono matí $\bar{d}\bar{o}$ mari desu 'This bus only goes as far as that town'; Sonna wazá $\bar{d}\bar{o}$ mari de wa zyúudoo o narátta to ienai 'You can't be said to have learned judo with nothing more than that sort of a throw'; Káre no zínsei wa tái-site omosíroku mo nái zyo-kyóozyu $\bar{d}\bar{o}$ mari no haran no nái zínsei datta 'His life was an untroubled life that did not go beyond being an assistant professor of no particular interest to speak of'; ... sasuga ni nén ni ni-kái $\bar{d}\bar{o}$ mari 'Sure enough, it's just two times a year' (SA 2664.23b); Kono "syérupa" no nittoo no soobá wa sánbyakú-en kara sen-en $\bar{d}\bar{o}$ mari da to iu 'The market price of daily wages for these "Sherpa's" [Himalayan mountain guides] is said to be from three hundred to a thousand yen' (SA 2680.114c); Mukasi, wareware ga kodomo no kóro wa, wáru-sa to itté mo kaki-dóroboo $\bar{d}\bar{o}$ mari datta no ni ... 'In the old days, when we were children, pranks at their worst were limited to stealing persimmons but [now] ...' (SA 2654.123c); ... sore mo kono hen $\bar{d}\bar{o}$ mari de aru 'that too is limited to this passage [in the book]' (Maeda 1962.186); Génzai no bungaku-sákuhin zya nákute, séizei Akutágawa Ryuunosuke $\bar{d}\bar{o}$ mari $\bar{g}\bar{u}$ rai no monó o yómeba matigai ná 'Rather than writers of the present day, it would be advisable to read at least back to Ryūnosuke Akutagawa' (Fukuda in Ōno 1967.229).

(19) $\bar{d}\bar{o}$ ori 'like, as, according to': Ziyuu-kéizai no gensoku $\bar{d}\bar{o}$ ori ... 'According to the principles of a free economy ...'; Sore o gakumen $\bar{d}\bar{o}$ ori ni uke-toru kotó wa dekinai 'That cannot be taken at face value'; Kono keikaku [no kotó] $\bar{d}\bar{o}$ ori o okonatta 'We acted according to this plan'; Kono keikaku $\bar{d}\bar{o}$ ori [no kotó] ga okonawareta 'It was done according to this plan'; ... kore máde $\bar{d}\bar{o}$ ori no bunryóo no sigoto o saseru 'they will expect the same amount of work as required up to the present' (SA 2820.119cd); ... naru-béku(̄) ima-máde $\bar{d}\bar{o}$ ori ... 'as much as possible as it has been up to now' (SA 2673.18c); Máe kara no warúi uwasa $\bar{d}\bar{o}$ ori ni nátte simatta 'It turned out just like the earlier nasty rumor (had said)'; Kono rokunén-kan wa kokumin tó no kooyaku $\bar{d}\bar{o}$ ori ni tutome-tái 'For this six-year period I want to serve in accordance with my agreement with the nation'; Anáta no baai wa, syakai-too no kúnda sukézyuuru $\bar{d}\bar{o}$ ori ni kikai-níngyoo no gótoku ugokánakute wa naránai to iu tura-sa, bakabakási-sa wa arimasén desita ka 'In your case, didn't you have the burden and foolishness of having to move like a mechanical doll according to the schedule put together by the Socialist Party?' (SA); Sono hí wa káre-ra no táteta tanosii keikaku $\bar{d}\bar{o}$ ori ni kotó ga hakobareta 'That day things worked out according to the happy plans they had set up'; Káre wa zibun no itta kotobá $\bar{d}\bar{o}$ ori no kotó o túne ni okonau 'He always carries things out according to the words he has said'; ... kyooká-syo $\bar{d}\bar{o}$ ori ga tatémae de aru to iu kotó ... 'that it is the rule to have it the way the textbook has it' (Nagano 1966.56).

(20) $\bar{d}\bar{o}$ osi '(those) in company with': ... maiko ya geiko $\bar{d}\bar{o}$ osi de siyoo sareru monó de aru 'they are gestures used by *maiko* and *geiko*' (Inokuchi 14); ... wakái monó $\bar{d}\bar{o}$ osi de asobi ni iku 'go out to enjoy oneself with fellow young folk' (SA 2645.18c); Sonna ni wakái onná $\bar{d}\bar{o}$ osi de ... 'in company with fellow women so young'; Hazímete Amerika e kíta monó $\bar{d}\bar{o}$ osi de, kái o tukútta 'As fellow newcomers to America they formed a society'; ... mibun no hikúi monó $\bar{d}\bar{o}$ osi de mo ... 'even people of low status among themselves' (Satō 1962.26); Nihon-zín $\bar{d}\bar{o}$ osi ... 'Fellow Japanese ...'; Zibun-ra $\bar{d}\bar{o}$ osi de ... 'In their own company ...' (cf. § 2.7); ... maru-de tosí ga tyót-to sika hanárete inai koibito $\bar{d}\bar{o}$ osi de de⁽¹⁾ mo áru ka no yóo ni, ... 'quite as if they were perhaps lovers only slightly apart in age' (SA 2662.120a); ... hutatú no tigatta rekisi o mótta kuni $\bar{d}\bar{o}$ osi ga átta baai

ni ... 'if fellow humans from countries which have two different histories meet ...' (Tani-gawa 49). Perhaps some cases should be treated as simple lexical compounds: rinson-dóosi 'neighboring villagers', tonari-dóosi 'neighbors', byoonin-dóosi 'fellow patients', Occasionally dóosi is used as a free noun: dóosi o atuméru 'form a fellowship', dóosi ga atumáru 'the fellowship forms/gathers'; Dóosi [de aru] Tanaka Tároo o syookai simásu 'Let me introduce T. T., [who is] a comrade [= fellow communist]'.

(21) ̀gáeri '(the one that is; the time when) on the way back from, returning from': Yasúi gekkyuu de koki-tukawareta Amerika ̀gáeri de ... 'On my way back from America where I slaved away for a cheap salary ...'; Kaisya ̀gáeri o neratte ... 'Aiming at the (man/ time) returning from the office ...'; Kaigan ̀gáeri ga óói 'There are many returning from the shore'.

(22) ̀gai 'outside of, beyond': Kyóo kimeta hán'i ̀gai [= han'ígai] no mondai wa asita soodan siyoo 'Issues beyond the scope decided for today can be discussed tomorrow'; ... to iu rón wa toomē^[1](-) no mondai ̀gai [= mondáigai] de aru 'the argument that ... is beyond the immediate problem' (Gekkan-Bumpō 2/11.35a); Kengén ̀gai [= kengéngai] 'beyond one's authority, unauthorized'; keikaku ̀gai [= keikakúgai] 'outside one's plans'; senmon ̀gai [= senmóngai] 'outside one's specialty'.

(23) ̀gákari '(requiring) as many/much as, (by) taking': ... maru hutuka ̀gákari de Miyazaki-si e túita ga 'It took us a full two days to reach Miyazaki city and ...' (SA 2674.110c); ... hitóri ni go-rokunin ̀gákari de naguráreta 'a group of five or six got punched by one [high-school bully]' (SA 2681.124d); Iti-nen ̀gákari de íp-pon nomimásu 'In the course of a year I drink up a bottle (of liquor)' (SA 2645.50d); ... watasi wa kita-káigan kara higasi-káigan e to hanniti ̀gákari de arúita 'I walked from the north shore to the east short, taking half a day to do it'; Káre-ra wa minná^[1]oo-ótoko da kara, sono san-nín ̀gákari nara, yuuyúu(-) kono piano wa hakoberu 'They are all big fellows, so with the three of them it should be easy to deliver the piano'; Yuusyuu na hitó-tati ̀bákari ga zyúu-nin erabáreta ga, sono yuusyuu na zyúu-nin ̀gákari de sité mo kono mondai wa tokénakatta 'Ten people, all excellent people, were chosen but even doing it with that whole group of ten excellent people this problem could not be resolved'; Kono san-nín ̀gákari de, isí o ugokásu 'These three people together will move the stone'.

(24a) ̀gake 'garbed in (informal traditional wear)': atarasií warazi ̀gake de 'wearing new straw sandals'; kon-iro no yukata ̀gake de 'in a dark blue yukata (bathrobe)'; akai tasukí(-) ̀gake de 'with red sleeve ties'; makká na merinsu de tukúta tasukí(-) ̀gake de 'with sleeve ties made of red muslin'.

(24b) ̀gake 'multiplied by': hutatú ̀gake no ooki-sa 'double size(d)'; yottú ̀gake no nága-sa 'quadruple length'. This usage is unfamiliar to speakers I have consulted, but it is listed in MKZ and Kōjien. It is unclear whether the usage san-nín ̀gake no (naga-)isu 'a set-tee for three' is an extension of this.

(24c) ̀gake 'ten percent': Teika no hatí ̀gake de uru 'We will sell it at eighty percent of the set price'.

(25) ̀gara 'by the nature of': Sigoto ̀gara no kyóomí ... 'Interests that stem from one's job ...'; mibun ̀gara 'by one's social position'; Íp-pun iti-byoo o ki ni suru syokúgyoo ̀gara [de], anaúnsaa ni wa noiróoze ga óói 'Announcers have a lot of neuroses from the nature of their profession where they worry about every minute and every second'; Máiniti(-) no yóo ni bukka ga agaru zisetu ̀gara, kokumin wa seikatu ni owarete, zeitakú-hin(-) ní máde wa té ga dénai 'In view of the times, with prices rising practically every

day, the people are hard pressed for their livelihood and can't touch luxury items';

... basyo ̀gara no mondai dé wa náku, hito ̀gara no mondai ni suginakatta no de aru 'It was not a matter of the place, it was only a matter of the nature of the person' (Maeda 1961.31).

(26) ̀gárami '(one who is) about, a round (age of)': sizyúu ̀gárami '(a person) about forty years of age'; gozyúu ̀gárami 'a round fifty years of age'; Sán-zyuu ̀gárami o taisyoo ni suru 'We aim at the thirty-year-olds'; Hátati ̀gárami ga óói 'There are a lot of twenty-year-olds'.

(27) ̀gata 'by about (a percent, a price level)': Itiwari ̀gata hetta 'It was reduced by ten percent'; Zyuu-en ̀gata geraku sita 'It fell ten percent'; Tóози, minkan yóri mo koko wa ni-sánwari ̀gata, kyúuryoo ga yókatta to omoimásu 'At that time the salaries here were about twenty or thirty percent better than civilian (pay), I believe' (SA 2665.29a). The use of ̀gata with a few time words (yuu-gata 'evening', yoake-gata 'dawn', asa-gata 'morning', hinokure-gata 'twilight') is best taken as a suffix, as is the use in teki-gata 'belonging to the enemy', Heike-gata 'belonging to the Taira clan', etc.

(28) ̀gawa 'the side of': ... sore o insatu site watakusi ̀gawa to, gusai ̀gawa tó no tizin(̀) ni háihu(̀) sita 'printed it up and distributed it to acquaintances of mine and of my wife's' (Tk 3.183); Kyónen made syusyoo dáta Ikeda ̀gawa wa kono sénkyo de zenpai sita 'The side (= forces) of Ikeda, who was prime minister up to last year, was decisively defeated in this election'; Genba de osiete iru wareware kyóosi ̀gawa to sité no íken ... 'Our opinion as teachers on the spot ...'; ... zoowai ̀gawa ... 'those engaged in the bribery' (KKK 3.132); Minami-Bétonamu séihu ̀gawa wa ... 'The side of the South Vietnamese government ...'. For convenience we will treat as compound nouns migi-gawa (= migi ̀gawa) 'right', hidari-gawa (= hidari ̀gawa) 'left', soto-gawa (= sóto ̀gawa) 'outside', dotira-gawa (= dóтира ̀gawa) 'which/either side', etc.

(29) ̀gáwari 'in place of, instead of, as substitute for': Húben de kyuu-siki na yu-tánpo ̀gáwari ni denki-burankétto o tukau 'Instead of an inconvenient and old-fashioned hot-water bottle, I use an electric blanket'; Zimú-in e no áisatu ̀gáwari ni, saikin no besuto-séraa o is-satú^[1] motte itta 'Instead of "greetings" to the clerk she brought a recent best-seller' (Ariyoshi 241); Ryóosi no katá wa góhan ̀gáwari ni sakana o tabéru n desu 'Those who are fishermen eat fish instead of rice, you see' (SA 2681.44a).

(30) ̀gáyoi 'attending; traveling between, commuting to': Nedan no takái ryoorí-ya ̀gáyoi o sinái de, táda de hón o yoméru tosyó-kan ̀gáyoi o site kúgaku o sita 'Instead of going to expensive restaurants, I went to the library where books can be read free and I worked hard at my studies'; Hónkón Yokohama ̀gáyoi no teiki-sen ... 'a regular boat running between Hong Kong and Yokohama'.

(31) ̀génzai '(the time that is) as of (a date/period)': Ití-nen ̀zyuu de itiban mizikái tukí no nigatú ̀génzai o nozokéba ... 'Excluding the period as of February, the shortest month of the year, ...'; Nizis-séiki ̀génzai ni nátte mo ... 'Even now in the twentieth century ...'; Syóowa(̀) yónzyuu yo-nen no sán-gatu ̀génzai no tookei ni yoru to ... 'According to the statistics as of March of 1969 ...'; Nanazyuu-néndai ̀génzai de wa ... 'As of the seventies ...'; Dé wa, gógo, rokú-zi ̀génzai no hattyaku-zyóokyoo o o-tutae simasyoo 'Now I will tell you about the (plane) arrivals and departures as of this hour of six p.m.' (R).

(32) ̀gó(̀) '(the time) after'—see §14.4: Dái itizi taisen ̀gó^[1](̀) dékita kokusai-rénmei to ... 'The League of Nations which was set up after World War I ...' (R); Kekkyokú^[1] sore kara, san-kágetu ̀gó(̀) ni ... 'Finally three months after that ...' (R); Rainen no soo-sénkyo

ṅó(-) ga mondai da 'The problem is (the time) after next year's general election'; Ní-sánniti ṅó(-) dá 'It is several days later'.

(33) ṅókkíri—see kókkíri.

(34) ṅónomi 'the style/mode/fashion/vogue of': Geki-teki na zisatu o tógeta Misima ṅónomi no, hito no ihyoo ni déru syuuzí-hoo(-) dá 'Rhetoric in the mode of a Mishima, with his violent suicide, takes people by surprise' (epithematic identification—see § 3.10a).

(35) ṅóro '(a time that is) about (a time)':⁴⁰ Hima na hiru-yásumi ṅóro ni denwa site morau 'I'd like to be phoned during the noon break when I am not busy'; Itiban isogasii yuu-gata ṅóro, misé o nukedásitari suru 'Around evening when it is busiest, I sometimes slip out of the shop'; Génki datta 1960'nen ṅóro wa, yóku issyo ni ténisu o sita 'Around 1960, when I was in good health, we used to play tennis together a lot'; Hi ni yake-tái nara, atúi ní-zi ṅóro ga ii 'If you want to get a sun tan, the best time is around two o'clock when it is hot'; Kí no ha [= Kó-no-ha] ga otíru zyuuiti-gatú ṅóro ni wa sootoo sámuku nátte yukí mo huri-dasu 'Around November when the leaves fall it gets quite cold and the snows start, too'; Mái-asa sán-zi ka yó-zi ṅóro ni mé o samásite ... 'Awakening around three or four o'clock every morning ...' (SA 2666.82b); Yohuké no zyuuní-zi, ití-zi ṅóro made, ... '...until around twelve or one at night' (SA 2666.83a); Daitai nán-zi ṅóro ga ii desu ka 'Around what time would it be better?'; Tokei no hári ga sán-zi ṅóro o simésite(-) iru 'The hands of the clock show three'. Lexical: konó-goro(-), itu-goro.

(36) ṅosi, ṅosi 'across, beyond, over; on the other side of': ... séntoo no bandai ṅosi ni ... 'beyond the watch-seat of the public bath' (SA 2650.117c); ... átukute kírakira kagayáku syusei [= arukóoru] no kirí ṅosi ni mé o korásite míru to, ... 'When I focused my eyes across the hot and glittering alcohol mist, I saw ...' (SA 2669.91a); Yonen ṅosi no koosyoo no kekka, ... 'As a result of over four years of negotiations, ...' (SA 2689.146d); ... tama-yóké(-) no donoo ṅosi ni ... 'across the bullet-proof sandbags' (SA 2678.96b); ... hoosoo o sán-nen ṅosi yatte 'másita 'was doing broadcasts over a three-year period' (Tk 4.201a); Tonari no kakíne ṅosi ni hanasi-kakeru ... '... starts talking across the next-door fence'; Sono térebi no tóo wa takái yamá ṅosi ni atira to kotira ni áru 'The television towers are here and there beyond the tall mountain'; Toomei na mado-gárasu ṅosi ni sóto no késiki ga mé ni háiru 'Beyond the clear glass of the window the outside scenery strikes the eye'; Atarásiku tukútta beránda(-) ṅosi ni mídori no sibahu ga miéru 'Beyond the newly built verandah you can see green turf'; Kotosi mo sono ié no hikúí kakíne ṅosi ni ume no haná ga miéru 'This year again you can see plum blossoms over the low fence of that house'; Sirói makú ṅosi ni ... 'On the other side of a white curtain ...'.

(37) ṅóto 'each, every (instance)': ... hitótu no torihiki ṅóto ni ... 'for each transaction' (SA 2670.29a); Yuumei na éki ṅóto ni náni ka miyage o katte kúru 'I will buy something in the way of a souvenir at each famous station'; Hurúí terá ṅóto ni sorézore motí-azi ga áru 'Each old temple has its own respective flavor'; Áu hitó ṅóto ni sono uwasa o itte mawatte iru 'I'm going around telling that rumor to everyone I see'; Kyuukoo wa ookíí éki ṅóto ni tomaru 'The express stops at every large station'; Tití ga kóokai(-) kara káeru tabí ṅóto ni utí(-) zyuude oo-sáwagi o suru 'Every time father comes back from a voyage there is a great commotion throughout the house'; Rinyúu-syoku wa

40. In the Tango area (west of Kyōto), ... góro is used to mean 'only, just', according to Inokuchi 281.

san-zíkan ṭgóto ga tekíto de áru 'For feeding the weaning baby, every three hours is suitable'; Rinyúu-syoku wa san-zíkan ṭgóto o géndo to suru 'We set every three hours as the limit for feedings when weaning'; ... tuuwa wa sán-pun made ṭgóto ni naná-en ni narimásu 'a phone call will be seven yen for each period up to three minutes' (SA 2835.41).

(38) ṭgoto 'inclusive of, with ... and all': Míkan wa eiyoo no áru kawá ṭgoto tabéru to yói 'It is better to eat tangerines with the nutritious skin and all'; Anna ni omoi kínko ṭgoto nsumáreta 'We got robbed of everything including that terribly heavy safe!'; Sono hako no náka ni háitte iru iroiro na garakuta ṭgoto motte kíta 'I brought everything including the miscellaneous junk in the box'; Sono totté ṭgoto tórete simatta 'The whole thing came off, handle and all'; Áru-hi watasi wa zitén-sya(ṭ) ṭgoto kawá no náka ni tenraku site oo-kega o sita 'One day I really hurt myself falling in the river, bike and all' (SA 2838.70b); Kono eda ṭgoto [o] ikete miyóo 'Let's try it all in the flower arrangement, including this branch'; Ikéru no nara, kono eda ṭgoto ga ii desyoo 'If you're arranging the flowers it would be better with this branch included in'. Some dialects use ṭguti.

(39a) ṭgúrai, ṭkúrai, ṭkkúrai 'about, as much; or so': Kono ití-kiro ṭgúrai ga kirei da 'This stretch of about one kilometer is pretty'; Kono ití-kiro ṭgúrai o Sakura-Námiki to iu 'This stretch of about one kilometer is called Cherry Lane'; Ni-kiro ṭgúrai hasíru 'We will walk about two kilometers'; ... tití ga yappári yonzyuu-kiro ṭgúrai sika náí n desu yó '... my father weighs only about 40 kilos himself' (SA 2654.44c).

(39b) ṭgúrai etc. 'to the extent of; about all (that ...); at least; as ... as' (adnominalizing either as a predicable adverb with nó or as an adjectival noun with ná): Sono hako ṭgúrai no ooki-sa nó ga hosii 'I want one [= a box] of a size as large as that box'; Sono ookii karénda ṭgúrai no kamí ni káite kudasai 'Please write it on paper as big as that large calendar'; Káre wa kinóo átta Sátóo san ṭgúrai no sé no táka-sa desu 'He is as tall as Mr Sató whom I saw yesterday'; Sukí na no wa ano kudamono ṭgúrai na monó da 'What I like is the fruit at least'; Wakái onná ṭgúrai kirei na monó wa náí 'There's nothing so pretty as a young girl'; Konna matigái o surú no wa, húdan amari hón o yománai kimi ṭgúrai na monó da 'Making this sort of mistake is about what I would expect from you who never bother to do much reading'; Sonó-hito ṭgúrai ga yuumei ni naréru no da kara, anáta d'atte ganbáreba seikoo simásu yó 'Since he at least can achieve fame, if you will just try harder you too will succeed, I tell you'; Kono wazá ṭgúrai o konaséreba tái-sita monó da 'If you can master THIS trick, it's quite a feat!'; Sonó-hito ṭgúrai yuumei ni nari-tái 'I want to become as famous as he (is)'; Sono mondai ṭgúrai muzukasii(ṭ) to sensei de mo nakanaka tokénaí 'If it is as hard as that problem even the teacher will be hard put to figure it out'; Sonna kantan na kotó ṭgúrai hito ni tanománakute mo ii no ni 'You'd think it wouldn't be necessary to call on others for anything as simple as that'; Sonna kotó o yarú no wa kimi ṭgúrai no monó da 'No one but you would do such a thing' (Kenkyusha); Tama ní wa kao ṭgúrai míset'atte ii daroo 'You might (at least) come and see us once in a while' (Kenkyusha); Tyúugaku de hissyuu-kámoku to sarete iru Eigo ṭgúrai wakaránakereba kore kará wa komarimásu yó 'Unless you can understand at least English, which is treated as a required subject in junior high school, you will be at a loss from here on in [= for the rest of your life]'; Píi-pii naku kodomo ṭkkúrai urusái monó wa náí 'There's nothing so annoying as a mewling kid' (Kb);⁴¹ Anó-hito ṭkkúrai, kamsan-kóokoo na hitó wa náí 'There's none so uxorious as he' (Tk 2.17b). Such expressions as A, B(, C) ṭgúrai de

41. On such expressions as N₁ ṭgúrai/hodó (A-i) N₂ wa náí, see hodó.

mean 'A and B (and C) are about all [there is and beyond that nothing]': ... denki-sutóobu, híbati, kotatu ṅúrai de 'electric heaters, hibachi, and kotatsu are about all there is [to use for heating]' (BJ 2.200); Eigo ga hanaséru no wa Sátoo san, Ikeda san ṅúrai de, hoka no kaiin wa hanasénai 'The only ones who can talk English are Mr Satō and Mr Ikeda; none of the other members can'. The following words are lexically derived adverbs, as explained on p. 789 (§13.7): dóno-kurai(⁻) 'how much/far/long'; kono-kurai and kore-kurai/-gurai 'this much'; sono-kurai/-gurai and sore-kurai/-gurai 'that much', ano-kurai/-gurai and are-kurai/-gurai 'that much'; ikura-ḡúrai 'how much', onazi-kúrai(⁻)/-ḡúrai(⁻) 'to the same extent'.

(40) ṅúrumi 'throughout, the whole/entire': ... hirói tíiki ṅúrumi tyuu [= to iu] kotó ni náru to ... 'when it gets to be a matter of an entire large area' (SA 2686.-); Kaisya ṅúrumi matomete natu-yásumi náhte yumé no máta(⁻) yumé desu yó 'To get the whole company together for a summer vacation would be a dream beyond dreams!' (SA 2637.39e); Kaisya ṅúrumi ooyoo site iru tokoró mo áru ṅrasii ga, sá-te ... 'It would appear to have some features that apply throughout the company; well, now ...' (SA 2685.113a); Kázoku ṅurumi ... 'The whole family ...' (For further examples, see Kenkyusha.)

(41) ṅhán 'and a half': ní-zyuu yo-kka ṅhán 'twenty-four days and a half'. The accentuation of yozyóo-han 'four-and-a-half mat area' indicates a compound.

(42) ṅhatu '(thing) leaving from, dispatched from/at': Haná no miyako no Párii ṅhatu [= Pariihatu] no zikan wa ... 'The time of arrival in Paris, the capital of (flowers =) gaiety ...'; Nízyuu gó-niti ṅhatu [= gonitihatu] ga óói 'There are a lot of them dispatched on the 25th'. For an alternative treatment, see p. 135.

(43a) hodó 'about, approximately': Kono éiga(⁻) no náka de wa, kono zíp-pun hodó⁽¹⁾ ga omosirói 'In this film, this stretch of about ten minutes is interesting'; Sono zíp-pun hodó⁽²⁾ o nozokéba, omosiroku náí 'Except for that stretch of about ten minutes, it isn't interesting'; Sono san-nin hodó⁽³⁾ ga itu mo itazura o suru 'That group of three or so is always up to some prank'; Wiiku-éndo no yukkúri tanosímu kotó no dekíru hutuka hodó wa hoka no yoozi ni tukai-taku náí 'I don't want to use for other purposes the couple of days of the weekend when I can relax and enjoy things'; Kita-hánkyyuu ni nízyuu rokú-syu hodó⁽⁴⁾ ga seizon suru 'Some 26 varieties exist in the Northern Hemisphere' (SA 2677.60d); Hutatú no kome-bitu ní wa komé to múgi ga wákete irerarete óri, komé⁽⁵⁾ no hoo wa taisetú ni site tukawanákatta no ka, musi ga hanbún hodo o koná ni site ita 'A couple of ricebins contained, separately, rice and barley; about half the rice—perhaps because he had not been careful when he used it—had been pulverized by weevils' (SA 2665.117a); Koko ni áru kono mittú hodo ga kowárete iru 'These three that are here are broken'; Kantan ni arúite ikareru hyaku-méetoru hodo no tokoró ni íi kissá-ten ga áru 'There is a good café about a hundred meters away within easy walking distance'; Myúuzikaru "Doró⁽⁶⁾ no náka no rúbii" no náka de wa, tatta ní-kyoku hodó sika Iwaya san no si ni sakkyoku dekinákatta no ga, tote-mo zannén datta 'In the musical "Rubies in the Mud" I was only able to put music to Iwaya's lyrics for just two numbers, much to my regret' (SA 2654.62a); Kore wa nihyakú-en hodó⁽⁷⁾ de kaeru 'This can be had for a couple of hundred yen'; ... tooka hodó⁽⁸⁾ taizai sita toki⁽⁹⁾, ... '(Once) when I stayed for ten days ...' (KKK 3.205). The expressions ika-hodo = náni-hodo(⁻) = dóre-hodo(⁻), ka-hodo = kore-hodo, sa-hodo = sore-hodo, and are-hodo are lexically derived adverbs, as are noti-hodo and naru-hodo; see p. 789 (§13.7).

(43b) hodó 'as much as (to be/do); insofar as; (not) as much as'; Senden ní wa rázio(⁻)

hodó^[1] yasúi monó wa náí 'For advertising there is nothing so cheap as radio' (Tk 2.295);⁴² Yóku iu kotó o kiku ko hodó^[1] kawaií monó wa náí 'There's nothing so adorable as an obedient child'; Watakusi wa hoka no hitó-tati hodo kúroku yakenákatta 'I didn't get as tanned as the others did'; ... dókusyo(¯) no sukí na kodomo hodó^[1] sakubun ga umái ... 'the more the child enjoys reading the better he is at composition' (Nagano 1966.135); Warúi yátu hodo yóku nemuru 'The worst rascals sleep the soundest'; Takái heyá hodo háyaku husagattayá n desu 'The more expensive the rooms [in the hotel] the sooner they are filled' (Tk 3.234a); Hén na yumé hodo masayume ni náru 'The strangest dreams come true'; Suekko hodó^[1] kawaií monó da 'The younger the child, the dearer it is to you' (Kenkyusha); Nága-sa ga haba hodó^[1] áru 'It is as long as it is wide' (Kenkyusha); Kotosi wa kyónen hodo átuku náí 'This year is not so hot as last' (Kenkyusha); Ore wa zúbun nónda kedo, áni hodo zya nákatta 'I drank a lot, but not as much as my brother'; Kore wa umái monó desu ga, Isé-ebi(¯) hodó zya arimasén 'This is good-tasting stuff but not as good as lobster'; Kono zí wa kirei desu ga, sono zí hodo zya náí desyoo 'This character is neat, but not so neat as that one, surely'.

(44) ¯hukáku 'the depths of; deep in': Ití-nen ¯zyuu yukí ni tutumáreta yamá ¯hukáku sumiyákí ga súde ita 'A charcoal burner lived deep in mountains covered with snow the year around'; Kakoo ¯hukáku {made/e} tobi-kónda 'She jumped deep into the volcano crater'; Kaitei/Kawazoko ¯hukáku tamá o hirou 'They find jewels deep at the bottom of the sea/river'.

(44') ¯hurátto '(an elapsed time that is) ... flat': Zyuití-byoo ¯hurátto desu '(It's) eleven seconds flat'.

(45) ¯hoo 'the air/manner of': ... rippa na narí o sita sarárii-man ¯hoo no hutarí no otokó ga ... 'two gentlemen with the air of white-collar workers cutting fine figures' (SA 2689.43); Atui mégane o káketa gakusya ¯hoo no roozín(¯) ... 'An old man with the air of a heavily bespectacled scholar ...' (or: 'A heavily bespectacled old man with the air of a scholar ...').

(46) ¯ien 'and beyond': ... syúui zík-kiro ¯ien wa ... 'the surrounding ten kilos and beyond' (SA 2686.41d); ... Hónkón ¯ien sika, uru ryokoo ga náí 'the only trips that will sell are to Hongkong and beyond' (SA 2832.44b).

(47) ¯igai 'outside of, except for': ... káiritu(¯) de kin-zirárete(¯) iru buta-niku ¯igai wa nán de mo tabéru 'They will eat anything other than the pork that is forbidden them by religious law ...' (SA 2673.140c); Sono mondai ¯igai o tóku 'I can get them all except that question'; Yakusoku sita hón ¯igai kasenai 'I can lend only the book I promised'; Kono páat'ii ni wa wakái hitó ¯igai wa kíte wa damé na n desu tté 'I hear no one but young people are supposed to come to this party'; Tooyoo-kánzi ¯igai ga hu-hítuyoo da 'Characters outside the Provisional List are unnecessary' (Ōno 295); Bénki ¯nai (= Benkínai) ni benyóosi ¯igai o sutenái de kudasai 'Do not throw anything other than toilet paper in the toilet' (sign). (Cf. hoka, sika.)

42. The structure in this and the following sentence is N_1 hodó^[1] (A-i) N_2 wa náí 'there is no N_2 the equal of N_1 ' in which N_1 is more specific and N_2 is a more general category into which N_1 fits: Zinsyu-móndai hodo muzukasii(¯) móndai wa náí 'There is no problem so difficult as the race problem'. Sometimes ¯gurai is used for hodó.

(48) *-igo* 'after, since, hereafter': Réi no páat'ii *-igo*, káre-ra wa sitásiku nátta 'Since the well-known party, they have grown quite intimate'; Ano yúkai na zíken *-igo*, sono misé ni wa hito ga óoku atumáru yóo ni nátta 'After that delightful incident, crowds of people came to gather in the shop'; Káre wa zibun ga kaisya o déta zíkoku *-igo* no kotó wa obóete inai 'He doesn't remember what happened after the time he left the office'; Nihón-si wa, sono zidai *-igo* ga muzukasíi() 'Japanese history is difficult from that period on'; Sono zidai *-igo* o benkyoo suru 'I will study the time from that period on'; Ano hisan na soonan-zíken *-igo*, kono yamá e no tozán-sya no kázu wa hetta 'After that tragic accident, the number of mountaineers going to this mountain declined'; Hooritu de kimerareta zyuuní-zi *-igo* wa eigyoo sinai 'We are closed (to business) from the legally set time of twelve o'clock'; Sono zíken *-igo*, kyaku wa kónaku nátta 'After that incident, guests stopped coming'. The expression *sono igo* (Tk 2.93a) can be regarded as ellipsis for something like *sono [zíken] -igo* 'after that [incident]'; *sore -igo* 'after that [time/event]' is also possible.

(49) *-ika* 'below, under, less than': Sono ten *-ika* wa rakudai désu 'Anything below that grade is failing'; Sono kóoi wa yaban na doobutu *-ika* da 'That behavior is beneath a savage animal'; Sátoo san wa sé ga hikúí. Ore no tiisái ootootó *-ika* da 'Mr Satō is short. He is under (the height of) my tiny little brother'; Sono sakana wa mizu ga koori-haziméru réido *-ika* de mo heiki de iru 'That fish is unperturbed even below zero centigrade when water starts to freeze'; Kóndo no booringu-táikai de, wareware hurúí monó-tati wa atarasíi hitótati *-ika* no sukóo o dásu wáke ni wa ikanai 'In the next bowling tournament we oldtimers have no reason to make a score less than that of the new people'; Túmari itihikutáaru *-zengo -ika* no nóoka wa, ooru-kengyoo-ka sinákereba, yatte ikenai wáke da 'What it means is that farmers without under about a hectare of land have to convert to ALL-sidejobbing to get by' (SA 2674.18c); Otokó wa, kono nenrei *-ika* ga sukúnáku nátte iru 'Men of below this age are getting scarce'; Otokó wa, kono nenrei *-ika* o taisyoo to suru 'We aim [our product] at men below this age'; Tokí ni wa itu mo zibun yóri hetá na hitó *-ika* no ensoo o suru kotó d'atte áru 'There are even times when I perform worse than people who are usually below me in skill'.

(50) *-ikoo* 'after, since': Kono sigatú *-ikoo* ... 'From this April on ...' (SA 2668.123d); ... rokuzyúú sítí-nen sángatu *-ikoo* wa ... 'from March of '67 on ...' (SA 2684.29c).

(51) *-ikutu* '... odd, and a few': zyúú *-ikutu* no hoogén() 'some ten-odd dialects'.

(52) *-inai* '(what is) within, inside of; less than': Kono ití-kíro *-inai* ga abunai 'Within this one-kilo stretch it is dangerous'; Kono ití-kíro *-inai* o soosa-táisyoo ni suru 'They are making this one-kilo stretch the object of an investigation'; Sono kíkán *-inai* ni sigoto o owaraseru yóo 'We would like the job finished within that period'; Sono kígen *-inai* ni kanarazu karita kane o káesite kudasái 'Please return the borrowed money without fail within that time limit'; ... ik-kágetu *-téido -inai* no zisin ... 'an earthquake (to take place) within a month' (R).

(53) *-ippai* 'all through; within, before the end of': Watasi no tikaará() *-ippai* da 'It's all that's within my power to do'; Sotugyoo sita tosí *-ippai*, sigoto o sagasi-tuzúketa 'I kept on searching for work all through the year of my graduation'; Kono ni-syúukan *-ippai* de káeru tumori da 'I plan to leave before the end of these two weeks'; Konogakki *-ippai* ni ... 'Within this school term ...'; Kotosi *-ippai* ni wa ... 'Before the end of this year ...' (SA 2688.23a); Syuunyuu *-ippai* ni kurasu 'lives within (or to the full extent of) one's income'; Rainen *-ippai* kakáru 'It will take all of next year'; Kóngetu *-ippai* made

iru 'I will stay till the end of this month'. Cf. N { | } íppai 'all over/around N': mádo⁽²⁾ íppai ni 'all over the window'; heyá^[1] íppai ni 'all over the room'; yamá^[1] íppai ni 'all over the mountain'; ié^[1] íppai ni 'all around the house'; niwa íppai ni 'all over/about the garden'; See § 25.

(54) \bar{i} rai '(the time) ever since, since': Kyónen no natú^[1] minná de itta tokí \bar{i} rai ano yamá e wa itte inái 'I haven't been to that mountain since we all went together summer of last year'; Ano utukusii yuuyake \bar{i} rai, ténki ga wárukute yuuyake \bar{r} asii yuuyake ga mirarénai 'Ever since that beautiful sunset the weather has been bad and there hasn't been a decent sunset to watch'; Ano iyá na deki¹gotó \bar{i} rai, sono matí e ikú no ga iyá ni náttá 'Ever since that disagreeable incident I have hated to go to that town'; Háha no sí to iu kanasii hí \bar{i} rai, amari monó o iwanaku náttá 'Since the sad day of mother's death I have not felt like saying much'; Ano tokí \bar{i} rai átte inai 'We haven't met since then'; Ano tokí \bar{i} rai no kenkyuu ... 'The research since that time ...'; Ano tokí \bar{i} rai [no] ga óói 'There have been many since that time'; Ano tokí \bar{i} rai [no] o taisyoo ni suru 'We aim at those (that are) since that time'. The time noun konó-kata 'this side of = since' is sometimes used in the same meaning as \bar{i} rai (but with prior juncture): Ano haizyá¹kku kara konó-kata, ... 'In the days since that [famous] hijacking ...' (SA 2677.149); zyuú-nen konó-kata 'for these past ten years'; kaibyaku konó-kata 'since Creation';

(55) \bar{i} ri 'containing, with ... in it': ... zibun de sibóttá gyuunyuu \bar{i} ri no baketu o ... 'the bucket full of milk that he had himself squeezed from the cow' (Endō 194); ... nízyuu hati-gúramu \bar{i} ri no ko-bin ga ... 'a small bottle with a capacity of 28 grams' (SA 2677.60); ... Pégii no kizi to syasin \bar{i} ri de ... 'including Peggy's writeup and picture' (Esuperanto 1971/10.15b); ... iti-dáasu \bar{i} ri no biirú-bako muttú ga ... 'six dozen-bottle cases of beer' (SA 2665.116c); ... akanboo \bar{y} oo no orugóoru \bar{i} ri [no] garagará o katte kíta 'went and bought a baby's rattle with a music box in it' (Ariyoshi 287); Atarasii zidai no kaiwa wa mattakú^[1] Eigo dá no singo \bar{i} ri ná no de, ... 'Conversation in the new era is quite loaded with English and neologisms ...' (Kotoba no uchū 1968/1.51); ... yónhyakú-en \bar{i} ri no sai¹hu 'a purse with 400 yen in it' (SA 2681.122).

(56) \bar{i} zen '(the time) before': Sono háru \bar{i} zen o omoidasoo 'Let us recall the time before that spring'; Sono háru \bar{i} zen ga omoidasenai 'I cannot recall the time before that spring'; Sono ziken \bar{i} zen wa, káre-ra wa sitasikatta 'Before that incident they were intimate'; Káre ga sissoo sita hí \bar{i} zen ni sakanobótte, tyóosa o suru 'I will investigate by going back to before the day he disappeared'; Hazímete soko e tití ni turete itte moratta hí \bar{i} zen no kotó wa yóku obóete inai 'I do not remember very well events before the day I was taken there by my father for the first time'.

(57) \bar{i} zyoo 'above, over, more than': Sono kingaku \bar{i} zyoo wa tote-mo dasemasén 'I simply can't pay any more than that amount'; Sono roozín() wa wakái hitó \bar{i} zyoo ni génki de hataraite iru 'That old man is working with more vigor than younger men'; Káre wa túne ni hito ni dekíru kotó \bar{i} zyoo o yaroo to site iru 'He is always trying to do more than others can'; Káre wa zibun no kurusikatta zidai \bar{i} zyoo ni íma mo dóryoku site iru 'He is even now working harder than during the period of his distress'; Syokuzi wa hituyoo na ryóo \bar{i} zyoo tótte wa ikenai 'You must not take more than you need at a meal'; Kono nenrei \bar{i} zyoo ga abunai 'Above this age is dangerous'; Kono nenrei \bar{i} zyoo o taisyoo to suru 'We aim at (those) above this age'; Sáru wa sono nenrei \bar{i} zyoo ikínai 'Monkeys don't live beyond that age'. Often to be taken as 'and over, or more'.

(58) \bar{k} a 'under': Koo iu zyoosei \bar{k} a (= zyooseíka) de, ... 'Under such circumstances ...'

(K 1966.107); Konna húu ni kyoodai na tuusin ya hoosoo názo no eikyoo ̀ka [= eikyóoka] ni áru seikatu ga ... 'Living under such a mighty influence of communications and broadcasting ...' (Tk 3.228a); Syúzyu no tigatta zyookén(̀) ̀ka [= zyookénka] de ... 'Under various different conditions ...' (R); Inhure ̀ka [= inhuréka] no bukka ... 'Prices under the inflation ...'.

(59) ̀kágiri 'to the extent (of/that); limited to, only; just because of': Ano iyá na ziken ̀kágiri soko o otozuréru kotó o yameta 'I gave up the idea of visiting there just because of that disagreeable incident'; Kono ituka ̀kágiri yuukoo 'Valid these five days only'; Daidokoro to, tiisái hito-ma ̀kágiri no utí(̀) ni súde iru 'I am living in a house that has only a kitchen and one small room'. With a following negative, ̀kágiri is sometimes equivalent to [k]kirí: Ano tokí ̀kágiri sonó-hito ni awánai 'That was the last I (ever) saw him'; Kono-aidá wakáreta tokí ̀kágiri átte inai 'The last I saw of him was when we parted recently'.

(60a) ̀kákko 'one who is) of about (the age): ... rokuzyúu ̀kákko no go-húzin 'a lady looking to be about fifty' (SA 2679.27a). Tosi-kákko is treated as a separate lexical item: ... onazi tosi-kákko no "otóotyán" ... 'a "daddy" looking about the same age' (SA 2793.123c); ... gozís-sai o súgita to omowaréru tosi-kákko no otokó-tati ... 'men looking of an age that appears to be past fifty' (SA 2795.124a).

(60b) ̀kákko '(the one who/the look of) apparently, (with) the appearance of, appearing': Ni-sannen máe kara óoku nátta híppii ̀kákko no yátu datta 'It was a guy who was apparently one of those hippies that have proliferated the last few years'.

(61a) ̀kan 'between (A and B); among': Nára Kyóoto ̀kan (= Nara | Kyootókan) 'between Nara and Kyóto'; Kátute, Edo Oosaka ̀kan (= Edo [l] Oosakákan) o ryookoo surú no ni zyúuku-niti mo kakátte ita 'It used to take all of 19 days to travel between Yedo and Ósaka' (SA 2673.30d); Yo-yatoo ̀kan [yoyatóokan] ni íken no tigai ga miraréru 'Differences of opinion are seen between the government party and the opposition'; ... zyosidaigakúsei ̀kan (= zyosidaigakuséikan) ni ... 'among college coeds' (Maeda 1962.69); Kaisya to zyuugyóo-in ̀kan (= zyuugyooínkan) ni okótta roodoo-sóogi wa ... 'Labor disputes arising between the company and its employees'. Cf. §2.7.

(61b) ̀kan 'the interval of': Sánzyuu go-nen ̀kan (= gonénkan) mo kakátta 'It took all of thirty-five years' time'; Ití-nen san-kágetu ̀kan (= sankagetúkan) ... 'An interval of one year and three months'. But we will treat -syúukan 'week(s)' as a counter.

(62) ̀katagáta 'incidentally to, while'—see §9.1.7.

(63) ̀kéiyu(̀) 'by the route of, via': Kanda no kasihon-ya ̀kéiyu(̀) de té ni ireta hón da 'It is a book that came into my hands by way of a Kanda rental library' (cf. SA 2685.115a); Ni-sannen máe ni dékita sin-kánsen ̀kéiyu(̀) de todóita nímotu da 'It is luggage that arrived by the Bullet Train line built a few years ago'; Yuki^[2] no óói Arasuka ̀kéiyu(̀) de ... 'By way of snowy Alaska ...'; Hura-dánsu de yuumei na Háwai ̀kéiyu(̀) de ... 'By way of Hawaii, famed for the hula dance, ...'.

(64) ̀ken 'additionally to'—see §13.7a.

(65) ̀kéntoo 'about (an amount of)': Kono is-syúukan ̀kéntoo ga abunai 'The period of about this week is dangerous'; Kono is-syúukan ̀kéntoo o moti-koséba, áto wa daizyóobu daroo 'If we get through the period of this week, about, from then on it's OK'; Okurimono wa, máa datoo na sen-en ̀kéntoo no ni siyoo 'For a present, let's make it something of about a thousand yen, a suitable sum'; Tóo ga kiboo suru itimán-nin(̀) ̀kéntoo wa dooin dekiru desyoo 'The party can probably mobilize the crowd of around

ten thousand people that they expect'; Toozitu wa yotei site ita s^{en}-nⁱⁿ(⁻) ⁻k^{en}too ga tume-kaketa 'That day the thousand or so people that had been anticipated thronged about'.

(65) ⁻k^{ikk}ári = ⁻k^{ókk}íri: Zyúu-zi ⁻k^{ikk}ári desu 'It is exactly 12 o'clock'; Hyaku-en ⁻k^{ikk}ári desu 'It is exactly 100 yen'.

(66) kiri—see kkirí.

(67) ⁻k^{itté}-no N 'the most N in all of ...; the most N of all': Káre wa kono matí ⁻k^{itté}-no méisi da 'He is the most distinguished man in this town'; Sono miti ⁻k^{itté}-no tuuzin ⁻buri o hakki sita 'He displayed an air of the most informed person in that line'; Nagaya ⁻zyuu ⁻k^{itté} no kawari-mono desu kara née 'For she's the queerest person in the whole tenement' (Okitsu 1.165); Sátoo san wa, kono kyodai na Naninani-gáisyá ⁻k^{itté}-no yarite da to uwasa sarete iru 'Mr Satō is the number-one go-getter in this mighty Such-and-such company, it is rumored'; Káre wa kono yuumei na daigaku ⁻k^{itté}-no syuusai da sóo da 'He is said to be the outstanding talent at this famous university'; ... syakai-too ⁻k^{itté}-no keizái-tuu de aru Kimura Kihatíroo gíin ga ... 'Diet member Kihachirō Kimura who is the outstanding economic expert in the Socialist Party'; Yamagami Mitio wa tóodai ⁻k^{itté}-no urekko-sakusika de áru 'Michio Yamagami is the most popular lyricist of the day' (SA 2653.58a); Kono hen ⁻k^{itté}-no bízin ... 'The belle of the neighborhood ...'.

(68) kkirí, kiri 'that being all and (not) beyond; (not) since': Anó-ko kkirí turete ikimas^{en} yó 'She's the only one I'm taking'; Góku yuumei na utá kiri sirimas^{en} 'I only know very familiar songs'; Tiisái ningyoo kiri arimas^{en} yó, koko ní wa 'We haven't any but little dolls, here'; Enpitu wa sákki katte kíta sán-bon kiri arimas^{en} 'I have only the three pencils I went and bought a while back'; Hóoki wa kitanái no kiri arimas^{en} 'The only brooms we've got are dirty'; Agerarerú no wa íma áru kore kkirí desu 'All I can give you is what you now have'; Koko ni kíte 'ru Yamanaka no tomodati kara míru to, máa taitei wa ano hoogakubu-yároo ⁻gúrai kkirí wakaránai 'Looking at it from the point of view of friends of Yamanaka's who are here, about the only ones that I can figure are those law school bastards' (CK 985.382); Hutarí kkirí de yatta 'They did it just the two of them'.

(69) ⁻k^{ókk}íri, ⁻g^{ókk}íri 'exactly; no more than': Zyuu-en ⁻k^{ókk}íri [made] da 'It is no more than ten yen'; Zyuu-en ⁻k^{ókk}íri sika náí 'I have no more than ten yen'. Cf. ⁻k^{ikk}ári, ⁻p^{ókk}íri, ⁻ty^{ókk}íri.

(70) ⁻k^{omi} 'including, with ... (included): ... kootúu-hi ⁻betu, syo-téate ⁻k^{omi} de heikin go-mán nisen-en 'including allowances other than transportation it [the pay base] is an average fifty-two thousand yen' (SA 2679.116b); Sararíi-man nara, iyá de mo gensen-kázei to site torárete simau syotokú-zei ⁻k^{omi} de goman-en no gekkyuu desu 'If you're a salaried employee, the monthly pay is fifty thousand yen including the income tax that gets taken out as withholding tax whether you like it or not'.

(71) ⁻k^{órai}-no 'traditional/native to': Hoog^{en}(⁻) no óói Ryuu-ryuu-rétto ⁻k^{órai}-no utá desu 'It is a song traditional to the Ryūkyū Islands, where there are many dialects'; Búnka no hikúí Nyuu-Gíniya ⁻k^{órai}-no doobutu desu 'It is an animal native to culturally backward New Guinea'; Kikú wa Nihón ⁻k^{órai}-no haná de wa náku, tairiku kara torai sita haná da sóo da ga, ... 'The chrysanthemum is said to be a flower imported from the [Asian] mainland, not a flower native to Japan, but ...' (SA 2685.102a).

(72) ⁻k^{úndari} 'all the way (to/from a remote place); (to/from) the remote place of': Hokkáidoo ⁻k^{úndari} made 'all the way to Hokkaidō' (SA 2678.26a); Bunka-sísetu náńka náńi-mo náí Tanegásima ⁻k^{úndari} e iku 'I will go to remote Tanegashima where there is

nothing in the way of cultural facilities'; Nagasaki $\bar{k}\bar{u}ndari$ kara {sae} wáza-waza kíta hitó mo kánari óói 'We also have quite a few who have taken the trouble to come [even] all the way from far-off Nagasaki'; Róndon $\bar{k}\bar{u}ndari$ made déte kíte ... 'coming all the way out to London' (Tk 3.208a). MKZ lists $\bar{k}\bar{u}ndari$ as a noun derived from kudari 'going down (i.e. away from the capital) to the country'.

(73) $\bar{k}\bar{u}rai$ —see $\bar{g}\bar{u}rai$.

(74) $\bar{k}\bar{u}zure$ '(one who is) a drop-out (from being ...); unsuccessful, manqué, formerly promising, a disappointed former ...': Káre wa sinbun-kísya $\bar{k}\bar{u}zure$ da 'He was once a promising newspaper reporter'; Gakusei $\bar{k}\bar{u}zure$ ga óói 'There are a lot of student drop-outs'; Daigaku no kóosi $\bar{k}\bar{u}zure$ o taisyoo ni site iru 'We aim at the disappointed former college instructor'.

(75) $\bar{k}\bar{y}\bar{o}o$ 'a little more than, and a bit more, plus (some)': ... heikin-nénrei wa sánzis-sai $\bar{k}\bar{y}\bar{o}o$ 'the average age is over 30' (SA 2681.24); Kono gakkoo wa senséi no gó(-) $\bar{b}un$ no ití $\bar{k}\bar{y}\bar{o}o$ ga gaikokú-zin desu 'This school has over one-fifth of its teachers foreigners'; Sono íken ni hantai sita zyúu-nin $\bar{k}\bar{y}\bar{o}o$ ga áto de odokasaretári sita 'The ten odd ones who opposed that view were later intimidated from time to time'; Sárarii no utí(-) sono nizip-paasénto $\bar{k}\bar{y}\bar{o}o$ ga zeikin to site hikareru 'From the salary something over twenty percent is withheld for taxes'; Démo ni sánka(-) sita hassén-nin $\bar{k}\bar{y}\bar{o}o$ no utí(-) yáku iti-paasénto no gakusei ga táiho saretá 'Of the over eight thousand students who participated in the demonstration about one percent were arrested'.

(76a) $máde$ 'till, as far as'—see also §3.7): Kono oka $máde$ ga turai 'It's tough up to this hill'; Kono oka $máde$ o zibun no toti ni sita 'Up to this hill I have made the land my own'; Sán-zi made benkyoo suru 'I will study till three o'clock'; Yuumei na Ueno-Kóoen made arukimasyóo 'Let's walk as far as famous Ueno Park'; Ano hirói bokuzyoo $máde$ ikítai 'I want to go as far as that wide pasture'; Húzi-san ga miéru tokoró made itta 'We went up to a place where Mt Fuji can be seen'; Sono koodai na bóti(-) $máde$ atarásiku óoki na miti ga tukuráreta 'A large road has been newly built up to that enormous cemetery'; Watasi ga yóku iku misé made tyóotto así o nobasimasén ka 'Shall we direct our steps toward the shop I always go to?'; Sono negái ga yózóra no utukusíi hosi $máde$ todóke to inorímásita 'I prayed that the request might reach all the way up to the beautiful stars of the night sky'.

(76b) $máde$ 'even'—see also §3.7a: Yasasíkatta sono áni made ga watasi ni hantai suru 'Even the older brother who had been so nice to me is opposed'; Sono áni made o hínan suru 'I blame even that older brother'; Sonó-hito made kubi ni saretá 'Even he got fired'; Kirai na monó made múriyari tabesaseráreta 'I was forced to eat even the things I dislike'; Sono kotó ni túite, yóku siranai hitó made hén na mé de míru 'Even people who don't know much about the matter take a dim view of it'; Hurúi bunken $máde$ sirábeta míta ga wakaránai 'I've tried checking even the older literature but can't find out'; Sín-zite(-) ita tomodati $máde$ káre kara hanárete itta 'Even friends he had believed in detached themselves from him'; Kono ué ni sukí na hitó made usinaú to wa, káno-zyo mo mízime da 'It is most miserable for her to lose even a loved one, on top of all this'; Gakuséi-táti o kore-hodó(-) $máde$ ni okoráseta gen'in wa hutatú átta 'What had angered the students to this extreme extent was two things' (SA 2680.22c); ... kore-hodó(-) $máde$ ni tettei sité wa inákatta 'it had not been so thorough-going as all this' (SA 2678.41a).

(77) $\bar{m}áe$ 'before (a time/event)': Musuko wa sono tosi no háru $\bar{m}áe$ ni káette kíta 'My son came back before spring of that year'; Yáhan(-) $\bar{m}áe$ kara áme ga huri-dasú

desyoo 'Rain will set in before midnight' (R). Minná ga syukkin suru hatí-zi ṁmáe ni, hayabáya to kaisya ni kíte, sono hí no keikaku o néru 'I come to the office [each day] well before eight o'clock when everyone comes to work, and put the finishing touches on my plans for the day'; Máiniti(ṁ) sono zíkoku ṁmáe ga isogasií 'The period before that time every day is a busy one'; Sán-zi o sakái ni, sono zíkoku ṁmáe o benkyoo no zikan to si, sono áto o asobi no zikan ni suru 'With three o'clock as the dividing line, we treat the period before that time as study time, and the period after as play time'; Sono zíkoku ṁmáe da to básu wa tote-mo kómu 'If it's before that time the bus gets awfully crowded'; Tyan-tó,^[1] watakusi ga dekakeru hí ṁmáe ni háha wa yoochuku o siágete kuremásiita 'Mother has kindly made some clothes for me (so they are ready) well before the day I depart'; ... natú no kankoo-siizun ṁmáe ni náru to ... 'when it gets to be (right) before the summer tourist season' (Tk 3.176b). NOTE: 'Five minutes ago/earlier/back' can be said either as gó-hun ṁmáe ('before [these] five minutes') or as gó-hun | máe ('earlier to the extent of five minutes'); cf. go-húnmae 'five minutes before (the hour/event)' with a compound counter: gó-zi go-húnmae 'five minutes before five o'clock'; Hassya | ni-húnmae desu 'It is two minutes till the train departure' (R).

(78) ṁmágai = ṁmódoki.

(79) ṁmágire '(in) a mood of; (in) a state of, (in) the confusion of': Zoku wa kurayami ṁmágire ni nige-satta 'The bandit got away in the darkness'; Nigéru no nara, sono dósakusa(ṁ) ṁmágire ga ii daroo 'If you are going to escape the confusion of that moment would be best'; Sono dósakusa(ṁ) ṁmágire o tákumi(ṁ) ni riyoo suru 'We will cleverly take advantage of the confusion of that moment'; Kotti de, kitanái tokoró da ga, túmari, ókusan no taikutu ṁmágire desyoo 'This is a dirty place, but I suppose you are running it out of your boredom, ma'am' (Fn 263b); ... taikutu ṁmágire no warai-góe ga ... 'laughter stemming from boredom' (F 52b); Huuhu-génka no haradati(ṁ) ṁmágire ni ironna kotó o iu 'In the heat of anger of a marital quarrel all sorts of things are said'. But uresi-mágire 'out of one's delight' and kuyasi-mágire 'in one's vexation' are lexical derivatives made by suffixing mágire to an adjective base: ... kuyasi-mágire ka mo sirenái kedo mo, ... 'It may be out of spite, but ...' (Tk 2.65a). And Kenkyusha's yótta ṁmágire 'in one's drunkenness' (also said as yóí ṁmágire?) apparently involves direct nominalization of a perfect, equivalent to yótta [nó] 'having gotten drunk', but I have been unable to find a speaker who knows the expression. This quasi-restrictive is derived from N ni mágire 'being confused by/with N'.^[1]

(80) ṁmágiwa (ni) '(at) the moment before, right before, just on the verge of': Yat-tó^[1] gakkoo kara déte ikeru sotugyóo-siki ṁmágiwa ni ... 'Just on the verge of the graduation ceremony when I could at last leave school ...'; Syuusen ṁmágiwa made ... 'Up to the moment before the war ended ...'; Hassya ṁmágiwa datta 'The train was about to depart'.

(81) ṁmámire 'with ... stuck all over, mucked up with': Sigoto ga súmu to hatake no doró ṁmámire ni nátta kimono o núida 'When the job was done I took off my kimono which had gotten smeared with mud from the field'; Minná^[1] áse ṁmámire de hataraitte iru 'They are all working bathed in sweat'; Mannén-hitu kara kobóreta ínku ṁmámire no kami ... 'Paper smeared with black ink spilled from my pen ...'; Komé^[1] no koná ṁmámire ni nátta 'It got all covered with rice flour'. This is derived from N ni mamire 'being smeared with N'. The accentuation options indicate that ti-mámiré(ṁ) 'blood-smeared' is best treated as a lexical item.

(82) ṁmáwari 'via' (= ṁkéiyu(ṁ)); 'through': Itóko ga súde iru Kóobe ṁmáwari de iku 'I will go by way of Kōbe, where I have a cousin living'; Namí ga sízuka na Seto-náikai

ṁmáwari no kankóo-sen de ikimásu 'I am going on a sightseeing ship all through the Inland Sea with its gentle waves'.

(83) ṁmé 'th' (ordinalizer)—see §13.8.

(84) ṁmíman '(one who/that is) not yet fully, under (the age/amount of)': ... nízís-sai ṁmíman no zyakunén-soo 'the youth stratum of under twenty' (SA 2666.121d); Genkín ga zyuuman-en ṁmíman made wa, risoku wa saikoo nén ní-wari, ... 'Up to where the principal is under ¥200 000 the interest is at a maximum twenty percent a year, and ...' (SA 2689.123b).

(85) ṁmódoki '(the situation of) imitating, resembling, (in) the style of': Tumaránai yákuza ṁmódoki no idetati o site ibátte iru 'He is swaggering about looking for all the world like a worthless hoodlum'; Óoki na kotó no dekinai kosodoro ṁmódoki no kakkoo o site iru 'He presents the appearance of a sneak thief incapable of anything big'; Otogibánasi ṁmódoki ni takaramónó(ṁ) o mátte iru 'She is expecting treasures as if it were a fairy story'; (?)Sibai ṁmódoki o sakeyóo 'Let's cut out the theatricals'. Synonym: ṁmágai. Cf. ume-módoki '[false-plum =] a kind of ivy', gan-módoki '[false-duck =] a kind of fritter'.

(86) ṁmuke '(that which is) bound/intended for': ... zieitái-in ṁmuke no sinbun o tukúru 'creates a newspaper aimed at the members of the Self Defense Force' (SA 2678.27e); ... syoonen syóozyo ṁmuke to iu kotó ... 'being intended for boys and girls' (Nagano 1968.153); Oo-mísoka kara gantan o yoppitē(ṁ) sugósu hitó-tati ṁmuke ni, ... 'Aiming at the people who stay up all night New Year's eve ...' (SA 2660.128); Kono orimónó(ṁ) wa tooi Amerika ṁmuke ga óói 'Most of these textiles are for distant America'.

(87) ṁmuki '(that which is) suitable for': Wakái musumé ṁmuki [no monó] ga óói 'Many are [things] suitable for young girls'; ... íma no wakái kankyaku ṁmuki no monó wa, ... 'those [films] directed toward today's young viewers' (Tk 3.301a); Kono géemu wa yooti-en e iku kodomo ṁmuki de áru 'This game is suitable for a child attending kindergarten'; Kore wa katuzi ga óokiku náí to yomi-nikúí roozín(ṁ) ṁmuki no hón desu 'This is a book suitable for an old person who finds reading difficult unless the type is large'.

(88) ṁ'nai '(what is) within': Onazi kaisya ṁ'nai [= kaisyánai] de, taisyoo ni náru hitó to naránai hitó ga irú no wa mazúí 'It is embarrassing to have within the same company both people who are to be the subjects [of talent upgrading] and people who are not' (SA 2665.21a); ... sono hán'í ṁ'nai [= han'ínai] ni súnde iru hitó ... 'people living within that sphere (those confines)' (Tanigawa 154); ... áru zikan ṁ'nai [= zikánai] {ni} tuzuite okonawareru 'takes place continuously within a certain time' (Kōgo-bumpō no mondaiten 290b); Purahá-si ṁ'nai de ... 'Within the city of Prague ...'; Yobí-hi ṁ'nai de ... 'Within the budget expenses ...'; Tíiki ṁ'nai no ... '(Those) within the area ...'; Kengén ṁ'nai ... 'Within the scope of authority ...'; Kígen ṁ'nai ... 'Within the time limit ...'; Kurémurin ṁ'nai no ... '(That) inside the Kremlin ...'; Aramoana-syoppingu-sénta ṁ'nai 'in the Ala Moana Shopping Center' (R). The accent may sometimes be heard as ṁ'nái, especially in unusual forms. And you will sometimes hear | náí, as if an ellipsis of something like N [no] náí were responsible: daigakú-in | náí de 'within the graduate school'.

(89) ṁ'náigai 'approximately, about': is-syúukan ṁ'náigai 'about a week'; sén gohyakú-en ṁ'náigai 'approximately ¥1500'.

(90) ṁ'nákaba '(in) the middle of': Is-syúukan ṁ'bákari tuzuita sikén ṁ'nákaba ni byooki ni nátte simatta 'In the middle of tests that stretched over a whole week I fell ill'; Ítumo-nágara no, zibun no mi-no-ue(ṁ) ni túite no hanasí ṁ'nákaba ni, kyuu ni omoi-dasite, hoka

no kotó o syaberi-hazimeta 'In the middle of the usual talk about his own affairs he suddenly recalled himself and started chatting about something else'. For Nakábá(̄) ... as a conjunction, see § 13.7a.

(91) ̄nami '(as) an ordinary example of, (at) the level of, (of) the order of': ... basue no sutorippu-gékizyoo ̄nami 'it is at the level of a suburban strip show' (SA 2657.117c); Toomei-koosoku-dóoro ̄nami no háíuee ga ... 'A highway of the caliber of the Tōkyō-Nagoya expressway ...' (SA 2654.141d); Mái-asa mái-asa buta ka nímotu ̄nami ni atukawarete, ... 'Morning after morning treated like swine or baggage ...' (SA 2792.32b); Buta ka usi ̄nami ni atukatte, ... 'treating them like swine or cattle' (SA 2792.33a); Kanzya o usi ka hituzi ̄nami ni atukau ... 'They treat patients like cattle or sheep' (SA 2670.30); Táka-sa wa rokkai-date no dánti ̄nami [de], ... 'The height (of the jumbo jet B-747) is of the order of a six-story tenement house and ...' (SA 2670.139a); ... Kizima Norio ya Hasegawa Hazime ̄nami no "saikóo-kyuu" "'top salaries" of the rank of [those of] Norio Kijima and Hajime Hasegawa' (SA 2666.102e); Koohii íp-pai hyaku-en nári de wa sekái-iti bukka no takái Tookyoo no, náka de mo itiban takái Ginza no kissá-ten ̄nami de áru 'It is typical of the coffeeshop in Tōkyō, which has the highest prices in the world with "Coffee ¥100 a cup"—and in Ginza, the most expensive place in Tōkyō, at that' (CK 985.271); Atasi nángo, séken no otokó ̄nami ni onná wa sukí na n desu ga, ki ga yówakutte náhni mo dekinai 'Me, I like women as much as the next man does, but I am too timid to do anything about it' (Tk 3.84a); Sibai no butai-sooti-ka to iéba, hito-múkasi máe wa, oodoogu-kata, kodoogu-kata ̄nami no "urakata" san 'In the way of stage managers for plays, ten years ago it was "scene-shifters" of the order of large-prop men and small-prop men' (SA 2689.121a); Kookoo o dénai no ni, Toodai o sotugyoo sita hitó ̄nami no sárarii o moratte iru 'Though I didn't graduate from high school, I am getting the salary of people who have graduated from Tōkyō University'; Nihón no tǐngin ga Amerika no sararii-man ̄nami ni náru no ni wa máda zúibun zikan ga kakáru 'It will still take a lot of time for Japanese wages to reach the level of the American salaried worker'; Sémete sono kázoku ̄nami ga zitugen sitára náa 'I wish we could at least realize as much as that family, you know'; Sono kázoku ̄nami o mokuhyoo ni suru 'We will take as our goal the level of that family'.

(92) ̄nari 'appropriate to, to be expected of' (cf. § 15.19): Tiisái kodomo ̄nari no handán-ryoku ... 'The discernment to be expected of a small child ...'; Tokoró-ga, kagákú-sya d'atte yappári kagákú-sya ̄nari no genzitu-syúgi to iú no ga arimásite, ... 'But scientists too have a certain realism appropriate to a scientist ...' (Tanigawa 20).

(93) nómi 'just' (=daké): Kono hón nómi ga atarasii 'This book alone is new' (usually said with minor juncture before nómi); Kono hón nómi o kau 'I will buy this book only' (usually lnómi o); Itinití no uti(̄), syokuzi-doki nómi tanósiku omowaréru 'The only time in the day that seems pleasant is mealtime'; Byooki sita kotó no áru káno-zyo nómi ga, watakusi no kimoti o wakátte kureta 'She who has experienced illness is the only one who understands my feelings'; Hito wa pán nómi de ikíru monó de wa náí 'Man cannot live by bread alone'.

(94) ̄nuki 'omitting, without': ... mattakú^[1] arukóoru ̄nuki no monó ... 'something completely non-alcoholic [to drink]'; Anmari kyuusin-teki na kangáe o mótte iru seinen ̄nuki ni ... 'Apart from the young who have overly radical ideas ...' (cf. Tk 2.244b); Keisiki-teki na áisatu ̄nuki de tyokusetu yookén(̄) o hanasi-hazimeta 'I began to talk business, skipping a formal greeting'; Karái sió ̄nuki no syokuzi o site imásu 'I am on a

salt-free diet'; Hirú ʔnuki de hatarakimasyóo ka 'Shall we work straight through, skipping lunch?'; ... nakámi ʔnuki no saiho 'a purse minus its contents' (Kenkyusha).

(95) ʔnuri 'painted/coated with': Tibétto gensan [or: Tíbetto-génsan] no urusi no kí no kawá kara tóttá urusi ʔnuri no sikki wa kóoga [= yúuga] na azi ga áru 'Japanware, coated with lacquer taken from the bark of the lacquer tree which originally came from Tibet, has an elegant air about it'.

(96) ʔókí(ʔ) 'at intervals of; skipping (every so many)': ... sánzíp-pun ka iti-zíkan ʔókí(ʔ) ni ... 'at intervals of thirty minutes or an hour' (SA 2663.51b); Sán-pun ka yón-pun ʔókí(ʔ) ni tóire ni iku 'He goes to the toilet (after) every three or four minutes' (Endō 112); Áru ittei no kikán ga sadamerárete óri, sono kikán ʔókí(ʔ) ni kansatu ga okonawarete iru 'A set period has been fixed and after each such period an inspection takes place'; Tekitoo na zikan ʔókí(ʔ) ni kusuri o nomásete yatte kudasái 'Give him his medicine after each suitable period'; Sono sigoto wa anáta no iu san-zíkan ʔókí(ʔ) ni kootai simasyóo 'Let's take turns at that work at the three-hour intervals you mention'; Mukasi no sibai tte yátu wa, ik-kágetu ʔókí(ʔ) ʔgúrai ni sika yaranákatta séi mo áru desyóo keredo ... 'They used to put on a show only about once a month, and maybe that's the reason, but ...' (Tk 3.211b). Sikási, konó-hito wa mikka ʔókí(ʔ) ʔgúrai ni tegami o yokósite kúru 'But this person sends me a letter nearly every three days' (Endō 138); Ití-mai ʔókí(ʔ) ni sáin o site kudasái 'Sign every other sheet'; Kono hón o ní-satu ʔókí(ʔ) ni tótte kudasái 'Take every third one of these books'. NOTE: Hamako Chaplin accentuates ʔoki, MKZ gives ʔókí (and MKZ⁵ skirts the question), K and H list iti-nití ʔókí, NHK lists iti-nití ʔókí(ʔ). Kansai dialects also use ʔhadame, ʔhasami, ʔhazami.

(96') ʔpókkíri = ʔkókkíri: Hyaku-en ʔpókkíri sika náí 'I've only got just a hundred yen'.

(97) ʔpúrasu '...plus (some)': Hyaku-zíkan ʔpúrasu ... '100-plus hours'.

(98) ʔrai 'since, the past ...' (= ʔirai): ... koko itiryóo-nen ʔrai [= itiryoonénrai] no gizyutu-teki sínpo o go-zon-zi náku, ... '[as they are] unaware of the technical progress of these last few years ...' (SA 2688.25b)—on the apposition of koko, see §25; Daigaku o sotugyoo sita yónzyuu rokú-nen ʔrai ... 'For the past forty-six years since I graduated from college ...'; Kono ryoosán-niti ʔrai ... 'For the past two or three days ...'; Kono ryoosán-nen ʔrai ... 'For these past several years ...' (R); Sakunen ʔrai ... 'Since last year ...'; Kono zyuu-súunen ʔrai, ... 'For these ten-odd years now, ...' (R); Súuzitu(ʔ) ʔrai ... 'For the past several days ...'; Móo, sanzýúu-nen ʔrai no ... '... of thirty years now' (R); Sénpan ʔrai ..., Káhan ʔrai ... 'Lately ...'.

(99) ʔryuu '(after) the fashion/school of': Síga Náoya ʔryuu no si-syóosetu 'autobiographical novels of the Naoya Shiga school' (SA 2685.105b); Kawabata Yasúnari ya Síga Náoya ʔryuu ni káku nara, ... 'if we were to write it in the manner of Yasunari Kawabata or Naoya Shiga' (Y 248); Túmari, Dóitu, Oosutória, Tyéko ʔryuu de ikoo tte kotó ni sita 'Finally it was decided to proceed in the style of Germany, Austria, and Czechoslovakia' (Tk 3.41b, Tyéko = Tyékkko); ... íma ʔryuu ni ... 'in the manner of the present' (SA 2686.29c); ... kotira/sotira/atira ʔryuu ni hatuon suru 'pronounces after the fashion of this/that place'; ... anáta wa Nihon-zín na no désu kara anáta ʔryuu de kékkoo desu 'since you [the reader] are a Japanese, it is quite all right [for you to seat dinner guests] in your usual fashion' (Tsukagoshi 180); ... sitamati no syokunin ʔryuu désu né ... 'it's (part of) the way of the downtown workman, you see, ...' (R).

(100) ʔsí dai 'depending on' (cf. §9.1.2): Aité ga/no moosi-deru zyookén(ʔ) ʔsí dai

no kotō da 'It is a matter that depends on the conditions proposed by the other side'; Kooto [= Katte] kureru okyakusan \bar{s} idai de, sinzyu wa nánbo [= ikura] de mo dekimásu 'So long as we have customers who will buy them we can make any quantity of pearls' (Tk 3.304b); Dónna hón de mo, yomi-té(̄) to yomi-káta \bar{s} idai de, "ryóosyo" ni mo "ákusyo" ni mo narimásu 'Any book may be a "good book" or a "bad book" depending on the reader and the way it is read' (Nagano 1966.137).

(101) \bar{s} siki 'way, fashion, type': ... súiryoku(̄) o tukau dámu \bar{s} siki ni yoranéba narán wáke desu 'we have to rely on a system of dams that utilize water power' (Tk 2.40b); Kí de tukúta bangároo \bar{s} siki no tate-káta ... 'A method of construction of the type of bungalows made of wood ...'; Sátoo Húmiko no imootó no Sasabayasi Hánako \bar{s} siki desu 'It is after the fashion of Hanako Sasabayashi who is the younger sister of Fumiko Satō'; Zínsyu no óói Amerika \bar{s} siki no kyooiku-séido ... 'An education system of the type of multi-racial America ...'; ... mukoo \bar{s} siki no sebiro 'an American style suit'; ... sore \bar{s} siki desu 'is that way, too' (Tk 4.125a)—cf. sore-siki no N 'such a trifling N', p. 80. In ... minna^[1] || "yo-ásobi | surú na" || siki no tyuukoku dáta n desu | yó 'everybody offered advice of the type "Don't play around in the evenings"' (Tk 2.306b) the major juncture that will be inserted before siki indicates an ellipsis of something like [to iu]. Similar examples: "Káku | tatakaéri" || siki no | éiga(̄) ... 'A "This is how we fought" type film' (SA 2678.147); ... siharai mo saiho o marudasi ni site, iru dak^[1] tóre siki no "oomono" ga óói 'and when it comes to paying [for their purchases] there are a lot of "bigshots" [among the tourists] who, baring their purses, are of the "Take what you want" type' (SA 2673.36d).

(102) \bar{s} sodati 'reared (in a place, by a person, on a nutrient)': Méiro no óói Yoshiwara \bar{s} sodati datta 'I was reared in the Yoshiwara with its twisting lanes'; Nigiyaka na Sinzyuku \bar{s} sodati no musumé desu 'She is a girl who grew up in bustling Shinjuku'; Ikinma(̄) [= iki-uma(̄)] no mé o nuku tokai \bar{s} sodati de, ... 'Having been born in the big city where sharp practices are the rule ...'; Míruku \bar{s} sodati ... 'Raised on [store-bought] milk ...' (R).

(103) \bar{s} sootoo '(a price) of the order of': ... happyakú-en \bar{s} sootoo no Tyuuka-ryóori no tyuusyoku ga múryoku(̄) de taberáru ... 'gets to eat an 800-yen Chinese lunch free' (SA 2679.35a); ... hyakú gozyuuman-en \bar{s} sootoo o hakonde imásita 'they brought in (goods) of the value of a million and a half yen' (R). But sore-sootoo = sore-soo'oo 'of a sort, in its/one's way' is a precopular noun; see §25.

(104) \bar{s} sugata '{one who is} garbed/attired in, wearing': Nihon-gami \bar{s} sugata no zyosei ga ... 'A woman wearing a Japanese-style hairdo ...' (R); ... waisyatu to zubón-sita(̄) \bar{s} sugata de ... 'in shirt and underpants' (Tk 4.282a); Toobu-syógakkoo o tazunéru to, Éndoo sensē^[1] wa kiirói kooruten no uwappari ni kuropói monpé(̄) \bar{s} sugata de arawáreta 'When I visited the Tōbu elementary school (in Toyama) Instructor [Miss] Endō appeared in a yellow corduroy smock with dark pantaloons' (SA 2682.107a); Yogoreta yoohuku \bar{s} sugata de sitúrei ... 'Excuse my dirty suit ...'; Kodomó-táti wa kirei na wahuku \bar{s} sugata ga óokatta 'Many of the children were in pretty Japanese kimonos'; Tózan \bar{s} sugata de kónde iru 'It is crowded with people dressed for mountain climbing'; ... sangúrasu, sentóo-huku \bar{s} sugata no Makkáasaa ga ... 'MacArthur, in his sunglasses and battle uniform, ...' (SA 2830.142c).

(105) \bar{s} sugí '(a time) after (a time)': Sono zíkoku \bar{s} sugí o neratte hoomon sitára, káre ni áu kotō ga dékita 'When I aimed my visit at a time after that hour I was able to see him'; Iti-zi \bar{s} sugí ni átuku náru 'After one o'clock it gets hot'; Sararíi-man no kitaku-zíkan

to sité wa kánari osoi hati-zi ˉsugí ni káeru kotó ga óói 'I often get home sometime after eight o'clock, an hour that is rather late for the time of a salaried employee's return'; Sigatú^[1] hatuka ˉsugí kara ... 'From (sometime after) the 20th of April ...' (SA 2679.18d); Gakkoo ga hazimaru sigatú ˉsugí ni wa sakura mo mankaí dá 'After April, which is when school begins, the cherries are in full bloom'; Háru mo máda asai sángatu syózyun(ˉ) ˉsugí ˉgóro, uti no sakura ga saki-hazíméta no de bikkúri sita 'I was surprised that the cherries at our house started blooming around the time after the first part of March when spring is still faint'. NOTE: Unlike máe, ˉsugí does not have a corresponding noun in free use. To say 'five minutes later' you must phrase it gó-hun áto/noti; there is no *gó-hun | sugí, and go-húnsugi means 'five minutes past (an hour/event)' as in gó-zi go-húnsugi 'five minutes past five' and Hassya ni-húnsugi {ni} zíko ga okótta 'Two minutes after the train's departure an accident took place'.

(106) ˉtai 'versus; (by) a score of X to ...': san ˉtai san = sán-tai san 'three-to-three (score)'. Also with nouns not numbers: ... soo iwareréba sákusya(ˉ) ˉtai sakuhin no mondai wa ... 'if we may so call it, the problem of creator versus creation, ...' (TK 3.321b). But in examples of this sort, Hamako Chaplin treats tai as a conjunction with no accentual effect on the preceding noun; see § 13.7a.

(107) ˉtaipu 'a type of': Kyooiku-néssin na ókusama ˉtaipu ... 'One of those types of housewife wild about education ...'.

(108) ˉtáka 'high on/in, the heights of': Huzisan-tyoo ˉtáka ... 'High atop Mt Fuji ...'; Aozóra ˉtáka o mokuteki to site ... 'Aiming high in the blue sky ...'. But in Sóra táka huusen ga nígete yuku 'The balloon escapes to high in the sky' the juncture indicates an ellipsis, perhaps Sóra [ni].

(109) ˉtarazu 'less than': Kitté(ˉ) wa san-zíkan ˉtarazu de urikire [da] 'The stamps are sold out in less than three hours' (SA 2672.17c).

(110) ˉtéido 'the level/caliber/limit of': Sanpo tó ka taisoo ˉtéido nara yói desyoo 'It would be best if it [= physical exercise for those with high blood pressure] were limited to walking and calisthenics' (SA 2679.120d); ... kaku-dántoo no hakái-ryoku mo Hiroshima Nagasaki no genbaku ˉtéido ni sugínai daroo 'nor would the destructive power of the nuclear warhead exceed the level of the Hiroshima and Nagasaki atom bombs' (SA 2678.136d); ... onsen-ba no soemono ˉtéido no monó^[1], ... 'something limited to being (= that is no more than) a mere appendage to a hot-spring resort' (SA 2688.89e); Nisen-en kara itiman-en ˉtéido no bakkin o haráeba súmu kotó da ... 'You can get off by paying a fine ranging from two thousand to ten thousand yen' (SA 2665.126c); ... séizei zyuugó-nin ˉtéido de owari-tai to omótte ita 'I felt I wanted to stop at (a limit of) fifteen people at most' (TK 3.0c); ... minarai-kangóhu ˉtéido no monó 'someone of the caliber of a probationary nurse' (SA 2666.114b); ... pánda no tabéru take no hutó-sa wa ningen no ko-yubi ˉtéido de ... 'the thickness of the bamboo that the pandas eat is that of a human's little finger' (R); ... kore mo "ˉtyanomi-bánasi" ˉtéido da to ka 'this is nothing but gossip over teacups' (SA 2668.28e); Daigaku sotugyoo ˉtéido no hitó ... 'persons with a college degree'.

(111) ˉtikáku 'nearly, close to': Dookyúu-sei no hanbún ˉtikáku ga kekkon site iru ... 'Close to half her classmates are married' (SA 2656.135d); Náze, konna ni sanzíp-pun ˉtikáku zikan o okurasetá no daroo 'Why did I dawdle this way for nearly thirty minutes?' (V 1967a.104); Sono hansúu ga ... 'Nearly half of that number' (SA 2655.42); Bunryóo mo zentai no hanbún ˉtikáku símete iru 'The quantity (of it) takes up nearly half of the whole thing' (SA 2674.92c); ... hatumoodé-kyaku hyakú^[1] gozyuuman-nin ˉtikáku ga mi-

komare, ... 'close to a million and a half New Year worshippers are expected' (R); Hi mo tákaku náta hirú \bar{t} ikáku ni yooyaku ókita 'I finally got up around noon when the sun was high in the sky'; Ensoku no hí \bar{t} ikáku ni náru to urésikute sikata ga náí 'As it gets close to the day of the outing I am most delighted'; ... niman-en \bar{t} ikáku ni náru 'amounts to close to ¥20 000' (SA 2640.105b). Observe the difference between Iti-zi \bar{t} ikáku NI náta 'It got to be close to one o'clock' with the restrictive and Iti-zi tikáku náta 'It got so it was close to one o'clock,' an ellipsis for Iti-zi [ni] tikáku náta. The ellipsis is optional and occurs freely for other forms of the predicate: ... sánbyakú-nin tikái hitó-tati ga ... 'nearly three hundred people' (SA 2688.58); ... zentai no ní-wari tikái kígyoo(\bar{t}) de ... 'in enterprises that are nearly twenty percent of all (enterprises)' (SA 2668.22c); Masúnaga ga ié ni káetta no wa ití-zi tikái 'It is close to one o'clock when Masunaga gets home' (Ig 62.90).

(112) \bar{t} omo 'all ...'—see § 15.14.

(113) \bar{t} ómo(\bar{t}) 'including ...'—see § 15.14: Iremono \bar{t} ómo(\bar{t}) ... 'including the container'.

(114) \bar{t} tuki '(one that is; being) equipped with, with ... (provided, attached, included, given)' (cf. \bar{t} zuki): ... seihuku o kita untén-syu \bar{t} tuki no Béntu ga ... 'a Mercedes (Benz) with a uniformed chauffeur'; Rei-dánboo, básu, tóire, óobun, reizóo-ko \bar{t} tuki no óoki na kyanpingu-káa de itta 'We went in a large camper equipped with air conditioning and heating, bath, toilet, oven, and refrigerator' (SA 2680.50c); Heyá wa roku-zyóo \bar{t} gúra no híro-sa de tansu, béddo, senpúu-ki \bar{t} tuki [da] 'The room was about a six-mat size and was equipped with chest, bed, and fan' (SA 2669.62b); ... itinén-kan no meekaa-hósyoo \bar{t} tuki désu 'It comes with a one-year guarantee from the maker' (SA 2654.53); ... hatuon \bar{t} tuki no zísyo 'a dictionary that gives pronunciations'; Kono nagasí \bar{t} tuki ga bénri da 'Having this sink attached is convenient'; Kono nagasí \bar{t} tuki o kaoo 'Let's buy one with this sink attached'; Sono ié wa, ano hánare \bar{t} tuki de uri ni dasárete iru 'That house is on the market for sale with the detached cottage included'; Sore wa, kirei na kazari-tódana \bar{t} tuki no wasitu désita 'That was a Japanese-style room provided with a beautiful ornament shelf'; Kono sutóobu wa óndo ga tákaku náru to hitori-de ni suítti ga kiréru saamosutatto \bar{t} tuki désu 'This heater is equipped with a thermostat which has a switch that cuts off automatically when the temperature gets high'; Sono daidokoro wa bénri na disupóozaa \bar{t} tuki désu 'That kitchen is equipped with a handy dispose-all (= garburetor)'; Nedan no takái kúuraa \bar{t} tuki no zidóo-sya(\bar{t}) wa sore-dake zentai no nedan mo tákaku nátte iru 'Cars that come with an expensive air conditioner just by that alone carry a higher overall price'; Sono kuruma wa móo húruku nátte simatta siito-kábaa \bar{t} tuki de urareta 'That car was sold with seat covers that had gotten quite worn'. In zoosákú(\bar{t}) \bar{t} tuki kasi-ya 'furnished house (to let)' there may be a lexicalization; NHK carries the entry zoosákú-tuki(\bar{t}).

(115) \bar{t} tyaku 'arriving at/in/on': Haná no miyako no Párii \bar{t} tyaku [=Pariityaku] no zikan wa ... 'The time of arrival in Paris, capital of (flowers =) gaiety, ...'; Róndon \bar{t} tyaku no denpoo ... 'Cables arriving in London ...'; Nízuyu gó-niti \bar{t} tyaku no yotei de áru 'Arrival on the 25th is scheduled'. For an alternative treatment, see p. 135.

(115') \bar{t} tyókkíri = \bar{t} kókkíri: Zyuu-en \bar{t} tyókkíri desu 'It's just ten yen'.

(116) \bar{t} tyóttó 'and a little, a little over': ... hyakú-nin \bar{t} tyóttó sika kónakatta ga ... 'only a little over a hundred people came but ...' (SA 2686.29c); ... kúroo ni kúroo site yat-tó san-zíkan \bar{t} tyóttó ni made nobásite ita 'we struggled and struggled and finally got it stretched all the way to a little over three hours' (SA 2684.118c); Hyakú-nin \bar{t} tyóttó ga

arawáreta 'A little over a hundred people appeared'; Kono gosen-en \bar{t} tyóto o betu ni simásu 'We will keep this sum of something over ¥5000 separate'; Nete simatté kara h́t-to(-) ki ga túku to, rokuzyúu \bar{t} tyóto déta kúrai no, zyoohin na kao-dati de byooki \bar{t} ágarí mítai na hitó ga, makurá-moto ni tyan-tó^[r] suwatte 'ru 'When I had finished sleeping I happened to notice there was a person clearly seated at my bedside, who had a refined face, somewhat past sixty years of age, and who looked as if just out of sickbed' (Tk 3.121a). The source would appear to be an ellipsis NUMBER \bar{t} tyót-to; cf. ... taidan sité kara, ití-nen to tyót-to ni narimásu ga né ... 'since that interview it's been about a year and a bit, you see, ...' (Tk 3.134a). For 'a little over a meter' you can say either iti-méetoru \bar{t} tyót-to or iti-méetoru \bar{t} tyóto.

(117) \bar{t} tyuu 'in the midst of, while'—see §14.4; 'among': Kyóo wa gózen(-) \bar{t} tyuu kara kenbutu site itá n desu 'Today I have been sightseeing since (sometime in the) morning' (Tk 3.244a); Nihón no seizi-ka \bar{t} tyuu dé mo, "A"-kyuu \bar{t} tyuu no "A"-gao de aróo 'Even among Japan's political figures he must be the "A" face in the "A" class (= most unusual)' (Tk 3.83); ... nyuusyóo-sya zyuuhati-nin \bar{t} tyuu yo-nin ga dání de atta 'of the eighteen winners four were male' (SA 2672.117b).

(118) \bar{t} úmare 'born in/at': Ano otokó wa kóto to site yuumei na Nára \bar{t} úmare da 'He was born in Nara, famed as the ancient capital'; Watasi wa usi-dosi \bar{t} úmare desu kara ... 'I was born in the Year of the Ox, so ...' (R).

(119) \bar{t} wari '(at) the rate of, by (a proportion of)': Inzei wa peezi \bar{t} wari de kureru wáke da ga, ... 'They are supposed to pay royalties by the page, but ...' (Tk 3.97a); Kaihi wa atumáta ninzu \bar{t} wari de atumeyóo 'Let's collect dues according to the number of people who join'.

(120) \bar{t} yoo 'for the use (of); for use (in/as/by)':⁴³ Musumé no yomeiri \bar{t} yoo no wahuku ... 'Japanese clothing for the young lady at her marriage ...'; Rainen okonau tuki-ryóko \bar{t} yoo ni atarasii rokétto o tukútte iru 'They are building a new rocket for use in the moon-shot to take place next year'; dókusyo(-) \bar{t} yoo no ránpu 'a reading lamp'; Zibun \bar{t} yoo no térebi ... 'My personal TV set ...' (Endō 80); ryokoo \bar{t} yoo no senmendoogu-ire 'a toilet case for when you travel'; ... káigi \bar{t} yoo [no] hóteru ... 'a convention hotel' (Tsukagoshi 130b); ... Káhuu wa happyoo \bar{t} yoo no nikki to happyoo sinai nikki tó no hutatú o kaki-wakete ita kotó ... ga séngo ni wakátta ... 'it came to light after the war that [Nagai] Kafū had written two separate diaries, one for publication and the other not to be published' (Endō 88); ... itigo to gureepuhurúutu \bar{t} yoo no supúun ... 'a spoon for strawberries and grapefruit' (SA 2863.97d).

(121) \bar{t} yori '(along) toward': Nisi \bar{t} yori no kaze 'a westerly wind'; higási(-) \bar{t} yori no minami 'south by east'; Hotimin-Rúuto wa kono matí no Minami-Bétonamu kokkyoo \bar{t} yori o hasítte irú no de, ... 'The Ho Chi Minh trail runs along toward the South Vietnam border at this town, so ...' (SA 2679.18d); Aiti-ken no toohoku, Naganó-ken \bar{t} yori no yama-ái(-), Óomi no búraku ni ... 'In northeast Aichi Prefecture, in a ravine toward Nagano Prefecture, in the community of Ōmi, ...'; Nízyuu ití-nen natú^[r] kokuden Okatímati \bar{t} yori ni barakku-nágaya no maakétto ga dékita 'In the summer of 1946 a market of hastily built tenements came into being toward the Okachimachi station of the National Railway' (SA 2671.39a); lé o tatéru no nara sono minami \bar{t} yori ga ii daroo 'If you are going to put up a house, it would be better to do it toward the south of that'; Sono higási(-) \bar{t} yori

43. Cf. N I sen'yoo no ... 'for the exclusive use of N' (§25).

o moo sukósi tákaku site, zentai ga onazi táka-sa(-) no zímen ni náru yóo^(o) ni sita 'The part toward the east we raised a bit so as to make the whole a land surface of the same height'; Kono mádo -yori ni tukue o okoo 'Let's put a table along this window'; Watasi ga yóku sanpo ni iku kooen -yori no tíiki ni, saikin zókuzoku(-) to ié ga tátte iru 'In the area toward the park where I go for walks a lot, lately one house after another has sprung up'; Sono hatí wa atira no tiisái mádo -yori ni oitára íi 'It would be nice to put that pot over toward the little window there'; Káre no kirai na migi -yori mítai na hatugen wa anmari sinai hoo ga íi yóo^(o) da 'It appears advisable not to make too many pronouncements that seem (politically) toward the right which he dislikes'; Komátta kotó^(o) ni, tonari no utí(-) dé wa watasi no utí(-) -yori ni ni-kai o tátete irú no de, niwa ga hikage ni nátte simau 'To my distress, the people next door are building a second story toward my house, so that the garden will end up shaded from the sun'.

(122) -yuki, -iki 'a trip to, bound for': Haná no miyako no Párii -yuki ga kimatte yorokónde iru 'I am delighted now that the trip to Paris, capital of (flowers =) gaiety, has been set'; Sukii-zyoo to site yuumei na Sugadaira -yuki no básu ga íma déru tokoró desu 'The bus is about to leave for Sugadaira, famed as a ski resort'; Kono dénsya(-) wa dóтира -iki désu ka 'Where does this train go?' But gakkoo-iki no kodomo 'school-bound children' is perhaps best treated as a lexicalization, since gakkoo cannot be modified or conjoined.

(123) -zén 'before'—see §14.4: Syuugiin no kaisan -zén ni ... 'Before the dissolution of the Lower House ...'.

(124) -zén [taru] 'like, of the sort'—see §13.5a.

(125) -zéngo 'about, approximately': Hima na ní-zi -zéngo ni kíte kudasai 'Please come at two, when I'm free'; Iti-niti^[2] no utí(-) dé mo itiban atúi ní-zi -zéngo ni oyógu 'I swim at two o'clock when it is the hottest in the day'; Yotei sita hyakú-nin -zéngo ga kíta 'The approximately hundred people that were expected came'; Kotosi no oo-mísoka -zéngo ni wa koinu ga umarerú desyóo 'Around the end of the year the puppies will be born, I think'; Sízuka no ití-zi -zéngo ni hirune o suru 'I take a nap around one o'clock when things are quiet'.

(126) -zibun 'time (when)': ... wakái musumé -zibun no kimoti ga ... 'her feelings at the time she was a young girl ...' (Fn 44a); ... wareware no kodomo -zibun, ... 'when we were children' (Tk 3.228a); Toodai no gakusei -zibun ni wa ... 'In the period when a student at Tōkyō University ...'; Syokuzi -zibun ni ukagatte sitúrei desu ga ... 'It is rude of me to visit during your meal time ...' = syokuzi no zibun(-). NOTE: Ima-zibun = ima-goro is treated as a derived time-noun (from íma -zibun): Ima-zibun wa hito mo sukunái 'At this time (of day) it is uncrowded'. Cf. Hirú -zibun wa kómu 'It gets crowded around lunch time'.

(127) -zidai 'period (when)': Wakái gakusei -zidai no seikatu wa ... 'My life at the period when I was a young student ...'; Onoe Matunósuke san -zidai no koroo-rénzyuu ga ... 'Old timers from Mr Matsunosuke Onoe's era ...' (Tk 3.298); Issei o húubi sita Takáhasi Sáburoo -zidai ... 'The times of Saburō Takahashi who dominated a generation ...'; ... Méizi, Taisyoo -zidai no Tookyóo-zin ga, ... 'Tokyoites of the Meiji and Taishō times' (Kotoba no yurai 50); ... kookoo kara daigaku -zidai, yóku míta n desu yó 'I used to see them a lot during the period from high school through college' (SA 2793.43b)—perhaps to be explained as daigaku {-máde} no} zidai, though that would not account for the accent.

(128) *ziken* 'the incident of': *Watasí-ra* [ga/no] *kodomo no zibun*(⁻), *Matudaira Noriyosi Otyanomizu ziken te monó ga taihen désita né* 'When we were children the Noriyoshi Matsudaira Ochanomizu affair was really something wasn't it' (Tk 3.211b); *Sikágo* [no] *kurohyootoo-kánbu* [no] *syasatu ziken* 'The Chicago Black Panther Leaders Killing' (SA 2659.149—subheading); *Yodó-goo ziken* ... 'the [hijacking] incident of the air liner Yodo'; *Tesuto-yóosi* [no] *nusumi-dasi ziken* ... 'The test-paper theft case ...'; *Kawáguti-kun ziken* ... 'the incident of [lynching] young Kawaguchi'.

(129) *zoi* 'along, following': *Urasoe-son no gun'yoo-dóroo itigoo-sen zoi ni* ... 'Along Military Highway One at Urasoe Village [in Okinawa] ...' (SA 2657.12); ... *mebosii kaidóo*(⁻) *zoi ni wa*, ... 'along the main avenues ...'; *Sono ogawa zoi ni komiti ga áru* 'Along the brook there is a path'; *Watakusi ga yóku oyógi ni iku kawá zoi ni wa dote ga tákaku tuzuite iru* 'There are tall banks stretching along the river where I go a lot to swim'; *Sono miti zoi ni sumire ga ippai saite ita* 'Along that road violets were blooming everywhere'; *Sono syóosya na tatémóno zoi no miti o tóori, migi ni magariéba sugu watasi no ié desu* 'Pass the road that goes along that trim building, turn right, and you're right at my house'; *Utukusii yasiki zoi no sízuka na miti o máiniti*(⁻) *tóoru no ga tanosimí*(⁻) *dá* 'It is a delight to take each day the quiet street beside the beautiful residences'; *Atarásiku dékita meiténgai zoi ni yanagi ga uerareta* 'Willows were planted along the newly built shopping lane'.

(130) *zóroi* 'a lineup (an array) of': *sumáato na bízin zóroi* 'a lineup of chic beauties'; *yuumei na syuusai zóroi* 'an array of famous talents'; *erabi-nuita meihin zóroi* 'an array of carefully selected merchandise'.

(131) *zúkare* 'weariness from': *Yógísyá de oohuku sita ryokoo zúkare de* ... 'From weariness after a round trip by the night train ...'; *Mikka tuzuita hagesii kéiko zúkare de tóotoo ne-kónde simatta* 'Exhausted from strenuous practice that went on for three days I finally fell asleep'; *sakúya*(⁻) *no gíron zúkare ka*, ... 'perhaps from weariness after the night's discussions' (Agawa 1:229b).

(132) *zuke* '(one that is) dated, bearing the date': *Sáru rokugatú^[1] zyúusan-niti zuke no Asahi-Sínbun wa* ... 'The Asahi Shimbun dated last June 13th' (SA 2686.44a).

(133a) *zuki* 'attached to': ... *zainiti Béi kaigun-siréi-kan Súmisu táisyoo zuki no untén-syu* ... 'the chauffeur attached to Admiral Smith, the commander of American naval forces in Japan' (SA 2679.7); *Rúi zyuyyón-sei no kyuutei zuki no sakkoku-ka desu ga né*, ... 'He is a composer who was attached to the court of Louis XIV, you see, and ...' (Tk 3.50a); ... *Amerika no koosi-kan zuki no búkan ni nátte* ... 'becoming a military attaché at the consulate in America' (Shiba 22).

(133b) *zuki* = *tuki*.

(134) *zúkú*(⁻) '(by) dint/force of; purely out of': ... *tokubetu no kóni zúkú*(⁻) *de* ... 'by virtue of a special intimacy' (Fn 84b); ... *kenpei zúkú*(⁻) *de* ... 'by virtue of one's authority' (Fn 117b); ... *áitai*(⁻) *zúkú*(⁻) *de* 'by common consent'; *Hanasí zúkú*(⁻) *de soo iu kotó ni kimetá n da kara* 'We decided it that way as a result of discussion' (Fn 120b); *Musuko to soodan zúkú*(⁻) *de byooin ni háitta* ... 'entered the hospital by mutual agreement with his son' (SA 2670.32c); ... *kane zúkú*(⁻), *kenpei zúkú*(⁻) *de osite kítara* ... 'if they press with the force of money and the force of authority' (Kb 241a); ... *kokumin mo nattoku zúkú*(⁻) *no hanasí desu ga* ... 'it is a matter that is (existent) by virtue of the nation's understanding it' (Tk 4.13b). *Kenkyusha* gives short examples of *udé* ~, *tikará*(⁻) ~, *syóobai* ~, *ízi* ~, *yokutoku* ~, *sínsetu* ~.

(135) *zúkume* '(one who/that is) adorned with, swathed in, full of': ... *kibisii kisóku zúkume no Tyúugoku de* ... 'in China which is blanketed with strict rules' (SA 2659.34d);

Sikási, hanasí wa bara-iro ʔzúkume ni wa susumanai 'But the story doesn't progress so rosily' (SA 2668.28c); Ima-no-tokoro íi kotó ʔzúkume desu 'Now it's loaded with goodies' (SA 2669.17d); Íi kotó ʔzúkume no "go-koosetu" ... 'Your valuable views laden as they are with good things ...' (SA 2664.102e); Sono hanasí wa watakusi ga mattaku^[1] siranai kotó ʔzúkume no tote-mo omosirói monó desita 'That story was a most interesting one that was full of things I had not known at all'; Kirai na monó ʔzúkume no syokuzi de gakkári sita 'I was disappointed at the meal, which was full of things I hate'; Subarasíi kotó ʔzúkume no tanzýóo-bi desita 'It was a birthday full of wonderful things'; Káno-zýo wa Ameriká-zin no katei ni kimono o kite dekaketa. Sono kinúmono ʔzúkume o káre-ra wa tote-mo mezurasi-gátta 'She wore a kimono to an American's home. They were quite agog at how she was all swathed in silks'; Natú de wa áru no de, sanká-sya no náka de sono kúro ʔzúkume ga tote-mo medátta 'As it IS summer, he really stood out among the participants decked out in that black [as he was]'.

(136) ʔzúkuri 'the construction/making of': Nerai wa atarasíi seiiki ʔzúkuri da 'The aim is the building of new sanctuaries' (SA 2686.39b); Búna-no-ki no syákusi ʔzúkuri no sono nagorí desu 'The making of beechwood ladles—it still survives [as we see in this scene]' (R); ... tánuki no okimono ʔzúkuri ... 'making ornamental figures of the badger' (R); Kodomo ni anzen na asobi-ba ʔzúkuri ga hituyoo da 'The construction of playgrounds safe for children is essential'; ... hitóbito ga hataraki-gai o kan-zuru yóo na kankyoo ʔzúkuri o suru to iu ... 'to build an environment that people can feel is worth working in' (R); ... iwáyúru riidaa no íméezi ʔzúkuri o suru, sono hoohoo no hitótu ga ... 'for building what is called the leader's image, one of the methods is ...' (R); Nihón no mirái ʔzúkuri ... 'The building of Japan's future ...' (R). In the following example we will have to assume an ellipsis niwatori[-goya] ya buta-goya 'chicken [coops] and pig pens', since we do not want to make -goya (= "koya) a restrictive: Sore o hi ga kureru to nusúnde, niwatori ya buta-goya ʔzúkuri no zairyóo ni suru 'That stuff they steal after dark and turn into material for making chicken coops and pig pens' (SA 2670.33a).

(137a) ʔzume 'packed in': Kí de tukútta hako ʔzume no monó ... 'Things packed in boxes made of wood ...'; Réika hatizýú-do ni mo tas-súru dorai-áisu ʔzume ni site okuridásu reitóo-gyo da 'The refrigerated fish is sent out packed in dry ice, which gets as cold as 80 below zero [centigrade]'.

(137b) ʔzume 'stationed in': Nihon-basi ni áru hónsyo ʔzume no zyúnsa(ʔ) ... 'A policeman stationed in the main station in Nihombashi ...'.

(137c) ʔzume—see §9.1.7 (V-i-ʔzume).

(138) ʔzumi 'finished with'—see §14.4.

(139) ʔzumi 'shipment by; loaded on; a capacity of': Hyakú-ton ʔzumi no húne ... 'a boat with a hundred-ton capacity'; Zyooyóo-sya(ʔ) to hotóndo onazi ooki-sa no torákku ʔzumi ni sitá kara, zibun de unten site hakoberu 'Since it is loaded on a truck almost the same size as a passenger car, one can transport it with oneself driving'.

(140) ʔzura 'a face/look of': Sinpo-syúgi ʔzura no yaróo-dómo ga ... 'Those so-and-sos with progressivism written all over their damn faces ...' (Tk 3.144b); Kane no kotó sika kangaerárenai sihon-ka ʔzura o sita kotó wa ná n desu yó 'I have never acted the capitalist who can think of nothing but money' (cf. Tk 2.83b).

(141) ʔzútai '(following) along': ... utímizu ni nureta tobiisi ʔzútai ni ... 'along the stepping stones wet from the garden sprinkling' (Kb 271a); Kisyá wa ítu ka, tuki^[2] no áru nagisá(ʔ) ʔzútai o hasítte ita 'The train at one point was running beside a moonlit beach'

(Fn 294b); Toránku hitótu de tabí kara tabí e, ati-kóti no kitin-yádo ˉzútai ni Nihon-réttoo o nagárete iku áutóroo de aru 'He is an outlaw drifting down the Japanese archipelago along a helter-skelter route of cheap lodging houses, trip after trip with a single suitcase' (SA 2668.116c); Semái rooka ˉzútai ni iroiro na monó o oku monó da kara, masúmasu sémaku náte toori-nukerú no ni mo kúroo suru 'Because there are all sorts of things placed along the narrow corridor, it's getting more and more cramped and is even hard to make your way through it'; Atarásiku dékita háiuee ˉzútai ni móto no hurúi miti ga miegákure(ˉ) site iru 'Along the newly built highway the old road can be seen now and then'; Sízuka na watari-róoka ˉzútai ni ume no kí ga uerarete ite, íma ni mo sore ga saki-soo na kéhá(ˉ) de áru 'There are plum trees planted along the quiet passageway and they look as if to burst into bloom at any moment'; Kuruma wa mukóo(ˉ) ni miéru únga ˉzútai ni hasítte itta 'The car drove along the canal you can see over there'; Kono óne ˉzútai ga, yóku soonan ga átte, abunai 'It is dangerous along this ridge for there are many accidents'; Kono óne ˉzútai o Bigán-ro to iu 'Running along this ridge is what they call Bigan Lane'; Tesurí ˉzútai ... 'Along the banister (railing) ...'.

(142) ˉzútu '(distributively) each'—see §2.5: Sakura no haná no kírei na hitó-hira ˉzútu o hári de íto ni tóosite iku 'We gradually string each pretty cherry petal with our needle'; Sono ume wa zitú ni mígoto de, utukusii hitó-eda ˉzútu ga maru-de meizin no té ni yotte téinei ni tukuráreta ka no yóo da 'That plum tree is really splendid; each beautiful branch looks quite as though it had been carefully crafted by a master workman'; Hón wa yakusoku sita is-satú ˉzútu sika agerarenai 'I can only give the one book each that I promised'.

(143) ˉzyáku 'a little less than, just under, minus': Sono sén-nín(ˉ) ˉzyáku ga syusseki sita 'Just under a thousand of them attended'; Sono sén-nín(ˉ) ˉzyáku o sutázíamu e yuudoo suru 'We will attract a little less than a thousand of them to the stadium'; Kono kuroo-túzuki datta go-nen ˉzyáku to iu aida, karada o yasumeru hima mo nákatta 'For that period of a little under five years of straight toil I hadn't a moment to rest my body'; Ano ití-kíro ˉzyáku wa tote-mo kiken na káabu ga óoi 'That stretch of just under a kilometer has a lot of curves that are quite dangerous'; A-ten to B-ten o musubu gó-kíro ˉzyáku wa nakanaka hasiri-yói kóosu da 'The something under five kilometers that links Point A and Point B are a course that is easy to run'; Kono ití-nen ˉzyáku to iu monó wa mattaku^[r] turákatta 'This matter of a little under a year was quite trying'; Zentai no roku-wari ˉzyáku desu 'It is less than 60 percent of the total'.

(144) ˉzyásuto '(the time that is) just, exactly': Hatí-zi ˉhán ˉzyásuto ni béru ga natta 'At exactly 8:30 the bell rang'; Sán-zi ˉzyásuto ga ii 'Three o'clock sharp would be good/better'; Zíkoku wa yó-zi sánzyuu ní-hun zyúu-byoo ˉzyásuto desu 'The time is exactly four thirty-two and ten seconds'; Básu no tootyaku-zíkan wa syóogo ˉzyásuto 'The bus arrival time is exactly noon' (SA 2679.35b). This word, like its English source, can be used as an adverb: Soko de mé ga sámete, tokei o mítara zyásuto zyuuni-zi na n desu 'Then I woke up and when I looked at my watch found it was just twelve o'clock' (Tk 3.121b).

(145) ˉzyoo 'on; in; in view/consideration of, from the standpoint of, because of; with respect to': ... sinbun ya zassi ˉzyoo ni, ... 'in the newspapers and magazines' (K 1966.231); Watakusi no tatibá ˉzyoo komáru 'It is embarrassing from my standpoint'; ... to iu yóo na kibisii keikai-táisei no kankei ˉzyoo ... 'in view of the strict warning system of the sort that ...' (R); Kono ié no motí-nusi wa Sátoo Tároo no túma Háma no méigí ˉzyoo,

Tároo no ziyúu ni wa naránai 'This house is in the name of Tarō Satō's wife Hamako and he is not free to dispose of it'; Atasi mo, [Yúki san o] Kyóoto e sasotta sekinin ̄zyoo, zut-to tuki-kkirí de kanbyoo sitá no yó 'In view of the fact that I am the one responsible for having invited her [= Yuki] to Kyōto, I have stayed close to her sick bed for the entire time' (Fn 306b); Osieru tugoo ̄zyoo asitá kara daigaku e ikanákereba naránai 'Owing to the circumstance that I am to teach I must go to the university starting tomorrow'; ... ziturei o ageru béngi ̄zyoo, ... 'for convenience in citing examples' (Nagano 1966.206); Tonari ni súde iru {to iu} kankei ̄zyoo koosai sinai wáke ni wa ikanai 'In view of our living as neighbors we can't help associate'; ... seizi ̄zyoo yóri wa músiro syóogyoo ̄zyoo ni íryoku o mótte itá n da né 'they [the newspapers] had power with respect to business rather than with respect to politics, you see' (Tk 3.225a).

(146a) ̄zyuu 'all through (a time)'; ~ ni '(at some point) during/within (the specified time)': Sonosíki^[r] no aida ̄zyuu ... 'All through the ceremony' (SA 2668.121b); ...tabi^[r] no aida ̄zyuu ... 'all through the trip' (Kb 265b); Syoo-gákkoo no toki^[r] káiko o kawaserárete né, sore o yatte iru aida ̄zyuu, bóku(̄) wa gákkoo o yasumimásita né 'When I was in primary school we were made to raise silkworms, you see, and all the time they were doing that I skipped school [because I disliked silkworms so much]' (SA 2663.42a); Kono san-kágetu ̄zyuu ni ... '(At some point) during these three months ...'; Kotosi/Konsyuu/Kyóo ̄zyuu ni ... 'Within the year/week/day ...'; Asitá ̄zyuu ni naosite moraitai 'I'd like it fixed by tomorrow night'; Kyóo ̄zyuu ni kono heyá o akete kudasái né 'I'd like you to clear this room sometime today (= before the day is out)' (R); Kono tuki ̄zyuu isogásii 'I am busy through this whole month'; Kaeru wa huyú ̄zyuu nemutte iru 'Frogs sleep all through winter'; Sono hí ̄zyuu atamá ga ítákatta 'My head ached that whole day through'; Akanboo wa atúi aida ̄zyuu naki-tuzúketa 'The baby cried the entire time it was hot'; Káno-zyo wa káre ga bínboo na aida ̄zyuu mendóo o míte yatta 'She looked after him the entire time he was poor'; Sono káigi ̄zyuu kintyoo si-doosi dátta 'I was a bundle of nerves through that entire conference'; Watasi ga hima na aida ̄zyuu wa kódomo no mendóo o míte yareru 'I can look after the child all the time I'm free'; Hitó-ban ̄zyuu benkyoo sita 'I studied all evening long'.

(146b) ̄zyuu 'throughout, all over (a place)': Nihón ̄zyuu ga kintyoo sitári ... 'All Japan was nervous ...' (Tk 2.128a); Kono tíisa na matí ̄zyuu o arúita 'I walked all over this little town'; Sono heyá^[r] no náka ̄zyuu kemuri ̄dárake dátta 'That entire room was filled with smoke'; Karada ̄zyuu ga itái 'I hurt all over my body'; Káre no súmu murá ̄zyuu ni sono uwasa wa hiromátta 'The rumor spread all over the village where he lives'; Sékái ̄zyuu ga odoróita 'The whole world was startled'; Sékái ̄zyuu o odorokáseta dai-zíken datta 'It was a major incident that startled the entire world'.

Our restrictives and quasi-restrictives can be grouped according to the number of sub-categories of noun each will follow, but the breakdown is gradual, ranging from those that can occur after all categories (̄daké *a*, ̄dókoroo, ̄gúrai *b*, ̄ígai, kirí, máde *b*, nómi, ...) to those that apparently occur after only one category: ̄ámari, ̄ate *b*, bákarí *a*, ̄biki *a/b*, ̄bun, ̄buri *a/c*, ̄dai, ̄gákari, ̄gake *a/b/c*, ̄gárami, ̄gata, ̄génzai, ̄góro, ̄gúrai *a*, ̄hán, hodó *a*, ̄íkutu, ̄kákkoo *a/b*, ̄kéntoo, ̄kókkirí, ̄kyóo, ̄míman, ̄naígai, ̄ókí(̄), ? ̄sóotoo, ? ̄sugí, ? ̄taípu, ? ̄táakaku, ̄tárazu, ̄tomo, ̄tyóotto, ̄zén, ̄zuke, ? ̄zúkume, ̄zume *b*, ̄zútai, ̄zútu, ̄zyáku, ̄zyásuto, ̄zyoo.

In an unpublished paper Aihara Setsuko has grouped a somewhat smaller list of

restrictives and quasi-restrictives according to the types of modification permitted the preceding noun—Adnoun, Adjectival Noun, Adjective, Verb—and according to whether the result could be followed by *tó* or *ní* or *gá/ó* (thus incorporating some of the information contained in the "Grammar" column of our list). Although there are a few difficulties of methodology and interpretation, Aihara's categories can be taken as reflecting the relative versatility of the items:

Type A: *daké a*, *nómi*, *ḡbákari b*, *kirí*, *ḡgúrai b*, *ḡígai*, *hodó b*, *máde b*, *ḡdókoró*, *ḡízyoo*.

Type B-1: *ḡátari* (*a* and *b* together), *ḡkágiri*, *ḡgóto*, *máde*, *ḡgoto*, *ḡígo*, *ḡírai*, *ḡzéngo*, *ḡgóro*, *ḡnami*, *ḡíka*, *ḡdómari*, *ḡdárake*, *ḡtuki*, *ḡzyuu* (*a* and *b* together), *ḡburi b*, *ḡdóori*, *ḡzoi*, *ḡzútai*, *ḡgósi* (?—also B-2).

Type B-2: *ate*, *ḡyori*, *ḡtikáku*, *ḡizen*, *ḡmáe*, *ḡgósi* (?—also B-1), *ḡbari*, *ḡgúrai a*, *ḡmágire*, *ḡzúkume*, *ḡátari c*, *ḡdaké b*, *ḡgákari*, *ḡkéntoo*, *ḡmámire*, *ḡámari*, *ḡbákari a*, *ḡburi a*, *hodó a*, *ḡínai*, *ḡzyáku*, *ḡkitté-no*, *ḡkyóo*, *ḡókí(ḡ)*, *ḡsugí*, and *ḡzútu*.

(The order within each list goes from most to least versatile.)

Given these types, Aihara has considered the possible combinations of two and three restrictives. (But certain items in the lists just above were left out of the study: *ate*, *ḡbari*, *ḡburi b*, *ḡmágire*, *ḡyori*, and *ḡzúkume*. Also the five items *ḡátari a*, *ḡkágiri*, *ḡnami*, *ḡdárake*, and *ḡdómari* were erroneously treated as B-2 rather than B-1; this does not significantly affect the statistical picture.) According to her study, particles of Type A will occur freely after those of Type B, with only 12 exceptions out of a possible 140 sequences of B-1 + A (the ratio of exceptions to occurrences is .0857) and 49 exceptions out of a possible 260 sequences of B-2 + A (the ratio of exceptions is .1885). In general, particles of Type B do not occur after those of Type A and particles of Type B-2 do not occur after those of Type B-1, with these exceptions:

<i>Sequence</i>	<i>Exceptions</i>	<i>out of</i>	<i>Possible sequences</i>	<i>Ratio</i>
A B-1	14		140	.10
A B-2	49		260	.19
B-1 B-2	84		364	.23

In studying the possible sequences of three restrictives, Aihara excluded Type B-2 altogether (because of the low versatility already found) and obtained these results:

<i>Sequence kind</i>	<i>Occurring sequences</i>	<i>Possible sequences</i>	<i>Ratio</i>
B-1 A A	499	1170	.4265
A A A	195	720	.2708
A B-1 A	76	1170	.0650
B-1 B-1 A	47	1560	.0301
A A B-1	29	1170	.0248
B-1 A B-1	11	1560	.0071
A B-1 B-1	10	1560	.0064
B-1 B-1 B-1	2	2180	.0009

Although our list of restrictives and quasi-restrictives is quite long, it is probably not

complete,⁴⁴ for we are dealing with a grammatical class which, while essentially closed, appears to be growing. One of the common sources of quasi-restrictives is the compounding of a verbal infinitive with a noun adjunct in a way that does not deprive the noun of its freedom to conjoin with prior nouns, to be modified, etc. Thus, it should not be surprising that we can elicit somewhat unexpected usages such as these with *~ízime* 'the teasing of': *Máda monó no yóku wakaránaí osanáí kodomo ~ízime ga óói* 'There's a lot of teasing little children who still don't know much about things'; *Musuko no tokoró e atarásiku kita yome ~ízime o sakeyóo to sita* 'We tried to avoid teasing the bride newly arrived at my son's'; *Akago no yóo ni teikóo-ryoku no náí yowái monó ~ízime da* 'It is teasing the weak who lack resistance like babies'.

And having run across *hookoonin-kómarase* 'harassing the help' we expect the likely elicitation (?) *Sekái-iti takái yatin o harawaserárete iru syakuya-nin ~kómarase no akuhoo dá* 'It is an evil law harassing tenants who are forced to pay the world's highest rents'.

The following words may turn out to be quasi-restrictives:

- baki [= "haki] 'wearing (on the feet/legs)': *zoori-baki* 'wearing straw sandals'; *sandaru-baki de yatte kíta* 'dropped around in sandals' (SA 2837.32a).
- buki [= "huki] 'roofing': *kawara-buki* '(with a) roofing of tiles',
- gae [= "kae] 'changing': *koromo-gae* 'change of dress',
- gí [= "ki 'garb(ed in); wearing': *gaisyutú-gí* 'streetwear', *hoomón-gí* 'formal attire', *hudán-gí* 'everyday clothes',
- moti 'for ... to have': *onna-moti no tokei* 'a ladies' watch',
- nage 'throwing': *enban-nage* 'discus throwing',
- ni 'resemblance': *titioya-ni* 'resembling one's father',
- ságasi 'searching for': *ni-hikí ~mé no dozyoo ~ságasi ga hazimatte iru to ka* 'saying something about the search for the second loach getting under way' (SA 2813.3)
- zoe [= "soe] 'adding': *tikara-zoe* 'assistance',
- zure [= "ture] 'taking along, accompanied by': *kazoku-zure* 'accompanied by one's family',

The first problem is to find examples that are criterial. I have been unable to elicit any such for *-zuki* [= "suki] 'devotee, enthusiast of' as in *yakyuu-zuki* 'a baseball fan', *onna-zuki* 'a womanizer', *sibai-zuki* 'a playgoer', etc. In *atarasi [i] mono-zuki* 'one with a taste for novelties' (lg 58) *atarasi [i] mono* is functioning as a single noun. We cannot assume that just any verb infinitive will freely turn up as a quasi-restrictive.

Another problem is the productivity of the constructions. The word *~dátera* 'despite one's status as' would appear to deserve inclusion as a quasi-restrictive by virtue of a sentence like *Sitóyaka de áru ~béki onná ~dátera ni arare-mo-nái* 'it is ill becoming to a proper

44. Surely to be added to the list, for example, are *~itoo* '(to) the east of', *~isei* '(to) the west of', *~inan* '(to) the south of', *~ihoku* '(to) the north of': ... *Súezu ~itoo no hitóbito ni tótte wa ...* 'for people living east of Suez' (Tanigawa 198); *Hokúí | nizyuugo-sen ~ihoku no || Kita-Bétonamu | bakugeki no | teisi o méi-zi || ...* 'Ordering the suspension of bombing North Vietnam north of the 25th parallel ...' (R). There is also *~tóozí* '(at) the time ...' as in *Méizi sanzyuu hati-nen ~tóozí ni ...* '(Back) in 1905 ...'. Notice also the English loanwords in ... *Itaria-go ~ONRÍI no ún-tyan ...* 'the driver who spoke only Italian' (SA 2816.32a), *yosan ~OObAA datta no wa* 'what was over the budget', *Túne ni wága-ko ~SAIDO kara sika monó o kangaerarénaí ...* 'thinks only in terms of one's own child's interests' (SA 2837.32d).

woman who ought to be genteel', but there seem to be very few nouns other than *onná* that can be used—*kodomo* has been suggested—so that *onna-dátera* is perhaps better treated as a single lexical item. (Ōtsuki derives *-dátera* from *tate-date-si-*, an obsolete adjective 'upright' derived from the transitive verb infinitive *táte* 'setting it up'.)

Noun-like elements that might turn up as quasi-restrictives include these:

-gata [= "kata] 'shape': *tamago-gata* 'egg-shaped';

-gata [= "kata] 'type': *huyu-gata no ténki* 'wintry weather';

-génka [= "kenka] 'a quarrel between': *Ti no kayowanai kyoodai-génka wa sáiban ni made náru kotó ga áru* 'A quarrel between cold-blooded brothers sometimes gets to be a court case';

-kékka 'result(s)': *Syáin(-) sén-nín(-) o taisyoo ni sita tyoosa-kékka ni yoru to ...* 'According to the results of a study that took a thousand employees as subjects ...' (SA 2668. 25c); *Atarásii hoo hoo ni yoru tiryoo-kékka wa ...* 'The results of treatment according to a new method ...'; *Kisyoo no kansoku-kékka wa ...* 'The results of meteorological observations ...'; *kaihyoo-kékka* 'the results of the balloting'.

-zíkomi [= "sikomi] 'training; tutelage': ... *káre ga syoonen -zídai ni, uti-dési to site sumi-konda Utagawa Kuniyosi -zíkomi no é-hude o hurutte ...* 'he wielded a brush after the style of Kuniyoshi Utagawa with whom he had moved in as an apprentice in his boyhood' (Okitsu 549).⁴⁵

-zítaku [= "sitaku] 'preparations for': *Musumé-tati no yomeiri-zítaku o site kureru* 'They take care of preparations for young ladies' marriages'; Note also *-ka(-)* and *-si suru* §14.3.

But the final elements in the following words do not permit phrasal modification of the nouns to which they are attached: *Yakunin-bánare* 'experience as an official', *syuzyutusitu-dónari no kanrí-situ* 'the office next to the operating room', *hutokoro-gúai* 'the state of one's purse', *watasi no tutome-saki no kaisya* 'the firm that is where my job is', *Amerika-zíkomi no eigo* 'English acquired in America', *Rondon-zítate no sebiro* 'a London-tailored suit',

Longer titles ("Mr", "Dr", etc.) are often treated as separate phonological words—here considered apposition (§25); shorter titles are treated either as suffixes or as quasi-restrictives, as discussed in §26. Collectivizers (§2.7) such as *táti* and *rá* display similar behavior.

The counters that attach to numerals (to form numbers) function as quasi-restrictives, in that the constituency structure puts the counter with the entire numeral, however long that may be; we have included the ordinalizer *-mé* in the list above, because it attaches to the entire number (cf. English 'three hundred and [three-th =] third'). The word *yó* 'excess, over' can be attached to a numeral-counter compound to mean 'more than (the number)'; it appears to function as a quasi-restrictive: *ití-nen -yo* = *itinén-yo* 'more than a year', *itinén-yo -buri ni* 'after more than a year'. But the patterns of juncture and accentuation are not entirely clear, perhaps because the word is a bit literary; I have elicited *sén'yó-nen* 'a thousand-plus years', *sanzén-yó (nó^[1] ...)* 'over three thousand', *sanzén-yó-en* 'over 3000 yen' (cf. *sanzén yó-en* '3004 yen'), *hyakú^[1] gozyuu-yó-nin* 'over 150 people' (cf. *hyakú^[1] gozyú^[1] yo-nin* '154 people'),

The word *ten* 'dot', used in reading off numbers with decimals, is similar: *san -ten naná-byoo* '3.7 seconds' is read *sánten | nanábyoo*.

An expression of AGE + *-tígai* 'differing by ... years' may qualify as a quasi-restrictive: *Hon-no hitótu -tígai no kodomo* 'a child who is a mere one year's difference in age'. Notice

45. This example clearly indicates that *-zíkomi* is indeed a quasi-restrictive, so I have dispensed with the hyphen.

that the reciprocal valence of the underlying infinitive *tigai* 'differing (from/with)' is retained: *Atasi to muttú ṭigai de, Umá desu ná* 'There's six years difference in age from me, so you were born in the Year of the Horse, I guess' (Tk 269a).

Among the words probably qualifying as quasi-restrictives is *ṁítasa* [de/ni] '[from] a desire to look at' as in *Kowái monó ṁítasa de/ni* 'from a curiosity to see frightening things' (Fn 62a). This is the abstract nominalization of the desiderative adjective made from *míru* 'looks/sees', i.e. *mí-ta-sa*. (Cf. the development of *mítai*, §2.12.) But unless there are many other noun phrases that can replace *kowái monó* we would perhaps do better to treat the whole thing as a dephrasal noun, as we will want to do with *naimono-nédari* < *nái monó* [o] *nedari* 'asking for the unobtainable'. Cf. §14.8.

Most grammarians have selected a few of the words from the above list of restrictives and quasi-restrictives, usually because of semantic considerations, and treated them—together with a few words (such as *nádo*) here treated separately—as "delimiters". But it is not clear how the list can be subdivided on purely grammatical—rather than semantic—grounds, other than as I have done it, on the basis of whether the restrictive also occurs in the same shape as a postadnominal.

Not all elements that occur after a noun are particles, restrictives, quasi-restrictives, quasi-suffixes, or the like. We have mentioned titles and collectivizers above. Certain other words derive from semantically "verbal" morphemes of Chinese origin and are used in ways reminiscent of *ṭ-hatu* 'departure' and *ṭ-tyaku* 'arrival' in our list, but they are separated from the noun by an underlying juncture: *sákú(ṭ)* 'written/composed by' as in *Kubota Mantároo | sákú(ṭ) nó wa* 'the one written by Mantarō Kubota'; *tyó* 'authored by' as in *Kubota Mantároo | tyó nó wa* 'the one authored by Mantarō Kubota'. We will have to account for such cases by assuming an ellipsis of something like *N [ga] sákú(ṭ) [sita]* and *N [ga] tyó [sita]*. Or, perhaps it will be simpler to assume *N [no] sákú(ṭ)* and *N [no] tyó*, leaving the further derivation of the "creative" or "effective" genitive to be accounted for under the explanation offered in §3.11.2.

Not all speakers are in agreement that the words for 'departure' and 'arrival' are to be treated as quasi-restrictives. In public announcements you may hear *hátu* and *tyáku* preceded by juncture, as in this example: *Máta || zyuukú-zi || sánzip-pun ni | túku yotei no || Nihon-kóokuu no || Singapóoru | hátu || Hónkón ṭ-kéiyu | ni-bin ga || zyuugó-hun | okurete || zyuukú-zi || yónzyuu || gó-hun ni | tukimásu* 'Next, Japan Air Lines Flight Two departing Singapore via Hongkong due to arrive at 19:30 is fifteen minutes late and will arrive at 19:45' (R). And in news reports you may hear such phrases as *Detoróito [l] hátu || Ee-Píi ni | yorimásu to || ...* 'According to an AP dispatch from Detroit ...' (R); *Teru-Abíbu [l] hátu ni | yorimásu to || ...* 'According to a dispatch from Tel Aviv ...' (R).

Jorden (1962) treats these words as if syntactic reductions: the juncture and accent are suppressed but the accent of the preceding word is unaffected: *Kóobe hatu || ití-zi tyaku wa ...* 'The train from Kōbe due at one o'clock ...' (BJ 1.347); *Zyuuití-zi hatu | Kyóoto ṭ-iki wa ...* 'The train for Kyōto leaving at 11 o'clock' According to Jorden these are "nominals which follow time and/or place words directly without intervening particles [and] may also follow each other directly" (BJ 1.348).

Structures such as *ní-zi ni-húnmae* 'two minutes before two o'clock' and *gó-zi go-húnsgu* 'five minutes past five o'clock' (cf. BJ 1.121) are probably best treated as some sort of ellipsis-derived apposition—either direct, *ní-zi [de aru] ni-húnmae* 'the two-minutes before that is (of) two o'clock', or inverted: *ni-húnmae [de aru] ní-zi* 'two o'clock that is two-minutes minus'. In any event, the second elements are best considered as complex counters,

-húnmae and -húnsugi, which behave morphologically like other counters in combining with appropriate numerals: zip-púnmae 'ten minutes of [the hour]', san-púnsugi 'three minutes past [the hour]'. Compare ní-zi zip-pun máe ni 'before 2:10', zip-pun máe ni 'ten minutes earlier/ago'; ní-zi zip-pun sugi ni 'after 2:10', zip-pun áto de 'ten minutes later'.

An adequate semantic analysis of the words under discussion is yet to be undertaken. Henderson has given us insight into the four words daké, gúrai, bákari, and hodó; the following analysis into semantic components is largely based on his description:

	EXACT	EXCLUSIVE	LIMITED	EXTENDED	
daké	+	+	+	-	("at the limit")
bákari	-	+	+	-	
hodó	-	-	+	+	("up to the extent/limit")
gúrai	-	-	-	-	

It seems that gúrai is the "unmarked" restrictive, and that accounts for its general vagueness and its frequency. After QUANTITY words (such as numbers) all but daké mean 'about, approximately'; daké, on the contrary, usually means 'neither more nor less = exactly' and you will sometimes see it written after a carefully spelled-out sum, as on a check: nimán gosén yónhyaku gozyúu-en daké '¥25,450.***'.

Isami presents a somewhat different scheme for three of these (daké, bákari, gúrai), adding máde and also nádo and nánka (§2.9):

	daké	bákari	máde	nádo	nánka	gúrai
Limit	+	+	+	+	+	+
Definite	+	+	+	-	-	-
Extension	-	-	+	+	+	-
Pejorative	-	+	-	-	+	-

The "pejorative" use of which Isami speaks is that illustrated by such sentences as Úso bákari túite iru 'You do nothing but lie' and Kudaránai kotó bákari syabéru 'You say nothing but stupidities', in which daké will not substitute. Isami says that máde represents an UPPER BOUNDARY (Uísúkii made nómu 'I drink even whiskey') and gúrai represents a LOWER BOUNDARY (Budóo-syu gúrai nómu 'I drink wine at least'), noted on his chart by the presence or absence of "definite".

Where do these words come from? Many of those with distinctively voiced initials go back to elements with voiceless initials, having picked up the voicing as part of the well-known compound nigori process. The restrictive daké is from the noun také 'length; total quantity', related to táka 'amount, volume' and táka- 'high, tall' (as is také 'peak'). The restrictive bákari is from hakári 'measure; weight; balance', the regular derived noun from the infinitive hakári 'measuring'; gúrai is from the noun kurai 'grade, rank; situation', itself originally a compound from kura-[w]i 'being in a seat or saddle'; dóori comes from the postadnominal toóri, in turn derived from toóri 'way', the derived noun from the infinitive toóri 'passing by'; dókoro is from tokoró 'place'. The origin of darake is problematical; one suggestion (Ôtsuki) has it related to tara-tara 'dripping profusely'. The quasi-restrictive góro is from the postadnominal kóro 'time'; góto [ni] is said to be an abbreviation from koto-góto [ni] '[in] everything', a reduplication of kotó 'thing', which is no

doubt the origin also of ̀goto.⁴⁶ Hodó is said to be from the verb h(e)- 'pass' + to[koró] 'place', with the first vowel assimilating to the second.

Of the remaining words, many are derived from verb infinitives, or from derived nouns that ultimately stem from infinitives. Thus ̀ókí(̀) and ̀sugí are from the infinitives okí 'placing' and sugí 'exceeding'—or from otherwise unfound nouns derived from them, as the accentuation may indicate; atári is from a noun 'vicinity' that derives with irregular accentuation from the infinitive atari 'hitting, confronting, etc.'; ̀kágiri is from kágiri 'limit-it', the derived noun from the infinitive kagiri 'limiting', and [k]kírí is from kírí 'closure, cutting off', the derived noun from the infinitive kírí 'cutting it (off)'. Other words that derive from infinitives or infinitive-derived nouns are these: ̀ágari, ̀ámari, ̀ate, ̀bari, ̀biki, ̀buri, ̀de, ̀deki, ̀dómari, ̀gaéri, ̀gákari, ̀gake, ̀gáwari, ̀gáyoi, ̀gónomi, ̀gosi, ̀iri, ̀komi, ̀kúzure, ̀mágai, ̀mágire, ̀mámire, ̀máwari, ̀módoki, ̀muke, ̀muki, ̀nari, ̀nuki, ̀nuri, ̀sódati, ̀tuki, ̀úmare, ̀wari, ̀yori, ̀yuki, ̀zoi, ̀zoroi, ̀zúkare, ̀zuke, ̀zuki, ̀zúkuri, ̀zume, ̀zumi (= "sumi), ̀zumi (= "tumi). Similar origins, but with etymological complications of various sorts, will probably account for ̀gárami, ̀gúrumi, ̀kúndari, ̀nami (cf. narabi), and ̀zútai; the quasi-restrictives ̀zukú(̀) and ̀zúkume are derived from the verbal root tuk-. The quasi-restrictive ̀tárazu is from the literary negative infinitive (§8.5) of the verb taru = tariru 'suffices'; ̀tikáku is from the noun 'vicinity' derived from the adjective infinitive tikáku 'being near'; ̀hukáku and ̀tákaaku come from adjective infinitives. The following are from native Japanese nouns or adverbs, some less obviously so than others: ̀gara, ̀gata, ̀gawa, ̀íkutu, ̀katagáta, ̀kíkkári, ̀kókkíri, ̀máe, ̀magiwa, ̀mé, ̀nákaba, ̀pókkíri, ̀súgata, ̀tomo, ̀tómo(̀), ̀tyóttó, ̀zura. And ̀kítte-no is from kítte 'cutting' (with the variant kítte owing to vowel unvoicing), the gerund of kír- 'cut'.

The quasi-restrictive ̀zyásuto is borrowed from English 'just'; ̀hurátto 'flat', ̀púrasu 'plus', and ̀táipu 'type' are also from English. The following are one-morpheme Chinese loanwords: ̀betu, ̀bun, ̀dai, ̀dai, ̀gai, ̀gó(̀), ̀hán, ̀hatu, ̀huu, ̀ka, ̀kan, ̀ken, ̀kyóo, ̀nai, ̀rai, ̀ryuu, ̀siki, ̀tai, ̀tyaku, ̀tyuu, ̀yoo, ̀zén, ̀zén [taru], ̀zyáku, ̀zyoo, ̀zyuu. And each of the following words consists of two morphemes borrowed from Chinese: ̀ien, ̀igai, ̀igo, ̀íka, ̀íkoo, ̀ínai, ̀írai, ̀izen, ̀ízyoo (all containing the Chinese preposition i-); ̀íppai (< ippai 'full' < íp-pai 'one cupful'); ̀génzai, ̀kákko, ̀kéiyu(̀), ̀kéntoo, ̀kórai-no, ̀míman, ̀náigai, ̀sídai, ̀sóotoo, ̀téido, ̀zéngo, ̀zibun, ̀zídai, ̀ziken.

The only etymology I have found for nómi is Ōno's suggestion that it may come from ... no mi 'the (body =) self of ...'. Although ma ní-te '(being) in the interval' suggests itself as an attractive etymology for máde, a likelier source is mande < maude, infinitive of the old intransitive verb maud(e)- < mawi-id(e)- 'come, go' [honorific]; cf. modern máir- < mawi-ir.^{46a} For the etymology of ̀zútu, see §2.5; for that of yóri, see §2.6.

2.4a. YÚÉ [NI]

Yúé is a postadnominal which means 'reason' or 'cause', much like wáke or tamé, but rather formal or literary, so that 'due to N' is a good translation for N no yúé [ni]. You will find that sometimes verbal and adjectival sentences, instead of undergoing adnominalizations (V-ru/-ta yúé, A-i/-katta yúé), are directly nominalized (§14.6) and attach 'due to' as ... ga yúé: V-ru ga yúé, A-i ga yúé. (Cf. ... ga tamé.) But N ga yúé apparently is not

46. But góto[-ku] 'like' offers a tempting alternative etymology for both.

46a. Both Ōno Susumu and Ōno Tōru favor an etymology that presumes a semantic extension of the Old Japanese word ma-de 'both hands' > 'fully'.

used; instead you find *N yúé*, with the 'due to' functioning as a postnominal particle much like a restrictive or focus marker: *Sore yúé ...* 'Due to that, ...'; *Kayoo na sidai yúé, ...* 'Owing to circumstances of this sort ...'; *Bóku(¯) wa danseí dá kara tasukári, káno-zyo wa, taikyúu-ryoku no sukunái zyosei yúé ni sinde simatta* 'I was saved because I am a rnan, but she ended up dead due to being a woman with little endurance' (SA 2637.57).

2.5. THE DISTRIBUTIVE (¯ZÚTU)

When the distributive marker ¯zútu is attached to a phrase the meaning of the simplex sentence is affected as a whole: the activity or state described is thought of as equally distributed among two or more subjects or objects or as equally distributed among two or more times (or, if mentioned, places, etc.). The marker must be included in some phrase that contains as its head a NUMBER; this is typically a numeral-counter compound, but it may be selected from certain other expressions that refer to limited quantity: *sukósi ¯zútu* 'a little each', *syoosúu ¯zútu* 'a small number each', *syooryóo(¯) ¯zútu* 'some each', *zyakkan ¯zútu* 'some each', *kore-dake ¯zútu* 'this much each'.⁴⁷ But expressions of unspecified large quantities are apparently excluded: **takusán ¯zútu* 'lots each', **tasúu ¯zútu* 'a large number each', **taryoo ¯zútu* 'a large quantity each'. Perhaps large quantities are to be considered indefinitely unspecifiable where small quantities would always be subject to some kind of limited specification.

There are two competing accentuations for the distributive: ¯zútu and ¯'zutu. *Sukósi ¯zútu* is pronounced /sukosizútu/ and *sukósi ¯'zutu* is pronounced /sukosízutu/; *zyuu-en ¯zútu* is /zyuuenzútu/ and *zyuu-en ¯'zutu* is /zyuueńzutu/. In this book we will choose to write the accentuation always as ¯zútu.

The older spelling of ¯zútu is *du* = "tutu; the word is said to come from a reduplication of the general counter -tú that we find in *hitó-tu* 'one', *huta-tú* 'two', etc. Notice that the distributive is NOT related to *V-i-tútu* 'while doing' (§9.1.4). As *du*, the particle is attested from Heian times (Terase 125). Dialect versions of the distributive include *zuka* (in Nara prefecture, Zhs 4.337); the origin of that can be seen in the Shikoku forms *duka* and *duku* (Doi 281)—probably ["]tu (number) + particle *ka* 'whether/or', with assimilation of the second vowel in *duku*. Throughout the Ryūkyūs a totally different etymon (... *naa*), of unknown origin, is used to mark the distributive.^{47a}

The reference of the distributive is vague; whatever the sentence says is happening may be treated as happening "distributively" (= in equal distribution), but the distribution can be with respect to an imputed dual or plural meaning of any adjunct—typically the subject or the direct or indirect object—or it can be with respect to time or frequency. In a sentence such as *Máiniti(¯) íp-pai ¯zútu nómu* 'I drink one cupful each day' the ¯zútu may be semantically redundant, simply reinforcing *máiniti(¯)*; but in other interpretations of the same sentence the distributive adds an otherwise unmarked meaning: 'I take one cupful of each beverage every day', 'Each of us takes a cupful every day', etc. Similarly, in a sentence that contains *sorézore* 'respectively, individually, as individually appropriate', one of the interpretations will make the distributive redundant: *Sanká-sya wa sorézore hitótu ¯zútu moratta* 'The participants each received one individually'. (Other interpretations: 'The participants individually received one each time'.)

The phrase that contains the distributive can be marked for case; the case marker will always follow (never precede) the distributive marker: *Gakusei hitóri ¯ZÚTU KARA*

47. ... *tikyuu no ziten ga || nennen | wázuka ¯zútu || osoku náru | keikoo ga áru no de ...* 'the revolution of the earth tends to slow a slight amount each year, so that ...' (R).

47a. Chūgoku dialects use ¯wate (Matsue), ¯waate (Nagahama), or ¯wátte (Hiroshima), from the gerund of *war-* 'divide'.

atúmeta 'I gathered them from each student' (*kará-zútu); Gakusei hitóri ZÚTU NI watasite kudasái 'Hand them out to each student' (*ní-zútu); Gakusei hitóri ZÚTU TO hanasi-au 'I will talk with each student' (*tó-zútu); Onóono pin íp-pon ZÚTU DE tomete kudasái 'Fasten one with each pin' (*dé-zútu); Ni-kásyo ZÚTU E itte kudasái 'Go to two places each' (or 'Go to each of two places') (*é-zútu); Ni-ko ZÚTU GA tekitoo dá 'Two apiece is suitable'; Tamágo hitótu ZÚTU O yóku awa-dátete tukau 'You use one egg each, whipped into a froth'.

The distributive phrase can be adnominalized: Ití-doru zútu no go-hóobi 'an award of one dollar each'; ... zyakkan zútu no reigai ... 'a few exceptions each' (KKK 3.61).

Although *N zútu zútu is impossible, you can have more than one distributive-marked adjunct in a surface sentence: Kodomó-tái wa hutuka ZÚTU hataraite moratta ití-doru ZÚTU no go-hóobi de ni-satú ZÚTU hón o katta 'The children bought two books of each kind for each of the one-dollar awards that they each had received for working two days'. But in such a sentence each distributive-marked adjunct belongs to a different predicate (respectively hataraite, nó = de áru, katta), so that it is safe to assume that we are permitted only one distributive-marked adjunct for each predicate.

The distributive can be found before or after various restrictives and the like; but sáe, nádo, and mítai will not precede zútu, though they may follow it. No combinations will be found of the distributive with those restrictives and quasi-restrictives that have temporal meanings: góro, ígo, írai, ízen, máe, sugí, zyu. You will also find zútu after ka but only when that particle is part of a phrase nán/íku-COUNTER ka 'some ...': Enpitu o nán-bon ka zútu moratta 'We received several pencils each'; Íku-tu ka zútu tábeta 'We ate several each'. (These phrases, like nani ka 'something', come from interrogative sentences, § 15.6.)

The following examples will permit the distributive to occur either before or after the restrictive: Hitóri ni ní-hon ZÚTU ÍZYOO (or ÍZYOO ZÚTU) wa agerarenai 'I cannot give more than two to each person'; San-nin de, hitóri gohyakú-en ZÚTU ÍKA (or ÍKA ZÚTU) de wa sukuna-sugirú desyoo 'With three people getting less than five hundred yen each, it is surely too little'; Iti-dó ni go-nin ÍNAI ZÚTU (or ZÚTU ÍNAI) nara háitte mo ii 'If it's no more than five people at a time, you may go in'; Mittú HODO ZÚTU kubátte kudasái 'Distribute three each'; San-nin ni gohyakú-en ZÚTU HODO kasite itadakemasén ka 'Won't you lend five hundred yen to each of us three?' (but HODO ZÚTU would be more common); Sukósi sika nai kara íp-pon DAKÉ ZÚTU wakeyóo 'There are only a few so let's divide them up just one each' [awkward?]; Hutarí ZÚTU DAKÉ de dekaketa 'We left just two at a time' [uncommon]; Mittú BAKARI ZÚTU kubátte kudasái 'Please distribute just three each'; Tatta hitótu ZÚTU BAKARI de o-hazukasii no desu ga, dóo-zo 'I'm ashamed that it is only just one each, but please (accept them)' [awkward?]; San-nin ni hutatú ZÚTU GURAI SIKA nai n da yó 'Each of the three has only about two each' (KKK 3.61); Dá kara, hutarí no kodomo wa Nihón no gakkoo no syotoo-kyóoiku wa ití-nen GURAI ZÚTU SIKA úkete imasén 'For that reason, my two children have only received a year each of elementary education in schools in Japan' (SA 2674.112e).

In certain combinations the distributive must come first: Hitóri ZÚTU ÍGAI nyuusitu sité wa ikenai 'You must not enter the room except one at a time' (*-ígai zútu); (?) Íp-pon ZÚTU GÓTO ni tutunde kudasái 'Wrap one (each) each time' (*-góto zútu ni, *-góto ni zútu); Kore-dake ZÚTU SIKA watasenai 'I can only hand over this much each'; Biiro o íp-pai ZÚTU NÁDO dóo desu ka 'How about a beer each or the like?'; Ano zibun(-) wa, máda, iti-góo ZÚTU DE MO moti-yoretá kke 'In those days, I recall, we could each still bring a gō (of sake) or the like' (Kb 267b).

The only example I have succeeded in eliciting with $\bar{o}k\bar{i}(\bar{~})$ [ni] puts $\bar{z}u\bar{t}u$ after $\bar{o}k\bar{i}(\bar{~})$ and before $n\bar{i}$, with other orders rejected: Go-nin $\bar{O}K\bar{I}(\bar{~})$ $\bar{Z}U\bar{T}U$ NI hitori tori-agete sirabete miyoo 'Let us try checking every sixth person (each time)' (* $\bar{z}u\bar{t}u$ $\bar{o}k\bar{i}(\bar{~})$ ni, * $\bar{o}k\bar{i}(\bar{~})$ ni $\bar{z}u\bar{t}u$).

About the longest combination that has been suggested as acceptable for $\bar{z}u\bar{t}u$ is Hutari $\bar{D}A\bar{K}\bar{E}$ $\bar{Z}U\bar{T}U$ KARÁ SAE MO moraenai 'I can't even get any from each of just the two of them' and that can be said with other orders: Hutari $\bar{Z}U\bar{T}U$ $\bar{D}A\bar{K}\bar{E}$ KARA SAE MO moraenai; Hutari $\bar{Z}U\bar{T}U$ KARA $\bar{D}A\bar{K}\bar{E}$ SAE MO moraenai. Another sequence that is said to sound acceptable is Hyaku-en ÁTARI MADE $\bar{Z}U\bar{T}U$ $\bar{G}U\bar{R}A\bar{I}$ $\bar{D}A\bar{K}\bar{E}$ nára, kasite agerareru 'I can lend you just about up to around a hundred yen each'; at least eleven other orders are said to be possible for this combination of five particles, all with $\bar{d}a\bar{k}\bar{e}$ at the end.⁴⁸

2.6. THE COMPARATOR (YÓRI); COMPARISONS

In Literary Japanese the ablative 'from' is marked by the particle yóri where the colloquial would use kará, whether the ablative is local, temporal, or personal. This usage of yóri is still found in somewhat formal contexts. In both the literary and the spoken language yóri is used to mark the point of departure for a comparison (the standard of comparison) 'more/other/rather than'; we will call it the COMPARATOR.⁴⁹ In earlier texts both yóri and yúri are attested; it has been suggested that the particle was originally yúri and came from yuri, an old noun meaning 'later, in the future' (Terasé 226). But the shape yuri was uncommon for the particle even in the Nara period and it completely disappeared in Heian times. (Abbreviated forms yu and yo are attested in old songs; compare the modern abbreviation yó' ka for yóri ka mentioned below.) I wonder if the true etymology may not be the infinitive yóri 'selecting' with yuri an aberrant variant. The Ryūkyū forms for the comparator are (Okinawa) yaka, yuka; (Yaeyama) yakañ (Amami) yukma, yumma. It seems likely that the Ryūkyū forms come from something like yo[ri] ka {mo}; short o regularly becomes u in the Ryūkyūs. The forms with /a/ in the first syllable have assimilated the vowel to that of ka; the nasal syllables in Yaeyama and in Amami apparently are reflexes of mó, and the vowel at the end of the Amami forms is to be attributed either to assimilation (to the subsequently contracted vowel of ka—with optional assimilation of -k[a]m- to -mm-) or to whatever explanation underlies the Miyako particle mai (see p. 88).

The comparator yóri can be followed by the focus particles wá or mó: Sore yóri wa ... 'Rather than that ...' (SA 2672.49a); Isásaka zíga zisan dága, náhi mo sinai kuni yóri wa ii 'It is a bit self-laudatory, but better surely than a country that does nothing at all' (SA 2659.111a); Sore zya, taitei no ningen yóri wa óoku mawatte irassyáru [n] desu né 'And you've been around more than most people, haven't you' (Tk 2.260a); Beikoku no "ekuzékyút'ibu" (kigyoo-kánbu) yori wa Nihon-teki na mén o tabun ni mótte iru 'Rather than (being) the American executive, he has a good many Japanese aspects' (CK 985.51);

48. For parts of the above information I am indebted to Ritva Sinikka Hayasaka, Kyōko Homma, and Yasuo Kubota.

49. Sometimes the translation will be 'instead of (= rather than, preferably)', especially when following a verbal noun or nominalized verb; cf. V-(a)nai de = V-(a)zu ni 'not doing = instead of doing'. Chūgoku dialects use taa (? < tó wa) for the comparator (Shin Nihongo-kōza 3.214). In Kyōto sika and hoka are synonyms for yóri (Okumura in Hōgengaku-kōza 3.145).

Moo ití-d^[1], máe yori wa óoki na kóe de yobimásu to ... 'When I called again, in a voice louder than before ...' (KKK 3.231); ... dooke-síbai yori mo, matomo na síbai o yari-tai ... 'I want to do serious plays rather than farces' (Tk 2.273a); Dá ga, kono kotó yori mo mondai ná no wa ... 'But what is more problematical yet than this ...' (SA 2676.98c); Séntyoo yori mo onná^[1] no hoo ga tosi o tótte ita 'The woman was older than Senchō' (Kb 8b); Syokúgyoo ^[1]gara, o-kaō yóri mo há-nami^[1](⁻) no hoo ga ki ni narimásite ... 'From my vocation, I am more concerned about teeth than about faces ...' (KKK 3.231).

In the informal speech of downtown Tōkyō yóri ka is often used to mean yóri mo; a common option allows the contraction yó' ka: Sore kara noboru yó' ka oríru hoo ga muzukasii n desu 'And then it is harder to come down than it is to climb up' (Tk 4.43b). Yóri ka mo also occurs: Okáatyan no kao dáí-suki—o-kási yori ka mo, o-támago yori ka mo 'I love Mommie's face—more than the cake, more than the eggs' (KKK 3.231)—this could be a blend of yóri ka + yóri mo, but it is not to be mistaken for yóri ka mo [sirenai] 'maybe than'. And I have one example of yó' ka mo: Zitubutu o míru yo' ka mo máe ni, hukusei o míte kansin sita kotó ga áru n da kedo né, ... 'Well before seeing the real thing, I saw a copy and admired it, you see, and ...' (Tk 4.295a).

When the comparator, with or without mó, follows an indeterminate the meaning is 'than any other (thing, person, place, etc.)'; the accent is optionally suppressed. Dáre yori [mo] means 'rather/more than anyone else' and náni yori [mo] means 'rather/more than anything else': Kore wa máta(⁻), Hónkón de tábeta náni yori mo oisíkatta 'This was, moreover, [better than anything else I ate =] the best thing I ate in Hong Kong' (SA 2666.110c).

Instead of just a noun, you will also find a sentence directly before yóri; yóri would thus appear to be also a postadnominal: Dóoro mo || omótta | yóri wa || tyan-tó^[1] site iru '(Even) the roads are in better condition than I expected' (SA 2670.43c). But I have suggested elsewhere that we treat such comparisons as a direct nominalization or as an ellipsis of the nominalization S [nó] yóri, thus accounting for the adnominal form of the copula in sízuka na yóri 'rather than be quiet'. The juncture is optional: omótta { | } yóri.

Instead of N yóri you will sometimes find N to iú yóri (pronounced either /yuúyori/ or /yuuyóri/: Sore wa, géngo zísín [or: gengo-zísín] no mondai to iu yóri wa, búna no mondai désu 'That is a question of culture rather than a question of language itself' (Shibata in Ōno 1967.104). On this usage, see §21.1.(17).

The comparator can follow (but never precede) a case marker: Anáta to yori hoka no hitó to iki-tai 'I'd rather go with someone other than you'; Anáta kara yori hoka no hitó kara morai-tai 'I'd rather get it from someone other than you'; Matí ni yori inaka ni sumi-tái n desu 'I want to reside in the country rather than in a city'; Kyóoto e yori Nára e ikimasyóo ka 'Shall we go to Nara rather than Kyōto?'; MU2-gatá-ki wa wá-ga kuni dé^[1] yori mo Beikoku de urete iru 'The MU2 plane is selling better in America than in our country' (SA 2680.142c); Gakkoo dé yori uti dé no hoo ga benkyoo si-yasúí 'It is easier to study at home than at school'. But neither *gá'ó yóri nor *yóri ga/o occurs.

Frequently particles marking case (or other functions) will optionally drop before yóri. If you choose to drop the particle in Watasi ga áni [ni] yori hito ni sínsetu da 'I am nicer to others than [to] my brother' the sentence becomes ambiguous since it could be taken as 'I am nicer to others than my brother [is]'; but selectional constraints leave only one interpretation for a sentence like Watasi wa Eigo [ní] yóri Huransu-go ni tuyói 'I am surer of my English than [of] my French'. Another example of a dropped particle: Sore dé

mo Kyōoto no wa Tookyoo [nó] yóri mo oisii kedo 'Still, Kyōto's are better tasting than Tōkyō('s), but ...' (SA 2689.55b).

It is possible to follow yóri with sika: Anáta yori sika tayorénaí 'I can depend on you alone'. But *N yóri nádo is rejected, though N nádo yori is acceptable: Nihon-zin nádo yori Indó-zin no hōo ga Eigo ga umái 'People from India are better at English than the likes of (us) Japanese'.

In English we have a special form for the adjective when we make comparisons: "this is MORE interesting—than that, than it used to be, than it is educational, etc.". After a short adjective the "more" is put on the end as a suffix and pronounced "-er": "This is cheapER—than that, than it used to be, than it is useful, etc.". Japanese normally use the simple adjective without any element corresponding to "more": Yasúi 'It is cheap' or 'It is cheaper'. If you choose not to subdue the subject, a comparison is often implied: Kore ga yasúi 'This one is cheap(er)', cf. Kore wa yasúi 'This one (among its other characteristics) is cheap'. Sometimes tyót-to 'somewhat' is prefaced to bring out a comparison: Tyót-to yasúi 'It is a bit cheap; it is on the cheap side'. You can be explicit and use the adverb mótto 'more', often implying 'more than it used to be': Móttö yasúi 'It is cheaper (than it was)'. Or you can use moo sukósi 'a little more': Moo sukósi yasúi no o mísete kudasái 'Show me one a little cheaper'.

But Japanese prefer to compare ALTERNATIVES, and they like to mark either or both of the alternatives with ... hōo 'the alternative (of) ...'. Yasúi hōo da means 'It's the cheaper (of the two alternatives)' and Kono hōo ga (or Kotira ga) yasúi means 'This (alternative) is the cheaper'. Thus Dótira (or Dótira no hōo) ga yasúi ka means 'Which (of the two alternatives) is cheaper?'

When the standard of comparison is to be mentioned you can mark it with the comparator yóri, but first you may wish to phrase it as an alternative: Senséi no hōo yori umái '(He) is better at it than the teacher'. Or you may put the alternative in the other part of the comparison: Gakusei no hōo ga senséi yori umái 'The student is better at it than the teacher'. And nothing prevents you from marking both parts as alternatives: Gakusei no hōo ga senséi no hōo yori umái. Moreover, the order of the two parts is fairly free, so that you can also say Senséi [no hōo] yori [wa/mo] gakusei [no hōo] ga umái—including any combination of the options in brackets.

When you want to ask a question about two items, you can conjoin and thematize the two nouns and then begin your inquiry with dótira 'which one (of the two)' or dótira no hōo 'which alternative of the two': Kono yamá to sono yamá de wa dótira [no hōo] ga takái ka 'Of these two mountains, which is higher?'

If you are asking about three or more things, you often conjoin and thematize the three nouns as *A to B to C dé [wa]*—or sometimes *A to B to C no utí(-)/náka [dé] [wa]* 'among A and B and C'—and then ask about dóre 'which of them' or dáre 'who among them', adding itiban 'most' before the adjective: Kono yamá to sono yamá to ano yamá de wa dóre ga itiban takái ka 'Of these three mountains, which is highest?'; Kono kodomo to sono kodomo to ano kodomo no utí(-)/náka de, dáre ga itiban umái ka 'Of these three children which is best (at it)?'

The answer to a question with two alternatives will be *N ga* or *N no hōo ga*; with three or more alternatives the answer will be *N ga*: Kono yamá [no hōo] ga takái 'This mountain is the higher'; Kono kodomo ga itiban umái 'This child is the best'. (You will notice

that when a short adjective is involved, the English marker for the superlative “most” is pronounced “-est” and attached as a suffix. In place of “more good” and “most good” we normally use “better” and “best”, and in place of “more bad” and “most bad” we normally use “worse” and “worst”.)

Under the influence of translations from English, modern Japanese has developed a usage of *yoru* as a kind of bound adverb, so that you will hear—and, more often, see—such expressions as these: ... *yoru yōi seikatu ni mitibīku tamé ni wa* ... ‘in order to lead to a better life’ (KKK 3.233); ... *sára ni káre o yori ízyoo ni hukóo ni sasete iru monó ga áru to sureba*, ... ‘considering that there are things that are making him even more unfortunate’ (KKK 3.233). As to whether this is better treated as a prefix or as an adverb, see pp. 797–8 (§ 13.7). A few English comparatives and superlatives have been borrowed outright, notably *bétaa* ‘better, preferable, advisable’ (see p. 561) and *bésuto* ‘best, tops; one’s best, one’s utmost’.

We have been discussing comparisons of INEQUALITY, those that tell us one thing is MORE so (or LESS so) than another. There are also comparisons of equality; instead of the comparator *yōri* the restrictive *gúrai* ‘as much as’ will mark the standard of comparison:⁵⁰ *Kono yamá wa sono yamá gúrai takái* ‘This mountain is as high as that mountain’. To deny such a comparison you use the restrictive *hodo* ‘(not) so much as’: *Kono yamá wa sono yamá hodo takaku nái* ‘This mountain is not so high as that mountain’. The latter sentence is logically equivalent to *Kono yamá [no hoo] yori wa sono yamá [no hoo] ga takái* ‘That mountain is higher than this mountain’.

2.7. COLLECTIVIZERS; IMPLIED PLURALS

Some languages, such as English, normally require the speaker to make it clear whether each of the nouns in his sentence is singular or plural. Various devices are provided: a suffix produces “cats” from “cat”, a vowel change turns “man” into “men”, a totally different word “we” serves as the plural of “I”, etc. A single form may be pressed into service as the plural of more than one word: “they” is the plural of “he” or “she” or “it” or any aggregation of those pronouns. Sometimes the plural is indicated only by the agreement of some other word (“this sheep” : “those sheep”); sometimes the difference between singular and plural is neutralized—“Look at the sheep” can call attention to one animal or to many animals.

In Japanese, as in many other languages of East Asia, nouns are characteristically vague as to number. With a few exceptions, such as the collectives “mankind” and “womenfolk”, an English noun is to be taken as singular unless otherwise marked. In a situation that forces the English speaker to draw an immediate distinction between “I need a book” and “I need (some) books”, the Japanese will usually say just *Hón ga iru* ‘(I) need book(s)’ with no need to commit—or reveal—himself. Japanese is also free of the obligatory distinction of definite vs. indefinite that forces the English speaker, once he has made up his mind about plurality, to say either “I need a book (some books)” or “I need the book(s)”. It does not follow that Japanese has no way to express definiteness; though “the” usually

50. Instead of *N gúrai* you can sometimes achieve much the same meaning with *N no yōo ni* ‘like N’ or *N to onazi yōo ni* ‘the same as N’.

goes untranslated, you can readily translate it as *sono* 'that', or you can thematize the noun to show that it has already entered the discourse in earlier context.

In a similar way, the Japanese have no difficulty when they wish to express plurality. An obvious device, of course, is that of explicit counting: *Hón ga is-satú^[1] iru* 'I need one (= a) book' is singular, *Hón ga ní-satu iru* 'I need two books' is not. And the plural count can be made vague in a number of ways: *Hón ga suu-satú^[1] iru* 'I need a number of books', *Hón ga nán-satu ka iru* 'I need several (= some number of) books', *Hón ga nán-satu mo iru* 'I need ever so many books', *Hón ga takusán^[1] iru* 'I need a lot of books', *Hón ga is-satú^[1] -izyoo iru* 'I need more than one book', etc. But the important point is that the Japanese do not go out of their way to inform you whether the noun is singular or plural, especially when it does not refer to an animate being.

When animates, especially human beings, are referred to, a Japanese is much more likely to mention plurality: *hito* 'person/people' remains vague, but *hitó-tati* 'people' is explicitly plural. And it is unusual not to mark as plural a personal pronoun that refers to more than one person; by "personal pronoun" we mean to include those noun phrases that have come to be used for pronominal reference as well as the traditional pronouns. You will find that *wata[ku]si* and its synonyms nearly always means just 'me', since 'us' will be said as *wata[ku]sí-táti* (or synonym); *anáta* will normally refer to a single 'you'—though the second person pronoun is usually avoided by using the name and/or title or kinterm, and *anáta-tati* 'you people, you all, youse' will be the 'you' that refers to more than one—though *miná-san* or *minasán-gata* 'all of you' will often be used instead. *Anó-hito* and *anó-ko* are normally taken as singular 'he' or 'she', since 'they' will be made explicit as *anóhito-tati* and *anóko-tati*. Even the inanimate pronoun *kore* 'this' or 'these' (vague) has an explicit plural *koré-ra*, though ordinarily inanimates are not usually marked for plurality: there is no **hón-ra* 'books' but you can say *koré-ra no hón* 'these books'. Similarly, *soré-ra* is an explicit plural for *sore* 'that/those' and *aré-ra* is a specific plural for *are* 'that/those [more remote]', but for *dóre* 'which' there is no corresponding **dóre-ra*. When referring to people, *koré-tati*, *soré-tati*, and *aré-tati* are also possible; the interrogative is *dáre-tati* 'who all', as in *Nára e ikú no wa dáre-tati desu ka* 'Who all are going to Nara?', but it is not used when the plurality is obvious: *Anóhito-tati wa dáre desu ka* 'Who are those people?' For the exalting words that end in *-sama* there are plurals *-sama-gata*, including *dótira-sama-gata* and *dónata-sama-gata*; you may also hear *dótira-sama-tati*, *dónata-tati*, and *dótira-tati* for 'who all'. The pejorative words *yátu* 'one, guy, thing', *koitu* 'this one', *soitu* 'that one', and *aitu* 'that one' can be made plural with any of the three markers *RÁ*, *DÓMO*, or *TÁTI* when they refer to people, and sometimes when they refer to things; but **dóitu-ra* 'which ones' is replaced by *dónna yátu-ra* or *dónna yatu-dómo* (or, rarely, *dónna yátu-tati*). I have also come across *koré-ra no kotó-dómo* 'these matters (facts)'.

Names are usually to be taken as singular and unique; but a family name can be used with vaguer reference. When the telephone is answered with *Ikeda desu* 'This is the Ikeda residence' (or 'This is the Ikedas') you should not assume that the speaker necessarily bears the name *Ikeda* himself, since he may be a household employee.

The most common Japanese marker for plurality is the quasi-suffix *táti*, which can be attached to almost any animate noun. The connotations of *táti* are quite neutral,⁵¹ and usually it can be replaced by the more formal *rá*, especially when writing. You can show

51. According to Satō 2.185 *táti* was originally exalting as well as collective.

special respect toward the noun by choosing the exalting euphemism *gáta*, and you can show deprecation (or humility) by choosing the humbling *dómo*.⁵² While it is often easy to predict the likely occurrence of one of these connotationally loaded substitutes for *táti*—as in *tekihei-dómo* ‘enemy troops’ (SA 2679.104a), *Nátisu no buraikan-dómo* ‘the Nazi scoundrels’, and *hosyu-ha no yáróo-dómo* ‘those bastards of the conservative wing’ (Tk 3.86b)—we cannot preclude unexpected combinations such as *ningen-dómo* ‘(wretched) humans’ (Ogaeri 35), *tuukoonin-dómo* ‘passersby’ (Tk 4.91), or *génzai no zyoosiki-ya-dómo* ‘today’s men of commonsense’ (Tk 3.153). The presence of the exalting suffix *-sama* does not necessarily mean that the plural will be *-gata*: for ‘guests’ *okyakusamá-táti* (SA 2655.113c) is polite enough, though *okyakusamá-gáta* will also be heard. And while *katá-gata* is an appropriate plural for the exalting *katá* ‘esteemed person’, *katá-tati* is also quite common: *dókusya(ˉ) no katá-tati* ‘the esteemed readers’ (SA 2658.46); *soo iu katá-tati mo* ‘such persons too’ (SA 2655.41a); *Karúizawa no katá-tati no kangae-káta wa dóo desu ka* ‘What is the opinion of the ladies and gentlemen of Karuizawa?’ (SA 2642.46b). It is safe to say that you can always substitute *TÁTI* for any occurrence of *DÓMO* or *GÁTA*. By picking the humble *monó* for ‘person’, the author of *Wá-ga tihóo no monó-tati wa ...* ‘People in our area ...’ (SA 2674.108e) no doubt felt he was showing sufficient deference to his readers without saying *monó-dómo*. The polite way to say ‘we’ is *watakusi-táti* or *watási-táti*; on formal occasions *watakusi-dómo* will be appropriate, but in less formal circumstances it is better avoided. (And *watási* will hardly ever be heard with *DÓMO*.)

The accentuation of plural forms shows much variation, in part reflecting the peculiar grammar of what I am here calling the “quasi-suffixes”. To begin with, the meaning of the suffixes is not plurality of the noun itself; but rather the reference is to a COLLECTIVE that includes—or centers on—the noun.⁵³ Thus *bóku(ˉ)* means ‘I (a male)’, yet *bóku-táti* or *bóku-ra* can mean a group of ‘us’ that includes one or more females; it is, in fact, the form that a young man would use in talking to his girlfriend. (In Japanese there is no distinction of inclusive vs. exclusive forms for the first person plural; *watakusi-táti* or a synonym will translate both *nous* and *nous autres* of French, as well as both Peking pronouns *wómen* ‘you and I/we’ and *zá-men* ‘he/she/they and I’.^{53a}) The modern pronouns *káre* ‘he’ and *káno-zyo* ‘she’ are explicitly masculine and feminine, where the older—and more common—*anó-hito* or *anó-ko* is vague; the plurals *káre-tati* or *káre-ra* and *kánozyo-tati* or *kánozyo-ra* refer to collectives that need include only one of the explicitly noted sex. But in some contexts the intention is obviously to limit the group to male or female, and that leads to such expressions as *káre-ra [to] kánozyo-ra no waraigao no náka de ...* ‘among the smiling faces of the boys and girls’ (SA 2654.135c).

Another peculiarity of the quasi-suffixes is that they can refer to an entire phrase, including conjoined nouns: *Dóko de mo otokó-no-ko, onná-no-ko, obasán-TÁTI ga sakana o tutte iru* ‘Everywhere there are boys, girls, and women fishing’ (SA 2681.93c); *Dantai de yatte kíta nookyoo no ozi-san ya obasán-TÁTI ga ...* ‘(Middle-aged) men and women

52. But in *kotó-dómo* ‘facts’ no special connotation is intended: *ízyoo no kotó-dómo kara* ‘from the above facts’ (Kokugo akusento ronsō 387). In older Japanese *dómo* was used as a pluralizer for objects as well as people: *humi-dómo* ‘letters’. It was also used like *nádo* to mean ‘and others’.

53. Cf. Hinds 1973, who defines *N tati* as ‘a group of people with *N* as the focal point’ and cautions that *senséi-tati* means ‘the teacher and others’, not necessarily ‘the teachers’.

53a. Inclusive vs. exclusive ‘we’ is distinguished in certain Ryūkyū dialects: *Kikai* (Zhs 10.26), *Miyako Irabu* (Zhs 11.224), *Ishigaki Kabira* (Zhs 11.259, 264), *Yonaguni* (Zhs 11.334).

from farm organizations who had come in groups ...' (SA 2681.58ab); Zyuurokú-nin no sákka(¯), hyooron-ka, sisoo-ka, kagákú-sya-TATI o aité ni ... 'With as partners sixteen writers, critics, thinkers, scientists ...' (SA). It can be argued that each of the above sentences is grammatically ambiguous, since certain contexts would force you to translate the plural only with the last noun in a conjoined series; so long as it is spoken in a country that permits progeny but forbids polygamy the phrase *kánaí to ko-domó-táti* can only mean 'my wife and children'. The meaning of these quasi-suffixes TÁTI, RÁ, and GÁTA, then, is 'a group that includes N' and that may or may not be 'a group of more than one N'. We can call these markers COLLECTIVIZERS.

In written Japanese it is not uncommon to put *rá* at the end of a group of names, as in these examples: Mata, "sékái no ríidaa" to sité wa Níkuson daitóoryoo, Erizábesu zyoóo, Moo-Tákútoo, Hoo-Ti-Min, Gánzii RA to tómo(¯) ni, Sátoo Eisaku syusyoo ga toozyoo suru to iu 'And it is reported that as "world leader" [in the wax museum]—in the company of President Nixon, Queen Elizabeth, Mao Tse-Tung, Ho Chi Minh, and Gandhi—now appears Prime Minister Eisaku Sató' (SA 2670.108b); ... gánrai saikóosai házni no Góorudobáagu-si ya Kuráaku zén Béisihoo-tyóokan RA ga béngo o hiki-úketa no o hazime ... 'Beginning with the taking on of the defense by sometime Supreme Court Justice Goldberg and former American Attorney General Clark' (SA 2666.121d); Kóoho to sité wa, Hukuda zoosyoo o hittoo ni [site], Tanaka kanzi-tyoo, Maeo Sigésáburoo, Míki Takeo, Nakasone Yasúhiro (¿) RA zituryokú-sya ga meziro-osi dá 'With Finance Minister Fukuda at the head of the list, the candidates—Secretary-General Tanaka and Messrs Shigesaburó Maeo, Takeo Miki, and Yasuhiro Nakasone—are jostling each other' (SA 2661.127b). The last example shows not only that *rá* goes with the preceding four names, but also that *si* 'Mr' is to be taken—as a title—with the preceding three. Titles, like collectivizers, are quasi-suffixes; when they are long they are often set off as separate phonological words (Níkuson daitóoryoo 'President Nixon'), when short they are attached to the preceding noun as a phonological suffix (Tanaká-si 'Mr T.', Níkuson-si 'Mr N.'). Though often with special accentuational rules (see §26). In this book we generally attach the quasi-suffixes other than *san* with a hyphen unless a word juncture (either overt or underlying) forces us to insert a space instead; we thereby sacrifice consistency of syntax in order to make the phonological bonds clear. (A contrary decision is taken for the restrictives in §2.4; that is partly because of the greater versatility they display in forming sequences.)

In written Japanese you may also see a collectivizer preceded by some parenthetical remark; when reading such a sentence aloud, you have no choice but to pronounce the quasi-suffix as a phonological word, preceded by a juncture: Kono hí ni, íma syóbu ga mondai ni nátte iru Á kyooyu (24)—kokugo—RÁ wa ... 'On this day, Instructor A (24 years old)—Japanese Language—whose treatment has now become an issue, AND HIS GROUP ...' (SA 2665.23—the context makes it clear that it is the disciplinary case of Instructor A to which the "issue" refers).

The following bit of fancy legalese puts *RÁ* right after an occurrence of TÁTI: Kéibo(¯) no zissi (saikon máe no ture-ko, saikon no tokí no ko) ya yoosi ga áreba, sonó-ko-tati, ko ga náí tokí wa kéibo(¯) no húbo ya keitei-símai (matá-wa sonó-ko-tati) RÁ ga isan o soozoku suru wáke desu 'If there are blood children of the stepmother (children from previous marriage, children of the remarriage) or adopted children, those children; if there are no children then the parents and siblings of the stepmother's parents and siblings (or their children); THESE succeed to the inheritance' (SA 2679.121b). This

example was read into a tape recorder with /sonókotatiraga/ pronounced as a single phrase.

Apposition (§25) will sometimes pose a nicety of translation: Súusúrohu-ra san-nín wa, ... 'Suslov and two others' (SA 2673.131a).

The suffix -ra which appears in íkura 'how much, some amount' and nán[i]ra 'what, some' is not a collectivizer, though it is etymologically related, as is the -ra in kotira 'this direction/person', sotira 'that direction/person', atira 'that direction/person', and dótira 'which direction/person'. The latter set of words also appear without the suffix and then give the /t/ compensatory lengthening: kottí, sottí, attí, dótti. In very limited contexts we also find kótí, sóti, and (only in compounds?) átí. (The element ti is related to the etymon for 'way' which appears in ti-mata 'crossroads' and may be a truncation of miti 'road' unless that was originally a compound; cf. kóozi 'alley' < [koūdi] < ko-m[i]ti 'little road'.)

In addition to the common collectivizers mentioned above, there are a few other quasi-suffixes, notably ren = renzyuu 'gang, group, class' as in these examples: ... kaikaku o yorokobánai hoka no sakká-ren o waratte iru sákka(̄) daróo ... 'it is an author who laughs at the other authors who find no joy in the [language] reform ...' (K 1966.74); Mitibata de tati-bánasi o site iru okusán-ren ni, hyoi-tō kōe mo káketa '(He) suddenly addressed the ladies standing in conversation by the roadside' (SA 2669.37a); Zennis-sei [= Zenniti-sei] zyo-séito ni PTÁ, doosóo-sei no obasamá-ren made kuwawátté no hunsoo de áru 'It is a struggle that includes PTA and middle-aged alumnae who have joined with the full-time [high school] female students' (SA 2665.127a).

According to K the quasi-suffix atonicizes a preceding noun: onná 'woman' but onna-ren 'womenfolk', búnsi 'literary man' but bunsiren 'the literati'. (MKZ, however, lists it as a preaccentuated suffix ̄-ren, and that is the version used by Hamako Chaplin.)

The noun syúu 'large group, mass (of people)' occasionally serves as a collectivizer suffix ̄-syuu: yakusyá-syuu 'actors', otokó-syuu 'menfolk', sirootó-syuu 'the amateurs' (Tk 3.97b), geisyá-syuu 'geisha girls', danná-syuu 'husbands, masters, gentlemen', But these words are little used in modern Tōkyō speech. Other collectivizers are ̄-dan 'group' as in ooén-dan 'boosters, fans', and ingái-dan 'the lobbyists'; and ̄-zoku 'tribe' as in tyoohatú-zoku 'the longhairs', sayóo-zoku '(1) the impoverished aristocracy, (2) the expense-accounters', sín'yá-zoku ni wa 'for the late-nighters' (SA 2792.121d), sín'ya no ozisamá-zoku ni 'for the late-night gentlemen' (ibid.).⁵⁴

We have spoken of the flux in accentuation that results when the collectivizers are attached to nouns. Listed below are forms that I have found or elicited to show the nature of the variation. The table also displays certain gaps that are primarily due to semantic incompatibilities; these are marked with a dash (—). The nouns are arrayed according to their inherent accent patterns; for each suffix one or more accentuation patterns is given with key numbers. Some variations are due to vowel unvoicing and should be covered under more general rules of phonological options; in our list the unvoiced vowels are marked with italic letters.

54. Notice also ̄-ruí 'various (kinds of); of different (kinds, varieties)': kikái-ruí 'machinery', omotyá-ruí 'toys', sen'í-ruí 'textiles', níku-ruí 'meats', sakaná-ruí 'fish(es)', kinokó-ruí '(kinds of) mushroom', kái-ruí 'shellfish', kanzumé-ruí 'canned goods', kusurí-ruí 'drugs', sitagí-ruí 'undergarments', tyokin-tuutyóo-ruí 'savings-account passbooks',

^a Hamako Chaplin also has *nyoobóotati*, *nyoobóora*, and *nyoobóodomo*, as if there were an atonic or oxytonic variant *nyoobo[o], *nyoobó[o].

^b An obsolescent expression meaning 'all of you'.

^c Notice the contrasting accent in *anókodomo* 'those children' and *ano kodomo* 'that child'.

^d It should be possible to get RA and DOMO with foreignisms such as those cited here, but I lack authentic examples; GATA probably does not occur.

^e ... *keesuwáakaa-tati* 'the caseworkers' (SA 2660.56b).

From the data in the list it is clear that when *RA* follows an atonic noun, it behaves as a good monosyllable should: it attaches itself with a shift of accent back one syllable. When *RA* follows a tonic noun it loses its accent, as a particle or other free element would do; cf. *kodomo máde* and *néko made* with *kodomó-ra* and *néko-ra*. But after an oxytonic noun either interpretation would lead to the same result; cf. *inú made* and *inú-ra*.

On the other hand, when *TATI* follows an atonic noun, there appear to be two options. You can attach it as if it were a particle, so that *kodomo-tati* is like *kodomo máde*, or as if it were a preaccentuated suffix (*kodomó-tati* like *kodomó-ra*), the latter being perhaps more common. A tonic noun retains its accent, so that the collectivizer is attached as if a particle: *néko-tati* is like *néko made*. And after an oxytonic noun either interpretation would lead to the same result; cf. *inú made* and *inú-tati*. NHK lists both *murabito-tati* and *murabító-tati* for 'villagers'; the former shows *TATI* attached to atonic *murabito* as a particle, the latter as a suffix. Since NHK also gives a variant *murábito* for 'villager' we would expect to find the form (?)*murábito-tati* as well.

It is not surprising to find several competing versions for the accentuation of forms with *GATA* and *DOMO*, since they are less frequent than *TATI* and *RA*. If we disallow certain variants as exceptions, to be noted individually as lexical items, we can represent the basic patterns of these quasi-suffixes as *-'gáta* and *-'dómo*, i.e. they attach as if

accentually dominant restrictives but with an optional left-shift of the accent. (Another way to put it: they attach either as if they were restrictives or as if they were preaccentuated suffixes.) But Hamako Chaplin is doubtful about the option of the left-shift. The words *kotira-sama* 'this person', *sotira-sama* 'that person', and *atira-sama* 'that person' form atonic collectives *kotirasamagata* 'these persons', *sotirasamagata* 'those persons', and *atirasamagata* 'those persons'. *Dónata-sama* and *dótira-sama* 'who' form collectives that are optionally atonic: *dónatasamagata(̄)* and *dótirasamagata(̄)* 'who [all], what persons'.

For those who would like a prescription, I recommend using the patterns 'tati, ̄-gáta, and ̄-dómo when creating new forms.

There are a few prefixes that pluralize nouns, notably *ta-* as in *ta-hóomé̄n* 'many areas' and *syo-* as in *syo-búkka* 'prices', *syo-gáikoku* 'foreign countries', *syo-móndai* 'problems, issues', *syo-táisaku* 'policies', *syo-génsyoo* 'phenomena', *syo-kózin* '(various) individuals', *hoka no syo-syákai* 'other societies' (Nakane 153), *syo-zyóokén* 'conditions', and *syo-yóoso* 'elements, factors'; the particular formations must be entered individually in the dictionary. The prefix *suu-* 'several' is a kind of numeral, for which see § 13.6. The old prefix *moró-* means 'both' in *morosode* 'both sleeves' and *morote* 'both hands', 'all' in *morobito* 'all people', but it is hardly productive.

A number of short nouns derive a kind of plural or collective by reduplication, usually with the initial consonant of the repetition voiced whenever it is basically voiceless and there is no *-b-*, *-d-*, *-z-*, or *-g-* within the word: *kamígami* 'gods', *kuníguni* 'nations', *hitóbito* 'people', *simázima* 'islands'; *sankan no ekiéki* 'remote rail stations' (Fn 244a); *kasanari-áu ryókan ya hóteru no madómado ga ...* 'the windows of the inns and hotels piled up one on top of each other' (Fn 239a); ... Each such word is an unpredictable lexical unit (there is no **kawágawa* 'rivers' or **tanádana* 'shelves') to be entered individually in the lexicon. Sometimes the meaning is narrowed, and the accent is not always predictable: *kutíguti(̄)* means 'each entrance/mouth', *tokorodókoró* means 'here and there, (in) various places' (a place noun that is often directly adverbialized), *súmízumi* means 'every nook and corner', *tuzítuzi ni* means 'at every street corner', *kígi* means 'every tree', *edaeda* means 'all the branches'. And *simózimo* means 'the lower classes, the masses'. In *kázu-kazu no sinázina ga tinretu sare, ...* 'numerous goods of all sorts are displayed and ...' (SA 2679.35b), the accent of the first word indicates it is a more recent formation, a syntactic reduction; but the accent of *hóoboo* 'every direction, everywhere' is not necessarily indicative of the same thing.

Most of the reduplications are old and are built on native Japanese nouns, but we also find iterations (§ 27) of longer elements, including binoms of Chinese origin (the reduplication being given the accentuation of a compound noun), and these can be used for plural reference: ... *kokúnai no tiiki-tiiki de hu-tóoitu de áru koto, ...* 'the fact that it is not uniform from area to area within the country' (Kaneda in Ōno 1967.238). The formal pronoun *wáre* 'I' has a plural form *wareware* as well as *wáre-ra*.

Sometimes a singular number can be iterated and used as a quasi-compound to mean 'each and every' or 'every single (one)' (cf. ̄-zútu); the second accent predominates: *ikken-ikken no zyuutaku dé wa* 'in every single residence' (Tk 4.180a), *ippon-íppon no epitu* 'each and every pencil', *hitotuki-hitótuki* 'each and every month', *itimai-itímai no kami* 'every single sheet of paper', *itionsu-itiónsu* 'every single ounce', ... As variants we find *hitoribítori* = *hitori-hitóri* 'every single person' and *hitotubítotu* = *hitotu-hitótu* 'every

single one', with the regular accentuation of a noun compound. From *kózin* 'individual' comes *kozín-kózin de* '(each) individually', and there is an abbreviated version *ko-kózin*.

Some nouns are inherently collective, for example *íin-kai* 'committee' in contrast with *íin* 'committee member(s)', which can in its plural interpretation (equivalent to *íin-tati*) refer to the same group as *íin-kai*. Many such words are formed by the suffix *-kai* 'meeting' and *-tai* 'group' (perhaps best regarded as an abbreviation of *dantai* 'group') as in *tanken-tai* 'expedition', *gakusei-tai* 'the student body, the students', and *demo-tai* 'the demonstrators'; by adding the suffix *-in* 'member(s)' you can refer to one or (= *-in-tati*) more of the individuals who comprise the group.

There are other nouns that are inherently PLURAL, notably the coordinate (or "dvandva") compounds such as *óya-ko* 'parent(s) and child(ren)'—meaning one parent and one child, one parent and two or more children, two or more parents and one child, or two or more parents and two or more children. *Titihaha* or *húbo* 'parents' will normally be taken to refer to a pair, but the words can be used for logical aggregations similar to the ones just mentioned and thus they are inherently plural rather than dual. But the word *kyóodai* 'sibling(s)', like other animate nouns, is vague as to plurality, despite an etymology that might suggest otherwise. An inherently plural noun can be the subject of a reciprocal-valence verb, incorporating the reciprocal adjunct within itself: *Óya-ko ga nite iru* 'Parent(s) and child(ren) are resemblant' is logically equivalent to *Oyá ga ko to nite iru* 'The parent(s) resemble the child(ren) and *Ko ga oyá to nite iru* 'The child(ren) resemble the parent(s)'. A dvandva compound can be regarded as a lexicalization made from a syntactic reduction of two conjoined nouns: *oyá to ko* > *óya-ko*. (When the accentuation differs from that of the first noun, the reduction is old; the accentuation of *yóru* [to] *hirú* > *yóru-hiru* 'night and day' shows a more recent lexicalization.) The word *húuhu* 'husband and wife, a couple', a borrowing from a Chinese dvandva, is inherently dual; for 'three couples' you use the counter for sets and say *mí-kumi no húuhu* 'three sets of husband-and-wife'. *Dánzyo* 'male and/or female' may be taken as dual, and that is why it can be used in such expressions as *dánzyo o awásete nihyákú-nin* 'including both male and female 200 people' and *dánzyo o tówazu(-)* 'without discriminating sex = both male and female'. The literary cliché *roozyaku-dánzyo ni ikán mo tówazu(-)* 'without regard to age or sex' is often said with the variant pronunciation *roonyaku-nánnyo*; a similar old cliché is *{kókon} tóozai o tówazu(-)* 'without regard for [the era or] the place'. But *tówazu(-)* merely implies variety: *tíi/zínsyu o tówazu(-)* 'irrespective of position/race'.

Numbers are, of course, specifically singular, dual, etc. Some words contain numbers lexically incorporated within them: *hutago* 'twins', *mitugo* 'triplets', *yotugo* 'quadruplets', *itutugo* 'quintuplets', ... ; *ryoogan* = *ryoo-me* 'both eyes', *ryoohóo(-)* 'both (alternatives)', *ryóosin* = *hutaoya* '(both) one's parents', *ryoo-te* 'both hands', *ryoo-asi* 'both feet', *ryoo-mimi* 'both ears', *ryoo-hasi(/-hazi)* 'both ends', *ryoo-gawa* 'both sides', *ryoo-zín'ei* 'both camps', etc. When such words mean more than one, they are inherently plural if they incorporate reciprocal valences and certain other syntactic properties—such as the possibility of plural-subject reference with a predicate in the representative form *-tári*; otherwise they are collective. To say 'a twin' you must rephrase the concept as 'one of (a pair of) twins'—*hutago no hitóri*. Some counters are inherently collective: *hitó-kumi* 'one set', *it-tui* 'a pair', *is-sokú* 'a pair (of shoes, socks, gloves), ...

Sometimes it is necessary to interpret a noun as dual or plural because the noun is modified in a way that would be logically impossible for something singular: *yottú to*

hutatú no magó 'grandchildren of four and two (years of age)' (SA 2686.36a) must refer to at least two grandchildren, since a single child could hardly be both ages simultaneously; in the cited example the intention was obviously dual, but the full range of meaning would be 'one or more grandchildren of four, and one or more grandchildren of two'. To be sure, the vagueness of the adnominalized proredication represented by nó permits a wide variety of farfetched interpretations that would hardly be appropriate here; as elsewhere, we will ignore this discomfiting vagueness of nó. But I would be prepared to believe someone might intend an interpretation 'the grandchild at ages four and two' with generalized reference, though 'my grandchild [when he was] at age four and at age two' would seem quite an unlikely interpretation for this particular phrase.

The plurality of a noun is often IMPLIED, rather than marked. We have observed that a reciprocal-valence verb such as niru 'resembles' will sometimes signal that a subject-marked noun incorporates two or more entities: Kodomo ga nite iru 'The children look alike'. Certain adverbs also imply plurality, e.g. [o-]tagai ni 'reciprocally', tómo(̄) 'together' (and synonyms); tendé[n](̄) ni 'separately', kakubetu ni 'individually', betu-betu ni 'separately'; sorézore 'respectively' (and synonyms onóono and meiméi); ...

A few verbs necessarily imply plural subjects or objects: atumáru 'they gather', atuméru 'gathers them'; tir-u 'they scatter', tirasu 'scatters them'; ... Verbs that are characteristically thought of as instantaneous will be taken as referring to more than one subject when they are put into a context that suggests beginning, continuing, or ending: ... (rentyuu mo) ki-hazimete iru rasii yó 'they (the gang) are starting to arrive, it would appear' (CK 985.377a.9). Of course ki-hazimeru could be used of a singular subject if it is conceived of as the beginning of an iterative or habitual action, as in 'I start coming (to school every day a half hour early)'. And certain verbs refer to acts that a singular subject would only be able to perform once, such as—barring metaphorical attempts—umareru 'is born' and sinu 'dies'. Thus Kodomo ga umare-sugiru can only mean 'Too many children are being born' and the following sentence will not permit interpretation with a singular subject: Iyakú-hin(̄) no gótoki wa, súde ni háyaku kara uri-túkete, mukasi nára hayazini(̄) sita hitó ga, íma wa sinanaku nátte iru 'People who would have died prematurely in the old days are beginning not to die, as a result of having drugs urged upon them early on' (SA).

The representative form (-tári §9.4) is a signal that the predicate so marked is to be taken as one of several predicates—a vague sort of plurality that can be pinned on particular arguments (= the adjunct nouns) or on the proposition (= the predicate) itself. The word nádo (or a synonym), presented as a generalized conjoiner in §2.9, marks a noun adjunct with a very similar vague plurality 'or the like', and dé mo or d'átte (§2.11) is sometimes to be interpreted in a like way; sonó-ta 'and others' (§2.9, §25) and [no] hoka (p. 76) = 'ígai 'besides' (p. 113) are similar. The set-opener ablative kará '(to include others) starting from ...' and the set-closer allative máde '(having included others) extending to' mark an adjunct as the first or last of an ordered set (§3.7a). Most uses of focus imply other entities or other sentences, especially the uses of mó that Chamberlain referred to as "aggregative" (see the discussion in §2.3). Plural implications are also often present with the excessive (-sugiru §9.1.9), the concurrent (nágara §9.1.3), and some of the verbal auxiliaries of §9.1.10 when combined with verb infinitives of particular aspectual types: -hazimeru 'begins', -tuzukeru 'continues', -owaru 'ends', -au 'does reciprocally', etc.

Other expressions that imply more than one entity include (... no) aida 'between/among ...' and the quasi-restrictive 'kan 'between', which attaches as a quasi-suffix to the

second of two directly conjoined nouns to form a noun phrase such as *Nára Kyootó-kan* 'between Nara and Kyōto' (§2.4). The distributive *-zútu* ambiguously marks plurality: *íp-pai -zútu nómu* means 'drinks a glass of each' or 'each one drinks a glassful' or 'drinks a glassful each time', as well as (by residual vagueness, if nothing else) any combination of these. See §2.5.

2.8. LINKAGE OF ADJUNCTS; NOMINAL CONJOINING

Japanese has a number of devices that serve to link separate sentences with meanings such as 'and', 'or else', 'but', 'when', 'if', and so on; these are taken up at various places in this work. There are also devices that serve to conjoin grammatically parallel adjuncts so that, for example, a single process or attribute can be predicated of two or more nouns either conjointly ('and') or alternatively ('or'). Many—perhaps all—of these devices can be explained as reductions from separate sentences that have been put together with the shared part (the predicate—or the predicate together with OTHER adjuncts) simplified to a single occurrence. Thus the sentence *Tití mo háha mo rúsu da* 'Both father and mother are out' can be explained as an optional reduction from something like *Tití mo [rúsu nara] háha mo rúsu da* 'If (it be true that) father is out (himself) then mother is out (herself also)' as explained in §9.3.2. Leaving aside the marking with *mó*, which is a special case of focus highlighting (§2.3), we will here take up certain other markers typically used to conjoin nouns or noun phrases; unlike the paired use of *mó* mentioned above, these markers are used to conjoin adjuncts BEFORE any relational marker is added. That is, the conjoined noun phrase as a whole is related to the rest of the sentence by a single occurrence of the appropriate marker as in *Tití to háha NI ioo* 'Let's tell father and mother', cf. *Tití NI mo háha NI mo ioo* 'Let's tell both father and mother'.⁵⁵

The markers in question are these: (1) *tó* 'and' (inclusive); (2) *yá* 'and (among others); or (as a representative sampling)'; (3) *ní* 'and (additionally)'—in a somewhat formal list and also in a few clichés; (4) *ká* 'or' (alternative).

Each of these would seem to be derivable from other conversions. Thus *tó* perhaps derives from the quotations of §21 or the conjunctivalization *N dá^[t] tó^[t]* 'when (it is)' of §17.2 if not directly from what I am calling the "subjective essive", rather than from the comitative (= *tó^[t] issyo*) or reciprocal 'with' of §2.2 and §3.6, which itself is perhaps to be treated as a reduction from the conjunctivalization (if not independent in origin). The conjoining *ní* may come from the nominal infinitivization (§9.1.11) 'its being', or directly from the "objective essive", rather than from the "change of position" (MUTATIVE-LOCATIVE) marker of §2.2 (cf. *Rokú ni san o tasu to kyúu ni náru* 'Six and three make

55. Yet I have elicited examples (perhaps a bit stiff) of conjoinings AFTER as well as before case-marking: *Kyóoto e to Nára e [to] ikimásita* = *Kyóoto to Nára [to] e ikimásita* 'I went to Kyōto and [to] Nara'; *Tanaka san kará to Yosida san kará [to] kikumásita* = *Tanaka san to Yosida san [tó] kara kikumásita* 'I heard it from Mr. Tanaka and [from] Mr. Yoshida'; *Sono misé de to ano misé de [to] tábeta* = *Sono misé to ano misé [to] de tábeta* 'I ate at that restaurant and at that other restaurant'. Perhaps it is possible to use this difference to make subtle differences of implication for certain sentences—such as whether the two actions are closely connected in time or logic rather than being independent of each other. But notice that the subject marker can be applied only after conjoining (*N tó ga* but not **N gá to*): *Tanaka san to Yosida san tó ga ikú no nara, sinpai nái* 'If it's Mr. Tanaka and Mr. Yoshida who are going there's nothing to worry about'.

nine'), which is itself probably secondary. And *ká* and *yá* are reductions from nominal questions 'is it ...?' → 'whether ... or' with the sentence-extensions of §15.6 and §15.6a, respectively, which call for ellipsis of the imperfect copula *dá*. This means we impute a somewhat complex derivation to a sentence like *Senséi ka gakusei ká ga yobu* 'The teacher or the student calls'—a sentence that, once made, is reducible to *Senséi ka gakusei ga yobu* by optional (and common) suppression of the second *ká*, or to *Senséi ka gakusei ka yobu* by optional omission of the case marker *gá* (producing ambiguity with the similar reduction of *Senséi ka gakusei ká o yobu* 'I call the teacher or the student'), or even to *Senséi ka gakusei yobu* by both processes (the latter sentence also being ambiguous with respect to subject and object). The immediate derivation of the subject is from a nominal sentence *Senséi ka gakusei ká da* 'It is a question whether it is the teacher or the student' and that sentence is a nominalization of a pair of alternative questions conjoined by simple parataxis: *Senséi [da] ka gakusei [dá] ka* 'Is it the teacher or is it the student?' (This explanation is supported by the occurrence of *dátta ka* in similar conjoinings.) The individual questions are, in turn, interrogativized (§15.6) nominal sentences, serving either as identifications or, more likely, as proredications (§3.10).

Similar devices are the use of *dá no* (§15.17), *yára* (§15.18), and *nári* (§15.19). The two expressions *dé mo* and *d'átte* (§2.11) 'even being' conjoin adjuncts after the pattern of *mó*, being applied AFTER relational marking (but cf. p. 170n): *Oosaka kará de mo Kóobe kara dé mo tegami ga kimásita* or *Oosaka kará d'atte Kóobe kara d'atte tegami ga kimásita* 'Letters came from as far as Ōsaka and Kōbe' but not **Oosaka dé mo Kóobe de mo kara ...* or **Oosaka d'atte Kóobe d'atte kara ...*. But with *tó ka* 'or the like' (§21.6) case markers can be applied either before or after conjoining: *Oosaka kará to ka Kóobe kara to ka tegami ga kimásita*; *Oosaka tó ka Kóobe to ka kara tegami ga kimásita* 'Letters came from such places as Ōsaka and Kōbe'. (Examples of *tó ka ga/o/ni* will be found in §21.6.) The effect of the *tó ka* or *dé mo* is largely independent of the conjoining; in a sense, this may be true of *mó* as well. Some other paired devices with much the same effect as *dé mo* ('whether ... or ...') are *ni si ró* or *ni sé yo* (§16.1, §9.1.11) = *ni sité mo* (*ni sit'átte*) and *de aróo to/ga/ni* (§21.5, §17.6, §17.7).

See also *nádo* (§2.9) with its inbuilt implication of conjoining.

One difference between *ní* and the other markers (*tó*, *yá*, *ká*) is that in general the items linked with the latter are semantically reversible (*A to B = B to A*) but those linked with the former are generally ordered so that *A ni B [ni]* cannot be easily reversed with the intended meaning.

In spoken Japanese it is usual not to mark the last item in a nominal conjoining—... *yómu kotó to káku kotó {to} wa ...* 'reading and writing' (SA 2672.109b), especially if a marker is called for to relate the conjoined phrase to the rest of the sentence: *A to B ni ageru* 'I will give it to A and B', *A ka B ni ageru* 'I will give it to A or B', *A ya B ni ageru* 'I will give it to A and B (and perhaps others)'.⁵⁶ But it is possible to mark also the final

56. In the following example, only *yá* marks noun conjoining, for *tó* marks the conjoined phrase as reciprocal, in valence with the verb: ... *hippii YA gakusei TO syuu-hei ga syoototu sita* 'the state troops clashed with the hippies and students' (SA 2685.16c). This means *syuu-hei ga* could be permuted to appear in front of *hippii ya gakusei to*. (The other interpretation is not impossible, however.)

item with *tó* or *ká* (or *tó ka*) or even *yá*—though that is largely limited to set phrases—for special emphasis or to bring out the full flavor of the predicate:⁵⁷

TÓ: A to B *tó kara nátte iru* 'It is made up of A and B'; Monó to monó to o kookan suru 'They barter things for things'; A to B *tó no tunagari ...* 'The links between A and B'; Káno-zyo to ore *tó no kotó wa ...* 'The affair between her and me' (SA 2642.37d); Sosite, *dekiru yátu to, dekinai yátu to o tyan-tó^[r] kúbetu suru* 'Then you make sure to separate those who are able and [= from] those who are not' (SA 2668.47c); Yooróppa no búngaku wa, koogo to bungo *tó no hedatári⁽⁻⁾ ga óokiku náí* 'The literatures of Europe have no wide disparity between colloquial language and literary language' (Ōno 1966.233); Sina-go to Nihon-go *tó ga sessyoku suru* 'The two languages Chinese and Japanese come into contact with each other'; Puro-yákyuu no gízyutu to daigaku-yákyuu no gízyutu to ga, sore-hodo hakkíri sita *sá⁽⁻⁾ wa náí desu né* 'The techniques of pro baseball and those of college baseball are not all that clearly different, you know' (Tk 3.60b—the sentence would sound better with *ni* in place of *ga*).

KÁ: Watakusi ka ootoó ka ga o-ukagai simásu 'Either I or my little brother will come to see you'.

DÁTTA KA: Syuusen tyókúgo⁽⁻⁾, Tookyoo no zosidaigakuséi-kan ni "kimi" dátta ka "bóku⁽⁻⁾" dátta ka o moti-iru kotó ga ryuukoo sita 'Right after the war, it was popular among college coeds in Tōkyō to use "kimi" or "boku"' (Maeda 1962.69).

TÓ KA: ... keibi-táisei to ka keikai-hóohoo to ka o zyuubún ni kenkyuu site ... 'adequately studying defense arrangements and alarm methods (and the like) ...' (Tk 3.6b); ... gó-ri to ka rokú-ri to ka hanáreta tokoró e ... 'to a place some five or six *ri* away' (Kb 55a).

YÁ: Are ya kore ya [de], sigoto ga takusán átta 'What with that and this, I had a lot of work'; Are ya kore *yá o kangáete míru to ...* 'Considering one thing and another ...' (Shiba 155); Kúne-kune sita hassoo ya bigaku ya no kooryuu de áru 'It is the interchange of meandering expressing and [= with] esthetics' (SA 2662.33d).

And you will find the last item marked somewhat more often in written Japanese: *wakái monó no kiboo to yumé to o syootyoo suru* 'it symbolizes the hopes and dreams of young people' (KKK 25.80a). But even in written Japanese, *A to B* is five times as frequent as *A to B to*; and *A ka B* is almost ten times as frequent as *A ka B ka* (KKK 25.140ff). Written Japanese also overwhelmingly prefers *A ya B* over *A ya B ya*, which is largely limited to set phrases. But *A tó ka B tó ka* has about the same frequency as *A tó ka B*, and an equal ratio apparently applies also for *A yára B [yára]* and *A nári B [nári]*. In written Japanese it appears to be easier to mark the last item if it is short; of 100 examples (in KKK 25.143), the B of 68 was a single *bunsetsu* (= basic phonological phrase, i.e. accent phrase) and the B of 12 contained only two *bunsetsu*. In choice of conjoiner, we find *tó* almost twice as frequent as *yá*, and *ká* and *tó ka* are each far behind (only five percent as common as *tó*), according to the statistics on written Japanese in KKK 25.

In some cases you might feel that it is necessary to mark the final item in order to avoid ambiguity, thinking that *Sekái-si to Nihon-si to no hón o kau* will mean 'I will buy books on world history and on Japanese history' but *Sekái-si to Nihón-si no hón o kau* will mean 'I will buy a book on world history and Japanese history (i.e. a single book that

57. But the final *tó* will never appear before the reciprocal *tó*: A to B ~~†tót†~~ to soodan suru 'consults with A and B'.

covers both)'; in fact, however, either has both meanings. This is part of a larger problem of ambiguity that arises when more than two items are involved. If you have, say, *A to B to C ...* it is possible to treat them as in a polymer—an unstructured series that, like a string of evenly matched pearls, is totally permutable, the meaning 'A and B and C ...' being the same as *B to A to C* or as *C to B to A* or as *C to A to B*. But it is also possible to assign a structure that brackets some groupings as against other groups: *(A to B) to C* 'A and B—with C', *A to (B to C)* 'A with B and C'. The possible ambiguities increase, of course, with the number of items conjoined; junctures often, but not always, give cues to the intended meaning. When an adnominal element precedes coordinated adjuncts (whether tightly conjoined as *N to N* or loosely conjoined as *N mo N mo*) the reference may be either to both of the adjuncts or to the first: *yuumei na A to B* 'A and B who are famous' or 'A who is famous and B', *yuumei na A mo B mo* 'both A and B who are famous' or 'both A who is famous and B'. In order to cue specifically the latter meaning (with the adnominal intended only for the first item), the typical minor juncture used to signal the conjoining will be promoted to a major juncture. No such ambiguity will be present if the adnominal is applied only to the second element (*A to yuumei na B* 'A and B who is famous', *A mo yuumei na B mo* 'Both A and B who is famous') because whatever is modified must follow the adnominalization.

Another ambiguity arises with phrases such as *A ya B mo*, which can be interpreted either as *A ya B + mo* 'even/also A and B (among others)' or as *A ya + B mo* '(among others) A and even/also B', depending on whether the focus highlighting is intended to apply before or after the conjoining.

In theory, at least, it is possible to conjoin with a different (or even the same) marker two or more sets of conjoined phrases: *A ya B to C ya D*, *A to B ya C to D*, etc.; *?A to B to C to D to* *tó [tò]*, *? A ya B yá ya C ya D*, *? A ka B ká ka C ka D ká [ka]*—but in such attempts the surface repetition of the marker would normally reduce to a single occurrence, leaving the listener with an ambiguity. A conjoined phrase can be further conjoined with a single noun, but the result is ambiguity: *A ya B to C* could be taken with two different constituency structures. In the following example the structure appears to be *A to [B ni C]*: ... *hutá-kumi no síngu TO tukue NI hónbako to iu kantan na hikkosinímotu ga ...* 'a simple moving-load that consists of a couple of sets of bedding and a desk and bookcase' (Fn 100a).

Certain pairs of words are conventionally said in a given order and sound odd when reversed (like English 'bread and butter, rain or shine, bed and board', etc.). Where English says 'This and that' Japanese says *Are ka kore (ka)* or *Are ya kore (ya)* and the opposite order sounds as out of place as the English 'that and this'. Such expressions, being set phrases, will allow the second conjoiner to surface more often than is usual: *Are ka kore ká ga átta* 'We had this and that'; *Are ka kore ká o kaimasyóo* 'I guess I'll buy this and that'; *Are ya kore yá ga kiki-tákute ...* 'Wanting to listen to this and that ...'; *Are ya kore yá to mendóo na kotó ga áru kara* 'What with this and that there are all kinds of nuisances. so ...'; *Are ya kore yá o kangae-awaseru to ...* 'After putting this and that together (I conclude that) ...'. *Are mo kore mo* means 'both this and that' and *aré-kore* is an adverb that means '(what with) one thing and another'; *tó-ya-kaku (iu)* '(says) this and that = object-ing, criticizing' is an adverb, derived from **tó ya káku ya*.

Another device for conjoining nouns or noun phrases is direct juxtaposition (parataxis),

usually marked with a juncture that is often written in Japanese texts with a comma or a raised dot.⁵⁸ Examples of the comma: ... yottu-mózi no hígo, waigo ga ... 'four-letter vulgarisms and obscenities' (SA 2678.98b); Syoogákkoo, tyuugákkoo e kayoi-nagará,^[L] tokidoki bútai e wa déte 'ta wáke desu ka 'You mean you sometimes appeared on the stage while still going to elementary school and junior high?' (Tk 2.270b); Kyoosan-too d'átte Márukusu, Réenin no sínzya de náí desu ka 'Aren't the Communists themselves believers in Marx and Lenin?' (SA 2671.19a). Examples of the raised (centered) dot: Ázia · Ahurika ... 'Asia and Africa'; ... mázu bukka · genzei, túide(¯) daigaku · kyooiku, san-ban ¯mé ga noosei dáta ... '... first of all it was prices and tax cuts; next, universities and education; third, farm policy ...' (SA 2661.116c)—when taped, this was read as daigaku-kyóoiku 'university education'. Sometimes there is no written signal to warn against misinterpretation as a compound noun: Sono kóro no sinbun zassi no kizi ... 'Articles in the newspapers and journals of the day' (Tk 2.268). In general there will be an accentual clue when read aloud; thus the minor juncture in úha | sáha (ga momete iru) 'the right wing and the left wing (are in discord)' signals a syntactic structure—here, that of conjoining. And we know that gízyutu no kenkyuu kaihatsu [*sic*] 'the research and development of a technology' (SA 2660.117c) is to be taken as two nouns in direct juxtaposition rather than as a compound noun, for it is read aloud without the compound accentuation (*)kenkyuu-káihatsu which, if used, will mean 'research-development'. (Similar: yotoo yatoo 'the in-party and the out-party'.) But when the first noun is atonic and the second is prototonic there may be no clue in the pronunciation to tell you whether it is a direct juxtaposition or a compound noun: the dropping of the juncture in rekisi (|) búngaku 'history and literature' will make it sound the same as rekisi-búngaku 'historical literature'.

Elsewhere (Martin 1970a) I have suggested that we treat this phenomenon of direct juxtaposition as an ellipsis of one of the markers *tó* or *yá*, but we will have to add also *ká* on the basis of the following example, where direct nominalization is applied after the conjoining: ... saiyoo suru^[L] [ka], sinái [ka] o kimerú no ga hutuu dá ... 'it is usual to decide on whether to offer employment or not' (SA 2652.66c). A more abstract view would perhaps treat parataxis as an undifferentiated conjoiner at a higher level. Numerous examples of parataxis will be found in Martin 1970a and in MJW. Here are some additional examples, with the assumed ellipsis marked, and with juncture shown: Kore wa || ii tokoro^[L] {to} || warúi tokoro^[L] {ga} || arimásu | yó 'This has good points, {and} bad points' (R); ... iroiro || Kyóoto {to} || Nára no || butuzoo dé mo ... 'the various statues of Buddha in Kyōto and Nara ...' (R); Kodomo no koto^[L] {to} [|] katei no kotó o || zikkúri to | kangáete || sínboo | sinasái 'Think of your children, (and) of your family; persevere!' (SA 2649.108d); ... káre-ra [to] || kánozyo-ra no | warai-gao no náka de ... 'Among the smiling faces of the boys and girls ...' (SA 2654.135c); ... keisiki-teki na mono^[L] {to}, || zimu-teki na mono^[L] no óoi no ni || odoróitari | akiretári [|] sita 'I was startled and aghast at how many formalities and routine chores there were' (SA 2659.134a); Yómi-kaki {to}, || soroban 'Reading, writing and arithmetic' (Kusakabe 1968.61).

Parataxis can also be used to conjoin adverbs and adverbial expressions where ellipsis of the above sort would not serve as an explanation: Bóku(¯) no operettá-netu wa, hí-goto(¯)

58. But the raised dot is occasionally used for other purposes, as well, including such oddities as treating puratto(-)hwóomu as if it were 'plat form' in English by inserting such a dot (Tk 2.160a), perhaps under the influence of the Japanese abbreviated version h[w]óomu; a similarly misguided dot is used in Berurin no hwiru(-)háamonii to iu yátu 'the Berlin Phil()harmonic' (Tk 3.50b).

[] yó-goto(⁻) ni takamátte, ... 'My enthusiasm for opera rose day by day and night by night ...' (SA 2641.50c)—the ellipsis can only be of ní). See also the possibility of directly conjoining adjectival nouns (§ 13.5a) or verbal nouns (§ 14.3).

Certain idiomatic phrases are doubtless reduced from conjoined nouns but the ellipsis is now obligatory: kókon ǂ?toǂ tóozai 'all ages and all places'.

There are a number of linking phrases—usually set off by juncture—such as sosite 'and then/also', sore ni 'and also', sore kara 'and then (also)', sono ue 'on top of that = additionally', máta(⁻) 'and also' (often following mó), arúi-wa = máta-wa 'and/or', narabi ni 'and (equally), óyobi(⁻) 'and additionally', kátu 'also', etc. These often serve as fillers to explicate the parataxis. (From the juncture alone we cannot always be sure how to interpret N | N or N || N, in view of the variety of ellipses possible; see Martin 1969.) But they also occur after a conjoiner-marked phrase: Ozi ya sosite méi mo zyookyoo suru 'The uncle, and the niece too, will be coming to the capital'.

On conjoining see also Kunihiro 1966, Yamada and Igarashi 1967. Some related questions are discussed under apposition § 25.

A number of problems remain. For example, there are unusual conjoinings when quantifiers such as numeral-classifier compounds are present: Hón o is-satú to pé n o ní-hon kau 'I will buy one book and two pens' is problem enough, but what about Hón is-satú to pen o ní-hon kau with the same meaning? The explanation for these oddities is to be found in the underlying structures for quantification of nouns, as explored in § 13.6. Here, I will simply list the possible conjoinings that occur as direct object (ó) or as subject (gá), with formulas to show the number word or quantifier (Q) and noun (N) as well as the typical conjoiner tó. Other surface versions are possible by suppressing the marker ó, which can be regarded as optional in all occurrences below.⁵⁹

CONJOINING OF QUANTIFIED NOUNS

Q no N to Q no N o	Is-satú no hón to ní-hon no pé n o kau.
N o Q to N o Q	Hón o is-satú to pé n o ní-hon kau.
Q no N to N o Q	Is-satú no hón to pé n o ní-hon kau.
N o Q to Q no N o	Hón o is-satú to ní-hon no pé n o kau.
*Q no N o to Q no N o to	*Is-satú no hón o to ní-hon no pé n o to kau.
*N o Q to N o Q to	*Hón o is-satú to pé n o ní-hon to kau.

Examples of yá-conjoinings: Minami kará ya kitá(⁻) kará ya hóoboo kara atumátta 'They came together from north and south and all over'; Kiirói no ya akái no ya samázama(⁻) no iroái(⁻) dá né 'They are yellow and red and all sorts of shades'; Hitorarízumu ya puroretária no dokusai no sinpóo-sya ni tótte kono syó ga omosiróku náí kotó wa toozen de aróo 'It is only natural that this book would give no pleasure to the devotees of Hitlerism and (= and/or) the dictatorship of the proletariat' (KKK 3.223); ... syákai o hametu ya konran kara mamóri, ... 'protecting society from collapse and/or chaos' (KKK 3.223); ... sitagátte(⁻), síi ya henken ya gáí ga táda genzitu-teki na kóoka no na ni yotte minogásárete(⁻) iru zituzyoo de átte mireba, ... 'accordingly, when we consider that selfishness and bias and wilfulness are countenanced in the name of actual

59. See § 13.6 for a more explicit formulation.

effectiveness ...' (KKK 3.223); Wareware wa hooritu ya syuukan ya reigi no yurúsu han'í-nai ni óite(¯), ... 'Within the sphere permitted by law and custom and etiquette, we ...' (KKK 3.223); Kissá-ten no kási ya súsí nádó ga mondai ni náru no de, ... 'Since the pastry and pickled rice and the like (served) in teashops are in question ...' (KKK 3.224).

Examples of ní-conjoinings: ... yamataká-boo ni kuro-sébiro no hutari no syoonen ga ... 'Two boys in bowlers and black suits ...' (KKK 3.151); Akai syátu ni, hosomé^l(¯) no zubón, gomuzóori to itta hucusoo '[He was] attired in a red shirt with narrow trousers and rubber zori' (Gd 1969/9.101)—the parataxis indicated by the comma represents the ellipsis zubón [to] l; Tenpura ni | sasimí 'Fritters and sliced raw fish'; Pán ni | báta 'Bread and butter'; Biiiru ni | Masámune, ll an-pán(¯) ni | kyarameru! 'Beer and (Masamune-brand) sake, beanjam buns and caramels!' (KKK 3.151).

In poetic clichés the ní often seems to be equivalent to ní [tái-site] wa 'in contrast with': Tuki ni murakumo, haná ni kaze 'The moon has its clouds, and blossoms have the wind [to contend with]'. Ása ni ban ni 'both morning and night' is an idiomatic phrase used to mean 'all the time, always, frequently'. The noun ása-ban (a reduction from ása to^l ban, as shown by the accent) 'morning and night' is also used as an adverb to mean 'always'.

Examples of sentences conjoined by tó or tó ka will be found in KKK 3.118–9; for conjoinings with tó ka and dá tó ka see §21.6. Examples of conjoining marked by other particles—ká, dá/dátta ka, dá no, mó, dé mo, etc.—will be found in the appropriate sections of this book. Sometimes direct nominalization (§14.6) with ellipsis of the nominalizing nó leaves a conjoining tó directly after a verb or adjective: Yómu {no} to míru {no} to wa oo-tígai [da] 'Reading it and seeing it are vastly different' (Kusakabe 1968.62).

Some roundabout expressions that conjoin nominals are described elsewhere in this book:

X to ii Y to ii	}	'either X or Y' §21.1.(27).
X to ii Y to itté mo		
X to itté mo Y to itté mo		
X ni sité mo Y ni sité mo	}	'whether X or Y' §9.1.11, §14.6 (#18).
X ni sit'átte Y ni sit'átte		
X ni si ro Y ni si ro	}	'whether X or Y' §9.1.11, §14.6 (#19), §16.1.
X ni sé yo Y ni sé yo		

(These quotative and mutative-putative conjoinings are often followed by predicates that imply an unfavorable evaluation.)

2.9. NÁDO; NÁNKA; NÁNTE

The word nádó is used with at least three meanings; for the third meaning nán-te is a synonym and for all the meanings nádó [Tk 2.238—dialect?], nánzo, názo, and nánka are variants or synonyms.⁶⁰ But nánka and nán-te are informal and lively, hence more susceptible

60. According to Maeda 1961 nánzo is a Tōkyō form, Ōsaka preferring nánka. MKZ gives two other uses of nánzo: one is equivalent to nani ka 'something' or 'anything' (the example given is Nánzo nai ka 'Isn't there anything?') and the other is a literary rhetorical 'how (possibly)' or the like, as in this example from modern prose: "... tó wa nánzo ya 'What ever do they mean by "...'??'

to special connotations, such as sarcasm. (*Nánzaa* is an abbreviation of *nánzo* [wa] = *nádo* wa. *Nádo*₂ and *názo*₂ are synonyms of *náze* 'why' in Literary Japanese.) You may detect a semantic resemblance in *yára* (§15.18) and ...*tári* (§9.4).

The meanings are these:

(1a) 'or the like, or something; maybe, say, just'—sometimes used to show deference, modesty or diffidence, as also is *dé mo* (§2.9): *Watakusi nádo tote-mo damé desu* 'Poor me, I'm just no good at it'; *Go-issyō ni syokuzi nádo [= dé mo] ikága desu ka* 'Won't you have a bite with me?'; *O-tati no katá wa turikawa nádo ni o-tukamari kudasái* 'Persons standing will please hang on to the straps or the like [= other secure holds]' (sign on bus).

(1b) 'for example, say, (let us) take ...'—sometimes, but not always, prefaced by *tatóeba* 'so to speak': *Tatóeba yuusyoku no tokí nádo wa, konna húu da* 'For instance at, say, dinner time it's like this' (SA 2640.107e); ... *mukasi no yóo ni nónki ni turi nánzo site iru monó wa hitóri d'átte arimasén* 'there wasn't a soul idly fishing, say, the way they used to' (Kubota 127a); *Óngaku nádo o-suki desu ka* 'Do you like, perhaps, music?' Cf. ... (no/ga) *gótoki wa* (§13.2, §14.6).

(2) 'the group of ... (with or without others); such things/people/places etc.; and others; and the like; and so on'—more often implying others than not: *Inú ya néko nádo made oo-sawagi da* 'What with dogs, cats, and all, what an uproar!' A close synonym of *nádo* in this meaning is *sonó-ta* 'and others, and the rest, and so on': *Séihu | sonó-ta no | dantai kara ...* 'From the government and other [or: and like] groups ...' (SA 2670.108c); *Omake ni, || kénsa | sonó-ta de, ...* 'In addition, with the investigation and all ...' (SA 2664.27b).

(3) 'the likes of; such a thing/person/place etc.'—often used for belittling. *Nánka* and *nánte* are particularly common with this meaning.

In the second meaning (cf. §2.7) *nádo* is sometimes reiterated: *nádo | nádo* 'etc., etc.' as in *Zyón no kao daké o utúsita tanpen-éiga "Sumáiru" nádo nádo de, iwáyúru "ryoosiki" to "titúzyo" ni tyoosen site kíta* 'With the short film "Smile" that showed nothing but John's face and so on and so on, he [= John Lennon] has started challenging so-called "conscience" and "order" (SA 2670.134). In somewhat formal speech *nádo* in this meaning can be replaced by *tóo*, the Chinese reading of the character often used to write it, and || *nádo | nado* || can be replaced by || *tóo | too* ||, as in *Tookyoo, || Oosaka, || Nágoya || too | too no || dai-tókai ...* 'large cities such as Tōkyō, Ōsaka, Nagoya, etc.'

Nádo appears after adnominalized sentences as (or, as if?) a postadnominal and it also appears after nouns as if it were a restrictive (§2.4). But in accentual behavior *nádo* differs from most of the usual restrictives for they are attached to nouns with no juncture (and earlier accents are cancelled). *Nádo*, on the other hand, is like *mítai* (§2.12) in attaching to nouns with an optional minor juncture; the juncture seems to drop more readily in the "belittling" meaning so that *zimú-in (|) nádo* = *zimúin | nádo* more likely means 'office workers for example (or etc.)' and *zimúin nado* more likely means 'a mere office worker'. The distinction will be neutralized for atonic nouns, since the minor juncture will normally be suppressed: *kodomo [|] nádo* = *kodomo nádo*. After an oxytonic noun, the juncture will remove the final accent and then disappear, so that *otokó [|] nádo* = *otoko*

(SA 2672.125c). Examples of *nádo* are given in Terase. *Nádo* goes back to Heian times (Satō 2.102).

nádo will be distinguished from otokó nado with no underlying juncture. Cf. the remarks on optional juncture with dé mo and d'átte, p. 171.

Like the restrictives, nádo can either be followed by a peripheral case marker or be attached to noun + peripheral case marker, with slight differences of meaning: Tegami ga tomodati nádo kara kíta or Tegami ga tomodati kará nádo kíta 'Letters came from friends and the like'.

Examples of nádo preceding and following various case markers: Yuuzin nádo kara kiita 'I heard it from friends (and the like)'; Aitu kará nádo hanagami ití-mai de mo morai-taku náí 'From the likes of him I wouldn't even accept a Kleenex'; Yuuzin nádo ni hanásita 'I spoke to friends (and the like)'; Yuuzin ní nádo hanásita rasii 'Apparently he spoke to a friend or someone'; Yuuzin nádo to hanasi-au 'I will talk with friends (and the like)'; Yuuzin tó nádo hanasi-au kotó wa métta ni náí 'I seldom talk with friends or anything'; Yuuzin nádo e sirasemasyóo 'Let's tell our friends (and all)'; Yuuzin é nádo wa sirasezu ni kázoku daké ni siraseyoo 'Let's not tell our friends or anything but just tell the family'; ... gyuunyuu ya zooketú-zai nádo de eiyoo o yóku sité kara ... 'after improving the nutrition with milk and blood-enricheners and so on ...' (KKK 3.132).

An example with nánka FOLLOWING ní: Konna syuukai ní nánka sánka(¯) si-taku náí ga ... 'I don't want to participate in any such meeting as this but ...' (SA 2661.112e). And examples of nánka following the marker dé in several meanings: Gakkoo dé nánka sonna kotó wa osienái daroo 'At school, say, they wouldn't teach any such thing, surely' (locative); Enpitu dé nánka káite wa ikenai 'You mustn't write with (= in) pencil or anything' (instrumental); Soko wa miti ga sémákute kuruma dé nánka ikenai tokoró da 'That is a place that the roads are too narrow to get to by car or anything like that' (vehicular).

But the core case markers gá and ó (also, often, ní?) more often attach after nádo, as in these examples (the first of which shows the variant nánzo): Anáta no ozii-sama nánzo ga, iroiro omosirói monó o o-kaki ni nátta kara ... 'That grandfather of yours has written a lot of interesting things, so ...' (SA 2663.46c)—notice how 'that' or 'that ole [= old]' sometimes captures the flavor of nádo and its variants; Koohii, o-tya nádo ga arimásu 'We have coffee, tea, and so on'; Náo zoowai ¯gawa wa kaisya, kobútú-syoo, insyóku-ten nádo o hittoo ni ... 'And as for those engaged in the bribery, [we can put] companies, antique dealers, restaurants and the like at the head of the list ...' (KKK 3.132); ... kono hwírumu o tukatte densyoo-syásin nádo o ooyoo suréba ... 'if we use this film to put into practice telephotography, for example, ...' (KKK 3.131).

And an example of a communicative-instrumental FOLLOWING nánka: Iya, sinbun nánka de iroiro itte 'másu kedo, zenzen noo-kánkei desu yó 'Oh, in the newspapers and the like they say all sorts of things, but I have absolutely "no interest"' (SA 2678.46b).

It seems obvious that (l) nádo, which first appeared in the Heian period, comes from an abbreviation of (l) nán[i] to 'and what' just as (l) nánka is an abbreviation of (l) nán[i] ka 'or what; something'; cf. ... ítu mo nán ka sira yatte 'ru 'I'm always doing something (or other) (Tk 314a). (Japanese grammarians usually take tó as the quotation marker, but both that and the 'and' tó may well be extensions of a single form, the subjective essive.) It is interesting that the nk of nánka has not made the grade to /g/ despite the passage of nt to /d/, no doubt by way of [nd] as the variant nándo would indicate; does (*)nága turn up in any dialect?

In any event, I would like to suggest that the postnominal nádo be explained as a generalized conjunction: N (l) nádo is a surface realization of something like

N tó | nani to 'N and what/anything' and N (l) nanka is a surface realization of something like N ka | nani ka 'N or something'.⁶¹ Such an explanation would account for the phrasing (the junctures) as well as for the shapes of several of the variants. (Etymologically zó may be related to -dó and tó, as pointed out on p. 89.) Nani-to was early used as an equivalent of nado; both versions go back to Heian times (Meikai kogo jiten 1135a).

Examples of nado and its synonyms will be found in KKK 3.131-3 and in Alfonso 118 ff, 1138 ff. Alfonso (1138) says that nanka is rare after anything other than a noun, and that *N nanka to iu is replaced by N nado to iu or by N nante iu. He considers nante an abbreviation of nado tó; but historically, at least, the abbreviation would seem to be from nán[i t]te = nani tó, the same source as for nado itself. Notice that *nante TO iu does not occur.

I have said "something like N tó | nani to" because we must allow for sentences of the sort A ya B nado and A ka B nado as well as A tó^[1] B nado. It is not quite clear, however, whether the nado of such sentences is to be considered the final member of a polymer (a coordinate chain)—the last bead on the string, as it were—or whether B nado is an already conjoined unit, derivable from B tó^[1] nado regardless of what may happen next. Relevant to this problem, perhaps, is the fact that A tó^[1] B nado tó^[1] seems to be acceptable, (?) A ya B nado is questionable (but recall that marking the last item with yá is always in some question), and *A ka B nado ka is apparently rejected—in the intended structure, though as a full sentence (= A ka B nado desu ka) used to question A ka B nado [da], the surface form is possible. If the nado-conjoining is indeed to be taken as in harmony with the conjoinings that precede it, we will have to assume that we are dealing with a higher-level undifferentiated conjoiner that is expressed (doubly) in nado and its synonyms. An example: Tyokoréto TO kyameru NANKA wa, riekí-ritu ga óói hōo desyoo né 'Chocolate and caramel (and the like) have a higher margin of profit, you see' (Tk 4.193a).

A fourth use of nado has been suggested, when N nado is followed by a negative and the nado functions much like mó 'even': Úso nado tukimasén 'I tell you no lie' (MKZ 632).

Nado and its synonyms in the first use mentioned above can be applied—as can dé mo—to express nuclear focus: N dé nado áru, A-kú nado áru, V-í nado suru. See §5. These elements can also separate the gerund from auxiliaries; see §9.2.4.

When quoted, nado can be preceded by various finite forms (presumably under direct nominalization) and even by sentence extensions (= sentence-final particles, §15): Kóndo no Syoogátú, mósi atarasii gomu-in o osita gazyoo ga todóitara, insatú-dai(¯) o ketitta ná, nado to omowanai yōo ni negai-tái 'If this January you should get a greeting card with a new rubber stamping, please don't think such thoughts as "so he's too stingy to have it printed, eh"' (SA 2658.39d); Baka da nado to wa yumé-sara omótte inai ziko o ... '... oneself whom one would never dream of thinking "I'm a fool" about or the like' (Maeda 1962.25); Toruko-go dá nado to iu to, ... 'Speaking of Turkish and all ...' (Shibata in Ōno 1967.69); Zyuken o kyoosei-sitá nado to iu zízitu wa arimasén 'There are no cases

61. As indicated by such a sentence as Bóku(¯) ga Kyúusyuu ka nanka e iku tokí desita yó, ... 'It was when I would go to Kyūshū or the like, I tell you, ...' (Tk 2.273-4). Also: ... kéiko no si-kata ya nanzo tiguaú desyoo né 'the way you practice and the like must be different, I suppose' (Tk 3.15b); Sensoo no eikyoo de, wakái monó ga pan-syoku ya nanka ni nárete kita kara daróo to omotta n desu kedo né 'We thought it must be because the young people, under the influence of the war, had grown accustomed to eating bread and so on' (Tk 3.81a). (*N tó nado is apparently unacceptable.)

of people having been coerced into taking the examinations [for the Self Defense Force] or anything' (SA 2678.29b)—recorded both /sitánado/ and /sita[|]nádo/; ... Eikokú-zin-tati wa, móo kaikyuu wa naku-nattá nádo to ittári surú ga, ... 'It is sometimes said that for the English their social classes have perhaps disappeared, but ...' (SA 2681.108a).

These examples put nádo after a hortative that enters a quotation: ... zénbu o yomóo nádo to kangáenai de ... 'wasn't thinking of reading all of it, exactly, but ...' (SA 2657.104b); Nihon-zín wa, sono sizen o, ningen no tika^(r)rá(¯) de sáyuu siyoo nádo to wa kangáezu, hitásura(¯) sono sizen no íryoku, réiryoku no máe ni kasikomátta 'The Japanese did not think to control Nature by man's strength or anything of the sort, but stood with total awe before Nature's power and authority' (Ōno 1966.64).

Some examples of nádo with restrictives, focus, etc.: Soozí nádo daké wa dekirú ga ryóori wa dekinái 'Just cleaning and all I can do, but I can't do cooking'; ?Mizu daké nádo de wa ikirarenai 'One cannot live on, say, water alone'; Tumaránai zassi nádo bákari yónde iru 'I'm just reading dull magazines and the like'; (?)Soko ni áru no wa hón, zassi bákari nádo desu 'What is there is just books, magazines, and the like'; Soozí nádo ¯gúrai wa dekirú ga ryóori wa tyót-to ... 'I can do at least the cleaning and all, but the cooking, well ...'; Kyokutyoo ¯gúrai nádo nara kantan ni naréru 'One can easily become at least the likes of a bureau chief'; Konna yowái sake ¯gúrai nádo (or: sake nádo ¯gúrai) wa noméru desyoo 'You should be able to drink the likes of wine this weak'; Sake, tabako nádo hodo karada ni warúi monó wa náí 'There's nothing so bad for the body as liquor and tobacco (and the like)'; Sore-hodo nádo to wa omói mo oyobanákat^(r)ta 'I just never thought of it that much or anything'; Hutarí ni mittú ¯zútu nádo de wa tarinai 'It's hardly enough, three for every two people or the like'; Kyokutyoo máde nádo nara sugu naréru 'One can get to be a bureau chief and all in no time'; Tyuugoku-go, Nihon-go wa motíron, Tagarogu-go nádo made benkyoo sita 'I even studied Tagalog and all, to say nothing of Chinese and Japanese'; Kyokutyoo ¯átari nádo ni náru to sekinin ga taihen da 'When you become a bureau chief or the like the responsibility is terrible'; Kimi nádo ¯átari ni wa bóku(¯) no táisi wa wakáru ¯mái 'I don't expect the likes of you to understand my ambition'; Méizi ¯zídai, Taisyoo ¯zídai ¯ígo nádo ni wa, soo iu syuukan wa naku-natta 'Since the Meiji period and the Taishō period and all such customs have disappeared'; Kamakurá(¯) ¯zídai, Murómachi ¯zídai nádo (¯)ígo ni wa soo iu syuukan wa naku-natta 'Since the Kamakura period and the Muromachi period and all, such customs have disappeared'.^{61a}

And some examples of nánka with focus, restrictives, etc.: Kanzya no kao o syoomén kara utúsita síin nánka mo átte ... 'There are even scenes showing patients' faces from the front and the like and ...' (SA 2672.116e); Tuke-mátuge nánka de mo [= d'atte] hazime wa iya-gátta món desu yó 'Even false eyelashes (and the like) they disliked at first, you know' (Tk 2.103a); Bóku(¯) nánka de mo ... 'Even such as I ...' (SA 2679.119d).

Nádo and nánka also occur as postadnominals, directly after a sentence. But it is more common for a noun or an adjectival noun NOT to convert the copula to nó or ná, but to leave it as dá or de áru; and the subject of the sentence will not permit the marker gá to be replaced by nó as most postadnominals will allow (§13.1.6). For these reasons, it would probably be better to think of the sentences as being DIRECTLY NOMINALIZED (§14.6) and then conjoined with nádo/nánka. Examples:

V-rú nádo: Anó-hito no kettén(¯) wa konki ga náku sigoto o sugu yamerú nádo da 'The trouble with him is that (among other things) he lacks patience and is quick to give up on a task'.

61a. According to Okutsu 1974.160, nádo can precede but not follow súra (presumably also sáe?), kóso (cf. p. 85), sika, or daké (see questioned example above).

V-tá nádo: Aitu no túmi wa hito no monó o nusúnda, sore o uttá nádo da 'His crime is that he has stolen others' property; that he has sold it, and so on.'

A-í nádo: Keóri-mono(¯) no tokutyoo wa karúi, attakái nádo da 'What is special about woolens is that they are light, warm, and so on'.

AN dá(/ná) nádo: Génki da(/na) nádo to wa, oo-úso(¯) de, zitú wa sini-soo da 'I heard he was well and all but it's quite untrue; in fact, he's at death's door'.

AN dátta nádo: Husin na ten wa myóo ni sízuka datta nádo da 'The unaccountable thing about it was how strangely quiet it was and all'.

N de áru nádo: Hantai no gen'in wa tatóeba káre ga gunzin de áru nádo da 'The reason for the opposition is perhaps that he is a military man or something'.

Nánte can be regarded as an abbreviation of several different expressions, including at least the following: (1) nádo to {iú no} wa; (2) nádo to wa; (3) nádo to iu; (4) nádo to {itte}. Examples:

N nánte = N nádo to {iú no} wa: Moo anna tumaránai zyukén-bénkyoo o suru kimoti nánte, zenzen arimasén 'I no longer have the least desire to do such dull studying for exams' (SA 2663.26d); Motomoto, gakkoo wa oré-táti no yookyuu nánte kangáe ya sinái n da 'Of course the school never gives any thought to OUR requests' (SA 2665.24e); Ningen nánte, náretyau [= nárete simau] món desu né 'The human being accustoms himself, you see' (SA 2674.47a); Osóraku wakái katá dattara, zí no yoménaí hitó nánte átta kotó ga náí 'I daresay those of you who are young have never met anyone who couldn't read (characters)' (Ōno 1967.164).

N nánte = N nádo to iu: ... "gakusei-zidai kara no sin'yuu" nánte no ga, ... 'those said to be "close friends from school days" or the like'; Séerusu nánte sigoto wa, tukí ni ní-sánniti hataráite nóruma o hatásite simaéba áto wa hima ná n desu yó 'Working in the sales field you finish up your quota working two or three days a month and the rest of the time you have free' (SA 2662.96e); Sisoo ni tai-súru taisaku nánte monó wa náí n da yó 'There's nothing in the way of any sort of policy toward the ideas' (SA 2672.27b); Kawabata Yasúnari nánte hitó wa, ... 'The likes of Yasunari Kawabata' (Tk 2.89b); Otokó nánte monó wa, íma no seikatu nya [= ní wa] hituyoo náí? 'You feel no need for a man in your present life?' (Tk 4.147a).

N nánte! = N tó wa! (see p. 945): Anó-hito ga gakusya nánte! 'You call HIM a scholar?!'

V-rú nánte = V-rú nádo to {iú no} wa: Íma no rosen o sansen ya hukuhuku-sen ni surú nánte, íma no Tookyoo no tiká wa hoowa-zyóotai de gozyuu-méetoru mo horánai to múri daroo si, tenmongaku-teki suuzi no híyoo de mo kanoo ka dóo ka 'To make the present lines into triple or quadruple lines would be unreasonable without digging at least 50 meters down, what with the saturation of Tōkyō's subways now, and I wonder whether the astronomical expenditures would even be possible (or not)?' (SA 2640.19b).

V-rú nánte = V-rú nádo to iu: Doráibu o tanosímu, nánte tosí zya náí desu yó 'I'm hardly of the age to enjoy driving' (SA 2664.98a—the comma in the original text was evidently intended to warn you against interpreting as nádo to iú NO WA 'As for enjoying driving or the like, [mine] is not the age').

V-[y]óo nánte = V-[y]óo nádo to {iú no} wa: Syokubá(¯) o sagasu tókí^[t] zibun no sáino(¯) o nobasóo nánte kangáénakatta 'When looking for a place to work it never occurred to me to think of developing my talents or anything' (Fujin-Kōron 636.126).

V-[y]óo nánte = V-[y]óo nádo to wa: Sonna kotó o siyóo nánte omowánai 'I have no intention to do any such thing'; Dé mo, watakusi wa Kozima to kekkon siyóo nánte, yumé-ni-mo omowánakatta. Sono toki kekkon site itá si 'But I hadn't the least thought of marrying Kojima or anything. For at that time I was already married' (SA 2685.43c).

V-rú mái nánte = V-rú mái nádo to wa: Tabako o yameru mái nánte omowánai 'It has never occurred to me that I might not quit smoking'.

V-[y]óo nánte = V-[y]óo nádo to iu: Ryuukoo-go o tukuróo nánte ito wa, zenzen ná n desu 'We [cartoonists] haven't the least intention of deliberately creating fashionable slang, or anything' (SA 2661.43a).

V-i-tái nánte = V-i-tái nádo to {iú no} wa: Sini-tái nánte omótta kotó wa ná desu 'I've never actually felt I wanted to die (or anything)' (SA 2671.47b).

V-[a]nái nánte = V-[a]nái nádo to {iú no} wa: Oosaka no hitó sika mirarénai nánte hu-kóohei zya ná? 'Isn't it unfair that only the Ōsaka people can see it?' (SA 2671.108c).

N dá nánte = N dá nádo to {iú no} wa: Kanemóti(-) dá nánte tonde-mo-nái 'You certainly couldn't say I'm a rich man or anything' (SA 2680.114d); Gógaku(-) no tensai dá nánte tonde-mo-nái 'I'm absolutely no genius at learning languages or anything' (SA 2671.65d); Iya, ákú da nánte itte inai 'No, I'm not saying it's wrong (= evil), exactly' (SA 2671.19d); Sore zya, Minamata-byoo ni nátta tokí ni, zénse no góo da nánte kangáeta to sité mo múri wa ná 'And then it is not unreasonable to assume that when they came down with the Minamata disease [= poisoning from organic mercury pollution] they thought it was the karma from an earlier life' (SA 2681.43b).

V-tá nánte = V-tá nádo to {itte}: Ozyóosama wa hontoo wa, íkite itá no desu. Sore ni, náze, hito wa, sindá nánte, ii-kagen na úso o túku no desyoo 'Your daughter was really alive. Why would people nonetheless tell such a wild lie as that she was dead and all?' (KKK 3.134); ... yat-tó onná no bútyoo(-) san ga dékita nánte, dóo-mo osói desu ne. Móttó háyaku déru békí desu yó '... it's taken an awful long time for a woman finally to become a department head, you know. It ought to happen [= have happened] sooner' (SA 2672.62a).

And it should not be forgotten that the surface string /nánte/ can represent nán [t]te = nán[i] tte = náni to 'saying what' as in this example: Nán te iéba ii no ka náa 'Wonder what I should say' (SA 2679.60b). Nán te 'tt'atte has the meaning of nán tó itté mo 'say what you will = in any event': Nán te 'tt'atte damé da 'In any event, it won't do'.

When nánte represents an abbreviation of nádo to iu, the final vowel may be lengthened (téé being an abbreviation of tó iu, §21): Zígoro nántee yátu wa mínakatta? '(In Paris) you didn't see any gigolos or the like?' (Tk 2.193a); ... minná sinzyáu [= sinde simaú] nántee kotó ga káite átta no o obóete 'masu né 'I remember it was written that they [= the goldfish] all died or something' (Tk 4.200a); Sindé mo ii nántee onná ni wa, túi ni dekuwasánakatta ná 'I just never ran into a woman that I wanted to die for or anything' (Tk 3.19a).

2.10. DÁ KA, DÁT TA KA

The expression N dáta ka ordinarily means 'Was it N?' To say 'Is it N?' in the plain style you will normally omit dá, but the full form is sometimes heard: N {dá} ka = N de áru ka. These expressions, which are full sentences, can be downgraded to the status of a simple noun phrase meaning 'N, I think/believe' or 'perhaps N', and then followed by case

markers and the like: Tyuuo-kóoron da ka ni dasáreta ... '... which was published by Chūō Kōron, I believe' (Tk 2.82)—the sentence might be said as Tyuuo-kóoron datta ka ni dasáreta 'was published by Chūō Kōron as I recall (if my memory serves me right)'; Tanaka san dá ka ga itte ita to omóu kedo ... 'I think it was perhaps Mr Tanaka who was saying it, but ...' (Mio 152); Ubagaya tte Rosiya-taisíkan no bessóo da ka no áru tikáku datta ka ná ... 'Ubagaya, I seem to recall, was in the vicinity of where what I believe is the Russian embassy villa is located' (Mio 152); ... ereveetaa-bóoi da ka ga hát-to(⁀) o-zigi sitára ... 'when, say, the elevator boy suddenly bows' (Tk 3.96b); ... Óyama san da ka ni kikimásita ga 'I think it was Mr Oyama from whom I heard it [that ...]'; (Kb 41a); ... Méizi naná-nen datta ka ni, ... 'in perhaps it was the 7th year of Meiji' (Shiba 68).

Sometimes dá ka appears where simple ká is usual, as when both ítu datta ka and ítu {da} ka can be used to mean 'at some time (in the past)': ... ítu da ka Sinagawa máde itta tokí ... 'one time when I went as far as Shinagawa' (Kb 34a).

Paired phrases of N₁ dá ka N₂ dá ka or N₁ dáta ka N₂ dáta ka can be used much as N₁ ka N₂ ka 'N₁ or (maybe) N₂': Dók [o] ka no, geisya dá ka, zyokyuu dá ka ni ... [situren sita] '[He was disappointed in love] for a geisha or waitress from some place or other' (Kb 399a); Ore no, are, tyúugaku no yo-nen dá ka go-nen dá ka no tokí datta 'It was when I was in the fourth or fifth year of middle school' (Kb 396a); Syuusen tyókúgo(⁀), Tookyoo no zosidaigakuséi-kan ni "kimi" dáta ka "boku(⁀)" dáta ka o moti-iru kotó ga ryuukoo sita 'Right after the war, it was popular among college girls in Tōkyō to use "kimi" or "boku" to each other' (Maeda 1962.69).

Apparently there are speakers who prefer dáta kke (or even dáta kke ka) rather than dáta ka. Instead of dá ka, dá kke can be used; but *dá kke ka seems to be rejected. Cf. § 15.10 (kké). See also dá no (§ 15.17), ká (§ 15.6). For N dá tó ka, see § 21.6.

2.11. DÉ MO; D'ÁTTE

We are treating dé mo as the highlighted gerund of the essive (or of the copula), deriving its various meanings—'even; also; just; whether/either ... or; for instance; or the like, or something'—all from the same source as the expected 'even/also being ...'.⁶² But at a certain level of sentence structure dé mo functions as a unit and we might wish to consider it a quasi-particle in its own right; the various forms of the copula make a sort of continuum with respect to particle-like characteristics, with certain uses of ní and dé (deriving from the infinitive and gerund, respectively) now definitely to be treated as particles but other uses still to be assigned to the relatively empty category of essive or copula in its various uses, with such forms as nára, dá tó, dé wa, and dé mo belonging somewhere along the way between. The unitary functions of dé mo that we are speaking of share a resemblance to (1) the focus markers such as wá, mó, sáe, sika, etc.; (2) the restrictives such as bákari, daké, etc.; and (3) the generalized conjoinment represented by nádo and synonyms. Words of all four types resemble each other in that most of them can be inserted into the structure of gerund + auxiliary and can split the nucleus into its underlying components of

62. In the following example N₁ dé mo N₂ dá is used to show narrowing identification: [Tokoró-ga, hiniku ní mo, siyóo-sya ga hiite motoméru kotobá no óoku ga,] singo dé mo hikaku-teki atarasii singo de áru '[But, ironically, many of the words that the user seeks by looking up] are neologisms and relatively new neologisms, at that' (Shibata 1966.145).

infinitive + auxiliary: V-í ... surú; A-kú ... áru; colloquial N dé ... áru, literary N ní ... áru/ári. For example, we find sentences such as Náni ka okótte de mo irú no daroo ka 'I wonder if he is angry or something', in which dé mo separates the gerund -té from the auxiliary iru, and Okóri de mo sinái desyoo ka 'Might he not get angry or something?', in which dé mo splits okóru into its underlying components okóri ... surú before negatization. (More examples will be found in §5.3.)

There are a number of uses of dé mo to be carefully differentiated; all but the first two will allow d'átte to substitute:

(1) Dé mo as a unit is attached to a noun or a case-marked noun (but gá/ó are suppressed) or to an adverb (including some adverbializations §5.5) with a meaning much like one of the meanings of nádo: 'or the like, or something; maybe, say, just'—sometimes used to show deference, modesty, or diffidence. In this meaning, d'átte can NOT be used: Miti ga wárुकute zíipu de de mo [*de d'atte] ikanákereba naránai 'The road is so bad I'm afraid we'll have to go by jeep'—notice how 'I'm afraid' carries the nuance of diffidence; Kao daké^[1] míte iru to dóko ka no syóo ni de mo syutuen site iru yóo na kao, ... 'When you just look at the face it is the sort of face that seems to be appearing in a show somewhere or the like' (SA 2673.120a); Kóogai(−) no mizuúmi ni de mo [*ni d'atte] ukaberéba, sára ni suzusíi kotó daroo 'It would be still cooler to float in a lake somewhere outside town' (Gd 1969/9.37)—I have used 'somewhere' rather than 'or something' to bring out the application of dé mo to the locative; Zíko de mo okósita no de wa náí ka 'I wonder if they might (not) have had an accident, or something' (= zíko ƒ oʒ de mo); Koohíi de mo nomimasén ka 'Won't you have a little coffee or something' (= Koohíi ƒ oʒ de mo); Nagái tabí kara de mo káette kíta tokí no yóo na kokoro-yówasa ga kyuu ni káre no munamotó(−) ni komi-ageta 'Suddenly his heart welled up with a faintness of heart as if he had just returned from a long journey or something' (Kb 166a); ... tookú^[1] no hoo e de mo turete ikareru yóo na ... hén na ki ni náru no 'I get a strange yen to be taken, say, to some distant place' (Kb 52b); Désu kara kottí wa, maru-de zyánguru no náka ni de mo iru yóo na kimoti desu 'So this place feels just like being in a jungle or something' (Tk 2.321a); ... tó de mo ierú daroo ka 'Could we say, perhaps, ...?' (SA 2673.40c).

(2) The copula itself can be highlighted (§5) by splitting dá into its components dé ... áru (equivalent to literary ní ... áru/ári) and inserting mó; one interpretation of N dé mo áru will be 'it even/also is N' or, with negative, 'it isn't N even/either': Sákka(−) dé mo áreba, hyooron-ka dé mo áru 'He is both a writer and a critic'; Sóo de mo náí 'It's not quite like that, either'. In this meaning d'átte can NOT be used.

(3a) The copula gerund dé 'being' (literary ní-te) can be highlighted with mó to mean 'even/also being' or 'even/also is ... and'; d'átte can substitute for dé mo: Takái monó de mo kamaimasén ka 'Is it all right even if it is an expensive one?' Tíisa na heyá de mo íi desu kara 'Even a small room will do'. For this meaning, the livelier d'átte will freely substitute: Dé mo, totyuu máde d'átte íi, issyo ni né 'But up to half way will be all right, won't it, together?' (KKK 3.68).

(3b) Paired phrases A dé mo B dé mo (or A d'átte B d'átte) can mean 'whether A or B' or 'both A and B'—negatively 'neither A nor B'—often as representative instances of a larger group; this is more emphatic than just A mo B mo: Móo kaisya d'átte, yakusyó d'átte, minná^[1] moetimatte irú n desu yó; anta-gata wa ninsiki husoku desu yó 'Both the company offices and the municipal offices, everything is burned down, I tell you. You people are ill-informed, I see' (KKK 3.68); Móo o-tomodati wa minná^[1] káettyatta wá yó;

Uragami san d'átte, Sugiyama san d'átte ... 'All of your friends have gone back [to Tōkyō]. Uragami, Sugiyama, ...' (KKK 3.68); Koohee de mo, kootya(¯) dé mo, (nán dé mo) nomimasén 'I will have neither coffee nor tea (nor anything else)'.

(3c) With an indeterminate like náni 'what', dé mo or d'átte translates as 'wh...ever' or 'at all': Wareware wa, zissai no syakai-séikatu de wa, nán de mo sukí na kotó o itári, sitári suru kotó wa dekinái 'Living in the real world, we cannot say whatever we like and do whatever we like' (KKK 3.99); Sanpa-réngoo seiritu toozi wa, sínai no dōko e⁽¹⁾ de⁽¹⁾ mo ziyúu ni de-aruketa 'At the time the [Laotian] Tripartite Alliance was formed, they could freely gad about anywhere in town they wished' (SA 2688.40a); Dāre d'átte [= Dāre de⁽¹⁾ mo] sitte 'ru yó 'Everybody knows'; Motiron, dāre d'átte sini-tákú nánka nái n desu yó 'Of course nobody ever wants to die or anything' (KKK 3.68); Sorya dāre d'átte hazime kara zibun ga sinú nádo to honki ni nátte kangáeru yátu wa óru ¯mái 'Well there probably isn't anybody at all who seriously thinks from the beginning that he is going to die or anything' (KKK 3.68); Negura wa ikura d'átte áru sá, Gotanda máde ikya [= ikéba] hyaku-en de tomareru zé 'Places to flop come at all prices, man, why if you go out to Gotanda you can spend the night for a hundred yen!' (KKK 3.68); Tízuko no inai zínsei wa, dónna tanosii kotó ga átte mo kokóro⁽¹⁾ no soko kara waraezu, dónna oisii monó de mo, aziwátte(¯) iru ki ga sínai no desita 'Living without Chizuko, whatever pleasant thing might happen I could not laugh from the bottom of my heart, nor did I feel up to enjoying the taste of things however delicious they might be' (KKK 3.98); ... dónna tuyói yátu ni d'átte káteru to iu sínnen ... 'the conviction that one can win against a fellow of any strength' (KKK 3.68). Additional examples of d'átte in this use will be found in §15.11. Phrases such as these can be accentuated on the indeterminate, on the first or on the second syllable of the marker, or the whole phrase may be atonic: dāre de mo, dare dé mo, dare de mó, and dare de mo are all equivalent, as are dāre d'átte, dare d'átte, dare d'átte, and dare d'átte. (But the noun/adverb nandemo-ká[n]demo 'anything and everything; anyhow' is a lexical unit with only one accentuation.) It should be noted that when an expression like nán de⁽¹⁾ mo⁽¹⁾ is subdued with wá (p. 54, §2.3) you cannot substitute d'átte: *Dāre ni d'átte wa dekimasén → Dāre ni de⁽¹⁾ mo⁽¹⁾ wa dekimasén 'Not just ANYBODY can do it'. This is perhaps a confirmation of the proposed identity of d'átte as a contraction of dé átte {mo} (pp. 938-9).

(4a) An extended use of the preceding puts dé mo after any adjunct (noun, noun + marker, adverb, etc.) to mean 'even', somewhat like máde {mo} or sáe {mo}: Súgu ni de mo tukai-konasemasú; dōko e⁽¹⁾ de⁽¹⁾ mo tegaru ni moti-hakonde tukaemasú 'You learn to use it immediately; you can take it anywhere to use' (SA 2639—back cover advertisement); Tukai-nagará de mo zyuuden dekíru 'You can charge the batteries (even) while using it' (SA 2637.13); Sosite sore kará de mo súde ni yonzyúu-nen o [és-site(¯) =] kemí-site (= héte) iru 'And there has already elapsed forty years (even) since then' (KKK 3.98). For this meaning, the livelier d'átte will freely substitute: Dé mo né, uti no okamisan wa watasi no sita kotó ni ippe⁽¹⁾ d'átte hantai sita kotó wa arimasén yó 'But, you see, my wife has never opposed what I did even once' (KKK 3.68); Néko d'átte sanpo ¯gúrai sinákutya 'Even cats gotta stretch their legs, at least' (KKK 3.68).

(4b) And sometimes the meaning of dé mo or d'átte is 'also, too, as well'—like mó⁽¹⁾ yahári: Kookoo é de mo singaku siyoo to omóeba, máiniti(¯) oohuku hyaku⁽¹⁾ gozyúk-kiro no basu-túugaku o kákúgo sinákereba naránai ... 'If they want to go on to high school, as well, they must be resigned to a daily round-trip bus commute of 150 kilometers ...' (SA

2666.121e). In this meaning *d'atte* freely substitutes: *Késa d'atte tikoku sitá desyóo* 'I bet you were late again this morning, too'; *Umarete kúru áka-tyan no séiméi(¯) [= ínóti]* no mondai *d'atte áru* 'There is also the problem of the life of the baby being born' (SA 2666.115d); *Syuukyóo-sin wa Nihon-zín ni d'atte áru n da kedo mo, ...* 'Religious feeling is something Japanese have, too, but ...' (Tk 4.273a); *O-níisan d'atte kit-tó^[1] uresii to omóu ni kimatte 'másu wá* 'Your brother is bound to be pleased, too' (KKK 3.67); *Góhan o tukéru no d'atte, otóosan o itiban hazime ni túkete, tyóonán o tugí ni túkete, hahaoya nánka itiban o-simai né* 'In serving rice, too, you start with father first, then the oldest son, and the likes of mother comes at the very end' (KKK 3.67). With negatives, the translation is sometimes 'not ... either': *Anó-hito d'atte siranai* 'He doesn't know, either' (or: 'I don't know him, either'); *Koko no táisyoo d'atte, anmari matomo zya arimasén zé* 'Our boss is none too honest, either!' (KKK 3.67); *Íma no kono zísei(¯) wa yoppodo benkyoo site kangáete mínai to, oyá ni d'atte wakaránai kotó ga zúibun takusan áru mono né* 'The way things are today, there are a lot of things that parents wouldn't understand, either, without a good deal of study' (KKK 3.68).

(4c) But sometimes—like *mó* itself—*dé mo* and *d'atte* express an emphasis that is difficult to translate: *Kinóo d'atte yonhyap-piki tóttá* 'Yesterday alone we caught 400 fish' (KKK 3.67)—notice the purely emphatic function of English 'alone' here; *Dá kara, íma d'atte kono tóori, watasi no mé no máe ni wa hakkíri ano komágusa ga saite irú no né* 'So right now here in front of my very eyes, that dicentra is clearly blooming, you see' (KKK 3.67); *Íma no tantei-syóosetu ni d'atte, kore ni masáru(¯) bungakú-mi wa náí* 'In all the detective novels of the present day there is none to surpass this one in literary flavor' (KKK 3.68).

It is not always easy to differentiate 'even' (4b) from 'also' (4c), whether in Japanese or in English. Thus the sentence *Kodomo ní d'atte zinken ga áru n da zó* (SA 2665.102b) could be translated as either 'Even children have personal rights!' or 'Children, too, have their personal rights!'

The subject and direct-object markers are obligatorily suppressed with *dé mo* and *d'atte*: *N †ga/o† dé mo, N †ga/o† d'atte*. But they can occur with the highlighted gerund representing propredication. This perhaps explains Henderson's example (78) *Kore ó de mo kaoo* 'I'll buy this one—such as it is!'⁶³ And, like the sometimes criticized *dáre mo ga* (p. 55), *dáre dé mó ga* turns up every now and then: ... *dáre dé mó ga sitte iru zízitu de aru* 'it is a fact that everyone knows' (SA 2688.43b). The following examples of *N dé mo ga* are from conversation in modern prose; many speakers would feel happier with the *gá* suppressed: *Sore dé mo ga kámi no séturi ka* 'Is even that God's will?!' (Kb 412a.5); ... *iro-ásobi o site iru yátu de mo ga, ... taikutu dá tte n de [= to itte irú no de]* ... 'since even the playboys say they got bored ...' (Kb 38a.1).

A surface sentence of the type *N dé mo áru* has at least three grammatical interpretations. One stems from *N de áru = N dá* by way of nuclear focus (§ 5) and means 'it is also/even N'; the second—rather unlikely—has the highlighted gerund of the copula conjoined loosely with some elliptical sentence [...] *áru* 'there is [something]' to yield the meaning 'even/also being N, there is something'; and the third, related to *N ga áru* and

63. And the more disturbing example: ... *aságao no hitó-hati de mo hutá-hati de mo o kaoo to iu ki-moti ...* 'an urge to buy one or two pots of morning-glories' (Kb 277a). This is a counterexample to the claim that *N dé mo N dé mo* CASE is unacceptable (p. 155).

created by way of highlighting the gerundized essive/copula, means 'there is (we've got) N or something'.⁶⁴

After a tonic noun, Tōkyō speakers have the option of inserting a minor juncture before the *dé mo* that means 'even'; but the *dé mo* that means 'or the like' will ALWAYS be attached without juncture, as is appropriate for the copula and for particles:

Ásahi <i>dé mo</i>	'even Asahi' (= Ásahi d'átte)
Ásahi de mo	{ 'even Asahi' (= Ásahi d'átte) 'Asahi or the like' (= Ásahi nánka)

When the noun is oxytonic (i.e. when the inherent accent is on the last syllable), the juncture will remove the accent and then disappear, leaving the accent of *dé mo* to dominate the phrase:

otokó <i>dé mo</i> →	'even a man' (= otokó d'átte)
otoko ꞑ ꞑ <i>dé mo</i>	
otokó de mo	{ 'even a man' (= otokó d'átte) 'a man or the like' (= otokó nánka)

But this distinction will not be heard after an atonic noun, since the minor juncture will normally just disappear with no trace:

kodomo ꞑ ꞑ <i>dé mo</i> }	/kodomodémo/	{ 'even a child' (= kodomo d'átte) 'a child or the like' (= kodomo nánka)
kodomo <i>dé mo</i>		

Some other examples of *dé mo* and *d'átte* after various adjuncts and markers: Tookyoo *dé dé mo* (= *dé d'átte*) *áme ga hütte iru* 'It's raining even in Tōkyō'—more or less equivalent to just Tookyoo *dé mo* (= *d'átte*) ... or even Tookyoo *mo* ...; Íkura ka *dé mo* (*d'átte*) 'Just a little bit ...'; Bōku wa *hón daké de mo* (= *daké d'átte*) *yuubin de okuroo* 'I will send at least the books by mail' (Inoue 97). Further studies of the distribution of *dé mo* are needed. Apparently both **Kore sika dé mo wakaránai* and **Kore dé mo sika wakaránai* 'understand just this only' are unacceptable.

If we derive *dé mo* from the copula, some sentences would seem to contain a double copula (possibly even a triple?)—but these will have been inserted at different levels of sentence construction. Thus in *kikai-teki ní dé mo* 'mechanically, for example', *dónna ní dé mo muzukásiku(¯) suru kotó* 'making it ever so difficult', *byooki ní de mo náru to* 'when you get sick, say', and *Isya ní dé mo náru desyoo* 'You'll become a doctor, even' the *ní* is to be explained as the copula infinitive (= the essive). With proredication, of course, it is possible to construct sentences such as *Kikai-teki ní da* 'It is mechanically [that they do it]'.

The sentence-opener *Dé mo* ... is an ellipsis for [Sore] *dé mo* 'Even being that = But ...'.

64. Henderson 72 gives the example *Nán DATTE sonna kotó o surú no da* 'Why do you do such a thing?' and says that *datte* is here an abbreviation of *de átte*. That would make the expression congruent with *Nán de* = *Náze* 'why'; but it would be the only instance where *d'átte* did not have the *dé mo* meaning, so I wonder if it may not rather be *Nán da tte* = *Náni de áru to itte*.

And *D'átte* ... is similar, but (according to Y 388) a more feminine usage. On other uses of *dé mo*, parallel to those of *-té mo* and *-kúte mo*, see §9.2.2. On $\overset{[r]}{ni}/\overset{[r]}{tò} \overset{[r]}{sité} mo$ and $\overset{[r]}{sí} mo$ as equivalents of *dé mo*, see §9.2.2, §9.1.11, and §21.4; on $\overset{[r]}{ni} \overset{[r]}{si} ro$ and $\overset{[r]}{ni} \overset{[r]}{sé} yo$ as equivalents, see §16.1.

From such expressions as *Senséi de mo siyóo ka* 'Shall I be a teacher or something' or 'Shall I be a teacher, even' and *Senséi sika dekinai* 'I can only be a teacher' the compound prefix *demosika-* will yield the pejorative *demosika-sénséi* 'a teacher—of sorts'. The prefix sometimes translates as 'uninspired' or 'half-hearted' or 'faute-de-mieux': ... *yó(-) ni óói demosika-okugata-dómo e no go-hihan* ... 'your criticism of us many poor women who have no choice but to be half-hearted housewives' (SA 2685.120a); "Go-zónzi desu ka *demosika-ziéikan* ..." 'Do you recognize him—the uninspired Defense officer?' (SA 2679.144d quoting from SA 1970/5/8). Other examples are *demosika-táin* 'uninspired trooper', *demosika-kyóoiku* 'an education—of sorts', *demosika-hóosiki* 'perfunctory forms/methods'. Dictionaries list the prefix just as *démo(-)* with the meanings 'would-be, *soi-disant*' or 'reluctant, irresolute' (MKZ gives the example *démogákusya* 'a self-styled scholar' and Kenkyusha offers *démokurísutyan* 'a pseudo-Christian'); Shimmura says *dé-mo* is sometimes used as a free noun 'a pseudo'.

In western Japan the particle *káte* is used where *Tōkyō* uses *d'átte* or *dé mo*: *naa kate = nawá d'atte* 'a rope even' (Zhs 4.159), *ban katee = ban d'átte* 'evening even' (Zhs 4.159—the lengthened *e* is for emphasis, perhaps the particle *é = yó*). Thus where the *Tōkyō* speaker may begin a sentence with *D'átte*, an ellipsis of [*Sóo*] *d'atte = Sóo de mo* 'even being so', the *Ōsaka* speaker will say *Soo {ya} kate* (Maeda 1961.211). The suppression of the copula *ya* (= *Tōkyō dá*), apparently optional, suggests that *káte* incorporates the question particle *ká* (§15.6), perhaps followed by *te = to* [*itte*] or by [*to ii*]*te* 'saying'; cf. the sentence opener *Ká to itte*, ... 'If that surprises you' or 'If you question that'. Sometimes a simple *mó* is a better *Tōkyō* version for Kansai *káte*; Maeda 1961.100 has a woman saying *Úti kate míta wa* and gives the *Tōkyō* translation *Atasi mo míta wa* 'I saw it too/myself' (or 'Even I saw it?'). For further discussion of *káte* and the reason for the apostrophe in our notation of *d'átte*, see §15.11.

There is also a dialect variant *zyátte* (= *dy'átte*) for *d'átte*, as in *kodomo zyátte* ... (Y 402); and I would not be surprised if the variant (?)*yátte* were to turn up.

2.12. MÍTAI (DA/NA/NI)

The word *mítai* is like *nádo* in that it appears after adnominalized verbal and adjectival sentences as a postadnominal and after nouns as if it were a restrictive, but usually attaching to nouns with an optional minor juncture: *zimú-in { | } mítai = zimúin | mítai* or *zimúin mitai* 'like an office worker'. The result is a nominal sentence that differs from *nádo* in that it adnominalizes in the fashion of an adjectival noun (*dá* becoming *ná*): *Zimú-in { | } mítai na | hitó da* 'It is people like office workers'; *Zimú-in { | } nádo no | hitó da* 'It is people who are office workers and the like'.

Adjectival nouns, when used, behave like regular nouns in attaching *mítai* and suppress the copula; apparently *... $\overset{[r]}{ná} \overset{[r]}{mítai}$ never occurs. In the sentence *Sízuka de kirei mítai da* 'It appears to be quiet and clean', the reference of *mítai* is to the entire conjoined sentence

Sízuka de kírei da 'It is quiet and clean'; a major juncture can appear before mítai or before kírei (with minor before mítai): Sízuka de | kírei || mítai da or Sízuka de || kírei | mítai da. Alfonso (1070) says that Japanese seem reluctant to use mítai with adjectives or adjectival nouns, but he finds examples such as Yasasii mítai de muzukasii(¯) mondai desu 'It is a problem that looks easy but is difficult' and Kantan mítai desu ga hukuzatu desu 'It looks simple, but it is complicated'.

The word mítai has come into existence as a contraction of the older expression ... [(nó) o] míta yóo 'like one saw (it)' and that accounts for the adnominalization, since the postadnominal yóo (§ 13.2)—itself of Chinese origin (<yau<yàng 'appearance')—is an adjectival noun.⁶⁵ The infinitive form mítai ni, like yóo ni, is used adverbially. Sentences with ... mítai da have much the same uses as those with ...yóo da: (1) 'it looks like', expressing resemblance; and (2) 'it seems like', expressing an inference or an uncertain (roundabout) conclusion based either on sensory impression of the object itself or on the surrounding circumstances—cf. rasií, daróo, hazu dá. The adnominalized form mítai na N has an additional meaning of BELITTLING; many speakers apparently do not use yóo na to belittle. Notice that yóo da/na/ni have a number of uses inappropriate to mítai. For example, áme ga húru yóo na hi 'days when it rains' cannot be said with mítai na, and neither máiniti(¯) no yóo ni 'every day' nor Sátóo syusyoo wa tugí no yóo ni nobemásita 'Prime Minister Satō spoke as follows' will be said with mítai ni; nor will mítai da be used in Kono génri wa tugí no yóo de aru 'These principles are as follows' (KKK 3.276)—for these are all examples where yóo serves to introduce CONTENT or LIMITATIONS. Yóo ni is also used, as mítai is not, to express purpose or desired result as in Wasurenai yóo ni tyúui site kudasái 'Please pay attention so as not to forget'.

Although mítai normally requires something before it, opening ellipsis ([Sóo/Sore] mítai, § 24) can leave the word standing alone at the beginning of a sentence: Anáta ga purodyúusu site?—Mítai ni nátyatta n desu 'With you producing it?—So it seems' (SA 2666.43a). This will never happen to yóo.

A comparison of various expressions for appearance and resemblance will be found in the discussions of § 19 and § 20.

Here are examples of mítai in the several uses mentioned:

(1) RESEMBLANCE: Ano kúmó, tyót-to, hituzi mítai daróo? 'That cloud looks a little like a sheep, doesn't it?' (KKK 3.273); Maru-de sinkon mítai né 'Why it's just like a honeymoon' (KKK 3.273); Sóo, wareware, itátte(¯) onna-rasií wá né, zibun de homéru mítai da kedo ... 'There we are—extremely feminine, aren't we; though we shouldn't say it ourselves ...' (KKK 3.273); Nán da ka, atasi no kao o niránde hótte iru mítai 'Somehow it's like he's staring a hole in my face' (KKK 3.273); Húne ni notte 'ru mítai da 'I feel like I am on a boat'; Totu-zen no árasí mítai desita né 'It was like a sudden storm, you see'; Sore ga maru-de senseí to o-desi mítai na n desu tté 'I hear they are just like teacher and pupil'; Ore nánzaa [= nánzo wa = nádo wa] kore dé mo kin'yuu-gáisya no zyuuyaku-sama ná n da kara warawaseru mítai na món sá[a] 'I may not look like much but I happen to be an important executive in a finance company and am not to be laughed at!' (KKK 3.273); Hana no saki ga itái mítai na sámu-sa '... a cold [day] such that my nose almost hurts';

65. The contraction from míta yó[o] became popular in print during the Taishō period (1912–25) according to Yoshida, who gives examples from modern fiction of mitae, mitei, and mitee (Y 346). Examples of míta yóo used for mítai will be found (passim) in Okitsu.

Sosite, hontoo ni é ni káita mítai na katadóori no kekkon-hiróoen ga hazimatta 'Then there began a formal wedding announcement banquet that was just as if drawn in a picture' (CK 985.378); Zyoodán zya náí, sonna zyo-gákusei mítai na amai yumé o míte iru zidai dé wa náí n da 'It's no joke, you're not at a time of life to be dreaming such sweet dreams like a schoolgirl' (KKK 3.273); Watasi wa zibun ga sikararete iru mítai ni atamá o ságeta 'I lowered my head as if I were being scolded myself' (KKK 3.273).

(2a) DIRECT SENSORY IMPRESSION: Náni ka tote-mo siawase na kotó ga átta mítai 'You look as if you had a most happy time'; Wakáreta tokí yori mo kírei ni nátta mítai da 'You seem to have grown even prettier than you were when we said goodbye'.

(2b) INFERENCE: Kaze o hiita mítai da 'I seem to have caught a cold' (KKK 3.273) = Kaze o hiita mítai na ki ga suru 'I feel as if I must have caught a cold'; Áme [ga] hútte 'ru mítai desu 'It must be raining'; Anó-hito wa báka mítai! 'What a fool he must be!' Takamura san tote-mo nayánde irassyáru mítai 'Mr T. seems to be quite distressed'.

(3) BELITTILING (always adnominal): Anáta mítai na hitó, kirai da 'I hate people like you'; ... watasí-ra mítai na, ironna omo-ni ni náru yóo na zyookén(¯) ya syúui ga áru kara 'Since there are conditions and surroundings (of the sort) that impose burdens such as us ...' (KKK 3.273); Bóku(¯) wa mangá-kyoo kara syuppatu sita mítai na kanzi zya náí n desu yó 'I don't feel as though I made my start [as a cartoonist] from any old craze for comics' (SA 2653.42c—or does this belong with 2b?).

Apparently mítai can appear AFTER (but not before) peripheral case markers, as in these examples of ablatives: Anó-hito wa Oosaka kará mítai [da] 'He seems to be from Ōsaka'; Kono tegami wa Tanaká-kun(¯) kara mítai da ga, akete mínakereba wakaránai 'This letter seems to be from Tanaka, but I can't tell without opening it'. But the core case markers will not appear (*ga/o mítai and some kinds of ní + mítai) except possibly under propredications of an unusually loose sort.

In sequences with restrictives, it is usual for mítai to come last, as in these examples of ¯kágiri mítai (*mítai ¯kágiri): Yóku wa sirimasén ga, ano géki wa kyóo ¯kágiri mítai desu yó 'I'm not sure, but it seems that play is on today only, you know'; Káre wa kore ¯kágiri mítai na kao o site wakáreta 'He departed with an expression on his face that seemed to say this was it'.

Yet with ¯dókoró, mítai will precede (*dókoró mítai): Hottate-goya mítai ¯dókoró zya náí; maru-de buta-goya da 'It is a far cry from being even a shanty; it's a perfect pigsty!'; Kappa mítai ¯dókoró zya náí. Mótto zyoozú ni oyógu 'No water sprite he—why, he swims even better than that!'

And I have elicited both (¯)daké mítai—as in Hitóri ¯daké mítai [da] 'It seems to be just one person'—and mítai (¯)daké, but the latter sequence may be limited to the special use daké ni/átte (§ 13.2) as in this example: Anáta no kao wa kodomo mítai daké ni, kuti no kiki-kata ni tyúui sinákeryaa 'Because your face is like a child is all the more reason one must be cautious about what you say'. Daké^[b]átte would sound odd in the above sentence but it would be all right in one with a less urgent conclusion, such as: Anáta no kao wa kodomo mítai daké^[b]átte minná ni kawai-garárete iru 'You are all the more loved by everyone just because your face is like a child'.

Mítai appears AFTER but not before kóso 'precisely' and ¯zútu '(distributively) each': Watakusi kóso mítai na kao o site iru 'He has an expression that seems to say "It's my fault" '; Kyóo koso mítai na kao o site, yatte kíta 'He dropped around with an expression that seemed to say today is it!'; Watakusi wa yóku sirimasén ga, minná moratte o-kane wa

sen-en zútu mítai desu yó 'I'm not certain, mind you, but it looks as though the sum they all received was a thousand yen each' (*mítai zútu). But the first two examples seem to involve a kind of semi-quotation of a propredication (Kyóo koso [...] mítai), so that the mítai is actually attached to some sort of underlying predicate in the deeper structure, and that is probably what accounts for the unacceptability of *mítai koso.

Apparently neither *mítai sika nor *sika mítai occur. Nor have I been able to elicit (*sáe mítai or *)mítai sáe; the latter is replaced by the acceptable mítai de sáe áreba in one of its expected occurrences.

In general the sentences ending in mítai da are open to the same conversions as other nominal sentences, including the negative (mítai zya náí), which can be used when you want to deny a resemblance. Although *yóri mítai 'appearing than' is unacceptable, mítai yori 'than appearing' will pass muster, at least in children's speech, but with an implied ellipsis: (?) Heitai mítai [na hukú] yori súihei mítai na hoo ga íi ya 'Rather than soldier-looking [clothes], sailor-looking would be better'.

3 EXPANSION CONSTRAINTS; NOUN SUBCATEGORIZATION

Subclasses of nuclear predicates—verbs, verbal nouns, adjectives, adjectival nouns, and nouns—can be set up on the basis of various kinds of constraints. Among nominal predicates (N dá), those which never convert to the status of subject or object (→ N gá/ó) must be separated from those which do; the latter we will call pure nouns, and the former will be mostly adverbs together with a few minor classes, notably the various kinds of restricted nominals and adnouns (§ 13.5) and the precopular nouns (§ 13.8), which are almost indistinguishable from adjectival nouns. Such classes, in turn, are composed of various subclasses (often crisscrossing) on the basis of distributional constraints, substitution possibilities, conversion restrictions, and valences or ties with other classes. Thus we find classes of nouns that can be set up on the basis of a kind of “pronominal” substitution by the indeterminates which serve to localize interrogation or generality on particular nouns (rather than, say, on the sentence as a whole):

- | | | |
|------|---|---|
| (1) | dóre ‘which/any’
izure ¹ ;
dótira ‘which/any of two’;
íku-/nán-COUNTER,
íkutu ‘how many’ | COUNTABLE nouns, which may have valences with
COUNTERS (§ 13.6) |
| (1a) | íkura, ² ika-hodo ‘how
much’ | MEASURABLE nouns |
| (2) | dáre ‘who/anyone’
táre
(dónata, dótira)
nani-bito, nan-pito
nani-mono ₁ | HUMAN nouns, which differ from other nouns in
lacking systematic restrictions on what predicates
they can become subjects of, for a human noun
may be the subject of virtually ANY verb or ad-
jective (granted minor semantic restrictions—*hito
ga húru ‘it rains people’) |
| (3) | náni ‘what/anything’
nani-mono ₂ | NONHUMAN nouns, which normally cannot become
the subject of verbs of emotion, the indirect sub-
ject of adjectives of emotion, or the subject of
most verbs of action or—with the exception noted
below—of verbs of motion |
| (3a) | ” | NONHUMAN ANIMATE nouns, which can be the
subject of verbs of motion and of iru/óru |
| (3b) | ” | SELF-PROPELLING nonhuman nouns, which can be
the subject of verbs of motion and (rarely, at
least) of iru/óru ³ ‘is; stays’ |

1. For other uses of this word, see § 13.7. Apparently the accent is always atonic.

2. Including the Kansai form nán-bo, a shortening from nan[i]-boo, which might be derived from -ba[k]u (cf. iku-baku ‘some amount’) by velar elision and crasis. But Ōtsuki derives nan-boo from náni-hodo(̄) and MKZ^S follows that etymology.

3. As in this example: Hoka no zyookyaku wa minna^[,] déimatte, saigo ni wa takusii made inaku nátta ‘The other passengers all took off, and at last even the taxis disappeared (= it go so there weren’t even any taxis)’ (Tk 3.47a).

- | | |
|--|--|
| (3c) = nani-goto | EVENT nouns, with predicates in which <i>ga áru</i> may substitute for <i>ga okóru</i> 'happens', etc. |
| (4) <i>dóko</i> 'where/anywhere'
<i>ízuko(-)</i> , <i>ízuku(-)</i> | PLACE nouns, for which the marking of the locative is <i>ní</i> rather than <i>dé</i> when stasis is marked in the predicate (see §3.8) |
| (5) <i>ítu</i> 'when/anytime'
<i>nan-doki</i> | TIME nouns, subdivided into SPECIFIC time nouns (for which the locative is usually marked by <i>ní</i>) and RELATIVE time nouns such as <i>kyóo</i> 'today', <i>háru</i> 'spring', <i>mukasi</i> 'long ago' (for which the locative is usually left unmarked—see §9.1.13) |
| To this list we can add: | |
| (6) <i>dóo</i> 'how/anyway'
<i>iká-ni</i> , <i>ikán</i> , <i>iká-ga</i> | ADVERBS (see §13.7); predicated adjectives and adjectival/precopular nouns |
| (7) <i>dónna</i> 'what/any kind'
<i>iká-naru</i> ; <i>iká-ga na</i> | ADNOUNS; adnominalized adjectives and adjectival/precopular nouns |

We have not included *dóno* (literary *izure nó*) 'which/any' as a diagnostic. There is no **Dóno da* (→ *Dóre da*); compare *Dónna da* = *Dónna N da* 'What kind (of N) is it?', *Dóo da* 'How is it?' Nor have we included *náze* or *nán de* or *náni-yue(-)* 'why' = *dóo site* 'how come', since we do not require a class of "reason" nouns; *náze* and *dóo site* focus the interrogation on larger units.

Isami uses somewhat different criteria to subcategorize nouns. In addition to our subcategories of COUNTABLE nouns⁴ (*hón* 'book', *ie* 'house', *tukue* 'table'), MEASURABLE nouns (*o-sake* 'rice wine', *zikan* 'time', *o-kane* 'money'), HUMAN nouns (*hito* 'person', *otokó* 'man', *kodomo* 'child'), nonhuman ANIMATE nouns (*inú* 'dog', *umá* 'horse', *tori* 'fowl'), PLACE nouns (*matí* 'town', *yamá* 'mountain', *kuni* 'country'), and TIME nouns (*ása* 'morning', *yóru* 'night', *háru* 'spring'), Isami sets up the following four types:

MASS nouns (like *áme* 'rain', *yukí* 'snow', *kiri* 'fog') can be quantified, as in *sukósi no áme* 'a little rain' and *takusán no yukí* 'lots of snow', but neither counted nor measured as such—durational expressions such as *ni-zíkan no áme* 'two hours of rain' do not count for this purpose. To translate 'two rains' you say *ni-dó⁽¹⁾ hútta áme* 'rain which fell twice'; and *zís-sénti no yukí* 'a 10-cm. snowfall' refers to a descriptive index rather than a specific measure. It is questionable whether Isami's example *kúmó* 'cloud' really belongs here, since it is possible to say *hutatú no tíisa na kúmó* 'two small clouds' etc.

RELATIONAL nouns (*máe* 'front', *ué* 'above', *migi* 'right'—mostly referring to temporal, local, or logical order) cannot be counted or measured but, according to Isami, they can be quantified. What he seems to mean is that you can say *sukósi máe* 'a little in front'. But surely this is different from the "quantifiability" of mass nouns, in that it is an adverbial modification by an adverb of degree (such as *zúbun* 'very', *zut-to* 'all the way, by far', etc.) rather than an adverbialization of a quantity noun like *takusán* 'lots'; *sukósi* here is functioning as a synonym of the adverb *tyót-to* 'slightly'. The critical thing about

4. Strictly speaking, RESIDUAL countable nouns, i.e. those not included in other categories below, since you can also count humans, nonhuman animates, places, and times. With the classificatory counter *-syu* 'kind' you can count abstract nouns, action nouns, mass nouns, and measurable nouns.

relational nouns is that, unlike the other subcategories (with the exception of certain nouns of quantity) they can take adverbs of degree; they can also take relational ablatives (§3.7); *kore kara saki* 'from now on', *kawá kara higasí(´)* 'east of the river', etc.

ACTION nouns (*turi* 'fishing', *oyogí* 'swimming', *mane* 'imitating') are said to be quantifiable yet neither countable nor measurable as such. Even quantification is limited to the adnominalization of frequency (*iti-dó no turi* 'a round of fishing') and duration: *Ano zíp-pun ´daké no turi de nán-biki mo tureta* 'In just that ten minutes of fishing we were able to catch a great many', *Ano go-zíkan no doráibu de tukáreta* 'That five hours drive left me weary'. But perhaps these expressions are best explained as adnominalized propredication, with the *nó* ultimately substituting for *suru*. Isami's diagnostic for the action nouns is their occurrence with ... *o suru* 'engages in ...'; they much resemble verbal nouns (such as *sanpo* 'strolling', *benkyoo* 'studying', *dokuritu* 'becoming independent'), as described in §14.3. But verbal nouns differ in that they carry individual valences with possible objects and the like and they permit the suppression of the *ó*-marker before *suru*. Although most—all?—of the action nouns are nouns derived from verb infinitives (see §14.5), the case valences of the verbs are attenuated by the nominalization: *mizuúmi o oyogí* 'swim in the lake' does not yield **mizuúmi o oyogí* or **mizuúmi o no oyogí* but only, by way of adnominalized propredication, the grammatically vague *mizuúmi no oyogí* 'lake swimming'. You do not say **hito o mane suru* but *hito no mane o suru* 'imitates people'.

ABSTRACT nouns (*séigi* 'justice', *bí* 'beauty', *zén* 'goodness') can be quantified, as in *sukósi no séigi* 'a little justice', but not counted or measured. By Isami's criteria they differ from action nouns only in not taking ... *o suru*: they are not actions that can be engaged in.

QUANTITY nouns include NUMBERS (numeral + counter/measurer) and QUANTIFIERS such as *sukósi* 'a little', *takusán* 'a lot', *minná* 'all', *zénbu* 'all', *súbete* 'all', *oozéi* 'a crowd', *tasúu* 'majority', *syoosúu* 'minority', *zyakkan* 'a few'—but not *syóosyoo* or *tyót-to* 'a bit', though they are listed by Isami, for they do not take *gá* or *ó* and thus are adverbs (of degree). Quantity nouns cannot be counted or measured, nor are they themselves quantifiable, though at least some of the quantifiers can be modified by adverbs of degree; since *sukósi* can function as a synonym of the degree adverb *tyót-to*, even *sukósi takusán* = *tyót-to takusán* 'a bit much' is grammatical.

According to Isami the word *sore* 'it' can substitute for all subcategories of noun except relative nouns, place nouns, and time nouns. He also says that all subcategories are determinable by *kono* 'this ...' (etc.) except abstract nouns and action nouns—counterexamples presumably involve a secondary interpretation 'this KIND OF ...' or the like, as noted below. And it is lack of determinability that sets off the category of PROPER nouns (or names—presumably including personal pronouns). When, in fact, a determiner DOES occur with proper nouns or the like—*kono Tanaka Tároo* 'this Taro Tanaka', *kono watakusi* 'I who am as I am'—it signals some sort of temporary recategorization analogous to personification. This perhaps accounts for Isami's judgment of abstract nouns and action nouns as undeterminable, since *kono séigi* 'this justice' and *kono turi* 'this fishing'—if acceptable—would seem to be loose attempts to say *konna séigi* 'this kind of justice' and *konna turi* 'this sort of fishing'. It should be kept in mind that some nouns are susceptible to more than one interpretation and accordingly they may be assigned to more than one subcategory. On co-relational nouns such as 'doctor and patient, parent and child, teacher and student, friend and friend' etc., see p. 465.

In this book the word "noun" is used in two ways: loosely to mean any word that can

be predicated with *dá*, forming our NOMINAL nuclear sentence; and strictly to mean a PURE noun—one that can be marked for case by the postpositions *gá* (subject) or *ó* (direct object) and that can be extruded as an epitheme, i.e. serve as the target to receive the adnominalization of the rest of a sentence of which it was a basic adjunct. (Certain pure nouns, however, can be intruded as SUMMATIONAL, RESULTATIVE, or TRANSITIONAL epithemes, rather than extruded from the adnominalization—see §13.1.)

Inadvertently, we may use the word “adverb” loosely to mean any word that can be directly adverbialized or can be adverbialized with the essive *ní* (= infinitive of the copula); but strictly we refer to a word that has only the directly adverbialized form; most adverbs are PREDICABLE with *dá* and adnominalizable with *nó*, but those few that are not we will call PURE adverbs.

We use the term “adjectival noun” strictly to mean a word that is adnominalized by converting the copula to *ná*, and the term “precopular noun” (or “quasi-adjectival noun”) to mean a word that, while neither a pure noun nor an adverb (unless individually requiring more than one categorization), is adnominalized by converting the copula to *nó*. A word which directly serves as an adnominal is called an “adnoun” (or, if you prefer, a “prenoun”).

By “verbal noun” we refer to a word that is predicated by the dummy verb *suru* ‘does (it)’; free—or “separable”—verbal nouns can (but need not) be detached from *suru* by the object marker *ó* or by certain particles of focus and restriction (namely those which can apply to verbal nuclei, §5) and can also enter into other cases appropriate to a pure noun including that of subject, marked with *gá*. The grammar of free verbal nouns differs from that of pure nouns in a number of ways (e.g. epithematization), as described in §14.3).

Here is a table of the criteria by which some of these categories are set up:

	<u>...gá/ó;</u> <u>epitheme</u>	<u>...dá</u>	<u>...</u> <u>[adv.]</u>	<u>...ní</u> <u>[adv.]</u>	<u>... N</u>	<u>... nó N</u>	<u>... ná N</u>
pure noun	+	+				+	
predicable adverb		+	+			+	
pure adverb			+				
adjectival noun		+		(+)			+
precopular noun		+		(+)		+	
adnoun					+		

There are various subcategories for each type, e.g. for pure nouns the ten-odd kinds of common noun listed earlier; individual members may be DEFECTIVE in one or more of the criteria; and while some words belong to only one category, others belong to two or more categories, usually with meanings that diverge to some extent. A special type of defective distribution is found in the POSTADNOMINALS, nouns which appear typically or only after an adnominalization as what we will call “intruded epithemes” (§13.1), and the further distribution of certain of the postadnominals is also highly restricted in individual

ways (§13.2 etc.). Many (perhaps most) adjectival and precopular nouns lack the adverbial conversion of the infinitive: *kenkoo ni 'healthily', *sinpai ni 'worryingly', *nentyoo ni 'seniorly'. This is not unexpected since many (perhaps most) adjectives do not make use of the adverbial conversion, either; the lack of an adverbial ní, however, does not mean that the ní form is completely missing, for the other infinitive conversions of §9.1.11 (such as ... ni náru/suru) are usually possible.

Examples of pure nouns were given in the earlier discussion of the subcategorization of common nouns. A few examples of some of the other categories:

pure adverb: góku 'extremely', tyoodo 'just', hóbo 'nearly',

predicable adverb: sibároku 'for a while', sendatté 'the other day', nitizyoo 'daily', kóo 'thus', mázumazu 'tolerably, so-so'; korékore, sikázika, korékore | sikázika 'so-and-so, such-and-such' (followed by tó only when tó is required by a quoting verb and there is ellipsis of dá)—korékore is also a (pro)noun 'this and that'; tabitabi 'often' (tabitabi no hoomon 'frequent visiting'), nakanaka 'considerably (etc.)' (nakanaka no gakusya 'no mean scholar');

predicable adverb, defective (with only the direct adverbial and the adnominal nó): zyúurai 'hitherto', kyúurai 'from times past', záirai(¯) 'by tradition'; tatta 'merely',

adjectival noun: sizuka 'quiet', hadé 'gaudy',

adjectival noun, defective (with only the adverbial ní, adnominal ná): sétu 'earnest',

adjectival noun, highly defective (with only the adverbial ní): tádati 'at once',

precopular noun: tama 'occasional', múzi 'plain, solid-color', ippan 'general, average', tokubetu 'special', betu-betu 'separate, apart', nanáme 'aslant', hasu[kai] 'aslant',

precopular noun (lacking the adverbial ní): uttuke 'just right', hatu-mimi 'heard for the first time, news'; kansetu 'indirect'; honnen (preferred to the older version honzen) 'natural, innate'; kinsyoo 'scanty'; akusitu 'inferior', tókusyu(¯) 'special' (both also used as adjectival nouns, but lacking the adverbial in any event)

precopular noun, highly defective (only the adnominal nó): zekkoo 'excellent', zantei 'provisional' (cf. zantei-teki na/ni),

adnoun: kono 'this', ironna 'various', hon-no 'just, mere', áru 'a certain',

Below are examples of some of the words which belong to more than one category:

konná	}	adjectival noun; adnoun (usually replacing the adnominalized form ... ná, see §13.5)
onazi		
tyokusetu		precopular noun; pure adverb, tyokusetu = tyokusetu ní 'directly'; cf. the antonym kansetu, a precopular noun that requires ní for adverbialization
ángai(¯)		adjectival noun 'unexpected'; pure adverb 'unexpectedly', ángai(¯) = ángai(¯) ní
isásaka		adjectival or precopular noun 'slight, trifling' (= wázuka); pure adverb 'slightly, a bit' (= tyót-to)
totu-zen	}	precopular noun; pure adverb, súgu = súgu ni
súgu		
guu-zen		
taigai		predicable adverb 'in general'; pure adverb 'probably' (= tábun); precopular noun 'moderate, in moderation'
ikkoo		highly defective adjectival noun (only adverbial ní); pure adverb, ikkoo = ikkoo ní '(not) at all'

sasuga	pure adverb; (pseudo) adnoun; defective precopular noun (lacking the predicative dá)—see pp. 787–8
hitásura(¯)	adjectival noun; pure adverb, hitásura(¯) = hitásura(¯) ní ‘wholeheartedly’
sínsetu	pure noun (abstract) ‘kindness’; adjectival noun ‘kind’
ziyúu	pure noun (abstract) ‘freedom’; adjectival noun ‘free’
hetá	pure noun (action) ‘a bungle, a mess’; adjectival noun ‘bungling, clumsy’
byoodoo	pure noun (abstract) ‘equality’; precopular noun ‘equal’ (but sometimes treated as an adjectival noun)
nentyoo	pure noun (animate) ‘a senior’ (= nentyóo-sya); (adverbial-lacking) precopular noun ‘senior, older’ (káre yori hutatú ^[1] nentyoo no zyosei ‘a woman two years his senior’)
tosiué	pure noun (animate) ‘older person’ (= tosiue no hitó); (adverbial-lacking) precopular noun ‘older’
tosisita	pure noun (animate) ‘younger person’ (= tosisita no hitó); (adverbial-lacking) precopular noun ‘younger’
iroiro	adjectival noun; predicable adverb, iroiro = iroiro ní ‘variously’—for iroiro tó (adverbial form of the subjective adjectival noun) see p. 786; pseudo adnoun (pp. 752, 826)
kékkoo	adjectival noun ‘excellent, nice’; predicable adverb ‘adequate(ly), enough’; pure noun (abstract) ‘structure, setup’
kenkoo	pure noun (abstract) ‘health’; (adverbial-lacking) adjectival noun ‘healthy’
génki	pure noun (abstract) ‘vigor’; adjectival noun ‘vigorous, healthy’
husigi	pure noun (abstract) ‘marvel’; adjectival noun ‘marvelous’
detarame	pure noun (abstract) ‘nonsense’; adjectival noun ‘random, haphazard’ (as in Detarame na kotó o iú na ‘Enough of your wild talk!’)
kyokután	pure noun (abstract/?place) ‘extremity’; adjectival noun ‘extreme’
sinpai	verbal noun (transitive) ‘worry’; (adverbial-lacking) adjectival noun ‘worrisome’
kyoosyuku	verbal noun (intransitive) ‘feel obligation/embarrassment’; adjectival noun ‘obliging, embarrassing’
tokutei	verbal noun (transitive) ‘specify’; highly defective precopular noun ‘specific, special’
koosiki	pure noun (abstract) ‘formula(s), formality’; precopular noun ‘formal’
takusán	pure noun (quantity) ‘a lot’; adjectival noun (takusán na) and precopular noun (takusán no) ‘much’
sukósi	pure noun (quantity) ‘a little’ (of which sukósi no is the adnominalization); ? pure adverb = tyót-to ‘somewhat’
tyót-to	pure noun (quantity) = sukósi ‘a little’; predicable adverb ‘for a while/moment, somewhat; (not) readily’; interjection ‘hey, excuse me, just a moment there’
táda	pure adverb ‘just, only; but’; predicable adverb ‘free of charge’, táda de = táda; defective predicable adverb (= tatta ‘merely’ (+ quantity)); ? highly defective precopular noun, táda no hito ‘the ordinary person’

These examples merely scratch the surface of a vexsome area; more details will be found in later sections (§ 13.4 ff). Some of the instances of direct adverbialization described in

§9.1.13 should perhaps be treated as multiple class-membership; for example, those time nouns which can be directly adverbialized, such as *háru* = *háru ni* 'in spring', may be considered to be adverbs as well as pure nouns.

Unlike the fairly few words of temporal and locative reference that are not pure nouns (such as *súgu* 'at once' or 'directly ahead'), time nouns and place nouns can serve as epithemes; thus we should not be surprised at these examples of *íma* 'now': *Tosí ga aketa íma mo ...* '(Even) now that the New Year has begun ...' (SA 2666.121c); *Syóbun sareru íma, hazímete séito to onazi tatibá ni tátta yóo na ki ga suru* 'Now that I am being disciplined I feel for the first time as if I am standing in the same position as a student' (SA 2665.26e). Similarly *saikin* '(in) recent days' can be modified—as in *monó ga tákaku nátta saikin* 'lately when things have got costlier'—and can serve as subject or object: *monó ga tákaku nátta saikin o kangáete míru to* 'considering these recent days when things have become costlier'. Time adverbs like *sendatté* 'the other day', on the other hand, cannot be modified or serve as subject or object (**monó ga tákaku nátta sendatté o kangáete míru to*), though they can often take certain other markers, such as the temporal ablative *kará* = *írai* 'since' or allative *máde* as in *sendatté kara/máde* 'since/until the other day'. *Sendatté* ^[1]*zyuu* means 'throughout the past few days' = *sendatté* ^[1]*uti*(⁻) *zyuu*; *sendatté* ^[1]{no} *uti*(⁻) (*wa/mo*) means 'during the past few days'. A time noun like *mukasi* 'a long time ago' can be modified either by an adverb (*sonna ni mukasi* 'so long ago') or by an adnoun (*sonna mukasi* 'such a long time ago') as in ... *sonna mukasi dé wa náku, kono Syóowa*(⁻) *zídai no, íma génzai mo, ...* 'not so long ago, even now in Shōwa times, ...' (Shibata 1965.32). But quantity nouns (numbers and quantifiers) are all directly adverbialized as a part of their grammar, §13.6; we have already implied in our subcategorization of pure nouns that a word such as *takusán* 'a lot' or *mittú* = *sán-ko* 'three (things)' can be used adverbially with no overt marker.

The category of "precopular noun" is assumed only when the facts cannot be treated under the class of "adjectival noun"; it is not alone a sufficient criterion that the word adnominalizes with *nó* rather than *ná*, unless the word fails to occur by itself as a direct adverb:

	... <i>dá</i>	... [adv.]	... [adv.] <i>ní</i>	... no N	... na N
predicable adverb	+	+		+	
(defective)		+		+	
pure adverb		+			
adjectival noun	+		+		+

precopular noun	+		+	+	
(highly defective)				+	
(defective)			+	+	
(adverbial-lacking)	+			+	
adverb AND					
precopular noun	+	+	+	+	

The two adjectival nouns *nyuuyoo* (also pronounced *iriyoo*) and *hituyoo* 'necessary, needed' lack an adverbial form—*nyuuyoo/hituyoo ní* can only be used in the mutative conversions with *náru/suru*—and belong also to the class of abstract pure nouns, with the meaning 'need' as in *kane no nyuuyoo/hituyoo ga átte* 'having need of money'; in these respects the words parallel the precopular noun *byooki* 'ill; illness'. Another peculiarity is that *hituyoo* and the less-colloquial *nyuuyoo* or *iriyoo* when used as adjectival nouns carry the valences of POSSESSIVE grammar, just like their synonym *ir-u* 'needs': *Dáre ni/ga náni ga hituyoo désu ka* 'Who needs what?'—see §3.5.

The abstract noun *mondai* 'problem' is used as an adjectival noun 'problematical, doubtful' but lacks the adverbial use of *mondai ní* 'problematically'; the other forms are seen in these examples: *mondai na kotó* 'a problematical matter', *Kore wa hizyoo ni mondai da* 'This is highly questionable' (Ōno 1967.171).

Though dictionaries seem to list only the adverbialized form *sikiri ní* 'frequently', the word *sikiri* 'frequent' is a normal adjectival noun with the usual adnominalization (*sikiri na saisoku* 'frequent urging') and the usual predicative form: ... *to iu róngi ga kono-tokoro sikiri dá* 'such arguments are frequent lately' (SA 2681.38b).

The words *saikoo* 'highest' and *saitei* 'lowest' can be used as pure nouns (*saikoo o simésite*(-) *iru* 'occupies the top spot') but they are also precopular nouns with adnominal and adverbial forms (*saikoo nó/ní*); as slang they are used to mean 'the tops = best' and 'the bottom = worst'.

Saizyoo 'best, top' is similar; its antonym *sáika* 'bottommost', however, is little used. *Saidai* 'largest' and *saisyoo₁* 'smallest', as well as *saisyoo₂* 'fewest; youngest' are precopular nouns usually found in the adnominal form (... *nó*) or as the first member of a compound (...-N); the same is true of *saiaku* 'worst' and its antonyms *sairyoo* 'finest' and *saizen* 'best', but *saizen* is also used as a pure noun in the expression *saizen o tukúsu* 'does one's (level) best'.

In the following discussions it can be generally assumed that whatever is said about "verbs" or "adjectives" as predicates will apply also to "verbal nouns" and "adjectival nouns", respectively, and that appropriate examples of the latter can be found to fit into all the subcategories set up. This follows from the fact that you can usually find at least one synonym for each verb or adjective among the Chinese loanwords that are borrowed into Japanese as verbal nouns and adjectival nouns, taking on the appropriate Japanese grammar once they have been supplied with the appropriate auxiliary—the verbal *suru* (from *sí*) and the copula *dá* (from *ní*).

3.1. CLASSES OF PREDICATES; SUBJECTS, OBJECTS, CASE VALENCES; SUBJECTLESS SENTENCES

All verbs can occur with a noun adjunct that is marked (typically as agent) by the subject particle *gá*. This does not mean there are no sentences without subjects. Subjectless sentences are of four types:

(1) In the first type a specific subject is so easy to supply that it was probably "intended" by the speaker and will be "understood" by the hearer even though it is not explicitly included in the message: [*Áme ga*] *yandá ka* 'Has it stopped [raining]?' *Sindá ka* '(Is he) dead?' We can treat this as OPTIONAL ELLIPSIS of the subject; it is one use of what has been called "zero pronominalization".

(2) In the second type, some sort of deictic reference is easily understood as the subject, even though the explicit verbalization of the reference is not easy to formulate. Thus the sentence *Kaerimásu* '[I'm] going (now)'—said on leaving a frequented bar or restaurant as a signal that you wish to pay up—implies a first-person subject; but whether that subject would be explicated as *bóku*($\bar{\text{~}}$) *ga* or *wata*[*ku*]*si ga*, or the plurals *bóku-ra ga* or *watá*[*kú*]*si-táti ga*, or (if the speaker is a woman) *atasi ga* or the plural *atási-táti ga*—or even, despite the polite stylization of the sentence, *ore ga* or the plural *oré-ra ga*—that question may remain unresolved for hearer and speaker alike. In a similar way the sentence *O-kaeri desu ka?* 'Are you leaving [to go home—or elsewhere]?' implies a second-person subject (YOU) but there remains open a wide range of possibilities, with no need for either speaker or hearer to decide on *anáta* 'you', *senséi* 'you, Professor', *Tanaka-san* 'you, Mr. Tanaka', *okyaku-san* 'you, Sir' (in a hotel or the like), ...; *ohutari-san* ('you two gentlemen/ladies' or 'you, Sir and Madam'), *miná-san* (you gentlemen and/or ladies'), If otherwise unmarked, the subject of a QUESTION is usually understood to be second person; the subject of a STATEMENT—especially in reply to a question—is often understood to be first person. That does not always correspond to the intention of the speaker, of course, and misunderstandings sometimes result.

(3) The third type of subjectless sentence involves expressions of time, weather, and other general conditions for which an arbitrary subject could be assumed but it would not be normal to use any specific noun: *Samúi* 'It's cold', *Osoku nátta* 'It's getting late', *Yakamasii* 'It's noisy', *Nigiyaka da* 'It's noisy/lively', It would be difficult to find a specific subject for such sentences as *li = Yorosii* 'It is all right [to do it—or, more often, not to do it]' and its opposite *Damé da = Ikenai* 'It is no good = You mustn't' since what they imply is some condition that is usually stated as an adverbialized sentence (...-*té mo* in the first case, ...-*té wa* in the second) and the use of a vague deictic such as *sore wa* [\leftarrow *sore ga*] 'that' in place of the condition is obviously secondary. Nor would it be easy to supply a subject for *Dóo sita* (*n desu ka*) 'What happened?', *Sinbun ni yoru to ...* 'According to the newspaper ...', *Mósi ka sitára ...* 'It might well happen/be that ...', etc. Mikami 1963 (*Nihongo no ronri* 96-7) gives the following examples of subjectless sentences with the verb *náru* 'it becomes': *Yó-zi hán ni nátta* 'It's [become] four thirty'; *li ténki ni narimásita né* 'It's become nice weather, hasn't it'; *Are kara zyuugó-nen ni narimásu* 'It's [become] fifteen years since then'; *Ikisaki wa toohyoo de kimeru kotó ni nátta* 'It was arranged for the destination to be decided on by vote'; *Watasi wa Oosaká-eki de yuuzin ni áu kotó ni nátte imásu* 'I am supposed to meet a friend at Ōsaka Station'. Such sentences might be regarded as extensions of the inherently subjectless use of the nominal sentence as propredication rather than as identification (see §3.10), since here *ní* is the infinitive of the copula (i.e. is the *essive*). Such sentences as *Amerika dé wa íma daitooryoo-sénkyo no mas-sáityuu desu* 'In America they are in the midst of a presidential election at the moment' probably belong there.

(4) The fourth type of subjectless sentence involves a generalized animate subject 'one, people, they, anybody' or the like, as in these examples (Mikami 1963.130—taken from Mio):⁵ *Ní ni ní o tasu to, sí ni náru* 'Two plus two makes four'; *Ningen to umaretára hito no tamé ni tukusánakereba naránai* 'If you are born a human being you must do all you

5. And this interesting example called to our attention by George Bedell (PIJL 2.170): *Háitte imásu!* '[Someone is inside =] (This toilet is) occupied!'

can for the sake of others'; Okóreba okóttá hoo no make de áru 'He who loses his temper is the real loser'; Lé o tatéru ni wa dáiku ni tanománakereba naránai 'To build a house you must call in a carpenter'; Kokuban ni "Asú wa yasumí" to káite átta 'On the blackboard it was written "No school tomorrow"'; Ano ningen ní wa náni o itté mo muda dá 'It's no use whatever one says to that individual'. Similar are expressions with ... tó^[j] omoimásu (= omowaremásu) 'it is thought that ...' and Kono yoo ni míte kimásu/mairimásu to ... 'When one comes to look at it like this ...'. Perhaps many cases of suru could be put here: [soo] suru to [né] ... 'when that happens ...'; sono ími kara suréba ... '(taken) in that sense ...'; moo tyót-to suru to ... 'a little more and ...'; etc. Also the "institutional" subjects marked by dé [wa] as in Kore ni túite kisyoo-tyoo zisin-ka dé wa "... to hanásite imásu 'With respect to this the weather bureau earthquake section is saying "...'.

We might wish to set up a fifth type to cover many of the expressions with postadnominals (§13.2), especially those making a sentence with ... ga áru/nái (such as nozomí(), mikomi, obóé, tamesí, kotó, tuide, kikái(), kanoo-sei, wáke, hazu, etc.) and ... ga suru (such as ki[moti], kanzi) where we might expect at least an indirect subject (N ní/gá), as well as the "clause auxiliaries" (nó da, yoo da, sóo da, rasii, etc.—see p. 661).

The frequency with which a subject is NOT explicitly stated—even as a subdued theme—may be as high as 74 percent of the sentences in a discourse (KKK 8), though it is lower in expository material such as news programs (37 percent according to KKK 8). On the problem of assuming an unexpressed subject, see Chew 1968. On multiple subjects and objects, see §3.11.

In addition to the gá-marked subject, some verbs take adjuncts with other markers. The direct-object marker ó is of particular importance in classifying verbs as to transitivity, but the classification is not easy, as the discussion below will show. Aside from transitivity, some verbs will take adjuncts with a particular case marker such as dative ní, reciprocal tó, ablative kará, allative é (or synonyms); such verbs are said to have one or more CASE VALENCES.⁶ In general only one instance of a given "case" is permitted for a given predicate, though you can always conjoin nouns BEFORE adding the appropriate case marker. Exceptionally, it seems to be possible to get multiple locatives of both time and place, but they must be arranged in a scope-narrowing sequence such as to suggest that they are probably the result of some secondary process—like the genitive ellipsis that leads to multiple subjects, etc. (§3.11). It is also possible to have multiple instrumentals, provided the "instruments" are different in type and semantically compatible with the process.

Although the AGENT (or "actor") is typically marked as subject with gá, other markings are possible under certain circumstances, as shown in the listings under §2.2 for ní 1d and 1e; dé 3d, 4, and 9; nó 2; kará 4 (and with verbs of informing under 1). It should be borne in mind that valences are sometimes left stranded by ellipsis, as in this example: Kyuukoo de Sinzyuku e [] san-zíkan hán de aru 'By express train it is three and a half hours to Shinjuku' (from Shibata 1961)—what is omitted is something like ikéba, iku to, or ittára 'to go'. Under propredication (§3.10) the case markers may disappear as well, though they are usually present in the adnominalized form (Sinzyuku é no kyuukoo).

6. These valences hold between the semantic entities which the "nouns" and "verbs" represent, so that it may be misleading to think of the valence as being specific to a given lexical item. Many verbs have multiple meanings; in some instances the valence will hold only if the verb is accompanied by specific other adjuncts.

3.2. DIRECT OBJECTS: TRANSITIVITY, ACTION, EMOTION, MOTION

Some verbs never occur with a noun adjunct that is marked by the accusative particle *ó*; such verbs are INTRANSITIVE ("VI"): *sinu* 'dies', *ikíru* 'lives', *súmu* 'lives', *iru/óru* 'stays', *áru₁* 'exists'; *ugóku* 'moves', *noru* 'mounts, rides', *noboru₁* 'climbs on'; *áu* 'meets', *niru* 'resembles', *tigau* 'differs', *komáru* 'is embarrassed', *kurusímu* 'suffers', *nayámu* 'is afflicted', *makeru* 'is defeated', *kátu* 'wins'; *kakáru* 'hangs', *tátu₁* 'stands up', *húru* 'precipitates', *hataraku* 'works'; *áru₂* 'is possessed', *ir-u* 'is needed', *dekíru* 'is created, is possible', *wakáru* 'is understood' (but see §3.5), potentials (§4.4), derived passive potentials (such as *miéru* and *kikoeru*, §4.7);

A few intransitive verbs turn up in idiomatic phrases that are transitive.⁷ Though *kubi ni náru* 'takes it in the neck = gets fired (discharged from employment)' is normally intransitive, it has come to be used with a direct object: *kaisya o kubi ni nátta seinen* 'a young man fired from the office' (= *kaisya ga seinen o kubi ni sita* 'the office fired him'); NHK no *zyoodán óngaku*(~) *o kubi ni nátta Miki Toríroo* 'T.M. who had been fired from NHK Jokes and Music [Department]' (SA 2641.51a). Similar is *ki ni ir-u* 'enters one's spirit = pleases one; one likes' (examples in §3.5a). Notice that focus can be inserted: *kubi ní wa/mo náru*, *ki ní wa/mo ir-u*, so that such expressions are better written with spaces instead of hyphens.

Verbs which sometimes occur with a noun adjunct that is marked by the accusative particle *ó* fall into three classes (cf. Isami 11.55), depending on whether they are open to either of these two conversions: the intransitivizing resultative *X o V-ru* → *X ga V-te áru* (§9.2.4(3)) and the pure (or "translational") passive *A ga X o V-ru* → *X ga A ni V-rare-ru*. EMOTION verbs will permit the pure passive (which reverses the subject-marking from the source of the emotion to the object toward which it is directed) but not the resultative conversion. MOTION verbs require a PLACE NOUN for the *ó*-marked object and they will take neither the resultative conversion nor the pure passive, although—like intransitive verbs—they are subject to the adversative passive and the passive-potential and they behave like action and emotion verbs with respect to the marking of adjuncts in desiderative sentences (§7.1). This means that *Hito ga miti o arúku* 'People walk the road' cannot be converted to **Miti ga hito ni arukaréru* 'The road gets walked by people', but you can say *Watakushi-tái ga hito ni miti o arukaréru* 'We suffer from having the road walked by people', *Hito ga miti ga aruk[ar]éru* 'People can walk the road', and *Watasi ga miti o/ga arukitái* 'I want to walk the road' (but *miti o* is more common than *miti ga* in such a sentence). In written Japanese you will sometimes find odd cases where the grammatical "sufferer" of an adversative-passive sentence would seem to be the place word rather than "people": *Zyookuu ga zyettó-ki ni tobarete yakamasii* 'The sky above is troubled with the flying of jet planes so that it is noisy'.

We will refer to these *ó*-susceptible motion verbs as QUASI-INTRANSITIVE verbs ("VQI") since there are also transitive ACTION verbs that designate movement or removal—see §3.3.(1), as well as intransitive verbs of motion that never take an *ó*-marked object: (... *ni*) *noboru₁* 'climbs on'—cf. *noboru₂* 'climbs', *noru* 'mounts', etc. Notice that *iku* 'goes' and *kúru* 'comes' sometimes take a traversal object: *Éki e wa dóno miti o ittára*

7. For example, *asobu* 'plays, amuses oneself' in the context *Kodomo o asonde kureru?* 'How about amusing [or amusing yourself with] the children?' (Endō 195, wife to husband).

ii desyoo ka 'Which street should I take to get to the station?', Sono toorí o kúru to utí(-) e demásu 'If you come down that avenue you will emerge at our house', Tooi miti o ái ni kíta otokó o ... '... a man who had come a long road to see her' (Ōno 1966.168). Annái suru 'leads the way' is similar: ... Hámako wa saki ni tátte, tobiisi o annái sita 'Hamako went ahead and led the way across the stepping stones' (Fn 439a). But another possibility is okyakusan o heyá e annái suru 'leads the guest to the room'; annái has two grammars, one equivalent to tureru 'brings along (a person)'.

These critical examples (adapted from Isami) show the differences between the three kinds of verbs:

ACTION TRANSITIVE VERBS

Hón o yómu. '[] reads the book = The book is read [often]'.	Hón ga yomaréru. 'The book gets/is read [by someone—hito ni]'.	Hón ga yónde áru. 'The book is [already] read = The book has been read'.
Mádo o akeru. '[] opens the window = The window is opened [often]'.	Mádo ga akerareru. 'The window gets/is opened [by someone—hito ni]'.	Mádo ga akete áru. 'The window is opened = The window has been opened'. (Cf. Mádo ga aite iru 'The window is open'.)

EMOTION TRANSITIVE VERBS

Háru o mátu. '[] expects spring = Spring is expected'.	Háru ga mataréru. 'Spring is expected [by someone = hito ni]'.	*Háru ga mátte áru. [Nor, apparently, *Háru o mátte áru.]
Kodomo o ai-súru. '[] loves the child = The child is loved'.	Kodomo ga ai-saréru. 'The child is loved [by someone—hito ni]'.	*Kodomo ga ái-site áru. [Nor, apparently, *Kodomo o ái-site áru.]

(MOTION TRANSITIVE =) QUASI-INTRANSITIVE VERBS

Kádo o magaru. '[] turns the corner = The corner is turned'.	*Kádo ga magarareru.	*Kádo ga magatte áru.
Sóra o tobu. '[] flies the sky = The sky is flown'.	*Sóra ga tobareru.	*Sóra ga tonde áru.

Some speakers have told me they feel it is possible to say such things as (?)Dóno miti ga arúite áru 'Which roads have been walked (on)?', as well as the generally acceptable Dóno miti o arúite áru and (?)Anna tokoró ga ryokoo site áru 'Such places have been traveled', but other speakers reject such forms; nor will most speakers accept (*)Dóno miti ga arukáreta ka 'Which roads got walked (on)?' or (*)Anna tokoró ga ryokoo saretá

'Such places got traveled', We will follow Isami in rejecting PLACE ga VQI-te áru and PLACE ga VQI-rareru (passive).

A list of sample verbs of each kind (with a few semantic surprises for the English speaker): *ACTION*: akeru 'opens', atuméru 'gathers', káku 'writes', kakúsu 'hides', kiku 'listens to', kowásu 'breaks', míru 'looks at', simau 'shuts up', siméru 'closes', tukúru 'makes', yobu 'calls', yómu 'reads', *EMOTION*: ai-súru 'loves', iwáu 'celebrates', homéru 'praises', kirau 'dislikes', konómu 'likes', kóu 'loves', koi-súru 'loves', mátu 'expects, awaits', nagéku 'laments', (hukóo o) naku 'laments (one's misfortune)', donáru 'yells at' (kodomo o donátte mo, Tk 2.240a), okóru 'gets angry at' (nan de mo náí kotó o kyuu ni okóru 'gets mad at the least little thing', Tk. 2.239a; ókusan o okótte 'angry at one's wife', Tk 2.240a—cf. nyoooboo NI okótte in the same discourse), nagúru 'hits', osímu 'regrets', urámu 'resents', (boosi/kodomo o) warau 'laughs at (a hat/child)'; arasóu 'strives for' (syóobu o ~ 'contends for victory'; séki(¯) o ~ 'scrambles for a seat'; saki o ~ 'strives for first place'); *MOTION*: hasír-u 'runs', kake-meguru 'runs around', koeru 'passes over', kudaru 'descends', magari 'turns (a corner)', matágu 'bestrides', noboru₂ 'climbs', subér-u 'slides/skates/skis (on)', oríru 'descends', tóoru 'passes by/through', tobu 'flies'; (gakkoo o) yasúmu₂ 'absents oneself from (= skips) school' (cf. yasúmu₁ 'rests' vi.),

The verbal noun ryuugaku has the grammar of a motion verb and should be translated 'GOING abroad to study', not just 'studying abroad': Amerika e ryuugaku sitári ... 'sometimes going to America to study' (SA 2686.26b). *Amerika de⁽¹⁾ ryuugaku suru would be ungrammatical. Other verbal nouns that are quasi-intransitive (i.e. take traversal objects only): zyookuu o patoróoru suru 'patrols the sky', kooen o sanpo suru 'walks in the park',

The "place" words that represent the traversal object are sometimes abstract (representing a situation or the like): ... atúi SAKARI O wázawaza Tokusíma made kiki ni ikimásita yó 'I went through the height of the hot weather all the way to Tokushima especially to hear it' (Tk 4.95a).

3.3. DIRECT OBJECTS OF ACTION VERBS: KINDS OF AFFECT

The direct object of transitive motion (as expressed by quasi-intransitive verbs) is the place across or along which motion takes place—either totally or partially (TRAVERSAL OBJECT);⁸ the direct object of transitive emotion is that toward which the emotion is projected (CATHECTIC OBJECT). The direct object of transitive action is that which is affected by the action (AFFECTIVE OBJECT), and "affect" covers a wide variety of semantic relationships that can be attributed to the meanings of particular verbs, e.g.:

(1a) that which is moved or removed: okuru 'sends (off)', hazusu 'removes', hanásu 'lets go, releases', dásu 'puts out, pays (etc.)', ...; hakobu 'conveys', utúsu '(re)moves', ...; tutaéru(¯) 'relays', ...; núgu 'doffs', ...; tóru 'takes (away)', ...; modósu 'sends back', káesu 'returns', ...; ukéru 'receives', morau 'gets', ...; kakéru 'hangs', ireru 'inserts', ...; oku 'puts (away)', ...

8. We must also take account of ABLATIVE OBJECTS, since some intransitive verbs of movement will permit the ablative to be marked by ó as an optional substitute for kará (§ 3.7; § 2.2, ó 3): déru 'leaves', tátu 'departs', oríru 'descends from', etc. The verb ugóku 'moves' also belongs here: líi to ossyáru made watakusi koko o, ugokimasén 'Until you agree I will not budge from this spot' (Fn 409a —kará could have been used).

(1b) that which is exchanged: (tori-)kaeru 'exchanges', ...

(2a) that which is created: tukúru 'makes', káku 'writes', tatéru 'builds', kosiraeru 'concocts'; ? iu 'says', hanásu 'speaks', yobu 'calls out', sakébu 'cries out', ...;

(2b) that which is converted: naósu 'corrects, repairs', (A o B ni) suru 'makes (A into B)', ...

(3) that which is extinguished, consumed, destroyed or gotten rid of: tabéru 'eats', nómu 'drinks', kesu 'extinguishes, erases'; kowásu 'breaks', korosu 'kills', naku-su 'loses, gets rid of', usinau 'loses', wasureru 'forgets'; ...

(4) that which is put on to be worn or which is worn: kiru 'wears (in general or on the torso)', haku 'wears (on the feet or legs)', kabúru 'wears (on the head)', ...

(5) that which is perceived: míru 'sees', kiku 'hears', kan-ziru 'feels', omóu 'thinks of, feels', ...

(6) that to which attention is paid for the purpose of direct or indirect perception: míru 'looks at', kiku 'listens to', kagu 'smells, sniffs'; sawaru 'touches'; ...

It is far from clear how we arrive at such semantic categories, to say nothing of whether they are valid. What semantic relationship is there between verb and object in hito o yobu 'calls/invites people' or in sensei o otozuréru 'visits the teacher', or in kamidana o ogámu 'prays to the household altar'? In Ei-káíwa no aité o tutómete 'serving as a partner for English conversation' (CK 985.372)?⁹ In kami o tokásu 'combs one's hair'? In pán o kíru 'slices the bread' or itiman'én-satu o kuzúsu 'breaks (= changes) a ¥ 10 000 bill'? In monó o sagasu 'hunts things' or zí o hiku 'looks up a character (in the dictionary)'? In kone o tukátte 'using one's "connections"'? Cf. the categories given for ó in §2.2. Does yasúmu₂, as in gakkoo o yasúmu 'skips school' and ... kottí ga unten o yasúnde iru zikan(=) ní wa 'during the hours when I'm not driving' (SA 2640.19c), form a separate category, or is it a metaphorical extension of Meaning 3 (place departed from), making yasúmu a quasi-intransitive verb, as I have assumed it to be in §3.2? There are, in addition, semantically cognate objects such as sutó o tatakatta 'fought (= maintained) a strike'—a strike being a kind of fight in itself, as in an election: sénkyo o tatakau 'fights (= contends in) an election'. (On the various meanings of N o V, see also Okuda 1970-1.)

Moreover, we must take account of verbs with multiple grammars, i.e. those that allow more than one kind of semantic relationship with their affected objects, as shown by these examples (from KKK 23.74):

- osieru* (1) kodomo o osieru 'teaches children'
 (2) kodomo ni Eigo o osieru 'teaches children English'—is kodomo ni miti o osieru 'shows a child the way' a third type?
- nuru* (1) kabe ni penki o nuru 'applies paint to a wall = paints a wall'
 (2) penki de kabe o nuru 'paints a wall with paint = paints a wall'
 kabe o síroku nuru 'paints a wall white' (§9.1.11)

9. Tutoméru has at least two grammars: intransitive (or pseudo-passive) in ginkoo ni tutoméru 'works for (is employed by) the bank' and transitive (of some sort) in ginkoo-in o tutoméru 'works/serves (is employed) as a bank clerk'. Here are more examples of the latter: ... dekíru(=) kágiri káno-zyo no aité o tutoméru 'does one's best to be a partner for her' (SA 2639.34b); ... Sikágo no Maasyaru-Hwíirudo sinbun-tyéen no kómon o tutómeta 'was employed as an adviser to the Marshall Field newspaper chain in Chicago' (CK 985.51); ... geizyutu-bún'ya no hensyuu-sekinínsya o tutómeta ga 'worked as managing editor in the art field' (CK 985.51).

- tukúru* (1) *tuiido de óobaa o tukúru* 'makes an overcoat out of tweed'
 (2) *tuiido o óobaa ni tukúru* 'makes the tweed into an overcoat' (§9.1.11)

These examples fall within the single class of ACTIVE TRANSITIVES. There are also verbs which may appear as either transitive or intransitive with a difference of meaning, for example:

mátu (1) *hito o mátu* 'waits for people'; (= *kitai suru*) 'expects, anticipates people; accords treatment to (receives) people'; (= *yoo-súru*) 'requires people'—Kenkyusha mis-assigns the last meaning.

(2) *hito ni mátu* (= *ni tayóru*) 'relies/depends on people': *Kokkai no ryoosiki ni mátu*, *genrón-kai no ryoosiki ni mátu* 'We rely on the conscience of the Diet, we rely on the conscience of the press' (SA 2663.18d).

See §4.6 for a discussion of "ambivalent" verbs, which appear as transitive or intransitive with little or no difference of meaning. Notice also the verbal nouns made with the suffix *-ka* 'ize' (§3.13) which can be used both as transitives and (the equivalent of *-ka sareru*, the passivization of the transitive) as intransitives.

The verbs *kami-tuku* 'bites' (given as transitive by MKZ) and *hoéru* 'barks at' (given as intransitive) seem to be in flux: *Inú ga kodomo ni/o hoéru* (*kami-tuku*) 'The dog barks at (bites) the child'. *Ni* is preferred usage but some speakers also use *ó* and it is that usage which must underlie the passive *Kodomo ga inú ni kami-tukareru* 'The child gets bitten by the dog'. (For those speakers who never use *ó*, *kami-tukareru* is a new intransitive verb derived from the passive and belongs with those listed in §4.5.)

Morishige 191 suggests that what looks like an intransitive use of transitive verbs in the following sentence can best be handled by assuming an ellipsis of 'self' for the direct object, as I indicate in brackets: *Nami ga [onore/zisin o] yoseté wa káesu* 'The waves drag [themselves] in and out'.

Certain other oddities can be treated as SYNTACTIC BLENDS, acceptable in varying degrees. Thus the sentence *Okáyama no éki o órite súgu desu* 'It's right after you get off (at) the Okayama station' (SA 2640.44c) will be acceptable to more speakers if it is edited so as to read *Okáyama no éki DE KISYÁ o órite súgu desu* 'It's right after you get off the train at the Okayama Station'. But perhaps the intention was 'when you go DOWN FROM the station'; cf. *saká o oríru* 'goes down the slope/hill'.

Sometimes an *ó*-marked object is left stranded by the ellipsis of the verb responsible for it, with or without proredication. One common type is the ellipsis of *surú no*^[b] after a verbal noun, as in these examples: *Watasi wa kono sángatu úmaku ikéba dezain-gákkoo o sotugyoo [surú no] desu* 'I will graduate from the design school this March if all goes well'; ... *watasi mo sore o syooti [surú no] de*, ... 'I went along with that, and ...' (SA 2684.138c). A more straightforward ellipsis of the predicate (here an unspecified transitive verb) is seen in: *Koko de gimón o hitótu* 'At this point, a doubt' (SA 2679.30a).

Some verbs will permit both a traversal object marked by *ó* and an allative marked by *é* or *ni*: *Áme no náka o Kokuritu Syoo-gékizyoo e iku* 'I go through the rain to the National Little Theater' (SA 2681.113e); ... *rooka o kotira e kúru gakuséi-táti* ... 'the students who come this way down the corridor' (Shibata 1961.62). The verb *háiru* 'enters' must be similar, to judge from this example: *Génkan o háitta* 'We entered through the vestibule' (SA 2672.22b)—the house entered would be *ié* [no náka] *e*. In fact, nothing prevents you from adding an ablative, as this sentence shows: *Nágoya kara Kóobe e atarasii háuei(-) o doráibu sita* 'I drove the new highway from Nagoya to Kōbe' or 'I drove from Nagoya to Kōbe on the new highway'.

The transitive verb *tazunéru* 'visits' permits both a direct object—the person visited—and an allative, the destination of the visit: ... *Kárayan o hóteru ni [=e] tazunéru to*, ... 'upon visiting Karajan in his hotel' (SA 2688.106a).

The intransitive verb *muku* means 'faces, fronts on' or 'is suitable for, suits' with *N ní*; but with *N ó* it is a quasi-intransitive verb of motion meaning 'turns (one's face) toward': "Yoko o muite", "Máe o muite", ... ' "Turn to the side", "Turn to the front", ...' (SA 2684.116a).

Some verbs are not normally used without an expressed object. And there are verbs of this sort which are virtually limited to a specific noun as the object, e.g. *kao o sikaméru*(⁻) 'frowns' (= *sikame-ttura o suru*), where the noun *kao* 'face' is quite free to occur in other contexts, but *sikaméru*(⁻) is not. The opposite situation limits a noun to the role of object of a specific verb, though the verb freely occurs elsewhere: *móo o hiráku* 'dispels the darkness (= ignorance), enlightens'. Such expressions are often carried by dictionaries as separate idioms.

3.4. INDIRECT OBJECTS: BENEFICIARIES; DATIVE VALENCES

Verbs that express giving, sending, imparting of information, showing, etc., imply the designation of a RECIPIENT or BENEFICIARY, usually marked by *ní*. A beneficiary may be designated even for a predicate which does not carry with it a latent recipient of this sort, but such generalized beneficiaries are usually marked by ... *nó tamé ni* 'for the sake of' (an adverbialized nominalization) or some other expression involving nominalization along the way; in any event, the particular predicates involved are not characterized by a dative valence.

Among the verbs that enjoy a dative valence are those that involve the giving of objects or favors (*yarú/ageru*, *kureru/kudasáru*—see §10) and the transmittal of objects or messages: *okuru* 'sends', *kasu* 'lends', *uru* 'sells', *dásu* 'pays', *miséru* 'shows', *simésu*(⁻) 'reveals', *osieru* 'instructs', *iu* 'says, tells', *tutaéru*(⁻) 'transmits, passes on', *hanásu* 'speaks to, addresses' (also with reciprocal valence, §3.2.1); *tyúumon*(⁻) *suru* 'orders' as in *Hirumesi o susiya NI tyúumon*(⁻) *suru* 'I will order lunch FROM a sushi restaurant'. With CAUSATIVES (*saseru* etc. §4.1) and PASSIVES (*sareru* etc. §4.2) the dative marking at the surface represents an underlying agent; we might say the same thing about FAVOR RECEIPT (*site morau* §10), but we are treating that as an ablative valence (§3.6) even though the more common marking is with *ní* rather than *kará*—in contrast with GIFT RECEIPT (*morau*) where the *kará* marking is more common. The verbs *sireru* 'becomes known', *tutawáru*(⁻) 'gets reported', *omoéru* 'seems', *miéru* 'appears', and *kikoeru* 'sounds' are best treated as pseudo-passives to account for the *ní* that marks the semantic agent of the underlying active verb in each case; *hanmei suru* 'becomes clear (to someone)' perhaps belongs with *wakáru* 'understands' under the quasi-possessive verbs of §3.5.

When a favor conversion (*V-te yaru* etc. 'does it for someone', and—with the dative surface marking for the underlying ablative—*V-te morau* 'has it done for one' etc.) is applied to a verb that has a characteristic dative valence, two beneficiaries may appear, since the favor conversion—built as it is on verbs of 'giving'—carries one such valence itself. In these cases, the dative that refers to the favor normally precedes that which is called for by the underlying predicate, which usually keeps its grammatically tied elements close to it: *mekurá ni {wa} tomodati ni tegami o káite ageru* 'writes a letter for a blind man to his

friend'. If there is only one dative expressed, the grammar is ambiguous: *tomodati ni tegami o káite ageru* can mean either 'writes a letter FOR a friend' or 'writes a letter TO a friend', though the latter would be the interpretation to be assumed in the absence of contrary clues from the situation or the context.

We may need to include among the dative-valence verbs certain predicates where the *ni* marks a hurdle: *seikoo suru* 'succeeds in/at', *mayóu* 'is confused (over/by)', *kane ni komáru* 'is embarrassed for [= lacks] money' (cf. *kane de komáru* 'is embarrassed because of [having] the money'). Compare the CAUSE group of valences that can optionally be marked by the instrumental *dé* (but perhaps with some slight difference of nuance): *nayámu* 'suffers (from)', *odoróku* 'is surprised (at)', *bikkúri suru* 'is startled (at)', ... (§3.7).

Some of the other uses of *ni* listed in §2.2 will also represent dative valences, e.g. 1c with *yoru* 'depends/relies (on)', *sitagáú(⁀)* 'conforms (with), is consequent (upon)', *oo-zíru(⁀)* 'complies (with)', *motozúku* 'is based (on)'; 1f with *mitásu* 'fills it (with), *mitíru* 'gets filled (with)', *ahuréru* 'overflows (with)'; perhaps 4, the LOCATIVE with static verbs (see §3.8); and 5a, change of position (MUTATIVE-LOCATIVE), with *oku* 'puts', *hitáru* 'is absorbed (in)', *kakéru* 'hangs it', *kakáru* 'it hangs', (*bédde ni*) *yoko ni náru* 'lies (on the bed)', *ireru* 'inserts', *káku* 'writes (on/in)', ? *noru* 'mounts', ? *noboru₁* 'climbs on'—cf. (... o) *noboru₂* 'climbs', ? *túku* 'attaches (to)'—cf. P *ni/e túku* 'arrives at P' with allative valence, §3.7). Also: *sigoto ni sánka(⁀) suru* 'participates in a job'; *ginkoo ni tutoméru* 'works for a bank' (cf. p. 189); *gyógyoo(⁀) ni zyúuzi suru* 'engages in commercial fishing'; ... *taihán(⁀) no gakusei wa gesyuku-ságasi ni kenmei dá* 'the majority of the students are assiduously searching lodgings' (SA 2676.118a); *bareebóoru ni kyoo-zíru(⁀)* 'amuse themselves with volley ball' (SA 2688.38ab); *supóotu ni nekkyyoo suru* 'is excited about sports'; ...

With the following verbs the dative valence calls for a CONFRONTED: *idómu* 'challenges', *amaéru(⁀)* 'coaxes', *horeru* 'falls in love (with)', *mutyuu ni/to náru* 'gets infatuated (with); becomes absorbed (in)', *hankoo suru* 'resists', *hantai suru* 'resists', *kánsya(⁀) suru* 'thanks', *kátu₁* 'vanquishes' (as in *aité ni kátu* 'beats one's partner', cf. *siai ni kátu₂* 'wins the match', *sumoo ni kátu₂* 'wins at sumō wrestling'), *makeru* 'is vanquished (by), loses (to)', *koosan suru* 'surrenders (to)', *akogareru* 'adores'; *akíru* 'wearies (of), is fed up (with)'; *hito* [no *hukóo*] *ni doozyoo suru* 'sympathizes with a person (with a person's misfortune)'. But it is unclear to me why *hito NI monó o kakúsu* 'hides things from people' belongs here; cf. *hito KARA monó o nusúmu/ubáu* 'steals things from people'. The confronted need not always be a person, of course: *míbun NI kanáu* 'it suits one's social status'; *sizen NI motóru* 'goes against nature'; *ima-máde NI kuraberu to* 'when you compare it with (the time) up to now' (SA 2642.40e)—that the *ni* is called for by the verb can be seen from *yó-zi made ni NI kuraberu to* 'when you compare it with a time up to four o'clock'.

Other dative valences are found with *A ga X ni sansei/hu-sánsei da* 'A agrees to (disapproves of) X'; (*koodoo ni*) *húziyuu da* 'is hampered (in movement)'; *N ga N ni tokuyuu da* 'N is peculiar to N'; *N ga N ni motte-kói* (or *uttetuke*) *da* 'N is just the thing for N'; *X ga Y ni nitukawásii* 'X is in keeping with (is appropriate for/to) Y' (cf. *A/X ga B ni niáu* 'A/X suits B'); and perhaps *A ga B ni sínsetu da* 'A is kind to B', unless this is a generalized beneficiary. Certain other cases of *ni* are best treated as the MUTATIVE (change-of-state) use of the essive, or copula infinitive; thus *N ní kagír-u* 'limits it to N' means 'limits it so

that it is N'—Use 6 in the list of §2.2. This will cover such verbs as *kimaru* 'is decided', *kimeru* 'decides', *kettei suru* 'is decided', *kakutei suru* 'is firmly decided', *ninmei suru* 'appoints (to be)', and possibly *tyuumoku ni atai-suru* 'is worthy of attention'.

The following verbs not only can take N *ní* but also permit N *yóri* 'than N', as if they were adjectives: *masáru*(⁻) 'surpasses', *suguréru* 'surpasses', *hiidéru* 'surpasses', *okureru* 'lags behind', *otóru*(⁻) 'is inferior', (Apparently N *dé* is not acceptable with these verbs.)

There are a few adjectives and adjectival nouns that use N *ní* as an equivalent of N *ni tái-site* 'with respect to N'; this is a type of DATIVE OF CONFRONTATION: *momen ga mizu ni tuyóí* 'cotton can stand water (= washing)', *o-sake ni tuyóí* 'can take a lot of liquor'; *sán ni yowái* 'is easily affected by acid', *keizai-móndai ni kuwasíi/akarui* 'knows a lot about economic problems'; *kotobá^[1] no tukai-kata ni binkan dá* 'is sensitive to wording', *tíri ni hu-ánnai na gaikokú-zin de mo* 'even a foreigner unfamiliar with the geography' (SA 2663.34b). Also *génki/yúuki/keiken/syokúryoo*(⁻) *ni tobosíi*(⁻) 'is wanting (lacking in) vitality/courage/experience/provisions'—cf. N *ni tómu* 'is rich in N, abounds in N' (= N *ga yútaka da* 'N is abundant'). But words for 'full of' (*ippai* etc.) usually take the instrumental *dé*: *Mé wa námida DE ippai ni nátta* 'Her eyes became full of tears', *Muné wa kánsya*(⁻) *no nén DE ahuréru* 'My breast brims with gratitude', ... *wakamonó*(⁻) *ya hisyó-kyaku DE ahúrete iru* 'is flooded with young people ... and summer vacationers' (SA 2642.42); yet cf. §2.2, Use 1f, where *ahuréru*, together with *mitásu* and *mitíru*, is given a dative valence, and the example ... *zisin ni miti-ahureta Isidá-si wa* 'Mr Ishida, brimming with confidence, ...' (SA 2677.30c). The thing overflowing itself is often the subject: *mé ni námida ga ahuréru* 'tears well up in one's eyes', *tegami ni nétui ga ahuréru* 'the letter brims with passion', *kawá* [no mizu] *ga ahuréru* 'the (water of the) river overflows', etc.

Still other predicates take N *ní* in the sense of N *ní tótte* 'for N': *Kenkoo ni taisetú/daizi da* 'It is important for one's health'; ... *éiga*(⁻) *ni hú-muki na* ... 'unsuitable for a film' (SA 2684.120a); ... *bóku*(⁻) *ní wa monosúgoku syaku ni sawatte* ... 'for me it was very irritating' (R); ... *bóku*(⁻) *ní wa subarasíi kotó na n desu*. (OKáasan ni site míreba, mósi ka suru to, monosúgoku sabisíi ka mo sirenái kedo ...) 'for me it was splendid. (But perhaps for my mother, however, it may have been very lonely ...)' (R).

All the uses of *ní* ultimately come from the essive 'being'; it may be possible to explain at least some of these uses by assuming ellipsis:

- (1) dative of benefit = [no tamé] *ni* 'being for the sake/cause of'
- (2) dative of direction = [⁻ate] *ni* 'being aimed at'
- (3) dative of confrontation = *ní* [tái-site] 'being opposed to'
- (4) dative of reference = *ní* [tótte] 'taking it as being (a case involving ...)'

Propredication will yield examples of N *ní da*; under adnominalization, the expected N *ní no* ... is usually replaced by N *é no* See §3.7 for a discussion of *é no*.

3.5. EXISTENCE, LOCATION, AND POSSESSION; QUASI-POSSESSIVES

In Japanese, as in many languages, there is considerable overlap in the devices used to express existence, location, and possession. That is because, in a three-dimensional world, if something exists it must have a location; and in a personalized world OWNERSHIP can

be imputed (to supernatural beings if to no one else) for whatever exists. And so the same verbal elements are often used to carry all three meanings, but with subtle differences in the grammar depending on which of the meanings is intended. In many languages, including Japanese, some of these wide-ranging verbal elements are used also as semantically empty auxiliaries in order to predicate adjectival and nominal elements, though their identity is often masked by various surface assimilations and abbreviations when they are joined to the grammatical elements that mark the quality or thing as an adjective, an adjectival or precopular noun, or any of the several classes of ordinary nouns. In Japanese the verb *áru* is used for all the above functions in one way or another; in some of the uses, however, other verbs are either required or available to specifically mark as ANIMATE or HUMAN the direct subject (which expresses that which exists, that which is located, or that which is possessed). The use of the other verbs, as obligatory or optional alternants to *áru*, varies somewhat from dialect to dialect and from period to period in the development of the modern language; what is described here is the pattern for the standard language of today. In Wakayama prefecture the verb *áru* is used for living beings instead of the standard *iru* or *óru* (Zhs 4.23, H 1968.108), and the usage is common in older literature. The literary cliché *sonó-hito [ga] ári* 'there exists that person = is well known' persists in the colloquial: ... *zyósi puro-resu ni sonó-hito ári to sirareta hitó (-)rasii* 'appears (or: is said) to be a person well known in women's wrestling' (SA 2678.141c). The existential-possessive verbs (as we can call them) are also used as verbal auxiliaries with infinitives and gerunds (§9.1.10 and §9.2.4 respectively), both those which are marked for animateness of direct subject (such as *iru* or *óru*) and those which are not (such as *áru* and its synonyms). In the following chart the synonyms for each verb are usually not exact synonyms but include some feature of exaltation explained elsewhere; A and B mark people (but also often animals), X a thing, and P a place.

THE GRAMMAR OF EXISTENCE, LOCATION, AND POSSESSION

	Unmarked	Marked for animate direct subject (possessed)	
(1) Existence	X/(A) <i>ga áru</i> <i>gozaimásu</i>	A <i>ga iru/óru</i> <i>irassyáru</i> <i>o-ide ni náru</i>	Optional, but preferred.
(2) Location	X <i>ga P ni áru</i>	A <i>ga P ni iru/óru</i> <i>irassyáru</i> <i>o-ide ni náru</i>	Obligatory. ^a
(3) Possession	A <i>ni/ga X/B ga áru</i> <i>gozaimásu</i> <i>o-ari ni náru</i>	A <i>ni/ga B ga iru/óru</i> <i>irassyáru</i> <i>o-ide ni náru</i>	(See below.)

a. But when speaking of people being in abstract static situations, only *áru* is used: *Watakusi wa kootyoo to site sono enzetu o sinákereba naránai tatibá ni áru (*iru)* 'As the principal, I am in a position where I have to make the talk'. In addition to *tatibá*, the words *tii* 'position', *kankyoo* 'environment, atmosphere', and *zyootai* 'situation' (and possibly a few others) will be used in this way. (But not *baai* or *tokoró* or other nouns referring to dynamic or physical situations.)

The possessive *áru* permits the subject-exalting conversion of §6.1; what is exalted is the POSSESSOR, who appears on the surface as the indirect subject, since the direct subject

has been usurped by the POSSESSED: *Dónata ni/ga náni ga o-ari désu ka* (= *o-ari ni narimásu ka*) 'What esteemed person has what?' In the unmarked situation the possessed is typically an inanimate object, but it may be animate if the possession reflects membership in a group ("belonging") as in 'I have a brother' (kin group) or 'we have a friend/leader' (social group). For other cases of an animate "possessed", *áru* is usually replaced by the marked verb *iru* or one of its synonyms; the marked form is obligatory to express an animate "located" and preferred to express an animate "existent". Since the unmarked version is only optional to express possession that reflects membership in a group, some common situations can be expressed in both ways:^{9a}

<i>Dáre ni/ga</i>	<i>kodomo ga</i>	<i>imásu/orimásu</i>	<i>ka</i>
<i>Dónata ni/ga</i>	<i>okosan ga</i>	<i>irassyáimasu</i>	<i>ka</i>
<i>Dónata ni/ga</i>	<i>okosan ga</i>	<i>o-ide désu</i>	<i>ka</i>
<i>Dónata ni/ga</i>	<i>okosan ga</i>	<i>o-ide ni narimásu</i>	<i>ka</i>
<i>Dáre ni/ga</i>	<i>kodomo ga</i>	<i>arimásu</i>	<i>ka</i>
<i>Dáre ni/ga</i>	<i>kodomo ga</i>	<i>gozaimásu</i>	<i>ka</i>
<i>Dónata ni/ga</i>	<i>okosan ga</i>	<i>o-ari désu</i>	<i>ka</i>
<i>Dónata ni/ga</i>	<i>okosan ga</i>	<i>o-ari ni narimásu</i>	<i>ka</i>

All of these mean 'Who has a child (or: children)?' with deference shown toward the possessor (*Dónata ni/ga* ...) or the listener (... *gozaimásu ka*) though the chart is misleading to this extent: it fails to show that the exalting forms (*dónata*, *okosan*, *irassyáru* etc.) are but optionally correlated and other combinations can be selected.

The possessor, marked optionally by *ní* or *gá*, is usually animate, but occasionally not; when not, the particle used is *ní* rather than *gá* (*X ní Y ga áru* 'X has Y'): *Kuruma ni hándoru(ˉ) ga áru* 'A car has a steering wheel'; *Kuruma ni taiya ga nái* 'The wheel (or: the car) lacks a tire'; *Sin'yoo dekiru igákú-sya ga, marihwana ní wa huku-sáyoo ga nái to tyan-tó hatugen site 'rú si, ... 'Reliable medical men clearly state that marijuana has no side effects (that there are no side effects to marijuana)' (SA 2680.119c)*. Free word order obtains regardless of the choice of *ní* or *gá* to mark the possessor: ... *zibun ní wa kodomo ga hutarí iru* 'I have two children myself' (SA 2793.46b); *Kottí ni kane wa nái ga ... 'I haven't any money but ...' (Tk 3.290b)*. But there are problems: *Morishige 241* gives the example *Kodomo wa watasi ga áru* 'I have children'. My informants reject that in favor of *Kodomo wa watasi NI áru*; yet they will accept *Kodomo wa watasi MO* (or: *watasi NÍ MO áru*), and that would seem to imply an underlying *watasi GA*—unless we assume that *watasi mo* is an ellipsis for *watasi {ní} mo*.

It will perhaps be questioned whether we need to distinguish EXISTENCE from LOCATION; the two would seem to be in contrast in the sentence *Koko ni iru gakusei mo irú si koko ni inai gakusei mo iru* 'There are students who are here and students who are not here'. For the locational *iru* the best translation is sometimes 'stays' (i.e. 'continues to be at'): *Utí(ˉ) ni ite benkyoo si-nasái* 'Stay at home and study'. Notice that *nokóru* 'remains' means 'stays behind (when others have gone)' or 'lingers (beyond the expected time)' or 'is yet to be dealt with'; it also means 'survives'. It may be helpful to recall that there are three different Chinese loanmorphs corresponding to *áru*: SON refers to existence, ZAI location, and YUU possession. From these come the verbs *son-súru* = *sonzai suru* 'exists', *taizai suru* 'stays' (there is no **zai-súru*), and *yuu-súru* = *syoyuu suru* 'possesses'.

9a. As in ... *watakusi ní wa nyóoboo mo áru, kodomo mo iru* 'I've got a wife, I have children' (Agawa 1.252b).

A few other verbs are similar in grammar to the possessive use of the verb *áru*; we can call them QUASI-POSSESSIVE verbs. They include *wakáru* 'understands', *ir-u* 'needs',¹⁰ *dekíru* 'can do', *miéru* 'can see',¹¹ *kikoeru* 'can hear', and the regularly formed potentials^{11a} such as *yom[ar]éru* 'can read'. You will notice that I have translated the Japanese verbs with English transitives. It has been suggested that we regard their grammatical peculiarities as the result of an obligatory transformation within Japanese from some regular transitive grammar, so that *A ni/ga X ga wakáru* 'A understands X' is regarded as just a surface-warped expression of something that is thought up as **A ga X o wakáru*. Evidence favoring this interpretation can be found in the fact that, despite my asterisk, people sometimes say *A ga X o wakáru*; cf. Mikami 1963b.236, which also gives an example of *A ga B o ki ni ir-u* where we would expect *A ni/ga B ga ki ni ir-u* 'A likes B' since the idiom *ki ni ir-u* 'enters one's spirit' = 'catches one's fancy' functions as a unit with the grammar of a quasi-possessive verb. (SA 2655.134a reports with disapproval the discovery in a new novelist's work of this sentence: *Watasi ga íma no sigoto o ki ni itte iru kotó wa tásika da* 'It is definite [= I am sure] that I like my present job'.) I have myself heard *Kore o irimásu ka* 'Do you need this?' (as have others), and I have elicited acceptance of *Kore o o-wakari ni narimásu ka* 'Do you understand this?' as well as [see below] *Kore o hosíi ka* 'Do you want this?'. Yet no amount of encouragement will elicit **N o áru*—perhaps because of the ready availability of the transitive synonym *mótu* 'holds, possesses'. (It is perhaps worth mentioning that the Chinese verbal nouns which are synonymous with some of these verbs are, indeed, transitive: *syoyuu suru* 'possesses', *rikai(-) suru* 'understands', *yoo-súru* 'needs'.) Authentic examples of *o wakáru*: *Uke-té ga bóku(-) no omótte iru kotó o wakátte kureréba uresii ga, ...* 'If the persons receiving them [= the images I draw] kindly understand what I intend I am pleased but ...' (SA 2640.12); *Bóku(-) ga hanásita kotó o wakátte kureta tó wa kooei désu ga ...* 'I am honored that you have kindly understood what I have said, but ...' (CK 985.390—a similar example appears a few lines later). In these two examples it might be thought that the *ó* is due to a syntactic blend of *monó o kureru* 'gives a thing' with *V-te kureru* 'gives the favor of doing V' but then we find: *Sosite bóku(-) wa, káre-ra no soo iu yari-kata no ími mitai na monó o wakátte ...* 'Then I understood something of the meaning of their doing it like that and ...' (CK 985.393). And in order to account for the pure passive in ... *íma de mo sonna ni wakarárete wa inai* 'I'm still none too well understood' (Tanigawa 38) we will have to assume an underlying [*watakusi*] *o wakáru*.

An example of *o dekíru*: *Íma ya séito ga Toodai to iu namae daké ni hikarerú no de wa náku, zibun ga yari-tai gakúmon o dekíru daigaku o erábu yóo desu* 'Nowadays it seems that the student is not lured just by the name Tōkyō University but chooses the university where he can pursue the studies he wants to do' (SA 2663.28a). On the retention of underlying *ó* with the potential conversion in general, see §4.4—where, however, I suggest explaining *N o VN dekíru* as an ellipsis: *N o VN [suru kotó ga] dekíru*. That will take care

10. Kuno (1973.89) suggests that *ir-u* is different from the other quasi-possessives in that only *Dáre ga* (and not **Dáre ni*) *o-kane ga irú no desu ka?* 'Who needs money?' is acceptable; but other speakers feel that *Dáre ni ...* is acceptable, if perhaps old-fashioned.

11. But NOT in the meaning 'seems'. In ... *ip-piki no doobutu ga, watasi ní wa inú ni mie, anáta ni wa tora ni miéru ...* 'an animal appears to me as a dog and to you as a tiger' (Kabashima 1965.95) the first *ni* in each clause is the dative of reference *ní* [*tótte*] and the latter *ni* in each clause is the copula infinitive under the putative conversion of §9.1.11.

11a. But the subjects of potentials formed from intransitive verbs are usually marked with *gá*, not *ní*: *(?*)kodomo ni arukéru* → *kodomo ga arukéru* 'the child can walk', despite the acceptability of *kodomo ni/ga arúku kotó ga dekíru*. Cf. Harada, *Kokugogaku* 92.47 (1973).

of this example: *Matomo na kotó o yatte itá n de wa, zin'in o kákuho dekinai dankai ni kite 'ru n desu* 'We have reached the stage where, if we are honest, we cannot guarantee our personnel [their jobs]' (SA 2674.26c). But *gakúmon* is not exactly a verbal noun, unlike *seikatu* in the following sentence, cited with disapproval by SA 2658.39a: *Wareware ga seikatu o dekíru yóo ni si ro* 'Make it so we can live'. The conservative nature of written Japanese may account for the fact that KKK 25 finds that the object of a potentialized verb is marked with *gá* over twice as often as with *ó*. (KKK 25 found no instance of *N o wakáru*.)

Certain adjectives have a grammar that is similar to that of the possessive *áru*, notably its negative counterpart *nái* 'is nonexistent, lacks' and the quantitative *óói* 'is/has much' (= *óoku áru* = *takusan áru*)—as in *Zensoku wa tinoo(¯) no takái zidoo ni óói* 'Asthma is common to children of high intelligence'—and *sukunái* 'is/has little' (= *?sukúnáku áru* = *sukósi áru*); these two adjectives are also peculiar in shunning non-defining adnominalization to their immediate subjects (*sukunái kane* → *sukósi no kane* 'a little money', *óói kodomo* → *óoku/takusan no kodomo* 'lots of children'—see §13.10), a peculiarity perhaps not unrelated to those constraints on adnominalizing a possessive sentence that lead to the generation of possessive nominals (§13.4) and to one source of sentences with multiple subjects (§13.11). At least one adjectival noun seems to have the grammar of a quasi-possessive: *A ni/ga X/B ga hituyoo da* 'A needs X/B'. The adjectival noun *hu-mánzoku* and its shortened version *human* 'dissatisfied; dissatisfying' would appear sometimes to be used with possessive grammar—*S nó ga watasi ní wa human dáta* 'I was dissatisfied that S' (SA 2680.118b); yet *Dáre ga N ni human désu ka* 'Who is dissatisfied with N?' is more usual than *Dáre ni/ga N ga human désu ka*. These words, both of which are also abstract nouns, may be involved in a blend of DESIDERATIVE grammar (*Dáre ga N ga human désu ka*) and two types of ordinary grammar, one with a dative of reference, the other with a dative of cause:¹²

Dáre ni [tótte] N ga human désu ka 'For whom is N dissatisfying?'

Dáre ga N [no tamé] ni human désu ka 'Who is dissatisfied on account of N?'

The separable idiom *ki ga suru* 'has the feeling/inclination' also appears to have a possessive grammar: ... *to iu ki ga, watasi ní wa suru* 'I DO have the feeling that ...' (SA 2654.46d).

Sometimes the verb of possession is obvious enough to be optionally omitted: *Kokuseki ni túite wa hurete inái no de, Nihon-zín de mo kanoo-sei ga {áru ka}?* 'Since it says nothing about nationality, perhaps even a Japanese might have the possibility [of becoming the "playmate of the month" in Playboy Magazine]' (SA 2681.103d).

Since both *áru* and *iru* are used as verbs of possession, it is possible to get both in a conjoined sentence, as in the following example (where they are negativized): *Oyá mo náku, kyóodai mo inai* 'He has no parents and lacks brothers or sisters, too' (SA 2674.89b). In such conjoinings the verbs can also be used for existence, rather than possession, even though *áru*—in the standard language—is not otherwise used for animate existence: *Daigákú-sei mo iréba roonin tyuu mo áru* 'There are [among those answering the ad] both

12. A double grammar is also shown by *Káre ga zyoosiki ni kakete iru* 'He is lacking in common sense' (dative of cause?) and *Káre ni zyoosiki ga kakete iru* 'He lacks common sense' (= *Káre ga zyoosiki o kaite iru*); since (?)*Káre ga zyoosiki ga kakete iru* is apparently not used, I am uncertain whether *Káre ni* is possessive grammar or dative of reference.

university students and unsuccessful applicants waiting for the next chance to take the entrance exams' (SA 2674.123b).

Examples such as ... S *nó* o *syooti* da 'understands that S' (Fn 319a) seem to show a nominal taking a direct object, but a better explanation is propredication since *syooti* is a transitive verbal noun: S *nó* o *syooti* [*surú* no] da.

According to Kuno 1971 the normal unmarked order of adjuncts in the locational sentence puts the location before the located, and that would account for this example: *Sikási, omowánu tokoró ni otosí-ana ga áru monó de aru* 'But hitches turn up where you least expect them' (Shibata 1961.170). (This is simply a particular instance of the general unmarked order described in §2.1.) When the located precedes the location, it has presumably been thematized; as a consequence it is often subdued.

Kuno says the locative-located order occurs three and a half times as often as the opposite order. Does this mean that the located is thematized (in our sense of thematization) in every fourth sentence expressing location?

3.5a. DESIDERATIVE AND QUASI-DESIDERATIVE PREDICATES; CATHEXIS

Those adjectival sentences that result from applying the desiderative conversion of §7 to transitive and quasi-intransitive verbs will permit more than one subject to come to the surface (cf. §3.11): N_1 ga N_2 ga V-i-tai ' N_1 wants to V the N_2 '. The second *gá*-marked phrase represents an underlying semantic object which can optionally be marked by *ó* as it is in the underlying verbal sentence (N_2 o V): N_1 ga N_2 o V-i-tai ' N_1 wants to V the N_2 '. Sentences that exemplify this: *Watasi ga mizu ga/o nomi-tái (kotó ...)* '(The fact that) I want to drink water'; *Watasi ga miti ga/o aruki-tái (kotó ...)* '(The fact that) I want to walk the road'; *Watasi ga sensei ga/o home-tái (kotó ...)* '(The fact that) I want to praise the teacher'. When the desiderative sentence is from an intransitive, the adjunct marking is the same as in the underlying sentence: *Watasi ga umá ni noru* 'I will ride the horse' → *Watasi ga umá ni nori-tai* 'I want to ride the horse'.

A similar grammar characterizes a few other predicates, which we will call QUASI-DESIDERATIVE. Perhaps the best known of these are the adjectival nouns *sukí* 'like(d)'¹³ and *kirai* 'dislike(d)' and their derivatives *dái-sukí* 'much like(d)' and *dái-kirai* 'much dislike(d)'—deriving from the infinitives of the verbs *súku* 'likes' and *kirau* 'dislikes', together with the adjectival noun *iyá* 'dislike(d)', which presumably derives from an interjection that is a synonym of *iie* 'no'. The traditional adjunct marking for sentences with these adjectival nouns is N_1 ga N_2 ga *sukí* da (etc.) ' N_1 likes (etc.) N_2 '.¹⁴ I have encountered

13. Also *hiiki* 'being popular': A ga/wa B ga *hiiki* da 'B is popular with A'. *Hiiki* is a precopular noun and also an intransitive verbal noun 'patronizing, favoring'. Notice that *kóobutu* (-) 'favorite (food/drink)' and *dai-kóobutu* 'special favorite' are nouns; in *Néko wa gyóruí ga dai-kóobutu da* 'Cats are especially fond of fish' (Kotoba no yurai 137), the underlying relationship between *néko* and *dai-kóobutu* is a kind of genitive: *Gyóruí ga néko no dai-kóobutu da* is a paraphrase.

14. To be sure, N_1 is commonly thematized and subdued (N_1 wa N_2 ga AN da); we are speaking of the basic grammar, as found with localized interrogation (*Dáre ga dáre ga sukí* 'Who likes whom?' and—usually—under adnominalization: N_1 ga/no N_2 ga/no *sukí* na *kotó*. Cf.: *Atasya [=Watasi wa] sukí datta n da*. *Anó-hito ga sukí datta n da* 'I was pleased. I liked him', or: '[He] appealed to me. [I] found him appealing' (Kb 100b).

difficulty in eliciting good examples of *N o kirai/iyá da* despite the widespread use of *N o sukí da*,¹⁵ and elsewhere I offer the notion that we might derive the latter structure by associating the *ó*-marked object directly with the verb infinitive *súkí* 'like'. But that suggestion is to be rejected in view of the following example of *N o sukí ni náru*, where *súkí* can surely be taken only as an adjectival noun (under the mutative conversion of §9.1.11): *Ítu-no-má-ní-ka Mása ya o kore-hodo sukí ni nátte ita kotó ...* 'that before she knew it she had become this fond of Masaya ...' (Fn 409b). And there are, after all, text examples of both *N o kirai dá* and *N o iyá da*: *Anáta ga sai-gúnbi ni sansei sareté mo, watasi wa Tokúgawa san o kirai zya náí n desu* 'I do not hate you, Mr Tokugawa, even though you support rearmament' (Tk 2.248b); *Seizi to iu monó o watasi ga itiban kirai ná no wa, ...* 'The thing I hate the most about politics ...' (Tanigawa 25); ... *Kikunaka sensei ga Seitároo o kirai da ...* 'Maestro Kikunaka dislikes Seitarō' (Fn 316b); *Onna-gata o iyá da?* 'Dislikes female impersonators?' (Kb 134b—written in 1928).

The idioms [*N ga*] *ki ni ir-u* 'likes [*N*]', [*N ga*] *kimoti ga yói/warúi* '[*N*] feels good/bad' and [*N ga*] *ki ga susumanai* 'is reluctant [toward *N*]'¹⁶ have a grammar that is somewhat similar, though the source of the feeling—usually unexpressed, since it is oneself—stands in a genitive relationship to *kimoti/ki* 'feeling'.

The adjective *hosii* 'wants (to have)' is the surface realization, in colloquial speech, of an underlying (**ari-tái*), and so it is usually given the possessive grammar of *áru*: *N₁ ni/ga N₂ ga áru* '*N₁ has (got) N₂*' → *N₁ ni/ga N₂ ga hosii* '*N₁ wants (to have) N₂*'. But some speakers will perhaps feel uneasy with *N₁ ni N₂ ga hosii*. And others will accept *N₁ ga N₂ o hosii* (though I believe no one would countenance **N₁ ni N₂ o hosii*): *Sore kara, utukusii onna-gata o dásu yóo no monó o hosii desu né* 'And then, [on the program] I'd like to have something that would present a beautiful female impersonator, you see' (Tk 4.307a).¹⁷ In producing such a sentence the speaker reaches beneath the surface grammar of *áru* to a deeper structure which converges with that of *mótu* 'possesses' and treats the expression as an alternant realization of the same content as *N o moti-tái* 'wants to possess *N*'.¹⁸ At some intermediate depth of structure we may find it necessary to assume an underlying **N o áru* = *N o mótu* which obligatorily surfaces as *N ga áru*. (Examples of *N o hosii* from the Edo period are cited in K 1966.123.)

The following example is doubly interesting in that it makes a desiderative out of a quasi-possessive verb (*N₁ ni/ga N₂ o/ga wakáru* '*N₁ understands N₂*') and chooses to retain the less-common marking of the possessed object, *N₂ o wakáru* instead of *N₂ ga wakáru*:

15. An adnominalized example: ... *úmi o sukí na hitó ...* 'a person who likes the sea' (SA 2650.58c). Kazama 158 has an example of *N o sukí da* that dates from Meiji days, and (159) he says you sometimes hear such things as *Ano ii-kata GA sukán* (= *Ano ii-kata O sukánai*) 'I don't like that way of talking'. But in *musi ga sukán[ai]* 'dislikes', *musi* is the subject '[my] inmost feelings'; Kenkyusha gives the example *Ano otokó wa musi ga sukánai* 'I dislike him'.

16. *Kyóowa kaisya ni iku kotó* [or: *ikú no*] *ga ki ga susumanai* 'Today I don't feel like going to the office'.

17. Three examples of *N o hosii* from modern fiction will be found in *Gekkan-Bumpō* 2/9.71, 73 (1970).

18. But such a sentence as *Kodomo o hosii to omóu kotó ga áru* 'I sometimes think I'd like to have children' is not necessarily to be explained in this way, since *Kodomo ó* can be taken as the direct object of *omóu* with the interpretation 'I think children desirable' (a kind of putative, cf. p. 997, as well as with the other interpretation. Notice, however, the hint such sentences give toward understanding the grammar of cathectic sentences in general (see below, pp. 200-1).

Sore o wakari-tái tte iu kimoti ga átta n da kedo, ... 'I had the feeling I wanted to understand it, but ...' (Tk 2.190a).

According to Shibatani 1972 the structure OBJECT ga VT-tai gets less and less grammatical as you put more material between gá and the desiderativized verb: "In the desiderative form of sentence with the object-ga phrase, the degree of grammaticality is in inverse proportion to the amount of the element intervening [in] the object-verb sequence." This strongly suggests that the gá-marking is secondary.

In a statistical study of modern written Japanese, KKK 25 found 73 examples of V o V-i-tai but not a single example of N ga/no V-i-tai used to represent the underlying object of a transitive verb. By way of contrast, the same study turned up only one example of N o sukí/dái-sukí but 17 of N ga sukí/dái-sukí and 2 of N ^(l)no sukí; although there was not a single example of N ó + adjective (or adjectival noun), there were 28 examples of N gá as cathectic object with adjectives and adjectival nouns.

There are a number of other adjectives and adjectival nouns used with quasi-desiderative grammar, the best known being kowái 'afraid, fear'. The sentence Kodomo ga inú ga kowái can mean either 'The child fears the dog' (= Kodomo ga inú o osoréru) or 'The dog fears the child' (= Inú ga kodomo o osoréru), though the first gá-marked phrase will normally be taken as the source of the emotion unless the context makes that implausible. (And most commonly in an independent sentence the source will be thematized and subdued: N₁ wa N₂ ga kowái.) According to Inoue 42 the following adjectives behave in the same way: kawái 'is lovable, finds it lovable', kemui or kemutai 'is smothering/awkward, finds it awkward', turai 'is trying, finds it trying', muzukasii(¯) 'is difficult, finds it difficult', yasasii 'is easy, finds it easy' (cf. the grammar of facilitatives, §9.1.8).¹⁹ The adjectival nouns zyoozú 'skillful', with its synonym takumi(¯), and hetá 'clumsy' also belong here, as do the synonymous adjectives, umái and mazúí: Dáre ga náni ga zyoozú desu ka 'Who is good at what?' (but never *... ni for either adjunct). The adjectival noun tánnoo 'proficient' enjoys competing grammars: hito ga gogaku ga tánnoo da 'people are proficient at language learning' exemplifies the quasi-desiderative grammar, and hito ga gogaku ni tánnoo da (with the same translation) presents a dative of confrontation, equivalent to gogaku ni {tái-site} tánnoo da 'is proficient when confronted with language learning'. Under adnominalization either of the N-gá phrases can be epithematized and the remaining N gá will allow the replacement of gá by nó (under the conditions of §13.1.6): Gogaku ga/no/ni tánnoo na hitó ga óokatta 'There were many people proficient at language learning'; Káre ga/no tánnoo na gogaku wa ... 'Language learning, at which he is proficient, ...'.

Certain of the emotion adjectives will mark the source of the emotion (the person with the feeling) optionally with the particle ní; this is a dative of reference ní {tótte} 'with respect to': Dái-iti Teruo no hoo kara ítu mo yasasii kotobá o kárete kurerú no ga Mítuko

19. KKK 25.123 lists (together with hosii, kowái, iyá, kirai, dái-kirai, kí-ni-iru) the following as taking an "objective gá": kosisii, omosirói, nikúí, nozomasii, hazukasii, osorosii; kawai sóo, kinodókú, human, ziman. (But ziman 'one's pride' would appear to be out of place, since it is not an adjectival noun; N₁ ga ziman ga ... is from a genitive, §3.11.2.) The list in Kuno 1970 includes words with possessive and facilitative grammar as well as desideratives, etc. Terase 21 says the object is marked with gá for predicates expressing desire, skill or clumsiness, ease or difficulty or a process, potentiality or lack thereof, like or dislike, etc. The notion of "gá-marking of object" covers a variety of disparate phenomena; cf. §2.2.

ni wa uresii 'Most importantly it delighted Mitsuko that Teruo always addressed her with gentle words' (SA 2640.107c). The underlying grammar is Mítuko ni/ga ... kurerú no ga uresii but "ni/ga" here is not possessive grammar; it represents ni {tótte} / ga.

In parts of Shikoku the grammar of sukí, kirai, zyoozú, kowái (etc. ?) is N₁ ga N₂ ni ... (Dáre ga náni ni kowái 'Who fears what?'), apparently using a dative of confrontation, N ni {tái-site}, for the underlying object. Cf. Doi 268, confirmed for me by an informant from Kōchi who is familiar with this usage.

Desiderative adjectives and many of the quasi-desiderative adjectives (though not all), together with a number of other adjectives and adjectival nouns that express emotions, can be converted into transitive verbs with the suffix -gáru- (see §7.2). Kowa-gáru, for example, is a synonym of osoréru 'fears'; iya-gáru is a synonym of kirau 'dislikes'; and hosii will verbalize to hosi-gáru 'desires'. But there is no *kira-gáru or *suki-gáru, perhaps because we already have the verbs kirau 'dislikes' and súku = konómu 'likes' or kóu (= koi-súru) 'loves'. Bear in mind that -gáru- is also used to derive intransitive verbals, with the meaning 'displays an emotion or attitude', so that not every A-gáru or AN-gáru can be assumed to behave like kowa-gáru and iya-gáru.

3.6. RECIPROCAL VALENCES

Certain verbs and a few adjectives and nouns permit the designation of a RECIPROCAL subject or object. The reciprocal is marked with tó, but in some instances this may be replaced optionally by the dative ní, with or without a difference in nuance. We must accordingly set up two classes of reciprocal-valence predicates:

(1) tó

VI kawaru 'differs (from)' (≠ 'changes into' ≠ 'substitutes for' both of which take N ní); tatakau 'fights (with)', arasóu 'struggles (with)'; kisóu 'competes (with)'; V-i-au 'does reciprocally (with)' (§9.1.10) as in home-au 'praise each other (one another)'; ... ; ái irenai 'is incompatible (with)'.

VNI kekonsuru 'marries, gets married (to)', rikon(¯) suru 'divorces, gets divorced (from)', siai suru 'has a match/game (with)', kakutoo suru 'scuffles with', kenka suru 'quarrels (with)', kyoosoo suru 'races; competes (with)', ryooritu suru 'coexists, is compatible (with)', heikoo suru 'runs parallel (with)', muzyun suru 'is inconsistent (with), contradictory (to)', doosei suru 'cohabits, lives (with)', doositu suru 'rooms (with)', sessyoo suru 'negotiates (with)',

Also: (sore) to zéngo site 'at about the same time as (that)'; Umá to hasiri-kko sitári site 'ta 'On occasion he even raced with horses' (Tk 3.79b);

VT? ... ; VT-i-au 'does reciprocally (with)' (§9.1.10)—but only certain ones, e.g. hanasi-au 'speak it back and forth'.

VNT taisyoo suru 'contrasts it (with)', kanren suru 'associates it (in one's mind with)', giron suru 'debates it (with)', ron-zíru/-zúru(¯) 'debates it (with)', káiri(¯) suru 'dissociates it (from)',

A sitasii 'is intimate (with)',

AN gyaku dá 'is the reverse (of)', sinmitu dá 'is intimate (with)', isitu-teki dá 'is extraneous (foreign) to', ...

PcN sasimukai dá 'is vis-a-vis, is face to face (with)', betu dá 'is separate (from), dooyoo dá 'is the same (as)', doo-íken da 'is of the same opinion (as)', dóozi(¯) dá 'is the same time

as', doositu dá 'is the same quality (as), is homogeneous (with)', onáidosi da 'is the same age (as)'; kyootuu dá 'is in common (with)'; byoodoo dá 'is equal (to)'—as in Íma wa, túma mo otto to byoodoo no tatibá ni nátte irú no desu kara 'Now that wives have achieved an equal standing with their husbands ...' (SA 2659.117d); ...

Also: heikoo ni '(in) parallel (with)'; gúru ni náru 'gets in cahoots (with), conspires (with)'; tyánpon ni 'mixing/alternating/together with'—as in yoosyu to tyánpon ni Nihon-syu o nóndari sita tokí wa 'when sometimes I would drink rice wine at the same time with foreign liquors'; issyo/tómo(¯) ni 'together (with)'—source of the generalized comitative, as shown below.

N tomodati dá 'is friends (with)'; kói-náka(¯) dá 'is amorously involved (with)'; húuhu da 'is man-and-wife (with) = is a spouse of, is married to'; (N to) táisa ga áru/nái 'differs much/little (from N)'; (N to) úri hutatú da 'is exactly alike (with N)'; hito to KANKEI ga áru 'has connections/relations with people'; hito to AISÓ[O] ga íi 'is congenial with people'; hito no NÁKA ga íi, hito to íi NÁKA da 'is on good terms with a person' (hito to HÚ-NÁKA da 'is on bad terms'); ... ²⁰

(2) *tó/ní*

V / *á* 'meets, sees'; *niru* 'resembles' (cf. *niá* 'befits' with *N ní* only); *tukiá* 'associates (with)'; *hure-á* 'comes in contact (with)'; ? *V-i-tigaeru* 'does mistakenly (mistaking it for)' (§9.1.10); ...

VNI *menkai suru* 'has an interview (with)'; *sooguu suru* 'encounters'; *sessyoku suru* 'comes in contact (with)'; *syoototu suru* 'collides/clashes (with)'; *itti suru* 'is in agreement (with)'; ...

VT *kuraberu* 'compares it (with)'; *niseru* 'likens it (to), imitates'; *tatoéru* 'illustrates it (with)'; *hikiawaséru* 'brings it together (with)'; ? *matigaéru* 'mistakes it (with)'; *musubu* 'ties it (with/to)'; ...

VNT *hikaku suru* 'compares it (with)'; *syookai suru* 'introduces one (to)'; ...

A *hitosíi* 'is equal (to/with), is equivalent (to)', ...

AN ? ...

PcN *sokkúri da* 'is identical (with)'; *suresure dá* 'is very close (to)'; *dookan dá* 'is in agreement (with)'; *hantai dá* 'is opposite (to/from)', ...

N ?

The predicate *onazi dá* 'is the same (as)' is spoken with the grammar of Type 1, *N* to *onazi*, but you will find it written with the grammar of Type 2, *N* to/*ní* *onazi*; the synonym *N* to *hitótu da* 'is one with *N* = is the same as *N*' seems to be always Type 1. The intransitive verbs *tigau* and *koto-náru* 'is different (from)' are like *onazi* in grammar: Type 1 in speech, Type 2 in writing.

In addition to the above types, there are also some ablative classes that can optionally replace *kará* by *tó* and/or *ní*; see § 3.6.

There is no reciprocal in ... to *obósiki/obosíi N* 'N that appears to be ...'—as in *Sinátorá to obósiki eiga-háiyuu ga ...* 'a movie actor that would appear to be [a fictionalized] Sinatra' (SA 2679.118d), since *tó* is the subjective essive (or quotative); see § 21.1.

20. Also, perhaps *zyosei to ÉN no hukái kotobá* 'a word that has close associations with women'; or does *én* belong with *tó/ní*, as perhaps indicated by the example *Yappári sumoo ni én ga átta ná, kéiko tte no wa* 'After all it had a connection with wrestling, didn't it, the practice' (Tk 3.15a).

Normally the reciprocal will refer to a subject unless the verb is transitive, and then the reference ought to be to the direct object, but there appear to be exceptions when the reciprocity is due to an auxiliary as in V-i-au, where other valences may obtain for the underlying V.

Intransitive verbs that refer to meeting or coming in contact (such as *áu*) seem to have two grammars, one involving a dative of confrontation and the other a subject-reciprocal. Only the dative will be used when the contact is with an inanimate or something abstract, as in *hidói mé ni átta* 'encountered a rough experience', but animate nouns may be marked either as dative or as reciprocal. And many speakers feel that the dative option carries a somewhat different meaning, at least for certain of the predicates, in that it emphasizes the subject (N ga) as the point of departure. We can compare *hito NI hanásu* 'speaks TO a person' and *hito TO hanásu* 'speaks WITH a person', taking the latter as a pure reciprocal and not as a special case of *hito tó¹[issyyo/tómo(¯) ni] hanásu* 'speaks [jointly] with a person (to/with some third party)', where we find a generalized COMITATIVE, in which the reciprocal valence is not with the verb but with the underlying "togetherness" represented by *issyyo* or *tómo(¯)* in the version that is unreduced (or, depending on your viewpoint, expanded). Kuno 1970 (§9) says you are more likely to choose the dative option with such verbs as *áu* 'meets' and *soodan suru* 'consults' when the other party is of higher social standing²¹ and thus it behooves the subject to initiate the action. Also according to Kuno, if you say *A no atamá ga B no atamá to butukatta* 'A's head collided with B's head', both heads were moving; but if you say *A no atamá ga B no atamá ni butukatta* 'A's head collided with B's head', only A's head was in motion. And that is why *A no atamá ga kabe ni butukatta* 'A's head collided with the wall' is grammatical but neither **A no atamá ga kabe to butukatta* 'A's head and the wall collided' nor **Kabe ga A no atamá to/ni butukatta* 'The wall collided with A's head' will be said. *Saikon suru* 'remarries' is peculiar in that the 're-' refers to the subject only; although the reciprocal adjunct also 'marries', for her/him it may be a first marriage: *Aa, yóku zó kono onná to saikon sita* 'Ah, how nice I chose this woman for my second wife' (Tk 2.—). Perhaps we can treat this as a case valence with a relexicalized nucleus (§3.8a), the morpheme *-kon* representing the verbal noun *kekkon*; cf. *Káno-zyo to kekkon site yókatta ...* 'I thought it good that I had married that woman [and that she had married me]' (ibid.).

The marker *tó* under discussion can represent at least three different underlying structures: (1) the RECIPROCAL, as in *Tároo ga Hánako to kekkon sita* 'Taro married Hanako'; (2) the COMITATIVE, as in *Tároo to [issyyo ni] Hánako ga kíta* 'With Taro came Hanako'; (3) CONJOINED NOUNS, as in *Tároo to Hánako ga [betubetu ni] kíta* 'Taro and Hanako came [separately]'. Cf. Inoue's remarks (Kgg 81.63b) on *Okutsu*, from whom the examples are drawn; he treats the last example as two conjoined sentences (*Tároo ga kíta + Hánako ga kíta*) for reasons appropriate at a deeper level. Expressions such as *N to hutarí/san-nín de* 'together with N making two/three persons, as a party of two/three with N' are probably to be treated as containing the comitative.

One difference between *issyyo ni* and *tómo(¯) ni* is that the latter is normally limited to animates (typically humans), but *issyyo ni* can also be used of inanimate objects: *Hón to zassi o issyo ni (*tómo ni) tutúnde kudasái* 'Please wrap the book and the magazine

21. Or in temporary authority: ... *tébebi-ya san ni soodan nasátte kudasai* 'consult your television repair man' (R).

together'. But this example perhaps is to be explained as containing a mutative ní ('wrap them so that they are together'), possible for *issy* but not for *tómo*(⁻), which is always adverbialized.

Although the reference of the 'together' is usually to the subject (or, as in the mutative above, perhaps an underlying subject), you may occasionally find reference to an object: *Iro-énpitu to issyo ni iró-gami o tótta* 'I took colored paper together with crayons'. In such sentences, *issy* ni is functioning as a synonym of *dóozi*(⁻) ni 'at the same time (as)' and the underlying structure can be thought of as something like this: *Iro-énpitu [o tóru no] to dóozi*(⁻) ni *iró-gami o tótta* 'I took colored paper at the same time with [taking] crayons'.

The word *tomódomo*(⁻) {ni} is a synonym of *tómo*(⁻) ni 'together' with the meaning '(all) together' and it too has a reciprocal valence, but the marker *tó* is optionally omitted when this comitative expression follows a noun: ... *kázoku [to] tomódomo*(⁻) [ni] *Sóren ni syootai sareta* 'was invited to the Soviet Union together with all his family' (SA 2679.37b). The reciprocal marker can also be omitted in phrases with the structure N {to} *dooyoo*/*doozen* 'like N' as in these examples: *Káre-ra [to] dooyoo [ni]*, ... 'Like them, ...' (SA 2657.120a); *Kodomo nánte monó wa, ángai*(⁻), *otona [to] dooyoo no kokoro-zúkai o suru món da kara* 'Children are apt to be surprisingly like adults in consideration' (Tk 3.37a); *Íssái no ningen-kánkei o tátu zyohatu-níngen [to] dooyoo no káre da ga*, ... 'He is like an evaporated man suppressing everything human, and ...' (SA 2685.112b—epithematic identification, § 3.10a); ... *wakamonó*(⁻) [to] *doozen no kenkoo de* ... 'with health like that of a young man' (Ariyoshi 299). On the optional omission of the marker in N [to/ni] *sokkúri*, see § 25.

When the verb is *tigau* 'differs (from)' it is possible to apply the reciprocal marker *tó* to an adjunct already marked for some other function, as in the following example of the locative *dé*: *Zissai no rézyaa no náka de wa, syokuba DÉ TO wa tigatta katati ní mo sé yo*, *onazi taboo-sa, kakuitu-sa, sosite zyudoo-sei ga ári wa sinái ka* 'In the midst of actual leisure, even though it be of a form different FROM ON the job, don't you have the same busyness, uniformity, and passivity?' (SA 2673.40b). Similar examples can be concocted to juxtapose with *tó* the dative *ní* and even a prior reciprocal *tó*, since what is involved is the ellipsis of the predicate that initiates the first case-marking: *Káre NI TO wa tigatta katati ní mo sé yo, káno-zyo ni íi wa sinái ka* 'Even though it be in a different form from [telling it] to him won't you tell it to her?'; *Káre TO TO wa tigatta katati ní mo sé yo, káno-zyo to soodan sí wa sinái ka* 'Even though it be in a different form from [consulting] with him, won't you consult with her?' It is also possible to get *tó* after an *ó*-marked direct object in such a sentence: *Sore Ó TO wa tigatta katati ní mo sé yo, kore o naósi wa sinái ka* 'Even though it be in a different form from [what is done to] that, won't you repair this?' But similar attempts to elicit *gá* + *tó* are rejected: **Atamá GA TO wa tigatta katati ní mo se yo, kubi ga ítáku wa náí ka* 'Even though it be in a different form from your head [doing it], doesn't your neck hurt?'

A reciprocal-marked adjunct can be immediately followed by the copula by way of propredication (§ 3.10), *dá* standing in place of the verb that calls for the valence—or marking an ellipsis *tó* [V-rú no] *da* 'it's [a matter of V-ing] with'. The copula is free to appear in any form, including the negative: *Minná*^[1] *anáta to de nákyá [= de/zya nákereba]*, *móo kekkon sinái tte itte másu* '(My ex-husbands) they all say "If it's not with you I won't get married again"' (SA 2678.43c).

The copula can be adnominalized to yield N $t\acute{o}$ $n\acute{o}$ N; usually either the epitheme (the second N) is a noun derived from a verb infinitive, as in *inhure $t\acute{o}$ no aras\acute{o}i(-)* 'the struggle with inflation' (SA 2681.38b), or it is a verbal noun: *ensyutu-ka $t\acute{o}$ no kyooryoku* 'cooperation with the [drama] producer'; *kok\acute{u}gai to no renraku* 'contact with the world beyond the border' (SA 2677.153ab); *hito $t\acute{o}$ no taioo d\acute{e}su ga n\acute{e}* 'it's a matter of coping with people' (SA 2672.64a); *zyosei $t\acute{o}$ no sessyoo* 'negotiating with a woman' (Tk 2.103b); *k\acute{e}nryoku to no t\acute{a}izi made* 'to the point of a conflict with authority' (SA 2677.152e—cf. *k\acute{e}nryoku to t\acute{a}izi suru* 'confronts authority' in the same text); But sometimes, as explained in §3.8a, the verbal element that is responsible for the reciprocal has been obscured by relexicalization or other masking, such as ellipsis; the reciprocal in *Rokugat\acute{u} ni Amerika $t\acute{o}$ no kokkoo ga kaihuku sita \acute{a}to, ...* 'After diplomatic relations with America were resumed in June, ...' (SA 2680.20a) is to be explained by some such underlying sentence as *Amerika $t\acute{o}$ kokkoo [o musund\acute{a}] no da* 'it is a matter of [having entered into] diplomatic relations with America'.

3.7. ABLATIVE, ALLATIVE, AND INSTRUMENTAL VALENCES

Just as we cannot say that every instance of N $n\acute{i}$ represents a dative valence, not every N $t\acute{o}$ can be taken as a reciprocal valence; almost all predicates are capable of "togetherness" on the part of more than one subject, and many instances of $t\acute{o}$ = $t\acute{o}$ [$t\acute{o}mo(-)$ /issyo ni] '(together) with' represent nothing more than that—the generalized "comitative". In much the same manner the marker *kar\acute{a}* '(starting) from' can be used with a great many predicates as peripheral information—a generalized ablative, as in *booi-hur\acute{e}ndo kara denwa ga kak\acute{a}ru (= kak\acute{a}tte k\acute{u}ru)* 'gets a phone call from her boy friend'. But some verbs call for *kar\acute{a}* in a special way, notably those expressing SEPARATION or DEPRIVATION: (*s\acute{e}nro kara*) *hazureru* 'slips off (the rail)'—cf. *kis\acute{o}ku ni hazureru* 'deviates from the rule'; (*m\acute{a}do kara garasu o*) *hazusu* 'removes (glass from the window)'; *musuko o koibito kara toozak\acute{e}ru* 'keeps one's son away from his sweetheart'; *nus\acute{u}mu* 'steals', *ub\acute{a}u* 'seizes', *d\acute{a}su* 'takes out (from)', *d\acute{e}ru* 'emerges'; *kieru* 'disappears (from)', *hyoo kara namae o kesu* 'removes a name from a list', *kyuu ni kaisya kara s\acute{u}gata o kesu* 'suddenly disappears from the office' (KKK 25.75a); *kau* 'buys (from)', *\acute{e}ru* 'gets', *t\acute{o}ru* 'takes', Perhaps *k\acute{u}ru* 'comes' and *arawar\acute{e}ru* 'appears' belong here (cf. KKK 23.126). (For some other uses of *kar\acute{a}* see §2.2.)

In addition to the verbs of separation or deprivation, there are also a number of verbs and adjectives with a kind of ablative valence that can be marked either by *kar\acute{a}* or by some other particle; the following types of option have been found:

(1) *kar\acute{a}/n\acute{i}*^{21a}

VT *kariru* 'borrows', *kiku* 'hears (from)', *azuk\acute{a}ru* 'receives (in trust)', *morau* 'receives', *uk\acute{e}ru* 'receives', *nar\acute{a}u* 'learns', *osowaru* 'learns',

VNT *haisyaku suru* 'borrows', ? *koonyuu suru* 'purchases',

VI (< *VP*) *homerar\acute{e}ru* 'is praised (by)', *okorar\acute{e}ru* 'is subject to anger (from)', incurs the wrath (of)', *iwareru* 'gets told (by)', *kawai-garar\acute{e}ru* 'gets loved (by)', etc.—but most passives will take only N $n\acute{i}$ to mark the source of the action (see §4.2).

VNI *ty\acute{u}ui sareru* 'is noticed (by)', ? *r\acute{i}kon(-)* *sareru* 'gets divorced (from)',

A ?

21a. The $n\acute{i}$ option is usually limited to animates: 'borrows it from the bank/company' is *ginkoo/kaisya kara kariru*; 'borrows it from the library' is *tosyo-kan de kariru*.

(2) *kará/dé*

VT tukúru 'makes it out of',

VNT hensei suru 'organizes', koosei suru 'organizes',

VI dékite iru 'is made out of', nátte iru 'is composed of',²² ...; also the semi-literary náru 'consists of/in' with the literary synonym yóri for kará, as in Kekkyoku^[1] hukóo wa human yóri náru 'After all unhappiness consists in discontent'.

VNI seiritu suru 'is formed',

A ?

(3) *kará/ó*

VQI déru 'leaves',²³ tátu 'departs' or 'stands up from'; oríru 'descends from, gets off'; ugóku 'moves (budges) from'; géngí kara/o hanárete 'departing from the original meaning';

VNQI syuppatu suru 'departs',²⁴ ...

(4) *kará/ní/tó*

VI wakaréru 'parts', hagaréru 'strays apart (from)',

VNI sayonára suru 'says good-bye', sibetu suru 'is separated by death',

VT ?

VNT ?

A ?

(5) *kará/tó*

VI hanaréru 'is separated (from)',

VNI ?

VT wakeru 'separates', hanásu 'separates', hiki-hanásu 'pulls apart',

VNT búnri(¯) suru 'separates', yúuri(¯) suru 'separates',

Perhaps all verbs of movement can be said to enjoy both ablative (N *kará*) and allative (N *é/ní/máde*) valences; included are not only the quasi-intransitives, i.e. verbs taking traversal objects (including *iku* 'goes' and *kúru* 'comes'), but also such intransitive verbs as *túku* 'arrives' and such transitive verbs as *okuru* 'sends' and *dásu* 'mails'. Sometimes an unexpected allative turns up that can perhaps be explained either by metaphor, the verb enjoying temporary status as a motion verb, or by propredication and/or ellipsis of a motion verb: *utí(¯) e isóida* 'hurried home' = *utí(¯) e isóide itta/kíta* 'went/came home in a hurry'. (The pair *iku* and *kúru* are, in a sense, but a single verb—the generalized verb of motion, which gets dichotomized by obligatory deictic marking, as if in English we were to say 'to thither' and 'to hither'.) To say 'leave Kamakura for Itō' you have a choice of adjunct order if you use *kará* to mark the ablative: *Kamakurá(¯) kara Itoe e/máde tátu* or

22. Since *náru* can be treated aspectually as either durative or durative-stative (like *tigau* §3.12), often *náru*, *nátte iru*, and *nátta* have the same meaning, especially when adnominalized: *go-kákoku kara náru iin-kai* 'a committee made up of five nations' can be said with *nátte iru* or with *nátta*. But *dekiru* is punctual so that *ki kara dekiru monó* must be taken as future or as iterative 'things to be made (or usually made) out of wood'; 'things (that have been) made out of wood' is *ki kara dékita* (or *dékite iru*) *monó*.

23. *Déru* 'appears' has a different grammar (*génkan ni/e déta* 'appeared at the entryway'); notice that you cannot omit the gerund when the two different kinds of *déru* are conjoined: *hikaé-situ o déte bútai ni déta* 'left the green room and appeared on the stage'.

24. In standard Japanese *sotugyoo suru* 'graduates (from)' always takes a direct object marked by *ó*. In Hawaii you will also hear *daigaku kara sotugyoo suru*; perhaps this is influenced by the English dialect variation, with and without 'from'.

Ito *e/máde* Kamakurá(¯) kara tátu. But if you use *ó* to mark the ablative, it will sound awkward unless that adjunct follows the allative: Ito *e/máde* Kamakurá(¯) *o* tátu.

The adjectives *tooi* 'is far' and *tikái* 'is near' take a valence that is best treated as ablative though it permits marking by either *kará* or *ní* (but not, in the standard language, by *é* so that the valence is not allative); for *tooi* the use of *kará* is more common, and *ní* is more common for *tikái*, just as the corresponding English habits might lead us to expect: 'far FROM, near TO'. (But KKK 44.14 has *kará/ní/tó* for both adjectives.)

In place of the allative marker *é* the particle *máde* can be used to add a sememe of end-point or arrival ("all the way to" versus "to, toward"), which may be pleonastic in the case of those verbs that already contain the sememe (*túku* 'arrives', ...). *Máde* will be considered more extensively below.

A generalized INSTRUMENTAL phrase with the marker *dé* (= *o* *tukatte* 'using') can be supplied as peripheral information for many verbs: *kyakkan-teki na mé DE míreba né*, ... 'if you look at it with an objective eye [= objectively], now, ...' (SA 2671.19c). There are a few predicates that seem to involve a special instrumental valence, e.g. *ippai dá* 'is full (of)'; *ahúrete iru* 'is overflowing (with)', *mitasárete iru* 'is filled (with)' (the latter also with *ní*), And we might prefer to put the second type of ablative option (*kará/dé*) with the instrumental since the *dé* marker is more common in speech; it is doubtful whether there are any cases where only *kará* (and not *dé*) can be used. When the "instrument" involved is a vehicle, the instrumental can be regarded as a paraphrase—or even an abbreviation—of *N ni notte* 'riding on N'; in some of the dialects this VEHICULAR instrumental is marked differently, e.g. by *kará*—showing the intimate relationship between the ablative and the instrumental. Other instrumental (and causal) uses of *dé* have a literary paraphrase *N o mótte* 'holding/having N', and *N o tukatte* 'using N' is sometimes used as a colloquial paraphrase for the instrumental. (On *dé mótte*, see pp. 488–9.)

Some verbs have a CAUSAL instrumental valence that is optionally marked by *ní* instead of *dé*: *nayámu* 'is afflicted (with)', *kúroo suru* 'suffers (from)', *méiwaku suru* 'is troubled (by)', *nángi suru* 'is in difficulties (over)', *odoróku* 'is startled (at/by)', *bikkúri suru* 'is surprised (at/by)', But sometimes (or always?) there are slight differences of meaning: *kane de komáru* means 'is embarrassed BY (having) the money', *kane ni komáru* 'is embarrassed FOR (the lack of) money'. Cf. §3.4. Perhaps the *ní* is to be regarded as a dative of confrontation.

The instrumental and causal uses of *dé* are extensions from the copula gerund (the esive *ní* + *-té* = *níte* > *n[i]té* > *[n]dé*); for examples of instrumental and causal uses of verb gerunds, see §9.2.

On *é* for *ní*, and *ní* for *é*, see the remarks in §2.2. Isami (speaking, of course, only of the standard language) says the difference between *é* and *ní* is that *ní* requires "contact" where *é* merely expresses "direction", so that if you want to say 'Proceed ahead' you will phrase it *Máe e susume* and not *Máe ni susume*. (Isami is perhaps considering only the *ní* that I am elsewhere treating as mutative-locative 'so as to be at'.)

Adnominalization of *N ní* is avoided, in any of the meanings of *ní*; that may be because *N ní da*, the propredication, is a bit clumsy to begin with. When *é* can replace *ní*, *N é no N* may be used; otherwise the situation that seems to call for adnominalization will be handled by rephrasing, so that instead of **gó-zi ni no kisyoo* 'the rising at five o'clock' you will say *gó-zi ni kisyoo sita kotó* 'the matter of rising at five o'clock' or the like. In dative

and allative uses, *ní* can be replaced by *é*; but in locative uses (of time and place alike) *é* will not be found.²⁵

The *nó* of *N é no N* is the adnominalized form of the copula *dá*, here serving as propredication for the verb that initiated the allative valence: *Oosaka é no dénsya(⁀)* 'the train to Ōsaka' is equivalent to *Oosaka e iku dénsya(⁀)* 'the train that goes to Ōsaka'. But not all such phrases are readily explained in that way. Consider the following examples: ... *sékái e no madóguti* 'a window to the world' (SA 2671.64e); ... *sore é no taisaku to site* 'as a measure aimed at that' (SA 2685.25c); ... *nooryoku-káihatu e no gutái-saku* 'concrete measures for (= aiming at) the development of ability' (SA 2664.22d); ... *gaikai é no kansin* 'interest in the external world'; ... *yánusi(⁀) e no dankoo [= dantai-kóosyoo] o yatte iru* 'we engage in collective bargaining with the landlords' (SA 2669.40b); *Iki-nokoru kotó e no kanoosei o dekíru kágiri motóme*, ... 'Seeking as much as we can the possibility that looks to survival ...' (SA 2664.32d); ... *kono byooín é no siharai ga ...* 'the payments to this hospital' (SA 2681.112b); ... *yóozi e no omoiyari* 'consideration for the toddler' (SA 2662.71); *Kantoku é no áisatu de aru* 'It is a greeting to the [wrestling] coach' (SA 2678.139b); *Gunzin é no sirei wa dáre ga dásu?* 'The orders to the troops are issued by whom?' (SA 2677.151d); ... *seisin-syoogáisyá e no íryoo(⁀)* 'medical treatment for the mentally disturbed' (SA 2670.33c); *Maru-de oozákénomi(⁀) é no sekkyoo no yóo [da]* 'It's just like preaching to a drunkard' (SA 2678.16b); ... *masui no kówa-sa e no keikoku* 'a warning against the dangers of anesthesia' (SA 2666.115c); *Kodomo-san ga iroiro na kotó o iimásu né, otona é no keikoku, tyúumon(⁀), mónku na n desu* 'The child will say all sorts of things, you know—warnings, requests, complaints (all) directed at the adult' (SA 2677.54c); ... *bakánsu e no kitai ga ...* 'the expectation of looking forward to the vacation' (SA 2635.107b); ... *kaihoó é no dóryoku(⁀)* 'efforts toward liberation' (SA 2672.136b); ... *Índ'ian e no yokuatu to gyakusatu* 'The suppression and massacre of the Indians' (SA 2673.114c); ... *tisikí-zin e no dan'atu* 'oppression of [aimed at] intellectuals' (SA 2684.147ab); *Watasi no Tyuugokú-kan e no gokai o tadásu* 'To correct the misunderstanding of my views on China' (SA 2688.133a—heading of letter); "*Sengo*" *minsyu-syúgi e no situboo ga, Amerika no minsyu-syúgi e no utagai ni tyokketu sarerú no ga, ímaya wá-ga kuni no huutyoo de áru* 'Right now it is the trend in Japan for the disillusionment with "postwar" democracy to be linked with doubts about American democracy' (SA 2679.104c); ... *uwayaku é no kigane ga átte ...* 'there is a feeling of constraint toward one's superiors and ...' (SA 2677.62c); ... *senséi e no on-gáesi no tamé ni rainiti sita* 'came to Japan for the purpose of showing gratitude toward his teacher' (SA 2680.44a); ... *ningen é no ái* 'love toward human beings' (SA 2672.119c); ... *kyooryuu é no nétui to aizyoo* 'zeal for and devotion to interchange (between people)' (SA 2676.40b); ... *zenhúzin e no ikári(⁀) wa ...* '(his) anger at his ex-wife' (SA 2668.122a); *Mata, mósi kore ga zitugen suréba, gakusei-úndoo e no eikyoo mo aróo* 'Moreover, if this is realized, it will probably have an effect, too, on the student movement' (SA 2673.43d). For some of these examples a specific verb might be adduced in place of *nó*, but it is far from clear that such was the intention of the writers. In expressions like *asú e no kágaku* 'science looking toward tomorrow', the postposition *é* seems to carry all the meaning itself. In certain examples we can assume an allative valence with a verb that has been lexically

25. Though the static locative does not adnominalize, the dynamic (dé-marked) locatives will do so: *Sukii-zyoo dé no ziko ...* 'accidents (happening) at ski resorts' (SA 2673.111c).

nominalized: Tate-sósiki kara yoko-sósiki e no ugókí ... 'The move from vertical to horizontal organization' is derived from N kara N e ugóku 'moves from N to N'. A somewhat more complicated history must be found to explain this example: Dóozi(⁻) ni, kono sutó wa TAI-hóndo E no gensoo o tati-kitta 'At the same time this strike [in Okinawa] cut down the illusions directed toward [help from] the home islands' (SA 2664.17c)—some-how to be derived from hóndo e tai-súru gensoo 'illusions directed toward the home islands'.

There are also examples of adnominalized ABLATIVES with similar problems: ... Toodai kará no zykén-sya mo ... 'examinees from Tōkyō University' (SA 2688.18c)—is nó substituting for dēta or kíta?; ... Nihón kákuti [or: Nihon-kákuti] kara no atumáři de áru 'It is a gathering from all parts of Japan' (SA 2678.139c)—by lexical nominalization from N kara atumáru 'they gather from N'. In oyá kara no kó-zukai 'spending money from one's father' and sóto kara no ényzo 'aid from outside' the missing verbal element would appear to be moratta 'received'. An example of an adnominalized INSTRUMENTAL in valence with a verbal noun báibai 'transaction': Tóku ni, syooko ga nokoránu denwa DÉ no báibai wa kinmotu [de áru] 'Especially taboo is the transaction by a telephone call that leaves no evidence' (SA 2670.29).

The particles kará and máde differ from the other case markers in that they can be followed by the subject marker gá and the object marker ó:²⁶ Kore kará ga páiku ni ii zikan da 'From now on is a good time of day for [catching] pike' (SA 2672.97a); Kore kará ga hónron de aru 'This is where the (main) argument starts'; Sore kará ga taisetú da 'The important part is from there on'; Setumei to sité nara kore de zyuubún de aru ga, zitú wa sore kará ga omosirói 'As an example this much will suffice but actually it is from there on that it is interesting'; ... kore kará ga sían no si-dókoró [da] 'what happens next is the thing to be thought about' (SA 2663.117a); Kore kará o yóku kiite kudasái 'Listen carefully from this point on'; Zyuuní-zi made ga géndo desu 'The limit is up to 12 o'clock'; Zyuuní-zi made o géndo ni site imásu 'They've set the limit at up to 12 o'clock'.

In such examples there is no valence-linked predicate. When kará and máde are used to mark one and the same adjunct, máde is the focus particle 'even' (= máde mo): Anó-hito made kara (or: kara made) o-rei o itadaku tó wa omowánakatta 'I didn't think I'd receive a present from him, too'. The same would appear to be true when máde and the reciprocal tó are used together: Kimi no hatu-koi no aité to made (or: made to [?]) tukiátte iru n zya náí daroo ná 'He's not going so far as to associate with the object of your first love, surely?' And, for that matter, when ó máde occurs, too: Tánin o made (or: made o [??—cf. earlier remarks]) hazukasiméru kotó wa náí desyoo 'There's no need to shame others as well'.

An ablative phrase can be directly conjoined with a similar allative phrase (in that order) to delimit a span of time or space; the resulting structure can then be marked for case, just like an ordinary time or place noun: Rokugatú kara kúgatu made ga natú na n desu keredo

26. Yet (as a result of ellipsis) the allative é will also permit subject-object markings, as shown by these examples of é ga/o: Hwinrándo e wa ikerú ga Mósukuwa(⁻) é ga mondai da 'I can get to Finland, but the problem is (getting on) to Moscow'; Hwinrándo e wa ikerú ga Mósukwa(⁻) é o kentoo site miyóo 'I can get to Finland, and I'll investigate (the possibilities to go on) to Moscow'. Rejected are *gá/ó e. On the occasional ellipsis of the allative marker under subdued thematization N [é] wa, see § 2.2a.

mo ... 'It is summer (= Summer lasts) from June to September, but ...' (SA 2689.126c); Kita-Bétonamu kara zyuusangoo-dóoro made o yoko ni musubu nanagoo-dóoro ... 'Route 7 that links across [the territory] all the way from North Vietnam to Route 13 ...' (SA 2673.22e); Yón-sai kara rokú-sai ni kákete ga, móttó-mo izimerareru zíki de aru 'The time they get teased most is from four to (through?) six years of age' (SA 2655.44c); Íma no San'ai né, are kara Matuzaka-ya no hoo e kákete ga Owari-tyoo 'You know where San'ai [Building] is now, from there extending toward Matsuzakaya [Department Store] is Owari-chō' (SA 2821.56b).

In such span-delimiting phrases, the allative is usually marked by *máde*, but occasionally *é* will be found: *natú kara áki e wa* 'from summer to autumn' (Fn 436a)—particularly surprising for a time span. I have found one example of *N kara N o*, probably to be treated as ellipsis *N kara N [máde] o*, unless it is a syntactic blend: ... *ootóbai o hasiri-mawasite sutázio(⁀) kara sutázio(⁀) o hasiri-mawatta* 'drove the motorcycle around, driving from studio to studio' (SA 2642.55c). Other examples where *máde* appears to have dropped: *Óobei(⁀) dé wa huyú o hasánde áki kara háru [made] ga páat'ii no síizun de, ...* 'In Europe and America the party season is from autumn through winter into spring, ...' (Tsukagoshi 174); ... *gó-hun kara sánzíp-pun [made] no okure ga déte óri, ...* 'a delay of from five to thirty minutes occurs, and ...' (R); (?) ... *kookoo kara daigaku [máde [no]] ⁀zídai, yóku míta n desu yó* 'I used to see them a lot during the period from high school through college' (SA 2793.43b).

The phrase delimiting the span of time or space can be placed in apposition to a phrase that quantifies the span: *Meizi-tyúuki ⁀ígo Taisyoo ⁀zídai made [no] yáku sanzuyu-nénkan* 'about thirty years from the middle of the Meiji period up to the Taishō era' (Makimura).

A consideration of antonyms and synonyms will lead us to the conclusion that there are at least three rather different sorts of ablatives and allatives: (1) the predicate-initiated ablative (*kará*) and allative (*é*, *ní*, or *máde*); (2) the temporal ablative (*kará* or *⁀irai* or *⁀igo*) and allative (*máde* or *ni/e kákete* or *ni itáru(⁀) máde*); (3) the set-delimiter ablative (*kará*) and allative (*máde*).

In addition there are various other uses of each of these markers: *kará*, among other duties, is an optional substitute for *gá* or *ní* in some kinds of subject marking; *máde* is used for focus 'even'; *ní* marks the dative and the static locative and plays many other roles (such as the mutative); *é* optionally substitutes for *ní* as dative or allative and perhaps also enjoys unique functions of its own (*N é no N*, above). See §2.2 for a summary of these various uses.

We have discussed the predicate-initiated ablatives and allatives above; the set-delimiters are described in the next section. The TEMPORAL ablative (*kará* = *⁀irai* §2.4) is distinctive in that it can be applied to time adverbs—as in *sendatté kara* or *sendatté ⁀irai* 'since the other day' and *kánete kara* 'for some time past'—and to certain adverbializations (*sité kara* or *site irai* 'after/since doing'), as well as to time nouns (*kinoo kara* or *kinoo ⁀irai* 'since yesterday'). If the sentence contains a particular verb that can entertain an ablative valence, a *kará*-marked time noun may be ambiguous: *Moku-yóobi kara iti-zíkan o tótte soodan ni ateru* will probably be interpreted as 'We will take an hour from Thursday and assign it to counseling' but it could be taken as 'From Thursday on we will take [out of every day] an hour ...' (and that would be the only way to take *Moku-yóobi ⁀irai* ...), whereas *Sendatté kara iti-zíkan o tótte ...* would have to be taken as 'Starting from a few

days ago we take an hour ...'. The temporal allative, like the temporal ablative, can be applied to time adverbs: *sendatté made* 'until the other day', *zyúurai made* (SA 2794.100a) 'hitherto' (meaning much the same as the adverb *zyúurai* by itself),

The temporal ablative is sometimes used in Japanese sentences that are best translated with an English locative or the like: *makú ga aku máe kara* 'before the curtain opens'; *hati-zi kara hazimaru* 'it starts at eight o'clock'; *yu-u-gata kara* 'toward evening' (cf. BJ 2.45) as in *Koko de atamá o arattári, sinbun o nagámetari, búra-bura site yuu-gata kara misé ni déru* 'Here [at the sauna] I loaf around washing my hair, looking over the newspapers, and so on, and then show up at the shop toward evening' (SA 2662.97a).

Temporal ablatives and locatives can be adnominalized—presumably by way of propredication, with *nó* representing some predicate or other, though the derivation may be obscured by lexicalization and other factors: ... *sakunen máde no nyuuzyóo-sya wa* ... 'attendance up to last year' (SA 2681.105b); *kúgatu kara no syuunyuu* 'income since September'.

It is possible to conjoin a temporal ablative with a temporal allative (in that order, *T kara T máde* 'the period from T to T') and then mark it for various cases, including the time locative with *ní*: ... *Syóowa(¯) 39:nen kara Syóowa(¯) 44:nen made NI kakáreta tanpen* 'short stories written in the period from 1964 to 1969' (SA 2687.108c). The meaning 'by four o'clock' for *yó-zi made ni* is extended from 'at some time during the period up to four o'clock'. *Kore máde ni* usually translates as 'up to the present' or 'up to this time'. On *máde ni* ≠ *máde de* ≠ *máde*, see pp. 489–90. *N máde ni* can also represent the mutative *ní* 'so that it is' (§9.1.11) applied to *N máde*, as in the following example with the mutative verb *herasu* 'reduces it (to being)': *Syóorai 1850:zi wa naru-béku(¯) 881:zi made NI herasoo to iu kangae-káta ga átta wáke de arimasu* 'It's because there was the view that in the future we wanted to cut the 1850 characters all the way down to the 881 characters if possible' (Ōno 1967.166).

The conjoined time phrases can be adnominalized (*T kara T máde no N*) and that is also true when ... *ni/e kákete* substitutes for ... *máde*: *1962:nen kara 66:nen ni kákete no gonén-kan ni*, ... 'During the period from 1962 through '66 ...' (SA 2680.44b); ... *kodai-go kara kindai-go e kákete no hensen o* ... 'the changes during the period from the ancient to the modern language' (Kgg 81.51a). As the last example illustrates, a word that is not inherently a time noun can be pressed into service to imply a time; another example: *Yooti-en kara syoogákkoo ni kákete* ... 'From kindergarten through primary school ...' (SA 2672.149c).

Ellipsis of *máde* is possible in expressions such as *Kinóo kara asitá [made] no aida* 'the interval between yesterday and tomorrow'. This is also true when *N kara N máde* would seem to be the set-opener ablative and the set-closer allative conjoined, as in *yottú[¯mé] kara yattú ¯mé [made] no aida* 'between the fourth and the eighth of them' (on the optional ellipsis of the first ordinalizer, see p. 830) and in the following example: *Sore wa, zyutai ¯gót(¯) yon-syúukan kara zis-syúukan ¯mé ¯gurai no aida désu* 'That is between the fourth and the tenth week after conception' (SA 2689.122a), in which it is unclear whether *¯gurai* is to be taken with the conjoined phrase ... *zis-syúukan ¯mé [made] ¯gurai* or only with the terminus *zis-syúukan ¯mé ¯gurai [made]*, but the ellipsis of the ordinalizer in *yon-syúukan[¯mé] kara* favors the former interpretation.

There are also phrases of the type *N kara N [máde] nó^[1] N* in which the last *N* is not *aida*: ... *siti-nin kara zyúu-nin no kookóo-sei ni naguráreta* 'got beaten up by (from) seven to ten

high school students' (SA 2681.122a). (See also the example of *kookoo kara daigaku* 'zidai 'during the period from high school through college' in §2.4.)

The following sentence includes three kinds of *kará*; the first *kará* is abstract ('from the standpoint of' = *kara míte*), the second substitutes for the passive agent marker *ní*, and the third (despite the translation) marks the start of a series: "Nenrei KARÁ wa soozoo dekinai kansei saretate tekuníkkú, óngaku ni tai-súru hukái rikái-ryoku" to hihyooka-súzi KARA zessan saretate kono risáitaru KARA, tyoodo itínen 'mé [de aru] 'It has been just one year SINCE this recital won such high praise FROM the critics for "perfected technique impossible to imagine FOR his age" and "deep understanding of music" ' (SA 2679.119b).

The locational and the temporal ablatives can be used to delimit a relational noun, as in these examples: *Kore kara saki, dóo yatte kurasite ikimásu ka* 'From now on, how will I get by?' (Terase 33); ... *kosi kara ue sika míete 'nái n da kedo mo, ...* 'you can only see from the waist up, but ...' (Tk 2.54a); *Tikámatu kara tugí no Saíkaku ni utúreba ...* 'If we turn to Saikoku, who is next after Chikamatsu, ...' (or, perhaps, 'If we turn from Chikamatsu to Saikaku, who is next, ...'); *Ano kawá kara higasí(¯) ga tonari-mura désu* 'From that river east is the next village' (Terase 33).

3.7a. THE SET-OPENER ABLATIVE AND THE SET-CLOSER ALLATIVE

In the preceding section we have considered the direct conjoining of ablative and allative phrases to yield PLACE *kara* PLACE *máde* and TIME *kara* TIME *máde*; these can be used as adverbial phrases directly or they can be treated as nouns and marked for case. A semantic extension will allow nouns that do not refer to time and place to appear in such phrases: *Ití kara zyúu o kazoé yo* 'Count from one to ten' (Okutsu); ... *sénsya kara herikóputaa made tukatte, ...* 'using everything from tanks to helicopters' (SA 2648.134); ... *terebi-hwirumu kara pósutaa, ko-dóogu made o issai-gássai tori-yosete ...* 'procuring everything from television films all the way down to posters and stage props' (SA 2640.131). In these sentences, the ablative and allative are used to delimit a set; *kará* marks the START of the set, *máde* marks its END. The items that delimit the set may or may not be included within the set; only context can tell you whether *ití kara rokú máde* 'from one to six' actually takes in 'one' and/or 'six', though more often than not it will be intended to include both. When *máde* or (especially ?) *ni kákete* refers to a time or a place, the meaning is often taken as 'extending into': *natú kara áki ni kákete* will usually mean 'from (the beginning of) summer until sometime after the beginning of autumn' but it can also be taken as 'from sometime after the beginning of summer until sometime after the beginning of autumn' or 'from (the beginning or after the beginning of) summer through (to the end of) autumn'; and *Kokura kara Óoita(¯) ni kákete no tíiki* 'the territory from Kokura into Óoita' probably includes a bit of both Kokura and Óoita, though perhaps not all the territory of either. (In place of *ni kákete* you will also find *ni watatte* or *máde ni watatte* 'extending to'; but none of these expressions will in itself answer the question whether the first and last items are to be included, wholly or partially, in the range covered.)

Once delimited, the set as a whole can function as a noun; when case is to be marked, it is added after the phrase. The focus particle *máde*₃ 'even', on the other hand, will

normally follow all case markers but *gá*; cf. Okutsu's examples *Hánoi made₂ o bakugeki sita* 'bombed every place including Hanoi' and *Hánoi o made₃ bakugeki sita* 'bombed even Hanoi' or, loosely, '(went so far that they) even bombed Hanoi'. Other examples of *ó made* will be found in §2.3.3. (In that section we treat *ní made* and *máde ni* as optional variants both meaning 'even to'; perhaps we should reconsider whether the latter is not, in fact, *máde₂*—closing a set.)

In several other places (pp. 210, 211) we have found *máde* optionally omitted in delimiting a set, *N kara N [máde] ...*; here is another example: *Iti-nití ni ní-kyoku kara sán-kyoku [made o], sakkyoku sinákute wa nemutté wa ikenai to, zibun zísín de késín si, zikkoo site míta* 'I myself decided that I must not sleep unless I composed from two to three songs each day and I tried to carry that out' (SA 2641.48a).

In a perceptive article from which many of the examples here are drawn, Okutsu (1966) distinguishes three kinds of *máde*: our allative of time and (= *é*) of place—*máde₁*; our set-closer allative—*máde₂*; and our focus marker—*máde₃*. He argues (22) that there exist all logical combinations of these three kinds of *máde*, even though we never find such realizations as **N máde máde máde*, nor even **N máde máde*; where such expressions are expected, they will be reduced to a single *máde*, and that is one factor that makes it difficult on occasion to decide just which kind of *máde* is intended in a given context. Many sentences are ambiguous—or, perhaps, vague—with respect to which of the three, or which combination of them, is intended. Okutsu gives an example of the set-closer *máde* + the focus *máde* that, I believe, will be acceptable if we collapse the two *máde*'s into one: *Ákatyan kara 80'sai no roozín(¯) máde {máde} ga démo ni sánka(¯) sita* 'Even from babies to 80-year-olds took part in the demonstration'—the 'even' in the English leaves me a bit uneasy, however.

Okutsu points out that for the start and the end of a set you can use not only simple nouns but also case-marked nouns, and then both *kará₂* and *máde₂* will FOLLOW the case marker:²⁷ *Hokkáidoo e kara Okinawa é made (hóoboo e) ryokoo sita* 'I made all sorts of trips—from [going] to Hokkaidō to [going] to Okinawa'; *Káno-zyo wa Á-si to kara É-si to made (iroiro na otokó to) kekkon sita kanoo-sei dé wa nakaróo ka* 'Surely it would not be possible for her to have wedded with all those men, from [wedding] with Mr A all the way to [wedding] with Mr E?'

On the other hand, a case marker may be added to a set whose start and end are somewhat loosely conjoined, as in the following example from Okutsu, where *kitá(¯)* 'north' and *minami* 'south' are subdued genitives of scope: *Kitá(¯) wa Hokkáidoo kara minami wa Okinawa máde e ryokoo sita* 'I took trips to (places) all the way from Hokkaidō in the north to Okinawa in the south'.

It is not necessary to mention both the start and the end of the set; *N kará₂* or *N máde₂* can be used alone, to delimit one of the terminal points of the set, the other remaining unexpressed or vague: *Kákari wa (zyukén-sei no uti) 51'ban kara o kono heyá ni ireta* 'The proctor put (the examinees) from No. 51 on into this room' (Okutsu); *Kono péezi made ga omosirókatta kedo* '(Everything) up to this page was interesting, all right'.

These open-ended sets can lead to some rather unusual sentences, in which the set

27. Can we then go one step further and put a case marker on the delimited set with case markers within *P é kara Q é made ga/o ...*? Okutsu does not raise the question, and I have no example.

delimiter implies a PLURAL adjunct of the same high semantic category; *kará₂* means '(to include others) starting from ...' and *máde₂* means '(having included others) extending to ...'. The subject and object markers need not be present, so that we find sentences like these: *Kodomo kara tabesaseyóo* 'Let's feed the children first' (i.e. 'Let's let people eat, starting with the children'); *Dé wa || Nomura san kara [|] o-negai simásu* 'We will first hear from Mr Nomura (= we will first call on Mr N. to speak)' (R); *Asú no | bangumí kara | go-syookai itasimásita* 'This concludes the announcements of tomorrow morning's programs' (R); *Ákatyan made ikimásita* 'We all went, including the baby'; *Nikú kara tabéru* 'We'll start with the meat' (i.e. 'We will eat, starting with the meat'); *Nikú made tabéru* 'We'll end up with the meat' (i.e. 'We will eat, ending with the meat'—it is unclear whether the terminal point is after the meat is consumed or before it is begun). The sentence *Itiban warúi yátu kara korosita* can be taken either as 'We killed them, starting with the worst offenders' or 'The worst ones started killing [people] first'.²⁸

When a time or place expression appears as the terminal point of a set, there may be ambiguity with the temporal ablative and allative: *Dóko kara hassya suru* can mean 'Where does the train depart from?' as a place ablative, but it can also mean 'Where does the train depart [for/from] first?'—implying several departure points and either *dóko [de/kara₁] kara₂* or *dóko [e] kara₂*, since a verb of departure entertains valences both ablative (the origin) and allative (the destination). The sentence *Yó-zi kara siyoo* can mean either 'Let's start at four o'clock' = 'Let's do it from four o'clock on' or '(Having decided to do it for a couple of minutes every hour on the hour) let's first do it at four o'clock'.

In the following examples mutative conversions (§9.1.11) are applied to set-opener ablatives: *Nihón no bíiru minná^[1] nónde mímasyóo*—*Kirin kará ni simasyóo ka* 'Let's try all the Japanese beers—shall we make it (= order) Kirin to start with?'; *Yó-zi kara ni nátte orimásu no de ...* 'It's supposed to begin at four o'clock'; *Koko kará ni sitára dóo desyoo* 'How about deciding to start here?'.

Examples with the dative: *Sensei ni kara iimasyóo ka* 'Shall I begin [telling it] with [telling it] to the teacher?'; *Miná-san ni okurimono o agetái n desu ga, dónata ni kara agemasyóo ka* 'I want to give each of you a present; whom shall I begin with?'

Okutsu cites an example (taken from Matsushita) that would appear to be a double allative with the second allative marker absorbed into the set-closing *máde*: *Watasi wa sakunen Kyúusyuu e Hukúoka made itta* 'Last year I went to Kyūshū ending up in Fukuoka [after going other places on the way]'. As Okutsu points out, the simple double-allative sentence *Kyúusyuu e Hukúoka e itta* 'I went to Kyūshū—to Fukuoka (to be specific)' is avoided; but *Kyúusyuu wa Hukúoka e itta* is possible, and might be taken as a subdued (and thematized) condition 'as for Kyūshū I went to Fukuoka', though I would prefer to derive this directly from a subdued genitivation 'Of (places in) Kyūshū I went to Fukuoka'. It is not possible to make a double-ablative sentence in quite the same way as the Matsushita example cited by Okutsu, but you can genitivize and subdue the locational reference of greater scope: *Hokkaidoo wa Sapporo kara (Kyúusyuu e Hukúoka made) itta* 'I went from Sapporo in Hokkaidō (to Kyūshū and ended up in Fukuoka)'. Logically it ought to be possible to say *Sapporo [kará] máde Kyúusyuu e Hukúoka made itta* 'I went

28. Following a number the set-opener *kará* means 'over, more than': *Garuvesutón-si o otózuréru hyakuman-nin kará no yuurán-kyaku ...* 'the more than a million tourists who visit Galveston ...' (KKK 25.75b). This can also be said with NUMBER *kará mo* (no ...).

finally from Sapporo (after going from other places) to Kyūshū and ended up in Fukuoka', but few speakers are logicians, and none will probably feel very happy with this attempt to pack so many implications into a single sentence.

One way to explain the set delimiters in these sentences would be to assume ellipsis of some verb gerund: ... kara [hazimete] 'starting from', ... máde [oyonde] 'extending to'. Under this explanation the ablative or allative is introduced as a valence by the verb, which then modestly disappears. Perhaps a similar explanation would account for the use of the set-opener ablative to mark a subject as the initiator of an act: ... yoozi ga áttara zibun no hoo kara iku ... 'when there was some business to attend to THEY would decide when to do it' (SA 2642.44d); Watasi no hoo kara kiboo site ita yo 'I was the one who had his hopes up'.

We have mentioned that the nouns in N kara N máde can be place nouns, time nouns, or (as the two limits of a set) other kinds of pure nouns. When the reference is to time, you will also find the expressions V-té kara (§9.2.3) 'after V-ing' and V-ru máde 'until V' or 'to the point where/when V': Ása ókite kara yoru neru máde yasumi náku hataraku 'I will work steadily from the time I get up in the morning till I go to bed at night' (Okutsu); Ása hatí-zi kara yoru neru máde ... 'From eight in the morning until I go to bed at night ...'; Ása ókite kara yoru hatí-zi máde ... 'From the time I get up in the morning until eight at night ...'; Kisyoo kara yoru hatí-zi máde ... 'From my arising until eight at night ...'; Kisyoo kara neru máde ... 'From my arising until I go to bed ...'; Neté kara kisyoo máde ... 'From when I go to bed until my arising ...'.

And, as we will see in §9.2.3, expressions with V-té kara as well as those with V-ru máde can serve as subjects and objects, just as can N kara and N máde. Any combination of these is possible: Kodomó-táti ga neté kara ga watasi no ziyúu na zikan de áru 'My free time is after the children have gone to bed' (Okutsu); Watasi no ziyúu na zikan de áru kodomó-táti ga neté kara o dokusyo de sugosu 'The time after the children have gone to bed, which is my free time, I spend reading' (Okutsu); Yasumi náku hataraku ása ókite kara yoru neru máde o yoku míte kudasái 'Consider carefully the time from when you get up in the morning until you go to bed at night, the time that you work steadily' (Okutsu).

The last two examples show that these phrases with kará and máde can be modified by adnominalized sentences, i.e. serve as extruded epithemes of TIME DURATION. Like other expressions of duration, such as iti-zíkan (ṅúrai) 'one hour' or aida 'interval', they function as time nouns and can have all the behavior appropriate to a pure noun, even though we run across them most often when they have been directly adverbialized. If, as suggested above, we assume that all ablatives and allatives imply an underlying verb—kara [hazimete] '[beginning] from' and máde [oyonde] '[extending] up to'—the appropriate form here would be a nominalization rather than the gerund (= adverbialization) given earlier: V-té kara [hazimeru kotó/tokí], V-ru máde [oyobu kotó/tokí].

As Okutsu points out, the appropriate way to state the duration of an event is by direct adverbialization: Natu-yásumi no aida ronbun o káita 'I wrote my thesis through the summer', Zyuuití-zi máde asonde ite kudasái 'Enjoy yourself (= Stay) until eleven o'clock'. And if you want to mark a point in the duration, you use the expected temporal locative ní: Natu-yásumi no aida NI ronbun o káita 'I wrote my thesis (at a time) during the summer', Zyuuití-zi máde NI kíte kudasái 'Come (at some time) by eleven o'clock (= at some time before eleven)'.

You will sometimes find the set-delimited duration in apposition to a more general statement of duration, usually quantified, as the use of *N kara N máde iti-zíkan* 'the hour from N to N' in this example from Okutsu: *Koosyuu-káidoo o doráibu sita gó-zi kara rokú-zi máde iti-zíkan wa tote-mo tanosíkatta* 'The hour from five to six that I drove (along) the Kōshū highway was extremely pleasant'. The expression *yó-zi kara ni-zíkan* 'for two hours (starting) from four o'clock' is perhaps better treated as an adverbial modifying an adverbial.

In place of *N máde* writers sometimes use *N ni itáru(¯) máde* 'to the point of reaching to': ... *zínzi kara keiei no bánpan(¯) ni itáru(¯) máde o kanzen ni kontoróoru site ita* 'They had complete control over everything from personnel matters all the way to overall business operations' (SA 2689.17a); ... *go-syúzin kara kozóo san ni itáru(¯) máde* 'from the master right down to the errand boy' (Tk 4.36a); *Kóodo no bunméi-zin kara Hottentóto no hitó ni itáru(¯) máde, sake o nómu desyoo* 'From the man of highest culture right down to the Hottentot (all people) drink wine, you see' (Tk 4.38b); *Watakusi no, kodomo no zibun(¯) kara kónniti ni itáru(¯) máde, e,*²⁹ *uti ni inú no inákatta kikán to iú no wa honto ni sukunái n desu* 'From the time I was a child right up to the present day, uh, there were really very few periods when we didn't have a dog in the house' (R).

Additional examples (from Okutsu) of modified ablative and allative nominalizations: *Taihen na kore kará o dóo kiri-nukeyóo ka* 'How will we make it through the dreadful period from now on?'; *Kákari ga kono heyá ni ireta 51'ban kara wa móo(¯) toan o dásita* 'Those from No. 51 on that the proctor put in this room have already handed in their papers'; *Tote-mo nágakatta sikén ga owaru máde o hurikáeru to ...* 'When I think back on the period until the exam was over, a period that was terribly long ...'.

As a postadnominal the word *máde* has an additional use to express DEGREE, somewhat like *hodó*. The following examples (from Okutsu) show that the phrase has the grammar of an adjectival noun, but it can be directly adverbialized as well as adverbialized with *ní*: *Zangyaku na máde na syazitu-syúgi no séisin* 'A spirit of such realism that it is actually brutal'; *Zangyaku na máde {ni} syazitu-teki na é* 'A picture that is so realistic as to be brutal'; *Sini-taku náru máde ni kurusii syuugyoo* 'Ascetic practices so excruciating that you get so you want to die'. A somewhat similar use of *máde* for degree will be found in *kóo máde* 'this much' (= *kore-hodo*) as in ... *kóo máde iú no ni wa ...* 'in his saying this much' (Kb 35a).³⁰

3.8. LOCATIVE CONSTRAINTS; STASIS

There are two ways to mark spatial location: with the particle *dé* and with the particle *ní*. The particle *dé* is the appropriate marker for any sentence, provided *ní* is not called for as a specifically static location by the other words present. A sememe of stasis is at least optionally³¹ present with such verbs as *súmu* 'lives', *tomaru* 'stops, parks', *todomáru*

29. As the 'uh' translation suggests, this is an empty pause-filler used in moments of non-fluency: the preceding vowel is either elongated (held onto) or, as here, repeated in a kind of echo.

30. It is obvious that I have relied heavily on Okutsu for much of the information in this section; I have also benefited from discussions with Yutaka Kusanagi and Shōzō Kurokawa, and from unpublished studies by Kusanagi.

31. For most speakers, it is surely obligatory. Here are other instances where stasis is inherent to the

'stops', *taizai suru* 'stays', *nokóru* 'remains', etc., and also is obligatorily present with such adjectivals as *óói* 'much/many', *sukunái* 'little/few', *mezurasii* 'rare' and such adjectival nouns as *maré(̄)* *dá* 'is/are infrequent' and such precopular nouns as *tama dá* 'is occasional,' etc. But the sememe is not present for such verbs as *sinu* 'dies', *hataraku* 'works', ... , nor for most adjectives and adjectival nouns; the particle *dé* is left as the only possible marker for location.

The sememe of stasis is, however, also present with the RESULTATIVE conversion *N o VT-ru* → *N o/ga VT-te áru* 'is [in the state resulting from its having been] done' §9.2.4.(2), and in two of the three meanings of *V-te iru*, §9.2.4.(1): (1) the RESULTATIVE, which expresses a resultant state as in *kumótte iru* 'is cloudy', *suwatte iru* 'is seated', *tátte iru* 'is standing, is upright', *sinde iru* 'is dead', *kíte iru₁* 'is (come) here', ... *nátte iru* 'is become', *tukárete iru* 'is tired', ... etc. (2) the REPETITIVE, which expresses regular activity as in *utte iru₂* 'they sell it' (*misé ni utte iru* 'they sell it at the shop' or, if *ní* is taken as dative, 'they sell it to the shop'); *arúite iru₂* 'they walk regularly', *hataraitte iru₂* 'they work', *tukútte iru₂* 'they make them', For the resultative and the repetitive, *N ní* is at least sometimes³² appropriate as the realization of the locative. But it is never appropriate for: (3) the CONTINUATIVE, which expresses stretched-out action as in *arúite iru₃* 'they are walking', *utte iru₃* 'they are selling it', *hataraitte iru₃* 'they are working', ... etc. (But verbs like **sinde iru₃* 'they are in the midst of dying', etc. are aspectually incongruent with this conversion—at least when the subject is singular.)

It is very difficult to find verbs that are limited to only one of these meanings. The best examples seem to be *wakátte iru* and *sitte iru* 'knows' for the RESULTATIVE; *hiraméite iru* 'is flashing' would be usual only as REPETITIVE, yet *hiraméite iru aida* 'while flashing' could be interpreted as CONTINUATIVE (the problem is *aida*). *Tuzuite iru* seems limited to the resultative ('is continued') and the repetitive ('repeatedly continues'), as is true for *owaru* 'ends' and *hazimaru* 'begins'. With the continuative, the locative is realizable only by *N dé*, i.e. by the residual realization. (But *dé* CAN be used with the other meanings of *V-te iru*.)

We can say that the stasis sememe is present in all occurrences of the verb *iru* 'stays, is' in simplex sentences, but we will have to exclude it from *V-te iru* sentences of Type 3 (Continuative). The stasis sememe would seem to be present in all cases of *áru* (including *V-te áru*, which appears only under Type 1, Resultative) except when the noun is an EVENT—often a verbal noun—as in *dóko de koogí(̄)/sikén ga áru* 'Where is the lecture/exam?'; here the stasis sememe would have to be declared absent unless we attribute the locative marking directly to the verbal noun (*dóko de suru koogí(̄)/sikén ...* → *dóko no koogí(̄)/sikén*, etc.) or, better, say that the ACTIVE sememe that is present in the verbal noun overrides (or cancels) the stasis sememe that is present in the verb *áru*. Another explanation would say that *áru* is here substituting for *okóru* 'happens' and the locative is marked as if the underlying verb were present: *Góku saikin Hokkáidoo de átta* [= *okótta*]

verb: *kono yó(̄) ni ikíru* 'lives in this world'; *mizuúmi ni ukabu* 'floats in a lake'; ... *Taihéi-yoo no seitan ni íti suru* 'is located at the western end of the Pacific Ocean' (SA 2685.16); ... *sékái no suizyun ni gó-site iku ...* 'ranking at world levels' (SA 2651.28c); *atí-kóti ni tamuro-suru* 'encamps here and there, rendezvous at various places';

32. Here is a repetitive *V-te iru* that will not permit *ní*: *Máiniti(̄) senzyoo DE (*senzyoo NI) takusán no heitai ga sinde iru* 'Every day many soldiers die on the battlefield'. Here is a resultative *V-te iru* that will not permit *ní*: *Waikiki DE hárete iru* 'Skies are clear in Waikiki'.

kotó desu 'It is something that happened quite recently in Hokkaidō' (SA 2659.50a). The question arises as to the appropriate marking for a repetitive V-te iru that is made on a passive. Apparently either dé or ní is acceptable if the agent is unexpressed, but if the agent is mentioned he will be marked by ní and the locative must be dé. N ga dóko de/ni urarete iru 'Where is N sold?' (from N o dóko ni utte iru 'Where do they sell N?') but N ga dóko de A ni urarete iru 'Where is N sold by A?'

In a sense, then, it might be said that the particles ní and dé are in complementary distribution, provided we allow the stasis sememe to be part of the environment; but the choice of ní or dé is often the only indication that stasis is present. Thus in the sentence (from MJW) Róndon ni wa íma de mo yamataka o kabúttá otokó^[1] no hitó ga arúite iru sóo desu 'I hear there are still men walking around with bowlers on in London' the use of ní to mark the locative tells us that arúite iru must be either resultative (and in this sentence that would not make sense) or repetitive, since the continuative is excluded. In ... táda béddo de nete iru daké de aru '(I) do nothing but just lie in bed' (SA 2645.47b)—the dé evokes the activities one might be indulging in.

Moreover, there are situations in which the preceding statements are seemingly contradicted, sentences in which the V-te iru is apparently continuative but the location is marked by ní; these may be syntactic blends, in which you are really saying two things—where somebody is and what they are doing, with your focus of attention on the former. Thus, to borrow examples from Leatrice Mirikitani, in answer to a question like Dónata ga o-taku no zyóotyán desu ka 'Which child is your daughter?' the reply may be Asoko ni asonde irú no ga uti no Hánako desu 'The one who is over there playing is my daughter Hanako' but in answer to a question like Hánako-tyan wa íma náni o site iru 'What is Hanako doing now?' what you will hear is Soto de asonde irú no 'She's playing outside'. And if someone wonders Gakusei wa dóko ni irú n desyoo née; móttö takusán^[1] déru hazu désita no ni ... 'I wonder where the students are; more were supposed to show up ...' the information may be offered Tosyó-kan no máe ni oozé^[1] atumátte itá wa 'There were a lot of them gathered in front of the library' (this can be treated as resultative—and the ní could be taken as mutative-locative) and Sunakkú-baa ni mo gakusei ga takusán^[1] nónde itá wa 'There were many students in the snack bar, too—drinking' in which the emphasis is on the whereabouts rather than the activity. Some pairs from Mirikitani: Iké^[1] no omoté ni bóoto ga hasítte iru 'There is a boat racing along on the surface of the lake'—Matí de wa zidóosya(¯) ga sirói kemuri o dásite hasítte iru 'The cars are racing along in town emitting white smoke'; Asoko no séeru ni mo takusán no hitó ga katte ita 'There were many people shopping at the sale there, too'—Sátóo san desitara, asoko de tabako o katte imásu yó 'If it's Mr. Sato you want, he is buying cigarettes over there'; Rozyoo ni itagákoí no aida kara san-nín ga nozoite ita 'There were three men on the street peering through the cracks in the wooden enclosure'—Gakkoo de kodomó-táti ga kyoositu no náka o nozoite ita 'At school the children were peering into the classroom'.

In these cases of unusual ní-marking with the continuative it seems to be obligatory to set the locative off with at least minor juncture. Although you can say Asoko ni (|) aná o | hótte iru no ga Tároo desu without the first juncture, it then cannot mean 'The one who is over there digging a hole is Taro' but only 'The one digging a hole into that place over there is Taro', and Asoko ni | sinbun o yónde irú⁽¹⁾ no ga || Tároo desu 'The one over there, reading the newspaper, is Taro' will be quite ungrammatical without the juncture since to say 'The one reading the newspaper over there' you will have to say Asoko de (|) sinbun

o yónde irú) no ga || ... Apparently these locatives can never appear after the subject (*Taroo ga | asoko ni | sinbun o yónde iru). Because of that I would hesitate to attribute the marking to ellipsis (something like *Asoko ni [ite/iru] Taroo* 'Taroo, being there, ...'); instead I would prefer to assume a blend of two disparate sentences, something like *Tároo ga asoko ni iru* and *Tároo ga [asoko de] sinbun o yónde iru*. Cf. the discussion in Alfonso 211–3.

Both particles, of course, have other uses, and these can provide further contrasts: *Amerika ní wa damé da* 'It is no good for America' has an indirect object, a dative of reference (= *ní [tótte]*), but *Amerika dé wa damé da* has a locative in the meaning 'It is no good in America' and the copula gerund in the meaning 'America is no good' (= *Amerika nára/wa damé da*). *Yamá ni | náru* means 'It becomes a mountain' with the essive infinitive but *Yamá ni || náru* means 'It [stands there and] bears fruit on the mountain' = 'It's on the mountain, bearing fruit' with the locative; cf. (?) *Yamá de { | } náru* 'It does its fruitbearing on the mountain'. With the verbs *saku* 'blooms' and *náru* '(fruit) is borne' the marker is usually *ní* regardless of whether the locative is intimate (the tree or plant or branch) or not (the area): *niwa ni bara ga saite iru* 'in the garden roses are blooming', *kí ni ringo ga náru* 'the tree bears apples'. Perhaps this should be considered the mutative-locative 'to a position at, onto'.

In the literary language *ní* will often substitute for *ní-te = dé*, and a similar substitution will sometimes turn up in colloquial contexts, especially with somewhat bookish verbs: *Tookyoo no sitamati NI sodátta tyósyá wa ...* 'The author, who was reared in downtown Tōkyō, ...' (SA 2659.113e—*dé* would be more colloquial); Certain anomalous sentences that contain *ní* with adjectives can be regarded as elliptical. In the sentence *Asoko wa nánboku ni/e [...] hoso-nagái tikei da* 'That region has a long and narrow shape from north to south' some verbal gerund is probably omitted (*watatte? yokotawátte?*); the substitutability of *é* shows that *ní* is probably not to be regarded as a locative in any event. Cf. *táte ni nagái* 'is long vertically', *yoko ni semái* 'is narrow sidewise' (Is this the *ní* of manner?).

Unexplained is the following anomaly: *máe ni* 'before' refers to order (= *saki ni*), time, or static space, and *máe de* '(happening) in front' refers only to space; *áto ni* 'after' refers only to order and *áto de* 'after' only to time (with *usiro ni/de* 'behind' designating space). Some sort of semantic cancellation may be present; or perhaps the overlap with the copula infinitive and gerund has confused the picture. The expression (*sigoto o sité kara*) *súgu áto ni simasyóo* can be taken as a mutative conversion of ... *áto da* 'Let's decide on its being right after (finishing the job)' or it can be taken as the static locative of *áto ni* as an adverbial modification of the verb 'Let's do it right after ...'. The mutative conversion can be applied to the latter, by way of propredication, yielding ... *súgu áto ni ni simasyóo* 'Let's decide on [doing it] right after ...'; *áto de ni simasyóo* will mean 'Let's decide on [doing it] later'.

Since we consider *N ní* to be the MARKED locative category (called for by the presence of stasis in the sentence), the temporal *N ní* 'at (a time)' can be included as a special instance—called for by the stasis that is probably present in ALL time words; such a treatment would deal with the space-time continuum as a single entity. Cf. the use of *kará* and *máde* with both space and time; and contrast the use of *é* with space only.

From what we have said about the marking of locatives, it is possible to discern two

kinds of locatives: a specifically static locative, marked by *ní*, which is called for by some particular predicate; and a general or residual locative, marked by *dé*, which marks the scope of a sentence regardless of the predicate and therefore is common in adjectival sentences as well as in those verbal sentences lacking stasis. But it is possible to have both locatives in a single sentence: *Amerika dé {wa} dóko ni súnde ita* 'Where were you living in America?' It ought to be possible to obtain by ellipsis something like *Amerika de [] súnde ita ka* 'Were you living [somewhere] in America?'

In addition, there is the mutative-locative which contracts the combination of static-locative *ní* + the mutative use of the copula-infinitive (or essive) *ní* into a single *ní*: *teeburu no ué ni oku* 'puts it [so that it is] on the table', *tehukí-kake ni te-hukí o káke ...* 'hanging the towel on the towel rack' (Fn 386a); *dénsya(˚) ni noru* 'boards the train'; etc. (Cf. *tikáku oku* 'puts it near', *tákaku ageru* 'lifts it high', etc.) On this, see §9.1.11.

Certain verbs, such as *tátu* 'stands' (not 'departs') and *suwaru* 'sits', can be described as each having two grammars: one with the static-locative 'is upright/seated in a place', the other with the mutative-locative '(changes position so that one) stands/sits to occupy a place'. That is why it is possible to say *Soko ni tátte/suwatte irú no wa húben desyoo—attí e tátte/suwatte kudasái* 'It must be uncomfortable for you to be standing/sitting there—move over there and stand/sit'. I have found a similar example with *neru* 'lies down, sleeps': *Hámako san. Kón'ya wa, koko e nete* 'Hamako, tonight sleep over here (beside me)' (Fn 268b). It may be possible to find examples with *súmu* (perhaps *inaka e súmu* 'moves to the country to live?') and even with *iru* 'stays'. One way we might account for such sentences would be to assume the ellipsis of a verb of movement, something like *koko e [kíte [koko de]] nete* 'come here and sleep [here]', *attí e [itte [attí de]] tátte* 'go over there and stand [there]'. Some sort of syntactic blend may be responsible for *Betonamu e kaku-héiki o tukang nádo to iu kotó ...* 'The using of nuclear weapons in Vietnam, say, ...' (Tanigawa 27).

An occasional substitution of *é* for *ní* might make you think you have an allative rather than a static-locative, but such a substitution often turns out to be due to confusion between *é* and *ní* and may well be rejected as substandard: *itiban ii hóteru e tomatte, ...* 'I stayed at the best hotel' (SA 2689.124d) would be better reworded as *hóteru ni tomatte—* nor is this example to be treated as ellipsis (... *e [itte soko ni] tomatte* or the like). A similar example: *Sono ban mo soko e tomatte* 'I stayed there that night, too' (Tk 121a).

The verbs *kau* 'buys' and *kariru* 'borrows' are peculiar in that the object is located with *ní* provided it is immovable (*Yokohama ni toti o katta/karita* 'I bought/leased land in Yokohama') but with *dé* if it is movable (*Yokohama de kuruma o katta/karita* 'I bought/rented a car in Yokohama'). The sentence *Ano misé de koko ni tokei o kaoo* 'Let's buy a clock at that store for this place' can be regarded as containing an ellipsis *koko ni [oku] tokei* 'a clock to put here' or an expression of purpose or dative of benefit *koko [no tamé] ni* 'for the sake of this place'. The expression *mótte iru* 'possesses' locates its object (the possessed) with *ní* (*Yokohama ni ié o mótte iru* 'I have a house in Yokohama') as, of course, is true of *áru*: *Dáre ni/ga Yokohama ni ié ga áru ka* 'Who has a house in Yokohama?'

With verbs of seeing, locating, finding, etc., the place where the object is discovered to be situated is marked with *ní*, as if preserving the underlying marking of 'it is in that place'.^{32a} You will say *Pokétto no náka ni monó o míta* 'I saw something in the pocket' because you the observer are hardly likely to be in the pocket yourself. It is unclear whether or not the speaker who says *Enpitu o teeburu no sitá ni mituketa* 'I found the pencil under

32a. Also, forgetting to move an object from its location: *uti ni zibíki o wasurete kíta* 'I left my dictionary at home'. But when the object has been moved to some forgotten place, the allative (*é/ni*) is appropriate: *Dóko e tebúkuro o wasurete kíta daroo* 'Where have I left my gloves?' (Kenkyusha).

the table' got under the table to look for it; if you say *Yokohama ni ié o mituketa* 'I found (located) a house in Yokohama', it is possible that you were actually in Yokohama when you discovered the house (rather than consulting with a faraway real-estate agent, perhaps) but the sentence is noncommittal on that point. If you say *Asoko de yamá ga miéru* you mean 'From there (= if you are in that place) you can see the mountains' but if your meaning is 'The mountains can be seen over there [where they are located]' you must say *Asoko ni yamá ga miéru*. In *Anáta o yumé ni míta* 'I saw you in a dream' nothing is said about whether the dreamer visualized himself in the dream or not. These situations might be thought to involve a semantic extension of the mutative-locative; in any event, a very similar mechanism is at work, whereby the stasis of the object (after movement, discovery, or change-of-possession) is marked.

In the following example, the first *é* is probably anticipating the movement verb responsible for the second *é*: ... *óyazi(-) ga Tibá-ken e toti o katte, soko e yat-t^[i] sokai sitá n desu keredo mo, ...* 'my father bought land in Chiba prefecture and we finally were evacuated there' (SA 2821.59b). But a conceivable interpretation would be 'went to Chiba to buy land' or 'bought land out in Chiba' with ellipsis of *itte* 'going'. The expected marking here is *ní* (*toti o kau*), not *dé*, for reasons explained above.

Throughout Tottori and in northern Tajima (according to Tōjō 1954.64) the ablative marker *kará* is used to mark the dynamic locative in place of the standard *dé: hára kara* [= *de*] *asobu* 'plays in a field', *gakkoo kara* [= *de*] *undóo-kai ga áru* 'there is a sports meet happening at school'. This is reminiscent of the Korean use of {*ey*} *se* for both ablative 'from' and residual locative 'at'.

3.8a. CASE VALENCES WITH RELEXICALIZED NUCLEI

In some sentences a case marker is present by virtue of a valence with a predicate that appears in the sentence itself only in a relexicalized form or in a hidden guise, if at all.

Among the various kinds of genitives (§3.11.2), there are those that can be accounted for, in certain examples, by underlying verbs or verbal nouns. *Nengá-zyoo(-) no okurí-nusi wa ...* 'The sender of New Year's cards' (SA 2685.112b) contains an objectival genitive that derives from an underlying sentence *Nengá-zyoo(-) o okuru* '(He) sends New Year's cards'; its converse *nengá-zyoo(-) no uketóri-nin(-)* 'the recipient of New Year's cards' contains an objectival genitive that derives from *Nengá-zyoo(-) o uke-toru* '(He) receives New Year's cards'. There are similar examples of the objectival genitive in which the object is the "possessed": *zidóo-sya(-) no hoyúu-sya* 'a car owner' derives from *Zidóo-sya(-) o hoyuu suru* '(He) owns a car' and ... *surudói ryóosin no motí-nusi datta* 'was the possessor of a sharp conscience' (SA 2684.120d) derives from *Surudói ryóosin o mótu* '(He) possesses a sharp conscience'.

But sometimes the object is incorporated into the epitheme: *Káno-zyo wa san-nín no ko-moti dá ga, ...* 'She is the mother of three ...' (SA 2684.116c) derives from *Káno-zyo ga san-nín no ko o mótu* 'She has three children', and *Tóozi no siti-hatizyúuen no gekkyúu-tori ga sumáu yóo na utí(-) desu* 'It was the sort of house that would be lived in by a salary earner of about 70 or 80 yen in the money of that time' (Tk 4.322a) derives from [*Káre ga*] *siti-hatizyúuen no gekkyuu o tóru* '[He] takes a monthly salary of 70 or 80 yen'. In other instances the object may be genitivized, but the nucleus is converted to the

infinitive (or, more accurately put, is not finitivized—and the verbal noun simply omits the auxiliary *suru* altogether) and is then incorporated into a compound noun: ... *kanzoo no motteyuki-básyo ga náí* ‘has no place to take his feelings’ (KKK 3.170) (*Basyo e*) *kanzoo o motte yuku* ‘(He) will take his feelings (to a place)’; ... *sekai-héiwa no izi-kíkan* ‘an organ to maintain world peace’ (KKK 3.170). *Sekai-Héiwa o ízi suru* ‘(It) will maintain world peace’ or ‘(By it they) will maintain world peace’; ... *gakkoo no kyuuusái-saku* ‘a plan to save the schools’ (KKK 3.170) ← *Gakkoo o kyuuusai suru* ‘(With it they) will save the schools’.

It is not always immediately obvious that the underlying predicate has disappeared. When a case-marked noun is linked to another noun by *nó*, functioning as the adnominalized copula, it is helpful to think of the copula form as standing for a specific predicate; this is a kind of proredication, as set forth on p. 654. For example, *háha kara no tegami* ‘a letter from my mother’ can be explained as standing for the more explicit expression *háha kara moratta tegami* ‘a letter received from my mother’. But there are situations in which a case-marked noun cannot be so readily explained. The reciprocal valence of the noun *én* ‘relationship, tie’—as in ... *kore de hito wa kámi to én o kitta wáke de aru* ‘... for with this [= with Jesus] man cut his ties with God’ (SA 2672.128a)—can be explained in terms of the predicate *én o musubu* ‘forms a connection (with)’, perhaps by ellipsis: *kámi to [musunda] én* ‘the tie [joined] with God’. The particular verb that might predicate certain nouns is obscure: in the phrase *Tái to no kokkyoo ni tikáku*, ... ‘Near the border with Thailand ...’ (SA 2680.19d) the word *kokkyoo*, like its translation ‘border’, implies a SHARING that is not readily verbalized, so that we will perhaps want to say that the valence is with a verbal sememe of “sharing” that is inherent to the noun itself.

But the underlying verb is often present. The common expression *N tó wa kurabe-mono ni naránai* ‘does not stand comparison with N’, for example, is clearly derived from *N to kuraberu* ‘compares it with N’: ... *éiga(⁻) tó wa kurabe-mono ni naránai kúrai hínsoo desita* ‘it was too meager to stand comparison with the film’ (SA 2664.37); ... *hoka no gakki tó wa kurabe-mono ni naránai hodo^[1]* ... ‘to an extent that does not bear comparison with other musical instruments’ (SA 2673.115c); ... *génzai to wa kurabe-mono ni naránai no monó datta yóo⁽¹⁾ da ga* ... ‘it seems to have been something that would not stand comparison with the present’ (SA 2677.45e). And the common expression *N wa X ni tuki-mono da* ‘N always goes with X, N is an inevitable accompaniment of X’ clearly derives from *N ga X ni túku* ‘N is attached to X’. It is easy to see the origin of a case valence with a noun derived from a verb infinitive (§14.5), as when *Káre to nendai ga tigau* ‘differs with/from him in generation’ underlies the subject in the sentence ... *káre to nendai no tigai ga arimásu kara* ‘For there is a difference of generation with him ...’ (SA 2671.48a).

Often the valence is present as the result of a verbal noun that fails to function as a verb in the sentence: *Watasi wa siro to iu monó ni teikoo o kan-ziru* ‘I feel a resistance toward things called “castles”’ (SA 2673.156) has a dative of confrontation that derives from *monó ni teikoo suru* ‘resists things’. And sometimes the verbal noun is incorporated in a larger lexical compound: *Musuko to soodan-zukú(⁻) de* ... *byooin ni háitta* ‘entered the hospital by mutual agreement with his son’ (SA 2670.32c) gets its dative valence from *musuko to^[1] soodan suru* ‘consults with the son’ and *tooyoo-sísóo e no annái-syó(⁻)* ‘a guidebook to oriental thought’ perhaps derives its allative valence from *N é^[1] annái suru* ‘guides one to N’ (but see the remarks on *N é^[1] N* in §3.7).

Sometimes an adverb will be left dangling when a verbal noun fails to appear as a predicate: *Syokúgyoo ˉgara kaigai-ryókoo no óói Maedá-si mo ...* 'Mr Maeda who has lots of trips abroad [that he makes] by the nature of his business' would seem to contain an underlying *syokúgyoo ˉgara ryokoo suru* 'travels by the nature of one's business'. In the phrase *yori seikóo-hoo(ˉ)* 'a more frontal attack', the bound adverb *yori* 'more' would seem to refer to the incorporated Chinese-loan morpheme SEI 'front' rather than the noun *seikóo-hoo(ˉ)* as a whole.

The reciprocal valence of *renraku* 'contact' (*kyookai-kánbu tó^[r] renraku nási de* 'without contact with the Association staff') can be attributed to the fact that it is a verbal noun: *kyookai-kánbu tó^[r] renraku suru* 'makes contact with the Association staff'. And the reciprocal or dative valences of *kankei* can be derived from its use as a verbal noun in the predicates *N tó^[r] kankei suru* 'forms a connection/liaison with N' and *N ní^[r] kankei suru* 'relates to N; participates in N; has an influence on N': *Káre wa kono kotó ni kankei ga áru to omóu* 'I think he has something to do with the matter'.

In the following two examples, *kankei* is responsible for the reciprocal valence but it has been incorporated into a precopular noun *mu-kánkei* 'unconnected, unrelated'; moreover, the subdued focus is in anticipation of the negative element, which has been incorporated as the prefix *mu-*: ... *íryoo(ˉ) tó wa mu-kánkei no siróoto ga óoku ...* 'there are many ... amateurs lacking any connection with medical treatment' (SA 2670.34c); *Dái yón-syoo de wa, sore máde no tyoozyoo-zinbutu to wa mattakú^[r] mu-kánkei no húuhu ga toozyoo suru* 'In the fourth chapter, a married couple appear who are totally unconnected with the characters in the story up to that point' (SA 2688.89a). See also §2.3.1 on lexicalized negation with *wá*; notice that, unlike *wá*, *sika* requires that the negation be predicated (§2.3.3).

The reciprocal valence of the following example is due to *kanren* 'being connected (with)' though the verbal noun itself is incorporated in a compound with *do* 'degree': *Gúntai to no kanrén-do no tuyói sihon-ka ga ...* 'The capitalists, whose degree of relationship with the military is strong ...'.

The *é* in the following two examples of *é nō^[r]* is substituting for *ní*, in valence with lexicalized nuclei: ... *seikai é no "akí"* 'a "weariness" with political circles' (SA 2663.116a); *Seizi é no mukansin-soo ga húete iru* 'The class of those unconcerned with politics is growing' (ibid.). The noun *akí* in the first example is derived from the infinitive *áki* 'wearying (of)'; in the second example, the noun *kansin* 'concern' is incorporated into the precopular noun *mu-kánsin* 'unconcerned', which in turn is incorporated into a compound noun with the suffix *-soo* 'stratum'. A similar example: *séizi e no kansin-do* 'the degree of interest in politics'.

In the phrase *Hakuzin tó no konketu-séinen ...* 'a mixed-blood youth who is part white (= a *hapa-haole* lad)' (SA 2666.100e), the reciprocal valence is with the noun *konketu* 'mixed blood' as seen in *Kokuzin tó no konketu no ootoótó o sodátete iru* 'is raising a younger brother who is half black' (SA 2668.104b), and that valence in turn is to be explained in terms of the Chinese-loan bound morpheme KON 'mix', here forming a noun with the Chinese-loan bound morpheme KETU 'blood'. Such an explanation is, of course, historical; yet there are those speakers who feel an association of the morphemes with sentences like *N tó^[r] ketueki o kongoo suru* (or its de-Sinicized equivalent *N tó^[r] ti o mazeru*) 'mingles blood with N', and such associations must be accounted for, too. In the expression [*káno-zyo*] *tó no enbun* '(story/rumor) of a love affair with [her]' (Tk 2.268),

the reciprocal valence is with the morpheme EN 'relationship' (a valence in turn due to the sentence *én o musubu* as explained above). In the phrase *dai-tósi e no zinkoo-syúutyuu* 'the concentration of the population into large cities' (SA 2684.137c) the subject and the verbal noun have been joined as a compound noun after extrusion from *dai-tósi ni zinkoo ga syuutyuu suru* 'into large cities the population concentrates' with a mutative-locative *ni* that is replaced by *é* under adnominalization.

In the sentence *Kore tó wa taisyoo-teki ná no ga Nissan-zidóosya(-) da* 'In marked contrast with this is Nissan Motor [car]' (SA 2664.122e), the reciprocal valence is due to the verbal noun *taisyoo*, here incorporated into an adjectival noun ('contrastive') created by the suffix *-teki*. But in the phrase *Amerika ni hihan-teki na éiga(-) wa ...* 'Films critical of America ...' (SA 2668.104a) we must assume an independent dative, since the verbal noun *híhan(-)* is transitive; we cannot derive the structure directly from *Éiga(-) ga Amerika o híhan(-) suru* 'The film criticizes America'.

An unusual syntactic carryover under lexicalization will be seen in the sentence ... *zensokú-i ni wa nari-té ga sukunái* 'those becoming asthma specialists are few in number' (SA 2649.41). The derivation is [*té* = *hito*] *ga zensokú-i ni náru* '[people] become asthma specialists' but the verb that serves as the nucleus of the intransitive mutative conversion (§9.1.11) is incorporated, in its infinitive form *nári*, into a compound noun with *té* 'hand = person'. Subdued focus is then applied to the dangling essive (or copula infinitive) in order to emphasize the semantically negative predicate *sukunái* 'are (not many =) few'. An even more complicated situation is found in the expression *V-te kure-te* 'one who will V for me' (Y 577): ... *aité ni site kure-te ga nákatta* 'there was no one who would be my partner'; *Moratte kure-te ga arimasén wa, ...* 'There's none who will marry me'. The genitive in *Tóozí wa Yooróppa wa Nihón no sensín-koku de, ...* 'At that time Europe was a group of nations in advance of Japan' (Ōno 1967.158) would appear to derive from [SYŌ-]KOKU (= *kuni* [guni]) *ga Nihón yori sensín suru* 'the nations get ahead of Japan'; it is possible to modify *sensín-koku* 'advanced nation' with an adverb of degree, as if it were a relational noun: *Nihón no zut-to* (or: *háruka ni*) *sensín-koku* 'a nation far in advance of Japan'.

In the sentence *Íma no Nihón de nara zitugen kanoo da* 'It could be put into effect in the Japan of today' (SA 2648.106a) the phrase marked by *nára* 'if it be' is quasi-thematized by setting up a condition with the provisionalization of the copula which is marking a pro-predication of the locative *Nihón de da* 'it's in Japan (that ...)'; we could take the locative as going with *kanoo dá* 'it is possible' or with *zitugen* [*suru kotó ga*] 'putting it into effect', a nominalization by reduction to the verbal noun itself.

Some valences are called for by verbs that underlie derived nouns in the surface sentence: *ikkoo sore NI o-kamai náku, ...* 'quite irrespective of that ...' (K 1966.111) is clearly to be traced to *Sore ni kamáu* 'It bears on that'. The derived noun may be tucked into a larger compound: ... *otto wa F-mati to hookoo-tígai no réssya(-) ni notta* 'the husband took a train in the opposite direction from F-town' (SA 2793.99b) is to be explained as *F-mati to* [*réssya(-) no*] *hookoo ga tigau* 'The direction (of the train) differs from F-town'.

3.9. THEMATIZATION

It is generally recognized that some, but not all, Japanese sentences contain a "topic" or THEME. The usual assumption has been that the theme comes at, or near, the beginning

of the sentence and is marked by *wá*. I wish to revise the prevalent view that *wá* is a topic marker, since I would like to account for ALL cases of *wá* in terms of its polarity with *mó* in a system of emphasis focus as shown in §2.3. By what, then, is the theme marked?

Primarily, by POSITION. The theme, if there is a theme, comes first in the sentence—except that it may be preceded by sentence-linking conjunctions (*sikási* ‘but’, *kéredo mo* ‘however’, *sitagátte*($\bar{\tau}$) ‘accordingly’, etc.), and these can be regarded as a special kind of theme, the CONJUNCTIONAL THEME.³³ Interjections are best treated as minor sentence types interpolated within the sentence (*Kore mo máa ...*) or within the discourse at the beginning of a sentence (*Máa kore mo ...*); cf. the “sentence extensions” *né, sá*, etc., which are also often interpolated within the sentence as well as at the end. Interjections and sentence-extensions are thus something like mirror-images within the syntax; and the mirror-image of the theme, as a syntactic concept, is the EPITHEME—the target of an adnominalization as explained in §13.1.

But surely we do not want to say that whatever comes first in the sentence is a theme. In view of the free order that the basic ingredients enjoy as they enter the sentence (§2.1—but note that there is a statistically favored and, we presume, semantically “neutral” order), we can expect to see virtually ANY predicate adjunct appear in that position. Does this automatically make the adjunct a theme? No, not unless we insist on finding a theme for EVERY sentence that contains more than the predicate alone. I feel no need to assume that the direct object is thematic in the sentence *Kore o rikai suru kotó ga | dekinai* ‘I can’t understand this’. On the other hand, in the following sentence the same object has been thematized: *Kore o || káre-ra wa | tootei rikai suru kotó ga | dekinai* ‘This they simply can’t understand’. In this sentence, the major juncture marks the initial adjunct as theme. And it is by setting off an initial element with some such break that the speaker signals to tell us he intends a theme.³⁴ (But we must not forget that surface-level adjustments will sometimes reduce or suppress an underlying major juncture, so that an “intended” theme may not be overtly marked and would have to be inferred.)³⁵

The remainder of the sentence—called the RHEME—can be either a simplex or a compound consisting of more than one simplex; and, of course, it can contain within it various embeddings and the results of other conversions. Within the simplex we presume that

33. But there are two types of these sentence-connecting conjunctions, corresponding to the resultative and the transitional epithemes (see p. 621); accordingly we can speak of RESULTATIVE THEMES (*hatásite* ‘sure enough’, *sore-yué ni* ‘therefore’, *koo site* ‘thus’, *sitagátte*($\bar{\tau}$) ‘consequently’) and of TRANSITIONAL THEMES (*sikási* ‘but’, *siká-mo* ‘moreover’, *sosite* ‘then’, *áto wa* ‘later on’, *yokuzitu mo* ‘the next day too’). Occasionally strings of two or more transitional themes will begin a sentence: *Sára ni mata ...* ‘And furthermore ...’; *Sosite náó, ...* ‘Then further ...’; *Sitagátte*($\bar{\tau}$) *máta*($\bar{\tau}$), ... ‘Consequently, again ...’. There may be interpolated interjections: *Kédo mo, máa, dóo-mo, ...* ‘But, well, somehow ...’; *Máa, zitú ni, dóo-mo, ...* ‘Well, indeed, somehow ...’. Or, a resultative or transitional theme may be followed by an extruded theme: *Yokuzitu, áme wa máda hütte ita* ‘The next morning it was still raining’ (V 1972.162).

34. Does the major juncture usually required before an interrogative serve to signal that the preceding phrase is thematized, e.g. the object in *Huróito o || dóo omoimasu [ka]*? ‘What do you think of Freud?’ (SA 2688.121e).

35. On the other hand I suspect that the suppression of juncture after an atonic adverb at the beginning of a sentence may be a signal that the adverb is NOT to be taken as thematic, but rather as an anticipation of some later element, such as the negatives in these examples: *Zenzen kotobá ga | tuuzinai to iu kotó wa || arimasén* ‘It isn’t true that the language is totally not understood’; *Kessite warúi | kotobá de wa | arimasén* ‘It is not a bad word at all’.

the maximum normal phrasing (at least with neutral order) will place an underlying minor juncture after each adjunct; but we must bear in mind that under many circumstances a surface-level rule automatically suppresses a minor juncture that separates an atonic phrase from a tonic phrase.

It is possible to subdue a theme, and it is possible to highlight it: *Kore wa || káre-ra wa | tootei ...*; *Kore mo || káre-ra wa | tootei ...*. And, in fact, it is extremely common to put a theme into the background by subduing it with *wá*, so that if an initial adjunct is followed by *wá* we are tempted to call it theme whether or not it is followed by major juncture—and we are often right. There is nothing wrong with this as a rule of thumb, but we may be missing the value of the concept of “theme” if we fail to distinguish certain subtleties that I am here attempting to shed light on. The subdued theme is a very popular way to open a sentence; as Ōide (1965.140) says, it is like a pincushion—once you have it in hand you can stick the rest of your *hanashi* in where convenient. When the subject or object is identical in adjacent sentences, it is often subdued and thematized: *Pisutoru O mukete?—Pisutoru WA muketá ga, utánakatta* ‘Aiming a pistol at you?—He AIMED the pistol all right, but he didn’t fire [it]’ (Tk 2.35b).

It has been widely noted that an adnominalized sentence cannot contain a theme; this seems to be true when the epitheme is an extruded adjunct taken from the simplex, but not when the epitheme is summational (or, probably, other intruded epithemes). It has also sometimes been assumed that focus (at least with *wá*) is not permitted so freely in the adnominalized sentence as in the unadnominalized, and this is at least misleading, if not false. Examples will be found in §13.1. Here is an example of a subdued thematization of the dative (in valence with a noun “interest IN”) that is part of a sentence adnominalized to the summational epitheme *wáke* ‘explanation, reason, matter’: *Tyúugoku ni wa, máe kara kyóomí o o-moti dátta wáke desu ka* ‘Is it that China has been of interest to you for some time?’ (SA 2679.46b). The observation by Mikami (1963a.105) that it is unusual to drop case-markers in an adnominalized sentence, unlike an independent sentence, does not seem to be confirmed by my informants; but perhaps what he has in mind is the common dropping of markers with a THEMATIZATION, leaving the theme marked only by juncture, and that is another matter.

When the object comes before the subject, it usually (always?) seems to be thematized as in the example *Kore o || káre-ra wa ...* above. (According to Kuno 1971, the order subject-object-verb is 17 times more frequent than the order object-subject-verb.) And when focus is applied to adverbial elements that come later than the subject, the subject is often thematized (without necessarily acquiring focus): *Sikasi-nágara, koré-ra GA konpon-teki ní WA hitó-tuzuki de áru* ‘However, THESE are fundamentally a SINGLE continuum’; *Kore GA wá-ga kuni NI WA ní-sya sika náí* ‘There are only two of these firms in Japan’ (SA 2665.32a)—at least two other interpretations are possible (transitional theme ‘Now, ...’, thematization of the possessed ‘Of these, Japan has only ...’); *syúmi máta-wa asobi de turi o suru syuukan GA kono kuni NÍ WA náí yóo de aru* ‘the custom of fishing for a hobby or for fun seems to be lacking in this country’ (SA 2681.94b). In the following sentence, the allative adjunct has been thematized and highlighted (“to Tōkyō too”); the subdued adjunct (“some of it”) is probably not also thematized, though it represents the missing subject (“it”): *Tookyoo é mo sukósi wa kíte imásu ga, daitai Kyúusyuu de sabakimásu* ‘Some of it comes to Tōkyō too, but most of it we sell in Kyūshū’ (Tk 4.190b). For examples of delayed subject with possible thematization of various kinds of adjuncts, see §3.9a.

Adjuncts of time and place freely drop the locative marker when they are thematized: Hokkáidoo wa móo yukí ga hútta 'Hokkaidō must have had snow by now'; Kón'ya, aite 'nái ka 'Tonight are you free [I hope]?' (SA 2674.108d—the comma in the original text presumably indicates a major juncture, hence we conclude that the time phrase has been thematized, even though we would normally expect it in the first position, anyway; presumably the subject, had it been mentioned, would have followed); Tookyoo mo li áme ga | hútte iru ka sira 'I wonder if Tōkyō is having rain, too' (cf. Tookyoo dé mo li áme ga | hútte iru ka sira 'I wonder if in Tōkyō it's raining, too', Tookyoo dé mo li áme ga hútte iru ka sira 'I wonder if it's raining in Tōkyō, too'); Kaizyoo wa li tasyoo namí ga | áru desyoo '(At sea there will be some waves =) The marine forecast calls for somewhat heavy seas' (R). The allative marker also sometimes drops, as in Kyookai [é] wa yóku itta wá 'I went to church a lot' (Tk 2.192b); other examples will be found in §2.2a.

The following examples of (focused) thematization with ellipsis of ní in various uses are taken from KKK 23.223: Kono ohusarumogúrahu [ni] wa li áto de | moo iti-dó^[1] kuwásiku | huremásu 'This ophthalmograph we will take up in detail again later'; Dé li mázu li sono kiraremasita | monó [ni] wa li o-sío o | itasímásu 'Now first, that which has been chopped up, we salt it'; Ée li katáppoo [ní] wa li íma no—(oo)³⁶—li táda no li watá o | iremásita | yó 'Mmh, on one side we stuffed it with regular cotton'; Kao no siwa o ki ni suru to dooyoo, li así^[1] no siwa [ní] mo li zyuubún | go-tyúui kudasaimáse⁽¹⁾ 'Just as you worry about the wrinkles on your face, the wrinkles on your legs too—please pay careful attention to them'.

We are suggesting that any adjunct—except, perhaps, certain adverbs³⁷—can be EX-TRUDED from the simplex, placed at the beginning of the sentence, and set off by major juncture to form a theme. Can more than one theme be created for a single sentence? There would seem to be nothing to prevent multiple themes—up to the limit of adjuncts—and in fact sentences with two or three are not uncommon. The following example has an instrumental theme ('by this car'); within its rheme there is at least one thematization of time ('in the mornings'), and probably two ('in the evenings'): Kono kuruma de ása, kodomo o gakkoo e okuri, yóru, manekárete páat'ii ni mo dekakeru 'This car is used, in the mornings, to send the children to school, and in the evenings to go to parties, too, when invited' (SA 2688.38ab)—mó is in loose reference. But see p. 622 for doubts on this.

But not every case of ...wa ...wa is to be taken as two themes. In Watasi wa li sibáruku wa li akké ni | torárete ita 'I was taken aback for a moment' (lg 1962.70) probably only the first of the two subdued phrases is a theme. (The original punctuation put a comma after the first wa, perhaps to indicate major juncture, though comma-insertion is highly idiosyncratic and often unconnected with either grammar or prosody.)

On the other hand, an adverb (especially a short one, such as móo 'already', íma 'now', kyóo 'today', máta(¯) 'again', ...) is often attached to an opening noun phrase, with minor juncture before and the major juncture after; unless this is purely a surface adjustment, we should treat the adverb as a second theme following the noun-phrase theme: Kotosi wa mata, ... 'This year again ...' (SA 2680.114e); Nihón wa | génzai, li gitaa-búumu to | iwarete iru 'Japan at present is said to be having a guitar boom' (SA 2679.119c); Yo-nín no | syoonén-táti wa li íma, li Kanazawá-si no | syoonen-kanbetuzyo de | kasai no sinpan ga

36. Prolongated echo of the preceding vowel used as a pause-filler in a moment of non-fluency.

37. Here is an adverbial of degree (hizyoo ni) in a position to indicate thematization: Dá kara, hizyoo ni are wa husigi na món desita ná 'So indeed that was a strange thing, I see' (Tk 3.23b).

kudaru hí o | sízuka ni | mátte iru 'The four youths at present are in the Kanazawa city Juvenile Classification Office quietly awaiting the day when the Family Court decision will be handed down' (SA 2647.119d). In the following example, a *gá*-marked subject is clearly thematized (without focus), as indicated by the initial anaphoric reference as well as the position of the sentence-connecting adverb: Sono goozyoo ga sikási konó-goro⁽⁻⁾ dandān yowátte kita sóo da 'That obstinacy, however, has gradually mellowed of late, they say' (Kb 30b—the obstinacy in question was introduced in the preceding sentence). This example would appear to have three themes: Erintó-ki wa kyóo mo kakuzitu ni, Nihon-kákuti no kíti kara tobi-tátte iru hazu de áru 'Without a doubt even today Elint [= electronic intelligence] planes must be taking off from bases all over Japan' (SA 2685.27c).

Sometimes a theme serves to extrude the object of a sentence that happens to be identical with the subject of an embedded or conjoined sentence: Boku, nánni mo sinái no ni án-tyan ga nagútta 'Brother hit me when I didn't do ANYTHING!' (I assume that the comma calls for a major juncture. If, instead, it is a visual signal to mark ellipsis of {ga}, the sentence contains no theme and nagútta lacks an expressed object.) And here is a subdued theme that represents a convergence of several different cases: Inosísi wa kawá o háide, kí o tuki-tóosi, takibi no ué de gúru-guru mawasite yaitá no de aru 'The boar was stripped of its hide, pronged on a stick, and broiled by rotating it over a fire' (SA 2685.101a). The cases represented are genitive (inosísi no kawá 'the boar's hide'), allative (inosísi ni/e kí o tuki-tóosu 'pokes a stick through the boar'), and two cases of direct object (inosísi o mawasu 'rotates the boar', and inosísi o yaku 'broils the boar').

In addition to the extruded theme, is it possible to have an INTRUDED theme? This would be some word taken from another sentence, say, that clearly could not serve as an adjunct of the simplex to which it is attached. The obvious examples that we notice—of the type *Watasi wa unagi dá* 'I'm the [one who ordered the] eel'—are to be explained in other ways, probably as ellipsis of embedded material *Watasi wa unagi* [o tyuumon sitá no] da; this is what is elsewhere called propredication (§3.10). I lack a clearcut example that would require the assumption of an intruded theme of this kind; the sort of example needed would be one where the initial element was very loosely connected with the attached simplex and propredication could not be imputed.³⁸

Such loose connections can be achieved by using some of the devices that we might call "quasi-thematization", i.e. by using the various CONDITIONALIZATIONS (or HYPOTHESIZATIONS)—such as *-reba*, *-ru to*, *-tara*, etc. (§9.3)—of the copula and certain other forms:

⁽⁻⁾de áru: nára, dá to, dáttara; dé (wa/mo); ná no nara/dattara
⁽⁻⁾ni/⁽⁻⁾to náru: náreba, náru to, náttara; nátte (wa/mo); náru no nara/dattara

38. But perhaps this traffic sign is an example: *Ihoo-tyúusya wa rékkaa de idoo simásu* 'In the event of illegal parking we will move [the offending vehicle] by tow truck = Illegally parked vehicles will be towed'. (The subdued theme means 'parking' not 'parked vehicle'.) Other likely examples: *Wareware wa Nagásaki ga hazimete na no desu ga*, ... 'It was the first time for us to be in Nagasaki ...' (Endō 271); *Tatami no heyá wa || kimoti ga ii desu || née* 'Aren't tatami rooms pleasant!' (BJ 1.316). Actually, such intruded ("loose") themes are not at all uncommon and numerous examples will be found in *Mikami*, in *Kuno*, and elsewhere. Often a predicate is understood but not expressed: *Kaizyoo wa [] urá* no tizu o go-ran kudasái 'For the meeting place, see the map on the other side' (Kokugo-bumpō no mondai-ten 99) implies an omission of something like [doko ka to iu to] '[if you ask where it is (I will ask you to do me the favor of looking on the other side)]'.

^[e] ni / ^[o] tō	suru:	sureba, suru to, sitara; site (wa/mo); suru no nara/dattara
^[e] tō	kuru:	kureba, kuru to, kitara; kite (wa/mo); kuru no nara/dattara
^[e] ni	itaru(-):	itareba, itaru(-) to, itattara; itatte (wa/mo); itaru no nara/dattara
^[e] ni	kagir-u:	kagireba, kagiru to, kagittara; kagitte (wa/mo); ...
^[e] ni	tuite	ieba, iu to, ittara; iu no nara/dattara; itte (wa/mo)—as in N to itte mo iroiro no N ga aru 'But there are various kinds of N'
^[e] tō	iu:	

—AND OTHER QUOTATIONS: S tté = S to iú no wa, S te[e] to = S to iu to, etc. (Note also: N no baai o iéba, N no kotó wa, ...).³⁹

On the use of these as substitute theme-markers, see Mikami 1963.119; similar are N ni tótte [wa], N ni tuite [wa], N ni tái-site [wa], and other phrasal postpositions (§9.7). An example of N ni tái-site thematized: Konna gakutyoozimu-toriatukai no íken ni tái-site, yonén-sei no zyosi-gákusei ga hitotu-hitótu hanron sita 'Against such a view of the acting president [of the university], senior coeds presented one counterargument after another' (SA 2678.35d). In the following example the embedded quotation contains a quasi-theme that functions to extrude the direct object (katákána o ... omóu); the subdued theme at the beginning extrudes the subject of omóu (wareware ga ... omóu 'we think') but possibly also, by sentence sharing, the subject of iéba (wareware ga ... iéba 'if we say'): Wareware wa katákána to iéba mottó-mo yasasii mózi to omóu ga ... 'We think of katakana as the easiest script but ...' (Ōno 1966.205). And the following is a coordinate sentence with a single subdued theme at the beginning (converging extrusions from the possessor of the first conjoined sentence and from the subject of the second); the first of the conjoined sentences begins with a quasi-theme (... tó iéba 'when it comes to ...') and the second with a subdued and thematized dative of reference (... ní wa 'on'): Íma no katyoo-kúrasu WA keizái-gaku TO IÉBA Marukusu-keizáigaku de, Kéinzu ɾryuu no kindai-keizáigaku ni wa, itátte(-) yowái 'As for today's section heads as a class, when it comes to economics, it's Marxian economics, and on modern Keynesian economics they are extremely weak' (SA 2668.25b)—I take the copula gerund dé as simple 'and'-conjoining rather than the consequential 'and so'.

In origin the so-called "provisional" form (-réba)—synonymous with -té wa (in one use)—contains a nigoried form of the particle wá, thus adding to the evidence from the orthography that the original shape of the particle was pá, and the same nigoried form ba is used as optional emphatic extension of the so-called "conditional" form -tára ba and in literary

39. Examples of thematizational tté: Róoma tte, hurúi monó o taiseu ni suru mati desu né 'Rome, you see, is a city that prizes old things' (SA 2685.122d); Sonna kotó tte aru ka sira 'I wonder if such things happen' (Fn 165a). Among other devices for thematization, Morishige (183-4) suggests N no yátu [wa] as in Tanaka no yátu [wa] '(that guy) Tanaka', but in the example it is unclear how yátu (= monó) thematizes as such. An example without wá: Konaida Keiméi-sen no tokí ni, wáihu no yátu mákura o dásite yoko ni nátte ráziol(-) kiite 'yagáru n desu 'At the time of the Keiō-Meiji game recently, my wife put out a pillow, lay down, and listened to the radio' (Tk 2.49a). Note too the use of nánte (§2.9) to mark a theme, often with some negative or pejorative conclusion: Kotobá nánte móo yakú ni tatánai '(Mere) WORDS are of no use any more' (SA 2672.155). We also find themes introduced by tō iu (or té or tté) monó/yátu [wa]: Bisukétto tee yátu wa ... 'Biscuits ...' (Tk 4.195a); Zyóotyō tte monó wa, hitótu mo arimasén né 'There isn't the least bit of feeling to it' (Tk 2.270a). There is also nánte[e] monó/yátu [wa]: Zígoro nántee yátu wa minakatta? '(In Paris) you didn't see any gigolos or the like?' (Tk 2.193a). Cf. Y 443 where thematic N tté is taken as meaning N tō iu hitó/monó/tokoró/kotó/(etc.) wa.

Japanese of the object particle *o* *ba*. For these reasons, among others, there is a widespread feeling that the *wá*-marked theme is in some way a distilled CONDITION: 'if it be a matter of speaking of ...' or the like. Since *N dé wa* and *N dá tó*^[1] can often be used for *N nára* 'if/when it be N', the quasi-theme of a sentence like *Íma no Nihón de nara zitugen kanoo dá* 'It could be put into effect in the Japan of today' (SA 2648.106a) might be rephrased ... *Nihón de dé wa* or ... *Nihón de dá* to 'if it be in Japan' as well as ... *Nihón de wa*, which can be interpreted either as 'in Japan (guess-what)' or 'if it be Japan' (incorrect for the exact paraphrase intended here).

Certain summational epithemes are adverbialized (often directly—without *ni*) in order to set up conditions and these can be used to mark quasi-themes, as we see with *baai* 'situation' and *toki* 'time, occasion' in the following sentence, which begins with a transitional theme and may have as many as four themes, depending on how *maido* 'every time' is to be explained: *Tatóeba K [Kée] kun no baai, Á [Ée] bútyoo(˘) no toki wa maido tóppu [da]* 'For instance, in the case of fellow employee K, when it's department chief A [who does the rating], every time he's tops' (SA 2668.108a—I would not have been able to figure this one out except for the rest of the paragraph, here omitted). And note these two examples of *N nára tó-mo-kaku* where we expect *N wa tó-mo-kaku* [to site] 'Be N as it may': *Méekaa nara tó-mo-kaku, ...* 'To say nothing of the maker(s) ...' (SA 2671.107d); ... *hooka nára tó-mo-kaku, ...* 'leaving arson to one side' = 'arson being quite another matter' (SA 2669.105a).

Vardul would treat all themes as accretions from some other (unexpressed) sentence because of the possibility of ANAPHORIC REFERENCE (or "reprise") within the attached sentence, as in these examples he cites from modern sources (V 52 ff): *Tanken-sítai WA || Sátoo hakase ga | KORE o sikí sita* 'The exploration [detachment =] party, Dr Satō directed it'; *Gakúmon no | ziyúu WA || KORE o hosyoo suru* 'Academic freedom, we will defend this'; *Áyako-san no kao WA || máda | SONNA KAO o site irú ka i* 'Ayako's expression, is she still putting on such an expression?'; *Íma no | Nihón ni || ii [i] yátu no | dénai no MO || SONO túmi no | hanbún wa || zassi-kísya no | túmi desu | né* 'The fact that no good ones appear in Japan, half the fault for THAT, [it] is the fault of the magazine reporters, you see'.

In some cases the anaphoric reference is at some distance, as in these further examples from Vardul: *Siro-budóosyū no | koppu to || uisúkii no | koppu tó WA || hutatabi | bu-áiso na | wéetaa no | té de || kohaku-iro no ekítai ga | SONO náka ni | mitasáreta* 'The glass of white wine and the glass of whiskey, at the hands of the sullen waiter the amber liquid again got poured to fill THEM'; *Bussitu no kusetú-ritu WA || hikarí ga | nání kara | nyuusya sité kita ka de || SONO [ne →] atai ga [i] tigatte kúru* 'The coefficient of refraction of objects varies in ITS value depending on the source of the incidence of the light'.

Some examples of anaphoric reprise suggested by Mikami: *Kono kámara (WA) || KORE o niman-en de uru* 'This camera—I will sell it for ¥20 000'; *Kono kámara (WA) || KORE ni niman-en haráu* 'This camera—I will pay ¥20 000 for it'; *Zóo (WA) || KORE wa hana ga nagái* 'The elephant, it has a long trunk'; *Yóku site irú no WA || KORE wa o-ryooriya-san da to ka o-huroya-san* 'Those who do it a lot, they are restaurateurs or bathhouse operators'.

Here is a long sentence from Matsuda (52) which seems to have a thematized subject with anaphoric reprise that is embedded within a larger theme (subdued by *wá*): *Nihón no daigaku no kenkyúu-sya GA, SONO wakái tokí ni Amerika de osiete míru kotó WA ||*

Nihón no tamé ni mo Amerika no tamé ni mo, hónnin no gakúmon sikoo no mén ni mo, kit-tó^[1] púrasu(¯) ni náru monó ga takusan^[2] áru to omóu no desu 'I feel that for a researcher in a Japanese university to try teaching in America while he is young has many advantages for both Japan and America—and for the person's studies and thought, as well'. (This is a counterexample to the claim that themes cannot occur in adnominalized sentences, but notice that the epitheme is the summational kotó, a postadnominal.) The example Naiyoo wa to iu to, kore máta(¯), ... tó ka ... tó ka 'As to the content, this too is a matter of ... or of ...' (SA 2645.107e) contains a quasi-thematization derived from a reduced quotation Naiyoo wa [dóo da] to ... 'How (= what) is the content ...', followed by a reprise that is itself thematized and followed by a transitional theme máta(¯) 'again'.

More examples of subdued themes with anaphoric reprise (from KKK 3.187): ... múti ya ki-maguré(¯) ya waga-mámá ni motozúku genkoo WA, túyoku KORE O seigen sinákereba naránai de aróo 'Words and deeds based on ignorance and whim and willfulness ... these must be strongly restrained'; ... kono hyooyun-sen ni oyobazáru monó WA súbete KORE O hitei sú beki monó to kangáeru 'The ones which fail to reach this standard line, it is felt, ... these are all to be rejected'; ... máta(¯), kan'i-saibansyo-hánzi óyobi(¯) huku-kénzi WA, tómo(¯) ni KORE O zyogai sú beki monó to kangáeru '... furthermore, summary-court judges and assistant public prosecutors, both of these are treated as categories to be excepted'. The following is a nice example of a thematized object, with adnominalized reprise: Mózi O mázu SONO syúruí kara míru to, go-syúruí no mózi GA tukawarete iru 'The letters, when we look at them first from their varieties, five kinds of letters are in use' (K 1966.165). An example of a subdued theme separated from its reprise by a concessive adverbialization that includes both focus markers wá and mó: Ízyoo moosi-ageta yóo ni, boin no muséi-ka(¯) WA ippan-teki na gensoku wa átte mo, SONO araware-káta wa samázama(¯) desu 'As I have mentioned above, the vowel unvoicing, though there are general rules, its appearances are quite diverse'.

There are a number of special problems. We will sometimes wish to consider a QUOTATION to be thematized, since anaphoric reprise is possible: ... tó, kono yóo ni nobemásita '... (end quote)—this is what they said'; ... tó, kayoo ni sin-zúru(¯)'... (end quote)—this I believe'; ... to iú ka, sore wa ...; ... tté 'ttára sá, sore kóso ... (Morishige 148). And the anaphoric reprise can be followed by enscooped or instanced quasi-appositions that would seem to refer back directly to the theme (cf. §3.11.3):

THEME wa/mo ANAPHORIC REPRISE sore ga/o ENSCOPED itíbu ga/o

It has been observed that when you extrude a theme you may leave behind in the simplex an anaphoric marker (typically sore, soko, sono, etc.), which I call the anaphoric REPRISE of the theme. In a similar way, when you extrude an epitheme, you may leave behind (i.e. ahead, in anticipation) a cataphoric reference (or HERALD), though this seems to be rather uncommon outside of philosophical or linguistic discussions: Bún ga SOKO DE kirete syuuketu suru TOKORÓ o syuusí-bu to iimásu 'We call the part where the sentence breaks and ends (THERE), the "conclusion"' (from Mikami). For the cataphoric nó of cleft sentences, see §14.2.4. Considerably more on cataphora will be found in Okutsu 1974 (154, 165-6, 168-9, 171-2, 173, 175, 178).

Perhaps to be considered here are sentences of the type S₁ hóo ga N ga ... in which the hóo-ga phrase constitutes an adverbialization of CONDITION (Morishige 224,249): Bóku(¯) wa || béddo no | hóo ga || karada ga yasumáru 'Me, my body gets a better rest in

bed'; Kosyóo wa || saigo ni | hurikáketa hoo ga | kaori ga yói 'The pepper, it has a better aroma if you sprinkle it on last'; Yappári | tabemónó wa || míta mé⁽²⁾ mo | kirei na hoo ga | ii | né 'After all, when it comes to food it's easier on the eye [looking at it] if it's pretty'; Inaka no hoo ga | monó ga | yasúi 'In the country things are cheaper'; Yóru no hoo ga mawari mo sízuka de denwa ni zyama sarezu, nóoritu(¯) ga agaru 'At night the surroundings are quieter and I don't get bothered by telephone calls; my efficiency rises' (SA 2640.17d); Daigaku o yameta hoo ga | yóku | kuéru 'I can eat better if I quit [teaching at] the university' (SA 2671.27e); Nóoka no syuunyuu o bunseki suru to, noogai-syótoku no hoo ga nóoka sono-mónó no syuunyuu yóri nobi-ritu ga takái 'When you analyze the income of farmers, the non-farm earnings enjoy a higher growth rate than the farmer income itself' (SA 2684.18b).

Sometimes S *nó ga* is used to set up a condition ('if ...') much after the manner of S *hoo ga*: Mutuu toraberúmin no yoo na kusuri o húne ya kuruma ni noru máe ni nómu NO GA, kuruma-yoi no yoboo ní wa kóoka ga arimásu 'It is usually effective to prevent motion sickness IF you take a medicine like Travelmine (= Dramamine) before boarding a boat or getting in a car' (SA 2669.104a).

It should be kept in mind that a CONDITION can be followed by an anaphoric reprise, as in this example: [Ryuukoo-go wa, sono ími o yóku ríkai(¯) suru hituyoo wa kanarazú-símo arimasén.] Múudo ga déreba SORE de zyuubún desu '[For current words, it is not absolutely necessary to understand their meanings well.] If the mood emerges, THAT is enough' (Shibata 1966.64). The bracketed context also contains an anaphoric reprise of the subdued theme—apparently extruded from a genitive (§ 3.11.3).

Of course there is no need to assume that EVERY anaphoric reprise of a clause is diagnostic of a theme; we might be unhappy with that view of structures like Utí(¯) e káette, sore kara ... (or: sono áto ...) 'We returned home, and after that ...', and Yukí ga hútte 'ru si, sono ue ... 'It's snowing, and on top of that ...'; but the unhappiness may abate as we consider the function of thematization—to relate the sentence to the larger discourse (specifically, to the preceding sentences). Sore kara, sono áto, and sono ue function as transitional themes.

Support for the identification of THEME with CONDITION may be found in the fact that you do not apparently find a theme within a condition⁴⁰ (nor, usually, within a theme—but see the example from Matsuda cited earlier); and it appears to be ungrammatical to put a condition within a condition (KKK 23). It does not follow, however, that the focus particle *wá* is precluded from appearing within a condition. And, if my interpretation of the meaning is correct, the following example would seem to contain a thematized condition with anaphoric reprise (... kítara sore kóso) included in a thematized CAUSE with anaphoric reprise (... dá kara sore o): ... kyuukyúu-sya nánka kítara sore kóso gakkoo no hu-méiyó ni náru n da kara sore o mázu dáí-iti ni kangáete kure '... since if ambulances and the like come, that [condition] itself will disgrace the school, therefore think about that [fact] first of all ...' (SA 2655.37e)—but the structure is perhaps looser than I have assumed; the second *sore* could refer back to the n[ó] 'fact' of gakkoo no hu-méiyó ni náru n da, with the cause unthematized as such.

40. Unless these examples of delayed subject provide a counterexample: Nooyaku ga hutayaku sita kí-no-mi O tori GA tabéreba, sono tori wa sinu. Kusá O nyuugyuu GA tabéreba, nooyaku ga mazitta tití ga déru 'If a fruit sprayed with pesticides is eaten by a bird, the bird will die. If grass is eaten by a dairy cow, milk contaminated with the pesticides will be produced' (SA 2684.45b).

The following example would appear to have three themes, two of time (or perhaps of condition)—the second being subdued, followed by a directly adverbialized quantity *íssái* ‘everything’: *Kasu tokí ni, zíko ga ókita tokí wa, íssái kasí-nusi(¯) ní wa méiwaku o kakénai de, zibun no sekinin de syóri suru muné no yakusoku o site okéba dai-zyóobu desu* ‘When you lend a car it is [safe] enough if there is an agreement to the effect that in the event of an accident (arising) everything will be taken care of [by the driver] on his own responsibility without troubling the owner’ (SA 2664.107c). The second and third themes are incorporated in the adnominalization to the summational epitheme *muné* ‘effect that’.

Thematization is often responsible for surface ambiguities. In the following sentence (KKK 3.212), for example, the first phrase (*hito mo aróo ni* ‘of all people’) can refer to either of the two personal references in the remainder of the sentence: *Hito mo aróo ni il ano ranboo-mono ni | táte o | tuku tó wa ll kimi mo | yoppodo dókyoo no | áru | otokó da | né* ‘Of all people, you are indeed a brave man to tangle with that roughneck’ grammatically interpretable either as ‘You of all people’ or ‘that roughneck of all people’, though it will normally be taken in the second way. In the sentence *Sore o ríkai(¯) dekíru zyootai ni site oku kotó [da]* we can take *Sore o* merely as the object of the verbal noun *ríkai(¯)* (‘leave matters in a condition where we can understand THAT’) or we can take it as a theme (‘THAT—leave that in a condition where we can understand [it—or something unmentioned]’); *ríkai(¯) dekíru* represents an ellipsis of *ríkai(¯) [suru kotó ga] dekíru*. If *Sore o* is intended as just the object, the expected minor juncture will be suppressed—because the phrase is atonic and short; if it is intended as the theme, the expected major juncture may be reduced to minor—for the same, surface-level, reason.

In spontaneous speech, themes are often INVERTED—perhaps as afterthoughts (cf. § 23): *Zúibun kawarímásita né—Yokosuka mo né* ‘It’s changed a lot, you know, Yokosuka!’ Contrast the tightness of epithematization: *Zúibun kawatta Yokosuka ...* ‘Yokosuka which has changed a lot’ or—as epithematic identification (with ellipsis of final [dá], see p. 253) ‘Yokosuka has changed a lot’.

Observe the following two groups of sentences (cf. KKK 23.213–5):

SUBJECT UNTHEMATIZED

Tároo-san ga | iki-nasái

‘You go, Taro.’

Tároo-san mo | iki-nasái

‘You go too, Taro.’

Tároo-san wa | iki-nasái

‘You go, Taro (the others will stay).’

SUBJECT THEMATIZED

Tároo-san ga ll iki-nasái

‘You, Taro—go!’

Tároo-san mo ll iki-nasái

‘You, too, Taro—go!’

Tároo-san wa ll iki-nasái

‘You, Taro—go (the others? let them stay).’

There are bits of evidence in favor of treating the SUBJECT as a special kind of theme, notably those discussed on pp. 35–6, the various kinds of subjectification⁴¹ allowed by the

41. What Fillmore calls ‘primary topicalization’ is here called SUBJECTIFICATION—or just SUBJECT in many cases, since it is not necessarily secondary in Japanese; what he calls ‘secondary topicalization’ is here called THEMATIZATION, though the concept is somewhat broadened.

grammar (cf. pp. 38-9), and the ordering of subject marker AFTER focus markers (N mó {ga}, N máde ga, and marginally N mó wa) in contrast with the object marker, which comes BEFORE focus (N ó mo, N ó made, *N ó wa = N ó-ba, p. 53).

As mentioned on pp. 621-2, there exist intruded themes corresponding to two types of intruded epithemes: resultative and transitional. We can ask whether there might also be a theme that would correspond to the SUMMATIONAL epitheme, and some of the adverbs of sentential relation in §13.7 are perhaps what we seek, e.g. 'probably' = 'it is a probability that'.

The following example displays a highlighted theme extruded from an Identified that is a nominalization (as is the Identifier), followed by a subdued transitional theme: [Tó suréba,] asú no hu-ánteí no hoo ga kyoo no antei yori zikkan o obite(¯) sonzai suru to iú no MO, kekkyokú WA, antei to hu-antei to no aida no soogo-kánkei ni okéru huantei-sei o kan-zit' óru kotó na no de aru '[Thus considered,] the very fact that the instability of tomorrow exists with a look of greater reality than the stability of today, in the last analysis, (that) is a matter of our feeling the quality of instability in the interrelationship of stability and instability' (KKK 3.191).⁴²

3.9a. SUBJECT DELAY

We have suggested that a delay in the expected positioning of the subject—whether marked by gá or given focus by wá or mó—may indicate the thematization of one or more other adjuncts, though it is by no means clear that thematization always results. Here are some examples that I have collected in order to study subject delay with various kinds of preceding adjuncts.

(1) Preceded by direct object (ó):

(1a) *Traversal object*: Aq, asoko O híhi GA arúite 'r'a [= arúite iru wá]! 'Oh, over there there's a baboon walking!' (SA 2676.106c); ... tuki ni itta, tuki no ué O ningen GA arúita, banzái, ... '... (they've gone to =) they're on the moon, man walks on the moon, hurray, ...' (SA 2635.22d—arúita is a vivid use of the perfect, for the event is being observed by television); Kono hukín wa dóoro ga irikúnde iru tamé ni, ié no tikáku O zidoo-sya(¯) GA toorazu, taihen sízuka de aru 'Since in this neighborhood the streets are tangled, the vicinity of the house is not favored by cars; it is very quiet' (SA 2678.156).

(1b) *Other objects*: Yamerú no O, hwán GA yurúsite kurenái n desu 'My fans won't LET me retire' (SA 2662.103e); Sangó-syoo O kurosio GA arau 'The coral reefs are washed by the Black Current' (SA 2808.103); Kyuuzitu no hotóndo O káre WA zibun no yotto de sugósi, ... 'Most of the holidays he would spend on his yacht, and ...' (SA 2650.58b); Soo iu umái syóobai O, dóo site minná GA yaranái no ka to omoimásu yó 'I tell you, it's such a fine business I wonder why everyone isn't in it' (SA 2668.47a); Tokoró-de, kono yoo ni hássuru suru katyoo O búka WA dóo míte irú no daroo ka 'And section heads that hustle like this, how will their underlings look upon them?' (SA 2668.25b); Tokoró-ga

42. Thematizations similar to those of Japanese turn up in many other languages, but the resemblances are not always easy to spot. An unusual example from English: "These pills will take more than a person can swallow before they will kill you, but ..." (Honolulu Star-Bulletin 28 Sep 69 A-4.18)—presumably a thematization of a genitive "[more] OF these pills" from a noun phrase that functions as underlying object of the sentence "[it] will take".

itizyun site míru to simá wa sukkári “katazúite iru” to iu insyoo O watasi WA mótta ‘But upon going around I got the impression that the island [of Iwo Jima] had been completely “tidied up”’ (SA 2670.43b); To suru to, Beigun no Kanbozia-syútugeki O, kaihoo-sénsen WA súde ni yóki site, té o útte itá no da ‘(If we grant that,) then the American incursion into Cambodia was already expected by the Liberation Front and they clapped their hands at it’ (SA 2679.18d-19a); Kantoku wa Oosima Nagisa de áru ga, kyakuhon O máda nízis-sai no Hára Masáyosi GA tyuusin ni nátte káki, syutuen site irú no wa zissai ni kono háru made kookoo-éiken de éiga(ⁱ) o tukútte ita wakamonó-táti no gurúupu de aru ‘The director is Nagisa Ōshima but the script was largely written by Masayoshi Hara who is still just 20 years old, and the performers are a group of young people who were making high school experimental films up to this spring’ (SA 2687.116b); Nokótta íkutu ka no sisen ga, zibun ni sosogaréru no O Sáeki(ⁱ) WA sitte ita ‘Saeki knew that the remaining several eyes were staring at him’ (lg 1962.87); Ayao wa syuumai dá no yakibuta dá no O Ákira to Tómodo GA yorokónde tabéru no o nagusamáni(ⁱ) kao de míte ita ‘With disconsolate face Ayao watched Akira and Tomoko eagerly eat the Chinese ravioli and roast pork’ (lg 1962.87)—since this is within an adnominalized sentence, yielding a nominalization that serves as the object of mí- ‘watch’, it is questionable whether we would want to interpret the preposed conjoined object (‘ravioli and roast pork’) as “theme” in any sense; Koo site syógyoo muzyoo no sekái-kan no tooitu no motó(ⁱ) ni náru zyozi-si O, hazimete, Nihon-zín WA mótu yóo ni náta ga ... ‘Thus the Japanese for the first time came to possess an epic to form a basis for unifying a conception of the world as total vanity ...’ (Ōno 1966.216)—this example seems to have two themes, one extruded from the object (‘an epic ...’), the other extruded from a time adverbial (‘for the first time ...’) unless we interpret the time reference as a transitional theme; Mózi o seigen site hitóbito no hyoogén(ⁱ) no ziyúu o koosoku suru kénri O dáre MO motánai hazu de áru ‘Surely no one has the right to restrict people’s freedom of expression by limiting the written characters’ (Ōno 1966.237); “Kokin-syuu” no genkei O watási-táti WA míru kotó ga dekinái ‘The original form of the Kokin-shū is not available for us to look at’ (Ōno 1966.208)—is the subdued phrase the indirect subject of the potential (marking the possessor of the potentiality) rather than the direct subject of míru?; ... húdan wa iwanai yóo no [= na] kotó O óyazi(ⁱ) GA hossa-teki ni ii-dásu to ... ‘when things not ordinarily said start coming spasmodically from one’s father’s lips ...’ (Tk 3.37b); Soo iu yakumé O watasi GA onná to site yaru ... ‘For such a role to be performed by me as a woman ...’ (SA 2672.60b); Tokoró-ga, kore O syoogákkoo [no] rokú-nen ni náru musuko GA mane si-dásita ‘But this my sixth-grade son started imitating’ (SA 2681.103ab); Konó-ko ga umareru kotó O kázoku no monó GA kangei sinákatta kará da to iu ‘It is said to be because this child’s birth was not welcomed by (those in) the family’ (SA 2689.42b); Káigi^[1] no tyokúzen(ⁱ) ni nátte, sono Wanibuti san O, kooséi-syoo no Tákano Takeyosi syokuhin-eisei-ká-tyoo GA katyóo-situ ni yobi-dásita ‘Right before the conference, our Mr. Wanibuchi was summoned by the head of the Food Sanitation Section of the Ministry of Welfare, T.T., to the section office’ (SA 2687.135c); Kore máde wa onná^[1] no hitó ga tukau monó O otokó no hitó GA otokó^[1] no hassóo-hoo(ⁱ) de tukútte ‘ru desyo ‘Up to now things that women use have been made by men according to male conceptions, you see’ (SA 2672.63a); Konna ni kyóohu(ⁱ) no hyooyóo O, watasi WA Betonamu dé mo míta kotó ga nákatta ‘Such fearful faces I had never seen even in Vietnam’ (SA 2678.40a); Nihón de wa sizen ga hóohu(ⁱ) de áru hoka ni, sono sizen O Nihon-zín WA taihen yorokóbu ‘Not only is

nature bountiful in Japan but that nature is much enjoyed by the Japanese' (Kindaichi in Ōno 1967.27); *Tosiyōri* no *inoti* O *soo'on* GA *tōri* ni *kūru zō* 'Old people's lives are being snatched by the noise, I tell you' (SA 2678.67a); *Nittoō wázuka yonhyakū-en*. Sono *yōn-wari* O SURA *byōoin* WA *pin-hane site iru* to *iu* 'The daily allowance [per patient] is a mere four hundred yen. And even forty percent of that, they say, is raked off by the hospital' (SA 2672.26d); *Dá ga*, *mondai wa soo kantan dé wa náí kotó* O 1930-*néndai* no *rekisi* WA *osiete iru* 'But that the problem is not so simple is shown by the history of the 1930's' (SA 2673.45a—note that the sentence adnominalized to the summational epitheme *kotó* contains a subdual of the nucleus *kantan de áru* [= *dá*] as well as a subdual of the subject *mondai* [ga]); *Gensoku tó ka katí-kan to ka*, *sisin nári mokuhyōo nári* O, *sekinin-sya* WA *simesányá* ^[1] *ikan to omóu n desu* 'Principles and values, directions and goals, must be shown by the responsible people, I think' (SA 2678.48b); *Náigai no híhan*(-) o *abi-tútu sékái ni kunrin suru* "Amerika-téikoku" no *taigai-kóodoo* O *Seioo tisikí-zin* WA *dóo míru ka* 'How do West European intellectuals regard the international behavior of the "American Empire" that dominates the world while showered with criticism at home and abroad?' (CK 985.121). See also the examples in §2.3.

(2) *Preceded by various particle-like uses of ní*: *Móttó-mo*, *isitu no húuzoku* NI *wakamonó*(-) GA *hikarerú no wa*, *sinri-teki ní mo seiri-teki ní mo toozen na kotó da si* ... 'To be sure, it is natural both psychologically and physiologically that young people will be drawn by [new and] different ways, and ...' (SA 2684.119d); *Inaká-mati no tetudōo-in* no *mízime na seikatu no saimoku* NI, *kankyaku* WA *warau* 'The onlookers laugh at the petty details [*sic*] of the wretched life of a railroad worker in a country town' (Ig 1962.70); *Konna kotó o kari ní mo kuti ni suru háha de nákatta kotó* NI *Kúniko* WA *odorokasáreta* 'Kuniko was surprised for it was not [like] mother to say such a thing even in jest' (Ig 1962.87); *Tookyoo* NI *Meizi-tennóo* WA *tyuuoo-séihu o oita* 'The Emperor Meiji located the central government in Tōkyō' (Ōno 1966.229)—would the best translation be 'It was in Tōkyō that ...'?

(3) *Preceded by copula-like uses of ní*: *Masúnaga ni hanásu tokí to betu na hibikí ga áru yōo* NI *Masúnaga* WA *kan-zuru* 'Masunaga felt that it had a different tone from when he, Masunaga, was being spoken to' (Ig 1962.89); ... *guu-zen Ní mo Nihon-zin* WA *sono yōo na ten ni ki-ga-túku yōo ni nári*, ... 'quite by accident the Japanese came to pay attention to that sort of feature, and ...' (CK 985.295)—if *ki(-)ga(-)túku* is not taken as a unitary lexeme the expression *ten NI ki GA túku* will form an example for Group (2) above; *Sono kaitoo* NI, *Nihón no sararii-man* GA *nátta* 'The president [*sic*, *kaitoo* = *kaityoo*] of that group—a Japanese salary worker has become it' (SA 2671.62a)—see §9.1.11.

(4) *Possessive and quasi-possessive sentences* in which the direct subject (= the underlying object, the possessed) precedes the indirect subject (= the underlying subject, the possessor)—reversing the normal unmarked order: *Hosino-Ōsen ni mo, íku-do ka kíta kioku* GA *káre* NI *áru* 'He has memories of having come to Hoshino Springs, too, a number of times' (Ig 1962.86)—the location of the comma in the original text is misleading, for I do not believe the author intended to thematize Hoshino Springs; *Kore GA Ameriká-zin* NI *wa wakaránai n desu né* 'This an American can't understand, you see' (Kindaichi in Ōno 1967.30); *Hídeko no mé no kagayákí de*, *tyúugaku no ninén-sei ni náru* to *iu sonó-ko* no *kíta kotó* GA, *káre* NI *mo sūgu ni wakátta* 'From the glitter of Hideko's eyes, it was apparent to him too that she who was said to be [or: to be going to be] a second-year student in middle school was here' (Ig 1962.88)—here, the indirect subject (the possessor) is

HIGHLIGHTED; Waratte iru wáke GA Noboru WA hazímete wakátta 'Noboru understood for the first time the reason for the laughter' (lg 1962.70)—here, the indirect subject (the possessor) is SUBDUED; Kúniko o Nózaka to wakaresaséru no ga hatásite yói kotó ka warúi kotó ka WA Ayao ní WA wakaránakatta 'Whether separating Kuniko from Nozaka was after all a good thing or a bad thing Ayao couldn't tell' (lg 1962.88)—here, both direct and indirect subjects are subdued, the first wá replacing gá. Two examples: Táda konpon-teki na tigai wa, iu kotó o kikanákya ansatu sitári bunnagúttári suru yúuki to iú ka, dókyoo to iú ka, sore GA anáta NI wa áru. Soo iu monó GA, atasi NÍ ya náí n desu yó 'But a fundamental difference is that (call it) the courage or (call it) the pluck to assassinate or assault unless what you say is heeded, THAT is something you possess. That sort of thing I just don't have' (Tk 3.92a).

5. *Preceded by the allative é:* Mutyuu ni nátte nige-dasita Tookyoo E watasi WA kaeráneba naránai 'The Tōkyō that I fled in a trance I must return to' (SA 2685.101c); Soko E betu no kobune DE dénka GA kenbutu ni yatte kíta 'Whereupon in a separate boat "His Excellency" happened by to watch [the sport]' (SA 2685.100a)—apparently a thematized allative followed by a thematized instrumental.

(6) *Other cases:* Yukí^[1] no utukúsisa(−) daké [o Húkuko ga] hanásu no GA Masúnaga WA áware datta 'Masunaga felt pity that she (Hukuko) would speak only of the beauty of the snow' (lg 1962.91).—Does the wá come from gá or from ní/gá? If gá, then áware is an adjectival noun with quasi-desiderative grammar; here, the "cathector" (who experiences the emotional reaction) follows the gá-marked "cathected". If from ní/gá, then áware has quasi-possessive grammar, the "possessor" (of the cathexis) following the "possessed" (the cathected).

The following text delays the subject in two successive sentences; the first sentence thematizes the object and what is thematized in the second is either an allative or a mutative-locative: Kono kozákaná O óoki na sakana GA tábete sodátu. Óoki na sakana no táinaí NI, sára ni dokusei GA ruiseki sarete yuku 'These little fish, the big fish eat to grow on. In the bodies of the big fish, the poison is gradually accumulated' (SA 2688.44b). The example Watakusi no taita góhan NI, Kozima GA mónku o itta kotó wa, kátute arimasén 'My rice never provoked any complaints from Kojima' (SA 2685.43a) has a thematized dative in a sentence adnominalized to a summational epitheme (kotó 'experience') that is itself thematized and subdued. The thematization is attested to not only by the subject delay, but also by the context. The preceding text is Watakusi, tukuróo to omóttara, dekinái o-ryóori wa arimasén; Itiban taisetú ná no wa, góhan to omiotuke da to omóu n desu 'There's no cooking I can't do if I want to fix something; The most important things are rice and soup, I think.' And the sentence that follows is Omiotuke ní mo mónku o iimasén 'He doesn't complain about my soup, either'.

An example of subject delay in a sentence adnominalized to a summational epitheme (nó 'fact', the factual nominalizer): ... Gei-Unrin tee namae O atasi GA hazímete sittá no wa, ... 'The first I learned of the name [of the artist] Gei Unrin (was when) ...' (Tk 4.294a).

3.10. IDENTIFICATION AND PROPREDICATION

We have assumed a set of basic sentence types that includes what we have called NOMINAL SENTENCES, essentially a noun + some form of the so-called "copula". In a more abstract form such sentences consist basically of a noun + the ESSIVE marker ní;

and in §13.5a and elsewhere we distinguish this usual sort of *essive* as “objective” in contrast with the *tó* that is used in quotations and vivid descriptions, which we are calling the *SUBJECTIVE essive*. This more basic form of sentences—before the attachment of tense or aspect—is here treated, for convenience rather than accuracy, as a conversion from the imperfect, our starting point, by a process of “infinitivization”, §9.1; the real structure is probably the other way around.

But for the purposes of the present discussion we will not consider the *essive* as such but rather the *essive* + the auxiliary *áru* in their various manifestations. In Literary Japanese *ní* + *áru/ári* (attributive/infinitive-pseudopredicative) contract to form the copula *náru/nári*, but when nuclear focus is applied (§5) the underlying components emerge: *N ní wa áru/ári*, *N ní mo áru/ári*. It is the attributive form *náru* of the literary copula, we assume, that has evolved into the modern adnominal forms *ná* and perhaps (by vowel crasis and shortening) *nó*. Forms of the literary copula are preserved in certain expressions in the colloquial language, where they underlie various elements given separate treatments in various parts of the present description (see Index): *náru*, *nári*, *nárazu*, *narazáru*; *náradewa*; The literary language makes a “subjective” copula by contracting *tó* + *áru/ári*, and the resulting forms are also preserved in set expressions in the colloquial: *táru*, *tári*, *tárazu*, *tarazáru*, I assume that the subjective copula can take nuclear focus but I have not yet come across the examples of *tó wa/mo ár-* that are needed to confirm the point. Satō (1.100) gives literary examples of *tó KA ár-* as well as *ní WA/MO/KA ár-*, but none of *tó WA/MO ár-* except for *tó m[o] áre* (alongside *ní m[o] áre*); he also has an example of *ní z[o] ári* (103).

The predicates of all modern Japanese imperfect (nonpast) sentences continue the *ATTRIBUTIVE* form of older Japanese, or an analog thereof;⁴³ that is why sentences that once ended in *ári* now end in *áru* (older *kane ári* = modern *kane ga áru* ‘has money’), the latter being derived from some sort of nominalization: *kane ga áru* [*kotó*] or the like. An exception, however, is the nominal sentence. Instead of **kane ná* from *kane na* [*kotó*], earlier *kane náru* [*kotó*] < *kane ni áru* [*kotó*], the unadnominalized sentence is *Kane dá* ‘It is money’. This word *dá* and some of its conjugational forms (*dátta*, *daróo*, etc.) are derived not from *náru/nári* < *ní áru/ári*, but from *dé* + *á(r)*-. And *dé* comes from *ní-te*, the *GERUND* of the *essive*, by way of *nde* < *n'te* (cf. *sinde* < *sini-te* ‘dying’).

In the somewhat formal style that you may hear in public speeches or see in books, the copula is generally treated as *de áru* with no contraction; and *áru* is given its usual conjugation, so that the polite form, corresponding to the more colloquial *désu*, is *de arimásu*. Even in colloquial usage, when nuclear focus is applied the copula *dá* reverts to its immediately underlying components and yields *dé wa/mo áru*. The honorific stylization of a nominal sentence (shown in §22.2) is made by adding an honorific synonym of *áru* to the *essive gerund*, yielding *N de gozaimásu* or, with nuclear focus, *N dé wa/mo gozaimásu*. And the polite stylization *N désu* is a contraction of *N de arimásu*, the polite formal version, as shown by the forms with nuclear focus *N dé wa/mo arimásu*.

43. A slight exaggeration, for the verb *sinu* ‘dies’ would seem to follow the pattern of the literary predicative; the attributive is *sinuru*. But that has to do with a recategorization of the verb into a regular conjugation, that of the consonant bases. Vowel verbs of more than one syllable that end in *-eru* and *-iru* in the modern language are analogs to the literary attributive forms that ended in *-uru*.

We would expect the negative forms for the unfocused nominal sentence to be *N de náí*—with stylization *N de arimasén* and *N de gozaimasén*—and you will sometimes see such forms, especially in a somewhat formal style. But in ordinary speech you find that *zyá* commonly substitutes for *dé* in the negative expressions so that you hear *N zya náí*. With polite stylization this will be *N zya arimasén*; *N zya gozaimasén* is also heard, but less often, since the level of formality implicit in the honorific style leads you to use either *dé* or *dé wa*. The word *zyá* comes from a contraction of *dé wa* and it is sometimes used AS that contraction, so that it will not always be obvious whether *N zya náí* is to be taken as equivalent to *N dé wa náí*, with subdued nucleus, or merely to *N de náí* with unfocused nucleus. But some speakers use a lengthened version *zyáa* for the “living” contraction of *dé wa*. For such speakers the short *zya* is simply an allomorph (an alternant shape) of the infinitive of the copula, the other allomorphs being *ní* (the essive) and *dé₁* (as in *N dé mo náí*)—not to be confused with *dé₂*, the gerund of the copula (as in *Hadé de mo íi* ‘It’s all right for it to be gaudy’ and *hadé de wa damé* ‘It won’t do for it to be gaudy’), despite the common origin of the two forms. In effect, *dé₁* is simply a borrowing of the gerund for use in place of the infinitive, and *zyá₁* is a borrowing of the contraction *zyá[a]* from the subdued copula gerund *dé wa* for use in the same way.

The provisional form of the copula, *nára[-ba]*, is borrowed from the CONDITIONAL form of the literary copula (in focused form *N ní wa/mo ára-ba*); the somewhat old-fashioned flavor of the provisional category has perhaps kept the standard language from developing the form **dáreba* that we would have expected. On the confusing interrelationships between form and meaning for the literary and colloquial copulas in a number of forms, see the charts in §9.3.

But the forms of the copula are only part of the story. How is the nominal sentence used and what does it mean? It appears we must distinguish at least two functions: IDENTIFICATION and PROPREDICATION. In a propredicational sentence the copula is used to mark an ellipsis of some specific predicate either alone or together with any number of its adjuncts. This is a device that lets you be as vague, or unexplicit, as you like about the verbal element; usually you can prune the sentence back to any degree, revealing less and less of the situation, provided only that you retain at least ONE nominal element, for the copula will not normally stand alone. (Exceptions involve ellipsis, as when *Sóo* or *Sore* is suppressed in [] *Dá kara ...* ‘Therefore ...’ and similar sentence openers.)

It might be possible to regard the identificational sentence as one type of propredication, with the copula marking an ellipsis of something like ... *N [ni/to hitosii no] da* ‘is [a matter of being equivalent to] N’. But there are syntactic characteristics that make it desirable to treat identification separately and to extend the category so that it includes descriptive identifications as well as specific equations.

An identification involves two entities: a variable, the IDENTIFIED, is given a value by the IDENTIFIER. The Identifier (*Ir*) specifies which of the range of possible values the speaker wishes to assign to the Identified (*Id*). The *Id* must be in the essive, with *N ní* becoming *N dá* in the finite sentence, UNLESS it is thematized; in that event, the *Ir*, normally marked by *gá*, takes the essive:

WITHOUT THEMATIZATION

(1) Kane ga mondai da.

Ir Id

'MONEY is the question.'

WITH THEMATIZATION

(1a) Mondai wa kane da.

Id Ir

'The question is MONEY.'

That this is indeed focused thematization in (1a) rather than just subdued focus is shown by the fact that *Mondai wa kane ga mondai da* 'The problem—MONEY is the problem' is a paraphrase, but **Kane wa mondai ga kane da* 'Money—the PROBLEM is money' is unacceptable. Cf. *Ikú no wa, bóku(-) ga ikú n da* 'The one who's going—ME, I'm the one who's going'.

Notice that the Identifier cannot be thematized, unlike all other functions represented by *N ga* such as agent, attributee, etc.; and that is a restriction unique to the identificational sentence. But one can, of course, reverse the semantic direction of the identification since in most instances the only difference between $A = B$ and $B = A$ is a matter of where one's knowledge or interest starts from:

(2) Mondai ga kane da.

Ir Id

'A QUESTION is (the matter of) money.'

=

(2a) Kane wa mondai da.

Id Ir

'(The matter of) money is a QUESTION.'⁴⁴

Unless otherwise marked, the *Id* is presumed to be definite ('the') or general ('any') and the *Ir* is presumed to be indefinite ('a/some'):

(3) Onná ga syáin(-) da.

Ir Id

'The employee is a woman.'

=

(3a) Syáin(-) wa onná da.

Id Ir

(4) Onná wa syáin(-) da.

=

(4a) Syáin(-) ga onná da.

'The woman is an employee.'

But, with deictic or anaphoric marking:

(5) Kono onná ga sono syáin(-) da.

Ir Id

'That employee is THIS WOMAN.'

=

(5a) Sono syáin(-) wa kono onná da.

Id Ir

I have often assumed that, in general, a content-interrogative (*dáre*, *náni*, etc.—corresponding to the "wh-" words of English) cannot be thematized in an identificational sentence because the UNKNOWN is always treated as *Ir* in Japanese:

(6) Dóre ga bóku(-) [da].

Ir Id

'Which am I?'

=

(6a) Bóku(-) wa dóre [da].

Id Ir

(7) *Dóre wa bóku(-) [da].

=

(7a) (*)Bóku(-) ga dóre [da].

'Which is me?'

Yet I have found apparent counterexamples of (7a): "*Genzi-monogátari*" no zidai wa, umare GA *náni* ka, kettoo wa *náni* ka to iu kotó ... ga, hizyoo ni *óoki* na *kankéi*-zi de átta

44. This example is somewhat confusing; *mondai* is both an abstract noun 'problem' and an adjectival noun 'problematic'. What is intended here is only the former.

zidai de átta 'The era of the Tale of Genji was an era when it was a matter of considerable consequence what one's BIRTH was and WHAT one's lineage ...' (Ōno 1966.26); A to B no kankei ga dóo de áru ka ni yotte 'depending on what the relationship between A and B is like ...'. In these examples the sentence in question is embedded in a larger structure; under such circumstances there may be no overt difference in marking between Identified and Identifier except for order: Dáre ga syatyoo ka siranai and Syatyoo ga dáre ka siranai both mean 'I don't know who is the president of the firm' (or 'I don't know who the president of the firm is'). Cf. the remarks in §2.3.1. Additional examples where the Identified is marked by *gá* in a sentence that is embedded or subordinated: Zibun no musuko ya musumé ga dáre da ka wakaránai n desu yó 'He doesn't know who his own son and daughter are, I tell you' (Ariyoshi 69); ... kyóo ga do-yóobi de yókatta. (Asitá wa niti-yóobi da si, ...) 'she was glad today was Saturday. (Tomorrow would be Sunday, and so ...)' (Ariyoshi 256). See also p. 58, p. 250 (fn. 46).

The following sentences are examples of unthematized Identifieds (*Ir ga Id da*): Sono tugí ga Eziputo to Isuraéru [de], sono tugí ga Betonamu de áru 'Egypt and Israel are next, and after that is Vietnam' (SA 2672.99c); Aikawarazu ná no ga zyagaimo (kíro hyakú¹ nízyúu-en) [de], tama-négi (hatizyúu-en) [de], ninzin (hyaku-en) [da] 'Those unchanged are potatoes (¥120 a kilo), onions (¥80), carrots (¥100)' (SA 2679.115c); Máda kyóo ga syoniti ná n desu yó 'The opening day is (yet) today' (Tk 2.82b); Kinóo ga Oohuna no hoo no syoniti ná n desu 'Yesterday was the opening day in Ōfuná' (Tk 2.83a). The saying Itízi ga bánzi de 'One case being enough to tell you what will happen in all cases' apparently involves some sort of ellipsis, perhaps bánzi [no daihyoo] dé 'being representative of all cases'.

The thematization apparently must be focused but the focus need not always be subdued; highlighting—of the *Id* only—is also possible: Kore MO kanasii kyóku(⁻) da 'This too is a sad tune' (Ig 1962.73); Kyóosi MO ningen de áru kara 'Since teachers are human beings, too ...' (Ōno 1966.140); Mínohe tízi MO mattakú¹ komátta o-hito de áru 'Governor Minobe is indeed really quite a nuisance' (SA 2664.33d—a descriptive identification); Matúsita de wa 'sinbun to seriai suru monó de wa náí' to itte irú ga, kore MO hitótu no tukai-kata da 'The people at Matsushita are saying "It [= facsimile communication] is not something to compete with newspapers" but this indeed is one way it could be used, too' (SA 2647.137d); Ima-máde tukatte ite kóoka ga náí to iu kotó de áreba, kusuri o kaete míru to iu kotó MO hitótu no hoohoo desú 'One [or: Another] method is to change the drug if it happens that there is no effect from using it to date' (SA 2669.104c); Sore MO máa hitótu no íken desyoo né 'That too, I guess, is another way to look at it, isn't it'—but *Hitótu no íken MO sore da, (?*)Hitótu no íken wa sore MO da.

The thematized Identified (*Id wa*) is often omitted or delayed and stuck on as an afterthought: Onná desu, sensei wa 'She's a woman, the teacher is'. Less often the Identifier (*Ir ga*) will be added as an afterthought: Genkai desyoo né, sên-mai ga 'It's the outside limit, a thousand pages' (SA 2650.42d)—this is equivalent to saying Sên-mai desyoo né, genkai wa 'It's a thousand pages, the outside limit is'.

On the distinction between identification and propredication, cf. Vardul 106, who gives two interpretations to the example Áme da:

(1) = [Sore wa] áme da 'That is rain' (don't mistake it with snow).

(2) = Áme [ga hútte iru no] da 'It is [a fact that it is] raining'.

Propredication can leave any of the adjunct markers stranded before the copula. V 77 gives

this example of the direct-object particle (taken from Mikami 1953:745): Benkyoo no tamé to omóeba, ^[r]dare mo miná ^[r]kore o kyúukutu to wa kangáenakatta. Gakusei to sité mo miná ga zit-to ^[r]sinobi-osáete itá no wa wakái ikigómí(¯) ni tomonáu kékki(¯) O [mótte ita no] de átta 'Feeling it was for the sake of our studies, no one thought this oppressive. That we all endured it with a patience surprising even for students was [because we enjoyed] the animal vigor that accompanies youthful enthusiasm'.

The following example is even more revealing, so to speak, in that for each ellipsis the author has inserted a comma (preserved in the transcription but not intended to signal a juncture): Tó-ni-kaku onná ga déte kíte hadaka o miséru. Óppai o, de wa náí. Heso ó, de wa náí. Maru-hádaka o, de áru. 'Anyway, out comes the woman to display her flesh. Not her breasts. Not her navel. Her stark naked body' (SA 2650.118e)—what is dropped is [miséru no] 'displaying'.

The following sentence would seem to be best explained by the indicated ellipsis, which leaves N₁ or N₂ stranded before the copula: ... iyasíi(¯) toogokú-zin o aité {ni surú no} de aroo to mo ... 'even though they would have the hateful Easterners for adversaries' (Ōno 1966.35).

As a result of propredication the copula itself can follow adverbialized forms of the copula: Minná de [] desu ka 'Are we going to [do it] as a group?'; Minná de [] dé wa damé 'It's no good [to do it] as a group'; Minná de [] dé mo íi 'It's OK [to do it] as a group'; Génki ni/de [] nára ... 'If it is vigorously [that one does it] ...'; Zibun no kangáe o aité ni mukatte, góku syookyoku-teki ní [] de wa áru ga, siíru no ga sékkyóo(¯) désu kara né 'Because preaching is forcing one's ideas—to be sure (it is a matter of doing it) in a very conservative way—on the other party, you see' (Tk 2.213b). What is omitted is something like surú no 'doing it'. Some dictionaries treat itu-no-ma-ní-ka 'unawares' as a single lexical item; we can derive it by way of an ellipsis that drops the propredicative copula imperfect dá: itu no ma ní [da] ka 'whether [it is] in an interval of when/some-time/anytime' with ní taken as the time-locative marker.^{44a}

Here is a more obvious case, where the author's punctuation is not merely a reminder of ellipsis but calls for a juncture in reading the passage aloud: Sore kóso zyoodán daroo, dá 'THAT's the joke, is the situation' (Kb 266a). What has been omitted before dá is something like ^[r]to iu zyootai 'the situation' or ^[r]to ii-tai kimoti 'a feeling of wanting to say'; the actual intention perhaps never got beyond ABSTRACT-NOUN da, if that far.

Under adnominalization, the copula gerund can be predicated N dé da → N dé no, and that—by way of propredication—is the explanation for examples such as these: ... hontoo no ími de no han-táisei 'anti-establishment in the true sense' (SA 2680.116d); ... kono yóo na katati dé no "dassoo" ga ... "'desertion" in a form like this' (SA 2678.27d); ... genzyoo [= génzai no zyootai] dé no koosaku 'farming under present conditions' (SA 2679.35d); Kono ten dé no hónsyo no tokutyoo wa ... 'With respect to this the distinguishing thing about the present book ...' (SA 2677.110c); Én ga yásuku, sitagatte dóru ga takái genzyoo dé no Nitibéi-kan no booeiki wa, ... 'Japan-America trade which is in a current situation where the yen is cheap and accordingly the dollar is expensive ...' (SA 2687.124b).

Examples of propredication, taken from KKK 23.128–70: Yamá wa yukí da 'The mountain has snow on it'; Káre wa asú kara gakkoo da 'He starts school tomorrow'; Káre wa asú kara koogi(¯) da 'He begins his lectures tomorrow'; Asitá wa ensoku da

44a. But other accentuations indicate lexicalization: itu-no-má-ní-ka.

'Tomorrow [there] will be a picnic'; Wareware wa iyóiyó asitá^[1] syuppatu da 'Tomorrow we are finally off on our trip'; Bóku(¯) wa unagi da 'I'll have eel'. Notice the suggestion (KKK 23.270) that Kóndo wa kodomo ni mikan da 'This time an orange for the child' is to be treated as Kóndo wa kodomo ni [agerú no wa] mikan da 'What I will give the child this time is a mandarin orange'; a simpler explanation would be Kóndo wa kodomo ni mikan [o agerú no] da 'This time [it is that] I will give the child an orange' with the narrowed meaning taken from situation or context.

It is easy to find examples where propredication has pruned a sentence down to a single noun, but a case-marked noun turns up less often. In rough order of frequency we can expect (starting from the most frequent) to find examples of the following:

N kára da; N máde da.

N tó da.

N dé da.

N é da: Watasi no káeru no wa zibun no tokoró e da 'Where I returned was to my own place' (V 1972.162).

N ní da: Kimi ní zyaa náí, okyakusámá ni da 'It's not for you, it's for the guest' (Kb 325a—the text has a comma before dá); Ai-tái n da.—Dáre ni?—Áru otokó ni da 'I want to get together.—With whom?—(It's) with a certain man' (Kb 269b—the text has a comma before dá, to signal the ellipsis).

N ó da: Uótuka o desu ka? 'You mean [drink] vodka?' (Kb 230b—also uótoka, uókka); Ore ó zya náí ka 'Surely it's me that's meant'.

N gá da: Désu kara né, senséi no táido ga desu né 'So, you see, [it's a matter of] your attitude, professor' (SA 2670.18c)—presumably an ellipsis of something like táido ga [mondai] desu; Omae, warúi ryóoken da zé.—Náni ga desu? 'You've got something naughty in mind.—What?' (Kb 64b).

Certain of the case markings are more common when the propredication is adnominalized:

N kará/máde no N; N é no N; N tó no N; N dé no N. But *N ní no N* appears to be rare; whether dative or allative, it is usually replaced by *N é no N*, and as a stative locative *ni* shuns propredication so that you get *N ni áru N* or the like rather than (?)*N ní no N*. Yet the (residual) locative *dé* freely occurs in adnominalized propredication: ... tikágoro katei DÉ NO yasai-sáibai ga sízuka na búumu da 'recently there has been a quiet boom in raising vegetables at home' (SA 2670.108a); ... Indosína DE NO sensoo 'the war in Indochina' (SA 2685.16c); ... minkan-byóoin DE NO arubáito o yame, ... 'I quit my part-time job at the hospital, and ...' (SA 2678.129c); ... kokúnai DE NO hyóoka(¯) ga takamáru no ga ... 'the rise in appreciation [of it] within the country' (SA 2681.60d).

And it is possible that (?)*N gá no N* and (?)*N ó no N* never occur (I have yet to find examples), though they would constitute a handy device for disambiguating certain phrases adnominalized to a verbal noun (see p. 869); we will probably have to say that *gá* and *ó* obligatorily drop when the propredication is adnominalized. Since *N wá da* is itself rare (and largely limited to interpolated *dá ná* or *desu né*, §23), it is hardly surprising that we are unable to find an example of *N wá no N*; however, *N mó no N* is used, and you will also find *N máde/kará mo no N*: tuki máde mo no rokétto 'a rocket all the way to the moon', tuki kara mo no tuusin 'a message all the way from the moon'.

The following example propredicates one kind of instrumental, with the copula appearing in its uncontracted formal shape *de áru*: Hóteru e káeru to, sono-hi^[1] taiken sita hanasí ni íken o túkete téepu ni huki-komu. Motíron Eigo DÉ de aru 'When I return home I add

my views to the story of each day's experience and record it all on tape. In English, of course' (SA 2671.64c).

On problems of adnominalizing identificational and propredicational sentences, see § 13.1.5.

Notice the following operations that can be done to sentences:

N ga X o suru 'N does X'	→	N ga surú no wa X da 'X is what N does'.
		X o surú no wa N da 'N is the one who does X'.
N ga V 'N V-s'	→	V nó ga N da = N wa V no da 'The one who V-s is N'
		V nó wa N da 'N is the one who V-s'

Cf. the "cleft" sentences of § 14.2.4.

A few examples of V nó ga N da: Gasorín-sya(¯) no gasorin ni atarú no GA, denki-zidóosya(¯) no denti ni takuwaeráreta(¯) denki-enérúgii DA 'The electric energy stored in the batteries of an electric automobile is what corresponds to the gasoline of a gasoline car' (SA 2684.24a); Kiti-nai ni súmu no GA gohyakú-nin DE, yosó kara kayóu no GA gohyakú-nin [DA] 'Those living on base are five hundred in number, and those commuting from outside are five hundred [also] = There are five hundred living on base and there are five hundred commuting from outside' (SA 2685.29ab); Máe wa ík-ko nihyakú-en mo sitá no GA íma wa hán-ne(¯) [DÉ], ... 'What before cost a whole two hundred yen each are now half price, and ...' (SA 2679.115a). (See also pp. 246-50, p. 867.)

Several different vivid expressions use an identical noun both for Id and for Ir; this we can call SELF-IDENTIFICATION. Notice these types:

(1) N_1 wa N_1 dé means ' N_1 being N_1 ' or—equivalent to N_1 wa N_1 dé mo—'even though N_1 is N_1 ' as in: Sore wa sore de yókatta 'That was all right as it was (or: as far as it went)' (Shibata 1965.212); Todokoori-náku súmeba, kore wa kore de medetái 'If all goes without a hitch, that in itself calls for congratulation' (SA 2649.109a); Sore wa sore de náni ka betu no mondai to site kangaemasyóo 'That's what it is but let's think of it as something in the way of a different problem'; Sore wa sore dé mo kamawánai 'That's all right, if that's all it is (= if it goes no further than that)' (Maeda 1962.1970); Hón wa hón de mo, manga-bon 'When it comes to books, [it's] comic books!' (SA 2677.120b)—equivalent to 'The only books they read are comic books'; Kyóozyu(¯) wa kyóozyu(¯) dé mo, kyóozyu(¯) ni yotte nakámi ga tigau 'Professors may be professors, but the substance varies with the professor' (SA 2685.60); Nanigoto mo okoránakatta kara, sore wa sore de yókatta 'Since nothing happened, that was all right as far as it went' (SA 2685.138b). A similar expression is Maa, sore wa sore to site, ... 'Well, be that as it may, ...' (SA 2664.33d); and Sore wa sore to site mo, ... 'Be that as it may, ...' is also common. In most of the preceding examples the self-identifying noun is a situational anaphoric: 'this [situation], that [problem]', etc. But there are other examples in which the noun is animate or is an institution (Nihón 'Japan' will do) and the expression is followed by a verb referring to behavior; the meaning is '(that is) just like N', or 'N, typically enough', with the gerund dé showing consequence (' N_1 is N_1 and consequently ...'): Húmiko wa Húmiko de náni-mo tetudátte kurenákatta 'That's Fumiko for you—not a bit of help', cf. Húmiko wa yappári Húmiko desu 'Fumiko is, after all, Fumiko = That's our Fumiko, all right!'; Siki-sya wa siki-sya de, kyúuryoo morawanákya kuénai si né 'For his part, the conductor has to get a salary or he

can't eat, you see' (Tk 3.50a); *Oyá wa oyá de, kodomo o sín-zite(-) iru; kodomo wa kodomo de, oyá o sín-zite(-) iru* 'Parents (being parents) will believe their children, and children (being children) will believe their parents' (Kb 274a—the text was cluttered with commas): *Ippóo Hónnda wa Hónnda de, "Kyúu Hondá-kai no masukomi-sóosa ni sugínai"* to *míte iru rasii* 'For its part, Honda, typically enough, is said to be taking the view that "it is merely the Former Honda Group manipulating the mass media"' (SA 2655.26d). Sometimes *N wa N de* is a mere literary device to return to a subject, or to remind the reader of his name: *Isokiti wa Isokiti de, bon'yári, kínko no ué no bara no hatí ni mata mé o yatta* 'Isokichi then idly cast his eyes again upon the potted rose on top of the strong box' (Kb 223b—ending a section).

In these usages, you will sometimes find *N₁ mo N₁ de*: *Kyóosi mo kyóosi de, wáza-to kyoodan de sinbun o yónde iru* 'And the teacher for his part deliberately reads the newspaper up on his lecture platform' (Endō 79). The expression *kóndo wa kóndo de* means 'THIS time': *Kánari máe kara kaisán-huu ga húki, kóndo wa kóndo de, sangiin de "anna kotó" ga okóttari site iru seikai dé mo, móto-yori reigai de áru hazu wa arimasén* 'Dissolution [of the Diet] has been in the wind for some time, and THIS time even for the political circles in the Upper House where "you know what" sometimes happens there is, of course, no likelihood of being an exception' (SA 2640.130). Cf. Kenkyusha's example of *kóndo to iu kóndo wa*: *Kóndo to iu | kóndo wa || zítú ni | yowátta* 'This time it's the toughest luck'. A somewhat similar expression is *orí mo | orí [to site]* 'just at this very moment', which appears in an extended form in this example: *Kono orí mo | ori, || kóndo wa || zassi "Rúkkú" ga ... to || senséesyonaru na | kízi o | noseta* 'Now of all times, Look Magazine ran a sensational article that said ...' (SA 2647.135b). A similar expression is found in this example: ... *Nikkatu no hookai sunzén(-) to iu tokí mo toki, ...* 'Right on the very brink of Nikkatsu's collapse, ...' (SA 2664.103c). The expression *ki ga ki de/zya náí* 'feels uneasy' is perhaps best treated as an idiom: *Kazue wa, ki ga ki dé wa arimasén desita* 'Kazue felt uneasy' (KKK 3.17).

(2) *N₁ nára N₁* means 'just (a case of) N' as in: *Tatóeba || haná nara | haná o || réi ni | tótte | míru to ...* 'If, say, we take just a flower for example ...' (Morishige 143). Leaving out the *N₁ nara* will affect the meaning only slightly. Here belong *Sore nára || sore ni kosita kotó wa | arimasén* 'There's nothing better than that, all right' (Tsuji-mura 77) and *Sore nára sore de* 'Be that as it may' as in *Sore nára † | † sore de, || dóo site | sono tokí ni | setumei sinákatta n desu ka* 'That's all very well, but why didn't you explain it at the time?'

(3) *N₁ wa N₁ dé, N₂ wa N₂ dá* means 'N₁ will be N₁ and N₂ will be N₂' and *N₁ mo N₁ dé, N₂ mo N₂ dá* means 'N₁ is a problem and so is N₂': *Oyá wa | oyá de, || kodomo wa | kodomo da* 'Parents will be parents and children will be children'; *Oyá mo | oyá de, || kodomo mo | kodomo da* 'The parents are a problem and the children are a problem (too)'.

(4) *N₁ mo N₁ nára N₂ [mo N₂ da]* means 'not only N₁, as might be expected, but also/even N₂ [is a problem]': *Gakusei mo gakusei nára(-ba) || kyóozyu(-) mo | kyóozyu(-) da* 'Both the student and the teachers are a problem' or 'The teachers are just as bad as the

students'; Hatiroo mo Hatiroo nára, || utí^[t](-) no oziisan made ga né ... 'Hachirō is bad enough, but even our GRANDFATHER (doing such things) ...!' The expression can be conflated by adding N_3 mo N_3 nára/dé with the copula gerund used in place of the provisional at the point where you wish to place the major break—which is marked by the only major juncture: Gakusei mo gakusei de, || kyóozyu(-) mol kyóozyu(-) nára || oyá mol oyá da 'The students are a problem and both the teachers and the parents are a problem, too'; Gakusei mo gakusei nára || kyóozyu(-) mol kyóozyu(-) de, || oyá mol oyá da 'Both the students and the teachers are a problem, and so are the parents'; Tokí mo | tokí nara || tokoro mo | tokoro dága, || náni ka | wáke ga | átta no daroo 'The time and the place are a problem, but there must have been SOME reason' (Maeda 1962.42).

(5) N_1 mo N_1 [de], N_2 'is so much N_1 that it is N_2 ; is the utmost N_1 and is even N_2 ': Akunin mo [|] akunin [de], || satuzin-han da 'He is such a villain, he is even a murderer'. Cf. V-tá mo V-ta 'really did, did ever so much', V-anái mo V-anai 'really doesn't, doesn't at all', A-í mo A-i 'is ever so A', § 14.6; AN mo AN § 13.5a.

(6) S_1 nára S_1 dé (by direct nominalization, § 14.6—cf. § 17.9) means 'if indeed S ': Ikú nara | ikú de, || kinōo | soo itte kureréba | yókatta no ni 'If you ARE going, why didn't you let me know yesterday?!'; Ittá nara | ittá de ... 'If you HAVE been there ...'; Kawanákatta nara | kawanákatta de ... 'If you DIDN'T buy it ...'; Hosii nara | hosii de ... 'If you really WANT it ...'; Iyá nara | iyá de ... 'If it is such an unpleasant thing ...'.

(7) N_1 wa N_1 dá ga/kedo ' N_1 is N_1 , to be sure, but ...': Dótira mo || hón wa | hón da ga, || naiyoo mo [|] káti mo | zenzen tigau 'Both of them are books, all right, but they are totally different both in content and in value'; Íma, || hima wa [|] hima dá ga, || kyaku ní wa || ai-táku | náí 'I am at leisure now, true, but I have no desire to see visitors'. Cf. S kotó wa S ga/kedo, § 14.1—the "iterative concessive". Notice that ellipsis is possible in the structure AN [na kotó] wa AN da ga: Sízuka wa | sízuka desu ga, || tyót-to | tooí desyoo? 'It's quiet enough, all right, but isn't it a bit far?'

On sentences of the type N_1 ka to omóttara N_2 dá[tta] used to express unexpected identification, as in Dáre ka to omóttara anáta desu/desita ka 'Oh—it's YOU?', see Alfonso 811. The frequency of the perfect form of the copula in these expressions is to be explained from its use to express sudden realization (see p. 603).

It is of interest to see what kinds of sentences will put the Identified into the essive, i.e. before the copula—sentences of the type N_2 ga N_1 da (= Ir ga Id da). In one type the Identifier is a long nominalization and the Identified is short (... nó/kotó ga N dá 'It is N that/to ...'): ... anzen-sei no hyóoka(-) ga nasárete inai tenká-butu ga yurusárete irú no GA mondai no konpon DA 'The root of the problem is that additives are permitted that have not been given a safety evaluation' (SA 2664.93b); Zísyo o kau tokí ni wa, dáre dé^(t) mo, kono is-satú ga áreba, hituyoo na tokí ni wa dónna kotobá de mo hikeru to omóu no GA nínzyoo DE ARU 'It is human nature for everyone to think, when buying a dictionary, that with this one dictionary you can look up any kind of word when necessary' (Shibata 1965.196); Míinari o | kírēi ni site, || minná de || ookii | otó de || rókku o | kíkú no GA || Koozi no | asobi DÁTТА 'It was Kōji's recreation to get himself all dolled up and listen with the gang to rock and roll with great hubbub' (Ig 1966.88)—is the phrase ookii otó de to be taken as MANNER or as CAUSE?; Sono tiryoo mo || san-kágetu GA | géndo [DA] 'for its treatment, the limit is three months' (SA 2670.30d)—the first phrase is a highlighted

thematized genitive; *Tyuutoo no kaimono dé wa, || ne-gírú no GA | zyoosiki DÁ ga, ...* ‘If you’re shopping in the Middle East, everyone knows what you do is haggle’ (SA 2673.37a). ... *benkyoo suru hima ga ná no GA | nayamí DESU* ‘It distresses me not to have any time to study ...’ (SA 2665.114d); *Igákú-bu to iu to, || súgu | hooken-sei to iú no GA || séken no | zyoosiki DÁ ga, ...* ‘It is a matter of people’s common knowledge that a reference to medical faculties implies feudalism, but ...’ (SA 2647.25d); *Sáabisu ga | zinsoku ná no GA | tokusyoku da* ‘It features rapid service’ (SA 2689.117c); *Sore kara, || kutikazu ga sukunái no to || kuti no kiki-kata no sízuka na no GA | tokutyoo DÁTTA* ‘And then, it was characteristic for him/her to be sparing of words and quiet in speaking’ (KKK 3.168); *Oiru-tyéenzi | no hituyoo no ná no GA | tokutyoo DÉSÚ* ‘It enjoys the special feature that no oil changes are necessary’ (R); *San-nen máe ni || sigoto de || Hwinrándo ni itte || sáuna ni | háitta no GA | hazimari [DÁ]* ‘My start [as a sauna customer] was when I went into a sauna on a business trip to Finland three years ago’ (SA 2662.97b); *Eiga-kénbutu to | itté mo, || katati o kaeta móteru, || itte míreba, || kaa-sékkusu no | tamari-ba ni náru no GA | otí DAROO* ‘Call it movie viewing, but it will end up becoming a motel under a different shape, a rendezvous for car sex, so to speak’ (SA 2658.110e—reference is to drive-in movies); *Zízitu zyoó wa || hyaku-paasénto || íntyoo no | mune-sánzun ni | makasárete iru to iú no GA, || senmón⁽²⁾-i-tati no | íken DA* ‘It is the opinion of the specialists that in practice a hundred percent is left to the discretion of the hospital director’ (SA 2670.30d); ... *doogyoo-kan no | tyoosei o surú no GA | mokuteki DE ÁRU* ‘the aim is to make adjustments among those in the same trade’ (SA 2685.20e); *Zisyu-zémi wa || ... soozoo suru tikará⁽⁻⁾ o | tukútte iku kotó⁽²⁾ GA | nerai DÉSÚ* ‘The undirected seminar has as its aim to build up the power to create ...’ (SA).

In other types, too, it is usual for the Id to be short: *Yadoya no niwa no súgu mukóo GA, úmi DATTA* ‘The sea was right across from the garden of the inn’ (Ig 1962.73). Does the location of the comma, taken from the original text, indicate that the Ir is actually thematized, contrary to my assumptions of what is possible? Or is this one of the time/place subjects with ellipsis as described on pp. 65–6? More examples: ... *tikágoroll katei dé no || yasai-sáibai GA || sízuka na | búumu DA* ‘... recently there has been a quiet boom in raising vegetables at home’ (SA 2670.108a); ... *kekkón-siki de wa || hómete | hómete || home-makurú no GA | étikétto [DA]* ... ‘At a wedding ceremony it is etiquette to praise [the couple] to the skies ...’ (CK 985.391); ... *hóndo no | kankoo-ryóko GA | mé-ate DE, ...* ‘with a tourist trip to main-island Japan as their aim’ (SA 2674.27b); ... *tébebi no | ryoori-bángumi de, || kóosi GA zyosei DE ÁRU to ...* ‘when a woman is lecturer on a TV cooking class ...’ (Maeda 1962.169)—notice that *zyosei* is the Id, for we are talking about women, not lecturers; *Sikási, || sono zyusin-ki GA | mondai DA* ‘But the RECEIVER is the problem’ (SA 2647.137c); *Niwasaki ni oite áru | kuruma no nánbaa GA | Tookyoo nánbaa DE || “kappe” narazáru | tokoró o | kóosi⁽⁻⁾ site iru* ‘The license number of the car left in front of the garden is a Tōkyō number, proudly proclaiming that it is not some “hillbilly’s” place’ (SA 2648.35c).

Even when not especially short, the Id will usually be relatively simple in structure: *Sutyúwáadesu ga || “Zaseki-béruto o | o-sime kudasái” tte || itte kíta no GA, || Hukuóka o | tátte kara || iti-zíkan | nizíp-pun DA* ‘It was an hour and twenty minutes after leaving Fukuoka that the stewardess started saying “Fasten your seat belts”’ (Tk 4.5a).

Not infrequently the Id is an anaphoric: *Wadai no tyuusin GA | sore DESÚ | yó* ‘That’s the central topic (that I’m asking about)’ (SA 2649.48d); *Kokkyoo wa, || ... tiisái | kawá*

GA | sore DÁ 'The boundary, it was a little river that ...' (Fn 463b)—the anaphoric is a reprise of the thematized Id of the underlying source. But anaphorics also occur as Ir: ... kore GA kien(¯) DE ... 'with this as occasion = this led to ...' (Tk 3.69b); ... sore GA mé-ate DE ... 'with that in view ...' (SA 2670.40d); Soko GA póinto desyoo né 'THAT's surely the point, you see' (R); Hatigatú ni Izu-kóogen ni rinkan-gákkoo ni ikú no de, sore GA tanosímí(¯) DÉSU 'In August we go to a camp school in the Izu highlands, and THAT is fun' (SA 2635.40)—notice the anaphoric reference to the preceding situation, perhaps arguing for the treatment of ikú no de as a (gerundized) nominalization 'with its being a matter of going' rather than considering nó de as a conjunction (see p. 854).

Certain descriptive predicates are particularly common with ... nó ga; among the above examples we can cite ... nó ga zyosiki dá 'it is common knowledge that ...', ... (to naru no) ga otí da(roo) 'the upshot [= end of it] will be that ...', and ... nó ga tokutyoo (= tokusyoku) dá 'it has the special feature/characteristic that ...'. Similar predicates are these:

... nó ga hónrai da 'it is natural to/that ...'

... nó ga seki-no-yamá da 'it is all one can do to ...'

... nó ga yo-no-túne de aru 'it is usual/common that ...' (SA 2680.19a)

... nó ga hutuu dá 'it is usual that/to ...'

... nó ga ippan dá 'it is common that ...'

... nó ga túne da 'it is customary to ...'

... nó ga túne datta 'it used to be that ...'

... nó ga tuurei dá 'it is customary that ...'

... nó ga zyoodoo dá 'it is the normal course to/that ...'

... nó ga zituzyoo (no yóo) da 'the facts are (seem to be) that ...' (SA 2668.29e)

... nó ga genzyoo dá 'the state of affairs (= the way things are) is that ...' (SA 2670.30d)

... nó ga mé-ate dá 'the/one's aim is to ...'

... nó ga ziman dá 'we pride ourselves on ...'

... to iú no ga hónsin da 'the motive is ...' (SA 2664.122c)

... to iú no ga kyootuu-íken datta 'it was the consensus that ...'

... nó ga husigi da 'it is odd that ..., the funny thing is that': Sékiri ga hassei sinái no ga husigi da 'It is odd (= surprising) that dysentery doesn't break out' (SA 2672.24c).

... nó ga kimari dá 'it is a rule/habit that ...; makes it a rule/habit that ...': Ása okíru to, uti no urá no Higasi-kóoen e íkú no ga kimari de, watasi ni ai-tái hitó wa Higasi-kóoen e kúreba íi to iu kotó ni nátt' ōru kúrai desu 'I make it a habit to take a walk in East Park in back of my house when I get up in the morning; it's got so anyone wanting to see me does well to come to East Park' (Tk 3.84b).

You will sometimes find mó in place of gá, especially when the predicate refers to inevitability or naturalness: Gakuséi-táti ga || démo ni | sanká sitá no MO | doorí da 'The students have every reason to participate in the demonstration'; Sore daké ni, sigeki ni, tobosii(¯) zimotó(¯) no syoonén-táti ni óoki na eikyoo o ataetá no MO, atarimae DÉ wa nakaróo ka 'With that alone (for cause), wouldn't it be only too natural for it to have exercised a big influence on the local youth, hungry for stimulation?' (SA 2647.118a); Koozyóo(¯) de hataraité iru dokusín-sya [= dokusin-mono] ga óói no MO byoonin ga sukunái gen'in de aróo ga, ... 'The very fact that many of those working in our factory are bachelors probably accounts for the low number of illnesses, but ...' (SA 2645.103a); Káko ni hihyoo ga óokatta no MO tárika da kedo 'It is quite true that in the past there

was much criticism (but ...)' (SA 2671.20c); ... *oyā*^[1] no *sinpai ga hitótu húeta no MO tárika* [da] 'there's no doubt that the worries of the parent have increased by one more' (SA 2681.104b).

A common type is the gerundized N *ga motó*(⁻) *de* 'with N for a basis, starting with N' as in *o-sake GA motó*(⁻) *DE sinu* 'dies from drinking' and these examples: *Káre no túma wa otto ni saráreta*(⁻) *kanasímí*(⁻) *GA motó*(⁻) *DE, ma-mó-naku naku-nátta* 'His wife soon died from the grief of being left by her husband' (lg 1962.94); ... *sore GA motó*(⁻) *DE híroku tukawareru yóo ni nátte kíta* 'Starting with that [= appearing as the title of a play] ... it [= the word *gametsui*] came to be widely used' (Ōno 1966.16). Similar are N *ga mé-ate de* 'with N as aim/objective' and N *ga gen'in de* 'with N as cause', illustrated among the sentences given earlier.

Certain kinds of nominal (or adjectival-nominal) predicates seem to demand a *gá*-marked subject—i.e., the subject cannot be subdued with *wá* (nor, usually, highlighted with *mó*):

(1) *Kore kará GA taisetu (na tokoró) da* 'From now on is (the place/time that is) what is important'; ... *kyoouku no naiyoo GA taisetu na kotó desu* 'the important thing is the content of the education' (Kaneda in Ōno 1967.298); *Kaitoo wa enzetu surú yori kiki-te ni náru kotó GA taisetu ná n desu* 'What is important for the chairman is to be(come) a listener rather than make speeches' (SA 2671.64d); *Koo iu monó o oozúkami ni sirabénakya ikenai to iu kotó GA dá-iti de arimásu* 'The most important thing is that we must investigate such things in general' (KKK 23.214). Yet we find: *Sizen o nokósu kotó WA taisetu désu* 'It is IMPORTANT to preserve nature' (SA 2642.46c). But *Taisetu ná no WA kokóro desu* 'It's the spirit that is important' (SA 2642.46c) is not a counterexample, since it comes from *Kokóro GA taisetu {na no}* *da* 'The HEART (= SPIRIT) is important'.

(2) *Soo sita uwasa GA miyako dé wa móppara*(⁻) *de áru to iu kotó de atta* 'They said that such rumors were all over the capital' (lg 1962.81)—notice the backgrounding of the subdued locative.

(3) *Húkuko ga Háruko no kotó o ittá no wa, sore GA hazímete da* 'That is the first time that Hukuko talked about Haruko' (lg 1962.89)—*sore* is a reprise of the subdued thematization of a nominalization; *Gaikokú-zin no aida ni háiru no wa, kore GA hazímete de wa náí* 'This is not the first time to [enter =] be among foreigners' (lg 1962.89)—like the preceding (note the failure to subdue the reprise even with the negative).

At first glance, some of these would seem to be propredications rather than identifications (if indeed we can successfully draw the distinction), but the adverbs and adjectival nouns that are involved can usually be expanded into nominals (with *tokoró* or *kotó* or the like). Cf. the discussion in KKK 23.214, where it is said that there are sentences that will not permit *gá* to be replaced by *wá* (such as those given just above) and also that there are sentences that will not permit *wá* to be replaced by *gá*: *Kore WA motté-no-hoka*(⁻) *désu* 'This is absurd'. But the stricture is misleading, if not mistaken, for the following are all acceptable: *Náni ga motté-no-hoka*(⁻) *desu ka* 'What is absurd?'; *Kore ga motté-no-hoka*(⁻) *na/no kotó ...* 'The fact that this is absurd ...'; *Kore ga motté-no-hoka*(⁻) *to iu hanasí ...* 'Talk that this is absurd ...'.

Another type is *N₁ ga N₂ dé mo* 'even if N₁ should be (reduced to being) N₂' as in *Mikka ga iti-nítí de mo ...* 'Even if it is only one day instead of three ...' and this example:

Zikan ga náí tokí^[r] nádo, || iti-zíkan ga | sanzíp-pun de mo, || onná wa || dóko ka ni | yoru kotó o | motóméta 'On occasions when there was no time or the like, the woman asked to drop in somewhere for just thirty minutes if an hour was too long' (SA). Here we can also cite náni ga nán de mo 'at all costs, come what may; regardless (of anything)'.

Identificational sentences are used to express several different relationships. Miyake (Word 24.299-302) speaks of REVERSIBLE identity (Id wa Ir da = Ir ga Id da)—in which the Id and the Ir are coextensive; of TAUTOLOGICAL identity—in which the Id and the Ir are totally identical; and of SEQUENTIAL identity—nonreversible specifications of time or cause. In the framework of our discussion most examples of sequential identity would probably be treated as proredication. Miyake notes that tautological identity is used either to derogate or to praise; see the remarks on what is here called self-identification, pp. 244-6.

Let us consider another way of classifying identificational sentences of the type Id wa Ir (da):

(1) EQUATIONAL: Definite Id is Definite Ir—reversible.

Kono syáin(¯) wa sono onná da = Sono onná ga kono syáin(¯) da.

'This employee is that woman.'

Sono onná wa kono syáin(¯) da = Kono syáin(¯) ga sono onná da.

'That woman is this employee.'

Hánnin wa káre da = Káre ga hánnin da.

'The culprit is him.'

Káre wa hánnin da = Hánnin ga káre da.⁴⁵

'He is the culprit.'

(2) CLASSIFICATIONAL: Definite Id is Indefinite Ir—irreversible.⁴⁶

[Sono] onná wa syáin(¯) da 'The woman is an employee'.

[Sono] syáin(¯) wa onná da 'The employee is a woman'.

45. But this sentence would be ungrammatical according to Hayashi 80. "Definite" is not always readily apparent, and translations can be misleading. In *Minná ga teki de, dáre mo osiete kurenái si, ...* 'Everyone is a rival and no one shows me anything, so ...' (SA 2680.47b) you can reverse the identification to *Teki wa minná de*, and a closer translation would be 'The enemy is everyone ...'. (But **Teki ga minná de = Minná wa teki de* is rejected.) In *Sore kara moo hitótu ga kyooiku de arimásu* 'And then ANOTHER thing is education' (Ōno 1967.170) we know that 'education' is to be taken as definite because you can reverse the identification: *kyooiku wa moo hitótu de arimásu* 'education is ANOTHER thing'. I am not sure that this approach will account for the first identification in the example below, but perhaps it will: *... nyuusyóo-sya no seibetu o kazóete mítara, nyuusyóo-sya zyuuhati-nin ¯tyuu, yo-nin GA dánsi de atta; siká-mo, iti-i KOSO onná datta ga, ní-i ni otokó ga osamátte iru* '... a count of the sex of the prize-winners reveals that of the eighteen winners four were male; moreover, the first place itself was [taken by] a woman, but the second was occupied by a man' (SA 2672.117b). Nor is it obvious that the Ir is definite in *Kenbutu no dai-búbun GA Tyoosen-zin desu* 'Koreans comprised most of the audience' (Tk 3.76a).

46. But in certain conversions, only Id ga Ir da will appear, since some structures will not permit a theme within, e.g. adnominalizations and adverbializations—and subordinating conjunctionalizations: *Tó ossyáru no wa anáta GA Edokko de o-ide dá kara* 'You say that because you are a child of Tókyō' (Kb 139a); *Watasi GA ano gakusei no oyá nara ...* 'If I were that student's mother ...' (SA 2678.139a)—the only alternative is *Ano gakusei no oyá ga watasi nara ...* 'If that student's mother were me ...'; *Tatóeba, bóku(¯) no itta kotó GA matigái de áru to suréba, bóku(¯) wa sekinin o tóru* 'For instance, if what I have said should prove to be a mistake, I will take the responsibility' (SA 2671.21a)—

- (3) DEFINITIONAL: Any Id [and therefore THIS Id] is a specimen of Ir—irreversible.
 Ningen wa doobutu da kara watasi mo doobutu da 'Man is an animal so I am an animal too'.
 Tái wa sakana da 'A sea bream [red snapper] is a fish'.
- (4) DESIGNATIVE: Definite Id is called the name Ir—irreversible.
 Kono sakana wa tái da 'This fish is (called) a sea bream'. This could also be interpreted as classificational: 'This fish is a (specimen of) sea bream'.
 Watasi no háha wa Hámako da 'My mother is (called) Hamako'.
 Amerika no syúto wa Wásinton da 'America's capital is (called) Washington'.
 This could also be taken as equational (and reversible to Wásinton ga Amerika no syúto da).
- (5) EXEMPLÁRY: Definite Id is the best example of its Class Ir—irreversible.
 Sakana wa tái [ni kagíru no] da 'When it comes to fish there's nothing like sea bream'. ←Sakana wa [sore o] tái [ni kagíru no] da.
- (6) TAUTOLOGICAL: Definite N₁ (Id) is characteristically Definite N₁ (Ir)—reversible(?).
 Aité wa aité da (?) = Aité ga aité da 'Such is the adversary' (Kb 165a).
 Móo tosí ga tosí da kara 'Age being what it is', 'The years being what they are ...' (Okitsu 130).
 Cf. p. 664.

Examples of identificational sentences: ... zúisan ni "Isuke san de gozaimásita né. Tásika" to, kóe o káketa. "Isuke wa wasi dá yó." 'He addressed the old man ... "You would be Isuke; I'm sure"—"Isuke I am, all right"' (Fn 170b). Tantei-syósetu o yomi-dasu to, hánnin wa dáre ka siri-tái n desu yó 'When I start to read a detective story I want to know who the culprit is' (Tk 2.156a). Watasi wa kuni wa Wakáyama na n desu 'My hometown is in Wakayama' (Watasi wa is a subdued thematization of a genitive). ... daisanzí-sen [= daisanzi-táisen] wa?—Motíron kúru to omóu né. Daisanzí-sen ga kessyóo-sen da '... and what about World War III?—I think it's sure to come, you see. The decisive war will be World War III' (Tk 3.148a). Kore ga tanosímí(-) dé wa áru ga tama ni sika náí 'This is my hobby but I do it only occasionally'.

In §2.2 (p. 42: ní 14) are listed a number of expressions such as N ní wa ní-syu ga áru 'There are two kinds of N'; Hitótu ni wa ... (moo hitótu ni wa ...) 'For one ... (and for another ...)', etc. Since the following predicate is typically áru or some quantifying adjective that has a similar grammar (óói 'there are lots', sukunái 'there are few'),⁴⁷ it was suggested that these expressions might be regarded as an extended use of sentences expressing possession or location. The LOCATION interpretation is favored by the frequent possibility of a paraphrase N no utí(-) ni 'among Ns', from which most of the sentences could be regarded as derived by ellipsis. But there is another explanation that I would like to consider, and that is to assume that these expressions display thematization of the Identifier

cf. Bóku(-) no itta kotó WA matigái datta 'What I said was a mistake'; Sore GA sóo nara ... 'If it should be that way ...'. (A different explanation will be required for Sore wa sóo [da] to ... 'Be that as it may ...'). See also p. 58, p. 241.

47. Ippan ni syási to iu monó ni, yónde omosirói monó wa sukunái 'There are few things that are interesting to read among what are generally called company histories' (CK 985.36).

(marked by the essive *ní*), the Identified being suppressed since it is identical with the subject of the following predicate. This would treat *B ní nite 'ru hitó ní A ga áru* 'Someone who resembles B is A' (cf. example in §2.2) as derived from two underlying sentences *A wa B ní nite 'ru hitó da* 'A is a person who resembles B' (classificational, hence irreversible, so the underlying *... *hitó ga A da* is forced to thematize and focus the Identified) and *A ga áru* 'A exists'; i.e., 'A exists AS a person who resembles B'.

This explanation will yield the following scheme for the classificational sentence:

Cf. the diagram showing epithematization on p. 656.

Hayashi (32, 92) calls our attention to the variety of different devices, in addition to the simple copula expressions, that Japanese makes available to express DESIGNATION:

- A tó wa B dá* 'What is called A is B'
B no kotó da 'What is called A is a matter of (= refers to) B'
B o iu/sásu 'What is called A means/designates B' = 'By B we mean B'
B no kotó o iu/sásu 'What is called A refers to B' = 'By A we refer to B'
- A o B to iu/yobu* 'A is called B'
tonáeru/nazukéru/syoo-súru 'A is named B'
suru/sadaméru 'A is designated (stipulated as) B'
- A o sásite B to iu* 'A is B by/in meaning'
A o nazúkete B to suru 'A is designated B by name'

There are a number of other expressions which might be added to this list: for example, *A wa B to onazi dá* 'A is the same as B'.

There are several adverbs that will reinforce an identification, notably *sunáwati* 'namely, id est; precisely', *túmari* 'in other words, to be more precise; in the end', *kekkyokú* 'after all', *yahári* 'after all', *masásiku* 'evidently, really', *tyoodo* 'just, precisely', *hito-yonde* 'popularly called —; by popular designation —',

You will find both *Id wa sunáwati Ir da* and *Ir ga sunáwati Id da*; an example of the latter: ... *tán-ni, Yooróppa ga sunáwati sékái da nádo to kangáeru no wa* ... 'thinking simply that Europe is the whole world [= that the world is to be identified with Europe] and the like' (Ōno 1967.5).

Noun phrases such as *A || túmari/sunáwati | B ...* are a reduction from an identification sentence *A wa túmari/sunáwati B da* 'A is namely B'. (Similarly, *A wa | motíron || B sáe maré(¯) da* 'Even B is rare, to say nothing of A' contains a reduction of *A wa motíron da* 'A is unquestioned'.)

In English we usually avoid repeating a noun when we can substitute a pronoun, and that is why we use 'the one' in a sentence like 'Is the letter I saw the ONE you wrote?' In Japanese you can freely substitute either *monó* or *nó* 'the one' for either occurrence of

the identical noun ('Is the one I saw the letter you wrote?' being less awkward in Japanese than it is in English)—or, if the context makes the noun clear enough, for BOTH occurrences. But there is no compulsion to do this, since Japanese find nothing awkward about simply repeating the noun. Thus all the following sentences are possible ways to say 'Is the letter I saw the one you wrote?' or (6–9) 'Is the one I saw the one you wrote?':⁴⁸

- (1) Watasi ga mīta TEGAMI wa anāta ga káita TEGAMI desu ka?
- (2) Watasi ga mīta MONÓ wa anāta ga káita TEGAMI desu ka?
- (3) Watasi ga mīta TEGAMI wa anāta ga káita MONÓ desu ka?
- (4) Watasi ga mīta NO wa anāta ga káita TEGAMI desu ka?
- (5) Watasi ga mīta TEGAMI wa anāta ga káita NO desu ka?
- (6) Watasi ga mīta NO wa anāta ga káita MONÓ desu ka?
- (7) Watasi ga mīta MONÓ wa anāta ga káita NO desu ka?
- (8) Watasi ga mīta MONÓ wa anāta ga káita MONÓ desu ka?
- (9) Watasi ga mīta NO wa anāta ga káita NO desu ka?

But when we apply the factual nominalization (S *nó* da) of §14.2, we find a restraint that prevents the sequence *no ná no da:

- (1a) Watasi ga mīta TEGAMI wa anāta ga káita TEGAMI ná no desu ka?
- (3a) Watasi ga mīta TEGAMI wa anāta ga káita MONÓ na no desu ka?
- (5a) *Watasi ga mīta TEGAMI wa anāta ga káita NO ná no desu ka?
- (7a) *Watasi ga mīta MONÓ wa anāta ga káita NO ná no desu ka?
- (9a) *Watasi ga mīta NO wa anāta ga káita NO ná no desu ka?

3.10a. EPITHEMATIC IDENTIFICATION

Some authors are fond of a stylistic device that I will call epithematic identification. This leaves the Identified stranded with no visible Identifier; the descriptive material that would have made the Identifier is used instead as an adnominalization that takes the Identified as its epitheme: Honto ni ukatu na watakusi désita 'I was certainly stupid' (SA 2670.116c); ... sono sasáyaka da ga kityoo na hina ni, onna-rasii yorokóbí(¯) o kan-zite iru watasi de áru 'I feel a womanly pleasure at those humble yet precious dolls' (SA 2670.140d); "Azi-ónti" to iwareru watasi de áru 'I am said to be "deaf to tastes"' (SA 2672.124a); Kodomo no inai watási-táti desu 'We are childless' (SA 2664.108d); Risoo ni moete tyúugaku no kyóosi ni nátta Sáeki-si da ga, kekkyokú, rokunén-kan kyóosi o tutómeta daké de káre wa terá e káetta 'Mr Saeki, burning with ideals, became a middle school teacher, but finally after some six years as a teacher he returned to the temple' (SA 2674.62); "...", mégane no óku no hosói mé o issou hosómete, nikkóri to warau Mórita-si de aru '[Saying] "..."' beams Mr Morita, narrowing still more the narrow eyes behind his spectacles' (SA 2684.64c); Íssái no ningen-kánkei o tátu zyohatu-níngen [to] dooyoo no káre da ga, ... 'He is like an evaporated man suppressing everything human, and ...' (SA 2685.112b); Nihón no zyosei o zessan site yamanai káre da ga, ... 'he praises Japanese women no end, but ...' (SA 2685.111a).

The identification can be negativized: Úso o iu yóo na iemotó zyaa arimasén 'It's NOT like the Master to lie' (Kb 237a); Yóo no súnnda tokoró ni, ítu made úro-uro site iru

48. Gá can be replaced by *nó* in either part of each sentence, or in both parts (§13.1.6). You can even say *Watasi no mīta no wa anāta no káita no desu ka*.

O-úta san de wa nákatta 'O-uta was not one to loiter forevermore once she'd taken care of the business at hand' (Kb 276a).

The epithematic Id is usually a person, often oneself. If my analysis is correct, the first sentence above derives from something like *Honto ni ukatu ná no GA watakusi désita = Watakusi wa honto ni ukatu ná no desita* 'I was [one who was] really stupid'.^{48a}

3.11. MULTIPAROUS SENTENCES; MULTIPLE SURFACE-ADJUNCTS

Up to this point we have discussed the Japanese sentence as a structure that consists of a nucleus or PREDICATE and a series of optional build-ups or ADJUNCTS. We have assumed certain constraints with respect to the number and nature of the adjuncts it is possible to add to a given predicate; and we have found that the case-like relationship that obtains between some of the adjuncts and the predicate is often marked by a particle and that the cases are controlled by (= governed by = in valence with) the predicate.

In general we expect a predicate to have at most one adjunct each for such roles as the subject (agent or attributee), the affected (direct object), the beneficiary (indirect object), and so on. When more than one agent (etc.) is involved, the two or more nouns are grouped together and conjoined to form a single adjunct in the surface structure, as explained in §2.8. Multiple locatives of place and time are perhaps best regarded as shared sentences with the ordering of scope determined by meaning: *Utí(-) ni || daidokoro ni || reizóoko no usiro ni || sókétto ga | áru* 'At home in the kitchen behind the refrigerator there is a socket'; *Syóowa(-) | nízyuu | ití-nen ni || nigatú^[1] no túitai ni || ása no | yó-zi ni || okótta* 'It happened at four in the morning on the first of February in the 21st year of Shōwa'; *Kin-yóobi ni || nán-zi ǵóro ni | kimásita ka* 'What time did you come on Friday?'; *Tyuukyoo ní wa || dóko ni mo || hae ga ippiki^[2] mo inai* 'In Communist China there are no flies anywhere' (Mikami 1963c.172); *Kóoti to | Yámato to no | sakái ni || Kongóo-san to iu | tokoró ni | siro o kamáete ...* 'Building a castle at a place called Diamond Mountain on the border between Kōchi and Yamato ...' (Mikami 1963.109). These types should not be confused with the simple "gapping" left by dropping a verb: *O-támi wa, naka-no-ma e [dète], O-kín wa daidokoro e [dète], wakare-wákare ni zyotyuu-beya o déta* 'They left the maids' room separately, Otami for the middle room and Okin for the kitchen' (Kb 57a). Comparable problems are involved with numerical expressions and with apposition; see §13.6 and §25.

But there are a number of sentences that require us to account for what appear to be multiple subjects, objects, etc. First, we can exclude as pseudo problems those sentences that involve some subject or object that is incorporated in an adnominalization: *Dáre ga senséi ga káita hón o yónda ka = Senséi ga káita hón o dáre ga yónda ka* 'Who read the book that the teacher wrote?'; *Hanasí o hito o nattoku saseru yóo ni suru = Hito o nattoku saseru yóo ni hanasí o suru* 'He tells his tale so that people will understand it'. And then there are examples of "gapping" that result from an obvious ellipsis: *Bú-kími na seizyaku ga nó o [tutúnde] mori o tutúmi, hirogatte yuku* 'An eerie silence spreads, enveloping the fields, the forests' (SA 2688.44b—a free translation from Rachel Carson's "Silent Spring").

48a. An example of impersonal epithematic Id: *Tosí ǵoto ni | ninki ga | takamátte kíte orimásul keiba desu ga || ...* 'Horse racing is growing in popularity every year' (R).

3.11.1. Multiple surface-objects.

The sentences mentioned just above involve more than one underlying sentence. Other examples result from the application of conversions that affect the underlying sentence AS IF it had been combined with some other underlying sentence—perhaps of a more abstract sort. The sentence *Senséi ni tegami o káku* ‘I will write a letter to the teacher’ contains a single beneficiary,⁴⁹ but an additional one can be added when you apply the FAVOR conversions (§ 10) to create *Gakusei ni senséi ni tegami o káite ageru* ‘I will write a letter to the teacher for the student’. And in theory, at least, such beneficiaries can be multiplied without limit, since the giving and receiving of favors constitute a recursive device in Japanese: *Tomodati ni gakusei ni senséi ni tegami o káite agete morau* ‘I will have a friend do me the favor of writing a letter to the teacher for the student’, *Tití ni tomodati ni gakusei ni senséi ni tegami o káite agete moratte ageru* ‘I will do my father the favor of letting a friend do him the favor of writing a letter to the teacher for the student’, etc., etc., though the sentences grow as clumsy as the English translations indicate.

The causative conversion will normally mark the agent of the underlying sentence with the object marker *ó* unless there is an *ó*-phrase already in the underlying sentence; in that event, *ni* is preferred to mark the underlying agent but *ó* is sometimes used. This leads to sentences such as (?*)*Gakusei o senséi o mataséru gakkoo da* which means either ‘It is a school that makes teachers wait for students’ (= *Gakusei o senséi ni mataséru gakkoo da* ← *Gakusei o senséi ga mátu* ‘Teachers wait for students’) or ‘It is a school that makes students wait for teachers’ (= *Gakusei ni senséi o mataséru gakkoo da* ← *Gakusei ga senséi o mátu* ‘Students wait for teachers’).⁵⁰ Such examples seem to be somewhat more common when the *ó*-marked phrase of the underlying sentence represents a place departed from or traversed, i.e. when the verb is a quasi-intransitive (or intransitive motion) verb: *Hikóo-ki o anzen ni Haneda o tataséru tamé ni ...* ‘For the purpose of permitting airplanes to take off safely from Haneda’; *Yóru no háiuée o káre wa kuruma o hasiráseta* ‘He sped his car down the night(-darkened) highway’ (Okutsu 1967); *Kodomo o bénti o tatáseta* ‘We had the child get up from the bench’; ...

Since it is possible to have a traversal object with a TRANSITIVE motion verb, we face the prospect of finding two *ó*-marked phrases used as adjuncts for a single verb—one to mark the affected object and one to mark the traversal object. Such sentences will not turn up often (at least not in print) because usually one or the other of the objects (if not both) is usually backgrounded with *wá* or foregrounded with *mó*, and these focus markers normally require suppression of the marking of the subject-object distinction. But we would have to assume that such sentences are grammatical in order to account for the actual sentences with *wá* and *mó* even if we could not find them. This is how an example can be built up to win acceptability:

Sono nímotu WA || éki kara | hóteru no aida O | zitén-sya(¯) de | hakonda ‘The luggage, I took by bike the distance from the station to the hotel’.

Sono nímotu O || éki kara | hóteru no aida WA || zitén-sya(¯) de | hakonda ‘The distance from the station to the hotel I took the luggage by bike’.

Sono nímotu O | éki kara | hóteru no aida O || zitén-sya(¯) de | hakonda ‘(What I

49. I use the term loosely.

50. But many speakers will reject such sentences, feeling uncomfortable with all examples of *N o VT-CAUSATIVE* as an optional version of $\{N_2 o\} N$ ni VT-CAUSATIVE.

did to the luggage is) I took the luggage by bike the distance from the station to the hotel'.

A similar sentence: Sono nímotu o || rózi o || katúide | hakonda 'I shouldered the luggage down the lane'.

Now, since we can get another *ó*-marked phrase (in place of the optional but preferred *ní*) to serve as the underlying agent of a causativized sentence, it is possible to create a sentence with three direct objects in its surface structure: (?)Musuko O (= ni) sono nímotu O rózi O katúide hakobaseta 'I had my son shoulder the luggage down the lane'. But many speakers will reject this sentence for the reasons explained in the preceding footnote; and in any event it is unlikely that a speaker would let this sentence come out without first applying focus (*wá/mó*) to one or more of the other *ó*-phrases if he chooses the option of *ó* for the first adjunct.

The readiest examples of this sort of thing involve those transitivity doublets (§4.6) which present a morphological relationship between a quasi-intransitive verb and a transitive verb of motion that parallels the regular causative formation: (?) Nímotu o || kawá o watasu 'He takes the luggage across the river'—cf. Umá o || kawá o || wataraseru 'He lets/makes the horse go across the river'; Sonna hitó o || kono máe o || tóosite wa | ikenai 'You shouldn't let such a person pass in front of us'—cf. Umá o || gakkoo no máe o | tooraséru 'He lets the horse pass in front of the school'.

An example such as Tegami o || sáakuru no | náka o | mawasite yómu 'We will read the letter circulating it around the circle' might be given a different interpretation 'passes [something] around the circle and reads the letter' (= Sáakuru no náka o mawasite tegami o yómu) but that is not what is intended. Mikami (1963.109) cites the literary-flavored example Túmi omoki monó o ba kubi o kíru 'Those with heavy crimes will have their heads cut off'.

Very occasionally two *ó*-marked direct objects are put in apposition, as in Náni o báka na kotó o itte 'rú n da ná 'What nonsense are you talking?!' (Okitsu 1.251).

3.11.2. Multiple surface-subjects; the "genitive" as a surface phenomenon; genitivization; kinds of genitives

A number of Japanese sentences come to the surface with more than one "subject", i.e. the predicate seems to have two or more adjuncts marked with the particle *gá*. And many other sentences contain a structure N_1 wa/mo N_2 ga in which the focus-marking with *wá* or *mó* can be taken back to an underlying *gá* in a sentence of the same kind. These sentences fall into four major classes, three of which we have already examined:

(1) Those with possessive and quasi-possessive predicates (§3.5) have the grammar *dáre* NI/GA *náni* GA ... 'possessor ... possessed'. This includes *áru* 'possesses' (= *dáre* ga *náni* o *mótu*), *ir-u* 'needs' (= *dáre* ga *náni* o *yoo-súru*), *wakáru* 'understands' (= *dáre* ga *náni* o *rikai*(-) *suru*), *dekíru* 'can do' (= *dáre* ga *náni* o *si-éru/-úru*), *miéru* 'can see' (= *dáre* ga *náni* o *mi-éru/-úru*), *kikoeru* 'can hear' (= *dáre* ga *náni* o *kiki-éru/-úru*), and the regularly formed potentials in *-rare-ru* and *-[ar]e-ru* (§4.4); *nái* 'lacks' (= *dáre* ga *náni* o *motánai*), *óói* 'has lots' (= *dáre* ga *náni* o *takusáñ* *mótu*), *sukunái* 'has little' (= *dáre* ga *náni* o *sukósi* *sika* *motánai*), *hituyoo da* 'needs' (= *dáre* ga *náni* o *yoo-súru*). The double-subject version of such sentences seems to be the result of a blend between the expected surface grammar found in the alternative version (*dáre* NI *náni* GA ...) and the grammar of the underlying semantic structure as seen in the paraphrases (*dáre* GA *náni* O ...).

Apparently what has happened is this: the underlying semantic subject is retained in the surface structure, while the underlying semantic object is converted to subject marking by the originally intransitive nature of the Japanese predicates that were coopted to express possessive meanings. (On the analysis of N_1 ga N_2 ga A as containing a genitive, see Frei 1939.)

(2) Those with desiderative and quasi-desiderative predicates have the grammar *dáre GA náni GA/O ...*. These include *si-tai* 'wants to do' etc.; *sukí da* 'likes', *kirai dá* 'dislikes', and *iyá da* 'dislikes'. On the difficulties of eliciting *náni o* with the latter two and with *hosíi* (= *ari-tái*) 'wants to have'—owing to the intransigent intransitivity of *áru* in ITS surface grammar—see §3.5. In these sentences the underlying (= semantic) object is optionally converted to a surface subject, under the influence of the surface grammar of the adjective and adjectival noun. Similar to the desiderative is the FACILITATIVE (§9.1.8)—with a few additional subject-conversion options.

(3) Cathetic adjectives and adjectival nouns such as *kowái* 'is afraid' have the grammar *dáre GA náni GA ...* 'experiencer [feels an emotion toward] the stimulus'. See §3.5a.

The sentences accounted for in the above listing can include only two such surface "subjects" and for the first two types there is an alternative marking: in the possessive sentences the underlying subject can be marked with *ní* (as if dative or locative), in the second type the underlying object can be marked with *ó* (as expected). In the fourth type, now to be discussed, it is possible—at least in theory—to have any number of surface subjects, but certain semantic constraints obtain; a consideration of these constraints will help to explain the sentences. We begin by considering sentences with only two subjects since the larger structures can be explained in the same terms.

The classical example is from the title of Mikami's book *Zóo wa hana ga nagái* 'The elephant has a long nose (= trunk)'. This sentence is to be immediately derived from *Zóo ga hana ga nagái* 'The ELEPHANT has a long nose' either in answer to the question *Dáre* (or *Náni*) *ga hana ga nagái* 'Who (or What) has a long nose?' or when adnominalized as in *Zóo ga hana ga nagái kotó ...* 'The fact that the elephant has a long nose'. Focus can be applied to either adjunct or to both:

- (1) *Zóo ga hana ga nagái* 'The ELEPHANT has a long nose'.
- (2) *Zóo wa hana ga nagái* 'The elephant has a long nose'.
- (3) *Zóo mo hana ga nagái* 'The elephant too/even has a long nose'.
- (4) *Zóo wa hana wa nagái* 'The elephant has a LONG nose [but a SHORT tail]'.
- (5) *Zóo mo hana wa nagái* 'The elephant too/even has a LONG nose'.
- (6) *Zóo ga hana wa nagái* 'The ELEPHANT has a LONG nose'. (?)
- (7) *Zóo ga hana mo nagái* 'The ELEPHANT has even/also a long nose'.
- (8) *Zóo wa hana mo nagái* 'The elephant has even/also a long nose'.
- (9) *Zóo mo hana mo nagái* 'The elephant also/even has also/even a long nose'.

Under an elliptical interpretation Sentence (9) could mean 'Both the elephant and the nose are long' (= *Zóo mo nágakereba hana mo nagái*) or even 'Both the elephant and the nose have long ones' (= *Zóo mo sore ga nágakereba hana mo sore ga nagái*) or—as seen below—'Someone has both big elephant and big nose' (= *Dáre ka wa zóo mo nágakereba hana mo nagái*) etc.

But there is another set of sentences that can result:

- (1a) *Hana ga—zóo ga nagái* 'It's the elephant (who) has a long NOSE'.
- (2a) *Hana wa—zóo ga nagái* 'It's the elephant (who) has a long nose'.

(3a) Hana mo—z^oo ga nagáí 'It's the elephant (who) has a long nose too/even'.

(4a) Hana wa—z^oo wa nagáí 'It's the elephant (who) has a LONG nose'.

(5a) Hana mo—z^oo wa nagáí 'It's the elephant (who) has a LONG nose too/even'.

(6a) Hana ga—z^oo wa nagáí 'It's the elephant (who) has a LONG NOSE'.

(7a) Hana ga—z^oo mo nagáí 'It's the elephant too/even (who) has a LONG NOSE'.

(8a) Hana wa—z^oo mo nagáí 'It's the ELEPHANT too/even (who) has a long nose'.

(9a) Hana mo—z^oo mo nagáí 'It's the ELEPHANT too/even (who) has a long nose too/even'.

Sentences (1a) through (9a) are to be regarded as thematizations, with and without attention focus. Sentences (1) through (9) can also be said with thematization, simply by putting a major juncture after the first phrase (referring to the elephant)

(1b) Z^oo ga—hana ga nagáí 'The elephant, HE has a long nose'.

(2b) Z^oo wa—hana ga nagáí 'The elephant, he has a long nose'.

(3b) Z^oo mo—hana ga nagáí 'The elephant too/even, he has a long nose'.

(4b) Z^oo wa—hana wa nagáí 'The elephant, he has a LONG nose'.

(5b) Z^oo mo—hana wa nagáí 'The elephant too/even, he has a LONG nose'.

(6b) Z^oo ga—hana wa nagáí 'The elephant, HE has a LONG nose'.

(7b) Z^oo ga—hana mo nagáí 'The elephant, HE has even/also a long nose'.

(8b) Z^oo wa—hana mo nagáí 'The elephant, he has even/also a long nose'.

(9b) Z^oo mo—hana mo nagáí 'The elephant even/also, he has even/also a long nose'.

With thematization the only thing that protects such a sentence from ambiguity is the semantic relationship between the two nouns: elephants have "noses" but noses do not, in ordinary parlance, have elephants. (Situations can always defy rules, of course: if you paint an elephant on your nose, the nose will then possess an elephant—of sorts.) And this seems to be the key to the structure: some sort of POSSESSIVE sentence is built in. We can think of the underlying structure as consisting of two sentences at a deeper level: Z^oo ni/ga hana ga áru 'The elephant has a nose' and [Sono] hana ga nagáí '[The] nose is long'.

How these two deeper sentences are combined in the "double-subject" sentence will be discussed in a moment. But first let us consider the fact that the "possessive" relationship between N₁ (possessor) and N₂ (possessed) is not the only kind that may obtain in such a sentence; the other relationships are similar in corresponding to a structure N₁ n^[r] N₂ in which the n^[r] can be treated as a GENITIVE case marker, with the understanding that in Japanese as in many languages the "genitive" case covers considerably more ground than mere possession. The relationships that lead to the "double-subject" sentences do not obtain, however, in ALL instances of N₁ n^[r] N₂; suppose we class as "genitive" just those instances of n^[r] where such a relationship DOES obtain, treating the other instances of n^[r] in other ways—for example, as the adnominalized form of the copula (the essive ní + the auxiliary áru) in IDENTIFICATION and PROPREDICATION (§3.10). But, exceptionally, we may wish to treat as a genitive the Objectival Genitive (Type 7) listed below, even though it does not lead to double-subject sentences; see below (p. 262) for a different treatment.

In this sense of genitive, we find the following types of relationship marked (cf. KKK 23.131):

(1) possessor–possessed (Possessive Genitive):

(1a) inalienable (body, body parts, spirit, kin, ...):

Zóo no hana (ga nagái) : Zóo ga hana ga nagái 'The elephant has a long nose'.

(1b) alienable:

Zóo no haná (ga sirói) : Zóo ga haná ga sirói 'The elephant has a white flower'.

(2) wider scope–narrower scope (Scope-narrowing Genitive):

(2a) partitive (whole–part):

Hana no aná (ga ookíi) : Hana ga aná ga ookíi 'The nose has large nostrils'.

Ié no yáne no kawara (ga utukusíi) : Ié ga yáne ga kawara ga utukusíi 'The house has a roof that has beautiful tiles'.

(2b) specificative (general–specific, type–token, class–member):

Kuruma no kogata (ga keizai-teki da) : Kuruma ga kogata ga keizai-teki da 'Of cars the small types are more economical'.

(3) characterized–characteristic (Attributive Genitive):

(3a) underived attribution (attributee–color, smell, taste, look, size, repute, status, occupation, origin, basis, ? purpose, limit, number, ? price, ? age, health, feel, ...):

Kawara no iró (ga utukusíi) : Kawara ga iró ga utukusíi 'The tiles have a beautiful color'.

(3b) derived attribution (coming from adjective or adjectival noun):

Iró no utukúsi-sa (ga itizirusíi) : Iró ga utukúsi-sa ga itizirusíi 'The color has a striking beauty (about it)'.

(4) location–located (Locative Genitive):

(4a) place–located:

Koko no miti (ga kitanái) : Koko ga miti ga kitanái 'This place has filthy streets'.

(4b) time–located (relative time only?):

Háru no haná (ga utukusíi) : Háru ga haná ga utukusíi 'Spring has (= brings) nice flowers'.

(5) subject–predicate (Subjectival Genitive):

(5a) intransitive subjectival—with intransitive verbal nouns, nouns derived from intransitive infinitives or from adjectival nouns, certain nominalizations (A/AN/VI + kotó, ...):

Zóo no sanpo (ga osoi) : Zóo ga sanpo ga osoi 'The elephant has a slow stroll = The elephant's stroll is slow'.

(5b) transitive subjectival—with transitive verbal nouns, nouns derived from transitive infinitives, certain nominalizations (VT + kotó, ...):

Sizin no kenkyuu (ga muzukasíi(⁻))₁ : ??Sizin ga kenkyuu ga muzukasíi(⁻)₁ 'The poet has a difficult study (that he is doing)'.

(6) producer–product (Effective or Creative Genitive):

Sizin no hón (ga omosirói) : Sizin ga hón ga omosirói 'The poet has an interesting book (that he has written)'.⁵¹

51. This takes hón as a creative product; if it is merely taken as an object, the sentence can be interpreted as a possessive genitive 'The poet has an interesting book (in his possession)' or as an adnominalized proredication 'The poet has an interesting book (to sell, that he has bought, that he was talking about last night over sherry after the large dinner party at my wife's uncle's house in the country, etc., etc.)'.

(7) affected-process (Objectival Genitive)—with transitive verbal nouns, nouns derived from transitive infinitives, certain nominalizations (VT + kotó, ...):

Sizin no kenkyuu (ga muzukasii(¯))₂ : *Sizin ga kenkyuu ga muzukasii(¯)₂ 'The poet has a difficult study (done about him by someone)'.

Additional examples for various of the types will be found below.

The Possessive, Partitive, Locative, and Attributive Genitives (1–4 above) can be explained quite neatly in terms of ellipsis: the *gá* marks the possessor in a possessive sentence (*Zóo ni/ga hana ga áru* 'The elephant has a nose') that is adnominalized to the possessed, with obligatory dropping of *áru* in all instances EXCEPT those of alienable possession, where the dropping is optional. Whether *áru* is dropped or not, *gá* can be replaced by *nó* (under the process described in §13.1.5) and such replacement is, in fact, obligatory in colloquial Japanese—though not in the literary language—UNLESS the new predicate for the extruded noun (the possessed) is an adjective or an adjectival noun:⁵²

(1a) $Zóo \left\{ \begin{matrix} ni \\ ga \end{matrix} \right\} hana ga áru$ → *Zóo ni áru hana*
Zóo ga ǎáruǎ hana + ADJ, AN (But any pred in literary.)
Zóo no ǎáruǎ hana + ANY PRED
 'The elephant has a nose'. 'The nose that the elephant has ...'

(1b) $Zóo \left\{ \begin{matrix} ni \\ ga \end{matrix} \right\} haná ga áru$ → *Zóo ni áru haná*
Zóo ga ǎáruǎ haná + ADJ, AN (But any pred in literary, or if *áru* is not dropped.)
Zóo no ǎáruǎ haná + ANY PRED
 'The elephant has a flower'. 'The flower that the elephant has ...'

Note that the alienable possession permits a perfect, and the perfect form of *áru* (*átta*) is not to be omitted in the adnominalization:

(1c) $Zóo \left\{ \begin{matrix} ni \\ ga \end{matrix} \right\} haná ga átta$ → $Zóo \left\{ \begin{matrix} ni \\ ga \\ no \end{matrix} \right\} átta haná + ANY PRED$
 'The elephant had a flower'. 'The flower that the elephant had ...'

Under unusual circumstances, to be sure, any "inalienable" can be treated as an alienable possession; just as *Zóo ni/ga átta hana* 'the nose that the elephant used to have' suggests a somewhat odd but conceivable situation, so you might dream up a circumstance that would call for *Zóo ni/ga áru hana* 'the nose that the elephant happens to have in his possession right at the moment' (perhaps one of several papier-maché noses that have been distributed as playthings).

(2) $Yáne \left\{ \begin{matrix} ni \\ ga \end{matrix} \right\} kawara ga áru$ → ? *Yáne ni áru kawara*
Yáne ga ǎáruǎ kawara + ADJ, AN (But any pred in literary.)
Yáne no ǎáruǎ kawara + ANY PRED
 'The roof has tiles'. 'The tiles of the roof ...'

52. But a few VERBS are also allowed: *Senséi ga hyyooban ga ÓTITA* 'The teacher has fallen in repute'; *Kore wa Kanbun to Nihón-bun(¯) tó ga, kotobá no zyúnzyo ga TIGAÚ no o nán to ka Nihón thuu ni yómu tamé no kuhuu dáttá* 'This was a device to read somehow in Japanese fashion the places

- (3) Kawara $\left\{ \begin{matrix} ni \\ ga \end{matrix} \right\}$ iró ga áru → ? Kawara ni áru iró
 Kawara ga ǎáruǎ iró + ADJ, AN (But ...)
 Kawara no ǎáruǎ iró + ANY PRED
 'The tiles have color'.
 'The color of the tiles ...'
- ?(4a) Koko $\left\{ \begin{matrix} ni \\ ga \end{matrix} \right\}$ miti ga áru → Koko ni áru miti
 Koko ga ǎáruǎ miti + ADJ, AN (But ...)
 Koko no ǎáruǎ miti + ANY PRED
 'This place has streets'.
 'The streets that this place has ...'
- ?(4b) Háru $\left\{ \begin{matrix} ni \\ ga \end{matrix} \right\}$ haná ga áru → Háru ni áru haná
 Háru ga ǎáruǎ haná + ADJ, AN (But ...)
 Háru no ǎáruǎ haná + ANY PRED
 'Spring has flowers'.
 'The flowers of spring ...'
 Cf. the discussion of the
 "emphatic" gá on p. 65.

In this way we explain by a single mechanism (dropping of áru) four types of the "multiple-subject" sentences and the corresponding four type of genitives in both their colloquial (N_1 n_o N_2) and their literary (N_1 gá N_2) manifestations. Since the "multiple-subject" must be followed by an adjectival predicate, it is tempting to speculate that the dropping of the áru is triggered by the submerged áru that we assume to be a part of the inflectional forms of the adjective and the copula; the resulting formulation of obligatory ellipsis will look something like this (for the colloquial language):

$$N_1 \text{ gá } \text{ǎáruǎ} N_2 \text{ ga } \left\{ \begin{array}{l} A\text{-}\text{ǎkú}\text{-}\text{ár-}\text{ǎi} \\ AN \text{ n}\text{ǎi}\text{-}\text{ǎe}\text{-}\text{ǎfr-}\text{i}\text{ǎ} \\ \text{n}\text{ǎi}\text{-}\text{ǎfr-}\text{u}\text{ǎ} \end{array} \right. \begin{array}{l} = A\text{-i} \\ = AN \text{ dá} \\ = AN \text{ ná (when adnominalized)} \end{array}$$

Perhaps we should say that every adjective (and adjectival noun) has not only the meaning '(N₂) is A' but also the latent meaning '(N₁) has an N₂ that is A = (N₁) has an A N₂': kamí ga nagái means both 'the hair is long' and '(someone) has long hair'.

But what about the remaining types of genitive (subjectival and effective) and the corresponding multiple-subject sentences? And what about the Objectival Genitive that does not, apparently, have a corresponding multiple-subject sentence? For the agentive version of the subjectival genitive it is easy to assume ellipsis of the pro-verb suru 'does':

- (5a) Zóo $\left\{ \begin{matrix} ga \\ no \end{matrix} \right\}$ suru sanpo → Zóo ga {suru} sanpo + ADJ/AN IF SURU
 DROPS
 Zóo no {suru} sanpo + ANY PRED
 'The stroll that the elephant does ...'
 'The elephant's stroll ...'
- (5b) Sizin $\left\{ \begin{matrix} ga \\ no \end{matrix} \right\}$ suru kenkyuu → Sizin ga {suru} kenkyuu + ADJ/AN IF
 SURU DROPS
 Sizin no {suru} kenkyuu + ANY PRED
 'The study that the poet does ...'
 'The poet's study ...'

where classical Chinese and Japanese differ in word order' (Ōno 1966.205); ... Will all durative-stative verbs qualify?

This will work with most verbal nouns, but we may run into difficulties in individual instances. It is more difficult to derive the Effective Genitive, since there would seem to be ellipsis of the specific "verb of creation" (tukúru 'makes', káku 'writes', ...) called for by the "product". And the Objectival Genitive could not be derived by any sort of ellipsis that assumed nó to be a subject-marker. The most promising derivation for the Objectival Genitive is as follows:

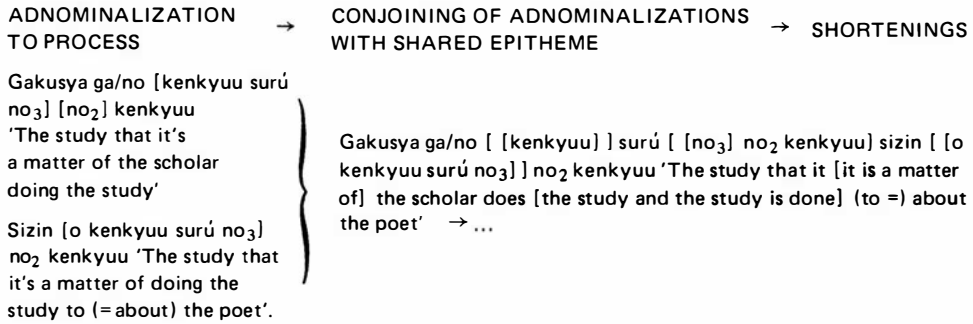

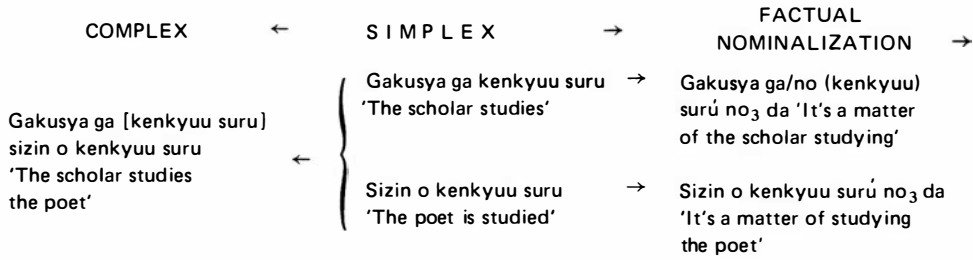

(5c) Sizin o kenkyuu suru 'studies the poet' → Sizin o kenkyuu surú no₃ da 'It is a matter of studying the poet' → Sizin [o kenkyuu surú no₃] no₂ kenkyuu 'the study of which it is [the matter of studying] the poet'.

That is, the underlying sentence (with or without an explicit agent but with the object) is nominalized by nó₃ 'fact' and the resulting sentence is then adnominalized (dá → nó₂ 'which is') to the extruded verbal noun, with the string ... ó VN surú no₃ obligatorily dropped. And the "objectival genitive" turns out not to be a genitive at all, as we have defined the term; instead, it is an adnominalization—to an extruded process expressed as a verbal noun—of a factual nominalization of a sentence with an expressed object. The /nó/ is not the genitive subject particle nó₁ (nor the pronoun nó₃) but the adnominalized copula nó₂. This could be regarded as a case of propredication, assuming an input sentence Sizin (o kenkyuu suru) with the parenthesized material "propredicated" with dá. That interpretation would save going through the factual nominalization.

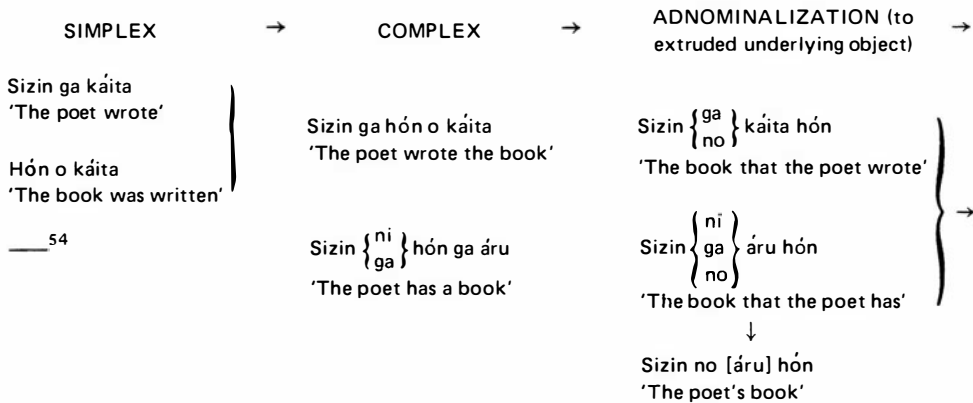

Notice that when the agent is expressed—and marked by gá, the pro-verb suru must be retained, yet must precede the underlying object: Gakusya ga sizin o kenkyuu surú no₃ da → *Gakusya ga sizin fo kenkyuu_‡ surú no kenkyuu → Gakusya ga surú^[1] sizin no₂ kenkyuu 'the study of poets done by the scholars'. (If surú is omitted, of course, the sentence is latently ambiguous; it could be interpreted as 'the poet who belongs to the scholar' if we grant that the acquisitive instincts of a scholar can lead to his owning a poet.)

This placement of suru offers support for our earlier notion that a "full" sentence is a complex of one or more simplexes (= adjunct-plus-predicate) with shared nucleus.⁵³ If we start from two simplexes with the same nucleus but unjoined and then, by way of factual nominalization, adnominalize each to the same epitheme (the process), we can lastly conjoin the two adnominalizations leaving suru in the proper place. The proposed derivations are shown in the following chart, where ordinary brackets indicate an ellipsis that is obligatory AT THAT STAGE and double brackets are a reminder of ellipsis at earlier stages:

53. But elsewhere I use the term "simplex" to refer to any sentence that has not undergone a conversion and thus include what is here called the "complex" (= a predicate with adjuncts up to a full array of case valences).

The Effective Genitive requires some sort of input sentence that will include a representative of the specific creative process that would lead to the particular product represented by N₂, unless we wish to posit an undifferentiated CREATION verbal of a more abstract nature. In order to account for the multiple-subject sentences that correspond to the Effective Genitive, I propose a derivation that includes áru:

CONJOINING OF ADNOMINALIZATIONS

Sizin {^{no}_{ga}} {káita} [sizin {ⁿⁱ_{ga}
_{no}} áru] hón
 'The book that the poet [wrote and that the poet has] = The poet's book [that he has written]'

54. Remember that possessives are complex to begin with.

A somewhat more sophisticated view of the preceding derivation might include an application of V-te áru as POSSESSIVE RESULTATIVE (i.e. 'the poet has written the book and that is part of the experience he possesses'); the semantic fit would be comfortable with something of that sort, but I have not worked it out. See §9.2.4.(2) for the necessary information.

The examples cited above contain only two surface subjects each, but they can be expanded by embedding genitives within genitives (of either the same or a different kind), so as to arrive at sentences with multiple subjects such as these: Dáre ga dóko ga guai ga warúi 'Who has got what part of him ailing?'; Kono zyunban wa dóre ga tugoo ga ii desu ka ná 'Which of these turns would be best?'; Mukoo no ié wa, yáne wa, kawara wa, iró ga utukusii 'The house across the way has a roof with tiles of a beautiful color' (Mikami 1963c.105). And, with the possessor epithematized: Sikási, né ga hito ga ii otokó na no de, ... 'But he is a man with at heart a good nature ...' (Nagano 1966.75) ← [sono] otokó ga né ga hito ga ii (as the immediate source).

Unlike colloquial Japanese, Literary Japanese does not require that nó replace gá when genitives are reduced in nominal phrases taking verbal predicates; N₁ ga N₂ is the normal literary possessive genitive, and that is the source of the modern adnoun wá-ga 'our' from the old pronoun wá[nu] = wáre 'I'. The genitive gá is also found in clichés and place-names such as Oni-gá-sima 'Devils' Island', Kasumi-gá-ura ('Bay of Mist'), Kasumi-gá-seki ('Checkpoint of Mist'), etc., where it represents other genitives such as the attributive.

One colloquial expression that can be explained as a relic of the literary genitive is number + ga tokó [da] 'it is the extent/level of ...' as in hyakuen ga tokó da 'it is a hundred yen('s worth)', hyak^[t]gozyúu-en ga tokó^[t] no esá(-) 'a hundred and fifty yen's worth of bait' (KKK 25.74b). The expression as a whole is often directly adverbialized (as a number alone would be). Thus Kenkyusha's Satóo o zyúuen ga tokó^[t] o-kure 'Give me ten yen's worth of sugar' and these more recent monetary examples: Kono yasu-de na zubon daké de, iti-niti^[t] niokú-en ga tokó^[t] kasegi-dasu ... '... (who) starts to earn two hundred million yen a day from these cheap pants alone' (SA 2668.37d); ... watasi wa nihyakuman-en ga tokó^[t] són sitimau [= site simau] yó 'I'll end up losing a couple of million yen' (SA 2679.27a).

In the following example húruki ga represents a literary genitive made on a direct nominalization of the adjective literary attributive; húruki ga utí corresponds to the more colloquial hurúi no no utí(-) 'among the old-fashioned ones': Húruki ga utí(-) ni mo hurúi onná ni wa, ... 'For a woman who is the most old-fashioned of the old-fashioned ...' (Fn 278a).

When you run across a genitive in the form N no^[t] (N₂) you may be uncertain whether the given form is really a genitive (and thus, presumably, equivalent to the literary N ga) or whether it is an adnominalization of N da. Nor is it always obvious just what kind of a genitive may be present. In Hutarí no ko no titioya [da] 'He is the father of two children' (SA 2688.29d) we will want to say that titioya is an epithematized genitive 'the father who it is [the case that he has] two children', deriving the adnominalization from something like hutarí no ko [ga áru] no da 'it is the case that he has two children', rather than treat the father as an inalienable possession (by kinship) of the children, i.e. derive the

sentence from *Hutarí no ko ni/ga titioya ga áru* 'The two children have a father', though under some contexts the latter interpretation ('the two children's father') might be preferable. In *san-nín no ko-moti* 'the parent of three' our surface grammar results from an object-incorporating lexicalization of the sentence *san-nín no ko o mótu* 'has three children', as explained—along with other perplexing genitives—in §3.8a. In *Kodomo no háha e no sittó(-)* 'Jealousy of the child toward his mother' (SA 2684.120cd), the first *nó* is a subjectival genitive that derives from *kodomo ga sittó(-) suru* 'the child displays jealousy'; from the surface form alone we cannot exclude the meaning '[someone's] jealousy toward the child's mother', but that was not the intention of the context from which the example was drawn.

Before a consonant the vowel of *nó* will sometimes optionally drop, as in *boku n[ó] tokoro* 'my place' (cf. *boku n[ó] u]ti* 'my house' with more drastic reductions); after a final *-n* the dropping of the vowel will necessitate further reduction to nothing at all, since the sequence *-nnC-* is not permitted: *ókusan [no] tokoro* 'madam's house'. But sometimes you will come across an ellipsis of the genitive *nó* that is not to be explained in that way: *sikyokú-tyoo [no] | taku ni denwa o site* 'making a phone call to the residence of the branch manager' signals the ellipsis by a minor juncture before *taku* 'residence' when read aloud, but if you see it in print you might mistakenly take it for a compound noun **sikyokutyoo-taku* or **sikyokutyoo-taku* if you were unaware that compound nouns of that particular type do not occur in the standard language.

In Alfonso's interesting example *Sono matí e ikú ni wa básu sika norimono ga arimasén* 'To get to that town there are no vehicles but buses' (731) we have an inversion of a specificative genitive (*norimono ga básu ga áru*) apparently triggered by the *sika*-focus applied to the specimen, which is extruded and, it would seem, thematized. Here is another example, in which *gá* has been replaced by *nó* under adnominalization of the structure (and that adnominalization casts doubt on the notion that the *sika*-focused adjunct is actually thematized): *Omake ni, mukasi wa nóogyoo sika sangyoo no nákatta toti ni booseki-kóozyoo made dékite imásu* 'In addition, on land that once had only agriculture in the way of industry there now stands a textile factory' (SA 2684.141cd).

This inversion would appear to be limited to specificative genitives that are functioning both as the specified (general, type, or class) for a specifier (instance, token, or member) and as the possessed or the existent in the matrix sentence: *norimono ga(/wa) básu ga áru* 'of vehicles there are buses' + *norimono ga áru* 'there are vehicles'. Instead of choosing to invert, you can subdue the specified: *norimono wa básu sika arimasén* 'of vehicles there are only buses', *sangyoo wa nóogyoo sika nákatta toti* 'land that, for industry, once had only agriculture'. These are subdued (and thematized?) genitives.

ADDITIONAL EXAMPLES OF GENITIVE TYPES

(See also thematized genitives, pp. 267–71.)

(1a)–(2b) Examples sought.

(3a) *Watasi ga mibun ga gakusei desu* 'I have the status of student'; *Kono ryokák[ú]-ki ga kassoo-kyóri ga mizikái desu* 'This airliner has a short taxiing distance'; *? Ore ga syabétta no ga náni ga warúi* 'What's the matter with my having spoken?'

(3b) Examples sought.

(4a) Húzi-san ga yukí ga tokénai 'The snow on Fuji doesn't melt'.

(4b) Nigatú ga óndo ga hikúí 'February has low temperatures'; Ítu ga tugoo ga íi 'When would it be convenient for you?' (= Ítu no tugoo ga íi). But the following example probably belongs with the stylistic peculiarity of the "emphatic GA" (p. 65): Sono zíbun(¯) ga tabémónó ga móttó-mo hóohu(¯) de átta [= hóohu(¯) dátta tokí da] 'That was the time when food was most abundant'.

(5a) Gakusei ga yasumí ga óói 'Students take a lot of cuts' from gakusei ga yasúmu; ... kuni no kétúí no arawaré desu 'it is an expression of the government's determination' (SA 2649.44e) from kétúí ga arawaréru; ... monó^[1] no kangae-káta no omosíró-sa o siru kotó ga dekíru 'you can find out the pleasure of thinking about things' (SA 2650.93b) from kangae-káta ga omosírói (the first phrase is an objectival genitive, from monó o kangáeru). ... kane no hósí-sa 'the desire for money' (KKK 3.171)—immediately from kane ga hosii 'desires money'; ... káre no kaerí o mátu kotó ni sitá ga, ... 'we decided to await his return but ...' (KKK 3.169)—from káre ga káeru 'he returns'; ... áka-tyan no hatuiku ni hituyoo na séibun ga ... 'ingredients necessary for the baby's growth' (KKK 3.169)—from áka-tyan ga hatuiku suru 'the baby grows'.

(5b) ... sono máe ni isya no sinsatu o úkete ... 'before that has a doctor's examination' (KKK 3.169) from isya ga [karada o] sinsatu suru 'the doctor examines [one's body]'; ... Amerika no Nihón ni tai-súru híhan(¯) wa ... 'America's criticisms of Japan' (SA 2685.24c).

(6) Examples sought.

(7) ... zyettó-ki no nottori[-ziken] 'the hijacking of a jet plane' from [káre-ra ga] zyettó-ki o nottóru '[they] hijack a jet plane'; ... sugúreta i zyúsya de átta ¯rasii || ónsi no | sóhu no || gakúmon no | si-kata ga ... 'the research methods of his grandfather and teacher, who seems to have been an outstanding Confucianist ...' (SA 2650.93c) from gakúmon o suru—the ^[1] of ónsi ^[1] is the copula (= de áru), the ^[1] of sóhu ^[1] is either the subjective genitive (from sóhu ga gakúmon o suru) or the possessive genitive (from sóhu ni áru gakúmon from sóhu ni/ga gakúmon ga áru).

There is a structure of iterated number word with the first occurrence followed by *ga* as in *san-nin ga san-nin* 'all three people', *zis-satú ga zis-satú* 'each of the ten volumes', *súbete ga súbete* 'each and every one', etc., that I would account for as a possessive sentence reduced to form a literary genitive (specificative): *san-nin ga {áru} san-nin* 'the three people that possess three people'. The expression as a whole works as a number, and it is often directly adverbialized as are other quantity nouns. Examples: ... *watakusí-ritu no san'in de syussan surú no wa zénbu ga zénbu to itte yóí hodo, máda kekkon site inai hahaoýá-táti de aru* 'Virtually all of those giving birth in private maternity hospitals ... are unmarried mothers' (SA 2655.42); *Itte mireba, minná ga minna, Kárayan no hoohoo o súite iru tó wa kagiránai si ...* 'It does not necessarily follow that, so to speak, just everyone is fond of Karajan's methods' (SA 2666.105d); ... *zénbu ga | zénbu || sóo de wa | náí* 'not all of them are like that' (SA 2655.133d); ... *zenpóo(¯) o yokogíru tyoozyuu-tyúugyo no íssái ga íssái o hitó-nomi ni site simaú no da ga* 'it [the pike with its mouth] swallows up every single living thing ["bird, beast, insect, or fish"] that crosses its path' (SA 2666.85a).

The expressions *zyúu-nin ga zyúu-nin* 'ten people out of ten' and *hyakú-nin ga hyakú-nin* 'a hundred people out of a hundred' are used to mean 'everyone, all of them': *Eiga(¯)*

ni hazímete utútta hitó wa, zyúu-nin ga zyúu-nin sóo desu né 'Everybody is like that on first being filmed in a movie' (Tk 2.140a); Soryaa hookoo-nin no kotó desu kara, syúzin o yóku iu nánte monó wa, hyakú-nin ga hyakú-nin arimasén ya 'It is a question of servants (being servants) so you won't find all of them speaking well of their masters' (Fn 205b).

We can compare such archaic expressions as NUMERAL ga mono (Meikai kogo jiten 204c) meaning 'approximately', as in the Chikamatsu example zyuugo-roku ga mono utte kure 'sell me about fifteen or sixteen', or 'price(d)' as in the Saikaku example 580 ga mono siro nasite 'pricing it at 580'. Cf. tó^[j] iu monó 'a matter of' (§21.1). An archaic equivalent of N to tómo(一) ni 'together with' is N no/ga muta. For such expressions as gó-nen ga zyúu-nen de mo 'whether five years or ten years', see pp. 249–50. Note also N tó^[j] iu N '(each and) every N', §21.1.

Somewhat similar are such expressions as íma ga íma 'right now' (=tyoodo íma) and íma ga ima-máde 'up to this very moment'—usually treated as idioms (p. 39: gá 26). Of like structure is kyóo ga kyóo made 'up to this very day'; but there is no *kyóo ga kyóo 'this very day' without máde. The expressions with máde will allow nó to replace gá: íma no ima-máde, kyóo no kyóo made, but not (under normal circumstances) *íma no íma or *kyóo no kyóo. There are also the expressions kyóo-ga/no-hi made 'up to this very day of today' (but not without máde) and asú-ga/no-hí 'the very day of tomorrow'. Asú-ga-hí mo 'even the very day of tomorrow' is pronounced either /asúgahimo/ or /asugahimo/, and asú-no-hí mo is pronounced either /asúnohimo/ or /asunohimo/. But in standard Japanese, despite such expressions as sui-yóobi no hí 'the day of Wednesday', you will not find *ototói ga/no hí. *kinóo ga/no hí, *asátte ga/no hí, nor *siasátte ga/no hi. Kyóo 'today' will not permit kono 'this' to modify it directly, but kono kyóo-ga/no-hi made is acceptable. There is also sore ga tamé [ni], equivalent to sono tamé ni 'for that reason' and 'for the sake of that' or (= sore no tamé ni) 'for the reason that it is that'.

3.11.3. *Thematization and focus of extruded genitives and of truncated possessives.*

We have described the following sentences as containing a thematization:

(1b) Zóo ga—[sono] hana ga nagái 'The elephant, HE has a long nose'.

(2b) Zóo wa—[sono] hana ga nagái 'The elephant, he has a long nose'.

(3b) Zóo mo—[sono] hana ga nagái 'The elephant too/even, he has a long nose'.

What is thematized in these three sentences is the EXTRUDED GENITIVE (Zóo ga ㇰáruㇰ), with and without focus.

Since we consider thematization and focus as two distinct processes, it is not always apparent whether a given sentence, especially a WRITTEN sentence, is to be interpreted with or without thematization. Most foreigners go by a rule of thumb something like this: Assume thematization if wá is present, assume no thematization if gá is present, and avoid the issue if mó is present. But that is obviously too simple. A better approach would be to look for some sign of juncture—such as a comma—that likely signals a theme regardless of the particle marking, especially if what precedes the comma is NOUN + PARTICLE followed by ADVERB to constitute a double theme: sore wa kyóo, ...; kore mo íma, ...; tegami o móo, ...; etc. Even without such a signal, you must assume thematization if there is an anaphoric reprise:

Zóo wa/mo SONO hana ga nagái 'The elephant, ITS nose is long'.

In other situations you should be prepared to suspend judgment. Certain kinds of sentences, however, will favor an interpretation of the first element as theme, provided it is focused (*wá/mó*); among these are the double-subject sentences which underly the genitives.

Let us examine sentences which would seem to have this kind of thematization—for the most part with backgrounding of the first member (the "possessor" etc.) though some will show foregrounding. You will notice that focus (and/or thematization?) will free the second noun phrase of N_1 ga $\text{fáru}\ddot{\text{z}}$ $N_2 \rightarrow N_1$ wa/mo N_2 to take any predicate; it need not limit itself to serving as subject for an adjective or an adjectival noun (or an idiomatically used verb). Those restraints apparently disappear along with the *gá*. The examples are classified according to the scheme in the preceding section, but there are a number of problems, some indicated by question marks before the examples and others taken up at the end.

EXAMPLES OF SENTENCES CONTAINING THEMATIZED GENITIVES

(1a) *inalienable possessive*: Hebi wa karada ga nagái 'The snake has a long body'; Anó-hito wa mé ga ookii 'He has large eyes'; Watasi wa así ga itái 'I have a sore foot'; Watasi wa karada ga moeru yóo desu 'I feel my body burning'—the predicate is adjective nominal (... yóo desu); Súgu ni, atamá ni hootai o sita Toyosima zyootóo-hei no súgata ga watasi wa mé ni ukanda 'At once the figure of Private First Class Toyoshima with his bandaged head floated before my eyes' (V 71 from Hino Ashiheii)—the three themes are transitional ('at once'), subjectival ('the figure ...'), and subdued genitival (watasi wa 'my'); Kóo-si wa ókusan ga nyuuin tyuu desu 'Mr Kō's wife is in the hospital' or 'Mr Kō has his wife in the hospital'; Kono hutarí wa hahaoya ga onazi de, ... 'These two had the same mother and ...' (Ōno 1966.99); Káre wa ki ga kuzíketa 'He was discouraged (in spirit)'; Watasi wa nán da ka ki ga susumanákatta 'I somehow felt unwilling to do it'; Zisyu-zémi wa ... soozoo suru tika⁽⁻⁾rá o tukútte iku kotó ga nerai desu 'The undirected seminar has as its aim to build up the power to create ...' (= Zisyu-zémi no nerai wa ... kotó desu).

(1b) *alienable possessive*: Watasi wa ié ga tiisái 'I have a house that is little'.

(2a) *partitive*: Kiso-gawa wa mizu ga tumetai 'The Kiso River has cold water'; Kore wa tásika ni búnsyoo ga warúi n desu 'The sentences are definitely wrong in this'; Tooan wa⁽⁻⁾ san-ban ga matigái desu 'The answer sheet has a mistake on No. 3'; ... uti⁽⁻⁾ no asá-syoku [= asamesi = tyoosyoku] mo o-kazu ga nattóo daké to iu kotó de ... 'all we had to go with the rice for breakfast at our house was fermented soybeans, so ...' (R); Ikeda-náikaku wa watasi ga kooséi-syoo desu 'I am [the Minister in charge of] the Welfare Ministry in the Ikeda Cabinet' (= ... kooséi-syoo wa watasi desu); ICU no kyooiku-kúiki wa syúui ga kóozi yoo no totan de kakomarete iru 'The ICU education areas are surrounded by metal construction fences' (SA 2676.35b); Dá ga, móo kane wa densyá-tin sika nákatta 'But now I had no more money than carfare' (Ig 1962.69)—kane no densyá-tin 'the carfare part of the money' seems to be what was intended; Okyakusan, Sibuya wa [soko no] dono-hen desu ka 'What part of Shibuya do you want, sir?' (SA 2641.54a—taxi driver speaking); Koo iu búraku no hitó-tati wa, ima-máde isya ni kakátta kotó no náí no ga dai-búbun de aru 'The majority of the people in this village have yet to see a doctor' (Mikami 1963.121) = ... hitó-tati no dai-búbun wa ... náí no da; Rokugatu⁽⁻⁾ syózyun⁽⁻⁾ {de}, taue wa, íma ga sakari dá 'The first third of June—this [now] is when

rice-planting is at its peak' (SA 2684.16c)—Ir ga Id dá = Id wa Ir dá (§3.10), taue wa sakari wa íma da = taue no sakari wa íma da = íma ga taue no sakari dá; Intatyénzi mo kónzatu suru tokoró wa sákete, suite iru kóosu o tegiwa⁽¹⁾ yóku sentaku suru kotó ga nozomasii 'With respect to interchanges, too, it is desirable to select skillfully those with empty lanes, avoiding the congested places [on or among them]' (SA 2649.96c)—reference is to intatyénzi no ... tokoró/kóosu 'places/lanes on the interchanges', but tokoró could also be taken as specificative (2b below).

(2b) *specificative*: Sake wa uisúkii ga umái 'Of liquors, whiskey tastes good'; Saó mo watasi nó o tukai-nasái, riiru mo watasi nó o tukai-nasái 'For a pole use mine, for a reel use mine' (SA 2678.95c); Páseri wa mizin-giri ni sita monó o tukaimásu 'You use the parsley minced' (KKK 3.131); Watasi no kóobutu wa, koohii ga dáí-iti da 'Coffee is number one among the things I like' (Mikami 1963.121); Bihuteki ni tukéru monó wa, bataa-sóosu ga itíban desu 'Of the things to put on beefsteak butter sauce is best' (Mikami 1963.121); ... rinyúu-hoo(¯) no itirei 'an example of weaning (method)'; Bóku(¯) ga kénzi o yameta riyuu mo, hitótu wa sore désu yó 'THAT is one of the very reasons I quit as public prosecutor' (SA 2650.43d) = Sore ga ... riyuu no hitótu da; Wakái hwán no motoméru kén wa hotóndo ga ittóo-seki [da] 'Almost all the tickets bought by the young fans are first-class seats' (SA 2649.101c) = Ittóo-seki wa ... kén no hotóndo da; Rekóodo wa "Loving you" ga natte ita ' "Loving You" was the record playing' (Ig 1962.69)—the verb is naru 'sounds'; N₁ wa dóno N₁ mo ... 'Just any N₁ ...'; Hanasi-áite wa dáre mo inákatta 'There was no one to talk to' (SA 2650.104b); Tori mo iroiro na tori ga kúru 'And all sorts of birds come, too' (Endō 106); Sasiire wa renraku ga túita kyoozyu-sósiki kara⁽⁴⁾ no wa átta ga, óyazi(¯) kara no wa nákatta 'Of packages sent in (from outside prison) there were some from the professors organization which I had made contact with but none from my father' (SA 2659.118c); Watasi wa ima-máde nán-kai to náku teioo-sékkai o yatte kíta ga, syúzyutu ¯gó(¯) naku-nátta no wa kore ga hazímete da 'I have performed any number of Caesareans to date and this is the first to have died after the operation' (SA 2666.114b); Kodomo wa musumé⁽¹⁾ bákari ga yo-nín 'When it comes to children—[he has] four, all daughters' (SA 2684.64b)—is the underlying structure Kodomo wa yo-nín wa musumé⁽¹⁾ bákari [da] 'When it comes to [his] children, the four are all daughters'?

(3a) *underived attributive*: Kono gakusei wa tinoo-sísuu ga hikúí 'This student has a low IQ'; Kodomó-táti wa kanzyu-sei ga tuyói 'Children are strongly impressionable'; Sáigo no monó wa ími ga semái 'The last one has a narrow meaning'; Kono hón wa haba ga hirói 'This book is wide'; Háha wa kagen ga warúi 'Mother is not well'; Tanaka wa tugoo ga yói 'It's convenient for Mr Tanaka'; Íma kootuu-síngoo wa iró ga áka da 'Now the traffic light is red'; Káre wa seikaku ga hakkiri sinai 'He has an ambiguous nature'; Kono kippu wa kígen ga kirete iru 'This ticket has expired'; Kono natú⁽¹⁾ no móodo wa atarasii kankaku ga húndan ni tori-irete áru 'This summer's styles liberally incorporate fresh touches'; Báanáado hákase [or: Baanaado-hákase] wa, watasi yóri tosi ga ue de áru 'Dr Barnard is older than I am' (SA 2647.126); Síamura-kun wa búngaku wa syokúgyoo de áru 'Shimura's profession is literature' (Ig 1962.77) = Síamura-kun no syokúgyoo wa búngaku de aru; Sore wa Kótake no kekkon ni gen'in ga áru yóo ni omowaréru 'It appears that that has its roots in Kotake's marriage' (Ig 1962.92); Sinbun de o-nazimi no densoo-syásin, sore ni térebi sono-mónó mo [soré-ra no] génri wa onazi koto, iwába(¯) hwakusímiri no kyoodái-bun to ieru 'Wire photos, familiar to you in the newspapers, and television itself have the same basic principle, so that they can be said to be in a sibling relationship, so to speak,

with the facsimile [newspaper]' (SA 2647.137b)—the attribute (*génri wa*) is subduced to serve as the Identified with the descriptive Identifier *onazi kotó [de]* 'is the same thing [and]' while the conjoined attributee (*densyoo-syásin [to] ... térebi sono-mónó mo*) is highlighted and thematized; *Sono hón o yómu no wa muron naiyoo o yómu no ga mokuteki de arimásu keredo, ...* (Ir ga Id da = Id wa Ir da §3.10) 'The aim in reading that book is to read the contents of course, but ...' (= *hón o yómu [koto no] mokuteki wa naiyoo o yómu no da*) (Hukuda in Ōno 1967.202); *Sono tiryoo mo san-kágetu ga géndo [da]* 'For its treatment the limit is three months' (SA 2670.30d) = *Sono tiryoo no géndo wa san-kágetu [da]* 'Three months is the limit for treating it [= alcoholism]'; *Bókú-ra wa tié ga syóobai desyo. Tísiki yori mo tié desyo* 'Our business is brains, you see. Brains rather than knowledge' (SA 2653.44b) = *Bókú-ra no syóobai wa tié desyo*. But *Kisyatabi wa kimoti ga ii* 'It's comfortable to travel by train' apparently does not contain a thematized genitive, since **kisyatabi no*^[1] *kimoti* would not be acceptable; instead, *Kisyatabi wa* is probably a theme of CONDITION = *Kisyatabi [o surú no] nara* 'If [you take] a train trip'.

(3b) *derived attributive*: *Kotosi no huyú wa zúibun sámu-sa ga kibisii yóo desu né* 'The cold this winter seems fierce, doesn't it?'; *Kore wa riyóo-sya no tyúumon(¯) suru zyoohoo o hwakúsímiri de sókuza ni okuri-kaeséru no ga tuyo-mí de, ...* 'This has the strong point that you can immediately send back by facsimile the information ordered by the user and ...' (SA 2647.137e)—from *Kore ga fáru† ... tuyo-mí GA ... okuri-kaeséru no DA*, from *Kore ga tuyói* 'This is strong'.

(4a) *place-locative*: *Tósi no kúuki wa, zinkoo ni hirei site hokori ga zóoka(¯) suru* 'City air increases in dust content in proportion to the population' (SA 2658.105d); *Nihón wa daigaku ga oo-sugiru* 'There are too many universities in Japan'—Here I am taking Japan as a geographical rather than a political entity; *Húzi-san wa itadaki no yukí ga yuumei desu* 'Mt Fuji is famous for the snow at its peak'—I take the structure as *Húzi-san wa ... yukí = Húzi-san no ... yukí* rather than *Húzi-san wa itadaki = Húzi-san no itadaki* (the latter interpretation would be partitive, I presume).

(4b) *time-locative*: *Huyú wa yózóra ga utukusii* 'The night sky in winter is beautiful'.

(5a) *intransitive subjectival*: *Káre wa umare ga Beikoku desu* 'His birthplace is the US'; *Watasi wa yói mo sámete ...* 'My intoxication wore off = I sobered up' (Endō 92).

(5b) *transitive subjectival*: *Kokuzin wa utáu no ga umái* 'Negroes are good at singing'—the verb is transitive though the object is unexpressed here.

(6) *effective*: *Káno-zyo wa seiseki ga yuusyyu desu* 'She has an excellent record'; *Bikutaa-sutéreo wa otó ga utukusii* 'Victor stereo produces beautiful sound'.

(7) *objectival*: ... *sikín wa zénbu bókú(¯) zísín ga sekinin o mótu no da ga* 'the capital I would myself take the responsibility for all of it but ...' (SA 2647.62c).—This comes from *Bókú(¯) zísín ga zénbu no sikín no sekinin o mótu*, but since *sekinin* is not a verbal noun (**sikín o sekinin suru*) the objectival relationship is a valence with a lexicalized nucleus involved deep in the history of the word *sekinin*: *sikín o SEKI (= semé) ni NIN-zíru(¯)* 'assumes the capital as a responsibility'. See §3.8a.

There are problem sentences:

1b?, 3a?: *Tóo wa sidoo-táisei ga ittaí-ka(¯) site { } náí* 'The leading principle of the party (? = the party platform) is not unified'.

1b?, 5?: Kázoku itídóo wa íken ga itti sita 'Every member of the family concurred in opinion'.

2a?, 3a?: Toohoku-ben wa hatuon o kaerú no ga muzukasii ga, Kamigata-ben wa ákusento ya iimawasi o kaerú no ga muzukasii(¯) 'For the Northeastern dialects it is difficult to change the pronunciation, and for the Western dialects it is difficult to change the accent and phraseology [when learning the standard language]' (Maeda 1962.208).

3a?, propredication?: Kóndo no ryokoo wa, syú-tó-site Á-kun ga púrán o tátete imasu 'It is mainly A who is setting up plans for the next trip' (Mikami 1963.121).

6?, 7? Kóndo no tyósyo mo, B-syóten ga syuppan o hiki-úquete kuremásita 'B Bookshop has undertaken the publication of my next work, too' (Mikami).

In Tabako no suigara wa dóko no kuni no kituén-sya ga nagái ka 'Cigarette butts are long for the smokers of what countries? = What nationalities do not smoke their cigarettes down to the shortest butts?' (SA) do we have an alienable possession (kituén-sya no suigara 'smoker's butts'), or is the sentence better explained as containing an ellipsis kituén-sya ga [sutetá no ga] '[the ones discarded by] smokers' and a specificative genitive 'those of the butts [discarded ...]'?

A special problem is presented by sentences with a genitive or propredicative ellipsis N [nó [nó]] ga serving as N₂ in the structure N₁ wa N₂ = N₁ n^[1]N₂ as in these examples: Taihúu no susumu sókudo wa, hatigatú ga osoku, kugatú ga hayái 'The speed at which typhoons advance is slow in August and fast in September' (Ōide 1965.149)—to be interpreted as ... sókudo wa hatigatú [no sókudo] ga ... 'the speed in August [TIME-LOCATIVE GENITIVE] which is one of the speeds [SPECIFICATIVE GENITIVE]' or as ... sókudo wa hatigatú [no taihúu] ga 'the speed of the typhoons [UNDERIVED ATTRIBUTIVE GENITIVE] of August [TIME-LOCATIVE GENITIVE]'; Tozan-tai no ténto wa goosei-sén'i ga zyoosiki dá ga, ... 'For the mountaineer's tent the commonsense thing is synthetic fiber, but ...'—to be interpreted as . . . ténto wa goosei-sén'i [no ténto] ga with thematized SPECIFICATIVE genitive and ellipsis containing an UNDERIVED ATTRIBUTIVE GENITIVE.

A more perplexing example: Kono yóo na kotó kara noosóttuu de ínóti o otósu kisétu wa, ití-nen zyuu de nigatú ga itiban óoku, hatigatú ga itiban sukunái no desu 'As to the seasons when lives are lost to strokes stemming from this sort of thing, of the whole year February has the most [cases] and August the fewest' (SA 2659.116a). Apparently there is a sizable ellipsis: kisétu wa nigatú {ni ... ínóti o otósu koto} ga óoku, ... with the relationship between 'season' and the two month-names that of a thematized SPECIFICATIVE GENITIVE.

The thematization of genitives should not be confused with thematization of a TRUNCATED POSSESSIVE PHRASE, in which both the possessor and the possessed are (at least latently) present: Watasi nó {monó} wa/mo—sóo na n desu yó 'Mine is like that (too)'. According to Inoue 81 the ellipsis in such an expression is possible only when N₁ (the possessor) is animate and N₂ is inanimate. In isolation such a constraint may appear to hold, but in context it seems to be possible to have an animate N₂: Kimi no tomodati desu ka, ootoó no desu ka.—Bóku(¯) nó desu 'Is he your friend, or your little brother's?—He's mine'. The sentence Sono éiga(¯) wa Amerika nó desu ka 'Is that film an American

one?' may sound odd by itself, since you would be more likely to say Sono éiga(⁻) wa Amerika no éiga(⁻)/monó desu ka, but it should be acceptable in a larger context: Sono éiga(⁻) wa Nihón nó desu ka, Amerika nó desu ka 'Is that film a Japanese one, or American?' This authentic example appears to violate Inoue's constraint: Mátá(⁻) geri no náka de mo rigyúu-ki no wa tóku ni omoku nari-yasúi no desu 'And (in particular) among diarrheas those of the weaning period are especially likely to become serious' (KKK 3.172). Truncated possessive phrases are not limited to themes, of course: Watasi nó o tótte kudasái 'Take mine', etc. See also the remarks on pronominal substitution in identificational sentences, p. 253.

By repeated ellipsis, it is possible to arrive at a sentence where two possessives are reduced to *N nó no (N)*:

Watasi no kodomo no monó da 'It is my child's thing'.

Watasi no kodomo nó [] da 'It is my child's'.

Watasi nó [] no monó da 'It is mine's thing'.

Watasi nó [] no [] da 'It is mine's'.

And since the nominal sentences given above can be adnominalized to ... hazu dá 'it ought to be (true that)', we may end up with the triple-nó sentence Watasi nó no no hazu da 'It ought to be mine's' (= Watasi no kodomo no monó no hazu da), which differs in meaning from Watasi nó no hazu da 'It ought to be mine' (= Watasi no monó/kodomo no hazu da) and from Watasi no hazu da 'It ought to be me' (← Watasi da).

Genitives being what they are, it should be possible to extend such strings of nó even further; we might expect that Watasi no kodomo no tomodati no monó da 'It is my child's friend's thing' would give us Watasi nó [] no [] no [] da 'It's mine's's (= It's one that belongs to mine's)' and eventually Watasi nó no no no hazu da 'It ought to be mine's's (= the one that belongs to the one that belongs to me)', but I doubt that such a mind-boggler would ever be uttered.⁵⁵ (It is easier to follow the meaning if the last nó before hazu is restored to its uncontracted formal guise de áru.)

3.12. INHERENT VERBAL FEATURES: ASPECT AND VOLITION

There are a number of ways to look at a process: it can be thought of as a single instantaneous happening (for which the terms "momentary" and "punctual" are sometimes used), it can be thought of as stretched out and under way (for which the terms "progressive", "continuative", and "durative" are sometimes used), it can be thought of as just begun ("inceptive", "inchoative"), it can be thought of as completed ("perfective", "perfect") or incomplete ("imperfective", "imperfect"), it can be thought of as a set of repeated instances ("iterative", "habitual", "repetitive"), it can be thought of as a lasting state ("stative") or as a lasting result ("resultative"), etc. Such features are called verbal ASPECT; Japanese, like other languages, has a number of devices to express them.

The distinction between completed and incomplete is often treated for Japanese as a matter of TENSE ("past" versus "nonpast"), the time of the event as related to the time of narration or of some other element in the discourse. In this study, I use the terms "perfect" and "imperfect" and consider the former the marked category. Thus I say that

55. Most English speakers are probably unaware of having heard the form *mine's's*, and many may feel uncomfortable with the highly colloquial *mine's*.

Sakana o *tábeta* 'I ate the fish' is a conversion of Sakana o *tabéru* 'I eat (or will eat) the fish' by a process of "perfectivization"; but the latter sentence is directly derived from the underlying infinitive form (sakana o *tábe* 'eat the fish') by the simple finitivization that yields the simplex sentence we have taken as our starting point. Elsewhere I suggest that such a description, while handy and revealing, is not the whole story. The shapes of the modern verbal sentences in the simplex form derive from older attributive (= adnominal) forms, so that we would do well to derive Sakana o *tabéru* not directly from the infinitive but rather from the adnominal version Sakana o *tabéru* KOTO 'the FACT that I eat the fish' or the like (KOTO represents a grammatical abstraction), in turn deriving that from something like Sakana o *tábe* [su]ru KOTO 'the FACT that I [do] eat the fish' with a factual nominalization of what we might call a VERBALIZATION (i.e. finitivization) of the underlying infinitive Sakana o *tábe*. From this standpoint, the appropriate derivation of the perfect (regardless of its semantic markedness, if any) will form a parallel to the imperfect rather than a conversion from it:

Sakana o <i>tábe</i> [su]ru KOTO	Sakana o <i>tábe</i> [si]ta KOTO
Sakana o <i>tabéru</i> KOTO	Sakana o <i>tábeta</i> KOTO
Sakana o <i>tabéru</i> .	Sakana o <i>tábeta</i> .

The problem then shifts to the derivation of the imperfect *suru* 'does' and perfect *sita* 'did' but synchronically we can take this only a bare half-circle to *si* [su]ru and *si* [si]ta, for we lack any intersentential evidence to prove the historic and prehistoric developments which can be summarized here in these formulas:⁵⁶

suru < *si-i* (w)uru < *si-i* wor(u) < *si-i* bor(u) 'be to do';
sita < *si-te* aru < *si-i* te aru < *si-i* ti-a[ri] aru < *si-i* t[i]-i ar-i ar(u) 'be to-be to-(?depart) to-do'.

Thus the perfect *-tá* turns out to be a contraction from *-te áru* (gerund + auxiliary) but it now differs somewhat in meaning from the latter. The major device for expressing aspect in Japanese is use of the infinitive or gerund in construction with an auxiliary, and the numerous types of this are taken up in §9.1.10 and in §9.2.4. In origin the gerund is itself a contraction from the infinitive (*-i*) of an auxiliary verb *t[í]*- 'depart, end'⁵⁷ followed by one of the two aboriginal auxiliaries meaning 'be'.

Other aspect-marking devices include some of the nonverbal conversions of the infinitive (e.g. §9.1.6 *-tate da*) and the use of specific adverbs such as *íma* 'now', *móo* 'already', *moo* 'still/yet', *íma ni* 'before long', *yagaté* 'after a while', *sassokú* 'soon', *zut-to* 'all the way', etc.

It has long been known that certain verbs will not permit some aspects to be marked or will do so only under special interpretations. Kindaichi Haruhiko 1950 established four classes of verbs on the basis of inherent aspectuality as reflected in conversion restraints:

- (1) stative verbs = *zyootai-dóosi*
- (2) durative verbs = *keizoku-dóosi*
- (3) punctual verbs = *syunkan-dóosi*
- (4) ("special" =) durative-stative verbs = *zyootaihattatu-dóosi*

56. The hypothesis represented by these formulas may turn out to be wrong, in whole or in part, but it has merits that I feel worth discussion.

57. The details of this hypothesized auxiliary are also matters of controversy, which I will not go into here. Another etymology: the old verb (s)utu[ru]/(s)ute 'discards'.

The classes can be justified on the basis of at least the following conversion possibilities (adapted and expanded from Kindaichi's study):

CONVERSION	ASPECT CLASS			
	1	2	3	4
	STATIVE	DURATIVE	PUNCTUAL	DURATIVE- STATIVE
-te iru continuative (= -i-tutu aru)	-	+	- ^a	-
resultative	-	+	+	-
repetitive	-	+	+	-
semantically empty	-	-	(+) ^b	+
-te simau 'finishes doing'	-	+	-	-
'does completely'	-	+	+	-
'ends up doing'—involuntary?	-	+	+	-
'dammit'	+	+	+	+
-te kúru 'gradually does'	+	+	-	+
-i-naosu 'redoos (improving)'	-	+	(+) ^c	-
-i-hazimeru/owaru 'begins/stops'	(-) ^d	+	(-) ^e	(-) ^h
-i-kakeru 'half-started'	-	+	-	-
'about to'	-	-	+	-
-i-kir-u 'to the end'	-	+	-	-
'thoroughly'	-	+	+	-
-i-tukeru 'gets accustomed to'	- ^f	+	- ^g	-
-i-tate da 'is fresh from doing'	-	+	+	-
-i-doosi da 'keeps on doing'	-	+	-	-
'happens over and over'	-	+	+	-
-i-gake ni 'when about to'	-	-?	+	-
-i-nagara 'though'	+	+	+	(+)
'while'	-	+	-	-

a. The nearest equivalents to such English examples as 'is going/leaving' would seem to be V-ru tokoró da/datta; cf. Alfonso 901: *Íma Tookyoo ni iku tokoró desu* 'He's on his way to Tōkyō now' and *Tadáima uti o déru tokoró desita* 'I was leaving the house just now'. (On tokoró see § 13.2.2.) Note that -te inai can mean either 'no longer' or 'not yet' with durative verbs, but punctual verbs permit only the latter interpretation. Thus *Hón o yōnde inai* can be taken either as 'I no longer read' or as 'I have not yet read' but *Kekkon site inai* can only mean 'I am not yet married' and not 'I am no longer married'. And with durative-stative verbs -te inai simply means 'not': *sobiete inai* 'does not tower', *sugúrete inai* 'does not excel'.

b. When adnominalized: *sinde iru hitó* = *sinda hitó* 'a dead person'.

c. *Suwari-naósu* 'reseats oneself'; in context, *sini-naósu* 'does a better job of dying the second time around'.

d. In context, perhaps *ari-haziméru* 'begins to exist/have'.

e. But, with implied plural subject, *ki-hazimete iru* '(the crowd—)they are beginning to arrive'.

f. But *o-kane ga ari-tukete iru* 'is used to having money' has been suggested.

g. Perhaps *sini-túkete iru* 'is no stranger to death' (or, with implied plural subject, 'they are used to dying—i.e. having deaths occur amongst them').

h. But: ... *hénka ga medati-hazimeru ziki* ... 'the period when the changes start being conspicuous', *Kōza Kokugo-shi* 1.256 (1977).

The difference between the stative and the durative-stative verb is that the latter normally requires *-te iru* when predicative (as in *gakusya ga sugúrete iru* 'the scholar excels' and *yamá ga sobiéte iru* 'the mountain towers') and take the perfect when attributive (i.e. adnominalized, as in *sugúreta gakusya* 'an excellent scholar'); but the stative, whether predicative or attributive, appears only in the simple imperfect (*yamá ga áru* 'there are mountains', *kore ga iru* 'I need this') and the perfect carries its full meaning whenever it appears: *átta yamá* 'the mountains that existed', *itta monó* 'the thing that was needed'. But it would be misleading to suggest that the imperfect forms of the durative-stative sentences are totally ungrammatical; they will be needed to account for more complex sentences such as these: ... *kanarazú-simo anzen-sei ga suguréru to wa ienai* 'we cannot say that they are always superior in safety' (SA 2674.130e); *Hito ni suguréru hodó no sáinoo*(⁻) *o moti-nágara káre wa nakanaka mitomeremasén* 'Though he has the talent to excel over others it is hard for him to gain recognition'; *Kono bún'ya de gakusya ga suguréru to súgu mitomereréru desyoo* 'If a scholar excels in this field he will be recognized at once'; *Sobiéru yamá o sita ni míte hikóo-ki wa tonde itta* 'Looking down on towering mountains the airplane flew along'. It is better to put the matter this way: stative verbs (Class 1) never take the *-te iru* conversions—**átte iru* 'is existing' and **itte iru* 'is needing' are ungrammatical, and *dékite iru* is possible only as the resultative ('is achieved/formed') of the punctual verb *dekíru* 'achieves/forms', not as 'is being able' from the stative. Similarly, *wakátte iru* 'has achieved understanding = understands' is to be distinguished from *wakáru* = *rikai*(⁻) *dekíru* 'can understand = understands'. Kindaichi says that both the stative and the durative-stative verbs (Classes 1 and 4) will not normally make imperatives or hortatives, nor do they readily form passives or causatives. The verb *iru* 'stays' would seem to belong with the statives, yet it shares a number of properties with the duratives. Being voluntary, *iru* converts readily to commands and exhortations (*Koko ni ite kudasái* 'Stay here', *Koko ni iyoo* 'Let's stay here') yet it normally lacks all *-te iru* conversions (for an unusual colloquial exception, see p. 519), as well as a number of other options open to the duratives. At the moment it is unclear how we must treat this verb and its synonyms (*óru*, *irassyáru*, etc.); probably it forms a separate class.

Kindaichi observes a number of other things about his classes. The particular subject-exalting form that adds the copula to the honorific infinitive (*o-V-i dá*, §6.1-2) can refer to present, past, or future when it is applied to DURATIVE verbs: *Móo o-yomi désu ka* 'Have you read it (already)?', *Íma dóko o o-yomi désu ka* 'What part are you reading now?', *Ítu o-yomi désu ka—asita desu ka* 'When will you read it—tomorrow?' But for PUNCTUAL verbs, the present is excluded: *Ítu o-tati désu ka* can mean only 'When did you leave (town)?' or 'When will you leave?' And the DURATIVE-STATIVE verbs usually do not permit the form: **Okáasan ni yóku o-ni désu né* → *Okáasan ni yóku nite irassyaimásu né* 'You much resemble your mother, I see', **Takái hana o o-si désu né* → *Takái hana o site irassyaimásu né* 'You (have a high nose =) are haughty, I see'. It might be thought that these sentences are rejected because of a reluctance to make honorific infinitives from monosyllabic vowel bases—**o-si* will occur only under unusual circumstances (p. 341)—but **o-sugure dá* is also rejected, as is **o-sugure ni nátte iru* → *sugúrete irassyáru*.

One of the difficulties recognized by Kindaichi is that a number of verbs can be used in several ways, for the aspect classes are semantic in nature. Knowing that a given verb clearly belongs to two or more classes will often help us understand the intended meaning in a given context. But there are a number of subtleties that have to do with adjuncts

to the verb: *sinu* 'dies' is punctual when the subject is a single human being, but when it is people in the aggregate that are spoken of—as in war or famine—a durative interpretation is possible.

The majority of all verbs in their normal usages belong either to Class 2 (durative) or to Class 3 (punctual); the duratives are mostly transitive and voluntary, the punctuals are mostly intransitive and involuntary. Verbs of Class 1 (stative) and Class 4 (durative-stative) will not normally take causative, passive, or potential conversions.

The following lists give verb examples for each of Kindaichi's aspect classes.

Class 1: STATIVE verbs.

- (1) *áru* 'exists, is located, has' (and synonym *gozaimásu*).
 - (2) *ir-u* 'needs', *yoo-súru* 'needs'.
 - (3) *wakáru* 'can understand' = *rikai*(-) *dekíru*; but in the sense 'acquires understanding' = *sir-u*, the verb is punctual.
 - (4) all potentials, including *dekíru* 'can do'; but in the meaning 'achieves' as in *odéki ga dekíru* 'acquires a skin eruption' and *koibito ga dekíru* 'gets a lover', the verb is punctual.
 - (5) ...-*soo ni miéru* 'seems', 'seems about to'.
 - (6) excessives made from adjectives or adjectival nouns, e.g. *oo-sugiru* 'is too much, are too many', *hade-sugiru* 'is too gaudy',
- These verbs are all involuntary and mostly intransitive; but *yoo-súru* 'needs' is transitive.

Class 2: DURATIVE verbs.

- (1) Transitive and voluntary (the majority): *yómu* 'reads', *káku* 'writes', *warau* 'laughs (at)', *syabér-u* 'talks', *utau* 'sings'; *kúu* 'eats', *nómu* 'drinks', *naméru* 'licks', *suu* 'sips', *osu* 'pushes', *hiku* 'pulls', *karu* 'mows, cuts', *kezuru* 'shaves', *núu* 'sews', *siku* 'spreads', *huku* 'wipes', *kangáéru* 'thinks (about)'; *benkyoo suru* 'studies', *kuhuu suru* 'devises'; *míru* 'looks' (but punctual as 'sees' and—?—stative as 'can see'), *kiku* 'listens' (similarly 'hears' and—?—'can hear');
- (2) Quasi-intransitive and voluntary: *arúku* 'walks', *kakéru* 'runs',
- (3) Intransitive and voluntary: *hataraku* 'works',
- (4) Intransitive and involuntary: *subér-u* 'slips', *naku* 'cries'; *oyobu* 'it reaches', *haná ga tir-u* 'flowers fall/scatter', *áme ga húru* 'it rains', *tí ga yureru* 'the earth trembles', *hí ga moeru* 'fire burns',

Class 3: PUNCTUAL verbs.

sinu 'dies', (*dénki ga*) *túku/kieru* '(electricity) goes on/off', *todóku* 'is delivered', *hanaréru* 'separates' (but durative when it means 'goes away' = *toozakáru*), *syuppatu suru* 'departs', *tootyaku suru* 'arrives'; *kimaru* 'is decided', *mitukaru* 'is found', *mé ga saméru* 'wakes up', *tokei ga tomaru* 'a clock stops', *byooki ga naóru* 'an illness improves', *áme ga yamu* 'rain stops', *nokóru* 'remains', *tukíru* 'is exhausted', *súmu* 'lives', These are mostly intransitive and involuntary, in contrast with those of Class 2; they refer to a change in state which is difficult to "try doing" (V-te *míru*) or to have happen "again" (as the same event). Presumably the following are voluntary and intransitive: *suwaru* 'sits', *kekkon suru* 'marries', *ríkon*(-) *suru* 'gets divorced', *sotugyoo suru* 'graduates', and *nyuugaku suru* 'enters school', Involuntary transitives include *usinau* 'loses' and *wasureru* 'forgets'. *Sir-u* 'acquires knowledge of' is transitive but perhaps involuntary, and *wakáru* with the same meaning is at least quasi-transitive (since nowadays many people mark the

underlying object with *ó* instead of *gá*): *sitte iru* and *wakátte iru* mean ‘holds as knowledge, knows’. *Tabako o yameru* ‘gives up smoking’ is transitive and presumably voluntary, as are *mótu* ‘grasps’ and *mótte iru* ‘has in one’s possession’ and the adnominalization *mótta* as in this example: *Syoohin dé wa áru ga, sute-gatái omosíró-sa o mótta kígeki de aru* ‘It’s a minor movie, to be sure, but a comedy with (“that has”) some fun to it that’s hard to reject (= that is fun in its own way)’ (SA 2657.118a).

Class 4: DURATIVE-STATIVE verbs. These are mostly intransitive.

(1) *sobiéru* ‘towers’, *suguréru* ‘excels’, *nukindéru* ‘excels’, *hiidéru* ‘excels’, *omo-dátu* ‘stands out’, *zubanukéru* ‘is prominent’, *arihureru* ‘is trite’, *saibasír-u* ‘is sharp-witted’, *saihazikéru* ‘is presumptuous’, *niyakéru* ‘is namby-pamby’, *bakagéru* ‘is foolish’; ? *maséru* ‘is/acts precocious’—cf. *Sonna monó⁽¹⁾ míru kara, maséru no né* ‘Watching such things you are behaving beyond your years’ (Fn 318a); ...

(2) *tómu* ‘is rich’, *niru* ‘resembles’ (“often used as Class 4”)—cf. *Kao ga nite iru to, seikaku mo niru monó to iú no ga gensoku dá ga ...* ‘It is a general rule that those who have similar faces will have similar characters, but ...’ (Tk 3.183).

(3) *takái hana o suru* ‘is proud’, *marugao o suru* ‘has a round face’, *sinsi-zén to suru* ‘is gentlemanly’, *bottyan-bóttyan suru* ‘plays the spoiled son’, *sinneri-múttúri suru* ‘is morose’, *nonben-darári to suru* ‘is idle, sluggish’, ... And quite a few other uses of *suru*, e.g.: *Kabutó-musi no yóo na KATATI O SITE ITE, míreba osóraku, dáre de mo súgu ni sore to wakáru de aróo Doitu-sei no kogata-zyooyóosya ga syuzín-koo na no da* ‘The star [of the film “The Love Bug”] is the German compact car that IS SHAPED like a beetle so that likely everyone would immediately recognize it at a glance’ (SA 2657.118a).

Verbs that can be either 2 or 3, according to Kindaichi, include *kúru* ‘comes’, *iku* ‘goes’, *háir-u* ‘enters’, *déru* ‘emerges’, *agaru* ‘goes up’, *sagáru* ‘goes down’, etc. And he gives the contrasting pair (p. 51) *Íma kotira e kite iru* ‘He’s on his way here now’ vs. *Máda koko máde kite inai* ‘He’s still not here’. I believe there may be another explanation for *V-te iru* in the first example; if we take it as ‘he will have come = be here any moment now’, all these verbs can be treated simply as punctual.⁵⁸

Verbs that can be either 3 or 4, according to Kindaichi, include *magaru* ‘gets/is bent’ and *kuttúku* ‘gets/is stuck’: *Kono kugi wa magatte iru* ‘This nail is bent’ and *Ítu made mo híbati ni kuttúite iru* ‘It is stuck to the hibachi for ever more’ show the resultative conversion of a punctual verb, but *Kono miti wa magatte iru* ‘This road bends’ and *Seiyóo-zin wa mé to máyu to ga kuttúite iru* ‘Occidentals have eye and eyebrow close together’ have the usual predicative form of a durative-stative verb. Do verbs of dressing-and-wearing belong here (punctual ‘puts on’, durative-stative ‘wears’)?

Kindaichi lists two verbs that can be either Class 1 or Class 4: *tigau* ‘differs, is different’ and *ataru* ‘is (equivalent to, or in the relationship of)’. What this amounts to is that the simple predicative form can be either *tigau* or *tigatte iru* (*ataru* or *atatte iru*) with no difference in meaning or translation, since the *V-te iru* form is “semantically empty” with durative-stative verbs, as is the perfect *V-ta* when adnominalized: *Kono geta wa tigau* and *Kono geta wa tigatte iru* both mean ‘These are the wrong clogs’; *Anó-hito wa watasi no ozi ni ataru* and *Anó-hito wa watasi no ozi ni atatte iru* both mean ‘(His relationship to

58. But Kindaichi’s observation appears to be valid, nonetheless; cf. *káette iru tokoró* ‘just the time when someone is returning’, *kite iru tokoró* ‘just the time when someone is coming’ (BJ 2.204). And KKK 43.210 cites a “rare” example of ... *Tookyoo ni kite iru totyuu* ‘while on my way here to Tōkyō’.

me is that) he is my uncle'. Notice how these verbs differ from wakáru ≠ wakátte iru and sir-u ≠ sitte iru, etc. When it means 'consists (of)', the verb (... kara) náru is like tigau, either Class 1 or Class 4; the expression go-kákoku kara náru iin-kai 'a committee made up of five countries' (KKK 25.75a) could be said with nátta or nátte iru in place of náru. But the verb (... kara) dekiru, like the mutative (... ni) náru 'becomes', is punctual only; thus while go-kákoku kara dekitu iin-kai can be equivalent to go-kákoku kara dekite iru iin-kai as the resultative 'a committee formed of five members', go-kákoku kara dekiru iin-kai can only be interpreted as future ('will be formed') or iterative ('that is always formed').

By considering the question of whether V-te iru N and/or V-ru N are equivalent to V-ta N, "stative" verbs can be divided into four classes, according to KKK 25.167-8:

Class of verb	Equivalent to V-ta N	
	V-te iru N	V-ru N
A	+	+
B	+	-
C	-	+
D	-	-

Sample expressions given for each class are these:

(A) koto-nátta azi 'a different flavor', i-ta-gátta kanzi 'a feeling of wanting to stay', supóotu ni kán-sita búngei(-) 'literature concerned with sports', móttó-mo tekí-sita bún'ya 'the most suitable field', dóoki(-) o mótta ningen 'a motivated human being', kawá ni sotta miti 'a road (following) along a river'.

(B) sikkári sita zínbutu 'a stouthearted character', ryooken ni nita hónnóo(-) 'the instincts [resembling those] of a hunting dog', bakágeta mane 'silly mimicry', Hamurétto zímíta sinkyoo 'a Hamlet-like state of mind', sirooto-bánare no sita géi 'art that is way beyond the amateur', húzin o tureta Indó-zin 'an Indian accompanied by his wife', sugúreta éiga(-) 'a superior film', kaku-bátta kao 'an angular face', mi-suita boogai 'obvious damage', úki-uki sita hyoozyóo(-) 'a cheerful visage', syareta ansánburu 'a stylish ensemble', kiwa-dátta tenkan 'a striking about-face', hukkúra to sita pokétto 'a bulging pocket', matigátta kokoróe 'a mistaken idea', gébita kotobá 'a vulgar word', ki no kiita kotó 'a witty remark', sái táketa onná 'a woman of great talent', té no kónnda dessan 'a skillful design'.

(C) soo itta baai wa 'under such circumstances', Nihón no sinkei-tyúuku to itta kanzi 'the feeling of [its being] the nerve center of Japan', sore ni tinánda mukasi-bánasi 'a traditional tale connected with that'.

(D) dai-sóreta kangáe 'a wild idea', omote-dátta ugoki 'a public move', tyotto-sita omoituki 'a trivial thought', hu-to sita kikái 'an unexpected opportunity', koo sita hitóbito 'people of this sort', zat-to sita idetati 'casual attire', hono-bóno to sita aizyóo 'a faint affection', omo-dátta bara-dántai 'a prominent ...[?] organization', rékkí to sita úyoku no tóosi 'a respectable champion of the right wing'.

Of these classes, B has over three times as many members as A or D, and there are very few members in C, though they are each used with considerable frequency (KKK 25.168).

Mikami (1963a) follows Kindaichi's classification but he puts the punctual and the durative verbs together as what he calls "perfective" (*kanketu-teki*) in contrast with the stative group, called "imperfective" (*zyootai-teki*—the translation is Mikami's), and says that *-te iru* "imperfectivizes" the perfective verbs, but the implications of that remark are not clear.

Mikami notes (1963a.17) that when *áru* means *okonawareru* 'happens' or the like as in *kenkyuu-happyoo-kai ga áru* 'a meeting to present research papers takes place', we would expect to find **átte iru* 'is happening' and **ari-tútu* 'while happening' but these do not occur. I wonder if we should not regard this use of *áru* as an optional replacement (or pro-verb-alization) of, say, *okóru* 'occurs'—a replacement that is NOT permitted precisely in those instances where other uses of *áru* would be precluded.

Yamada 1968a classifies verbs according to a set of four binary features: *activité* 'activity', *accomplissement* 'accomplishment', *momentanée* 'momentaneity (= instantaneity)', and *volonté* 'voluntariness'. Since she treats these as independent variables we might expect as many as $4 \times 4 \times 2 = 32$ verb classes, but only a few combinations are mentioned. We can extract Yamada's negative criteria as follows:

ACT	ACC	MOM	VOL	
—				Cannot take the intransitivizing resultative (<i>-te áru</i>) conversion: <i>konómu</i> 'likes', <i>omóu</i> 'feels', <i>nozómu</i> (—) 'expects', <i>mótu</i> 'holds', ...
	—			Cannot take <i>Íma ... tokoró da</i> 'is about to ...': <i>suguréru</i> 'surpasses', <i>sobiéru</i> 'towers', <i>súmu</i> 'lives', <i>niru</i> 'resembles', <i>hukúmu</i> 'includes', <i>siro-sugiru</i> 'is too white', ...
		—		The <i>-te iru</i> form is not possible: <i>áru</i> 'is', <i>iru</i> 'stays', <i>siro-sugiru</i> 'is too white'.
			—	Cannot be converted to commands, favors, or exploratory conversions (<i>-te míru</i>): <i>kawáku</i> 'dries up', <i>nieru</i> 'it boils', <i>kikoeru</i> 'is heard', <i>tigau</i> 'differs', <i>niau</i> 'suits', <i>áru</i> 'is', ...

For individual verbs Yamada notes the following properties to be accounted for:

(1) Some verbs can adnominalize either as *-te iru* or as *-ta* with no difference of meaning: *tigau* 'differs', *suguréru* 'excels', *kawáku* 'dries up', *akeru* 'opens', *simau* 'shuts', *siméru* 'closes'; the verbs of wearing such as *kiru*. This property Yamada attributes to +MOM.

(2) To express the present (as contrasted with the past or the future), some verbs require *-te iru* in order to mark an indefinite duration of the action, for the imperfect is interpreted as future or iterative: *akeru* 'opens', *tabéru* 'eats', *kawakásu* 'dries', *kangáéru* 'thinks', ... Yamada attributes this property to +ACT.

(3) When converted to *-te iru*, some verbs allow both the continuative interpretation ('is doing') and the resultative-continuative interpretation ('is/has done'). These properties Yamada attributes to a combination of +ACC with +MOM, and the group would seem to be those that fall in Kindaichi's durative class.

Isami (15.32-3) has attempted a subcategorization of verbs on the basis of a componential analysis that posits a number of inherent features such as (self-initiated) movement, emotion, "goal"-direction, and change (of state)—as well as the aspectual features of continuity and terminability. His analysis yields eight types of verb subcategories with seven components (one, PROCESS, defines verbs and so is here ignored):

	<i>Continuity</i>	<i>Terminability</i>	<i>Change</i>	<i>Movement</i>	<i>Emotion</i>	<i>Goal</i>
1. verb of movement: arúku, hasír-u	+	+		+		
2. verb of action: suru, míru	+	+		-		
3. verb of emotion: nayámu, nikúmu	+	- ^{58a}			+	
4. verb of continuity: sobiéru, tadayóu, kaku ('lacks')	+	-			-	
5. predicative verb: náru ('becomes'), kawaru	-		+			+
6. verb of change: kieru, huéru, horobíru(-)	-		+			-
7. shift verb: túku ('arrives'), déru	-		-			+
8. temporary verb: owaru, kiréru, tir-u	-		-			-

Isami has based these eight subcategories on the restrictions of cooccurrence with three kinds of adverbial phrases (DURATION, FREQUENCY, and TEMPORAL MANNER [fast/slow/abrupt/etc.]) and with ten gerund-connected auxiliaries, a number which we can reduce to seven since both -te iku and -te kúru are identical in restrictions and identity also obtains for yaru, kureru, and morau:

	<i>movement</i> <i>verb</i>	<i>action</i> <i>verb</i>	<i>emotion</i> <i>verb</i>	<i>continuity</i> <i>verb</i>	<i>predicative</i> <i>verb</i>	<i>change</i> <i>verb</i>	<i>shift</i> <i>verb</i>	<i>temporary</i> <i>verb</i>
DURATION	+	+	+	+	-	-	-	-
FREQUENCY	+	+	-	-	+	+	+	+
TEMPORAL	-	-	-	-	+	+	+	+
-te iru	+	+	+	+	+	+	+	+
simau	+	+	-	-	+	+	+	+
iku/kúru	+	+	-	-	+	+	-	-
míru	+	+	-	-	+	-	+	-
oku	+	+	-	-	-	-	-	-
yaru/morau	+	+	+	-	+	-	+	-
etc.								
áru	-	+	-	-	-	-	-	-

58a. But Isami is apparently mistaken and this should be "+". See pp. 281n, 360n.

(In examining the chart, remember that Isami has not been concerned with certain uses of *-te simau*, *-te oku*, and *-te áru*.) In the chart the EMOTION verbs differ from the CONTINUITY verbs (=Kindaichi's DURATIVE-STATIVE verbs) only in permitting favor conversions (*-te yaru/morau*). They also differ in being TERMINABLE; the perfect *-ta* is past in meaning even when adnominalized.⁵⁹

Isami proceeds to a componential analysis of the ten auxiliaries:

	<i>Volitive</i>	<i>Continuous</i>	<i>State</i> (vs. <i>Process</i>)	<i>"On" = Outbound</i> (vs. <i>"Off" = Inbound</i>)	<i>Passivity</i>
<i>-te iru</i>	—	+	+		+
<i>áru</i>	—	+	+		+
<i>simau</i>	—	—	+		
<i>iku</i>	—	+	—	—	
<i>kúru</i>	—	+	—	+	
<i>míru</i>	+	—	+		
<i>oku</i>	+	+	+		
<i>yaru</i>	+	—	—	—	
<i>kureru</i>	+	—	—	+	
<i>morau</i>	+	—	—	+	+

Earlier in his study Isami classifies the verbs according to their CONTEXTUAL features—subjects, objects, complements, etc.—into twelve groups:

- (1) Vt 11 (transitive, animate to inanimate 'HE does it to IT'): *akeru* 'opens', *yómu* 'reads', ...
- (2) Vt 12 (transitive, animate to animate 'HE does it to HIM'): *yasinau* 'rears', *kurusiméru* 'distresses', *izimeru* 'teases', ...
- (3) Vt 13 (transitive, animate to animate/inanimate 'HE does it to HIM/IT'): *morau* 'receives', *míru* 'sees', *sakéru* 'avoids', ...
- (4) Vt 2 (transitive, animate/inanimate to inanimate 'HE/IT does it to IT'): *oóu*(-) 'covers', *hiráku* 'opens', ...
- (5) Vt 3 (transitive, animate to animate/inanimate—or to nothing 'HE does it [to HIM/IT]'): *kangáeru* 'thinks', *nómu* 'drinks', *benkyoo suru* 'studies', ...
- (6) Vt 4 (transitive, animate to animate/inanimate WITH COMPLEMENT—or to nothing 'HE does it to HIM/IT' or 'HE does it AS/TO BE ...'): *sin-zúru*(-) 'believes', *omóu* 'thinks of', *iu* 'says', ...
- (7) Vi 1 (intransitive, animate): *naku* 'cries', *sinu* 'dies', *warau* 'laughs', *waméku* 'screams', *kami-tuku* 'bites', *syabér-u* 'chatters', ...
- (8) Vi 2 (intransitive, inanimate): *tokéru* 'melts, thaws, dissolves', *hazimaru* 'begins', *owaru* 'ends', *uzu-máku* '(water) swirls', *kisír-u* 'creaks, grates', *kowaréru* 'breaks', *naóru* 'improves', *sobiéru* 'towers', *sosori-tátu* 'rises precipitously', *itámu* 'hurts', *yodómu* 'stag-nates', *sumi-kir-u* 'becomes clear', ...
- (9) Vi 3 (intransitive, animate/inanimate): *yogoreru* 'gets dirty', *sizumu* 'sinks', *kizu-túku* 'gets injured/damaged', *tubureru* 'gets crushed', *tomaru* 'stops', *ugóku* 'moves', *narabu* 'lines up', *okureru* 'lags', *kúru* 'comes', *midaréru* 'is disturbed', ...

59. That is, emotions are temporary and can come to an end. But durative-statives refer to more permanent attributes, resembling adjectives in some ways.

(10) VI x (intransitive, ?mutual); maziwáru 'intersects, associates', túku 'comes in contact', ...

(11) Vp (taking a predicate complement): náru 'becomes', kawaru 'changes', ...

(12) Vmid ("middle verbs"—transitives that will not convert to a pure passive): mótu 'has', yoo-súru 'needs', ...

As a result of crisscrossing between the two type of classification, Isami ends up with 25 kinds of verbs, but these are unfortunately listed without examples.

3.13. POSTNOMINAL VERBS AND ADJECTIVES

A number of verbs and adjectives will attach to nouns in order to derive new verbs and adjectives. Some of these postnominal verbs and adjectives freely occur elsewhere; others are limited to deriving the new forms. At least four of the bound postnominal verbs allow the noun to carry adnominal modification and/or can be applied to conjoined nouns; for that reason, we will write them as separate—though accentually dominant—words, just as we write the restrictives (ǀgúrai etc.) as separate words. Here are the postnominal verbs, with a few examples of each:

(1) ǀméku 'acquires the air of being, looks to be, smacks of being': Háriúddo no zyoyuu ǀméita o-kesyoo ... 'makeup in imitation of a Hollywood actress'; Íkura ka tukuri-bánasi ǀméite imásu ga, zituwa da sóo desu 'It seems a bit of a made-up story, but they say it is a true tale' (Shibata 1961.193); ... watasi no hón wa ironna kigoo ya angoo ǀméita mémo de yogorete iru 'my book is soiled with various notes and memos that look like code' (SA 2639.90a); ... o-sékkyo ǀméita kotó o iu 'says something smacking of a sermon' (Tk 2.318a); ... rikutu ǀméita kotó ... 'argumentative remarks'; Dé mo, sukósi suiri-syóosetu ǀméku ga, dáre ka ga gasú-kan o kuwaesasetu, to iu kotó wa kangaeraréni daroo ka 'Yet, though it smacks a bit of the detective story, might it not be conceivable that someone put the gas pipe in his mouth?' (SA 2792.27a); Ootyoo no maborosi ǀméita omomúki(ǀ) o nokósu "Enti-Génzi" ... 'The Enchi [version of] Genji, which leaves [us with] the impression of phantoms of the court ...' (SA 2820.100b); ... hikáru gin-haiiro ni nureta ryuusen-kei no kogata-bóoto ǀméita monó ga ... 'something that looked like a miniature streamlined boat painted a shiny silver-grey' (V 142). But (íma o) toki-méku₁ 'enjoys its height (today)' is a derived transitive verb; ima-méku 'becomes modern' and iro-méku 'is tinged with color' are best treated as derived intransitive verbs, as is toki-méku₂ 'palpitates' (from a mimetic adverb, cf. dóki-doki 'palpitating'). Zawa-méku 'is astir, is in commotion, is rustling' (= zawa-tuku) clearly contains a mimetic adverb, usually reduplicated as záwa-zawa 'rustling'; similar are hata-méku 'flutters' from háta-hata 'fluttering', kira-méku 'glitters' from kira-kira 'glittering', yoro-méku 'totters' from yóro-yoro 'tottering', and perhaps sa{n}za-méku 'makes merry; makes a fuss'. On mimetic adverbs + ǀméku and ǀtuku, see §21.7.

(2) ǀmekásu 'takes the air of being, puts on the appearance of being': Háriúddo no zyoyuu ǀmekásita o-kesyoo ... 'makeup in imitation of a Hollywood actress'; ... zyoodán ǀmekásite ... 'somewhat joking(ly), half in jest' (Tk 2.98b). But ima-mekásu 'modernizes' is a derived transitive verb; compare the adjective ima-mekásii 'modern(-style)', probably derived from ima-mék- with the suffix -a-si-.

(3) ǀbúru 'poses as, affects, pretends to be; behaves like': Kídai no akkan ǀbúru 'behaves like a rare rogue'; Itiryuu no gakusya ǀbúta táido da 'affects an attitude of

playing a ranking scholar'; O-gyoogi no ii yuutóo-sei ʔbúru hitó ga óói no ni, anáta wa guu-zen sóo de náí tokoró o míseta wáke da 'It means that in the face of a multitude of people who play the well-behaved good student you have shown signs of somehow not being like that' (SA 2664.35a); Íi-onna ʔbútte irú keredo, hadaka ni suru to matá ni azá ga áru 'She poses as a beautiful woman, but when stripped naked she has a mark on her groin' (Fn 368b). The verb is more common with an unmodified noun: ániki ʔbúru 'puts on the airs of a big brother', dootoku-ka ʔbúru 'plays the man of virtue', gooketu ʔbúru 'plays the hero', kanemóti(ʔ) ʔbúru 'plays the rich man', kenzin ʔbúru 'acts like a saint', mottái ʔbúru 'puts on fancy airs', yoodái ʔbúru 'acts important, puts on airs', otona ʔbúru 'acts like a grownup', sizin ʔbúru 'plays the poet', sinzin-ka ʔbúru 'puts on piety', teisai ʔbúru 'puts on airs', tonosama ʔbúru 'lords it over people', séizin ʔbúta kotó 'having acted as saints' (Tk 3.169b), But it is possible to modify each of the nouns with adnominal phrases, so that we do well to keep the space in our romanization. On the other hand, when ʔbúru attaches to an adjectival noun or to an adjective base, it is not possible to have adnominal modification, and there would seem to be no reason the result should not be written as a single word, an intransitive verb: ADJECTIVAL NOUN + ʔbúru: koosyoo ʔbúru = koosyoo-búru 'puts on elegant airs'; rikoo ʔbúru = rikoo-búru 'displays a knowing air'; sinkoku ʔbúru = sinkoku-búru 'acts serious, puts on a grave look'; zyoohin ʔbúru = zyoohin-búru 'gives oneself fancy airs'. ADJECTIVE + ʔbúru: taka-búru 'acts haughty; is high-strung'; era-búru 'acts self-important'. In this usage, especially with adjectival nouns and adjectives, ʔbúru is a synonym of ʔgáru, which we have treated separately in §7.3. Túu ʔbúru = tuu-búru is equivalent to túu ʔgáru = tuu-gáru 'makes a show of one's knowledge'. The postnominal verb ʔbúru is said to be the nigoried form of the verb huru 'shakes, waves, brandishes'; cf. the quasi-restrictive ʔburi.

(4) ʔzimíru '(acquires a characteristic so that it) smacks of, looks like': Yama-óku ni súde iru tosiyóri ʔzímíta seikatu ... 'a life that smacks of an old man living way back in the mountains'; Káre wa inaka-mono ʔzímíte iru 'He smacks of the farmer'; Kitigái ʔzímíta benkyoo no kyoosei dátta 'I was forced to study like a madman' (SA 2666.59c). Sei-tóosaku no soo-mókuroku ʔzímíta iti-ren no kono syú no éiga(ʔ), nán da ka kán da ka itté mo, tumáru tokoró wa sekkusu-éiga no tane-gire o monogatáru ni sugináí yóo da 'The series of movies of this sort that smack of a whole catalog of sexual perversions, when all's said and done, only seem to be telling us that the sex movie is exhausted for material' (SA 2654.109e). Atakusi mo, isásaka kyóoso ʔzímíte 'ru to iwarete imásu ga 'I am said to be something of a "sect head" myself' (Tk 2.154b). The postnominal verb ʔzimíru is the nigoried form of the intransitive verb simiru 'soaks (in), permeates, penetrates'; cf. akazimíru (aká ʔzimíru) 'gets grimy (stained with dirt)'.

The following postnominal verbs apparently do not permit the noun to take adnominal modification, so we will treat the results in all cases as derived verbs:

(5) ʔbámu 'becomes, turns into': ki-bámu(ʔ) 'turns yellow'; murasaki-bámi 'turning purple' (SA 2684.103c); kesiki-bámu 'grows excited, becomes active'; ase-bámu 'gets sweaty'; aka-bámu 'reddens'; susu-bámu 'gets sooty'; The etymology of ʔbámu is uncertain.

(6) ʔbáru 'behaves, displays behavior': kakusiki-báru 'stands on one's dignity; is stiff-necked, ceremonious'; keisiki-báru 'makes much of formality'; kensiki-báru 'assumes an air of dignity (or of discernment)'; gisiki-báru 'stands on ceremony; is formal, punctilious'; sikaku-báru 'is formal, strict, methodical'; ... mé ni kádo [o] tátete rikutu-báru hodo no

dai-móndai de mo náí 'It is hardly a large question calling for glowering argument' (Maeda 1962.200). In *kasa-báru* 'becomes/is bulky' the meaning imparted by the postnominal verb is somewhat different. The postnominal verb $\bar{b}áru$ is the nigoried form of the verb *haru* 'stretches; displays (etc.)'; cf. the quasi-restrictive $\bar{b}ari$.

(7) $\bar{b}íru$ 'becomes like': *otona-bíru* 'shows signs of precocity'; *hina-bíru* = *inaka-bíru* 'becomes rustic, is countrified'; *huru-bíru* 'gets old'; Cf. *miyábita* = *miyabi*{*yaka*} na 'elegant'. The etymology of $\bar{b}íru$ is unknown. Is *hi-kara-bíru*($\bar{}$) 'dries up' connected (or is the third element a nigoried version of *híru* 'dries up')?

(8) $\bar{d}átu$, vi. 'forms, stands as' < N (ni/ga) *tátu* 'stands as N':⁶⁰ *yaku-dátu* = *yakú n*[i] *tátu* 'stands to use/service, is useful'; *tabi-dátu* = *tabí n*[i] *tátu* 'leaves on a journey'; *ture-dátu* 'goes along, accompanies'; *kasira-dátu* 'stands at the head (of others), leads'; *taikei-dátu* 'forms a system'; *kiwa-dátu* 'is prominent'; *keba-dátu* 'is nappy, shaggy'; *sakki-dátu* 'gets angrily aroused (bloodthirsty), (atmosphere) becomes stormy'; *sooke-dátu* 'shud-ders, has one's hair stand on end'; *saki-dátu* 'precedes'; ... Cf. the adnoun *omo-dáta* 'principal'.

(9) $\bar{d}atéru$, vt. 'sets (it) up as' < N (o/ni) *tatéru* 'sets up N': *keitoo-datéru* 'systematizes'; *soba-datéru* 'pricks up (one's ears)'—cf. *sobiéru* 'towers, soars'; *tituzyo-datéru* 'brings order (to)'; *monó o zyunzyo-dátete kangáeru kotó* ... 'considering things in order' (Tk 2.263a). Cf. *doogu-date* 'preparations, preliminaries; providing the necessary tools'.

(10) $\bar{z}uku$, vi. '(it) comes in contact (with)' < N ga *tuku*: *ikiioi-zúku* 'gains/gathers strength'; *iro-zúku* 'takes on color'; *ki-zúku* 'takes notice (of)'; *ne-zúku* 'takes root'; *monogokoro-zúku* 'attains (the age of) discretion'; *genki-zúku* 'takes heart', *kakki-zúku* 'shows life, gets active' Cf. the quasi-restrictive $\bar{z}uki$.

(11) $\bar{z}ukéru$, vt. 'provides with' < N (o/ni) *tukéru*: *ato-zukéru* 'traces'; *dooki-zukéru* 'motivates'; *genkai-zukéru* 'limits, bounds'; *genki-zukéru* 'encourages, cheers'; *gimu-zukéru* 'makes obligatory'; *hookoo-zukéru* 'provides direction, steers; orientates'; *imi-zukéru* 'provides with meaning' as in ... *sono tatibá o syakai-teki ni imi-zukeyóo to sita wáke desu* 'they tried to give social significance to that stand' (SA 2665.29d); *insyoo-zukéru* 'impresses'; *iti-zukéru* 'provides a place, locates, places'; *kakki-zukéru* 'animates, enlivens'; *kaku-zukéru* 'grades, rates'; *kankei-zukéru* 'relates, connects'; *kanren-zukéru* 'makes an association, correlates (with)'; *kata-zukéru* 'tidies up, puts in shape (kata[ti]); *kati-zukéru* 'values'; *keturon-zukéru* 'forms a conclusion'; *kettei-zukéru* 'provides with a decision' as in *sore o kettei-zukéru* 'serves to determine that'; *kiso-zukéru* 'provides with a basis'—*kiso-zukeráreta* 'was given a basis' (SA 2673.45a); *na-zukéru* 'names'; *ranku-zukéru* 'ranks' (SA 2813.58a); *retteru-zukéru* 'labels' (SA 2813.106a); *riyuu-zukéru* 'provides a reason'; *seikaku-zukéru* 'provides a characteristic' as in ... *simon-kíkan to site seikaku-zukeráreta* 'it was given the character of a consultative organ' (Ōno 1967.254); *syooko-zukéru* 'substantiates, provides with proof'; *syuukan-zukéru* 'makes a habit of'; *teigi-zukéru* 'provides a definition, defines'; *tituzyo-zukéru* 'orders, puts order to'; *tokusei-zukéru* 'characterizes, distinguishes'; *tokusyoku-zukéru* 'characterizes'; *tokutyoo-zukéru* 'characterizes, distinguishes'; *tyuumon-zukéru* 'provides requests' as in ... *ésséi o sansyoo site morai-tai, nádo to atogaki de tyuumon-zúkete iru* 'provides requests [to the reader] in the postface, asking for instance that one compare the essay ...'

60. Other meanings of *ni* are also found: *me-dátu* 'stands out, is striking = conspicuous' derives from *mé ni tátú* 'stands in/to the eye'.

(SA 2689.106c); *ura-zukéru* 'supports, backs, provides backing for'; *waku-zukéru* 'frames, provides with (puts into) a frame'; *yuuki-zukéru* 'inspires, instills with courage'; *zyoretu-zukéru* 'ranks, orders'. There are derived nouns from some of the infinitives (§ 14.5): *dooki-zuké* 'motivation', *kaku-zuke* 'grading, rating' (irregularly stonic), *na-zuké* 'naming' (according to NHK also, irregularly, atonic), Cf. the quasi-restrictive *zuke*.

(12) *-gúmu*, vi. 'shows signs of': *tuno-gúmu* = *me-gúmu* 'sprouts'; *namida-gúmu* 'is moved to tears' (whence the adjective *namida-gumasii* 'tearful' with the suffix *-a-si-*); ? The etymology is unclear; cf. *hukúmu* 'comprises; implies'.

(13) *-sabíru*, vi. 'becomes like ..., becomes suitable as': *kami-sabíru* 'becomes holy, venerable'; *okina-sabíru* 'becomes an elder'; ? This is now largely obsolete. The etymology is uncertain.

(14) *-gakáru*, vi. 'resembles, is close to (being)': *akami-gakáta kisyóku(-)* 'a look of ruddy joy'; *aomi-gakáru* 'gets/is tinged with blue'; *kimi-gakáru* 'gets/is tinged with yellow, is cream-colored'; *murasaki-gakáte iru* 'is tinged with purple'; *daibu uyoku-gakáte ita* 'was quite rightist' (KKK 25.78a); *sibai-gakáta kotobá* 'histrionics'; *onoo-gakáta monó o moti-tái* 'wants to have something smacking of Noh drama' (Tk 4.54b; 56b has *noo-gakáta monó*). This is the nigored form of the verb *kakáru* 'it hangs (etc.)'.

(15) *-gérú*, vi. 'looks': *baká-geta* 'stupid' ...; *hyóo-geta* 'droll' (*hyóo-* is bound);

Also note the postnominal bound verbal nouns (*-*)*si-suru* 'regards as' and *-ka suru* 'izes', etc. (§ 14.3).

Postnominal adjectives are all bound⁶¹ and do not permit the noun to carry adnominal modification:

(1) *-gamasii* 'is like': ... *benkai-gamasii kotobá* 'apologetic words' (SA 2835.42); ... *girei-gamasii kyoooyoo-gamasii kotó wa* 'etiquette-like, culture-like things' (Kb 176a); *giron-gamasii* 'is disputatious'; *hare-gamasii* 'is ostentatious' (SA 2833.124a); *hihan-gamasii* (SA 2793.126c), *hinan-gamasii* (SA 2820.31d) 'is critical, carping'; *iken-gamasii kotó o iu* 'says something that sounds like a remonstrance'; *katte-gamasii* 'is selfish'; *miren-gamasii* 'is regretful, is reluctant'; *oko-gamasii* 'is presumptuous, is ridiculous'; *onkise-gamasii* 'is patronizing' (from **on-kise* from *ón o kiseru* 'garbs in obligation'); *osituke-gamasii* 'is like forcing one's way; is pushy (pushing)'; *saisoku-gamasii* 'is like urging, is dunning'; *saside-gamasii* 'is impertinent, is meddling'; *sasizu-gamasii* 'is officious, is bossy'; *tanin-gamási* *hurumáu* 'behaves like a stranger'; *urami-gamasii* 'is reproachful, is rueful'; *yookyuu-gamasii* 'is demanding'. The etymology of *-gamasii* is unknown.

(2) *-rasii* 'is like': see § 19.

(3) *-tarasii* 'gives the feeling of being [often something bad]'—apparently attached only to adjectival nouns and to adjectives: ADJECTIVES: *mugo-tarasii* 'is outrageous', *naga-tarasii* 'is long, tedious', *niku-tarasii hitó* 'a hateful person', ADJECTIVAL NOUNS: *binboo-tarasii* 'is poor, poverty-stricken' (MKZ), *kinodoku-tarasii* 'is pitiful' (Fn 155a), *miren-tarasii* = *miren-gamasii* 'is regretful' (MKZ), *sukebe[e]-tarasii* 'is lecherous', *sui-tarasii hitó* 'a lovable person' (from *su[k]i* 'is liked'), Sometimes the *-t-* is doubled, perhaps for emphasis: *iya-ttarasii* 'is despicable'; *huziyuu-ttarasii* 'is inconvenient,

61. But this is simply because we have not included such forms as *-dakái* (= *takái*) as in *na-dakái* 'is famous', *-bukái* (= *hukái*) as in *kyoomi-bukái* 'is interesting', *syuunen-bukái* 'is tenacious', and *yoozin-bukái* 'is cautious', *-zuyói* (= *tuyói*) as in *gaman/sinboo-zuyói* 'is patient', etc.

uncomfortable' (Kb 125b); mizime-ttarásii 'is miserable'; naga-ttarásiku kakánakute mo 'without writing at great length' (Tk 2.219a); The etymology appears to be *tó* + *ár-a-si-*.

(4) *-ppói* 'is full of, is characterized by'—attached to: (a) NOUN: ... *sukósi yakuza-ppói kuti no kiki-kata o suru* 'has a bit of the hoodlum in his speech' (SA 2640.107c); ... *huryoo-syoonen-ppói hitóri no otokó ga* ... 'one juvenile-delinquent-looking lad' (SA 2647.60d—npp will reduce to np); *kodomo-ppói* 'is childlike'; *guchi-ppói* 'is peevish'. (b) PRECOPULAR NOUN: *Huryoo-ppói tokoró wa mizin mo náí* 'There's not a bit of the delinquent about them' (SA 2640.106). (c) ADJECTIVAL NOUN: *ada-ppói* 'is coquettish'; *kiza-ppói* 'is affected'; *zoku-ppói* 'is vulgar, common, cheap'. (d) ADJECTIVE BASE: *ara-ppói* 'is rough'; *yasu-ppói* 'is cheap, tawdry'. (e) ? VERB BASE: *sime-ppói* 'is damp'. Cf. *kara-ppo* = *kara* (precopular or adjectival noun) 'empty'. By etymology *-ppói* is apparently a reduction of an intensive form of *ópo-*, the ancestor of modern *óo-* 'much/many'. When the attaching form is atonic the adjective is optionally atonic for some speakers: *kodomo-ppói(̄)*, *huryoo-ppói(̄)*, *ara-ppói(̄)*, *sime-ppói(̄)*, ...

Note also the postnominal subjective adjectival noun *-zén*, § 13.5a. And compare such phrases as N [ga] *yói/warúi/nái*, N [ga] *yóku/wáruku/náku*, p. 794.

4 VOICE CONVERSIONS

Verbal sentences can be converted into CAUSATIVES,¹ into PASSIVES, and into PASSIVIZED CAUSATIVES (a passive built on a causative). These categories are formally marked by attaching suffixes (or bound auxiliaries) to the base—originally to the base + the subjunctive ending -a, now to be considered part of the voice suffix itself as it is considered to be part of the negative -ana- and of the hortative-tentative -a[m]ju > -oo. We treat the resulting sentences as conversions because of shifts in the marking of adjuncts: the agent of the underlying active sentence is marked as if the indirect object (by *ní*) when we introduce a new subject—the INSTIGATOR (causer) of the action or the VICTIM (the passive subject)—who may or may not be the underlying direct object. But one use of the passive—as an alternative to the subject-exaltation conversion of § 6.1— involves no change in adjunct marking; the domain is restricted to the nuclear sentence, the verb itself.

The passive can be considered as at least three separate conversions: the PURE (or “translational” or “normal”) passive that turns the direct object into the subject in ways familiar to speakers of European languages; the ADVERSATIVE passive, in which a new subject playing the role of the VICTIM is adversely affected by the underlying process; and the POTENTIAL passive, which endows an indirect subject (the “possessor”, marked by *ní/gá*) with the possession of the ability to initiate or to carry out the process.² In addition, the passive form of the verb can be used in place of a subject-exalting verb, § 6.2 (see also § 10); in olden days the causative too was used for subject exaltation.

Causative verbs are made with the suffix -(s)ase-; the suffix takes the shape -sase- after vowel bases and the shape -ase- after consonant bases³ (see § 8); colloquially the suffix is often shortened to -(s)as-;⁴ not to be confused with various suffixes that derive transitive

1. Alfonso calls the causative the “permissive”.

2. When negativized, the potential is sometimes used as a mild prohibition, especially in certain dialects, e.g. Matsuyama: *Horí no sakana turaremasén* ‘No fishing in the moat’ (Y 116). Yoshida’s study indicates that the passive used as a potential has declined in frequency from Meiji writings to Shōwa writings, the later usage being largely limited to the negative. The uses to express subject exaltation and spontaneity (§ 4.4a) are very low in frequency (Y 140). Commands or exhortations will be rung on a passive form only when it is used for subject exaltation: *Kangáete miráre yó* ‘Just think! (= *Kangáete go-ran nasái*) (K 1966.177). But even this is rare; it is usually claimed that the exalting passive lacks the imperative (see p. 341, § 6.2).

3. But in fast speech you may run across a variant version, perhaps substandard, that adds -asase-ru to consonant bases: *kak-asase-ru* = *kak-ase-ru*. Such forms are NOT to be interpreted as a “double causative” despite the appearance; only a single “causation” is intended. Lewin (155 n. 5) cites similar forms from texts of the eleventh and twelfth centuries: *tatematurasase tamau* ‘kindly lets one do it’, *omowasase tamau* ‘kindly lets one feel’. Alfonso 955 mentions another variant: adding -rasu instead of -sas[er]ju to vowel bases, e.g. *taberasu* for *tabesaséru*/*tabesasú*. This would seem to be borrowed from dialects that tend to regularize the verb conjugations by converting vowel verbs into consonant bases ending in /r/: they reinterpret *tabé-ru* as *tabér-u*. The negative *déran* for *dénai* ‘does not emerge’ is common in the Kansai area and similar forms are heard in widely scattered areas from northern Japan to the Ryūkyūs (cf. Maeda 1961.210).

4. As in these examples: *Huransu no sakana-ryōori wa, dóo yatte hurú sakana o úmaku TABESÁSU ka, to iu daké no ryōori na n da* ‘France’s fish cuisine is one that just tries to make stale fish somehow taste good’ (SA 2669.48a); *Warúí hitó ga ite, hén na koto, OBOESASU n desu yó né* ‘There are bad

verbs (§4.6) and are historically related. We know that *ugokásu* is a surface representation of two different underlying phenomena because it is possible to make a causative from it: *ugóku* 'it moves' leads to the irregularly derived transitive verb *ugokásu*₁ 'moves it' which regularly converts into the usual causative *ugokasaseru* 'causes someone to move it'; *ugóku* also converts into a regular causative *ugokaséru*₁ 'causes it to move' which can be abbreviated to *ugokásu*₂. *Hatarakasu*, on the other hand, can only serve as the abbreviation of *hatarakaseru* 'causes someone to work' because there is no **hatarakasaseru*. (A comparable problem appears in relationships between some short potentials and homonymous members of transitivity pairs such as *toréru*₁ 'can take' and *toréru*₂ 'is taken'; see §4.4. And *ugokaséru*₂ could be the short potential of *ugokásu*₁ or *ugokásu*₂.)

A pseudo-literary causative is made by adding the suffix *-(a)sime-*, as in this example: ... *aratámete mé o hirakasiméru tikaá(¯)* o ... *sonáete iru* 'provides the power to open our eyes anew ...' (SA 2679.103d). This form is called "pseudo-literary" because the genuinely literary form would be *-(a)sim[e]-*, i.e. the predicative form would be *-(a)simu* rather than *-(a)simeru* and the attributive form would be *-(a)simuru* as in this example of modern prose: ... *kánozyo-ra no íssyu no risoo-syúgi no sikarASIMÚRU tokoró na no de wa nakaróo ka* 'I wonder if it is not a kind of idealism on the part of those women that makes them be like that' (SA 2658.52d)—*sikári = síká [á]ri* 'being like that' is a literary equivalent of *sóo da*; the literary language will permit causatives for verbs like *ár-i* which would not become causative in the colloquial. An example of the pseudo-literary attributive is found in the quasi adnoun *kookotu-tarasiméru* 'enrapturing'; see §13.5.⁵

Passive verbs are made with the suffix *-(r)are-*; the suffix takes the shape *-rare-* after vowel bases and the shape *-are-* after consonant bases; a shortened form *-(r)e-* is used in the potential meaning only (§4.4) and restricted to consonant bases by some speakers.⁶ The passivized causative has the double suffix *-(s)ase-rare-*, often shortened to *-(s)as-are-*. Two verbs, *kúru* 'comes' and *suru* 'does', are irregular. The verb *kúru* 'comes' forms the causative *ko-sáse-* (contraction *ko-sás-*), the passive *ko-ráre-* (for which some have the contraction *kó-re-* in the potential use), and the passivized causative *ko-sas[e-r]áre-*; these

people who have it [= the parrot] memorize peculiar things' (SA 2663.43a); ... *syatyo o doráibaa ni sitátete, kuruma no náka de MATÁSIT' oita* [= *matásite oita = matásete oita*] '... got the head of the firm dressed up as a chauffeur and had him waiting in the car' (SA 2663.17c). According to Maeda (1961.222) Ōsaka prefers the shorter forms in *-(s)as-*, and Yoshida says the shorter forms are "Kansai-teki", the longer "Tookyo-teki" (Y 101). The Ōsaka causative for *suru* itself is *sas*, not *saseru*. The Ōsaka passive for *suru* is *sirareru*, not *sareru*. Y 127 gives three examples of *sirareru*, which is said to be a Meiji and/or Kansai usage.

5. The transitive verb *imasiméru(¯)* 'admonishes; bans', with the infinitive-derived noun *imasimé(¯)* 'admonishment; ban', appears to be a pseudo-literary causative from the verb *ímu* 'shuns, abhors'. Apparently in the earliest attested forms (those of the Nara period) the causative was expressed only by *-(a)sim[e]-*; *-(s)as[e]-*, at that time *-(a)s-*, was limited to subject exaltation—cf. the Korean subject-exalting suffix *-(u)si-*. By Heian times *-(s)as[e]-* had replaced *-(a)sim[e]-* for the causative, while continuing to be used for subject exaltation. But in the eleventh century, under the influence of reading Kambun (classical Chinese), *-(a)sim[e]-* was revived as a "masculine" usage (Terase 85); the Kambun tradition led to the modern pseudo-literary *-(a)simeru*.

6. Before endings beginning with *t*, the passive marker *-(r)are-* is sometimes shortened to *-(r)at-*, especially in Kansai dialects; and the imperfect ending *-ru* is often replaced by *-n* before *n* and by *-q* before *k* or *t*, so that *okorarén* no may sometimes stand for *okoraréru* no (Y 108)—as well as for the negative *okorarén [ai] no*—and *okorarék kara* may be heard for *okoraréru kara* (examples will be found in Y 108, 126).

forms use the historically basic shape *kó-* from which the *kú-* of *kúru* and the *kí-* of the infinitive *kí* are the result of vowel assimilations, as described in Martin 1967:257. The form *kiraréru* is reported as an old-fashioned Kyōto equivalent of *koraréru*; in Tōkyō it would only be taken as the passive of *kir-* 'cut' (atonic *kirareru* could be passive or potential of *ki-* 'wear'), but other parts of eastern Japan use it also for 'come'.

For *suru*, the causative is *s-ase-*, the passive is *s-are-*, and the passivized causative is *s-as[e-r]are-*, i.e. *saserare-* or its contraction *sasare-*. On *serareru* as a pseudo-literary equivalent of *sareru*, see Kazama 43-5, Mio 335. In Ōsaka the passive of *suru* is *sirareru*, rather than *sareru*, according to Maeda 1961:219. Kazama 47 observes that for one-morpheme Chinese verbal nouns, such as *sátu(-)* 'guessing' and *bátu(-)* 'punishing' which appear in *sas-súru(-)* 'guesses' and *bas-súru(-)* 'punishes', the usual written passive is *-serareru* (despite *-sinai* for the negative and *-siyoo* for the hortative) as in *hooritu de bas-seraremásu* 'will be punished by law' (SA 2673.109a) but that *-sirareru* is coming in, so that *sas-siraréru(-)* is acceptable—as in ... *míru kara ni sono miti no wazá-si to sas-siráreta(-)* 'from his looks you could surmise that he was an expert in his field' (SA 2671.95b) and *ras-siráre(-)* 'being pulled along' (Kb 242b)—though **sas-síru(-)* would still sound strange as a substitute for *sas-súru(-)*. But such forms as **sas-saréru(-)* etc. are apparently rejected for those verbal-noun morphemes that end in an oral consonant (reduced from basic -TU); cf. *syoo-saréru* etc. (§ 14.3) for those ending in a vowel or nasal. The same situation holds for those verbal nouns that require *nigori* of the auxiliary: *kan-zerareru* or *kan-zirareru* from *kan-ziru/-zuru* 'feels' (the negative is *kan-zinai* or literary *kan-zenu*, not **kan-zanai*); some of these end in a vowel, e.g. *tuu-ziru* 'gets through'. Notice that such verbs have colloquial imperfect forms in *-ziru* in addition to the written *-zuru*. There are a few verbs (usually the result of contraction from earlier *-ni-suru* or ...-mi-suru) that attach *-ziru/-zuru* to native Japanese elements, but the passive and causative forms are made in the same way as for the Chinese verbal nouns: *karon-zeráre(-)* 'is belittled and' (SA 2671.113c) ← *karon-zíru(-)/-zúru(-)* 'belittles'; ... *sono hatugen ga omon-zerárete(-)* *kíta to iú no wa ...* 'that this declaration came to be taken seriously' (SA 2672.63a) from *omon-zíru(-)/-zúru(-)* 'treats as serious'. (Lewin 112 allows a free verbal noun such as *ansin* to take either *sareru* or *serareru* for passive, and either *saseru* or *sesaseru* for causative.) Saeki 22 suggests that *sareru* be regarded as an abbreviation of *serareru* and gives *sesaseru* as the original form of *saseru*, the causative. But I have not come across *sesaseru* except bound to one-morpheme Chinese verbal nouns: *bas-sesaséru(-)* or *bas-saseru(-)* 'causes one to punish'. For the auxiliary-voicing verbal nouns, the causative is regular: only *kan-zisaseru* 'causes one to feel' is used, not **kan-zesaseru* or **kan-zaseru*. During the Taishō period (1912-25) the artificially regularized form *si-saseru* was promoted as a "standard", with *saseru* permitted as a variant (K 1966.120), but this prescription failed to gain support. According to Lewin 155 the literary causative of one-syllable vowel verbs is made by adding *sesim[e]-*, as in *mi-sesim[e]-* 'causes to see' and *ki-sesim[e]-* 'causes to wear' and *ni-sesim[e]-* 'causes to boil/resemble'; but Terasé 86 accepts the forms only for the two verbs *[e]-* 'get' and *h[e]-* 'pass', saying that *misesim[e]-* is from *mis[e]-* (therefore 'causes to show' in meaning?) and *kisesim[e]-* is from *kis[e]-* (therefore 'causes to clothe' in meaning?).^{6a}

Verbs other than *kúru* and *suru* are regular in their forms, but some verbs lack causatives and/or passives altogether. The verb *áru* 'exists, stays, has' makes a pseudo-literary causative *ar-asíme-*, but the colloquial lacks both the causative and the passive in any of its senses; we might have expected at least **araréru* as a synonym of *o-ari dá* 'deigns to

6a. Bound verbal nouns attach *-sesim(e)-* and *-zesim(e)-*: *tokui-sei o syoo-zesímeta gen'in no hitótu* 'one of the causes that generated the singularity'.

possess'. But two written examples of *araréru* as potential ('can exist'), apparently a Meiji usage, will be found in Y 107; see also the expression *go-ran araremasjóo* (p. 341, §6.2). Examples of *arasiméru*: *Soo suru to, káko ni nákatta kotó o Nihón ni arasimejóo to iu wáke desu né* 'That means we want to try to let Japan have things it lacked in the past, doesn't it' (Tk 2.152b); *Tikyuu ~zyoo no káko no rekisi ni nákatta kotó o, kore kara arasimejóo to iú no wa, taihen na kóttesu [= kotó desu] né* 'It's quite a job, you know, trying to make available from now on things that never existed before in past history on the earth' (Tk 2.152-3). The adjective *arare-mo-nái* 'is improper' is said to contain the infinitive of a passive of *áru*. (For a formal use of *de araréru* = *de irassyáru*, see §6.2.) And Maeda 1962 twice uses the expression *itomá(-) mo arasézu* 'not letting one even have time to ...' with the literary negative infinitive from a causative of *áru*: *Kakusin-teki na hitó ga sóosyo o ageru hima mo náku, hosyu-teki na hitó ga máyu o hisoméru(-) itomá(-) mo arasézu, utakata no gótoku arawáre, kagéroo no gótoku kie-sátta* 'With no time for the revolutionary-minded to lift their hands nor allowing the conservatives (to have) a moment to knit their brows, it [= the usage] appeared like a bubble and vanished like a day-fly' (69); *Okuni-kótoba ga seisi [sic 'restraint'] no itomá(-) mo arasézu kuti kara tobidásita to itte, kuti ni té o atetári, kao o akarámetári sinái de mo yói de wa náí ka* 'Rather than put one's hand to one's mouth, blush, or the like, wouldn't it be all right just to say that the local regionalism slipped out of one's mouth not allowing one (to have) time to hold it back?' (212). Is there a confusion with *itomá(-) mo ATAEZU* 'not ALLOWING time'?

We find no causatives or passives for the subject-exalting verbs *kudasáru*, *nasáru*, *ossyáru*, or even *irassyáru*—despite the acceptability of *isaseru* and *oraséru* 'lets someone stay' and of *irareru* and *oraréru* 'suffers from someone staying' or 'can stay' or 'deigns to stay'; but the potential *irassyaréru* 'can stay' is accepted by many speakers. We might ascribe the absence of such forms to the fact that it is usual to make the causative or passive BEFORE putting the sentence into any other conversion (though there are exceptions, as we will see below); but probably the real reason we lack the forms is that these verbs etymologically contain an occurrence of the passive as reflected in the *-ar-* with which each base ends. The short potential *irassyaréru* 'can stay' seems to be in use, as we have observed, though the longer form *irassyararéru* is rare even in modern prose; and an example of *ossyararéru* as a pleonastic equivalent of simple *ossyáru* is cited in Y 119. The short potentials *nasaréru*, *kudasaréru*, and *ossyararéru* all seem to be acceptable, though the longer forms are not used; and many speakers will accept *irassyaréru* (= *o-ide ni naréru*) for the meaning 'can stay' as well as 'can come/go'. The latter meaning is illustrated in this example: *Tyan-tó^[1] moku téki-ti e irassyaremásita ka* 'Were you able to get to your destination all right?' (SA 2659.52a).

Other verbs that do not make a causative or any type of passive include *ir-* 'need' (**irareru*, **iraseru*) and *déki-* with either the meaning 'be able' or 'get produced'; for 'lets it be produced' instead of **dekisaséru* we find *dekiagaraseru* from the compound verb *deki-agaru*. The causative of *wakáru* is acceptable (*wakaraséru* 'causes it to be understood, causes one to understand'), as is the adversative passive *wakararéru* 'suffers from having it understood' though *sirareru* 'suffers from having it known' is more common.⁷ *Wakararéru*

7. Kuno (1973.144) says that "statives" such as *wakáru* (as well as *ir-u*) can not make an adversative passive. I suspect that idiolects differ in their assignment of *wakáru*; some speakers, at least, put it in two classes. See §3.12, where we observe that both statives and durative-statives do not normally take ANY voice conversions.

can also be used for subject exaltation (= *o-wakari ni náru*) but not for the potential, and there is no **wakaréru* 'can understand'. The verbs *nár-* 'become', *kawar-* 'turn into', *moraw-* 'receive' all have regular causative and passive forms.

The accentuation of causative and passive is tonic or atonic in accordance with the accentuation of the underlying base; this is true also of the negative and, in fact, of virtually all forms historically based on the -a ending. But the pseudo-literary causatives in *-(a) síme-* are all treated as tonic regardless of the base.

It is interesting to find a passive built on a causative but not the opposite, as we might have expected in order to represent a meaning like 'A causes B to suffer from having C drop in on him' = *A ga B ni C ni *koraresaséru*. We might even expect a further passive built on that: *D ga B ni A ni C ni *koraresaseraréru* 'D suffers from having A cause B to suffer from having C drop in on him'. But such things are expressed, when wanted, by circumlocution of various sorts. I am treating both causative and passive as one-shot conversions (non-recursive), usually ordered before all others. Apparent exceptions appear when we apply the auxiliary conversions (with either the infinitive or the gerund), since the voice conversions can be applied either to the underlying verb or to the auxiliary, or again to both: *sase-rare-tuzuke-sase-ráre-* 'being forced to continue being forced to do it' is grammatical, though it will probably never be encountered. Since auxiliaries are repeatedly applicable up to any limit (in theory, at least), any number of combinations of passive, causative, and passivized causative can be generated by the grammar, provided each instance is one step removed—by an auxiliary conversion—from any other instance of a voice conversion. The desiderative verbalization (*-i-ta-gár-* §7.2) and the excessive (*-sugi-* §9.1.9) are similar, being special cases of auxiliaries: *sase-rare-ta-gar-ase-ráre-ru* 'is made to want to be made to do it' may never have been heard before but it is perfectly grammatical, as is the English translation. The back-loop from the desiderative verbalization in Chart 2 suggests that our grammar will permit the voice conversions to be directly recursive, generating **sase-sase-*, **sare-sare-*, **sare-sase-*, etc., since a "zero" by-pass is possible at every conversion. But back-looping is allowed by the chart ONLY if the conversion is NOT by-passed. (The chart is incomplete in that it fails to include extensions of the adverbializations into auxiliary constructions; if they were included, there would be back-loops from each.) Some Japanese linguists allow a double causative in their descriptions: Soga, for example, permits *Tároo ni Zíroo ni to o akesasesaseta* '[I] had Tarō let Jirō open the door', but I doubt many speakers would feel comfortable with such forms. Yoshida gives two examples of *V-ase-* with simple causative meaning (Y 81-2), but he says that such forms are little used and denies the existence of the full form (*V-ase-sase-*). But he also gives an example of *wakagaeráse de mo saseta* used for *wakagaeráse de mo sita* 'even rejuvenated [him]' (Y 88). Shibatani (1973) has suggested that the syntactic structure of a double causative (meaning 'A causes B to cause C to do') is grammatical, but it is expressed with the morphologically simple causative forms which serve as a kind of haplological reduction of the double causative: *Tároo ga Zíroo ni Itíroo o arukáse{sase}ta* 'Tarō made/had Jirō make Ichirō walk'. I have not come across authentic examples. There is a grammatical device available to achieve the semantic effect of a double causative: *saseru yóo ni suru/saseru* 'makes it (causes one to make it) so that one causes someone to do'—and in theory even *saseru yóo ni suru/saseru yóo ni suru/saseru ...* (etc. ad infinitum, the device being recursive). But an authentic example of even the simplest type has yet to catch my attention.

Semantically corresponding forms for adjectival and nominal sentences are discussed in §9.1.6; the "passive"-like intransitive mutative -kú/ní náru and the "causative"-like transitive mutative -kú/ní suru. Cf. also yóo ni náru/suru.

On problems of semantic skewing between transitives and causatives and between intransitives and passives, see §4.8.

Certain verb phrases such as motte kúru/iku 'bring/takes things' and turete kúru/iku 'brings/takes people' are usually treated as units in applying the voice conversions, with the suffix attached to the motion verb: Bókú-táti wa Mosukuwa-sínai no áru hóteru ni turete ikareta 'We were taken to some hotel within the city of Moscow' (SA 2656.62a); ... koo iu ko wa kono kyánpu e musúu(¯) ni turete korárete sinde ittá ga ... 'children of this sort in untold numbers were brought to this camp and died one after another' (SA 2674.89c).

Occasionally a causative or passive infinitive will enter into noun compounds. Omowase-buri o suru means 'acts suggestively; plays the coquette' and comes from the infinitive omowáse 'make one think'. Kiraware-mono means 'someone despised' and comes from the infinitive kiraware 'being despised'. Here is an example of the lexical abstract nominalization with -kata (§14.8) applied to a passivization of VN suru: ... sono soonyuu sarekata zítai ni kiwámete zyuyyoo na imi-ái(¯) ga kan-zirareru 'An extremely important significance makes itself felt in the very way it is inserted' (SA 2680.104c).

Under special circumstances of ellipsis it is sometimes possible to omit the base of a vowel verb before -sase- and -rare-, as if these were relatively free auxiliaries similar to those which attach to the infinitive (§9.1.10): Sin-ziraremasén ka?—Raremasén to mo 'You can't believe it?—Of course I can't!' (Y 128). Kuusoo yútaka na seikaku de nái to, háran(¯) banzyoo o kiwámeta sutóorii mo kangaeraréni daroo si né.—Raremasén. ... 'Without a nature rich in imagination you wouldn't be able to think up stories so full of glorious vicissitudes, would you.—No. ...' (Tk 4.285b). I presume that similar examples must exist for Sasemasén, since that form occurs anyway as the causative of suru. But I doubt whether -are-, -ase-, and especially -e- will ever allow the preceding consonant verb base to be omitted.

For the kind of quasi passive represented in the structure VT-ru tokoró no N, see p. 625.

Since the causative suffix differs from the passive only by having /s/ instead of /r/, it is tempting to speculate that these two phonemes stand in some sort of componential relationship, permitting us to set up a single "voice-transforming morpheme" *-ZaZe- with the causative marked by a positive feature (+CONTINUATIVE = /s/) and the passive by a negative feature (-CONTINUATIVE = /r/). But the usual etymological speculation holds that the causative is related to the verb si- 'do' and the passive either to the verb ár- 'be, have' or to the unusually brief base [e]- 'get'—or to both, since the verb for 'get' may well be an old causative from 'have': *á[r]-i- > e- with regular crasis and further abbreviation in making conjugational forms. (Chamberlain 199 derives -rare- from ár-i + é-ru.)

4.1. CAUSATIVES

When the causative conversion is applied, a new character is added to the cast, the INSTIGATOR. The instigator is marked by the subject particle gá, and the underlying

agent is then marked by *ní*—or, under certain conditions, by *ó*. Marking of the agent with *ó* is usual with intransitive verbs, and marking with *ní* is usual for transitive verbs:

A ga kúru 'A comes' → B ga A o kosaséru 'B has A come'

A ga B o yobu 'A calls B' → C ga A ni B o yobaseru 'C has A call B'

But some speakers will occasionally permit marking the agent with *ó* even if the verb already has an *ó*-marked object, in particular when the object is a traversal object; see §3.11.1. And the agent of an underlying intransitive verb seems to be optionally markable with *ní* in all cases: B ga A ní kosaséru is another way to say 'B has A come'. Use of *ní* instead of *ó* in the causative conversion of intransitives seems to have a softer implication for many speakers; it is possible that a differentiation is developing between the extremes of the range of meaning: "let" (permission—with *ní*) and "make" (coercion—with *ó*). Kuroda 1965 suggests that *ní* (instead of *ó*) is unnatural unless it sounds natural to make a similar sentence B ga A ni VI-te morau 'B receives the favor of A's doing it' (§10). In the same paper Kuroda says that transitive verbs divide into two types, the "weakly transitive" like tabéru 'eats' and the "strongly transitive" like nusúmu 'steals' because the causative forms of the weak transitives can have two meanings, only one of which will be permitted by the "strongly transitive": *usi o tabesaséru* can mean either (1) [*ó* = *ní*] 'they cause the cow to eat it' or (2) 'they cause someone to eat beef'; but *kodomo o nusumaséru*, he tells us, can only mean (2) 'they make someone steal the child' and not (1) [*ó* = *ní*] 'they make the child steal it'. I have been unable to confirm this intriguing distinction with other speakers, who readily accept both meanings for the example with *nusúmu* as well as that with *tabéru*; perhaps a fuller list of the verbs Kuroda feels are "strongly" transitive will enable us to find the distinction with other informants. Meanwhile I will treat the distinction as an idiolectal innovation outside the grammar we are considering. Notice the ambiguity of an isolated sentence like *Tároo o mataséru*, which could be interpreted as either (1) [*ó* = *ní*] 'causes Tarō to wait [for someone]' or (2) 'causes [someone] to wait for Tarō', depending on whether the *ó*-marked phrase is taken in construction with the causative or with the underlying transitive verb of "emotion".

In older written Japanese the underlying agent—the instigated, the person caused to act—was expressed as N o *site*^[i], leaving any object to be expressed as N *o*^[i] as in the sentence: *Yosítúne* [ga] *Yosínaka o sému* (= *seméru*) 'Yoshitsune attacks Yoshinaka' → *Yoritomo* [ga] *Yosítúne o site* *Yosínaka o semesímu* 'Yoritomo causes Yoshitsune to attack Yoshinaka' (Sansom 238). Some examples from modern prose: *Watakusi O SITE iwasioméreba* 'If I am forced/allowed to say = If you ask me' (KKK 3.79); *Sono kekka, kátute no yuuzin O SITE, "soositu" no zyunsui-sa no soositu o nagekaséru to sité mo, rokuzyuu-kyúunen Tookyoo no húzoku ni mugen no ími o yomi-tóru(¯) taizin ni seizyuku sitá no da to ieyoo* 'As a result, though we feel it will cause former friends to deplore the forfeiture of the purity of his "forfeiture" [of social contact in order to achieve spiritual development], it can safely be said that he has matured into a gentleman who reads infinite meaning into the mores of Tōkyō 69' (CK 985.53); ... *káno-zyo O SITE ... ayamátí(¯) o okasáséta no de náí ka* 'Isn't it that ... caused her to make the mistake?' (Tsumijima 69); ... *Kyóoto O SITE Nihón no búnka no tyuusin tarasimenákya ikan* 'we must make Kyōto the center of Japan's culture' (Tk 2.310a); for *tarasiméru* (= *to ar-asiméru*), see p. 750 (§13.5). Sansom says that N ni *site*^[i] is used "in modern prose to indicate the subject of a sentence where there is some fear of ambiguity" (244), but I have been unable to find examples of what he means; Chamberlain (1924.206) says N ni *site*^[i] is a rarely found equivalent of N o *site*^[i]. These ways

of marking the agent of a causative are probably a by-product of the Kambun style developed to read classical Chinese in early days.

I have come across one example of a causative where the instigated (the underlying agent) retains the marking with *kará* that is permitted in place of *gá* with verbs of informing (p. 45, §2.2): ... *musumé no watasi kara iwaseréba* ... 'If you ask me, who am the daughter ...' (SA 2672.148a). The passage could have read *watasi o iwaseréba*; but *watasi ni iwaseréba* might be taken as ambiguous, since the underlying verb takes a dative valence to begin with and the expression could mean 'if you have them tell it to me' or the like. Here, nonetheless, is an example: *Ookii okamisan ni iwaseréba nán d'atte sóo da* 'To hear the mistress tell it everything is that way' (Kb 44a). Cf. p. 295 (§4.2) for similar problems with the passive.

The meaning of the causative ranges from permission to coercion; the translation ranges from 'makes him do it' to 'lets him do it': ... *dókusya(¯) ni ími o wakaráséru kotó* 'letting the reader know what you mean' (Tk 2.218b). But the 'let' meaning will usually undergo a favor conversion (§10): *sasete ageru/kureru* etc. There are even cases where the implication resembles that of the adversative passive, e.g. *Kodomo o sinaseta hahaoya wa hoka no kodomo o míru to sugu naku* 'The mother who has had/let her child die cries when she looks at other children' is virtually synonymous with *Kodomo ni sinareta hahaoya wa* ... 'A mother who has suffered the death of her child ...'. But the causative in such cases would be limited to situations where the underlying agent was under the potential control of the victim (the adversatively affected): to say 'a baby had its father die' (i.e. 'suffered the death of its father') only *tití ni sinareta* would be used. *Kodomo o sinaseta* could also mean 'stood idly by while children died = let children die (through neglect, famine, etc.)' but in the meaning 'forced children to die' = 'put children to death' the causative would usually be replaced by *korosita* 'killed'. Cf. *Hito o sinasetaku náí mon desu* 'We do not want to let people die = We don't want to lose men'.⁸ The passive built on the causative of *sinu*, *sinas(er)areru*, is seldom heard, but to some it is acceptable in a sentence like *Watasi wa zyotyuu ni kodomo o sinasareta* 'I suffered from the maid's letting my child die' if the situation calls for it.

In English the instigator may be oneself, for "I" can "make myself do something"; in Japanese such sentences are never said with the causative, for the Japanese causative requires the instigator to be someone other than the agent. To say someone forced himself to do something you use the simple verb modified by an adverbial expression such as *múri ni* (or *múri site*) or *siite* 'perforce' or (perhaps better) *si-kata náku* 'with no recourse' (*si-yoo ga náí kara*), *iyaiya{-nágara}* 'though reluctant', or *iya-oo nási ni* 'like it or not'.

4.2. PASSIVES

What we are calling the pure or "normal" passive seems to be a relatively new device in the Japanese syntactic arsenal; it appears to have developed largely under the influence of English and hence is sometimes called the "translational passive". Pure passives are comfortably made only from transitive verbs—those that take persons or things as direct objects; adversative and potential passives are freely made from both transitives and intransitives, including the quasi-intransitives that take traversal objects.

8. A figurative example: *Tatami wa sinanai. Sinasité wa naránai* 'The traditional Japanese mat is not dead. We must not let it die' (SA 2669.72).

In the PURE passive, the underlying object becomes the surface subject and the underlying agent is given the indirect-object marker *ní*: A ga B o yobu 'A calls B' becomes B ga A ni yobareru 'B gets called by A'. The agent need not be expressed: bira ga makaréru 'leaflets are distributed'; onazi yóo na kekka ga erárete irú no de ... 'since the same sort of results are obtained' (SA 2651.22b).⁹ In the ADVERSATIVE (also called "victimizing") passive the surface-subject marking is preempted by the victim who suffers from the happening, and the underlying agent is marked with *ní*, but any direct object is left marked with *ó*: A ga B o yobu 'A calls B' becomes C ga A ni B o yobareru 'C suffers from A calling B', and A ga kúru 'A comes' becomes B ga A ni koraréru 'B suffers from (the inconvenience of) A's coming'. Here are examples of adversative passives, the first containing a series; Nyuun-kánzya B-san ... ga, doositu-kánzya go-nín ni tetu-páipu de atamá o naguráre, siitu de kubi o simerárete korosareta 'Hospital patient Mr B was killed at the hands of five patients in his ward, his head beaten with an iron pipe, his neck choked with a sheet' (SA 2670.31b); Dá ga, káre wa, tití no na o kuti ni sarerú no o, kirau yóo na sóburi(¯) o miséru 'But he shows signs of disliking to hear his father's name mentioned' (SA 2653.58b); "Mazime na kaisya" to iu kigyoo-íméezi o kowasare-táku náí, to iu kotó ka 'Perhaps it means that they do not want to have their corporate image shattered as a "sincere company"' (SA 2663.33e); Nyóobo [o] ni tótte, totuzen áru-hi kara, ása kara ban máde me-no-máe ni téisyu ni suwatte iraretára tamatta monó de wa náí daroo 'It would surely be unbearable for a wife suddenly one day to start having her husband sitting around in front of her from morning till night' (SA 2677.120d).

Authentic sentences are often so stripped down that it is far from easy to find intact examples of the full grammar. We can only decide from context or outside information the proper interpretation for the sentence Áki wa yóku kekkón-siki ni yobareru 'In autumn one gets invited to a lot of weddings' (SA 2649.109) since neither host nor guest makes an appearance in the sentence; whether the passive is to be taken as pure or adversative depends on how the writer feels about weddings, and grammatically there is nothing to keep us from interpreting yobareru as subject-exalting 'Esteemed person(s) invite ...'.

Sometimes the agent is optionally marked by *kará* instead of *ní*: [Gakusetu ga] gakkai kara músi sareta '[The theory] was ignored by the scholarly world'; Kaiin kara hínan sareta 'He was criticized by the members'; Minná kara ái-sáreta 'She was loved by all'; ... akarui seikaku de, minná kara mo sukárete ita 'was liked by all for his cheerful disposition' (SA 2666.36a); ... hito kara miraréru tokoró 'a place where one is seen by people' (Kotoba no yurai 147); ... hito kara tanomáreta sigoto wa 'jobs requested by other people' (SA 2651.66b); Minná kara mo soo iwareru 'I get told that by EVERYONE [—you're not the only one to tell me]' (SA 2645.52a); ... watasi wa gaikokú-zin kara iroiro na kuni no ningen ni matigaerárete kíta ... 'I have been mistaken by foreigners for a person from all sorts of countries' (Endō 185); Tanaka Yosio giin ga, sánzyuu kyúu-hyoo de yabúreta Miyázaki Masaó-si kara uttaerárete ... 'Diet member Yoshio Tanaka was taken to court by Mr Masao Miyazaki who had been defeated by 39 votes, and ...' (Shibata 1965.161); ... "térebi no ninki o hana ni kakéru" to sutáhhu kara kemutagarárete mo iru '... (and) he also suffers from his staff being standoffish toward him with the idea that he "has his nose in the air over his television popularity"' (SA 2657.119d); ... hitó-tati kara keibetu sare-nagará mo

9. An example with the underlying agent mentioned: ... ryóosin no kawari ni || sóbo ni | sodateremásita 'I was brought up by my grandmother instead of my parents' (BJ 2.296).

'though despised by the people who ...' (Ōno 1966.104); Sono sánaka ni waratte iru kyookan ga iru. Sosite, séito kara máiku de "Náze waraú no da" to kitumon sarete iru 'In the midst there are teachers who laugh. And they are subjected to demands from students at the mike "Why do you laugh?"' (SA 2655.40b). This use of kará would seem to be an extension of the notion of agent as SOURCE, found also in Watasi kara míru to 'Seen from my position = As I see it'. Compare the ablative-dative valences (§3.7) such as hito kara/ní homeraréru [okoraréru] 'gets the praise [incurs the wrath] of people'; favors in §10; and the remarks on agent-marking when the beneficiary is subjectified (p. 310). Alfonso 949-50 observes that kará is often preferred to mark the agent when ní might be ambiguous, as in A ga B kara/(ni) C ni syookai sareru 'A is introduced to C by B'; he gives examples using warawareru 'gets laughed at', sonkei sareru 'is respected', sikarareru 'gets scolded', taisetu ni sareru 'is thought highly of', yobareru 'is invited', tanomaréru 'is requested', happyoo sareru 'is published', and kyóka sareru 'is permitted'. He also gives an example of (... kara) sirasete áru 'is informed (by)' with the intransitivizing -te áru conversion of §9.2.4.(2). The following example would, accordingly, be clearer if kará had been used instead of ní: Áto de sono senseí wa kootyoo ni okoráreta n zya náí ka ná 'I bet later the teacher felt the wrath of the principal' (SA 2671.48c). The other interpretation would treat okoráreta as subject-exalting passive: 'the teacher was angry at the principal'. Cf. Howard 1969.43: Káre wa ano senseí ni Nihongo o osierareta 'He was taught Japanese by that teacher'—grammatically susceptible to the additional interpretation 'He deigned to teach Japanese to that teacher'.

Alfonso 950 says that dé is used instead of ní to mark the SOURCE (= the underlying agent) when that is inanimate and not self-propelling; such examples are given as kaze de taosaréru 'gets blown down by the wind', zisin de kowasaréru 'gets damaged by the earthquake', sensoo de hakai sareru 'is destroyed by/in the war', kázi de yakarete simau 'is burned down in a fire', etc. In these cases the source—unable to function as a real agent—could be regarded as causal or, perhaps in some cases, instrumental. Alfonso 951 observes that the written style will substitute ni yotté for the source of the passive regardless of the colloquial marker—ní, kará, or dé. And notice that ni yotté is also used for the causal and instrumental uses of dé. A more formal written style (see below) will use ni yori instead of ni yotté: Zyuumin(¯) ni yori tyokusetu sénkyo sareru 'They are directly elected by the residents'.

Not every instance of kará is to be taken as marking the agent; in the sentence Sén kyúuhyaku yónzyuu yo-nen, Huransu ga Dóitu senryóo-gun kara kaihoo sareta toki^[1] ... 'When France was liberated FROM the German occupation forces in 1944' the kará is in ablative valence with the verbal noun kaihoo 'liberating'.

Agents are typically animate—and human, but inanimates can also play the underlying agent role, especially in clichés and in written Japanese, where abstract nouns often serve as agents with the pure passive: Watasi wa, sibáruku wa akké ni torárete ita 'I was seized with amazement (= taken aback)' (Ig 1962.70); ... káre-ra kánozyo-ra wa rázio(¯) ni kokoró [o] ubawárete ... 'the boys and girls have their hearts stolen by the radio' (SA 2654.132b). In formal written Japanese, according to LF 61, an inanimate agent is often marked by ni yori, an animate agent by ní óite(¯) or—with exaltation—ni okarete, ni okaserarete. And ní óite(¯) is sometimes given a literary spelling ní ókite; the infinitive ni oki can substitute (despite remarks to the contrary in LF), cf. §9.7. Lewin 151 says the

passive with an inanimate agent is a modern development due to English influence.

Under the potential passive, it is optional whether we continue an underlying object as object (marked with *ó*) or change it to direct subject (marked with *gá*), the underlying agent being made the indirect subject (marked with *ní* or *gá*). Either choice is grammatical, but speakers prefer to treat quasi-intransitives in the former way—retaining the place as direct object; they prefer to treat transitives the latter way—shifting the underlying object to direct subject:

Dáre ga *náni* o tabéru 'Who eats what?' →
 Dáre ni/ga *náni* ga taberaréru } 'Who can eat what?'
 (Dáre ni/ga *náni* o taberaréru)
 Dáre ga *dóko* o tóoru 'Who passes where?' →
 (Dáre ni/ga *dóko* ga tooraréru) } 'Who can pass where?'
 Dáre ni/ga *dóko* o tooraréru¹⁰

Alfonso 918 says that verbs of motion "normally" retain their objects when they are made potential: *uti o derarénei* 'cannot leave the house', *miti o toorénei* 'cannot pass the street', *miti o watarenákatta* 'could not cross the road', etc. Examples like the last, however, can have the traversal object subjectified: *miti ga/o watarenai* 'cannot cross the road'. But subjectification is not permitted when the *ó*-marked object is an alternative to an inherent ablative: *uti o/kara derarénei* 'cannot leave the house' will not convert to **uti ga derarénei*.

Alfonso 922-3 observes that the direct subjects of potentials made from intransitives must be self-propelling: *Kodomo/Kuruma ga náka ni hairénei* 'The child/car can't get inside' is quite acceptable, but **Hón ga náka ni hairénei* 'The book can't get inside' is replaced by the non-potential form *Hón ga náka ni hairánei* 'The book won't go inside'.

All potential passives treat the underlying agent as an indirect subject (marked by *ní* or *gá*): *A ga B o yobu* 'A calls B' becomes *A ni/ga B (o/)/ga yobareru* 'A can call B' and *A ga kúru* 'A comes' becomes *A ni/ga koraréru* 'A can come'.¹¹ In this respect the potential passives (and the short potentials of §4.4) are like the possessive *áru* 'has' and the quasi-possessive *wakáru* 'understands' and *ir-u* 'needs' as well as the derived potentials *dekíru* 'can do' (≠ *sareru*), *miéru* 'can see' (≠ *miraréru/miréru*), and *kikoeru* 'can hear' (≠ *kikareru/kikeru*)—see §3.5.

Apparently in the potential meaning *sareru* is obligatorily replaced by *dekíru* (for a possible exception, see p. 302), *sareru* being used only for the other meanings of the passive; but (VN) *saserareru* has the potential meaning (rung on the causative) as well as the others. And the pseudo-literary *serareru* is perhaps sometimes intended as a potential: *soozoo serareru* 'can imagine' (Y 131), *sotugyoo serareta* '(you all) were able to graduate' (Y 134—thought to overlap with the subject-exalting use of the passive). Since *dekíru* is limited to use with FREE verbal nouns, most monomorphemic Chinese verbal nouns are forced to

10. Cf. Alfonso 918: "a sentence like: *Sono hon O yomemasu* is not uncommon. This practice is not yet, however, accepted as Standard Language". See the discussion of *ó*-marking with *wakáru* and *dekíru*, p. 196. Three examples from Meiji literature are cited in K 1966.122.

11. But the formulas are misleading: *A ga B o/ga yobareru* is all right, as is *A ni B ga yobareru*, but **A ni B o yobareru* is perhaps to be rejected. And, according to Kuroda, **A ni koraréru* (or **A ni yobareru* with ellipsis of the underlying object) is obligatorily replaced by *A ga koraréru* (*A ga yobareru*). Will these several rejections hold if focus is applied to the various adjuncts—e.g. (?) *Káre ni mo sakana o taberénei* 'He can't eat fish, either'?

use -serareru/-sirareru (or -zerareru/-zirareru) for all meanings of the passive; see p. 289.

On the passive as a subject-exalting verb, see §6.2. Passives in all uses (including even subject-exaltation according to Tsujimura 189) do not commonly form imperatives (§16 –nor, presumably, other ways of expressing commands) or hortatives as such (§12.2), but the non-potential passive will occasionally turn up (see the hortative examples in §12.2). In this respect the passive is similar to the verb *áru* itself and to the -te *áru* conversion of §9.2.4.(2). Kazama 214-5 notes that, like *áru*, *sonzai suru* ‘exists’ has no passives, rejecting some authentic examples as ungrammatical.

Alfonso (946 etc.) rejects the notion of an “adversative” passive; he suggests that what is often involved is simply an emotional AFFECT, which may be good or bad. The example is offered of *Atúi kara sóto ni déte kaze ni hukárete kimásu* ‘It’s hot so I’ll go outside and get some breeze’. Some other examples have been suggested as situations where the emotional affect would not be taken as adversative: *A ga N o yurusaréru* ‘A is forgiven N’; *kotaeraréru* (hen-ziraréru) ‘gets answered’; *senséi ni kodomo o homeraréru* ‘has one’s child praised by the teacher’, etc. These examples involve verbs with basic meanings that would seem to exclude the adversative affect: praise is something that is not usually thought to do one harm. However, for the adversative interpretation, cf. Howard 1959. The sentence *Ítu datta ka, watasi wa dénsya(¯) no náka de seinen kara séki(¯) o yuzurareta kotó ga átta* ‘Once in a train I had been given a seat by a young man’ (SA 2663.35a) would strike us at first to be non-adversative in affect, but then reading on we find, a few sentences later: *Watasi wa sono toki, isásaka yuu’utu de átta* ‘I was a bit depressed on that occasion’ –because the handicapped would rather have their handicap ignored by strangers, and the author of the reminiscence is a polio cripple.

The verb ‘knows’ would seem to have the possibility of either beneficial or adversative affect, yet it lacks any adversative connotation in this example: *Tokusyoku to itté mo, tyósyá ga sákka(¯) to site na o sirareta hitó da to iu kotó de wa náí* ‘By special feature I do not mean that the author is a man who has his name known as a writer’ (SA 2671.99a). And a number of other examples of passives that carry direct objects are apparently not adversative: *Huyú^[1] no yóru, simizími to, Tyóotyoo-san kara azi no áru hanasí o kikasareta* ‘One winter evening I was quietly treated by Madam Butterfly to a delightful talk’ (SA 2657.44); *Itíya, káre-ra husai ni yuusyoku o syóotai sarete, hisasi-buri no Nihón-syoku o tanosínda* ‘One night [in Moscow] we got invited to dinner by that couple and enjoyed the first Japanese food we’d had for a while’ (SA 2656.62c); *Watásí-táti tootyaku sita hí ni sono kotó o osieraretá no de, sassokú^[1] yakuwári(¯) o kimeru kotó ni sita* ‘Being informed of that fact [that we were being put up in a VIP hunting lodge] on the day we arrived, we decided our roles at once’ (SA 2664.81a); *Sigoto de sankagetú-kan, Sanhuransisuko-syútyoo o mei-zeraremasite né ...* ‘I was sent on a San Francisco business trip for three months, and ...’ (SA 2660.124); *Atarasíi omótya o ataerareta kodomo no yóo da ga, ...* ‘He is like a child who has been given a new toy, and ...’ (SA 2677.52c); *Áru syokubá(¯) no kenkoo-hoken-kúmiai de, zadán-kai no sikai o tanomáreta* ‘I was asked to chair a round-table discussion at a health insurance group in a certain plant’ (SA 2645.103a).

The following examples could be taken as the pure passive: *Kono o-kási wa sake-nómi ni mo yorokobaréru* ‘This sweet is enjoyed by drinkers, too’; *Dáre⁽¹⁾ ní dē mo sukaréru* (konomaréru) *hitó da* ‘He is a person liked by one and all’; *Omae ni soo iwareru to hontoo ni uresíi yó* ‘I am truly pleased to be so spoken of by you’ (Y 111); *Atasi d’átte ai-sare-tái*

wa, kawai garare-tái no 'I too want to be loved, I want to be cared for' (Y 111); Minná ni syóobi sareru 'He gets praised by everyone'; Yóku benkyoo sitá kara sensei ni homerárete 'I got praised by the teacher because I had studied hard'. But there are also examples of beneficial affect where the passive can not be treated as "pure" because the verb is intransitive: Nagái aido byooki ni nayánde ita áni ni sinarete watasi wa hót-to(-) sita 'I was relieved to have my brother, long suffering with illness, pass away'; Watasi wa háha ni yorokobárete uresíkatta 'I rejoiced to have my mother happy'. Cf. Yoshida's statement that the affective passive of an intransitive verb must be adversative (Y 112-3).

We might do well to label the unusual Japanese passive AFFECTIVE rather than adversative. Other terms suggested are "PSYCHOLOGICAL passive" and passive of "INTEREST" (= "benefit or harm", Y 111). But the affect is so often adversative. And adverse affect is quite common with the pure passive, too: Mata yarareta 'I've been had again!'¹²

In long sentences when the verb is well removed from the subject, the speaker (or writer) sometimes forgets an intended passivization and produces a sentence that is, strictly speaking, ungrammatical. Cf. MJW 1.124: Sono tamé dai-búbun ga nooritu no agaranaí gensi-teki na hoohoo de saitan site [= sarete] irú no de sono syuttán-ryoo wa óoku ná 'That is why most of the coal is mined by inefficient and primitive means, with the result that the coal output is not great'. Such sentences might be regarded as blends—here of dai-búbun o [hito ga] saitan site with dai-búbun ga [hito ni] saitan sarete ...

4.3. PASSIVIZED CAUSATIVES

Each kind of passive can be built on a causative, though the action sometimes gets a bit difficult to follow:

(1) The pure passivized causative treats the underlying agent as the instigated (by the causativization) and then reverses its marking with that of the instigator under the passivization:

A ga kúru 'A comes' → B ga A o kosaséru 'B gets A to come' → A ga B ni kosas[er]aréru 'A is made to come by B'.

A ga B o yobu 'A calls B' → C ga A ni B o yobaseru 'C gets A to call B' → A ga C ni B o yobas[er]areru 'A is made to call B by C'.

(2) The switched pure passivized causative treats the underlying object as the surface subject (ó → gá by the passivization), and marks both the instigator and the instigated with ní:

... → B ga A ni, C ni yobas[er]areru 'B has A made to call him by C'.

This would seem to be a sort of blend of B ga A ni yobareru 'B gets called by A' and A ga C ni (B o) yobas[er]areru 'A gets made to call (B) by C'.

(3) The adversatively passivized causative adds a victim to the happening, and the victim takes the subject marking:

... → B ga A o kosaséru 'B gets A to come' → C ga B ni A o kosas[ar]éru 'C suffers from B's making A come'.

12. Adversative meanings for the passive occur also in other languages: "Benny, ... walked out on by his girl (because of ...)" (The New Yorker 1962/6/23.29a); "I've been walked in on three times" (N.Y. Times Magazine 1971/5/9.77b—reference is to an unlocked bathroom).

... → C ga A ni B o yobaseru 'C gets A to call B' → D ga C ni, A ni B o yobas[er]areru 'D suffers from A's being made to call B by C'.

(4) In the passive-potentialized causative the instigator becomes the indirect subject (marked with *ní* or *gá*):

... → B ga A o kosaséru 'B gets A to come' → B ni/ga A ga kosas[er]aréru 'A can get B to come'

... → C ga A ni B o yobaseru 'C gets A to call B' → C ni/ga A ni B ga/o yobas[er]areru 'C can get A to call B'.

Inoue 58 gives an example of the latter, with 'me' for the C, 'child' for the A, and 'piano' for the B: *Watasi [ní] wa piano ga kodomo ni hikaserareru* 'I can have the child play the piano'; this would be more natural with *piano o*. Finally, the passive of the causative—as of any passivizable verb—can be used as an alternative form of subject exaltation, the exalted being the instigator: *Senséi ga gakusei o/ni kosas[er]áreta* (= ... *o-kosase ni nátta*) 'The teacher made the student come'. *Senséi ga gakusei ni kodomo o yobas[er]areta* (= ... *o-yobase ni nátta*) 'The teacher made the student call the child'.

And in written Japanese you may run across the obsolete use of the passive-causative forms for subject exaltation, especially in reference to the Emperor and his family. The passive-causative form may even be applied to the copula (*de araseraréru* = *de irassyáru*): ... *hokutyoo no keitoo de araseraréru* ... 'is of the lineage of the northern dynasty' (SA 2670.146).

Examples of passivized causatives: *Bóku-táti wa uketuke de yobi-tomerárete, sáin o saserareta* 'We were detained at the reception desk and made to sign our names' (CK 985.378—note the loose conjoining of passive with passive-causative); *Watasi wa Toodai o dénakatta bakari ni issyoo nakasareta. Musuko wa isí ni kaziritúité mo Toodai e ...* 'I was brought to tears for a lifetime just because I didn't graduate from Tōkyō University. My son will go to Tōkyō University, whatever it may take ...' (SA 2663.30e); *Otona muki no syoowa ní wa kodomo ní wa kikaserarenai yoo na hanasí ga ooku nári, ...* 'Many anecdotes for grownups are hardly such that we can let children listen to them (or: that we can tell them to children)' (Takeda 1970.3); *Tyúugaku no tokí^[1] ténisu o yatté 'te, kookoo-sei no tokí wa óyazi(-) ga benkyoo si ro si ró tté, supóoto wa yaraserarenákatta n desu* 'In Junior High I played tennis but when I was a high school student my father said "study, study!" and I wasn't allowed to engage in any sports' (SA 2662.44b). The last sentence would appear to be a counterexample to the claim by Kuno (1973.347) that the passive of a causative sentence always means 'be forced to' and never 'be let to'; perhaps the negative loosens this restriction.

4.4. POTENTIALS

The potential passive can be shortened. Traditional Japanese grammar suggests that such forms are available only for consonant bases: *yobareru* when it means 'can call' may (or must) be said as *yoberu*. But many speakers use the same kind of shortening for vowel bases, too: *tabaréru* for *taberaréru* when it means 'can eat'. There are two conflicting tendencies: One is to use only the short form for ALL potentials, thus formally differentiating them from the passives: *hanaséru* 'can speak' ≠ *hanasaréru* 'is spoken', *tabaréru* 'can eat' ≠ *taberaréru* 'is eaten'. The other tendency—common in Ōsaka and in the north—is to use only the long forms for both the passive and the

potential: *taberaréru* 'can eat' or 'is eaten', *hanasaréru* 'can speak' or 'is spoken'. These tendencies lead in many areas to free variation, or competition, between the forms. Most of the traditional Tōkyō speakers favor what amounts to a compromise: they always use the long form for both the passive and the potential of VOWEL bases, so that *taberaréru* is ambiguously 'gets eaten' or 'can eat';¹³ they nearly always use the short form for the potential of CONSONANT bases and the long form for the passive, keeping *hanaséru* 'can speak' distinct from *hanasaréru* 'gets spoken', but they will nonetheless often use long forms for the potential of certain consonant verbs such as *ikareru* instead of *ikeru* for 'can go' and *tukuraréru* for *tukuréru* 'can make'.

According to Yoshida (Y 116) use of the full passive of consonant verbs as the unabbreviated potential is obsolescent in speech and has a written-style flavor harking back to the Meiji period (Y 116). Yoshida (114-6) gives examples from Natsume Sōseki (*ikareru*), Shimazaki Tōson (*nozomaréru*(-)), Akutagawa Ryūnosuke (*okosi-tákute mo okosarénaí*), and Mori Ōgai (*nararénaí* = *narénaí*). Yoshida (132) says that though the C-e-ru forms date back to Muromachi times, the V-re-ru forms are "new"; he cites examples from Kawabata of *korénaí*, *kóre ya sinai* (= *koráre wa sinai*) 'can't come', and *ikirénaí* 'can't live', observing that the short forms are particularly common in the negative, where they are thought to have started (Y 136).

Examples of *koréru* = *koraréru* 'can come': *Yáku gosen-tubu no tamágo(-) no utí(-) de kókyoo no kawá ni modótte koréru no wa tatta ip-píkí de aru* 'Of the approximately five thousand eggs, only one fish is able to return to the home river' (SA 2659.71c); ... *yáku goman-en mo áreba déte kóreta sóo da ga ...* 'apparently they were able to get out [of jail] for about fifty thousand yen, but ...' (SA 2666.99c). And of *ikareru* = *ikeru* 'can go': *Anéssa no ué o hadasi de ikareru món ka* 'How could anyone walk on that burning sand in bare feet?!' (Tk 2.125b); *Bóku(-), Amerika e ikare-soo ná n da* 'It appears I will be able to go to America' (Y 116). More examples will be found in Y 134-5. For dialects with such forms as *yome-ré-ru* 'can read' and *ie-re-ru* 'can say', see Y 137.

For 'can do' apparently no one says either *sareru* or **seru*; instead, *dekíru* is used. (Mikami 1963a.12 treats *dekíru* as the suppletive short potential for *suru*; but the "long" form *sareru* is almost never used as a potential.) To be sure, there is a word *séru*, but it is the attributive form of the literary perfect *séri* < *si-ári* 'has done' (§9.6). Although *suru* does not itself make a potential (using *dekíru* instead),¹⁴ when attached to certain verbal nouns (such as *takú-su* = *taku-súru* 'entrusts', *hú-su* = *hu-súru* 'commits') or to certain other elements (*ái-su* = *ai-súru* 'loves', *naku-su* = *naku-suru* 'loses'), what remains of *suru* is just the *s*, which is treated as the final consonant of a consonant base and makes the usual potentials: *takus[ar]éru* 'can entrust', *hus[ar]éru* 'can commit', *ais[ar]éru* 'can love', *nakus[ar]eru* 'can lose', etc.; but the longer forms, which are identical with the passive, will be avoided by those speakers who use only the short potential with consonant bases: *Issyoo ni husénaí* "kagai-sya-isiki" 'A "consciousness of being the injured" that can not be lightly laughed off' (SA 2656.156—heading); *Tíisa na monó o aisénaí yóo de, óoki na monó o hontoo ni aiséru daroo ka* 'Would one really be able to love a big thing while

13. On the spread of such forms as *miréru* 'can see' (for *miraréru*) and *koréru* 'can come' (for *koraréru*), see Nagano 1966.187-8; he implies these forms may soon have to be recognized as part of the standard grammar.

14. But in written-style language you will also find *si-úru* (negative *si-énaí*), as in *soozoo si-úru* = *soozoo dekíru* 'one can imagine' (KKK 3.243).

apparently unable to love a little thing?' (SA 2664.32c). Notice that in these examples ...*sénai* does NOT represent *senu*, the literary and Kansai version of *sina*, which is the simple negative of *suru*. That category is never¹⁵ represented by **sinu* and (**sénai* is rare, if it exists at all.

But there are some other bound verbal nouns that traditionally do not contract to form new consonant-base verbs, and these apparently make their potentials with *-sareru*. In the colloquial language *syoo-súru* 'praises' or 'names' will not shorten to **syóo-su* (though you may occasionally run across the contracted form, especially under adnominalization: *syóo-su kotó* = *syoo-súru kotó*) and the potential has to be the same as the passive, so that *syoo-saréru* means both 'can praise/name' and 'gets praised/named', and there is no **syoo-séru* potential. (**Syoo-dekíru* is precluded by the fact that *syóo-* is bound.)

The first group of verbal nouns—the contracting ones—include monomorphemic Chinese borrowings that are of one mora in length or that end in *-ku*, *-ki*, *-tu*, or *-ti*. The remainder (those ending in long vowel or vowel + *i* or *n*) belong in the second group, provided they are BOUND: *ái* 'love' apparently goes with the first group because it is not fully bound since you can say *ái o suru*. (But such forms as **ai-dekíru* are not used.)

Bound verbal nouns from monomorphemic Chinese loans (and a few native elements) that voice the auxiliary, such as *kan-ziru/-zuru* 'feels' and *hoo-zíru(-)/-zúru(-)* 'repays' or 'reports', make both passive and causative with a colloquial *-zirareru* or a less colloquial (hence more often written) *-zerareru*: ... *zyuugyóo-in no tǐngin* [no] *zyoosyoo ni oo-zirarénai(-)* 'can not adjust it to the rise in the wages of the staff' (SA 2677.34c). Apparently **-zíreru* is never used for the potential; only the full passive form will be accepted.

Another way to express potentiality is to nominalize the sentence (by adnominalizing it to the summational epitheme *kotó* 'fact') for use as the direct subject—underlying object—of *dekíru*: *kodomo ga kore o tabéru* 'the child eats this' can be converted to *kodomo ni/ga kore o tabéru kotó ga dekíru* 'the child can eat this' = *kodomo ni/ga kore ga taberaréru* or *kodomo ga kore o taberaréru*—but *kodomo ni kore o taberaréru* strikes most as awkward, though it is quite possible to have *ní* (or *gá*) to mark the possessor of the potentiality in a sentence such as *Kodomo ni zǐ o yómu kotó ga dekíru* 'The child can read characters'. (On retaining the *ó*-marking of the direct object see Tsujimura 168 and Alfonso 918; above, p. 297.) This construction is discussed in §14.1.3; note that foreigners tend to overuse *dekíru*, where Japanese prefer the passive potential or its shortening. Elsewhere I suggest that the use of *dekíru* as the potential of *suru* can be regarded as ellipsis: [*suru kotó ga*] *dekíru*. That will account for all occurrences, including those which do not involve verbal nouns, e.g.: *Zisyu-teki ni nyuuzyóo-ryoo o haráu kankyaku o móttö daizǐ ni* [*suru kotó ga*] *dekínai monó ka* 'Why can't they take better care of the customer who pays his admission independently (to see the show)?' (SA 2671.111d); *Moo sukósi yásuku* [*suru kotó ga*] *dekimasén ka* 'Can't you make it a little cheaper?' (Cf. §9.1.11). The ellipsis suggested here will explain the retention of the *ó*-marking for the underlying direct object in constructions with VNT [*suru kotó ga*] *dekíru*: *Táda de Yooróppa o kenbutu dekíru nánte*, *subarasǐi zya náí?* 'Isn't it swell to be able to see Europe free?' (SA 2665.138—*Yooróppa ga* is possible); *Kánkoku no zítuzyoo kara míte keizai-teki ni óoku o kitai dekíru wáke de mo náí* 'In view of conditions in Korea there is little likelihood that one can expect much economically (from this venture)' (SA 2687.65-6—*óoku ga* is possible); ... *onazi gakká dé*

15. Or virtually never; see p. 371 for a dialectal exception.

mo koto-nátta téido(¯) no koogí(¯) o hoosoo dekiru kotó ni náru 'It will be so arranged that they can broadcast lectures at different levels even for the same subject' (SA 2659.109c). Notice that it is possible to say (VN) saseru kotó ga dekiru 'can cause', as well as (VN) {suru kotó ga} dekiru 'can do'; but *(VN) sareru kotó ga dekiru 'can have it done (can suffer the doing)' is rejected. The bound verbal nouns with -ziru (§ 14.3) are similar, as can be seen from this example: Tokubetu na kúnren o sureba, moozín(¯) ni sikisai o kan-zisaseru kotó ga dekiru ka mo sirenai (= kan-zisaserarerú ka mo sirenai) 'With special training it might be possible to let blind people feel colors'.

A literary expression for potentiality can be made with the infinitive -i+ [é]- 'get', §9.1.10; in pseudo-literary form this yields -i-e-ru, but in genuine literary form it will be -i-u when predicative and -i-uru when attributive (= adnominalized), though the form -i-e will appear as the infinitive and before the negative: ari-úru kotó to ari-énai koto 'the possible and the impossible'.¹⁶ The verb áru freely takes the V-i-eru potential: Tigatta kangae-káta ga ari-emásu ga ... 'It is possible to have a different point of view, but ...'; Senséi nara tutusimánakute mo yóii to iu kotó wa, ari-énai 'We can't have it happen that he who is a teacher allows himself to ignore politeness in his speech' (Maeda 1962.56). And the V-i-eru form can be used, in writing, to ring a potential on an identificational sentence predicated with the copula dé áru: ... Índo wa móhaya bookán-sya de wa ari-énai 'India can no longer be [= remain] an onlooker' (Ōide 1965.157—with subdued focus); Sono ími de, kono gurúupu wa senryóo-ka ni okéru(¯), hitótu no hihan-séiryoku de mo ari-éta no da 'In that sense this group was able to even be a force for criticism under the Occupation' (SA 2658.63a—with highlighting). Accent dictionaries list ari-úru as tonic, but if the formation is regular the older-generation speakers should have an atonic compound, according to the rules presented in §9.1.10.

You may also find the subjective copula tó áru in its reduced form táru, yielding tari-úru 'can be': Dóru ga sekai-túuka tari-úru wáke 'Why (it is that) the dollar can be a world currency' (SA 2676.44a). Here is an interesting example of a yes-or-no question in which the negative alternate is given with only the auxiliary: ... áru itíbu no hitó no sikoo ni too-zi-úru ka, énai ka to iu daké no kotó de, ... 'just with whether it will be able to hit a certain group of people's taste or not [be able to] ...' (Maeda 1961.81). Pleonastic formations V-i-e-rare- (with the passive-potential made on é-) are used for emphasis by some writers; see Y 128-9.

An older literary form places the infinitive é (of é-ru = literary úru/ú 'gets') in front of a verb that is itself either negative or a rhetorical question: ^[u]é iwazu = ii-ézu 'unable to say'; Káre no ^[u]é iwanú o ... = Káre ga/no ienáii no o ... 'his inability to say' (Y 508). Now, in Shikoku—and rather widely in the Kansai area—there is a potential construction that consists of the adverb yóo < yó'u < yó[k]u 'nicely = easily' + verb: Titioya wa itai no kakunin ni yóo ^[u]ikan 'His father is unable to come to identify the body' (SA 2676.127e—quoting a speaker from Toyonaka). The expression Yóo iwan wá 'I can't (rightly) say' has become a semantically empty cliché now spread widely through the country, including areas that would not normally use this sort of potential (cf. Maeda 1961.114-5). Like the literary construction with é, the potential yóo + verb is apparently limited to predicates that are negative or are rhetorical questions, though I lack examples of the latter. Maeda (1961.120)

16. In written Japanese you may come across sare-úru 'can be done', a potentialized passive: ... renraku sare-úru monó ... 'can be linked' (KgKbg 389.55b).

says that in Ōsaka yoo^[r] V-(a)n began replacing é^[r]V-(a)zu in the 1830's. But I wonder whether the literary é usage itself may not enjoy a false (though venerable) etymology, being perhaps instead an old crasis deriving from yée < yoo < yó[k]u. Although the é(-) has been treated as a prefix by Western grammarians, Meikai kogo jiten lists it as an adverb and gives examples where it precedes adjective negatives with the meaning 'can hardly be said to be' or 'can't (be said to) be'. Analysis of é as an adverb is supported by the fact that it can be followed by focus markers such as mó and yá (= wá); for an 1897 example of é mo iwarezu see Y 508. O'Neill 1968.202 gives examples also of é + kóso, námu, and nán. Writers sometimes use the same Chinese character (TOKU 'get') to write both é(-) 'can' and yoo < yó[k]u (using send-off kana "u"); see Y 508 for an example. (It is unclear whether these periphrastic potentials with yoo + negative verb have exactly the same quasi-possessive grammar as regular potentials or not.)

Maeda (1961.115-6) distinguishes three kinds of negative potential which are often neutralized in the standard language, while being kept apart in certain areas, such as Fukuoka (in northern Kyūshū):

- (1) It is quite impossible, beyond any ability: C-areru, V-rareru.
- (2) It is temporarily hindered or blocked: C-en, V-ren.
- (3) It is permanently beyond one's ability, it is too much for one: C-i-kiran,

V-(i/e)-kiran.

Following Maeda (1961.120) we can illustrate the forms for 'can't eat' as they occur in different parts of Japan:

FUKUOKA	ŌSAKA	TŌKYŌ (older)	TŌKYŌ (newer)
(1) taberaren	taberarehen	taberarénaí	taberénaí
(2) taberen			
(3) tabe-kiran			

In southern Kyūshū V-i ga náru is used for a potential, corresponding to V-i-kiru used elsewhere (in Kyūshū?), apparently in the affirmative as well as the negative (Zhs 6.25; Fujiwara 1969.149). Compare the standard use of naránaí to mean 'it won't do' (= ikenai from 'it can't go') in forming one of the expressions of obligation V-(a)nákereba naránaí 'must'.

The potential of i- 'stay' is irare-, and some speakers will allow the short form ire- (homonymous with ire- 'put in'). The humble-or-polite equivalent ór- (see §6.3-4) yields the forms oráre- and óre-. The latter is homonymous with óre- 'break it', but only because the Tōkyō dialect is historically aberrant in treating ór- < wór- as tonic when a comparison with other dialects would lead us to expect the verb 'be' to be atonic and thus to contrast with the verb ór- < wór- 'break' whose tonic accentuation is historically legitimate; the verb for 'weave' is historically tonic but the atonic form is also used in Tōkyō: ór-(-).

In the colloquial language those intransitive verbs that do not require human ability for their performance seem to lack all potential constructions; thus we find no forms for áru 'has it', húru 'rain/snow falls', kasumu 'it fogs up', otiru 'falls', saku 'blooms', kareru 'withers and dies', etc. The possibility of suicide, however, makes sin(ar)eru 'can die' acceptable; and the potential for that verb can be used under more prosaic conditions, as well: Dóo-de [= Dóo-se] mánzoku ni tatami no ué de sineru yátu to wa omowánakatta ga yappári sóo datta ka 'I didn't think he was after all a guy who could be satisfied to die on a mat floor [= in bed], and yet he did, eh' (Kb 96b). And hutóru 'gets fat' is apparently

subject to control, at least for some persons: *Tásika ni taisitu-teki ni hutorénai hitó ga imásu* 'There are definitely people who are constitutionally unable to put on weight' (SA 2664.106d). The expression *wakáru kotó ga dekiru* 'can understand' is acceptable at least to some speakers—though both **wakaréru* and (as potential rather than adversative or subject-exalting) **wakararéru* are rejected; perhaps this is due to the "transitive" influence of the Chinese-borrowed verbal noun that functions as a synonym: *kore o ríkai(-) suru* 'understands this' can be converted to *kore o ríkai(-) [suru kotó ga] dekiru* 'can understand this'—with optional but common ellipsis of *suru kotó ga* (p. 850).

Potential sentences are incompatible with the hortative (-[y]oo, § 12.2) or the imperative (-e, § 16.1) and synonymous circumlocutions; you can not say 'Let's be able to do it' or 'Please be able to do it', except through roundabout paraphrases such as 'Let's try to arrange it so that we are able to do it' (*dekiru yóo ni siyoo*).

On applying both exaltation AND the potential, see § 6.1, where three possibilities are offered: most common o-V-i ni *naréru*, less common o-V-e ni *náru*, and surprisingly frequent o-V-e ni *naréru*. For another instance of pleonastic (double) application of the potential, see V-e-te *sima-e-ru*, end of § 9.2.4.(4).

It is unclear whether the present-day short potential has developed from abbreviating the passive-potential, as here suggested, or from shortening the infinitive-with-auxiliary construction -i-(e)-, a tradition that is treated with suspicion by Yoshida; perhaps we can say there has been a convergence. In any event, the forms are to be carefully distinguished from those homonymous intransitives that belong to a transitivity pair as the marked member: *ureru* means either 'can sell it' or 'it sells', *kiréru* means either 'can cut' or 'is sharp'. These intransitives are made by suffixing -e- (perhaps from a proto-Japanese -i + auxiliary *á- = ár- 'be'*), so that the forms thus fall together as homonyms with the regular shortening of -are- in its meaning as potential. By contrast, *máke-* is ONLY the potential from *mák-* and means 'can sow', never 'gets sown' (= *makaréru*).

A fairly comprehensive list of the transitive bases that underly such intransitives (homonymous with the short potentials from the same verbs) contains 30 items:

13 that end in /r/—*kír-* 'cut', *kubir-* 'constrict', *makur-* 'tuck up', *nezír-* 'twist', *ór-* 'break', *sir-* 'find out', *súr-* 'rub', *tór-* 'take', *ur-* 'sell', *war-* 'split', *yabúr-* 'tear', *yór-* 'twist', *yur-* 'shake';¹⁷

13 that end in /k/—*hazík-* 'snap, repel', *hik-* 'pull', *hodók-* 'untie', *kudák-* 'break', *kuzík-* 'wrench', *muk-₁* 'peel', *nezík-* 'twist', *nuk-* 'extract', *sabák-* 'sell, dispose of', *sák-* 'split', *tók-* 'untie', *yabúk-* (= *yabúr-*) 'tear', *yak-* 'burn';

3 that end in /g/—*móg-* 'pluck', *núg-* 'strip off', *sóg-* 'slice off';

1 that ends in /m/—*mom-* 'rub'.

Also to be carefully distinguished are intransitive short potentials that happen to be homonyms of TRANSITIVE verbs which belong to a transitivity pair as the marked member, by virtue of the suffix -e- that goes back to something like -a + auxiliary *i-* (= [s]í-'do'(?)) in proto-Japanese. A fairly comprehensive list of such verbs contains 34 items:

12 that end in /m/—*hik-kóm-* 'withdraw', *itám-* 'hurt', *kagam-* 'bend', *kubom-* 'dent', *kurusim-* 'worry', *sizum-* 'sink', *susum-* 'advance', *tizim-* 'shrink', *tubom-* (= *tubomar-*) 'pucker up', *yam-* 'end', *yasúm-* 'rest', *yugam-* 'warp';

11 that end in /k/—*ak-* 'open', *dok-* 'remove', *katamúk-* 'incline', *muk-₂* 'face', *nok-*

17. Etymologically, also *sugúr-* 'select': *sugúre-* 'be superior (i.e. be select)'.

'remove', sirizók- 'withdraw', somúk- 'turn back on', todók- 'deliver', túk- 'attach', tuzuk- 'continue', utumúk- 'droop';

5 that end in /w/ (from earlier /p/)—kanáw- 'fulfil', sitagáw-(-) 'follow', sow- 'accompany', sorów- 'arrange', tigaw- 'differ';

2 that end in /b/—narab- 'line up', ukab- 'float';

2 that end in /t/—sodát- 'rear', tát- 'stand';

1 that ends in /r/—ir- (= háir-) 'enter';

1 that ends in /g/—yawarág- 'soften'.

And, of course, there are other fortuitous convergences: kakéru can be either the potential of kák- (equivalent to kakaréru in the sense 'can write') or the transitive verb 'hang it' (with its own potential kakeraréru that some will contract to kakeréru 'can hang it') which forms a polarized pair with intransitive kakáru 'it hangs'; makeru is either the potential of mak- (= makareru 'can roll it up') or the intransitive verb 'gets defeated' (with its own potential makerareru that contracts to makereru 'can get defeated'), which can be made transitive with the suffix -as- (makasu 'defeats', homonymous with the contraction of the causative of mak-, makaseru, which in turn happens to be a homonym of the potential of makas-, equivalent to makaserareru in the sense 'can defeat'). And in a written context you must be prepared to find that kakéru may be the attributive (= adnominalized) form of the literary perfect kakéri = káite iru 'has written' or = kaite iru 'is lacking'; the literary perfect of mak- 'roll it up' as well as of mák- 'sow, scatter' will be tonic makéru/makéri = maite iru 'has rolled it up' or = máite iru 'has sowed (scattered)' but that will not be apparent in writing. The literary perfect is normally made only on consonant bases and on si- 'do', for which the forms are séri and séru, so there are no legitimate forms for kakéru or makeru (though you may run across kakéri/kakéru and makéri/makéru used illegitimately, cf. Henderson 248). But makaséri 'has defeated' is possible, and only accent will differentiate the attributive makaséru from makaseru which is either the potential of makas- or the causative of mak-.

Some potentials have developed special meanings in addition to the expected ones; we might wish to treat the special meaning as a separate intransitive verb derived from the potential. Among these verbs are miréru 'is worth seeing, is seeable, is enjoyable to see', kikeru 'is worth hearing, is listenable, is enjoyable to hear', and noméru 'is worth drinking, is drinkable, is enjoyable to drink'. (Apparently taberéru is little used in this way, though kuéru 'is worth eating, is eatable, is good to eat' is common.) A sentence such as Sono sibai wa miréru ka has two meanings: 'Can that play be seen?' (= Sono sibai o míru kotó ga dekíru ka) and 'Is that play any good?' (= Sono sibai wa omosirói ka); cf. Morishige 127. On miréru = miraréru 'can see' as a thriving innovation in postwar Tōkyō, see Maeda 1961.1.16-8; an example: Koo iu supékutákuru wa Amerika-éiga de náí to mirénai 'Such a spectacle can only be seen in an American film' (SA 2678.114b).

Just as both kikeru and kikareru mean 'can hear' but only kikareru means 'is heard' or 'gets listened to', both miréru and miraréru mean 'can see' but only miraréru means 'is seen' or 'gets looked at': Watasi, kangó-hu de aru kotó ga wakátte, sirói mé de miraréru kotó ga yóku arimásu 'On being discovered to be a nurse, I often get looked at with "the white of the eye" (= disapproval)' (SA 2679.81b); ... "senmon-ka" no hatugen ga kikareru ga ... 'declarations by "specialists" are listened to, but ...' (SA 2664.93b).

We can compare, from the potential of iku 'goes', ikeru 'tastes good = is delicious (oisii)'

and *ikenai* 'is no good (damé); is bad (warúi)'. From *motéru* 'can be had by' comes the meaning 'is popular with' as in *onná ni motéru* 'is attractive to women'.

The predicate *ge-sénai* 'cannot understand' (with the same meaning and syntax as *wakaránai*) is derived from the negative potential of **gé-sú* 'understands', a one-mora verbal noun of Chinese origin now hardly used except in the negative potential, though *ge-si-gatái* 'is hard to understand' appears to be acceptable. The typical usage is found in *Bóku*(-) *ní wa ge-sénai né* 'I can't understand it' (Fn 443a). A rhetorical question is not permitted: **ge-séru món ka*. And **ge-sánai* is not used; the one example of *ge-sínai* I have found may be a mistake for *gesénai*: ... *yúumoa o ge-sínai otokó da ná* 'He is a man who doesn't appreciate humor' (Tk 3.--). Also found: *ge-si-kaneru* (Agawa 1.227a).

4.4a. SPONTANEOUS POTENTIALS AND PASSIVES

Alfonso 952 discusses "what the Japanese grammarians call the NATURAL POTENTIAL" that is used when something happens involuntarily or naturally, giving such examples as *Náni ka kaíte iru uti*(-) *ni é ga kámete iru* 'While I am doodling a picture happens to result' and ... *nakete kíta* 'tears welled up'. This category, which I will call the SPONTANEOUS POTENTIAL, may account for a double use of *dekiru* both as potential for *suru* 'can do' and as spontaneous 'gets produced, gets done'—as in *komé ga dékita* 'rice was produced', *kutú ga dékita* 'the shoes got done (= made/repaired/readied)', and *kodomo ga dékita* 'had a child'. Other examples of the spontaneous potential: *Hanasi o kiite iru uti*(-) *ni sizen ni waraete kíta* 'While listening to the story, I was seized with laughter'; ... *hontoo no yóo ni omóete kíta* 'it began to appear true'.

Kazama 213 refers to "natural passives" and gives as examples: ... *tó omowaréru/iwareru/miraréru* 'it is thought/said/seen that ...',¹⁸ *okonawareru* 'it happens', *zikkoo sareru* 'it goes into effect', *kaisai sareru* 'a meeting is held'. It is with this category of SPONTANEOUS PASSIVES, as I will call them, that some of Alfonso's examples properly belong: *soozoo sareru* 'it can well be imagined', *kangaeraréru* 'one can be led to think', *omoi-dasareru* 'the thought keeps coming to mind', *sikén ga omoi-yarareru* 'a test is on one's mind'. An example: ... *ni kiwámete zyuuyoo na imi-ái*(-) *ga kan-zirareru* 'An extremely important significance makes itself felt in ...' (SA 2670.104c). The spontaneous passive, in contrast with the spontaneous potential, would appear to be limited to verbs referring to psychological states (cf. Y 118). It is questionable whether verbal nouns are ever used with the spontaneous potential (*soozoo dekiru*) instead of the spontaneous passive (*soozoo sareru*).

Yoshida calls our attention to a number of examples on the borderline between pure and spontaneous passive, between pure and subject-exalting passive, and between pure and potential passive; a given example can often be interpreted in two ways (Y 121).

4.5. INTRANSITIVES DERIVED FROM PASSIVES

Some sentences contain a form that looks like a passive but turns out to have a grammar of its own, so that we must list the verb as a separate lexical item, an intransitive

18. But these can sometimes also be taken as potentials; *omowarénaí* at times is an equivalent of *omóenáí* 'can't think/feel' (for an example see Y 118).

derived from a passive. It would be possible to attribute the sentence *Onná ni kodomo ga umareta* 'A child was born to the woman' to the passivization of an underlying *Onná ga kodomo o unda* 'The woman bore a child', but a similar explanation is impossible for *Otokó ni kodomo ga umareta* 'A child was born to the man = He became the father of a child' or *Kodomo ni ootoó ga umareta* 'The child had a little brother born to him'. Similar verbs are (*monó ni*) *megumareru* 'is blessed (with things)' and (*sake ni*) *nomaréru* 'gets drunk (on liquor)'. The actual practice of dictionaries is somewhat erratic: many regular passives and causatives are needlessly listed, but some of the intransitives derived from passives may not appear as separate entries.

For the examples given here it is not possible to make a new passive, nor a causative **kodomo ni ootoó o umaresaseru* 'causes a child to have a little brother born to him'. But (*kabe ni*) *motaréru* 'leans (on a wall)' from the passive of *mótu* 'holds' can apparently take the causative (*hito o kabe ni motaresaseru* 'lets people lean on the wall') and the adversative passive (*hito ni kabe o motareraréru* 'suffers from having people lean on one's wall'), so that these restrictions may be verb-specific.

Perhaps the following belong here: *kemuri ni makareru* 'is wrapped in smoke', *sigoto ni owareru* 'is pressed by work' (but cf. *sigoto ni oi-makuraréru* 'is relentlessly driven by work', §9.1.10), In *heitai ni toraréru* 'gets taken (= drafted) as a soldier', the passive is functioning as a MUTATIVE verb (§9.1.10) but still retains its passive grammar as well, since you can retain the agent: *Péntágon ni heitai ni toraréru* 'gets drafted as a soldier by the Pentagon'.

4.6. TRANSITIVITY SETS

A good many verbs in Japanese appear in shape-related pairs that show PAIRED TRANSITIVITY. One of the verbs is intransitive or quasi-intransitive and the other represents a corresponding transitive meaning. Okutsu 1967 points out that we must take account of three kinds of derivation to explain such sets:

(1) Transitivity, in which an underlying intransitive verb (such as *kawák-* 'get dry') is converted into a transitive verb (*kawakás-* 'dry it') by the addition of a suffix, here *-as-*.

(2) Intransitivization, in which an underlying transitive verb (such as *hasám-* 'interpose') is converted into an intransitive (*hasamár-* 'is interposed') by the addition of a suffix, here *-ar-*.

(3) Polarization, in which both transitive and intransitive are to be derived from some hypothetical basic form: e.g. *naór-* 'get improved' and *naós-* 'improve it' seem to be derived, by the suffixes *-(a)s-* and *-(a)r-* respectively, from a nonexistent verb **naó-* (etymologically to be found in the adverb *naó* 'yet, rather').

Similar to the polarized pairs are verbs with AMBIVALENT TRANSITIVITY: the same shape represents both transitive and intransitive: *húku* '(the wind) blows; blows (a whistle)', *hiráku* '(the earth, a flower, one's "eyes") open; opens it', *haru* 'it stretches; stretches it', *masu* 'it increases; increases it', *?yoseru* 'it approaches; brings it near', *?akeru* 'it opens (dawns, ends); opens it'. For some of these verbs it seems that the basic grammar calls for one kind of transitivity, the other being a metaphorical extension, often limited to a few objects or subjects. In modern Japanese the originally intransitive verbs *owaru* and *simau* are also used transitively, meaning both 'it ends' and (= *oeru*)

'ends it'; but *súmu* is always intransitive 'it ends', paired with transitive *sumásu* 'ends it'. There are also verbal nouns that can be used either transitively or intransitively, e.g. *syóokyó* 'eliminating' or 'being eliminated', *zenmetu* 'annihilating' or 'being annihilated', Cf. also *yamá ni noboru* 'climbs on the mountain' ≠ *yamá o noboru* 'climbs the mountain'. (For a long list of ambivalent verbal nouns, see KKK 43.705-6.)

And some verbs, of course, occur as UNPAIRED transitives or intransitives:

INTRANSITIVE	TRANSITIVE
<i>kúru</i> 'comes'	(<i>motte/turete kúru</i> 'brings')
<i>iku</i> 'goes'	(<i>motte/turete iku</i> 'takes')
<i>yaseru</i> 'gets thin'	—
<i>oíru</i> 'gets old'	—
<i>saku</i> 'blooms'	—
<i>iru/áru</i> 'exists'	—
—	<i>útu</i> 'hits'
—	<i>kúu</i> 'eats'
—	<i>kír-u</i> 'cuts' (cf. <i>kiréru</i> 'can cut = is sharp', §4.4)
—	<i>kér-u</i> 'kicks'
—	<i>kokoromíru</i> 'tries'
—	<i>nagéru</i> 'throws'
—	<i>nagúru</i> 'pummels'
—	<i>kanéru</i> 'combines'
etc.	etc.

Transitivity pairing differs from the passive and causative conversions in two ways: (1) The derivation is not productive. Virtually any sentence can be turned into passive or causative quite regularly, but you have to know the transitivity pair as lexical items, and the semantic relationship between the two verbs is sometimes complex. (2) The shape relationship requires a number of special rules to explain. Okutsu has restated Bloch's list of suffixes in a revealing way, so that the transitivity suffix is regularly *-(a)s-* with a few cases of *-se-* and the intransitivizing suffix is regularly *-(a)r-* with a few cases of *-(a)re-*. The other pairs (*tátu* 'it stands' : *tatéru* 'stands it up'; *ureru* 'it sells' : *uru* 'sells it'; *nieru* 'it boils' : *niru* 'boils it') he explains as etymologically similar to the ambivalent verbs, with the differentiation into vowel and consonant conjugations used both ways to mark transitivity. If the original meaning of the verb was transitive in nature ('sells', 'boils') a vowel-verb derivative was created to mark the intransitive; if the original meaning was intransitive in nature ('stands') a vowel-verb derivative was created to mark the transitive. I propose a different hypothesis for the historical development: For the derived intransitives, quite a few in number, the *-e-* suffix comes from the infinitive *-i* + an auxiliary *á-* (probably to be equated with *ár-* 'be'); but the *-e-* of the derived transitives is a crasis of the same two vowels in reverse order and represents the subjunctive ending *-a* + an auxiliary *i-* (perhaps a variant of [s]i- 'do').¹⁹

19. I am aware that both kinds of *-e-* are assumed to be the same vowel in Old Japanese, which made a distinction between two kinds of /e/ after certain of the consonants. My proposal would place the derivation at an earlier stage, with analogical neutralization of the vowel distinction by the time of Old Japanese. Another theory posits a single suffix *-i-* (earlier **-gi-*) which reverses the transitivity of the base.

A number of larger sets can be found. For example, *yasúmu* 'rests' (basically intransitive, but transitive in the sense 'rests from', e.g. *gakkoo o yasúmu* 'skips school') underlies the polarized pair (*kokóro o*) *yasuméru* 'puts (one's heart) at rest' and (*kokóro ga*) *yasumáru* '(one's heart) is put at rest'. Similar are *tubomu* (= *tubomaru*) : *tubomeru* 'puckers shut' and *yamu* (= *yamaru*) : *yameru* 'stops': ... "yame-nasái" tte iwaret'átte yamaranai ná '... though told "Give it [= drinking] up" there's no giving of it up, you see' (Tk 4.317a). And some etymological connection no doubt links the polarized pair *káes-* 'return it' : *káer-* 'come back' with the similar pairs *kae-* 'change it' : *kawar*₋₁ 'be changed' and *kawas-* 'exchange' : *kawar*₋₂ 'be substituted'.²⁰

There are also pairs of verbs which have a parasyntactic relationship similar to, but differing from, the transitive-intransitive relationship; both verbs are transitive but the direction of action is reversed (cf. lg 15):

	OUT-GOING	IN-COMING	
Shape-related:	<i>kasu</i> 'lends'	<i>kariru</i> 'borrows'	
	<i>osieru</i> 'instructs; teaches it'	<i>osowaru</i> 'learns it'	
	<i>azukéru</i> 'puts in custody'	<i>azukáru</i> 'takes in custody'	
Unrelated:	<i>uru</i> 'sells'	<i>kau</i> 'buys'	
	<i>ataeru</i> 'gives'	<i>ukéru</i> 'receives'	
Cf:	<i>yaru</i> ₁ / <i>ageru</i> 'gives'	} <i>morau</i> 'receives'	
	<i>kureru/kudasáru</i> 'gives us' (§ 6.5)		
	<i>yaru</i> ₂ 'sends someone (to you, there, then)'		<i>yokósu</i> 'sends someone (to us, here, now)'
	<i>iku</i> 'goes/comes (to you, there, then)'		<i>kúru</i> 'comes (to us, here, now)'

Okutsu treats pairs such as *osieru* : *osowaru* and *azukéru* : *azukáru* as representing "double-transitive verbs". Thus *Senséi ga Nihon-go o osieru* 'The teacher teaches Japanese' and *Senséi ga gakusei o osieru* 'The teacher teaches the student' are both possible, though 'The teacher teaches the student Japanese' will mark the student as indirect object: *Senséi ga gakusei ni Nihon-go o osieru*. The "in-coming" versions, the result of "double-transitive intransitivization" according to Okutsu, take either *ni* or *kará* to mark the agent, as the beneficiary becomes the subject: *Gakusei ga senséi ni/kara Nihongo o osowaru* 'The student is taught Japanese by the teacher'. Notice that *morau* 'receives' functions in the same way with respect to verbs of giving. Another way of stating this is to say that when the beneficiary is subjectified, the agent is marked with either *ni* or *kará*; and some verbs (e.g. *osieru*) permit the beneficiary to take the *ó*-marking of the direct object provided the underlying direct object is not mentioned.

Alfonso 935 claims "Whenever a given word has two forms, TRANSITIVE and INTRANSITIVE, only the TRANSITIVE form is inflected into the passive" and says the following are "not used": *kimarareru*, *kirerareru*, *matomarareru*, *kowareraréru*, *nagareraréru*,

20. Corresponding to the transitive *morásu* 'leaks it' there are two versions of the intransitive: *móru* and *moréru* 'it leaks'. Some speakers apparently keep the two separate but the details are unclear. In origin the pair are, like *karu* : *kariru* 'borrows' and *taru* : *tariru* 'suffices', divergent dialect developments; see §13.9.

etc. But I believe these forms can be used as adversative passives; that is the most we can expect of them, since the meanings will preclude the subject-exalting use and the involuntary nature of the verbs will generally preclude the potential. Alfonso 936 says *iru, sinu, hūru*, etc. "can never be used in the passive"; as stated this is not quite true, since the adversative passive is possible, but his examples on 946 illustrate that he meant to refer only to the pure passive.

When a transitive verb lacks a corresponding intransitive verb, sometimes the passive can be pressed into service instead. But Alfonso 943 cautions us not to use the passive for an intransitive when a separate form is available unless we want to imply an agent or source; he gives these examples:

TRANSITIVE *Ringo o tōru* '[Someone] takes the apple(s)'.

INTRANSITIVE *Ringo ga torēru* 'Apples are produced'—the only implication is a location.

PURE PASSIVE *Ringo ga torarēru* 'The apples are picked [by someone]'.

AFFECTIVE PASSIVE *Ringo o torarēru* '[Someone] has his apple(s) taken [by someone]'—an agent or source and an affected are implied.

Alfonso treats *dekīru* as the intransitive verb corresponding to *suru*, as well as considering it a potential. But notice that *dekīru* will not substitute for *sareru*, any more than *sareru* will substitute for *dekīru*, and the meaning is rather different from that of *suru*. Thus *Syokuzi ga dēkita* 'Dinner is ready' corresponds to *Syokuzi o tukūtta* (or *kosiraeta* or *zyūnbi sita*) 'I've prepared dinner' rather than to *Syokuzi o sita* 'I've had dinner'. As an intransitive verb, *dekīru* has a number of meanings, the most prominent being 'is produced; gets born; (a disease) breaks out; is proficient; achieves (intimacy)', and each of these can be said with some other, more specific, verb. (Etymologically *dekīru* includes the same elements as *dēte kūru* 'comes out'; the common meaning would appear to be something like "it outs = emerges [as/that]"'.)

4.7. DERIVED PASSIVE-POTENTIALS

For the verbs *kiku* 'hears' and *mīru* 'sees' you will find the regularly formed passive-potentials; in addition, there are derived forms: *kikoeru* 'gets heard; can be heard' is used as well as *kikeru* 'can hear' and *kikareru* 'gets heard';²¹ *miēru* 'gets seen; can be seen' is heard as well as *mirarēru* 'gets seen; can be seen' and—for some speakers—*mirēru* 'can see'. But *omoēru* 'gets thought; can be thought' is simply the short potential abbreviation from *omowarēru* and requires no separate treatment. *Miēru* also means 'appears, shows up' and is used as a euphemism for *kūru* 'comes'. The meaning 'appears' is also expressed by *arawarēru*, which forms a transitivity pair with *arawāsu* 'reveals'; these are perhaps ultimately derived from *ār-* 'be', though more immediately they are associated with *ārawa(-)*, an adjectival noun meaning 'overt, open, public'.

To say 'With this device you can hear even faint sounds' there are the following possibilities:

21. Since this is a consonant base, we do not expect the potential use of the passive in *Tōkyō* speech. An example of the pure passive: ... "senmon-ka" no hatugen ga kikarerū ga ... 'declarations by "specialists" are heard, but ...' (SA 2664.93b).

22. *Watasi ni mirārete iru kotō o īsiki suru to, ...* 'When they realize they are being looked at by me, ...' (Nagano 1966.69).

Kono kikai o tukaéba, tiisái otó de mo

{ kiku kotó ga dekíru.
 kikoeru.
 kikeru.
 kikareru. [non-Tōkyō]

It is not possible to make a passive on *miéru*, *kikoéru*, or *omoéru*; where you might set out to say **Tumaránai okyakusan ni mieráreta* 'I had a dull guest show up' you will have to rephrase your thought as ... *koráreta* 'suffered from his coming'.

4.8. DERIVED PSEUDO-CAUSATIVES

Some of the regular causative derivations take on special meanings and then are treated as separate transitive verbs: *siras[er]u* 'informs one of, tells about' (from 'lets one know'), *kikas[er]u* 'tells one of' (from 'lets one hear'), *awás[ér]u* 'joins' (from 'causes them to meet'), etc. These are listed individually in dictionaries; sometimes they lead to further derivations, e.g. the colloquial intransitive (*sizen ni*) *té ga awasáru* 'one's hands clasp of their own accord'.

These verbs will form a negative with *-sanai*. But some speakers will reject **nemurasanai* in favor of *nemurasenai*; for them *nemurasu* is simply a contraction of *nemuraseru* 'puts to sleep; murders'—most causatives having such a contraction.

The transitive verbs *miséru* 'shows' and *kiseru* 'clothes (another)' are old causatives 'causes to see' (= *misaséru*) and 'causes to wear' (= *kisaseru*), but they are somewhat specialized in meaning and they can underlie causative forms of their own: *misesaséru* 'causes someone to show (it to someone else)' and *kisesaseru* 'causes someone to clothe (someone with a garment)'. Because of the extra adjunct role they introduce, the last two forms refer to a double causation, as shown in the skewing table of §4.9. (Those speakers who hesitate to accept *misesaséru* and *kisaseru* will probably feel comfortable with *tobasaseru* from *tobasu* 'lets it fly', cf. *tobaseru* 'causes it to fly' from *tobu*.)

4.9. SEMANTIC SKEWING

A number of verb pairs show the semantic relationships of transitive vs. intransitive but lack resemblance in shape; the most obvious example is *sinu* 'dies' : *korosu* 'kills'. Since it is possible to 'kill' any noun that can 'die', the selectional restrictions for the object in the one case correspond to those for the subject in the other. Another such pair is *náru* 'becomes' and *suru* 'makes it into' (§9.1.11); the shape-related *násu* 'makes' (little used in the spoken language, which substitutes *tukúru* or other synonyms) is a transitive verb and underlies an old passivization from which comes *nasáru*, the subject-exalting form of *suru* (§6.4). At first glance the pair *ireru* 'puts it in' and *háir-u* 'enters' would seem to be little resemblant in shape, but the intransitive verb was originally a compound that took for its second member *ir-*, the literary intransitive verb 'enter' that has been largely specialized to the meaning 'need' in the modern colloquial.

The semantic relationship between transitive and intransitive is similar to that between the causative and the pure passive, except that between the latter pair there always stands a "neutral" form—the underlying transitive. (But causatives made on intransitives will lack a corresponding pure passive.) We seem to end up with a conflation of categories as a result of the development of the pure passive on the one hand and of the transitivity pairs

on the other. Let us think of three core situations, which I will call INERT, DYNAMIC, and CAUSAL. Peripheral to this core we will find on one side the ADVERSATIVE and on the other side a rare case of DOUBLE-CAUSAL. The verb forms are skewed in their sharing of such a matrix according to whether they are, in a loose sense, "active" or "static" (not to be confused with "stative", §3.12) and according to their transitivity. Thus we find at least the following situations.

VI-static (unpaired):	A ga	i- 'stay', ...; (P o) hasír- 'run', arúk- 'walk', ...
	X ga	húr- 'rain/snow', ...
VI-static paired with VT-active	A ga : A o	ne- 'sleep' : nekas- 'put to sleep', ...; sin- 'die' : koros- 'kill', ...
	X ga : X o	nokór- 'remain' : nokós- 'leave', otír- 'fall' : otós- 'drop', ...
VT-active (unpaired):	A ga	yob- 'call', nagúr- 'hit', sawar- 'feel', kik- ₃ 'taste to see', ²³ ...
VT-static paired with VI-active:	X o : X ga	mí- ₁ 'see' : mie- 'get seen', kik- ₁ 'hear' : kikóe- 'get heard'
VT-static (unpaired):	X o	omów- 'think', kanzi- 'feel', kag- 'smell', ...; mí- ₂ 'look at', kik- ₂ 'listen to'

The middle column is merely suggestive. In general where X appears A can also appear—what can happen to things can usually happen to people, too, given the right (or wrong) circumstances; but where A appears it would require personification for X to be acceptable—it takes a poet to put a tree to sleep.

There follows a skewing matrix, to be interpreted in either of two ways: (1) VI-static sentences lack an adjunct "A". (2) VI-static sentences lack the category DYNAMIC—and "C" (since C is promoted to B, and B to A); but, then, shouldn't we promote CAUSAL to DOUBLE-CAUSAL?

The translations are not exhaustive. And the matrix does not show the passivized causative, since it can be predicted from the forms given.

Another verb like *míru* is *sir-u*. *Sir-u*₁ 'knows' is dynamic and has the inert form *sireru*₁ 'is known', the adversative passive *sirareru*₁ 'suffers from someone knowing', and the causal *siraseru*₁ 'informs' which makes a morphological causative that constitutes a double-causal: *sirasaseru* 'lets someone inform (someone else)'. *Sir-u*₂ 'finds out', on the other hand, uses the morphological passive both for its adversative form (*sirareru*₂ 'suffers from someone finding out') and its inert form (*sirareru*₃ 'gets found out'); the causal coincides as *siraseru*₂ 'lets someone find out' but does not permit a double-causal.

There are a number of gaps in the expression of semantic fields; for example, *kag*- 'smell' is unlike 'see/look' and 'hear/listen' in being only VT-ac and lacking a simple matching partner.

23. O-sake, azi, ... o ~ .

VERB SKEWING MATRIX

	ADVERSATIVE	INERT	DYNAMIC	CAUSAL	DOUBLE-CAUSAL
VT-st	A ga B ni C o miraréru ₁ 'A gets C seen by B' (*mieraréru)	C ga (B ni) miéru 'C gets seen (by B)'	B ga C o míru ₁ 'B sees C'	A ga B ni C o miséru 'A shows C to B'	D ga A ni B ni C o misesaseru 'D causes A to show C to B'
VT-ac	A ga B ni C o miraréru ₂ 'A gets C looked at by by B'	C ga B ni miraréru ₃ 'C gets looked at by B'	B ga C o míru ₂ 'B looks at C'	A ga B ni C o misaseru 'A lets B look at C'	—
VT-st	A ga B ni C o kikareru ₁ 'A gets C heard by B' (*kikoerareru)	C ga (B ni) kikoeru 'C gets heard (by B)'	B ga C o kiku ₁ 'B hears C'	A ga B ni C o kikaseru ₁ 'A lets B hear C'	—
VT-ac	A ga B ni C o kikareru ₂ 'A gets C listened to by B'	C ga B ni kikareru ₃ 'C gets listened to by B'	B ga C o kiku ₂ 'B listens to C'	A ga B ni C o kikaseru ₂ 'A lets B listen to C'	—
VI-st	B ga C ni irareru 'B suffers from C staying'	C ga iru 'C stays'	B ga C o isaseru 'B lets C stay'	—	—
VI-ac	B ga C ni hatarakareru 'B suffers from C working'	—	C ga hataraku 'C works'	B ga C ni/o hatarakaseru 'B lets C work'	—
VI-st	B ga C ni sinareru 'B suffers from C dying'	C ga sinu 'C dies'	B ga C o sinaseru 'B lets C die'	—	—
VT-ac	A ga B ni C o korosareru ₁ 'A suffers from B killing C'	C ga B ni korosareru ₂ 'C gets killed by B'	B ga C o korosu 'B kills C'	A ga B ni C o korosaseru 'A lets B kill C'	—
VT-ac	A ga B ni C o yobareru ₁ 'A suffers from B calling C'	C ga (B ni) yobareru ₂ 'C gets called (by B)'	B ga C o yobu 'B calls C'	A ga B ni C o yobaseru 'A lets B call C'	—
VT-st	A ga B ni C o omowaréru ₁ 'A suffers from B thinking of C'	C ga (B ni) omowaréru ₂ 'C is thought of (by B)'	B ga C o omóu 'B thinks of C'	A ga B ni C o omowaseru 'A lets B think of C'	—
	"the morphological passive"		"the morphological causative"		
	adversative passive	normal passive	NEUTRAL		

In general, each situation illustrated in the matrix is exemplified by more than one lexical set. Another set like 'die/kill':

	ADVERSATIVE	INERT	DYNAMIC	CAUSAL
VI-st	B ga C ni nerareru 'B suffers from C sleeping'	C ga neru 'C sleeps'	B ga C o nesaseru 'B lets C sleep'	—
VT-ac	A ga B ni C o nekasareru 'A suffers from B putting C to sleep'	C ga B ni nekasareru ₂ 'C is put to to sleep by B'	B ga C o nekasu 'B puts C to sleep'	A ga B ni C o nekasareru 'A has B put C to sleep'

5 NUCLEAR FOCUS AND RESTRICTION: SPLIT NUCLEI

Although we speak of "splitting" the nucleus to allow the insertion of focus markers and restrictives, that is because we began with the notion of a FINITE simplex sentence. At a more abstract level, the simplex is the INFINITIVE form of the sentence; the finite forms are the result of contractions of infinitive + auxiliary, contractions that are largely obligatory in the colloquial language except when focus or restriction is applied to the nucleus itself. Let us assume, for the moment, that the finite forms are always contracted in both the colloquial and the literary language. (Colloquial exceptions will be found in §5.3; various varieties of the literary language treat the contractions as largely optional.) The finite imperfect forms can be displayed as follows:

	L I T E R A R Y		C O L L O Q U I A L	
<i>Cons. verb</i>	V-u	V-i ... suru KOTO ... su.	V-u	V-i ... suru
<i>Vowel verb</i>	V-uru KOTO -u.	V ⁱ / _e -ϕ ... suru KOTO ... su.	V ⁱ / _e -ru	V ⁱ / _e -ϕ ... suru
<i>Adjectival</i>	A-ki KOTO -si.	A-ku ... aru KOTO ... ari.	A-i	A-ku ... aru
<i>Nominal</i>	N naru KOTO nari.	N ni ... aru KOTO ... ari.	N na/no KOTO N [da].	N de ... aru

Where different, the predicative form is shown with a final period and the attributive with KOTO. The triple dots show the "split" where focus and restrictive elements can be inserted. The literary form N ní ... áru (contracting to N náru when unfocused) represents the objective copula ('it is judged to be N') throughout the history of the language; but N ní-te ári, the ancestor of the modern colloquial predicative form N dé ... áru (contracting to N dá), appears as early as Heian times. The subjective copula N tó ... ár- (contracting to N tár-) 'it is felt/sensed/thought to be N', not shown in the chart, appeared sparsely in Heian times and spread during the Kamakura period with the development of the Kambun tradition of reading classical Chinese. (See Satō 1.264-5.)

Without nuclear focus or restriction, the infinitive + auxiliary will normally contract into the various conjugational forms of modern Japanese as shown; but in the written language of the Meiji period and earlier you will often find V-i suru without focus where the modern language would require V-(r)u. Note also the object-exalting conversion with the honorific infinitive as in o-yobi suru 'I will call you'. Moreover, in the modern written style the adjective provisional sometimes appears in an unfocused nuclear split as -ku áreba even though the other forms of -ku ár- are not used without focus or restriction:¹ Zituyoo ni bēnri de, mīta mé ni utukúsiku áreba yói 'It need be only convenient for use and beautiful to the eye' (Ōno 66.206). In this example, we might interpret the form as an ellipsis of -kú [sae] áreba—perhaps under the influence of the conjoining, which would

1. There are occasional exceptions: Éiga(ゑiga) no baai wa mata gyaku de né, sémaku áru bēki monó ga hiroku utútyau n desu yó 'With movies it's the opposite again, things that ought to be close are shot wide' (Tk 2.330a).

then be interpreted as ... *bénri de [sae áreba] ... utukúsiku [sae] ár-eba*, with an underlying provisional hidden inside the provisional-marked outer structure.

And, of course, the copula is split even without focus or restriction in the formal written style that characterizes much writing and many public utterances: *N de áru, N de arimásu*. That is what accounts for the following example (where we would have expected to find ... *táido de sae áreba, ...*): *Désu kara mondai wa, kanzi to iu monó wa dekíru* ⁽²⁾ *~dake sitte ita hoo ga yoi to iu táido DE ARI SAE SURÉBA, Tooyoo-kánzi o nán[i]-zi ni surú ka to iu kotó wa samatu na kotó desu* 'Therefore if the question just be an attitude that claims it is better to know as many of these Chinese characters as possible, the matter of deciding which characters are Tōyō Kanji is a trivial matter' (Fukuda in Ōno 1967.205). See also *N de ari-tái* (§ 7).

Once split, the nucleus will sometimes accommodate a few additional words: *Siróoto ga úka-uka to té o dásu yoo* ⁽¹⁾ *na siromono dé wa DAN-ZITE náí no de aru* 'It is definitely NOT a thing for an amateur carelessly to turn his hand to' (SA 2670.29e); ... *sono yoo na ími de wa KESSITE nákatta* '... it NEVER meant anything like that' (Ōno 1966.27); *Sikási, koré-ra wa izure mo tokusyu-kéesu de ari, syakai-teki syuukan dé wa KESSITE náí* 'But these are all special cases, they are in NO way social customs' (Nakane 162); ... *sikási, sono súbete ga, koo sita katei o tadotta wáke de wa, MOTÍRON náí* '... but it does not, of course, mean that all of them have followed such a course (of development)' (Sakakura 301); *Zenmen-teki ni soo suru monó de wa, MOTÍRON KESSITE arimasén* (or: *KESSITE MOTÍRON arimasén*) 'Of course they are not things that are totally different'; *Watasi wa warai-tákú nánka wa TITTÓ MO nákatta keredo* 'I did NOT in the least want to laugh or anything, but ...'. An example which inserts an adverb into the unfocused copula: *Dá karall Tyúugoku wa || sensei-kunsi-sei no kókka de || nágaku | arimásita keredo mo, ...* 'Thus, China was long a country under an absolute ruler, but ...' (R).

Mikami 1963.58 gives an example of a rather unusual inversion that puts the subdued Identified in the split of the copula marking the Identifier: *Kúzyoo Kanézane no ootootó de Zítin wa átta* 'Jichin was the younger brother of Kujō Kanezane'. Apparently this device is possible in explaining a relationship between two knowns. A couple of examples from modern literature are cited in Y 418: ... *itiban no kiraware-mono DE, watakusi wa ÁTTA no da* 'I was the most despised'; *Dómori de, múkuti na bóokun(¯) DE watakusi ga ÁREBA, ...* 'If I were to be some stammering, speechless tyrant, ...'.

5.1. NUCLEAR FOCUS WITH WÁ AND MÓ

We have seen how focus can be applied to an adjunct in order to subdue it and put it in the background (*wá*) or to highlight it and push it to the foreground (*mó*); it is possible to do the same sort of operations to the nucleus itself, by splitting it into its component parts of infinitive + auxiliary and attaching the appropriate marker to the infinitive:

Yobí wa/mo suru. Ógkiku wa/mo áru. Hón de wa/mo áru.

For *V-í wa* and *V-é wa* you will also find *V-í ya* and *V-é ya*; and both (but particularly *V-í ya*) often contract to *V-yá[a]*: *Yuugai-syókuhin to hakkiri wakárya [= wakáreba], dáfe mo kayáa [= kaí wa] sinái kara* 'For once they discover it is harmful food, nobody'll buy it' (SA 2671.26a). Free verbal nouns frequently drop the infinitive *si*: *kenyuu suru* 'researches' will yield *kenyuu* {*si*} *wa/mo suru*. But the ellipsis is optional, and the infinitive often appears, especially when the verbal noun carries a direct object: *Dáre mo* ⁽¹⁾

sono kotó o hitei sí wa sinái de aróo 'Surely no one will deny that' (SA 2651.69d); Koosyoku-bon to iú no wa ryóori no hón to onazi da. Yokuboo o sigeki sí wa surú ga, kessite úé wa mitásite kurenai 'Erōtic works are the same as books about cooking. They stimulate desire, all right, but fail to satisfy hunger' (SA 2685.111d). But the infinitive is not obliged to appear, as we can see from the following example of N o VN {sí} mo suru: Naganó-ken Saku soogoo-byóoin kara senmon-ísi o manéite, zanryuu-nóoyaku ga zintai ni dóno-yóo na eikyoo o ataerú ka o kumiái-in ni kooen mo site moratta 'They invited in a specialist from the Saku general hospital of Nagano Prefecture and had him lecture the guild members on what kind of effects residual pesticides have on the human body' (SA 2684.63bc).

Mimetic adverbs + suru (§ 21.7) require that wá or mó be attached directly to the adverb: ^{1a}Tái-site gakkári mo sinákatta n desu 'I wasn't terribly discouraged' (SA 2666.44b)—* ... gakkári sí mo sinákatta ...; ... hantaisei-teki na siten mo hakkíri wa site irú no da ga, ... 'some [= mó] anti-establishment viewpoints are quite obvious, but ...' (SA 2685.116b)—*... hakkíri sí wa site irú (It is clear that these are adverbs rather than free verbal nouns because you can not insert ó: *gakkári o suru.)

In view of the special nature of focus conversions, the expressions are often passed through other operations (for example, they may be made negative) before we see the resulting sentence; or, again, they combine with other elements into larger structures. The subdued nucleus with wá is particularly useful in expressing contrasts of positive with negative; the purpose of the focus is to play up the contrast ('DID do' vs. 'did NOT do') and that is why the infinitive gets backgrounded. Examples:

V wa Yómiti o arúite iru tokí ni, nání ka déte kí WA si-mái ka to omótte iru to, mátu-no-ki ga hito ni miétari suru 'When, walking at night, you wonder whether something is not about to dart out at you, it sometimes turns out to be a pine tree looking like a person' (Ōno 1966.128); ... áru-hi totuzen ni henkaku ga kanoo na yóo na tokí ga kí WA sinái ka 'Some day won't there come a time when reform is suddenly possible?'; Nán no syooko mo ári WA sinái 'There isn't the least bit of proof' (SA 2637.103); Kessite Yooróppa ni maké WA sinái 'It [= American economic power] is in no way inferior to Europe[']s' (SA 2664.45c); Dénsya(¯) de ni-zíkan to kakári WA sinái 'By train it HARDLY takes two hours' (Kb 34a). Notice that V-í wa (and, less often, V-é wa) may be contracted to V-yá[a]; kamáya[a] sinái is equivalent to kamái wa sinái 'it DOESN'T matter', from a focusing of kamawánai (or: from a negativization of the focusing of kamáu).

V mo ... yóku sirí MO sinái hitó 'people who do not KNOW [or: whom one does not know] very well' (Ōno 1966.35); irí mo sinái yakkai-mónó(¯) 'an unwanted nuisance'.

VN wa Sore mo suitei [sí] WA [suru kotó ga] dekiru keredo mo, ... 'That too one CAN assume but ...' (SA 2656.44b).

VN mo ... bidoo MO sinái 'doesn't move an INCH'; Mí-múkí MO sinái de (or: sezu ni) ... 'Without even casting a GLANCE ...'; ... géngo o soosaku MO site iru 'is actually creating a language' (Y 5).

A wa Tákaku WA áru ga, sina ga yóí 'It IS expensive, but the quality is good'; Sini-tákú MO náí no ni sinanákereba naránai 'Though we have no desire to die, die we must' (KKK 25.87b).

A mo Nán to onna-rásiku MO náí ... senseí datta 'She was a teacher who ... was not the least bit feminine-seeming' (SA 2672.108c).

AN wa Kono hen wa sízuka de WA áru ga, húben da 'This area IS quiet, but it's inconvenient'.

1a. But *sae* can be treated either way: hakkíri sae suréba = hakkíri sí sae suréba.

AN mo ... inú ga sukí de MO náí no ni inú o káu hitó ga óói ... 'there are lots of people who don't even like dogs and yet keep them' (SA 2668.41b).

N wa Nónde míru to sore wa nama-nurúi keredo tásika ni bíru de WA átta 'Upon drinking it I found it really WAS beer, though lukewarm' (SA 2669.91a); Tó-ni-kaku insyoo-teki na rasuto-siin de WA átta desu né 'Anyway, it WAS an impressive last scene, wasn't it' (Tk 2.125b); Kore wa taidán-syuu de WA áru ga, Takeda Táizyun no búngaku o siru ué ni mi-nogasenai síryoo(⁻) to náru daroo 'This is, to be sure, a collection of interviews, but I think it will constitute material that can not be overlooked for the understanding of Tajun Takeda's literary works' (SA 2681.101e); [Kono gonén-kan, hákase no "seisan" sitá no wa, san-kágetu ˉgóto ni dásu zyup-péizi ˉtárazu no syóruí(⁻) ˉdaké.^[1] Makoto ni yuuyuu táru péesu da.] Mótto-mo kono kenkyuu, supónsaa ga séihu de WA áru 'What the doctor has "produced" during these five years is just a report of under ten pages put out every three months. Truly a leisurely pace.] Of course the sponsor of this research IS the government' (SA 2661.28d). Notice that *dé wa* can contract to *zyá[a]*: Soryaa, omae d'átte móo itinínmae no onná ZYA áru ga, sore *dé mo* ... 'Well you yourself ARE a grownup woman, but even so ...' (Fn). And *N zya náí* can represent either *N de náí* (simple negation) or *N dé wa náí* (focused), the latter an equivalent of *N zyáa náí*; see §8.

N mo Sóo de MO náí desu yó 'That's not quite true either' (SA 2647.24b); Noosángyoo wa watási-táti no taisetú na gímu desu ga, ippóo, iti-nen o tuu-zite tuzuku tanosii géemu de MO áru n desu yó 'Agriculture is our grave duty, but on the other hand it is also a pleasant game that goes on all through the year, you see' (SA 2688.40c); Sore wa, kessite zúruku náí. Hazí de MO náí 'That isn't sly at all. Nor is it shameful' (SA 2664.32d). The expression *wáre ni MO árazu* 'in spite of oneself, involuntarily' is borrowed from a literary analog of *watási dé MO náku* 'not even being me'.

The order of application as shown in Chart 2 makes the voice conversions (passive, causative, etc.), if any, come before the application of nuclear focus (or nuclear restriction); the result is *saré WA sinái* 'DOESN'T have it done to one' rather than **sí wa sarenái*, *arúke WA sinái* 'CAN'T walk' rather than **arúki wa {suru kotó ga} dekinái*: ... sore-hodo moti-ageraré WA sinákatta desu yó 'I didn't get all that much (= didn't get very much) praise heaped upon me' (SA 2666.45b); ... *kozín-sa to site kangarére WA sité mo*, ... 'even if it be regarded as individual variation' (KKK Ronshū 1.425); *Káere ya [= wa] sinái zya náí no* 'Can I ever go home again?' (Kawabata: Saikai 91); ... *agameraré MO osoreraré MO sezu*, ... '[he] is neither revered nor feared ...'; ... *zikayóo-sya ga ahuréru yóo na génzai no zyookyoo wa yosoku saré MO sinákatta* 'present-day conditions, overflowing with private cars, were hardly foreseen' (SA 2652.98a); *Sikási ikímóno da kara ori^[1] no náka ni ireraré MO si-mái [= suru ˉmái] si* ... 'But he's a living being so we can't very well put him in a cage ...' (Ariyoshi 304); *Sore wa hihyoo-ka no monó de mo ári, kagákú-sya no monó de mo ári, syoosetu-ka no monó de mo áru—másite-ya iti-bungeihihyooka no monó to kagiraré WA senu* 'That is a quality of the critic, it is a quality of the scientist, it is a quality of the novelist—it is by NO means limited to being a quality of the ordinary literary critic' (KKK 3.192)—notice the series of three highlighted identifications.

With verbal nouns we find the expected VN *saré wa/mo suru*, as in the last example above, but we also find VN *wa/mo sareru*—presumably, in violation of the order of conversion application that we have assumed, to be taken as VN *{sí} wa/mo sareru*: Sono kóro wa ima no yóo na zyootai ni náru kotó wa, yosoo MO sarenákatta? 'At that time

you didn't even imagine that things would come to the sort of situation they are in now?' (SA 2662.44a). And the potential of verbal nouns seems to have the form VN wa/mo dekíru = VN [sí] wa/mo [suru kotó ga] dekíru as well as the expected VN déki wa/mo suru = VN [suru kotó ga] déki wa/mo suru: Sore mo suitei WA dekíru keredo mo, ... 'That too one CAN assume, but ...' (SA 2656.44b); Kono tokí hodo, akiráme(-) mo dékizu, tameíki no déru tokí wa náí 'There is no time like this for sighing with one's inability to resign oneself' (SA 2659.33a)—akiráme(-) is a noun derived from the infinitive akiráme, here used as a free verbal noun.

For a special use of the highlighted infinitive of suru (sí mo) as an equivalent of dé mo (so that dáre si mo means dáre de mo), see §9.2.2.

Adjuncts can be highlighted and conjoined to yield N₁ mo N₂ mo 'both N₁ and N₂' or, with negative predicate, 'neither N₁ nor N₂'; we consider this structure to be a reduction from N₁ mo [PREDICATE-reba] N₂ mo PREDICATE, with identical predicates.² Similar uses can be made of highlighted nuclei in pairs (or chains):

VERBAL Mósi, wá-ga kuni no zinkoo o génzai yori herí mo [sinákereba] húe mo sinai yóo ni si-tái nara, húuhu ga is-syóogai ni ní-ten iti-sán-nin no kodomo o tukuránakereba naránai 'If we want to keep our population from either diminishing or growing from [what it is at] the present, [each] couple must produce 2.13 children in their lifetime' (SA 2640.123b); ... o^[1]si mo ~~sinákereba~~ osaré^[1] mo sinai íti o kizúku made 'until one builds a position of acknowledged status' (SA 2649.102c)—the ellipsis is apparently obligatory in order to give the idiomatic meaning (the idiomaticity is here also usually signaled by accent suppression, as shown).

ADJECTIVAL Kono suuzi wa, betu ni óoku mo [nákereba] sukúnáku mo náku, ... 'These figures are not particularly large or small, and ...' (SA 2655.44a); [Sore wa yasúi no desu ka, takái no desu ka?—] Yásuku mo [nákereba] tákaku mo náí desyoo né ' [Does that make it cheap, or expensive?—] It seems neither cheap nor expensive, I'd say' (SA 2685.100d).

NOMINAL Koko wa Isuraerú-ryoo de mo [nákereba] Arabú-ryoo de mo náí 'This place is neither Israeli territory nor Arab territory' (SA 2647.11); Watasi wa kénzi de mo [nákereba] bengó-si de mo náí. Isya no tatibá kara syoogen site irú no desu 'I am neither a public prosecutor nor a lawyer; I am testifying from the standpoint of a physician' (SA 2666.114c); Síma kun no tikágoro káku monó wa, syoosetu dé mo náí, dénki de mo náí, hyooron dé mo [nákereba] zuihitu dé mo náí to itta yóo na monó ni nátte imá^[1]su 'What Shima is writing lately is something that is not fiction, is not biography, is neither criticism nor essay' (SA 2835.21a).

Here are examples of the unreduced conjoining: Kusuri wa tukai-kata ¹sídai de, dokú ni mo náreba kusuri ní mo náru 'Depending on how it is used, a drug can turn out to be both poison and medicine' (SA 2664.33b); Tokoró-ga, Zyóo no mé ni ukandá no wa watasi dé mo nákereba, Amerika no hahaoya dé mo nákatta n desu né 'But, you see, what floated before Joe's eyes was neither me nor was it his mother in America' (SA 2679.39b). A looser connection can be marked by using gerund or infinitive instead of provisional:

2. On assuming that what is ellipited is the provisional S-reba, see §2.3.2 and §9.3.2. An argument can be made for other conjoinings, as exemplified in the following unreduced example: Zyookyaku ni hanasi-kaké mo sezu, hanasi-kakeraré mo simasén 'He [= Mayor Minobe sampling the Tokyo subways] speaks to no passenger, nor does he get spoken to' (SA 2817.34c). More examples of this type will be found below.

Hataraku hitó mo izu, asobu hitó mo inái no da 'There are no people working nor any playing' (SA 2671.94a—izu is the literary negative infinitive, §8.5); Séihu ṅawa wa hóoi o síme mo sezu, yurúme mo sezu, hyooroo-zeme no genzyoo-izi no hoosin o tótte ita 'The government (side) was taking measures to maintain the starvation tactics, neither tightening the siege nor relaxing it' (SA 2647.86c).

There are three ways to construe the following example, taken from Mikami 1963a.90: Kono zassi wa omosíróku mo ári, tamé ni mo nári wa sinái ka? One interpretation would link the first sentence with the second only after the second had undergone nuclear subdual, though the negative question can be taken with the whole and assumed to be rhetorical: 'Isn't it true that this magazine is both interesting and DOES prove also of value?' A second, less likely interpretation would take only the ká with the whole, so that the negative would be given its face value: 'Is it true that this magazine is both interesting and (yet) does NOT prove of value either?' But the likeliest interpretation is to take the nuclear subdual as going with the sentence as a whole, so that you are applying both the subdual and the rhetorical question to a sentence Kono zassi wa omosíróku mo ári [=átte] tamé ni mo náru 'This magazine is both interesting and proves also of value'; the translation will be 'Is it NOT true (= Surely it IS true) that this magazine is both interesting and proves also of value?'. Mikami's interpretation is essentially that, but he assumes an ellipsis: Kono zassi wa omosíróku mo ári [wa sinái ka], tamé ni mo nári wa sinái ka. The lack of parallelism in highlighting the mutative conversion of the second part (tamé ni mo náru) to balance the highlighting of the adjective nucleus in the first part (omosíróku mo áru) is an instance of loose reference, discussed in §5.4; I have tried to suggest the looseness in my English versions.

A double identity 'N is both X and Y' is expressed by N wa X dé mo [áreba] Y dé mo áru: Káre wa isya dé mo bungákú-sya de mo áru 'He is both a physician and a literary scholar'; Ensyutu-ka dé mo áreba haiyuu dé mo áru tyósya ... 'The author, who is both a producer and an actor ...' (SA 2671.98c). (Only the Identifier can be so treated; the Identified can not contain a loose conjoining of this type.)³ Sometimes the first mó is suppressed: ... Hitotu-basi-dai [no] kóosi de bengó-si de mo áru Namiki Tosímori si wa ... 'Mr Toshimori Namiki who is a lecturer at Hitotsubashi University and also is a lawyer' (SA 2669.21b). Notice also the expression N₁ ṅákari de náku N₂ dé mo ári 'Is not just N₁ but is also N₂': Kore wa zibun no tamé ṅákari de náku, o-tagai no tamé de mo áru 'This is not just for one's own benefit, but also for mutual benefit' (SA 2649.97c).

Applying nuclear focus does not hinder the application of focus to larger structures. This example subdues the copula, applies the gerund to the output, and then highlights the gerund to express contrast: "Kiyosi" ga, toomei dé WA átte MO, isásaka syusei no katati de "nāni mo ná" to iu ími o mótte iru ... 'While "kiyoshi" IS, to be sure, "transparent", it has in a somewhat defensive form the meaning "having nothing there" ...' (Ōno 1966.24). For more examples of this sort, see §9.2.2.

And it is possible to reapply focus, though the lack of authentic examples would indi-

3. The following example is not an exception, since the entire conjoining is adnominalized to nó which serves as the Identified for kore ga: Kore ga watási-táti séito zen'in no kiboo dé mo ári, mata mokuhyoo dé mo áru no da 'THIS is what [it is that] both is the desire and is the aim of all us students' (KKK 25.87b).

cate that one seldom has cause to do so. Yet it seems that the following types are grammatical:

A-kú mo ári wa sinai: Yásuku mo ári wa sinai 'Nor is it cheap, either'.

N dé mo ári wa sinai: Isya dé mo ári wa sinai 'Nor is he a doctor, either'.

(?)A-kú sae ári wa sinákereba ...

But *A-kú wa ári mo sinai is apparently unacceptable. More research is needed on this subject, including combinations of restrictives, nádo, etc.

In the following example, it is unclear just what would be the appropriate filler for the ellipsis: Kessite Oosaka-ben ga dáí-iti de mo [] yúiiitu de mo ári wa sinái ga, ... 'By no means is the Ōsaka dialect either foremost or unique but ...' (Maeda 1961.82). If the conjoining precedes the nuclear focus, the ellipsis is of áreba; if the nuclear focus is intended to apply (somewhat loosely) to the second nominal only, the ellipsis is presumably of nákereba.

In the sentence Nani-mo hookoo-nin zya ári ya sinái si, ... 'You are in no way a SERVANT (or anything) ...' (Tk 3.146b) there appears to be a double application of subdued nuclear focus (zya = dé wa, ya = wa), but the intention may be simply to subdue the negativized copula (N de/zya náí) with the device applied to the auxiliary (náí → ári wa sinai, the negative of ári wa suru) rather than within the copula, d[é]á[ru] → dé wa áru.

On A-kú mo as an abbreviation of -kú mo átte, equivalent to -kuté mo, see §9.2.2. A-kú mo sometimes represents the highlighting of an adverb: háyaku mo 'swiftly indeed', yóku mo 'nicely indeed' [often ironic], etc.

A-ku wa is sometimes contracted to A-k'aa or A-k'a as in these examples: Yók'aa náí wá yó 'It's not nice, I tell you' (Kb 382a); Tittó mo okásik'aa náí n de 'It's not the least bit funny, you see' (Kb 409a—for the sentence-final gerund, see §9.2.1a); Sámuk'a arimasén ka 'Aren't you cold?' (Fn 107b); Wakái monó o, kátte mo maketé mo ii yóo na syoogi no aité ni wa sase-tak'a náí 'I don't want to have a young person as a partner in a chess game where it doesn't matter whether I win or lose' (Tk 3.135b). See also p. 373.

The colloquial yá freely replaces wá, and V-í ya often contracts to V-yá[a], as we have remarked. In colloquial Tōkyō usage kí wa/ya sinai 'does NOT come' is often said as kó ya sinai, apparently a blend of kónai with kí ya sinai (cf. Kokugo akusento ronsō 394).

5.2. NUCLEAR FOCUS WITH SÁE AND SIKA

The peripheral focus markers sáe and sika can also be used to split the nucleus, though the latter seems to be limited to nominal sentences: Seizei, Santa-Kuróosu wa, monó o kureru hitó de SIKA náí n desu né 'At most, Santa Claus is only someone who gives things (to them)' (SA 2658.117d); Tumaránai hón de SIKA náí (= Tumaránai hón ni sugínai) 'It is only a worthless book'; Sitagátte(¯), Tookyoo ni sumánai kágiri wa, sono tiiki-káisyá no hoogén(¯) ga kisó ni nátte iru yóo na kyootuu-go dé SIKA náí 'Accordingly, so long as it does not live in Tōkyō, it is only a "common language" with the dialects of the local area forming the base'; Soo iu monó wa zísyo de wa náku, sakuin dé SIKA náí 'Such things are ONLY (=NOTHING but) indexes, not dictionaries' (Shibata 1966.146); ... taigan no hí de átte wa naránu hazu no monó de wa áru ga, zízitu wa taigan no hí de SIKA nákatta no de áru 'To be sure we would expect it ought not to be a light across the river but actually it could ONLY be a light across the river' (KKK 3.59); Sore wa máda, yuusyoku ga súnnda bákari no zikan dé SIKA nákatta 'It was still only the time when dinner had just ended'

(68); ... hura-dánsu no yóo ni kankóo-kyaku no nagusami-mono dé SIKA náku náru desyoo '... will become nothing but a tourist attraction like the hula dance'.

Notice that *N sika de/zya ná is ungrammatical. For N dé sika ná we might expect to find also (*)N dé dake áru with the same meaning, but that is apparently ungrammatical.⁴

Following are examples of *sáe* splitting the nucleus; others will be found in §9.3.1-2 (with the provisional *suréba, áreba*), and in §9.2.4. Since a minor juncture is sometimes inserted before *sáe* to emphasize the focus even more strongly, optional accentuations are shown: N dé *sáe* is said either as N dé *sae* or as N de *sáe*.

VERBAL Itizi teitai-gími no boeeki-kánkei no sigoto nádo, tikáku hukkatu sí SÁE *suréba*, anta-gáta no té wa boeeki sínkoo ni nákte wa naránu monó to narimasyóo [= náru desyóo] 'If jobs such as those relating to the temporarily stagnating trade should soon revive, your hands will be necessary for the development of trade' (KKK 3.55); Tábe SAE *suréba*, hutorimásu 'If you just eat, you will put on weight' (SA 2664.106a); ... akire-háte SAE *sitá* no desu 'I am downright bored with it' (SA 2673.143a).

VERB-NOMINAL ... syusyoo no taizin o yookyuu sí SÁE suru 'they even demand the resignation of the prime minister' (SA 2676.136c); ... gáman sí SÁE *suréba* 'if one just bears with it'.

ADJECTIVAL Tuzurí ga tadásiku SAE *áreba*, kaki-káta no zyoozú^[r] hetá wa mondai ni simasén 'If the spelling just be correct, I won't make an issue over whether the handwriting is good or bad'.

ADJECTIVE-NOMINAL Kono hukuzatu-táki na zidai ni, noiróoze ni naránai hoo^(u) ga husigi dé SÁE áru 'In these days of complexity and division, it is peculiar NOT to get neurotic'; Kenkoo de súnao de SÁE *áreba* ii 'All they have to do is be healthy and obedient' (SA 2642.40—the reference is to household help); Anáta ga sukí de SÁE *áreba*, naréru ni turete zyootatu simásu 'If you just like it you will gain proficiency as you get used to it' (KKK 3.55).

NOMINAL Betonamu dé wa, kodomo ya onná ga sentóo-in de *sáe* áru baai ga oói n desu 'In Vietnam there are many cases where women and children are actually combatants' (major junctures after each *gá*, a minor juncture before *sáe*—see Martin 1970.438:(7).)

5.3. RESTRICTING THE NUCLEUS WITH OTHER ELEMENTS

Nuclei can be split by various focus and restrictive elements in addition to those previously mentioned:

Kóso:

VERBAL Kuti ni dási KOSO sinákatta ga, hu-sánsei na n da yó 'I kept it to myself but I am in disagreement' (Hozaka 1960.336); Sikási sono ryóori wa yahári Ahurika ni todomáru syoosyá-in ka, tobosii(−) syoku-séikatu ni nárete simatte iru gakuséi-táti ni yotte hyóoka(−) saré KOSO sure, ryóori no senmon-ka no sore tó wa hikaku si-yoo mo náí de aróo 'But still if that cooking just be criticized by businessmen staying in Africa or by students inured to a life of poor eating, there would be no way to compare it with that of culinary specialists' (SA 2645.97a—*sure* is the literary concessive, see §9.3).

4. The only example I have come across of *daké* applied to a nucleus is the following sentence, which some speakers are reluctant to accept: Kakáse dake *suréba* ii desyoo 'If you'll just have them write it that'll be fine' (Hozaka 1960.340). Here *daké* is functioning as a synonym of *sáe*.

ADJECTIVAL Yásuku KOSO áre, kessite tákaku wa náí 'It's cheap rather than expensive' (áre is the literary concessive, §9.3).

ADJECTIVE-NOMINAL Kono kimono wa hadé de KOSO áre, zimi de wa náí 'This kimono isn't plain, if anything it's on the flashy side' (áre is the literary concessive, §9.3).

NOMINAL ... "okawari" to iú no wa hito no zyootai dé KOSO áre, kessite hito sono-mónó de wa náí '... what is meant by "o-kawari" is more the state of a person rather than the person himself' (Tsumimura 58—áre is the literary concessive, §9.3); Káre wa seizi-ka dé KOSO áre, gakusya dé wa náí 'He is more of a politician than a scholar' (áre is the literary concessive, §9.3); Húzin wa yúuhu de KOSO nákatta ga ... 'The lady was not exactly married, but ...' (Fn 55b)—yúuhu is a precopular noun.

Súra:

VERBAL Ríeki no tamé nara, seiteki o korosí SURA suru 'If it is advantageous, we even kill political enemies'.

ADJECTIVAL ... sore wa itaitásiku SURA áru 'that is downright pathetic' (SA 2673.142d—in a letter to the editor from Kōbe, preceded by a heading Itaitásiku sura áru koomei-too 'Downright pathetic—the Kōmei-tō [a political party]').

ADJECTIVE-NOMINAL ... yúumorasu de SURA átta 'he was even humorous' (Tk 4.218); Kore wa áru ími de yamu-o-énai kotó de ari, músiro hituyoo dé SURA áru ga, ... 'This in a certain sense is something unavoidable, or rather even is necessary, but ...' (Kgg 81.131a).

NOMINAL Naríhuri ni mu-tónzyaku de aru kotó wa, bitoku dé SURA átta 'That he was careless in his personal appearance was actually (considered) a virtue' (Tk 4.61); Sore wa sikási, Marukusízumu de SURA náí to omóu n desu keredo mo ... 'But that isn't even Marxism, it seems to me ...' (Tanigawa 126); ... Séihi wa tóu(¯) kotó ga dekinai. Músiro, tóu(¯) máde mo náí, to ii-tai kúrai de SURA áru 'We can not question the (success or failure of the) outcome. Rather, we even might say it is not worth questioning' (KKK 3.62).

Nánka; nádo; nánzo; nánte:

VERBAL Denwa o káke NÁDO sinákatta 'I didn't phone or anything'; Soko e ikí NÁDO sinákatta 'I didn't go there or anything'; ... o-kyoo o age, kane o tataki NÁDO site góngyoo(¯) suru 'they have a Buddhist service, chanting scripture and ringing gongs and the like' (Ōno 1966.136); ... kuruma ni tumi, atamá ni nose, báta-bata de hakobí NÁDO site káette yuku '... they leave taking things with them all helter-skelter, loaded on wagons, carried on heads ...' (lg 67); Téepu o kaí NÁDO (*NÁNKA) site Eigo o narátte irú ga, nakanaka zyoozú ni naránai 'I've been studying English by buying tapes and so on, but I'm making slow progress'; Sonna hón wa yómi NÁDO/NÁNKA sinai 'I wouldn't read any such book'; Utí(¯) no kodomo wa marihwana o suí NÁNKA sinai 'Our boy wouldn't do anything like smoke marijuana'; Odokasu daké de, korosí NÁNKA suru wáke wa arimasén 'There's no call for anything like killing (him), just intimidating (him)'; Hitó-sama no monó o nusúmi NÁNTE sitára, uti no sikii wa matagasemasén 'If you are going to do such things as steal other people's things I can't let you cross our threshold'.

VERB-NOMINAL (apparently with obligatory ellipsis of auxiliary infinitive sí) Benkyoo ǫsíǫ NÁNKA sinákatta 'I didn't study or anything' (SA 2672.61a); Gakkai no warúguti o insatu ǫsíǫ NÁNKA sinai 'We won't do any printing or the like of slanders against the [Sooka-]Gakkai' (SA 2663.18c); Yo-nín wa izure mo, hito ¯nami ¯izyoo ni tuyói zíga no motí-nusi de atte, kessite dakyoo NÁDO sinai 'Each of the four is the

possessor of a stronger ego than the average man and never makes compromises' (SA 2681.108a).

ADJECTIVAL Nihón de wa siti-nen ʔízyoo, mu-zíko desu kara kówaku NÁNKA arimasén yó 'In Japan I have been accident-free for seven years, so I am not afraid [of driving abroad] or anything' (SA 2664.96e); Iki-tákú NÁNKA (or: NÁ[N]DO/NÁ[N]ZO/NÁNTE) nákata 'We did NOT want to go or anything'; Bóku(ʔ) no manga wa tittó mo muzukásíku NÁNTE náí 'There's nothing difficult about my cartoons' (SA 2640.12); Sono eiga(ʔ) wa tittó mo yóku NÁDO/NÁNKA ári wa sinai 'That film hasn't a thing to recommend it'.

ADJECTIVE-NOMINAL Ano gakkoo wa yuumei dé NÁDO/NÁNKA ári wa sinai 'There's nothing famous about that school'.

NOMINAL Náni ga tensai dé NÁNKA áru mon ka 'No genius HE!' (Mio 181); Báka o ie, are ga honmono dé NÁNZO áru ka i 'Rubbish—is THAT the real thing?!' (Mio 181); Tonde-mo-nái, doogú de NÁNZO áru monó ka 'Absurd, how can it [= language] be nothing but a tool?!' (Fukuda in Ōno 1967.218); Káre wa isya dé NÁDO/NÁNKA áru monó ka 'What kind of a doctor is HE?!'; Anó-hito ga hánnin de NÁNTE áru hazu wa náí 'There is no likelihood that he is the culprit or anything'.

Dé mo:

VERBAL Náni ka oisii monó o tábe DE MO sita yóo na kao o site iru 'You look as if you had eaten something tasty or the like'; O-támi wa uragiráre DE MO sita yóo ni omótta 'O-tami felt as though she had been betrayed or something' (Kb 86b); Hanetobasáre DE MO suréba ... 'If I get hit or anything ...'; Ása tabe-nágara sinbun nánka yómi DE MO sitára okoráreyau yó 'If I were, for instance, to read the paper or the like at breakfast, believe you me I'd hear about it!'; Yuubín-butu no kuwaké(ʔ) ʔtyuu ni tabako o sutte, kogási DE MO sareté wa taihen da 'It would be terrible if, from people smoking while sorting mail, we should suffer it [= the mail] getting burned or anything' (SA 2672.146d).

ADJECTIVAL Sono éga yásuku DE MO áreba kaerú no ni, sonna nedan dé wa té ga dénai 'If that picture were cheaper, say, I could buy it, but at such a price it's beyond my reach'; Isogásíku DE MO áreba sikata ga náí 'If you're busy or something, that's that'.

ADJECTIVE-NOMINAL Moo sukósi bénri de DE MO áreba tákakute mo ii 'If it is just a bit more convenient than I don't mind if it is more expensive'.

NOMINAL ... ziyúu-seki de DE MO áru to, ... 'when it is, say, an unreserved seat' (Maeda 1961.96); Senséi de DE MO aróo ka, ... 'Perhaps it is being a teacher or something, but ...' (Maeda 1962.30); Syoosetu-ka dé DE MO áreba, úmaku matomeru kotó mo dekíru no daróo ga, soo iu sáinoo(ʔ) wa náí 'If I were, say, a novelist, I could probably write it all up nicely, but I lack that sort of talent' (Maeda 1962.203); Sikási sono Tyoosyuu-ótoko ga, mósi-mo Sikoku-ótoko ka Nisi-Kyuusyuu-ótoko de DE MO áttara, kit-tó kenka ni náru ni tigai náí 'But if that Chōshū man were, say, a Shikoku man or a West Kyūshū man, there'd be a quarrel for sure' (Maeda 1962.199); Suru to Beikoku dé no, siorasii syusyoo-hátugen wa, soo-sénkyo ʔmuke no kootoo-sénzyutu de DE MO átta no daróo ka 'Then, was the gentle statement by the prime minister while in America perhaps, say, a high-level tactic aimed at the general election?' (SA 2663.116c); Titioya to musumé wa, maru-de tosí ga tyót-to sika hanárete inai koibito ʔdóosi de DE MO áru ka no yóo ni, zyare-túku yóo na mutumázi-sa ga átta 'The father and the daughter had a playful intimacy with each other quite as if they were perhaps lovers only slightly apart in age' (SA 2662.120a);

Tatimati, káre wa, dónna meizín de DE MO áru ka no yóo ni hyóoka(¯) sareta 'Suddenly he got rated as if he were the utmost expert or something' (Kb 287a)—dónna here means '(one) to such an extent' (= dóre-hodo(¯)) and has no tie with the DE MO, which can not be replaced by d'átte.

D'átte:

VERBAL Kane no tamé nara, oyá, kyóodai o korosí D'ÁTTE si-kanénai rentyuu dá 'The gang will be unable to resist even killing parents and brothers if it's for money' (epithematic identification).

Máde:

VERBAL Sore o sirábe MADE sita 'I went so far as to investigate that'; Yómi, katari, utai MADE suru 'They read it, tell it, even sing it' (Kusakabe 1968.62).

VERBAL NOUN (with obligatory ellipsis of auxiliary infinitive sí) Sore o kenkyuu ʃsiʃ MADE sita 'I went so far as to study that'; Séito no uti(¯) o kobetu-hóomon ʃsiʃ MADE sita senséi ... 'Teachers who had gone so far as to make individual visits to the pupils' homes ...' (SA 2664.123e); ... watasi wa siriai no byooin ni téhai ʃsiʃ MADE sitá no de átta ga, ... 'I went so far as to make arrangements at the hospital of an acquaintance but ...' (SA 2658.123d).

Bákari:

ADJECTIVAL Iró ga síroku BAKARI átte mo bízin(¯) tó wa ienai 'You can't be called a beauty just because you have a light complexion'.

NOMINAL Móhaya tanzun ni bunpoo-teki na monó de BAKARI áru wáke de wa nai ... 'It does not mean that it is just a simply grammatical thing ...' (Morishige 3).

Máde is not used to split adjectival or nominal nuclei (*A-kú MADE áru, *N dé MADE áru); bákari will not split verbal nuclei (*V-i BÁKARI suru). The restrictives hodó, ¯dókoró, and ¯kágiri do not split nuclei, nor does the comparator yóri. Most speakers reject splitting nuclei with ¯gúrai and ¯daké, though the following examples have been suggested: (?*) Iki-tákú ¯GÚRAI ná-katta 'We did NOT want to go at least'; (?*) Rázio(¯) o kiki DAKÉ/¯GÚRAI suréba ii no ni, nání mo sinái kara nyúusu ga wakaránai n desu 'I wish I would just listen to the radio at least but I don't do anything (of the sort) so I don't keep up with the news'; (?*) Kodomo wa syooziki de DAKÉ áreba, itazura dé mo sinpai arimasén 'If the child just be honest, I don't worry about pranks or the like'; (?*) Seizitu na ningen dé DAKÉ áreba hoka ni kiboo wa arimasén 'If I am just a sincere person that's all I aspire to'; (?*) Yásuku DAKE áreba, hoka no kotó wa kamawánai 'If it's just cheap, nothing else matters'. Those who accept the last three are taking daké as equivalent to sáe.

5.4. LOOSE REFERENCE

Often it will make only a subtle difference whether one applies focus to the nucleus or to one of the adjuncts. As a result, we sometimes run across semantically parallel sentences that seem grammatically incongruous, because the one has chosen to highlight or subdue the nucleus, and the other has chosen to focus an adjunct.

The most obvious cases are conjoined—or juxtaposed—sentences with mó: Óoi ni tasúke mo sitá si, zéni mo móoketa. Tasúketa kara, mookáta n da 'I both helped a lot and I earned a lot of money. I profited because I had helped' (SA 2650.00?). The sense is ... tasúke mo sitá si, zéni o móoke mo sita 'I both helped and earned'.

In some instances the conjoined sentences are grammatically incongruous to begin with:

Benkyoo wa sukí de mo nákatta si, seiseki mo wárukatta 'She took no delight in her studies, and her grades were poor, too' (SA 2650.104b)—the sense is ... seiseki ga wáruku mo átta; Hae ga túku sinpai mo náku eisei-teki dé mo áru 'Not only are you free of worry that flies may get to it [= the food] but it's also hygienic' (SA 2639.98a).

Similar uses of "loose-reference" mó are common with parallel sentences conjoined with the provisional (cf. §9.3.2), though these do not necessarily reveal nuclear focus: the sentence ... atu-mi mo tarinákereba aziwái(¯) mo usui 'is both inadequate in thickness and is thin in flavor' (Maeda 1962.214) would seem to be saying something like ... atu-mi ga tari mo sinákereba aziwái(¯) ga usukú mo áru. A similar example: Kotosi mo kurasikku-búmon wa syutuzyóo-sya no kázu mo sukúnákereba, sitú(¯) mo hikúkatta 'This year, too, in the classics both the number of entrants was low and the quality was poor (= not only was the number of entrants low but also the quality was poor)' (SA 2672.116b).

In the following example, the first mó appears to be serving two functions, one to generalize the indeterminate dáre, the other as a loose-reference equivalent of tukiái mo suréba; and the second mó is a loose-reference equivalent of sake o nómi mo sita: Imamáde ¯dóori dáre to de mo tukiáeba, ima-máde ¯dóori sake mo hukáku nónda 'Not only did she continue as before to consort with everybody, but she also continued as before to drink heavily' (Kb 13b).

It is fairly common to find loose reference in reductions from the provisional conjoining: ... karada mo yówaku gakkoo mo yasumi-gati de ... 'is both weak in body and apt to skip school' (SA 2652.120d) = karada ga yówaku mo áreba, gakkoo o yasumi-gati dé mo áru. Similarly, from other kinds of conjoining: Mesí mo tabénaí si, mizu mo seigén sarete iru ... '[While in training for a fight] I don't eat rice and water is restricted too ...' (SA 2671.46c); Hoka ni kemuri mo míezu, hito mo náí 'Otherwise neither smoke appeared nor were there any people' (SA 2664.80b) = kemuri ga mie mo sezu, hito ga ári mo sinai; Isya ní mo mísezu, byooín ní mo háirazu, kusuri mo nómazu, ... 'Not consulting a doctor, nor going into the hospital, nor taking any medicine ...' (SA 2659.70c) = Isya ni mise mo sezu, byooín ni háiri mo sezu, kusuri o nómi mo sezu ...; ... basyo mo tórazu idoo mo rakú [da] to iú no wa óoki na riten dé ... 'the big advantage is that it takes no space and is easy to move, too, and ...' (SA 2662.130) = basyo o tóri mo sezu idoo ga rakú de mo áru; Nenpu o haiken simásu to, ... nízyís-sai kara yáku zyuunén-kan, gakkoo mo ikazu, kiboo mo náku búnsyoo o káku, to iu seikatu [o] o-tuzuke ni nátta to arimásu keredo mo 'I see by your personal history, sir, that from the age of twenty for a period of about ten years you neither went to school nor had any prospects but just wrote your compositions ...' (SA 2658.126b) = gakkoo e ikí mo sezu, kiboo ga ári mo sezu; ... tyót-to séebu sinai to ikenai to iu kotó o, tití kara mo iwaremásu si, zibun dé mo soo omoimásu 'I get told by my father that I must save some [of the job opportunities for later] and I think so myself, too' (SA 2654.46b) = ... kotó o tití kara iwaré mo surú si, zibun de soo omói mo suru; ... supóotu mo yaranái si, tomodati mo náí ... 'he neither engages in sports nor has any friends' (SA 2656.46b) = supóotu o yari mo sinái si, tomodati ga ári mo sinai; [Ié o táte uturi-súnde zyuuití-nen ¯mé ni náru.] Sítí-nen máe ni wa kekkon mo si, kono sigatú de otokó-no-ko mo ní-sai ni náru '[It's eleven years since I built the house and moved in to live.] Seven years ago I got married and this April my son will become two' (SA 2661.138—in English it is hard to capture the effect of the highlighting); Watasi wa súzitu(¯) máe, kokkei na kookei o míte, taihen okásiku mo nári, gakkári mo sita 'A few days ago I saw a funny sight and it both was very amusing and very discouraging,

indeed' (SA 2689.43ab) = *okásiku nári mo si, gakkári ɸsiɸ mo sita*.

The two sentences need not be joined into one: *Nínen no tokí no seiseki mo warúi. Benkyoo mo sukí de wa náí* 'His sophomore grades were bad, too. He wasn't fond of studying, either' (SA 2652.188b).

You need not even have two sentences in order to detect a loose reference for *mó*; the meaning will sometimes tell you that an adjunct has been highlighted even though the obvious intention is to play up the nucleus: *É mo káku n desu tté né* 'I heard you draw pictures, too' (SA 2666.43b)—the meaning is *é o káki mo suru*; *Mazime de, katai hitó datta n desu yó. Atamá mo yókatta si ...* 'He was a serious and steady person. And he had a good head on his shoulders, too; ...' (SA 2665.118d)—meaning *atamá ga yóku mo átta*; ... *onsen ga yóku, kaisúi-yoku ni mo tekí-site iru ...* 'has good hot springs and is suitable also for sea bathing' (SA 2689.147b).

Loose-reference *wá* occurs when an adjunct is subdued instead of the nucleus despite the fact that the backgrounding is of the simplex as a whole: *Káre-ra wa íssei ni, kóe wa dasánakatta keredo waratta* 'They all kept silent but they smiled' (CK 985.382) = ... *kóe o dási wa sinákatta*—the author is not saying that they put out (*dásu*) other things holding back only their voices (at least he is not saying it directly); *Teré-syoo no Nósaka wa, sono séi ka, zettai ni hito no máe de mégane wa hazusanákatta* 'Nosaka, who was on the shy side, perhaps for that reason simply wouldn't take off his glasses in front of other people' (SA 2642.54b) = ... *mégane o hazusí wa sinákatta*, since after all he didn't remove anything else, either, we presume; *Kuti dé wa kirei-gotó(-) o iú ga ...* 'says nice things with one's mouth all right, but ...' = *Kuti de kirei-gotó(-) o ii wa surú ga*; *Sikási, daigaku wa sátté mo, kyooiku kara hanaréru no de wa arimasén* 'But even though I've quit [teaching in] the university, it doesn't mean I will be separated from education' (SA 2671.27c) = ... *daigaku o sári wa sité mo ...*

Some sentences will allow a tighter interpretation, but it seems likely that the loose reference was intended: *Gakkoo wa yametá no?* = *Gakkoo o yamé wa sitá no?* 'DID you quit school?' (SA); [*Hón mo káku.*] *Gakkoo mo osieru* '[He writes books.] He teaches school, too' = *Hón o káki mo surú si, gakkoo o osié mo suru*; *Hón wa kakánai.* [*Zí o zenzen siranái kara.*] 'He writes no books. [He doesn't know his letters at all.]' = *Hón o káki wa sinái*—after all, if he is illiterate, he hardly writes anything that isn't a book, either. Loose reference is probably to be assumed in *Sé[i] wa hikúku hutótte ita* 'He was short and fat' (SA 2642.37b) = *Sé[i] ga hikúku wa ári, hutótte ita* 'He was SHORT in stature, and he was fat' (cf. **sé ga hutói*).

Similar examples can be found with focus applied to the gerund: *Sake o nónde mo iru* 'He also drinks liquor (as well as doing other things)' can be loosely said as *Sake mo nónde iru* 'He also drinks liquor (as well as drinking other things)', though a stricter interpretation of the latter is also possible. The English words 'only, too, even' are fairly loose in reference and it is difficult to tighten English constructions to eliminate the ambiguities.

There are examples of loose reference with other focus particles and restrictives: ... *gunpuku [ó] kóso kite inái ga ...* 'they avoid wearing military uniforms but ...' (SA)—if we assume the meaning is equivalent to *gunpuku o kite i koso sinái ga*, rather than 'it is precisely military uniforms they don't wear'; *Kusuri saé nómeba yóku náru* 'You'll get better if you just take the medicine' = *Kusuri o nómi sae suréba yóku náru*; [*Áme ga hütte kíta.*] *Kaze máde húite kíta* '[It began to rain.] Even the wind came up' (Hayashi 64) = *Kaze ga húite kí made sita*.

Hayashi 111 gives three different ways to say 'If we just get the jewels (or balls?) back, the rest doesn't matter', and we can add a fourth:

- Tamá sae tori-kaesite kúreba, áto wa íi.
 Tamá o tori-kaesité sae kúreba, áto wa íi.
 Tamá o tori-kaesite kí sae sureba, áto wa íi.
 Tamá o tori-kaesi sae site kúreba, áto wa íi.

A similar kind of loose reference sometimes occurs in place of focused or restricted gerund + auxiliary: N sae/daké/bákari(/etc.) V-te AUX = N [...] V-té sae/daké/bákari(/etc.) AUX. Examples: ... Tookyoo no sínru(i⁻) e asobi ni bákari itté 'te né 'I did nothing but go visit my Tōkyō relatives' (SA 2658.126b) = ... asobi ni itté bákari ite (note that *íkí bákari site ite would apparently not be permitted, see p. 326); Íkite iru kotó no yorokóbi⁽⁻⁾ siawase ó sae tuukan surú no desu 'He is keenly aware of the joy and happiness of just being alive' (CK 985.363)—if my interpretation is correct, this means íkite sae iru kotó (or íkite í sae suru kotó) ... o tuukan suru

5.5. FURTHER REMARKS ON FOCUS AND RESTRICTION, ETC.

It is necessary to treat as a lexical idiom the example ái-mo | kawarazu 'without the least change' (CK 985.398; SA 2642.30d); we would have expected *ái-kawari mo sezu or *ái-kawarazu mo. An adnominal version of the idiom can be found: senzen to ái-mo kawaranu ... hooken-sei 'feudalism not the least changed from pre-war days' (Tsuji-mura 78). A similar example is tóri-mo | naósazu or tori-mo-naósazu (single lexeme) 'namely'; we would have expected tori-naoší mo sezu or tori-naosazú mo 'without even re-taking it'. Also similar are híkí-mo kiránai 'is uninterrupted', omói-mo yoranai 'is unexpected' and oyobí-mo tukanai 'does not reach', as explained on p. 441.

It is tempting to treat omói mo oyobaná-katta 'no one would have (even) thought' as similarly related to omói-oyobaná-katta (i.e. as replacing the expected *omói-oyobí mo sinákatta), but the accentuation appears to indicate that the first word is the noun derived from the infinitive so that the underlying sentence is omói [ga] oyobu 'the thought extends'. An example: Mata, tósin⁽⁻⁾ no dai-depáato ga yuuryoo de kono syú no tenrán-kai o hiráku kotó mo omói mo oyobaná-katta 'No one would have ever thought of a big department store in the heart of the metropolis opening this sort of exhibit with a charge (for admission)' (SA 2669.98b)—kotó mo represents kotó [ni/e/made] mo.

For the iterative structure V₁-i mo V₁-tari 'actually goes so far as to (do something unlikely or outrageous)', see §9.1.1b.

Following is a chart that shows the occurrence or nonoccurrence of various particles of focus, restriction, and the like, with respect to various conversions involving predication. Examples will be found separately, listed under each conversion in the appropriate sections.

PERMITTED APPLICATIONS OF FOCUS, RESTRICTION, ETC. IN VARIOUS CONVERSIONS

1. At least for N/AN ní; see §9.1.11 for examples.
2. In hi-góohoo de sika ikenai 'can go only by illegality' (SA 2677.153d) the instrumental marker might be interpreted as the instrumental use of the copula gerund.
3. As in íma de koso 'precisely (being) now' (SA 2678.112d) and Sore dé koso wá-ga ko da 'That's what I expect of my son = That's the boy!' (Kenkyusha).
4. An example will be found in §9.2.
5. An example will be found in §10.
6. As in Sonna ní made suru kotó wa náí 'There is no need to go so far' (Kenkyusha); or is this mutative (i.e. does this belong one column to the right)? An example of V-tári made suru will be found in §9.4.
7. At least for N/AN ní; I have been unable to elicit A-kú made náru/suru.
8. At least for N ní; I have been unable to elicit either A-kú d'átte náru/suru or AN ní d'átte náru/suru.
9. When the gerund is part of a phrasal postposition (§9.7) V-té daké is possible: Sono kawari zibun ni kati-mé no áru monó ni mukatté daké^[c] bóoryoku() o huruu 'Instead they display violence only toward those they themselves have the odds on' (SA 2685.118d).
10. An example will be found in KKK 3.179.

The particles hodó, kágiri, and yóri do not occur in most of the conversions listed above; can they, however, be used after Vté kara, after Adverb, and after Quotative tó?

6 EXALTATION

Among the peculiarities of Japanese there is a set of devices to mark what I call EXALTATION. This is a matter of showing deference, and it works in two ways: (1) when referring to someone other than the speaker, the subject (or the underlying or implied subject) can be exalted by adjusting the predicate—*káku* means '[someone] writes' but *o-kaki n[fi] náru* means '[someone esteemed] deigns to write'; (2) one of the adjuncts other than the subject, i.e. one of the objects (or implied objects) can be exalted if it pertains to someone other than the speaker, thereby imputing a HUMBLE or deferential or diffident attitude on the part of the subject, which accordingly must include the speaker—*o-kaki suru* means '[I or we] take the liberty of writing [to or for someone esteemed—often YOU]'.

The deference shown toward subjects and objects (EXALTATION) is independent of deference expressed toward listeners (STYLIZATION—§22), and care should be taken not to confuse the separate devices employed, especially when—as so often—the subject or the object-related person turns out to be the listener ('you').

Many of the appropriate verb forms are built around what we will call the HONORIFIC INFINITIVE. This is made by attaching the "honorific" prefix *o-* to the infinitive, removing any accent the infinitive may have; for verbal nouns of Chinese origin, the prefix *go-* is sometimes used in a similar way. Both of these honorific prefixes are also used with many ordinary nouns¹ and the resulting forms sometimes take on a tinge of pronominal reference: *o-tégami* will often mean 'YOUR letter', though the expression is as vague as its English translation as to whether the letter is written BY you or TO you (or even FOR you). A woman will often use such forms either as mere politeness (to show she is a well-mannered lady) or as hypercoristic endearments in talking to children. Not all nouns, or even a majority, take the honorific prefixes, and many of the forms are irregular in accentuation; therefore it is necessary to list each form in normal use in a complete lexicon, though no dictionary has yet done so, while allowing (as with many derivational affixes) a certain residual productivity to the prefixes, especially *o-*.

Accordingly, we will wish to distinguish three or four different uses of the honorific prefix:

(1) to form the honorific infinitive *o-V-i* (or *o-/go-* + verbal noun) for purposes of exalting the subject or an object-related person; and to attach to adjectives *o-A-i* (or *o-/go-* + adjectival noun) for similar purposes.

(2) to personalize a noun and show respect to the second person; this is limited to certain nouns: *o-tégami* 'your letter (= my letter to you or your letter to me/him)', *o-dénwa* 'your phone call, the phone call for/by you', ...; *Dóo iu go-seikatu désita ka* 'What sort of life was it for you?' (SA 2658.126d).

1. But NHK 1964.147 says that sixty percent of the nouns take neither *o-* nor *go-*; see also Shibata 1957. The prefix *go-* often, but not inevitably, attaches to Chinese nouns; *go-móttomo* 'proper' and *o-bentoo* 'packed lunch' are good hybrid examples. A few words contain relics of the old honorific prefix *mi-* or the combination *o-mi-* (or its abbreviation *on-*) as in *o-mí-kosi* 'portable shrine' (= *sin'yo*) or (slang) 'one's loins'; and even *o-mi-o* appears in *o-mi-o-tuke* 'miso soup'. There are also a few dictionary entries referring to the imperial household which have the variant *gyo-* for *go-*, e.g. *gyó-en*([~]) 'imperial garden' and *gyó-i*([~]) 'the pleasure of His Highness' (also 'your pleasure'); cf. Satō 2.184-5.

(3) to personalize a noun for reasons of elegance or endearment; this is largely limited to the speech of women and children, as in *o-inu* 'the dog', *o-tyóoku* 'the chalk', *o-tete* 'the hands', *o-síkko* 'peepee(ing)', Here perhaps belong such items of kitchen talk and restaurateurese as *o-ryóori* 'cooking', *o-bíiru* 'the beer', *o-náihu* 'the knife', etc.

(4) to mark certain everyday nouns in a purely conventional way: *o-kane* 'money', *o-tya* 'tea', *o-hási* 'chopsticks', *o-miyage* 'gift', *o-kási* 'sweets', *o-ténki* 'weather', *o-tagai* ni 'mutually', The semantically empty *o-* is optional for most such words, and men will often decline the option, though it is not necessarily feminine to say the words with the prefix; and some words occur only with the prefix built in: *o-maru* 'chamberpot', *o-sékkai* 'meddlesome(ness)', *o-séti* (= *oseti-ryóori*) 'festival cookery (for New Year's)';

Certain expressions are too colloquial to allow exaltation. The expression *soo ii-ii suru* 'says it habitually' contains a lexical item that permits neither focus (**ii-ii mo/wa suru*, **iiii-sí mo/wa suru*) nor exaltation (**ii-ii itasu* or **o-iiii suru*, **ii-ii nasáru* or **o-iiii ni náru*).

Both exaltation and stylization are sometimes used for sarcasm, and that would seem to be the intention of the honorific prefix in this example: *O-erai syakai-hyooronka nádo wa ...* 'Our "eminent" social critics and the like ...' (SA 2661.46a); cf. *o-erá-gata* 'a dignitary, a VIP'. The slang verb *on-déru* '(I) leave of my own volition [without being kicked out]' makes sarcastic use of a variant of the honorific prefix, as in this lively example: *Sono nyóoboo taru ya, ore ga on-déta ié ni dén-to(-) kosi o otitukete, noonóo to kurasite iru* 'That "wife" of mine has stuck her bottom down conspicuously in the house that I walked out of and is leading a much relieved existence' (SA 2661.112a).

Japanese prefer to avoid direct pronominal reference, so that such words as *watasi* 'I' and especially *anáta* 'you' are heard a good deal less often than their counterparts in English. (For the second person, the pronoun is typically replaced by a name and/or title; a younger relative is usually addressed by name without a title, an older relative by the appropriate kin term. See §29.) Exaltation is often used where we would expect pronouns. When the subject is the second person ("you") the subject-exalting form will normally be stylized if at the end of a sentence: *Móo o-kaeri ni narimásu ka* 'Are you leaving now?'. But the stylization may be delayed if the sentence is extended: *Dóko de go-seityoo ni náтта n desu ka* 'Where did you grow up?' (Tk 3.211a). And if you want to combine an attitude of respect with a special friendliness or affection, you can leave the subject-exalting form unstylized even at the end of a sentence, as in these examples: *Yoosyoku wa o-tukuri ni naránai?* 'You don't do any Occidental cooking?' (SA 2689.56—a male interviewing a male chef); *Nakanaka omosirói rekisi-káisyaku o site irassyáru* 'You are giving a very interesting historical explanation' (SA 2677.117d); *Atarasii hukú ga dekíru to, oziisama no tokoró e mise ni ittári nasáru?* 'When you complete a new garment do you sometimes go to your grandfather to show it off?' (SA 2663.43a—middle-aged male Iizawa to 11-year-old Kōzu Kanna, Nakamura Meiko's eldest daughter); *Óya, Háttsan ka i, yóku o-ide da né, máa, kotira e o-agari* 'Oh it's you, Hattsan; nice to see you, please come right in' (Okitsu 1.245).

Below are rules for the accentuation of words when *o-* is attached. The examples are listed in groups by shape type (number of syllables and moras); they include some items that are etymological in nature, and that accounts for the different glosses in certain of the pairs. (Most of the "exceptions" follow the rules of compound-noun accentuation; see p. 19.)

(1) The general rule is treat the resulting word as ATONIC, regardless of the input. Attested examples of all shape types will be found at the end of this section.

(2) But PROTOTONIC nouns of more than one syllable usually retain their accent: (a) *déko* o-*déko* 'head', *hási* o-*hási* 'chopsticks', *híya* o-*híya* 'drinking water', *híme* o-*híme*-*sama* 'princess', *hína* o-*hína*-*sama* 'doll', *húru* o-*húru* 'second-hand thing', *kámi* o-*kámi* 'superior (etc.)', *kási* o-*kási* 'sweets', *míso* o-*míso* 'bean paste', *múko* o-*múko*(-*san*) 'bridegroom', *núsi* o-*núsi* 'you my dear', *rúsu* o-*rúsu* 'absence', *séki* o-*séki* 'seat', *sóba* o-*sóba* 'buckwheat (noodles)', *túya* o-*túya* 'wake', *túyu* o-*túyu* 'broth', *yátu* '(former 8 o'clock =) midafternoon' > o-*yátu* 'snack'; (b) *míkan* o-*míkan* 'tangerine', *sán*-*zi* '3 o'clock' > o-*sán**zi* 'midafternoon snack', *sénko*[o] o-*sénko* 'incense', *ténki* o-*ténki* 'weather', *tyóozu* o-*tyóozu* 'hand-washing water', *sóosu* o-*sóosu* 'sauce', *dáisi* o-*dáisi* 'saint', *káiko* o-*káiko* 'silkworm', *náigi* o-*náigi* 'wife, landlady'; (c) *kyúuryoo* o-*kyúuryoo* 'salary', *syóozin* o-*syóozin* 'religious abstinence (from meat)', *dáizin* o-*dáizin* 'a big spender', (**sékkai*) > o-*sékkai* 'meddling', *téntoo* > o-*ténto*-*sama* 'the sun'; (d) *híbati* o-*híbati* 'brazier', *kágura* o-*kágura* 'sacred dance', *kúmotu* o-*kúmotu* 'offering', *nímotu* o-*nímotu* 'luggage', *súgata* o-*súgata* 'appearance', *kózukai* o-*kózukai* 'pocket money'; *tyúuniti* o-*tyúuniti* 'day of equinox'. And this includes certain nouns with multiple accentuation variants: *tómó* o-*tómo* 'companion', *sázi* o-*sázi* 'spoon', *húró* o-*húro* 'bath', *súsi* o-*súsi* 'vinegared rice'; *nándo*($\bar{\quad}$) o-*nándo* 'clothes cupboard', *zikan*($\bar{\quad}$) o-*zikan* 'time', *míkosi*($\bar{\quad}$) o-*míkosi* 'portable shrine', *kózara*($\bar{\quad}$) o-*kózara* 'saucer', *yákata*($\bar{\quad}$) o-*yákata* 'mansion, social elite'; *súmái* o-*súmái* 'residence'; *násaké*($\bar{\quad}$) o-*násake* 'sentiment'.

(2a) EXCEPTIONALLY, the following words are treated as atonic despite the prototonic accent of the noun (but younger speakers tend to regularize some of the 2-mora items so as to retain the accent, according to Akinaga in K 62): *hári* o-*hari* 'needlework', *húne* o-*hune* 'boat', *káge* o-*kage* 'shadow, influence', *kázu* 'number' > o-*kazu* 'nonrice dish', *nábe* o-*nabe* 'pan', *náka* 'inside' > o-*naka* 'stomach', *sáru* o-*saru* 'monkey', *sóba* o-*soba* 'vicinity'; *máe* 'front' > o-*mae* 'you'; *íkura* o-*ikura* 'how much', *íkutu* o-*ikutu* 'how many'; *ténami* o-*tenami* 'feat, skill'.

(3) The following groups of words are simply EXCEPTIONS and must be memorized as such: (a) *báa* o-*báa* 'grandmother', *káa* o-*káa* 'mother', *née* o-*née* 'older sister', *nii* o-*nii* 'older brother', *tóo* o-*tóo* 'father', *zii* o-*zii* 'grandfather' (all usually followed by -*san*, -*sama*, or -*tyan*); *bón* o-*bón* 'the urábon($\bar{\quad}$) festival', *kyán* o-*kyán* 'hussy'; (b) (*hané* 'jumping' >) o-*háne* 'hussy', *hirú* o-*hiru* 'noon (meal)', *kegá* o-*kegá* 'accident', (*kogé* 'scorching' >) o-*kogé* 'scorched rice', *koná* o-*kóna* 'flour', *kotó* 'matter' > o-*kóto* 'you' [elegant], *narí* o-*narí* 'form', *netú* o-*netu* 'fever'; *nikú* o-*niku* 'meat', *sewá* o-*séwa* 'solicitude' (But o-*sewa*-*sama* is atonic), *simó* o-*símo* 'the inferiors', *sió* o-*sío* 'salt', *tamá* o-*táma* 'egg' (see 4), *tugí* o-*túgi* 'next'; *giri* o-*giri*($\bar{\quad}$) 'social obligation'; *amari* o-*ámari* 'remainder', *hazikí* o-*házi**ki* 'marbles', *koboré* o-*kóbore* 'spill', *tedamá* o-*tédama* 'marbles', *tehukí* o-*téhuki* 'towel', *nagaré* 'flow (etc.)' > o-*nágare* 'wine cup passed to another; ~ *ni náru* comes to naught', *mazirí* 'mixing' > o-*máziri* 'rice soup', (*uturí* 'shifting' >) o-*úteri* 'return present'; *sagarí* 'descending' o-*ságari* 'hand-me-down, leftovers'; *tetudái* o-*tétudai* 'help'; *hinerí* o-*híneri*($\bar{\quad}$) 'money offering twisted in paper wrapper', *hirakí* o-*híraki*($\bar{\quad}$) '["opening"=] close of banquet etc.'; (c) *sekihán*($\bar{\quad}$) o-*séki**han* 'rice boiled with red beans'; o-*hutákata* 'two persons', o-*sánkata* 'three persons'; (d)² *syare* o-*syáre* 'finery, fop'; *nikai* o-*nikai* 'upstairs', *soozí* o-*sóozí* 'sweeping up', *syoozi* o-*syóozí* '(translucent) paper sliding doors', *boosi* o-*bóosi* 'hat', *denwa* o-*dénwa* 'telephone call', *tyawan* o-*tyáwan* 'ricebowl', *yasai* o-*yásai* 'vegetables'; *syuuzi* o-*syúuzi* 'penmanship'; *mukóo*($\bar{\quad}$) o-

2. The noun *tyaya* 'teashop' makes the regular o-*tyaya* 'teashop' and the irregular o-*tyáya* 'restaurant (with entertainment); brothel'.

múkoo 'the other side'; akasi o-ákasi 'light', hagaki o-hágaki 'postcard', haori o-háori 'haori coat', kawari o-káwari 'second helping' (cf. kawari o-kawari 'change'), kimari o-kímari 'routine', kogoto o-kógoto 'complaint', kotatu o-kótatu 'kotatsu heater', kuruma o-kúruma 'car', mawari 'tour' > o-máwari(-san) 'patrolman', musubi o-músubi 'riceball', nisime o-nísime 'boiled fish and vegetables', nobori 'going up' > o-nóbori(-san) 'a new arrival from the countryside', sakaki o-sákaki 'sacred tree', sigoto o-sígoto 'job', suwari o-súwari 'sitting up (by baby/dog)', tegami o-tégami 'letter', temae o-témae 'tea-ceremony procedures', yoohuku o-yóohuku 'clothes', sentaku o-séntaku 'laundry', donburi o-dónburi 'bowl'; yuzuri o-yúzuri 'inheritance'; tenugui o-ténugui 'towel'; (e)³ kusuri (*o-kúsuri →) o-kusúri 'medicine', sitazi (*o-sítazi →) o-sitázi 'soy sauce', tukiai 'socializing' (*o-túkiai →) o-tukiai 'obligational socializing', hikizuri (*o-híkizuri →) o-hikízuri 'trailing skirt, slut', huton (*o-húton →) o-hutón 'quilt', sikén (? *o-síken) → o-sikén 'examination'; hitóri (? *o-hítóri →) o-hitóri(−) 'one person, single', sitiya (? *o-sítiya →) o-sitiya(−) 'pawnshop'; (f) soozái o-soozái 'plain fare', syoogatu o-syoogatu 'January', zyohín o-zyohín 'elegance, elegant'; doorákú o-doorákú(−) 'pastime, hobby'; (g) tamágo(−) o-támago 'egg', teárai o-teárai 'washroom, toilet', hagúruma o-hagúruma 'cog', hirugóro o-hirugóro 'noon', koegákari o-koegákari 'recommendation, influence', hirugóhan o-hirugóhan 'lunch', tanzyóobi o-tanzyóobi 'birthday'; (h) tuki ó-tuki-sama 'the moon', ínari ó-ínari-sama 'the harvest god'. Nouns lacking immediate source: o-mánma 'food' [babytalk], o-kúrumi 'padded baby wrapper', o-syáberi 'talkative (person)', o-syáburi 'teething ring', ó-tí-no-hito 'wet nurse', otyobó-guti 'pursed lips' (for o-tyóbo see Inokuchi 39-40); o-yóbare 'being invited'.⁴

(4) When o- is attached to a TRUNCATED version of a noun, the accent falls on the first syllable of the truncation: bakemónó o-báke 'ghost', dekimónó o-déki 'rash', dengakú(−) o-dén 'Japanese hotchpotch', hagi-nó-moti o-hági 'rice dumpling', hiráwan(−) o-híra 'flat shallow bowl (with lid)', kawayá o-káwa 'privy', kotatu o-kóta 'kotatsu heater', mezamé o-méza 'waking up', miyage o-míya 'present', nesyobén o-néyo 'bedwetting', namaiki o-náma 'impertinence', nigirimesi o-nígiri 'riceball', satumaimo o-sátu 'sweet potato', sénbe[i] o-sén 'rice crackers', suberi-dai o-súberi 'slippery-slide', sumasi-zíru o-súmasi 'clear broth', tamágo o-táma 'egg', unagi o-úna 'eel', usu-tya o-úsu 'weak powdered tea', yaki-dóohu (etc.) o-yáki 'broiled bean curd (etc.)', zyagaimo o-zyága 'potato', zyuubako o-zyúu 'nested box'; (néba-neba >) o-néba 'sticky water from boiling rice'; hitasi-móno(−) (*o-hítasi →) o-hitási 'vinegared greens'; o-mési < omesi-tírimen 'striped crepe' (from o-mesi 'deign to wear', honorific infinitive). The word ó-ita 'naughty' (babytalk for itazura) has an exceptional variant. And o-kaka = katuo-busi 'dried bonito' is atonic.

(5) When o- is attached to a single-morpheme female name, the basic prototonic accent of the name is retained (as in 2): Húmi O-húmi, Hána O-hána. These names are regularly prototonic regardless of the accent of the common nouns from which they derive (Yúki comes from yukí 'snow'), and the accent remains when -ko is suffixed (Yúki-ko). But vowel unvoicing may shift the accent: O-hisá ← Hisá(-ko) ← *Hísa.

(6) Verbal nouns are treated the same as ordinary nouns. But most, being of Chinese origin, will take go- instead of o-. And go- attaches without disturbing the accent of the

3. Owing to vowel unvoicing.

4. A number of pseudo exceptions are compounds incorporating a regularly derived noun: ohati-ire (from o-hati), omesi-mono (from o-mesi), etc.

noun, with very few exceptions: annai go-annai 'guide', boo gó-boo 'Buddhist monk', risyoo go-risyoo 'divine grace'. The following are lexically fixed, with go- attached to a bound morpheme: go-ran 'deign to look', go-men 'pardon'; góhan 'cooked rice, food', gósyu 'wine'; gósyo 'palace', góten 'palace', góryoo 'imperial mausoleum', góryoo(-) 'imperial property', gózyoo 'imperial message'; gózen 'meal', gózen(-) 'presence of a high personage'.

(7) When o- is attached to an adjectival noun, the result is usually atonic. But there are prototonic adjectival nouns which retain their accents: génki o-génki 'healthy', mígoto o-mígoto 'splendid', ...

For sízuka 'quiet', only atonic o-sizuka is reported by K; does o-sízuka also occur? For nigíyaka 'bustling' both tonic and atonic o-nigíyaka(-) are reported, but for kinódoku 'pitiful' there is only the atonic o-kinodoku. Another irregularity: zyoohín o-zyoohín 'elegant'. Many adjectival nouns are from Chinese and these, for the most part, will prefer go- to o-; as mentioned above, go- attaches with no affect on the accent.

(8) When o- is attached to adjective forms, the result is usually atonic. But it is possible that some speakers may retain the accent of finite forms (A'í, A'katta); I lack authentic data.

(9) When o- is attached to verb infinitives the result is regularly atonic. But infinitives underly a number of DERIVED NOUNS that appear in the list of noun exceptions above.

Although there is no need to list all the many nouns that yield regularly accentuated (i.e. atonic) nouns when o- is attached, I have assembled attested examples under groups by shape type below. The form with o- is not given, since the reader can make it simply by removing any accents and attaching o-. *Nouns attaching o- with atonic accentuation:* (a) ha 'leaf', na 'name', su 'vinegar', tya 'tea'; doo 'temple', kyuu 'moxacautery', kyoo 'sutra', dai 'fee'; bon 'tray', wan 'bowl', zen 'tray';⁵ (b) mé 'eye', ná 'rapeweed', yú 'hot water'; dóo 'temple', nóo 'Noh drama'; kán 'heating wine'; (c) hana 'nose', hige 'beard', hitu 'rice bucket', huda 'tag', kane 'money', kayu 'gruel', kuni 'country', kyaku 'guest', miya 'shrine', niwa 'garden', sake 'wine', saki 'ahead', sara 'plate', sato 'village', satu 'folding money', syaku 'serving the wine', sezi 'flattery', taku 'house', turi 'change (received)', yome 'bride', zyama 'bother'; dango 'dumpling', seibo 'year end', syooyu 'soy sauce', taiko 'drum', taira 'flat' (Dóo-zo o-taira ni 'Please sit at your ease'), kagen 'state of health', mimai 'visit', tagai 'mutual'; kaikéi 'account', kanban 'sign', kooden 'obituary gift', ningyoo 'doll'; higán(-) 'equinox', saisén(-) 'offertory', zígí(-) 'bow, obeisance'; (d) desí 'disciple', heyá 'room', haná 'flower', hatí 'pot', imó 'sweet potato', kará 'beancurd lees', katá 'person', komé 'rice', tamé 'the sake (of)', terá 'temple', tosí 'age', utá 'song', yakú 'utility'; henzi 'reply', zyoozú 'skilled', aité 'partner', iwái 'celebration', satóo 'sugar', tehón 'sample', tesúu 'trouble, care'; aisó[o] 'bill', daimyóo 'lord', bentóo 'packed lunch', kanzyóo 'bill'; utí(-) 'house'; (e) kasiwa 'rice cake wrapped in oak leaf', kawari 'change', namae 'name', sakana 'fish', sioki 'punishment, execution', sirusi 'token', syokuzi 'eating', tumori 'intention', tya-no-ma 'sitting room'; kanmuri 'crown', boo-san 'Buddhist monk', soosiki 'funeral'; tomodati 'friend', yakusoku 'promise', siruko-ya 'beansoup shop'; maturí(-) 'festival', sirukó(-) 'bean soup', hudesakí(-) 'tip of one's brush' (o-hudesaki 'revelation, prophecy'); (f) hanamí 'flower viewing', hurobá 'bathing room', hutarí 'two

5. Also ten 'score, grades': senséi no o-ten ga warúi kara (Tk 2.97b).

people', kagami 'mirror', kasirá 'head', kotobá 'word', mamorí 'talisman', nakamá 'companion', sasimí 'raw slices (of fish etc.)', takará 'treasure', tegará 'merit', temotó 'at hand', todoké 'notification', yakusyó 'government office', yasumí 'holiday, rest', zasikí 'room'; (g) kokóro 'heart'; sakazukí(-) 'winecup'; honeorí 'trouble, effort', tosiyóri 'old person', monoírí(-) 'expenses, outlay', tanosímí(-) 'pleasure'; kokorozasí(-) 'kindness, gift'; (h) sobá-ya 'noodle shop', susí-ya 'sushi shop', komé-ya 'rice dealer'.

6.1. SUBJECT EXALTATION

The normal pattern for exalting the subject is shown below:

Verb	Yobu.	O-yobi n{í} náru.
Verbal noun	Soodan suru.	Go-soodan n{í} náru. ⁶
Adjective	Isogasíi.	(O-)isogásikute irassyáru.
Adjectival noun	Génki da.	(O-)génki de irassyáru.
Precopular noun	Byooki da.	(Go-)byooki de irassyáru.
Noun	Senséi da.	Senséi de irassyáru.

In addition to the forms given here, you will also find such sentences as: ... Sátoo san ga máda o-tiisai kóro ... 'when you were still small, Mr Satō, ...' (SA 2642.42b); O-tiisai katá to go-issyo ni ... '[See it] with your little ones' (R); O-isogasii 'Someone esteemed is busy';⁷ Go-byooki dá 'Someone esteemed is ill'; O-génki da 'Someone esteemed is well'; O-tégami da 'It is an esteemed (or someone esteemed's) letter'. These are best regarded as LEXICAL HONORIFICS similar to Tanaka san/sama da 'It is Mr Tanaka', Senséi da 'It is the esteemed teacher', O-taku da 'It is the esteemed house/family'. Tsujimura 119 notes that such phrases as o-kai-yasúí o-nedan 'a price easy to buy at' and o-motome-yásuku narimásita 'has become easy to purchase' are advertiser jargon; the more appropriate versions would apply exaltation first to the underlying verb: o-kai ni nari-yasúí, o-motome ni nari-yasúí, o-motome ni nari-yásuku narimasíta, etc. Cf. §9.1.8. Notice that there is no exaltation of the subject in Zitú wa || o-hazukasíi n desu ga 'The fact is I'm ashamed (to say it) but' (BJ 2.300); here the o- shows deference toward the listener.

The sentence O-suki désu ka 'Do you like it?' might be regarded as either: (1) an equivalent of A ga B o o-suki n{í} náru from A ga B o súku 'A likes B', a verbal sentence that is commonly replaced by the adjective-nominal sentence; or, (2) lexically related to the adjective-nominal sentence A ga B ga sukí da 'A likes B', which will yield the normal A ga B ga sukí de irassyáru 'Esteemed A likes B'. But the latter is obviously the proper interpretation for most occurrences; the antonym is O-kirai désu ka or O-iya désu ka: ... syoozoo-ga nánte o kakasaréru no wa, o-iya desyóo ná 'You must dislike being called upon to paint portraits ... and all' (Tk 4.119b). Notice that usually o-suki n{í} náru—like o-rippa n{í} náru, o-sízuka n{í} náru, and other adjectival nouns—is not to be taken as parallel to o-yobi n{í} náru, but rather to the construction of infinitive + náru/suru called mutative in §9.1.11, with the meaning 'gets to be liked, comes to like', an equivalent of sukí ni o-nari n{í} náru. (Nagano 1966.188 says it is better to use o-suki de irassyáru.)

6. When you drop the /i/ in go-soodan n{í} náru, the triple nnn reduces to nn. Many speakers are uncomfortable with go-VN ni náru and prefer go-VN nasáru.

7. When o- is attached, a tonic adjective usually becomes atonic.

Occasionally, you will find, N/AN ni náru 'gets to be N/AN' is used as a virtual synonym of ... dá 'is'; examples are usually expressions of age (cf. Ishigaki Kenji 218): Kotosi o-ikutu ni o-nari désu ka—Kazoédosi hatizyúu yón-sai 'How old are you this year?—A full 84 years (of age)' (Tk 3.22a); Nán-sai ni narimásu ka = Nán-sai desu ka 'How old are you?'; Nízyuu hás-sai ni náru zyosei désu 'I am a woman twenty-eight years of age' (SA 2678.118a); Nooka no gozyúu íkutu ka ni náru syúzin ga byooki de naku-natta 'The head of a farm family, some fifty-odd years old, died of illness' (Shibata 1961.70). Compare ítu nfī náttara = ítu 'when', háru nfī náru to = háru [wa] 'in spring'; ... tó, áto ni nátte [= áto de] sitta 'I found out later on that ...' (SA 2681.93). But sukí nfī náru is used with both the meanings 'likes' and 'comes to like'.

The expansion of an exalted sentence is exactly the same as the unexalted, and later conversions apply as they would to the unexalted sentence; the new sentence O-yobi nfī náru is treated just like Yobu, except that it is not normally subject to voice conversions—instead, you first change Yobu to Yobaseru, Yobareru, etc., and then change THAT to O-yobase nfī náru, O-yobare nfī náru. But sometimes the subject-exalting passive is added, pleonastically, to the exalted sentence: O-yobi nfī nararéru = O yobi nfī náru 'calls' or = O-yobi nfī naréru 'can call' (cf. §6.4). Unlike the passive and causative, however, the subject-exalting short POTENTIAL is more commonly expressed by first exalting and then making the potential; and a pleonastic double application of the potential is "surprisingly frequent" according to Tsujimura 166:

most common:	o-yobi nfī naréru
less common:	o-yobe nfī náru
frequent:	o-yobe nfī naréru

An example of the most common type is heard in Migite ní wa Húzi-san ga go-ran ni naremasú 'On the right you can see Mt Fuji' (R). Notice that o-yobi dekiru which contains an ellipsis, o-yobi [suru kotó ga] dekiru, is the potential for OBJECT-exalting, and is to be translated 'I can call you (or on your behalf)'.

For a possible ellipsis of ... ni nátte or nasátte, as in Go-riyoo [ni nátte] kudasaimáse 'Please use it' or O-mati [ni nátte] kudasái 'Please wait' and Go-riyoo [ni nátte] itadakimásu 'I will receive the favor of your using it' or O-kiki [ni nátte] itadakimásu 'I will receive the favor of your listening', see §10. According to a survey by Kurokawa in the summer of 1969 a majority of younger speakers seem to accept such forms as O-mati site kudasái for 'Please wait'—apparently a blend of O-mati [ni nátte OR nasátte] kudasái with Site kudasái 'Please do it', though their acceptance presumably would not extend to the use of other forms of o-V-i suru for subject exaltation; the kudasái in the blend precludes the usual object-exaltation ("humble") interpretation called for by o-V-i suru. Note how easy it is to arrive at such a blend when you start with possibilities such as these:

- (1) Hanasí o site kudasái 'Please tell me the story'.
- (2) O-hanasi [ni nátte, nasátte] kudasái 'Please talk'.
- (3) O-hanasi o site/nasátte kudasái 'Please tell me your story'.
- (4) O-hanasi [o] site/nasátte kudasái 'Please tell me your story'.
- (5) O-hanasi site (= nasátte) kudasái 'Please talk'.

Here, o-hanasi can be the honorific infinitive (o- + hanasí 'talking') or an honorific prefixation of the noun derived from the infinitive (o- + hanasí 'story'). Not all verbs, of course, have the derived noun. On the apparently "growing danger" of this substitution of o-V-i suru for the subject-exalting o-V-i nasáru = o-V-i nfī náru, see Shibata 1965b.58–9.

The honorific infinitive itself optionally drops when a subject-exalting predicate is repeated in a larger structure, such as *o-kaeri ni nátte mo [] naránakute mo* 'whether you leave or not'.

Not every instance of *o-V-i n[ɨ]-náru* is subject-exalting. In *o-séwa ni náru* 'I cause you trouble'^{7a} and *o-tikara ni náru* 'I lend my strength to yours = I help you', the subject is humbled. In the sentence *Syokuryóo-nan no kuni ni kane o ageté mo, tábete simaéba sore de o-simai ni narimásu né* 'Even if you give money to a country short of food they will eat it up and that will be the end of it right there, you see' (SA 2671.63d) the word *o-simai* is the derived noun from the verb infinitive 'end' and carries the semantically empty prefix *o-* (like *o-kane* 'money').

The "subject" to which subject-exaltation refers is the underlying subject—the possessor (*A ni/ga*) in a possessive sentence (*A ni/ga X ga áru*) or in a quasi-possessive sentence (*A ni/ga X ga wakáru, dekíru, ir-u, etc.*). Sometimes the reference will be to a possessor reduced to a genitive (*A no X ...*); and the possessor may be unexpressed: *Sánzís-sai ʔkúrai nenrei ga o-tigai no yóo desu ga, ...* 'Your ages would appear to be some thirty years apart, but ...' (SA 2685.43c)—coming from something like *Anata-gáta no [= ni áru] nenrei ga o-tigai ni náru* 'Your ages differ'.

Sometimes the reference is less direct: *O-wakari ni naránai yóo de irassyaimásu kara, moo iti-dó moosi-agemasyóo* 'Since it appears you do not understand, I will tell you again'; *Soo iu wáke de irassyáru kara, ...* 'Since that's the way things are (for you) ...'. (But not **Soo iu wáke de orimásu kara, ...* 'Since that's the way things are for humble me ...'.) There seems to be no use of *... *wáke ni wa irassyaimasén* for the usual ... *wáke ni wa ikanai* 'must' despite the humble (or merely hyperpolite) *Damátte iru wáke ni wa mairimasén* 'I have to speak up'.

6.2. CIRCUMLOCUTIONS

The normal way to exalt the subject of a verbal sentence is to change the verb to the honorific infinitive (*o-* + infinitive minus any accent) and add *ni náru*. Instead of *ni náru* you will also hear the copula *dá*: *O-kaeri desu ka = O-kaeri n[ɨ]-narimásu ka* 'Are you leaving (for home)?' (with polite stylization). Although this bears the earmarks of a nominal sentence and will enter into further conversions as other nominal sentences will,⁸ within the sentence itself the expansions (the adjuncts and their markings) are identical with those in the underlying verbal sentence: *Watakusi o o-yobi desu ka?* 'Are you calling me?'; *Nihon-go no seisitu no [← gá] yóku o-wakari no [← dá] katá* 'a person who well understands the nature of the Japanese language'; *Tyúugoku no hoo zya, dónna hitó ni o-ai désita ka* 'What sort of people did you see (when you were) in China?' (Tk 2.261a); *Sore wa dóo desu ka; sore wa ii kotó to o-kangae desu ka* 'What about that; do you think that a good thing?' (R). This is one of the very few situations where a "nominal" sentence looks as if it took a direct object; the object belongs, of course, to the underlying sentence

7a. The person troubled is marked as dative or genitive: *senséi ni/no o-séwa ni náru* 'I trouble the teacher'.

8. For example, *O-kaeri no katá desu ka* 'Are you the person leaving?' (with adnominalization replacing *dá* by *nó*, § 13); *Soo iu monó ga o-suki desu to, turi nánzo ni mo syúmi ga o-ari ná n zya nái desu ka* 'If you like that sort of thing, surely you must enjoy fishing too?' (Tk 4.150b). A sign I noticed in a train's restroom included an example of an adnominalization of *go-VN dá*, reading *Dansei é no o-negai: tóire o go-siyoo no sái wa sita no siito o ageté kara o-tukai kudasái* 'Gentlemen please lift the seat below before using the toilet'.

from which the nominal sentence is a conversion. We can compare this to the way objects are retained in verbal sentences that have been converted into adjectival sentences, such as the desideratives (§7) and the negatives (§8).

The exalting reference of *o-ari dá* 'has' is to the underlying subject, the possessor A in A ni/ga X ga *o-ari dá* 'A has X', even when that goes unmentioned, as in *Inú ga o-ari désu ka* 'Do you have a dog?'

Sometimes the meaning of the honorific infinitive + *dá* is equivalent to that of *V-te iru*, as when *O-moti désu ka* means *Mótte imásu ka* 'Do you have it?', so perhaps we will want to say there are at least two sources for *o-V-i dá*, one from *o-V-i nfi} náru* and one from *V-te irassyáru*.⁹ For the meanings of the latter, see §9.2.4; the RESULTATIVE will account for the translation 'Are you back?' as one version of *O-kaeri désu ka*. However K 1950 calls our attention to the fact that *o-V-i dá* can refer to past, present, or future with DURATIVE verbs and to past or future with PUNCTUAL verbs. Perhaps the second derivation should be from *o-V-i ni nátta* rather than *V-te irassyáru*, from the simple past rather than the resultative:

- Ítu o-tati désu ka* (1) = *Ítu o-tati ni narimásu ka* 'When will you depart?'
 (2) = *Ítu o-tati ni narimásita ka* 'When did you depart?'

For the durative verb we will assume three sources: *O-yomi desu ka* can mean 'Are you reading?' (= *O-yomi ni nátte irassyaimásu ka* or *Yónde irassyaimásu ka*), 'Did you read?' (= *O-yomi ni narimásita ka*), or 'Will you read?' (= *O-yomi ni narimásu ka*)—the last also subject to an iterative interpretation 'Do you read?' that is formally undistinguished. The ambiguity remains when a sentence is adnominalized: *hónsyō o o-yomi no katá* will be interpreted as 'persons about to read this book' if in the foreword (or in a review), as 'persons (now) reading this book' if in the middle, and 'persons who have read this book' if at the end of the book. In the following examples *o-V-i nō* represents the continuative: *O-kiki no hoosoo wa KOHO de gozaimásu* 'You are listening to [Station] KOHO' (R); *O-mati-kane no Kingu-áwaa ...* 'King Hour that you have been eagerly awaiting ...' (R); *Sore de, o-komari ni nátte iru katá ga irassyaimásu ka, hoka ní mo ... O-komari désu ka* 'Are there others [in our audience] who are troubled by that ... Are you [troubled], madam?' (R). Kindaichi also observes that DURATIVE-STATIC verbs (such as *suguréru* 'excels' and *sobiéru* 'towers') do not usually permit the form at all: **o-sugure dá* → *sugúrete irassyáru*, **o-sugure dátta/no senséi* → *sugúrete irassyáru senséi* (since **o-sugure ni nátta senséi* is also rejected). See §3.12.

The negative of *o-V-i dá* and *o/go-VN dá* is the expected ... *de/zya náí*, but for those honorific infinitives (or verbal nouns) used also as nouns—such as *o-ide*, *o-negai*, *go-zón(-)zi*, *go-syooti*, etc.—you will find optional ellipsis of the copula [*de/zya*]:¹⁰ ... *kotó*

9. Or a variant, *V-te o-ide ni náru*, which underlies the *V-te o-ide dá* that must be the source of the adnominalization in this example: *Sekkaku, sikási, o-hitóri de agatte o-ide no tokoró o* 'But to be drinking here all by yourself ...' (Kb 132b). And in *Anáta, Ensyuu-ya o go-zón-zi de o-ide desyoo?* 'You know the *Enshū-ya*, I presume?' (Kb 131a) we have the equivalent of *go-zón-zi de irassyáru desyoo*. There are also examples of *N de o-ide dá* = *N de irassyáru* as in *Tó ossyáru no wa anáta ga Edokko de o-ide dá kara de irassyáru* 'You say that because you are a child of *Tōkyō*' (Kb 139a) and of *A-ku[t]te o-ide dá* = *A-ku[t]te irassyáru* as in *Sore wa, anáta wa, o-wakakutte o-ide dá kara ...* 'But you are still young ...' (Kb 132b).

10. Occasionally the ellipsis occurs for an honorific infinitive NOT otherwise in use as a noun: *Sore o danna wa, watasi no móosu kotó wa tittó mo o-kikiire náku ...* 'Despite that, the master will not accede to a thing I say ...' (KKK 25.89). But the ellipsis is not possible for most instances of

o go-zón(-)zi {de} náí kata ... 'persons unaware that ...' (SA 2664.81b); ... senséi wa máda go-zón(-)zi {de} náí mén de ... 'you, professor, in areas that you are uninformed on ...' (SA 2671.24c). Although the ellipsis is perhaps more common under adnominalization (as in the examples cited above), it also occurs elsewhere: Go-syooti {de} arimasén/gozaimasén ka 'Don't you agree?'; Go-zón(-)zi {de} náí/arimasén/gozaimasén desyoo 'You are probably unaware'. And it can be used where áru ̄mái substitutes for náí daroo: Tumaki ga bóku-ra ni, "Onná ga itiban utukúsiku miéru tokí o, anata-gáta, go-zon(-)zi áru ̄mái" tte iú n desu yó 'Tsumaki says to us "I wager you gentlemen do not know when a woman looks the most beautiful' (Tk 4.324a).

Although it is possible to say o-V-i dátta N (= o-V-i ni nátta N) as well as o-V-i nō N (thus clearing up ONE ambiguity!), and both o-V-i de nákkatta N and o-V-i de náí N are said, for some reason you are not allowed to say *o-V-i de áru/áttta N. Nor are the focused forms in use, it would seem, for either the affirmative or the negative: (?*) o-V-i dé mo/wa áru N, (?*) o-V-i dé mo/wa náí N.

The expressions with o-V-i dá can be stylized not only to polite (o-V-i désu) but even to hyperpolite (o-V-i de gozaimásu/irassyaimásu) as in O-yobi de irassyaimásu ka 'Are you calling me, sir?' (Y 426), Ikága o-sugosi de irassyaimásu ka 'How are you getting along (these days)?', and O-sumi de gozaimásu ka 'Are you finished?' (Shibata 1961.165—a response to Gotisoo-sama! 'Thank you for the meal').

Another, now somewhat old-fashioned, way to exalt the subject is to follow the honorific infinitive with nasáru, the euphemistic subject-exalting synonym of suru (§6.4),¹¹ for which elegant ladies (and an occasional old gentleman) will sometimes substitute asobasu—by origin an abbreviated causative 'lets it play' but now 'deigns to do'.

Still another device to exalt the subject is to use the passive conversion of the nuclear sentence (leaving the adjuncts unaffected by the conversion): Watakusi o yobaremásu ka? 'Are you calling me?' (or 'Can I be called?'—but not 'Will I be called?' for that would be Watakusi ga yobaremásu ka, a form that could also have the potential meaning). Here are examples: Dé mo, okosan ga móo óokiku narárete ... 'But your son now has become big ...' (SA 2681.44b); Sore wa, tásika ni iwareru yóo ni omoimásu 'I think that is certainly just as you say' (Tanigawa 157).

In very formal speech or writing you may come across an exalting passive made on the uncontracted copula de áru, equivalent to de irassyáru:¹² Rippa na ryoosiki no hitó de araréru yóo da 'He seems to be a person with an admirable conscience' (Tk 2.122a—reference is to the Emperor's brother Takahito); ... masúmasu go-kenkoo de araréru yóo inori-ageru 'I pray that they continue in the best possible health' (Kgg 78.86a); Saiwai Amerika ̄zidai kara go-sin'yuu no aidagara de araréru Yáno san no go-kóoi mo arimásite

o-V-i; you can not omit de/zya in o-yomi de/zya náí kata 'persons who do not read' or o-wakari de/zya náí tokoró 'places you do not understand'.

11. And ...ri nasáru will sometimes be pronounced /...nnasáru/: ... tyuuhuu (tyuubu[u]) ni o-nan nasútta no wa, ... 'that you had become paralyzed' (Fn 84a)—o-nan = o-nari; Isuke san ni wa, kodomo ga o-an nasáru n desu ka 'Do you have children, Isuke?' (Fn 97a)—o-an = o-ari. In dialects you will also find V-i-nasáru, using the simple infinitive instead of the honorific: an-nasáru (Fn 70b) = ari-nasáru = o-ari nasáru = o-ari ni náru 'deigns to possess'. A contracted version: V-i-nsáru.

12. O'Neill (1966.49, 102) recognizes N de o-ari ni náru, citing the example O-taku wa kyúuka(̄) de o-ari ni narimásu né 'Yours is an old family, isn't it?' taken "from a modern novel".

'Fortunately I enjoyed the goodwill of Mr Yano with whom I had been on friendly terms since the days in America' (Y 118).

According to Tsujimura 189, the exalting passive lacks an imperative—and presumably all command forms: *Yomárete kudasái → O-yomi ni nátte kudasái 'Please read it'. (But see p. 287 n. 2, for an exception.) Maeda 1961.181 cites this lack of an imperative for the subject-exalting passive—which had been recommended by the Kokugo Shingi-kai (in *Kore kara no keigo* 1952) for its "simplicity and regularity"—as showing its inferiority to the Ōsaka form V-i-haru, which has the imperative V-i-hare. Tsujimura calls our attention also to the fact that the passivized causative is not much used for subject-exaltation: instead of *Oziisan ga okosan ni hón o yomaseráreta* you would be more likely to say *Oziisan ga okosan ni hón o o-yomase ni nátta* 'Grandfather let the child read the book (or: got the child to read the book)'. In former days both the causative and especially the passivized causative were often used as subject-exalting forms (with no causative meaning) in referring to actions of members of the Imperial Household, but now instead of *Héika ga yomáseta/yomaseráreta* for 'His Majesty deigned to read' you would say *Héika ga* (or *Tennóo-sama ga*) *o-yomi ni nátta* or (pleonastically) *o-yomi ni naráreta*.

The exalting passive, it should be noted, is not normally used for any of the possessive or quasi-possessive verbs (*áru*, *wakáru*, *dekíru*, ...); cf. NHK 1964.147. But in the uncontracted copula *de áru* the verb *áru* is occasionally passivized (N *de araréru*) for subject-exaltation, as we have mentioned above, and the passivized causative (N *de araseraréru*) is also occasionally found: ... *hokutyoo no keitoo de araseraréru* ... 'is of the lineage of the northern dynasty' (SA 2670.146). The *dé* is sometimes absent: ... *séikyo araseráreta* 'he [Prince Chichibu] passed away' (Tk 3.182). And, exceptionally, in ... *go-ran araremasyóo* 'Let the reader observe ...' we even find a polite hortative made on the subject-exalting passive of *áru*.

The verbs *iru* 'stays', *kúru* 'comes', and *iku* 'goes' traditionally lack their expected honorific infinitives **o-i*, **o-ki*, and (*)*o-iki*. (The last is now more widely heard, especially in substandard, rural, or children's speech.) Instead, for all three you use *o-ide*, the honorific infinitive from the obsolete literary verb *idéru/ízu* (which is the source of the modern *déru* 'emerges'):

Iru.	}	O-ide n{i} náru.	O-ide dá.	O-ide nasáru.
Iku.				
Kúru.				

Similar to *o-ide* is *o-demasi* as in *o-demasi ni náru* 'deigns to go out(side)' (an example will be found in Fn 245b), used where we might expect [*sóto e*] *o-de ni náru*; the word would appear to be built on the infinitive of *de-másu* (the polite stylization of *déru*), though the auxiliary *-máru* does not ordinarily display an infinitive.

Most verbs other than *iru*, *iku*, and *kúru* make regular honorific infinitives; there is even *O-ari désu ka* 'Do you have any?' and *o-ari ni náru* as in this example: *Okosan ga tiisái kóro, neru tokí ni o-hanasi o site ageta keiken [ga], o-ari ni náru desyo?* 'You must have had the experience of telling stories at bedtime when your children were little' (SA 2688.47). But certain verbs are regularly replaced by euphemistic synonyms (§6.4), so that you might expect not to find the honorific infinitives in the regular subject-exaltation forms. Yet *o-omoi ni náru* is more common than the formal-sounding *obosimésu* for 'thinks'. And although *ossyáru* is the common replacement for *o-ii ni náru* (from *iu* 'says'), the latter form is not rejected by all speakers. *Go-zón(-)zi da* or *Go-syooti da* is usually heard where

one would expect *o-siri ni nátte iru* for *sítte iru* 'knows' but such forms as *o-siri ni nátta tokí* 'when you realized' are not uncommon. It has been suggested that monosyllabic infinitives can be avoided in the normal construction: instead of *o-ki ni náru* (for *kiru* 'puts on, wears') you can say *o-mesi ni náru* with the infinitive of a euphemism; instead of *o-ne ni náru* (for *neru* 'sleeps') you can say *o-yasumi ni náru*; and instead of *o-ni ni náru* (for *niru* 'resembles' or 'cooks') you can say *nite irassyáru* using the gerund-auxiliary form. But the only monosyllabic infinitives that are OBLIGATORILY avoided in the normal construction are the following:

<i>míru</i> 'looks at, sees; tries'	* <i>o-mi ni náru</i>	→	<i>go-ran ɸniɸ náru</i> ¹³
<i>éru</i> 'gets'	* <i>o-e ni náru</i>	→	{ <i>o-motome nɸiɸ náru</i> <i>o-te ni irerareru</i>
<i>suru</i> 'does'	* <i>o-si ni náru</i> ¹⁴	→	<i>nasáru</i> ¹⁵

And there seems to be only the regular possibility for *déru* 'goes out; attends; performs (on stage)': *o-de nɸiɸ náru*. (But see the remark on *o-demasi* above.)

The regular honorific infinitives are also used in the object-exalting forms to be discussed below; but *o-ide* and other euphemistic forms are limited to the subject-exalting conversion—other euphemisms are available for the object-exalting form of some of the same verbs.

A number of the honorific infinitives (and all free verbal nouns) can be used as pure nouns, e.g.: ... *tennoó no o-ide o sirazu ni* 'not knowing of the Emperor's presence' (Ōno 1966.137); *Miná-san no o-ide o o-mati site orimásu* 'We await your arrival, gentlemen'. But the distinction between such pairs as [Sono] *o-negai o simásu* 'I make [that] humble request' and [Sore o] *o-negai simásu* 'I humbly request [that]'

 is limited to the few verbs that underly such derived nouns.

Virtually all¹⁶ instances of *o-* + a noun derived from an infinitive (*yasumi* 'vacation' → *o-yasumi* 'your vacation') coincide in accent with the regular honorific infinitive (*yasúmi* 'resting' → *o-yasumi* 'deigning/presuming to rest') so that only context will disambiguate certain phrases: [Anáta no sono] *o-kangae nára* 'If it's your idea' contains a lexical honorific made by attaching the prefix *o-* to the noun *kangáe* that is derived from the infinitive *kangáe*, but [Anáta ga soo] *o-kangae nára* 'If that's what you think' is a subject-exaltation with *o-V-i dá* converted to the provisional.

6.3. OBJECT EXALTATION

You can make a verbal sentence exalt the object or indirect object, whether mentioned or assumed, by following the honorific infinitive with the verb *suru* 'does': *O-yobi suru* 'I call someone esteemed (or something that belongs to someone esteemed)', *Go-soodan suru* 'I consult with someone esteemed'. Except for certain clichés such as *O-negai simásu*

13. When you drop the /i/ in *go-ran nɸiɸ náru*, the triple nnn will reduce to nn.

14. But *o-si*, the honorific infinitive of *suru*, is sometimes used as a command: ... *ansin o-si* 'put your mind at rest' (Kb 76a); see §16.2.

15. As in *o-kéga o nasáru* 'an esteemed person has an accident' from *kegá o suru* 'has an accident'.

16. A few exceptions will be found in the lists of §6. The most likely to confuse is *o-tétudai* 'help' (from *tetudái*). *O-tétudai simasyóo ka* 'Shall I help you?' (BJ 1.297) is to be taken as a verbal noun; the subject-exalting form is *o-tétudai nasáru* 'deigns to help'. It is unclear whether the regular forms *o-tetudai suru/itasu* and *o-tetudai ni náru* are also used.

'I request it of you' = 'Please', these object-exalting forms are uncommon when the speaker does not feel himself in an inferior status to the addressee. To emphasize the difference in status, a speaker may exalt the object one stage higher by substituting the euphemism *itasu* for *suru*; to lower oneself still further from the object it is possible to use *o-V-i móosu* or *moosi-ageru*: *O-tétudai moosi-agemásu* 'Let me assist you'. And there are unusual occasions that call forth the now obsolete form *V-i-tatematúru*: Ikeda Daisaku no *sinkin o yasume-tatematuru tamé ni* "Sooka-Gákkai o *kíru*" o *dasánai kotó ga ii* 'In order to respectfully set Daisaku Ikeda's "majestic heart" at ease it would be better not to let [Hirotatsu Fujiwara's book] "I Denounce the Sōka Gakkai" be published' (SA 2663.18e—sarcasm is indicated by the use of terms appropriate for reference to the Emperor).

Maids and other menials sometimes use these object-exalting forms (or did so in less democratic days!) even when there is no clearly obvious object involved, as a way of showing general humility, especially toward the addressee; that is why these are often called "humble" forms as opposed to the subject-exalting forms which are often called "honorific" forms, though the use of either kind of exaltation is often called "honorific speech", a term reserved here as one way to refer to a particular kind of sentence stylization (the hyperpolite or elegant *gozaimásu*-style of §22.2). According to O'Neill *go-VN suru* is used only for those verbal nouns necessarily involving more than one person—such as *renraku* 'contact', *soodan* 'consult', *kenka* 'quarrel', etc. (but not *sitúrei* 'breach decorum', nor any verbal noun that is inherently object-exalting such as *haiken* 'respectfully look'); the only possibility for object-exaltation is *VN itasu*, so that where you might feel the urge to say **go-benkyoo suru* or **go-tootyaku suru* or **go-sanpo suru* you will have to say *benkyoo itasu* 'I take the liberty to study', *tootyaku itasu* 'I presume to arrive', *sanpo itasu* 'I make bold to stroll'.

The voice conversions normally precede all exaltations: thus *suru* first forms *saseru* and then forms *o-sase suru/itasu* '[I or we] take the liberty of causing/letting [someone esteemed] do it' or '... [someone] do it [to something pertaining to someone esteemed]'. (But passive and potential, being involuntary, will not be used.)

The specific situations that permit what I am calling object exaltation¹⁷ are these:

(1) The direct object is an exalted person: *Yó-zi kara anáta o o-mati [ita]simásu* 'I'll be waiting for you at four o'clock'; *Kokóro kara anáta o o-mukae [ita]simásu* 'I will welcome you with all my heart'; *Yorosikáttara éki made o-okuri simasyóo* 'If you don't mind, I'll see you to the station' (ISJ 5.2b.253).

(2) Some adjunct other than the subject or the direct object is an exalted person: *Konaidá^[1] anáta no o-niisan ni o-ai simásita* 'I met your brother the other day'; *Moo súgu miná-san to o-wakare sinákereba narimasén* 'I will have to say good-bye to you all before long'; *Senséi kara/ni piano o o-narai itasi-tái n desu ga* 'I'd like to take piano lessons from you'. Sometimes the adjunct is implied: *O-dénwa o o-kake itasimasyóo* 'Shall I phone [you]?'; *Go-annai itasimásu* 'I will show you around'.

(3) An embedded genitive, stated or implied, expresses possession by an exalted person: *[Anáta no] zidóo-sya(-) o o-arai itasimasyóo ka* 'Shall I wash the [= your] car?' Cf. Tsujimura 53-4, where he says you sometimes hear such sentences as *Ano-kátá mo o-uti ga o-yake ni nátta sóo desu* 'His house burned down, too, they say'.

17. The notion apparently originated with Matsushita Daisaburō and Kindaichi Kyōsuke (see Tsujimura 111, 114) though I arrived at my version of it independently.

(4) Although unmentioned, an exalted person is the beneficiary of the action—which could be rephrased as a favor: *Mádo o o-ake itasimasyóo ka* ‘Shall I open the window (for you)?’; *Kyóo wa watasi ga o-harai simasyóo* ‘I’ll pay (for you) today’; *Dénki o o-tuke simasyóo ka* ‘Would you like me to turn on the light?’; *O-satoo o o-ire itasimasyóo ka* ‘Shall I put sugar in your coffee?’; *Mázu áto no hoo no situmon kara o-kotae simásu* ‘I will start by answering your last question first’ (SA 2677.119a); *Dé wa || kákuti no | ténki o | o-tutae simásu || ... Tenki-yóhoo o | owarimásu* ‘Now I will tell you about the weather in local areas. ... This finishes the weather report’ (R)—notice that **o-owari simásu* would not be said. This seems to be the most common type, and some of the earlier examples could be interpreted to belong here; many speakers maintain that benefit to an exalted person is always implied in object exaltation.

Certain verbs would never occur in these situations, and such a verb will never appear in the form *o-V-i suru/itasu*: *áru* ‘is, has’, *wakáru* ‘understands’, *dekíru* ‘can’, *ir-u* ‘needs’; *náru* ‘becomes’ (contrast *suru* for which the euphemism *itasu* exists), *sinu* ‘dies’, *ikíru* ‘lives’, *déru* ‘goes out’, *dekakeru* ‘leaves’, *káer-u* ‘returns home’, *naóru* ‘gets better’, *naréru* ‘gets accustomed’, *komáru* ‘gets troubled’, *akiraméru* ‘resigns oneself’, *matigáeru* ‘mistakes’, *kan-ziru* ‘feels’, *kurusímu* ‘suffers’, *mayóu* ‘is confused’, *awateru* ‘is rushed’; as well as verbs that normally do not have human subjects such as (*áme ga*) *húru* ‘rains’, (*sigoto ga*) *súmu* ‘(work) ends’, (*zinkoo ga*) *huéru* ‘(population) increases’, etc. The verb must express a voluntary action.

A potential can be made on an object-exalting verb by ellipsis [*suru kotó ga*] *dekíru*: *o-yobi dekíru* ‘I can call you’, *go-soodan dekíru* ‘I can consult with you’; *anáta ni o-ai dékite*, ... ‘Having the opportunity to see you ...’ (Kawabata: Saikai 109); *senséi ni o-ai déki*, ... ‘being able to see the doctor’ (SA 2679.124b); *Sore dé wa o-kasi dekimasén ná* ‘In that case I’m afraid I can’t lend it to you’ (Okitsu 1.175). Less commonly, the potential will be made on *itasu*: *Yóku o-hanasi itasemasén kara ...* ‘Since I am unable to speak (for/to you) very well ...’.¹⁸

The honorific infinitive optionally drops when an object-exalting predicate is repeated in a larger structure: *o-kari sité mo [] sinákute mo* ‘whether I rent it (from you) or not’ (BJ 2.184.31) = *karité mo karinákute mo*.

Not all instances of *o-V-i [o] suru* and *o-V-i dá* are to be regarded as exaltation devices. The following examples show *o-* + a derived noun used as a verbal noun or the like: ... *o-tutome o site ite, sára ni yóru o-kéiko o site iru hitó ...* ‘people who work at a job and then in addition take lessons at night’ (SA 2664.106c); *Máiniti(¯) o-tutome no áto, ...* ‘Every day after work ...’ (SA 2664.106a). In some sentences it would look as though the honorific infinitive can be marked as the object of *suru/itasu* provided there is no other object mentioned, just like a verbal noun: *O-negai [o] itasimásu* ‘I request it of you = Please (do it for me, give it to me, etc.)’; cf. *Kudasáru yóo {ni} o-negai [o] itasimásu* ‘I beg you to give it to me’, *Sore o kudasáru kotó o o-negai itasimásu* ‘I ask the favor of your giving it to me’. But this is lexically limited; for the correct interpretation, see p. 339. Subject-

18. But the object-exaltation itself can not be applied to a potential, nor to a passive, since these operations normally leave the verbal marked as INVOLUNTARY, regardless of whether or not it was involuntary to begin with. (A causative, on the other hand, is marked VOLUNTARY regardless of whether the underlying verbal is itself voluntary or not. The reason we seldom hear object-exalted causatives is more sociological than grammatical.)

exaltation can be expressed by substituting *nasáru* for *suru*: *o-negai* [o] *nasáru* = *o-negai ni náru* 'you request'.

6.4. EUPHEMISMS

In addition to the regular forms—subject-exalting *o-V-i ni náru* (etc.) and object-exalting *o-V-i suru* (etc.)—a number of common verbs have euphemistic synonyms:

	VERB	SUBJ.-EXALT.	EUPHEMISM	OBJ.-EXALT.	EUPHEMISM
'eats'	Tabéru.	O-tabe ni náru.	= {Mesi}agaru.	O-tabe suru.	
'drinks'	Nómu.	O-nomi ni náru.		O-nomi suru.	Itadaku.
'receives'	Morau.	O-morai ni náru.	—	O-morai suru.	
'stays'	Iru.	O-ide ni náru.	= Irassyáru.	—	Óru.
'goes'	Iku.			—	
'comes'	Kúru.			—	

But in *Kyōto* speech and in written Japanese *óru* is merely an elegant euphemism for the non-exalting *iru* (somewhat as *gozaimásu* is for *áru*, §22.2); from this the subject-exalting passive can be made: *Oraréru* 'Someone esteemed stays'. (*Irareru* can only mean 'suffers from someone's staying' or 'can stay'. Examples of *oraréru* and *V-te oraréru* can be found in Y 119.) Even in *Tōkyō*, *óru* is also often used for *iru* after the gerund in reporting weather phenomena: *Áme/Yukí ga hútte orimásu* 'It is raining/snowing'; *Kumótte/Hárete orimásu* 'It is cloudy/fair'. And the use of *óru* for mere politeness seems to be spreading: *Yátin wa, ... nanaman-en ni nátte orimásu ga, ...* 'the rent has been set at ¥70 000 ...' (BJ 182.15; cf. 185 note). *Máir-u*, too, is often treated as a merely honorific euphemism for the non-exalting verb of movement *iku/kúru*, which loses its deictic specification ('thither/hither').¹⁹ This accounts for the use of *V-te máiru* as an elegant version of *V-te kúru/?iku* (gerund + auxiliary 'gradually', §9.2.4) regardless of the subject of the gerund. It is interesting to see that the verbal representation of MOTION loses its deictic specification under either kind of exaltation and is not distinguished from STASIS under subject exaltation. Thus *Irassyaimáse!* means not only 'Hello; welcome [= Come!]' but also 'Good-bye [= Go!]' and, given the proper situation, even 'Stay!'

Some people feel that *irassyáru* has become overused in social intercourse and carries a "Tōkyō and feminine" flavor (Y 426). Yamanishi 1972 says the earliest instance of the verb is found in a popular novel published in Edo in 1779, the usage getting generalized "from the everyday conversation of a social class which was credited with elegant use of language at the time" to the point where a shift from *o-ide ni náru* toward *irassyáru* is clearly seen in late Meiji times. In a frequency study of 494 subject-exalting forms observed in NHK broadcasts (p. 59), *irassyáru* accounted for virtually a fourth of all forms found. The other figures reported, converted to rounded percentages are: .25 *o-V-i ni náru*, .11 *V-rareru*, .09 *ossyáru*, .18 other euphemistic verbs, .04 *go-VN ni náru*, .04 [*go-*]VN *sareru*, .03 *go-VN nasáru*. In the common salutation *O-kawari mo/wa irassyaimasén ka* 'Have you had no changes = Is everything all right with you as usual', *irassyaimasén* is used illogically; cf. Y 426. Tsujimura 56 suggests that this expression

19. Accordingly, for object exaltation one must resort to other euphemisms, such as *agaru* ('ascends') and *ukagau* ('visits'). Cf. Kindaichi *Kyōsuke* 1959.17.

really “ought” to be *O-kawari mo náku irassyaimásu ka* ‘Are you getting along with no changes?’ See also §30.

As the verb representing motion illustrates, regular forms to express exaltation are lacking for a few common verbs, which offer only the euphemisms; a comprehensive list of these euphemisms will be found at the end of this section. There is no **o-ari suru* for *áru*,²⁰ despite the existence of *o-ari ni náru* ‘has’. Nor, despite the existence of *o-yari suru* and *o-age suru* and *o-morai suru*, is there any **o-kure ni náru* (= *kudasáru*)—at least in the standard language, though the form is said to occur in dialects. For object-exaltation only the euphemisms are offered by *sir-u* — **o-siri suru* → *zon-zíru*(^l); *míru* — **o-mi suru* → *haiken suru*, but not in use for the auxiliary in *V-te míru* ‘tries doing’ (§9.2.4) despite the subject-exalting *V-te go-ran ni náru*; *iu* — **o-ii suru* → *móosu* or *moosi-ageru* or circumlocutions *o-tutae suru*, *o-hanasi suru*, *o-mimi ni ireru* = *o-kikase suru*, etc.; and *omóu* — **o-omoi suru* → *zon-zíru*(^l), despite the subject-exalting *o-omoi ni náru* that is more common than the formal *obosimésu*(^l). But *o-omoi suru* is AVAILABLE, as we can see from the love-letter cliché in this sentence: “*Anáta no kotó o o-omoi site*” *yóru mo neremasén* ‘“Pining for you” I find no sleep at night’.

Occasionally a speaker will apply the regular exaltation conversions to a euphemistic verb superfluously—*O-mesiagari ni náru*, *O-itadaki suru*—but such over-done sentences are best avoided. It is fairly common to hear, especially from television hosts and the like, an exalting passive built on a form that already exalts the subject: *ossyararéru* (cf. Y 119), *o-mie ni naráréru*, *o-kaeri ni naráréru*, etc. There are also two SUPER-EXALTING EUPHEMISMS for *suru*: *asobasu* = *nasáru* (subject-exalting) and, no longer heard, *tukamatúru* = *tatematúru* (cf. p. 1004) = *itasu* (object-exalting). Compare the use of *arakásu*, a vulgar equivalent of *yaru* = *suru*, as in this facetious bit (Maeda 1962.98): *Zibun ga sósoo o yarakásita tokí ni wa* “*nara*”, *tanin ga asobasita tokí ni wa uyamátte* “*o-nara*” *to itta* ‘When they [= the court ladies] themselves committed the gaffe [of flatulating] they called it a “crepitation” but when others deigned to do so they respectfully called it an “honorable crepitation”’. *Yarakásu* demeans the object; typical objects are *héma* ‘blunder’, *símatu* ‘situation attended to’,

We find only the euphemism *itasu* for the object-exalting form of *suru* (replacing **o-si suru*); but *itasu* is also often used as a merely elegant euphemism for *suru*—as *óru* is for *iru* and *maír-u* is for *iku/kúru*—and that will account for such uses as ... *tó itasimásite* for ... *tó site* (§21.4). Tsujimura observes that *itadaku* is now often used as an elegant euphemism for *tabéru*—itself originally a euphemism for *kúu*—and especially for *nómu*. He also observes that *móosu*, similarly, is more often merely elegant and thus yields a subject-exalting passive *moosaréru* (Tsujimura 77 has an example), said by K 1966.130 to be fairly old—dating at least back to Meiji times; the usage is condemned by Kindaichi Kyōsuke (1959.187). There are also such impersonal phrases as ... *to moosimásu no wa* = ... *to iú no wa* ‘what is called/meant’. As the object-exalting form of *iu*, at least in the sense of ‘says = conveys information’, *móosu* is replaced by *moosi-ageru*. Tsujimura 77 points out that a number of object-exalting euphemisms are now going out of style in favor of regular formations: *o-mimi ni ireru* = *o-kikase suru* ‘informs’; *o-me ni kakáru* = *o-ai suru* ‘meets, sees’; *o-me ni kakéru* = *o-mise suru* ‘shows’.

The paradigmatic forms of the subject-exalting verbs *ossyáru* ‘says’, *kudasáru* ‘gives’,

20. Use *gozaimásu* instead. (Strictly speaking, this is not object-exalting.)

nasáru 'does', and irassyáru 'stays, goes, comes' display several irregularities. The expected infinitive form occurs when you make verbal compounds—e.g. ossyari-tái 'wants to say', kudasari-sugiru 'gives us too much', senséi de irassyari-nágara 'although you are a teacher'—and when you put the infinitive into various other constructions such as go-soodan nasári ni irassyáru 'goes to consult', but when the auxiliary -másu is attached to represent polite stylization it is customary to suppress the *r*: the forms are ossyaimásu, kudasaimásu, nasaimásu, irassyaimásu. This is why the honorific verb gozaimásu has no *r*, although it comes from an older gozarimásu which (along with ossyarimásu, kudasarimásu, nasarimásu, and irassyarimásu) will be heard on the kabuki stage, used for sarcasm by standard speakers, attempted by dialect speakers, and found in the older literature. You may run across the expected regular imperatives for the four subject-exalting verbs mentioned, especially in advertisements or the like (kore o o-erabi kudasáre 'please select this'), but it is usual to replace ...are with ...ai, as in ossyái 'say it!', kudasái 'give it to me!', nasái 'do it!', and irassyái 'stay!' or 'go!' or 'come!' (often used to mean 'welcome!').

When the endings -tá, -té, -tára, and -tári are attached to the subject-exalting verbs 'give (me/us)' and 'do', you may hear the variants kudasút- and nasút- in place of the expected, and common, kudasát- and nasát-. My impression is that the variant forms are more common in the speech of women than of men, but Kindaichi Kyōsuke (1959.171) says forms like nasútte sound "masculine" and not very pleasant. Both men and women readily use several variant forms for irassyát-, so that in addition to irassyátta you will hear irásitta, irásitta, irássita, and irásita. These variants no doubt were gradually developed to simplify the articulation: the low vowel *a* is raised to the high vowels *u* and *i* so as to become unvoiced between the voiceless consonants; the double *ss* and *tt* are reduced to shorten the word.

As we have observed in §4, causative and passive forms are not used for ossyáru, kudasáru, and irassyáru, though the potentials are all acceptable (at least to many speakers): ossyaréru, kudasaréru, nasaréru, irassyaréru.

Since irassyáru means 'stays' or 'goes' or 'comes' it is not always obvious which meaning is appropriate to a given sentence. With an allative or ablative adjunct (dóko e, dóko kara) the meaning 'stays' will normally be precluded; but the locative marker *ni* could be interpreted as substituting for the allative *e*, so that dóko ni irassyáru will have three interpretations. The expression irásite irassyáru can be taken as an equivalent either of kíte iru 'is here, has come' (or 'comes regularly') or of itte iru 'is there, has gone' (or 'goes regularly'); but it will not be taken in the other two interpretations we might expect, as an equivalent of kíte iku 'comes and goes = comes for a while' or of itte kúru 'goes and comes = goes for a while'. To exalt the subject of those two expressions, you apply the conversion only to the second of the two verbs: ... Hwírípin e itte 'rásita wáke desu ga, ... 'has been to the Philippines' (Tk 2.255b) — here itte [i]rásita is a subject-exalting version of itte kíta. There is a special usage of Irásite 'rasite or Irásite 'te (optionally followed by kudasái, tyoodái, or kure—and/or by final *e*) to mean 'Stay!', corresponding to the exceptional expression heard in Tyót-to koko ni ité 'te! 'Stay here a moment!' O-ide o-ide is not used in this way; if heard, it will be taken as an iteration, equivalent to Kíte kíte 'Come here, come here!'

We encounter a number of problems in attempting to apply exaltation to the several varieties of verbal noun (§14.3). For certain free verbal nouns of Chinese origin such as soodan suru 'consults' and syookai suru 'introduces' you will find the expected pattern:

go-soodan ni náru (or: go-soodan nasáru) 'someone esteemed consults, deigns to consult', go-soodan suru/itasu 'consults someone esteemed, makes bold to consult'. But for denwa 'telephone call' the honorific form is o-dénwa, not *go-denwa, and we fail to find *o-dénwa ni náru; there is only o-dénwa nasáru 'someone esteemed telephones, deigns to telephone' and o-dénwa suru/itasu 'telephones someone esteemed, makes bold to telephone'.

Those Chinese verbal nouns of one morpheme such as ai-súru 'loves' are treated as if they were regular native verbs with a consonant base ending in *s*: o-ai-si ni náru 'deigns to love' (also o-ai-si nasáru?); o-ai-si suru 'makes bold to love' (also o-ai-si itasu?). The passives and causatives of such verbs are regularly formed (ai-saréru, ai-saséru) and there is even a short potential (ai-séru 'can love'—not to be confused with the literary perfect-resultative attributive, §9.6, equivalent to colloquial ái-site iru 'beloved'); the negative is ai-sánai, not *ai-sínai. Examples: yaku-sú[ru] 'promises', o-yaku-si ni náru 'deigns to promise', o-yaku-si suru 'makes bold to promise' (little used?); ryaku-sú[ru] 'curtains', o-ryaku-si ni náru 'deigns to curtail', ?*o-ryaku-si suru 'makes bold to curtail': sas-súru(¯) 'surmises', o-sas-si ni náru (o-sas-si nasáru) 'deigns to surmise', o-sas-si suru/itasu 'makes bold to surmise'.²¹ Compare the non-Chinese naku-su[ru] 'loses', o-naku-si ni náru (o-naku-si nasáru) 'someone esteemed loses', *o-naku-si suru/itasu 'loses for/of someone esteemed' (not used).

Those one-syllable verbal nouns that voice the auxiliary (...ziru/-zuru) seldom take exaltation; o-sin-zi ni náru (an example will be found in O'Neill 125) and o-sin-zi nasáru 'someone esteemed believes' are rare. An apparent exception is zon-zíru(¯) 'knows' which appears as go-zón-zi ni náru (etc.) to serve in place of (*)o-siri ni náru for the subject-exalting form of sir-u 'knows'. But there is no *go-zón-zi suru/itasu. And there appears to be an etymological convergence with (or misinterpretation of) an old word zonzi < zondi = zon-"ti, a synonym of syooti 'understanding' that consists of two morphemes of Chinese origin. For more on the verbal nouns, see §14.3.

LIST OF VERBS WITH EXALTING EUPHEMISMS

<i>English tag</i>	<i>Neutral</i>	<i>Subject-exalting</i>	<i>Object-exalting</i>
assent, obey	wakáru	o-wakari ni náru; o-kikiire ni náru; [lit.] kikosi-mésu	kasikomáru; syooti suru
arise, awake	okíru	o-okí ni náru; o-mezame ni náru; ohi[n]-náru (< o-hi ni náru)	? o-okí suru
bathe	[o-]húro ni háiru	o-húro/o-yu o mésu (o-mesi ni náru)	? —
be A	A-i	[o-]A-kute irassyáru; [o-]A-kute o-ide ni náru	— (A-[k]u gozaimásu)
be N (or AN)	N dá (= de áru)	N de irassyáru; N de o-ide ni náru	— (N de gozaimásu)
be V-ing	V-te iru	V-te irassyáru; V-te o-ide ni náru; V-te oraréru; o-V-i dá (etc.)	V-te óru

21. There is also a euphemism haisatu suru 'humbly surmises/sympathizes'.

The euphemism *mésu* (o-mesi ni náru) occasionally turns up in other expressions: *tosí o mésu*, o-tosi o mésu = *tosí o tóru* 'ages' (o-tosimesi no o-kata 'the honorable agèd'); o-hara o mésu = *hará o kíru* 'disembowels oneself (in a ritual suicide)'; *kása o mésu* = *kása o sásu* 'opens an umbrella (over one), carries an open umbrella'; ...

6.5. EXALTATION IN DIALECTS

In western Japan there are a number of ways to exalt the subject by attaching an auxiliary to the verb infinitive. The auxiliary is *nasáru* (which, as we have mentioned, comes from an old passivization of *násu* = *suru* 'does') but it often appears in a variant form *naháru* and with various reductions in shape, which—together with an epenthetic -y- after the front vowel of the infinitive—leads to forms like these:

26. As in: *Ryoo-héika ni mo go-ran ni iremásite keredo mo, o-simai máde go-ran ni nátte itadakimásita* 'We showed it to their Majesties and they were kind enough to watch it [the film] all the way through' (Tk 2.265a).

27. And various specific verbs *haku* (on feet or legs), *kabúru* (on head), *hameru* (on fingers or hands), *siméru* (by tying—as a necktie or a belt), and sometimes *tukéru* (by attaching); but *mésu* is not used for *kakéru* 'wears (by hanging—as glasses or necklaces, etc.)'. The specific verbs will occasionally be heard with the regular forms o-V-i ni náru; and even o-ki ni náru is not unheard of.

iki-nasaru	iki-naharu	iki-'aharu	{ ikiyaharu ik'aharu }	'goes'
ki-nasaru	ki-naharu	ki-'aharu	kiyaharu	'comes'

These forms are cited from Maeda 1961.180; he notes (181) that the V-'aharu form is old-fashioned, the new fashion being just to add -haru to the infinitive:

iki-haru
kii-haru²⁸

But in Ōsaka (Zhs 4.16) these are often further reduced (to iki-'aru and kii-'aru) and appear, with intrusive -y-, as:

iki-yaru
kii-yaru

According to Zhs 4.20 the appropriate Ōsaka forms for 'write' would be kaki-haru and the appropriate Kyōto form is kak-'aharu.²⁹ (In Zhs 4.191 there is an example of yarahan no wa < yar-'aharu no wa.) In the northern Kinki area (Tango) -naharu contracts to -na'ru: kaki-na'ru (Zhs 4.26).

But some dialect versions o-V-i aru are regarded as containing the auxiliary áru (rather than being reductions from naháru). Tōjō 1954 lists for Morioka the form o-kagyeru, i.e. o-kaki-yeru < o-kaki aru. He also mentions the Sendai use for subject-exaltation of a contraction of the passivized causative -(a)sa[se-r]r[are-r]u: kakasaru 'deigns to write'.

According to Maeda (1961.180) in Ōsaka the infinitive + -haru, -naharu, and -nasaru are now used both for subject-exaltation and for mere politeness (like V-i-'másu), though -naharu is said to remain more exalting.

In Kyōto the form o-V-i yasu is widely used for both imperfect (nonpast) and perfect (past) and especially for the imperative: O-ide yasu is the Kyōto version of Irassyái 'Welcome', and O-yasumi yasu is the Kyōto way to say O-yasumi nasái 'Good night'. O-kure yasu corresponds to Kudasái 'Please (give it to me)!', and favors are asked with V-t[e] o-kure yasu = V-te kudasái. The Kyōto expression O-kosi yasu (Zhs 4.18) means 'stay', 'come', or 'go'—in the nonpast (= O-kosi nasaru/naharu), the past (= O-kosi nasatta/nahatta), or the imperative (= O-kosi nahare, O-kosi yahare). I presume that yasu is an abbreviation of [n]as[ar]u with the intrusive -y- after the front vowel of the infinitive, though that will not quite explain Go-men yasu for Go-men nasái 'Excuse me'; perhaps it is from Go-men [s]i [n]as[ar]u. Yoshida (488) derives the form from (V-i) asu[base], a variant of asobase, observing that V-i yasu occurs without the epenthetic -y- in Aichi and Toyama, where the corresponding forms are V-i-asu.

6.6. DONATORY VERBS

The verbs for "giving" cause difficulty primarily because of their lexical meaning. Two directional components are involved: yaru³⁰ or ageru means 'gives to the out-group' and

28. Monosyllabic infinitives are automatically lengthened in western Japan. See p. 393 (§9.1).

29. Interestingly enough, the labial -w- is retained in such forms as iw-'aharu or yuw-'aharu from i[w]i-naharu. Cf. Inokuchi 254. (We need not, however, impute great antiquity to the contractions; they may have been morphophonemically remodeled by analogy with the negative forms.)

30. But yaru is largely replaced by ageru in Tōkyō speech; Alfonso follows this usage. Several observers have suggested that yaru/ageru is being replaced by ageru/sasi-ageru. According to Tsujimura

kureru or kudasáru means 'gives to the in-group'. The in-group always includes 'me'; the inclusion of 'you' or 'him' (etc.) in the in-group depends on the situation. The verb set yaru/ageru (or ageru/sasi-ageru) is appropriate whenever it is / who give YOU or HIM. The set kureru/kudasáru is appropriate whenever YOU give ME. For the other situations (YOU give HIM, HE gives YOU, and HE gives HIM) the choice of verb depends on whether HE is thought of as closer to ME or to YOU. In what we might call the unmarked, or unspecified, situation YOU will be included with ME as against HIM: thus YOU will give HIM with yaru/ageru (or ageru/sasiageru) and HE will give YOU with kureru/kudasáru unless we know that HE is closely associated with ME. (The unspecified case of HE gives HIM will also be yaru/ageru.) So it seems that the unmarked verb for "giving" is yaru/ageru—and for many Tōkyō speakers, as we have observed, ageru alone (or ageru/sasi-ageru); kureru/kudasáru is semantically marked as directed toward the first person or those associated with the first person. Similar remarks will probably apply to iku (unmarked) vs. kúru (marked) and to yaru₂ 'sends' (unmarked) vs. yokósu (marked); perhaps also to sore (unmarked) vs. kore and other such deictics.³¹ (Cf. EJ 354–5 and Kuno 1973.127–35, where a number of subtleties are explored.) Since the out-group never includes 'me', there is no object-exalting form for kureru (*o-kure suru) and in place of the expected *o-kure ni náru we usually find the euphemism kudasáru used to exalt the subject—although o-kure ni náru is said to occur at least in dialects. The in-group includes 'me' and others temporarily grouped with 'me' so that we would not expect to exalt the subject, yet we find such examples as these: Sensei ga gakusei ni F [= éhu] o o-yari ni nátta (kotó) '(The fact that) the teacher gave the student an F'; Sono onná ni o-kane o o-yari ni naránai n desu tté né, densetu ni yoreba 'It is said that you wouldn't give the lady any money—according to rumor' (Tk 3.101b).

To exalt the object the euphemism ageru (or sasi-ageru) is used in place of the expected *o-yari suru. But since many Tōkyō speakers substitute ageru for yaru (in the meaning 'gives' only, not 'sends'), it is not surprising to find o-age suru/itasu used for object-exaltation. And it is possible to say o-age ni náru in order to exalt the subject: Ókusan ga sensei ni okurimono o o-age ni nátta (kotó) '(The fact that) the teacher's wife gave him a present'. In this usage ageru is functioning not as an object-exalting verb but rather as an equivalent of yaru.

All remarks apply also to the donatory verbs when they are used in the favor conversions of § 10. Notice that, although the choice of forms for the in-group (marked) or the out-group (unmarked) has parallels in the verbs of movement (kúru/iku) and sending (yokósu/yaru₂), the distinction is lacking for 'receives' so that morau means either 'I receive (from you etc.)' or 'you receive (from someone)' (the someone is usually not me, for in that case the sentence would be recast as a "giving" sentence). The situation can be specified by exaltation: itadaku '(I/we) are honored to receive' versus o-morai ni náru '(an exalted person—such as you) deigns to receive'.

In Kyūshū the distinction between kureru and yaru does not obtain; only the unmarked

158 sasi-ageru is simply more polite; perhaps for that reason it will usually be the second person (YOU) that is favored, thus providing a contrast with ageru for those speakers who no longer use yaru to mean 'gives'.

31. Perhaps this helps explain the fact that the second-person pronouns are avoided more often than those pronouns referring to the first person.

form *yaru* is used (Zhs 6.16). It is said that eastern Japan originally lacked the distinction, too, using the marked form *kureru* (Zhs 2.19) both for in-giving and out-giving.

The verbs *yaru*₂ 'sends (out)' and *yokósu* 'sends (in)'—as in *kodomo o tukai ni yaru/yokósu* 'sends a child on an errand'—are also used as auxiliaries after a very few gerunds. The prime examples are (... *tó*) *itte yaru/yokósu* 'sends word (that ...)', *káite yaru/yokósu* 'writes (to inform)', and *kotozúmete yaru/yokósu* 'sends a message (saying)'; some speakers will also accept *okutte yaru/yokósu* 'sends' and *watasite yaru/yokósu* 'hands over, transmits'. Yoshida suggests that *V-te yokósu* is more or less equivalent to a causative version of *V-te kúru*, i.e. that *káite yokósu* approaches the meaning of *káite kosaséru* and *sirasete yokósu* approaches the meaning of *sirasete kosaséru* (Y 546). He provides examples from modern fiction of ... *watakusi ni mawasite yokósu* ... 'turns it over to me', ... *háha no sí o sirasete yokósita* ... 'informed us of mother's death', and ... *hón o tótte o-yokosi* 'bring me the book'.

Speakers generally reject combining donatory verb + *yaru/yokósu*, though you may hear *kurete yaru* in nonstandard speech, where it means *yaru* 'gives' (Fn 9a.7). In *nagútte yaru* 'gives a thrashing to, beats up', the "favor" would seem to be more of a disfavor; perhaps the phrase is to be taken as an example of the somewhat slangy use of *V-te yaru*₃ to add vividness to a verb ('does it vigorously' or the like) as in the example *háyaku ókite yaru* 'bounces out of bed early' (MKZ 856c). *Yaru*₁ 'gives', *yaru*₂ 'sends', and *yaru*₃ 'does' are etymologically identical; I separate them according to the divergent meanings, assuming that the vivid auxiliary belongs with the meaning 'does'. For some speakers, at least, all three kinds of *yaru* will permit a subject-exalting conversion to *o-yari ni náru*, the third kind being equivalent to *nasáru* 'deigns to do'; but apparently there is no **o-yari suru/itasu* in any of the meanings, not even 'sends (out)', nor are there such forms as **o-yokosi suru/itasu* (perhaps because inbound sending could hardly exalt the object?), despite the acceptability of the subject-exalting forms *o-yokosi ni náru* and *yokosaréru*.

7 DESIDERATIVES

Verbal sentences (meaning 'does it') can be converted into desideratives (meaning 'wants to do it, would like to do it') by adding *-ta-i* to the infinitive;¹ the resulting sentence is an adjectival that is subject to further conversions in the same way as other adjectivals. Desideratives made on tonic verbs are tonic; those made on atonic verbs are atonic, but some speakers treat ALL desideratives as tonic.

Nuclear focus can be applied to yield *V-i-tákú wa/mo áru* (etc.) as in this adnominalized example: *Sore dé mo íkite iku tamé ni wa, SI-TÁKÚ MO NÁI ákogi(-)* na kyoosoo mo *sinákute wa naránai* 'In order to go on living nonetheless, you have to engage in the most cruel competition which you haven't the least desire to do' (SA 2668.117c).

The desiderative meaning of certain sentences is not always immediately obvious from the English translation: *Hotóndo mizo to YOBİ-TAI YÓO NA ogawa ga, bokuzyoo no náka o nagárete iru* 'Through the pasture flows a stream you'd almost [want to] call a ditch' (SA 2671.93c). And sometimes the translator does well to put the desire as a purpose: ... *dakare-tai to nakú n da yó* 'they cry [wanting] to be picked up' (SA 2655.43c). The perfect *V-i-tákatta* 'I wanted' can sometimes be translated as 'I wish I had done' (= *V-tára yókatta no ni*): *Tiisa na kodomo to mazime ni zyanken suru tokoró o, nozoite mi-tákatta desu né. Dótti ga kátta n desu* 'I wish I had been there to see you earnestly playing the stone-scissors-paper game with the little child [as I have just learned about from you]. Which of you won?' (SA 2677.55c).

Any verbal sentence will, it seems, form a desiderative. Even *Áru* 'It exists; We have it' occurs in somewhat abstract situations such as ... *yóo ni ari-tái* 'We would like to have it so that ...': *Gokai no náí yóo ni ari-tái monó da* 'Of course we want to have it so there are no misunderstandings'. And *S kotó ga ari-tái* 'We want S to happen' will often be seen in print. In written Japanese you will also see *N dé [wa/mo] ari-tái* 'we want it to be N' or 'one wants to be N' as in these examples:² *Bóku(-) wa sono náka no hagúruma no zyunkatú-yu(-) de ari-tái* 'I want to be the lubricant that oils the gears between them' (SA 2655.113b); *Wareware no seikatu wa, goori-teki de ari-tái to iú no ga, kono íssyo zenpén(-) o turanúku watakusi no néngán(-) de áru* 'Wishing for our life to be logical is my desire throughout the whole of this volume' (Maeda 1962.1); *Oyá to iu monó wa kodomo ni tótte "ái-su békí oya-baka"* de ari-tái monó de aru 'It is only natural for a parent to want to be a "lovable doting father" toward his child' (Nagano 10); ... *hitóri no zyosei de ari-tái* ... 'I want to be just another woman' (SA 2831.131c). The spoken language, however, will not make a desiderative on the nominal sentence without first converting it into the mutative *N ni náru* 'becomes N' (§9.1.11); Greta Garbo's famous plea 'I want to be alone' is quoted in Japanese as *Hitóri ni nari-tái wa*. And in place of (*)*ari-tái* 'wants to have it', the spoken language prefers *hosíi*, originally a contraction of (*) *horasíi*, an adjective made from an old verb *hor-* 'desire' (cf. the intransitive *hore-* 'be infatuated'), now found only in a reduced form of the infinitive *hori* in the verb *hos-súru(-)* 'desires'. *Wakari-tái* 'I want to understand it' or 'It is desirable to understand' is written and sometimes heard (e.g.

1. In Ōsaka one-syllable infinitives are lengthened: *sii-tai, kii-tai, mii-tai, nee-tai, ...*. But the length is said to disappear in the provisional form *-takereba* (Y 299). Cf. §9.1.

2. And even *A-ku ari-tái* from adjectival sentences (*A-ku ... áru*, §5), as in this example from a TV commercial: *Yori utukúsiku ari-tái* 'I want to be more beautiful' (R).

from children), as is *sare-tai* in the meaning 'I want to get it done', e.g. *Yóku benkyoo sare-tai* 'I want you to study [this material] well'. Cf. *site morai-tai* and *site hosii* (p. 598) 'I want to have the favor of getting it done'. But **deki-tái* 'I want to be able (to do it)' and **iri-tái* 'I want to need it' have not made the grade.

As a complete sentence the desiderative is usually limited to statements about one's own desires, or to questions directed to close friends about their desires—anticipating the reply, as it were. Even in those cases, it is common to turn the sentence into a nominal sentence *V-i-tái n[o] da* (§14.2), or to quote it as a thought or feeling (*V-i-tai to omóu* 'I think/feel I would like to V', §21—cf. the quoted hortative *V-[y]oo to omóu* 'I think I will V'), or to adnominalize it in some such fashion as *V-i-tai [yóo na] ki[moti] ga suru* 'feel like doing V' as in: *Sore o iwareta tokí wa naki-tai yóo na ki[moti] ga sita* 'When told that, I felt like crying'. Japanese are typically hesitant to come right out and state their emotions; that is why a desiderative sentence will often trail off with *V-i-tái n desu ga [née/náa]* '(it is that) I want to ... but (you see)'. Other people's desires—or emotional states—are usually referred to obliquely, as direct quotation or as hearsay (*V-i-tai sóo da*, §18) or by adnominalization to *yóo da* (§13.2). But desires and other emotions can be stated directly about third persons, provided the sentence is buffered in some fashion; Teramura notes these conditions: (1) in a quotation, (2) in nominalizations, (3) in adnominalizations, (4) in some adverbializations (e.g. *S kara* 'because S'),³ (5) with "containers" that express the judgment, assertion, or conjecture of the speaker (... *nó da*, ... *daróo*, ... *yóo da*, ... *rasii*, ... *sóo da*, ...-*sóo da*), (6) when the sentence is perfect (*V-i-tákatta*). Sometimes the unexpressed source of the desire is general or vague: ... *sorézore no gakkoo no kuhuu ni makase-tái* 'it is desirable to leave them [= new student uniforms] to the design of the individual schools' (SA 2674.102c).

A statement of desire, like a request, may be intensified by an introductory adverb *zé-hi* 'by all means' or *dóo-mo* 'ever so much'. An adverb may refer to the verb underlying the desiderative rather than to the desire, which can take separate adverbial modification of its own; it is possible (if a bit unusual) to say *Íma wa rainen iki-taku nái kedo ...* 'Right now I have no desire to go next year but ...'. Often a desire (with or without *zé-hi*) is introduced by the expression *Iti-dó de íi kara* 'Once (at least) = Sometime [I would like to ...]'

For other notes on the desiderative, see also p. 598 (§10). On the question of making evidentials on the desiderative (*V-i-ta-soo*, *V-i-ta-ge*), see §20. There are two adjectives derived from desideratives: *zirettái* 'is irritating' comes from *zire-tái* 'wants to fret' (*zíréro* 'frets'), and *kusuguttái* 'is ticklish' comes from *kusuguri-tái* 'wants to tickle' (*kusugúru* 'tickles').

The form *-táku wa nái* sometimes is contracted to *-táka[a] nái*, and in western Japan *-tá[k]ú mo nái* often shortens to *-tó[o] mo nái*; examples from print will be found in Y 293, where there are also examples of *-tákerya[a]*, *-tákya[a]*, and (Kyōto) *-tákera*, all contractions from *-tákereba* 'if one desire', and of *-tei* and *-tee* from *-tai*.

The desiderative marker *-ta-* comes from an auxiliary use of a truncated form of the adjective *itá-i* 'painful' or 'extreme' (cf. 'tantalizing'). Heian examples are rare, but the form became more widespread in Kamakura days and flourished in Muromachi times

3. As in *Kodomo mo iki-tái kara, turete itte kudasái* 'Since the child wants to go, too, take him along'.

(Y 301, cf. Satō 1.282). Another kind of desiderative was common in Heian and Kamakura days with various forms V-a-masi-, V-a-mausi-, and V-a-mahosi that are contractions from V-a-m[u] a[ku] hosi- (? <*por-asi-); see p. 943.

Throughout the Ryūkyūs the common desiderative is made by attaching to the verb infinitive something like -busya- (Okinawa and Amami) or -busa- (Yaeyama). These forms are nigoried contractions from pus[γ]a-, now husya- in Shuri and in Amami, which is cognate with standard Japanese hōsi-sa 'desirèdness'. But in Yaeyama there also occur forms deriving from V-i-ta-sa.

7.1. DESIDERATIVE ADJUNCTS

Two different traditions determine the marking of adjuncts in desiderative sentences. One tradition applies the desiderative conversion to the fully expanded sentence, allowing the object to stand with its basic specification:

A ga B o yobu 'A calls B' → A ga B o yobi-tai 'A wants to call B'.⁴

The second tradition applies the desiderative only to the nuclear sentence and treats the resulting form as a double-subject adjective, marking the object as if it were also a subject:

(A ga B o) yobu '(A) calls (B)' → A ga B ga yobi-tai 'A wants to call B'.

With quasi-intransitive verbs, the former treatment is more usual: Dōko o aruki-tái is said more often than Dōko ga aruki-tái for 'Where do you want to walk?'. It is awkward to have adjuncts intervene between N gá (converted from N ó) and V-i-tai, and even more awkward when N gá is further converted to N nó (see § 13.1.6); but N ó can readily be separated from the desiderativized verb by other material (Y 299).

In the following example the object is left marked with ó before a desiderative made on an adversative passive: "Mazime na kaisya" to iu kigyoo-imézi o kowasare-táku nái, to iu kotó ka 'Perhaps it means that they do not want to have their corporate image as a "sincere company" shattered' (SA 2663.33e).

Traversal objects can be subjectified: kaidan o noboru 'climbs the stairs' will become kaidan o/ga nobori-tai 'I want to climb the stairs'. But kí ni noboru 'climbs [in/on] the tree' will become only kí ni nobori-tai 'I want to climb the tree', not (*)kí ga nobori-tai. You are not allowed to subjectify an object marked with an ó that is merely an alternative to the ablative marking with kará: dénsya(¯) o/kara oríru 'leaves the train' becomes dénsya(¯) o/kara ori-tái 'I want to leave the train' and not *dénsya(¯) ga ori-tái. Some verbs have two meanings, depending on whether the ablative option is available: gakkoo o/kara déru 'leaves (goes out of) the school' will convert to the desiderative gakkoo o/kara de-tái 'I want to leave the school' but gakkoo o déru as a synonym of sotugyoo suru 'graduates' will desiderativize to gakkoo o/ga de-tái 'I want to graduate from the school'. In general, ó-marked objects are permitted the option of subjectification (gá-marking) provided the ó-marking is not itself an optional substitute for some other, more basic, marking. Thus gakkoo o yasúmu 'skips school' will convert to gakkoo o/ga yasumi-tái 'I want to skip school'.

Examples of desiderative sentences (from KKK 3.258-9): ... nan-to-náku hutarí ¯daké de hanasi-táku nátta no de ... 'somehow we got so we wanted to talk just the two of us,

4. This tradition goes back to the Muromachi period, at least, and was the common form in the Edo period (K 1966.123-4).

so ...'; Iya, iya—watasi, anna tumaránai inaka dé nánka, zettai ni seikatu si-taku náí wá 'No, no—I have absolutely no desire to live in such a dull hick town'; Sore de, otóosan no iru Hokkaidoo ni wa háyaku kaeri-tákute, yóru, huton no náka de nakimásita 'Then, anxious to return quickly to Hokkaidō where Father was, I cried under my quilt at night'; Dá kara iti-dó^[1] o-ai si-takátta 'So I was eager to have a chance to see you'; Bóku(¯) mo koohuku ni nari-tái si, Yásuko san mo koohuku ni site age-tái no da 'I want to be happy myself and I want to make you happy, too, Yasuko'; Iki-tái n da kedo, máda iti-dó mo itta kotó ga náí n da 'I want to go but I have yet to go even once'; Iki-tákereba, katte ni ike 'If you feel like going, go when you like'.

7.2. DESIDERATIVE VERBALIZATION

Desiderative verbals are made from the (expanded) desiderative sentence by attaching *-gáru*, using a suffix *-gár-* that derives verbs from certain adjectives and adjectival nouns (§7.3) but here is attachable to ANY desiderative from ANY underlying verbal except *Aru*; we find *Ari-tái* (in written Japanese, at least) but not **Ari-ta-gáru*.^{4a} The accent pattern of *-ta-garu* is optionally (1) always tonic, or (2) tonic only when the underlying verb is tonic; in this book we choose the latter option, since it is maximally differentiating. (The accent pattern of the desiderative adjectives *V-i-tái* is similar, having the option of being always tonic or being tonic only when the underlying verb is tonic, and we have chosen the latter option in this book.)

The verbalized desideratives have a strong meaning 'desires, is eager to' and in sentences of straightforward reference they are seldom—if ever—used of one's own desires: *Tookyoo ni uturi-tái kimoti wa átta si, uti no óku-san mo uturi-ta-gátte itá n desu* 'I was in the mood to move to Tōkyō and my missus wanted to move, too' (SA 2671.30c—notice the unexpected use of *uti no óku-san* for *kánai* 'my wife'); *Sigoto no owari -góro, káno-zyo wa watasi no móderu o yame-ta-gatte ita* 'At the end of the job, she wanted to quit as my model' (SA 2658.133b). But in sentences that imply a shift of viewpoint—so that from YOUR point of view, say, "I" temporarily become "you"—the first person can take the verbalization: *Watasi ga sonna kotó o si-ta-garu to omoimásu ka* 'Do you think that I want to do such a thing?'; *Watasi ga iki-ta-gatta món da kara turete itte kuremásita* 'Seeing how badly I wanted to go, he took me with him'.

The sentence often appears in the continuous aspect *-ta-gatte iru*, §9.2.4.(1); the desiderative verbalization would seem to be used as a durative-stative verb like *suguréru* 'excels' (§3.12), but see p. 360 (§7.3) for a more precise characterization. It is possible to add the structure *-ta-gatte iru* to a sentence that has already undergone an auxiliary conversion to *V-te iru*, and then it is unclear whether the "desire" has reference to the entire phrase, to the auxiliary, or to the underlying verb: *Ása kara ban máde sake o nónde i-ta-gatte iru* 'He keeps wanting to drink (or: He wants to keep drinking) liquor from morning till night'.

Notice the chain VERBAL (as INFINITIVE §9.1) → ADJECTIVAL (*-ta-i*) → VERBAL (*-ta-gar-u*). The new verbal retains some of the grammatical properties of the immediately underlying desiderative adjectival: it can not be turned into a command, a request, or an exhortation, for desires are involuntary, and not subject to human control.

The object of the underlying verb will always retain its *ó*-marking. Compare *Ano hón o yomi-ta-gátte iru* 'He is eager to read that book' with *Ano hón o/ga yomi-tái n desu* 'I want to read that book'. The transitivity or intransitivity of the underlying verb is not affected

4a. But Peter N. Dale calls my attention to the fact that *N de ari-ta-gáru* is sometimes encountered: *hitóri de ari-ta-gáru onná* 'a woman who desires to remain single'; *Dóo site Nihon-zín wa "Nihon-zín" de ari-ta-gáru no ka* 'Why is it that Japanese want to be "Japanese"?' (Tada Dōtarō in *Nihon-bunka no hyōjō*: ronshū 3, Kōdan-sha 1972).

by the verbalization of the desiderative: (uti e) kaeri-ta-gáru 'is eager to go (home)' remains as intransitive as káeru 'goes (home)'.

Examples (from KKK 3.259-60): ... Ano musumé ga, omoté kara hairi-ta-garánakatta kara desu 'It is because that girl did not want to enter from the front way'; ... yataru ni hue o huki-ta-gáru '... they [= certain referees] are overly eager to blow their whistles'; Hakkíri monó no mieta hitó da to omoimásu ga, hizyoo ni manabi-ta-gari, siri-ta-gatta, soo iu ími de tankyúu-sin no átta hitó da to omoimásu 'He is a man of clear discernment, I believe, and—extremely desirous of learning and desirous of knowing—he is in that sense a person possessed of the spirit of inquiry, I believe'; Motíron Sakámaki no yóo na, gyosyok-ka de tóotte iru otokó ga mi-ta-gáru sibai nára, ooyoso kentóo wa túku 'Of course if it's a play that a man like Sakamaki, known as a lecher, is eager to see, I can pretty well guess [the content]'; Sonna ni tabe-ta-gáreba, dónna hahaoya d'átte tabesasézu ni wa irarenai to omoimásu 'When they are so eager to eat, it seems to me that hardly any mother can resist feeding them'.

More examples: Tokoró-ga syoogákúsei no musumé^[r] hutarí wa térebi ni kazíri-túite(¯) séki(¯) o hanare-ta-garánaí 'But my two daughters who are in primary school sit glued to the television set and don't want to leave their seats' (SA 2666.108c); Ningen to iu monó wa saki o siri-ta-garu doobutu de átte, sono o-kage de yogén-sya nádo wa syokúgyoo to site seiritu site kíta 'Man is a creature who desires to know the future, and thanks to that such things as the prognosticator have gradually come into existence as vocations' (SA 2680.40a); ... sore de setumei si-ta-garu katamúki(¯) ga áru 'there is a tendency to want to explain it by that' (SA 2666.36a).

The V-i-ta-garu formation originated in Kamakura times; through the Muromachi period the negative version was usually made by applying the verbalization to the negative auxiliary: V-i-tai → V-i-ta[k]u náí → V-i-ta'u na-gáru. The modern negativization (V-i-tai → V-i-tagáru → V-i-tagaránaí or -tagaránu) dates from the Edo period. Cf. Y 304.

7.3. VERBALIZATION OF AFFECTIVE AND CATHECTIC ADJECTIVES AND ADJECTIVAL NOUNS

There are some 70 adjectives and around 30 adjectival nouns that can be verbalized with -gáru, a kind of bound auxiliary thought to be derived from -ge 'appearance (etc.)' (§20) + áru. These are all words that refer to emotional affect or reaction. A number of the verbs produced are intransitive, with a meaning something like 'displays symptoms of being ...', as exemplified by nemu-gáru 'feels drowsy' and iki-gáru 'puts on the dog (= pretends to swank)'. But dictionaries are unreliable on the question of transitivity for many of these words; the decision is not always easy. Sabisi-gáru 'feels lonely' is commonly used as an intransitive, but you can say hitori-tabi o sabisi-gáru 'feels lonely on an unaccompanied trip'. Only body-parts can serve as the direct object for such verbs as ita-gáru 'feels pain', kayu-gáru 'feels itchy', kurusi-gáru 'feels distressed', and kusugutta-gáru 'feels ticklish'; speakers will sometimes allow the body-part to be marked with gá instead of ó, a variation which occasionally turns up for other N o A-¯gáru sentences.

Those adjectives and adjectival nouns that will make transitive verbs are CATHECTIC. They have a grammar that not only calls for a subject who is the source of the emotion, always marked by gá (unless focused with wá/mó or the like), but also will allow a CATHECTIC OBJECT—the externalized person or thing toward which the emotion is

directed—also marked by *gá*. The fact that, in general, word order is free can lead to ambiguity: *Kodomo ga inú ga kowái* may mean 'The child is afraid of the dog' but it may also mean 'The dog is afraid of the child', though under neutral circumstances the former interpretation is more likely. The verbalization with *-gáru* requires that the cathectic object be marked with *ó*, thus disambiguating the sentences: *Kodomo ga inú o kowa-gátte iru* 'The child is afraid of the dog', *Kodomo o inú ga* [or: *Inú ga kodomo o*] *kowa-gátte iru* 'The dog is afraid of the child'. These facts have led to the notion that perhaps something verbal lurks beneath (or hovers above) the cathectic adjectives. It has even been suggested that we take the verbalization, despite its morphological complexity, as syntactically basic, with the simple adjective or adjectival noun to be derived (by something like truncation and ambiguation) from the *-gáru* form. It would be less contrived to think of the lurking verbal character as something more abstract (CATHEXIS) that underlies the simple adjective or adjectival noun, asserting itself unambiguously only when the verbalization is applied, though present in the simple forms, as well, by virtue of the double surface-subject.

There are a few verbs made by attaching *-gáru* to other elements, such as *kyoo-gáru* = *omosi-ro-gáru* 'enjoys' (*kyoo* 'amusement, fun', *kyoo-zíru* 'amuses oneself'), *tuu-gáru* 'makes a show of one's knowledge' (*túu* 'an expert'), and the examples found in the following sentences: ... *kóto ni Edokko-gáru ningen wa kirai désu né* 'I especially hate people who put on "Yedo" (traditional-Tōkyō) airs' (Tk 2.290b); ... *bizin(̄) dé mo náí no ga beppin-gátte ru kara*, ... 'because those who are no beauties go around acting as if they were real dolls' (Tk 3.145a); *Sinpo-syúgi zura no yaróo-dómo ga iyá ni sinposyugi-gáru to, bóku(̄) wa múka-muka sityáú n da* 'When those so-and-sos with a front of progressivism go around parading their progressivism so unpleasantly I get disgusted' (Tk 3.144b).

In §3.12 we examined verbal aspect and Isami's subcategorization of verbs. Where do our *-gáru* verbs fit in that scheme? According to Takaki the "emotive" verbs made with *-gáru* resemble the categories of verb of EMOTION (such as *nayámu* or *nikúmu*) and verb of CONTINUITY (or durative-stative, such as *suguréru*); these two categories differ from each other primarily in that the verb of emotion will permit favor conversions, as will some of the *-gáru* verbs that have favorable meanings, such as *kawai-gáru*. They are also terminable, for emotions are temporary things that can come to an end, and thus the perfect form is past in meaning even when adnominalized: *nayánda hitó* 'the man who suffered' differs in meaning from *nayámu hitó* 'the man who suffers' and *nayánde iru hitó* 'the man who is suffering' but *sugúreta hitó* means the same thing as *sugúrete iru hitó* 'a surpassing person'. Since *nomi-ta-gátta hitó* 'the man who wanted to drink' differs in meaning from *nomi-ta-gátte iru hitó* 'the man who wants to drink', we conclude that the verbalized desideratives (and probably the other *-gáru* verbs, as well) belong, not surprisingly, with Isami's verbs of emotion. But Takaki says that they differ from both of Isami's classes in permitting cooccurrence with adverbs of frequency and time. (Both classes cooccur with adverbs of duration, as do our verbalized desideratives.)

On p. 358 we observed that *V-i-ta-garu* resembles the durative-stative verbs (*suguréru* 'surpasses', *sobiéru* 'towers', etc.). But according to Takaki they differ in that *V-i-ta-gatte iru* has the repetitive⁵ meaning of *V-te iru* and is thus not semantically empty; that there is a difference in meaning between *V-i-ta-gatta N* and *V-i-ta-gatte iru N*; that **V-i-tagatte*

5. Not the continuative; emotions pulsate.

kúru 'gradually comes to want to V' can not be used; and that V-i-ta-gari-doosi dá 'keeps on wanting to V' is possible.

Takaki made a survey to check the acceptability of -gáru verbs made from various adjectives and adjectival nouns. She found a correlation between the relative frequency of the underlying word and the acceptability of the derived form; not surprisingly, adjectives of lower frequency are less likely to be accepted with -gáru than those of higher frequency. Moreover, she found that verbs with -gáru are generally used to express something unpleasant or uncomfortable, though some are neutral and a few are pleasant. We find samu-gáru 'is sensitive to cold, feels the cold' and atu-gáru 'is sensitive to heat, feels the heat', both matters to be complained about, but no *atataka-gáru 'feels the warmth' or *suzusi-gáru 'feels the cool'. The lists which follow are based on Takaki's work, supplemented by data I have found elsewhere. Before each entry you will find two columns of information. The first column roughly shows the ratio of acceptability according to Takaki's survey:

- A 100 percent (40 adjectives, 7 adjectival nouns)
- B 75-100 percent (15 adjectives, 6 adjectival nouns)
- C 50-75 percent (10 adjectives, 8 adjectival nouns)
- ? not in Takaki's list (7 adjectives, 9 adjectival nouns)

The second column has a minus (-) for those words which are NEVER cathectic, producing -gáru forms that are always intransitive; there are at least 5 such adjectives, and 6 adjectival nouns.

The ratio refers to the acceptability of the A-gáru verb as checked with a number of speakers, not to the cathectic grammar. Some speakers will be reluctant to allow the transitivity of a few verbs made from entries not marked with a minus, such as (?)sigoto o isogasi-gáru 'feels busy with one's work'. Most of the transitive verbs can also be used as intransitives. Instead of the direct object, a cause (marked by dé or ní or n^[o] tamé ni) can sometimes be used with the intransitive version; the example under ikigurusii below could replace seikatu o with seikatu de, seikatu ni, or seikatu no tamé ni. The translations given are tags, at best, and misleading in many cases; each word should be given closer study.

LIST OF ADJECTIVES THAT VERBALIZE

- A abunai 'is dangerous': Watasi ga/wa sono atarasii keikaku o abuna-gátte iru 'I am wary of that new plan'.
- A arigatái 'is welcome': arigata-gáru 'appreciates'
- C - atarasii 'is new, fresh': atarasi-gáru 'is fond of novelty', atarasigari-ya 'a novelty-seeker'.
- A atúii 'is hot': Ameriká-zin wa Nihón no natú o atu-gáru 'Americans find Japan's summers hot'.
- B ayasii 'is doubtful'
- ? - erái 'is eminent': era-gáru 'gives oneself airs, is self-important'.
- C hagayúii 'is vexed, impatient'
- A hazukasíi 'is ashamed; is shy': Káre ga/wa zibun no hu-bénkyoo o hazukasi-gátte iru 'He is ashamed of his own lack of diligence'.
- B - himozíi 'is hungry'
- A hosíi 'is desirous'

- ? ikigurusii 'is suffocating, stuffy': Géndai no wakamonó(¯) wa seizon-kyóosoo no seikatu o ikigurusi-gáru 'Young people of today find the competitive life stifling'.
- C imaimasii 'is annoying, vexatious'
- A ?⁶ isogasii 'is busy'
- A itái 'is painful': Kodomo ga/wa así o ita-gátte iru 'The child feels his leg hurting'.⁷
- ? itosii 'is beloved'
- A kanasii 'is sad'
- A kawaií 'is lovable'
- A kayúí 'is itchy': Watasi ga/wa senaka o kayu-gáru 'I feel my back itching'.⁸
- A kemutai 'feels awkward'
- A kitanái 'is dirty; is mean, stingy': Háha ga néko o kitana-gáru 'The mother finds the cat dirty (feels the cat is dirty)'.⁹
- A kitana-rasii 'is squalid, disgusting'
- A koisii 'is beloved'
- B kokorobosói 'is downhearted, depressed': Káre ga/wa zibun no syóorai o kokoroboso-gátte iru 'He is depressed over his future'.
- C — kokorozuyói 'is heartened'
- A kowái 'is afraid'
- A kurusii 'is distressed'
- A kusuguttái 'is ticklish'
- ? kutiosii 'is regrettable'
- A kuyasii 'is vexing, regrettable': Anó-hito wa hito ni warawareta kotó o kuyasi-gátte, naita 'Chagrined at being laughed at by people, he wept'.
- A mabusii 'is dazzling; is abashed': Káre ga ásahi o mabusi-gátte, iro-mégane o káketa 'Dazzled by the morning sun, he put on his dark glasses'.¹⁰
- B matidoosii 'is impatiently awaited'
- A mendookusái 'is troublesome, tiresome'
- A mezurasii 'is rare, precious': S to mezurasi-gáru ' marvels that S' (SA 2672.60); ... kago-nori no kyaku o mezurasi-gátte, ... 'marveling at the guest in the palanquin' (Y 255).
- A modokasii 'is fretful'
- B moosiwakenái 'is apologetic'
- B mottai-nái 'is unworthy, impious': ... mottaina-garimásu wá, kit-tó^[j] 'he doesn't deserve it, surely' (Fn 62b).
- B muzukasii(¯) 'is difficult; is fastidious'
- A namagusái 'is fishy'
- A natukasii 'is nostalgic'
- ? nemui 'is sleepy'

6. For Hamako Chaplin isogasi-gáru is always intransitive. In Japanese a time, a place, an activity (sigoto), or a person can be isogasii 'busy'.

7. But sometimes said with así GA.

8. But sometimes said with senaka GA.

9. But sometimes said with néko GA.

10. But sometimes said with ásahi GA.

- A nemutai 'is sleepy'
- ? netamasii 'is envious': Mazusii hito ga/wa kanemoti(¯) no seikatu o netamasi-gáru 'The poor man envies the rich man's life (or: envies the rich man his life)'.
- C nigái 'is bitter, trying'
- A nikurasii 'is hateful'
- B nomi-nikúí 'is hard to swallow/drink'
- ? oisii 'is delicious': Ryoohoo ¯tomo mainiti(¯) oisi-gátte tábete iru "syokuhin" dá kara da 'It's because both of them [cyclomates and monosodium glutamate] are "foodstuffs" that we relish eating every day' (SA 2651.16).
- A okasii 'is funny; is suspicious': Ano zyúnsa(¯) no ízoku mo irú n da kara, kono taidan de anmari okasi-gáttya ikenái daroo ná 'That policeman's family are still alive, so I guess we better not make too much fun of him in this interview' (Tk 3.34a).
- A omosirói 'is interesting, fun': Kono kumiawase o omosiro-gáru hito ga iru 'There are those who will enjoy this combination' (SA 2658.61a).
- A omotai 'is heavy'
- B osii 'is regretted, begrudged, valuable': Isogasii hito wa zikan o osi-gáru 'The busy man values his time'.¹¹
- A osorosii 'is dreadful': kázi o osorosi-gáru 'dreads fires'.
- A sabisii 'is lonely'
- A samúi 'is cold': Watasi ga kaze ni samu-gátte nekóze ni náru no ni ... 'I feel the cold from the wind and hunch my shoulders against it, but [he] ...' (SA 2666.85c).
- C setunái 'is oppressive, painful'
- A sewasinái = sewasii 'is busy, restless'
- C sibúi 'is astringent, puckery; is austere'
- B suppai 'is sour': Kodomo ga natu-míkan o suppa-gáru 'Children find the citron too sour for them'.
- B tanomosii 'is dependable'
- B tanosii 'is pleasant'
- C tayori-nái 'is helpless; is unreliable'
- B terekusái 'is embarrassed, shy': Kono ... sikumi o, isásaka mo terekusa-gáru koto^[1] nási ni ... 'Without the slightest embarrassment at this device ...' (SA 2688.90e).
- B tumaránai 'is dull, worthless': ... kyaku ga tumarana-gátte 'ru to ... 'when the guests are bored' (Tk 2.17a); Gakusei ga kono syoosetu o tumarana-gáru 'Students will find this novel boring'.
- A ? tumetai 'is cold (to the touch); is cold-hearted'
- B turai 'is trying, cruel'
- A — tuyói 'is strong'
- ? umái 'is delicious'
- C uramesii 'is reproachful'
- A urayamasii 'is enviable'

11. But sometimes said with zikan GA.

- A uresii 'is delightful, joyful'
 A urusái 'is annoying': ... urusagátte suwítta o kíru ga ... 'feeling annoyed, I switched it off but' (K 1966.232).
 B uttoosii 'is gloomy'
 C wazurawasii 'is troublesome'
 A yakamasii 'is noisy; troublesome; fastidious'
 ? yói 'is good': yo-gáru 'exults; (a woman) is sexually gratified'¹²
 A zirettái 'is irritating': ... omóu yóo ni hakobanai tékubi o ziretta-gátta 'was irritated at his wrist which would not move as he wanted [in writing with the brush] ...' (Fn 172a).

LIST OF ADJECTIVAL NOUNS THAT VERBALIZE

- ? áware 'pathetic, touching'
 ? daizí 'important, valuable': Butai-sóoti nánka, soo daizi-garánai yóo na kanzi dáttá 'I got the feeling that they don't care so much about the stage sets and all' (Tk 2.117a).
 C — haikara 'classy'
 A — huan 'uneasy': ... ninki o huan-gátte iru 'are uneasy over their popularity' (SA 2665.114e).
 B húbin 'pitiful'
 ? huhei 'discontent': Syáin(¯) ga taiguu o huhei-gáru 'The employee is unhappy with his treatment' ← Syáin(¯) ga/wa taiguu ga/ni huhei da.
 ? hukái 'uncomfortable; displeased': ... hukai-garaséru daké de aru 'it is enough to make one displeased' (SA 2655.29d).
 ? huketu 'filthy': Óoku no hitóbito ga koosyuu-bénzyo o huketu-gáru 'Most people find public restrooms unclean'.
 A husigi 'odd'
 C — hu-yúkai 'unhappy'
 A — iki 'stylish'
 ? iyá 'disliked'
 C kawaisóo 'pitiful'¹³
 A kinodókú 'sorry, wretched': Minná ga giséi-sya o kinodoku-gáru 'Everyone feels sorry for the victim'.
 ? kityoo 'valuable'
 A méiwaku 'troublesome': Isogásii hitó ga/wa syóotai o meiwaku-gáru 'The busy person finds invitations a nuisance'.
 A mendóo 'troublesome': Sukósi da kara to mendoo-gátte nokorí-bi o somatu ni suru kotó wa móttomo hu-keízai desu 'It is most uneconomical to neglect the embers fussing about there being so little left of the fire' (KKK 3.39). (Another example appears in Nagano 1970.202.)
 C munen 'resentful'
 A okkúu 'bothersome'

12. Whence (by way of a derived noun?) the adjectival noun *hitori-yógari* 'self-satisfied, complacent'.

13. But *kawaisoo-gáru* sounds a bit childish, being commonly replaced by *aware-gáru*.

- A — okubyóo 'cowardly'¹⁴
 B — sinkoku 'poignant'
 B — táigi 'irksome, wearisome'
 B — tokú(i)(') 'exultant'
 C — tuukai 'thrilling'
 ? tyoohoo 'convenient, handy; of use/value': ... dáre kara mo tyoohoo-garáreta
 'was found of value by everyone' (Kb 113a).
 A yákkai 'troublesome, awkward'; ... túma no byooki o yakkai-gátte 'finding his
 wife's illness troublesome' (KKK 44.24).
 ? yú kai 'cheerful, happy'
 ? — yuu'utu 'melancholy, gloomy'
 A zannén 'regrettable, disappointing'
 C zyama 'cumbersome, burdensome'

You may run across additional items in texts or dictionaries: bukimi-garáreta (SA 2793.129b); bakabakasi-gátte bákari ite (Okitsu 1.245); ibukasi-gáru (Hokama 1971.5); usukimiwaru-gátte (Ariyoshi 74); sema-gáru (Shimmura); iyarasi-gáru, kimariwaru-gáru, kimi-gáru, medata-gáru, namagusa-gáru, nasakena-gáru, nayamasi-gáru, niku-gáru, omo-gáru, sumana-gáru (cf. p. 384), tanomosi-gáru, uramesi-gáru, wabisi-gáru, waru-gáru, yukasi-gáru (all MKZ⁹); daru-gáru (KKK 44.22); The earliest example of -gáru seems to be afare-gare-do-mo (= aware-gátte mo) in Tosa-Nikki (935 A.D.).

14. Hamako Chaplin has not heard okubyoo-gáru.

8 NEGATION

Virtually any Japanese predicate can be made negative to deny the assertion made in a statement. Negative commands (prohibitions) are described in §16.3; for V-rú $\bar{m}ái$ {yó} = V-(a)nái daroo {yó}, see §12.1, §12.3; for other uses of V-rú $\bar{m}ái$, see §15.12a. For the negative with stylizations, see §22; for S zya nái ka and V-[y]oo zya nái ka, see §15.16 and §12.2 respectively.

In a conjoined sentence, the meaning conveyed by the final negative may or may not carry through the earlier sentence(s); see the discussion under §9. Certain kinds of sentence—for example, rhetorical questions—express semantic negation without the formal markings that are here treated as “negation”. And a few expressions which are formally marked as negative may function in other ways semantically; for example, Ikimasén ka may be used either as a negatively put question ‘Will you not go?’ (expecting a yes-or-no answer directed to the content, §8.2) or as an invitation ‘Won’t you go = Please (I invite you to) go/come’, to which the appropriate answer is an expression of thanks or regrets.

8.1. NEGATING THE ADJUNCTS

To negate an adjunct (‘Not I but someone else was here’, ‘He gave it not to me but to my brother’) the adjunct must first be predicated as a nominal: *watasi* → *watasi dá* → *watasi de/zya nái* ‘it isn’t me’; *watasi ní* → *watasi ní da* → *watasi ní de/zya nái* ‘it isn’t to me’ (but through propredication the *ní* can drop, leaving the expression homonymous with the preceding). The negated nominalized sentence is then adverbialized and conjoined: *Watasi zya náku{te}* ... ‘Not I but ...’; *Watasi {ní} zya náku{te}* ... ‘Not to me but ...’. In place of N (...) *zya náku{te}* you may hear N (...) *tó* *tigatte*, sometimes abbreviated to N *tó* *ty’atte*; this is especially common in western Japan. Examples: *Tekiira de nákute, uisúkii o nomi-nágara hanásita n desu keredo mo ...* ‘We talked while drinking whiskey rather than tequila, but ...’ (SA 2662.110d); *Ningen no honsitu wa, roodoo de náku asobi ni áru to iu* ‘It [= the theory of *homo ludens*] claims that the essence of man lies in play, not work’ (SA 2673.41c).

Instead of *zya náku* you will often see (and sometimes hear) *dé wa náku*: ... *nádo no seikoo wa, zyosei no miryoku(¯) ga muné ni de wa náku mé ya kóe ya sunnári sita síruétto nádo ni áru kotó o simésite(¯) irú no desu* ‘... the success of such [actresses] as ... shows that a woman’s charm is not in her bust but in her eyes and voice and graceful silhouette’ (SA 2665.106c); *Takéuti Yosimi wa kono hón o, senmon-ka no tamé ni de wa náku, siranái ga siri-tai to negátte iru óoku no hitóbito no tamé ni káite iru* ‘Yoshimi Takeuchi has written this book [“Tyúugoku o siru tamé” “In order to know China”] not for specialists but for the many people who do not know [China] but are pleading that they want to know [it]’ (SA 2680.104c). As a result of propredication, various elements in sentence conversions can also be denied by *dé {wa} náku*: *Yasúmi ni de wa náku hón o yómi ni káetta n desu* ‘I went home not to rest but to do some reading’ (§9.1.1); *Nágaku de wa náku mizikáku katte kudasái* ‘Cut it short, not long’ (§9.1.11); *Tokai-búnka o mane surú no de wa náku, rikai(¯) saseru kyooiku to iu monó ga huzai na*

tamé da 'It is not that they [= rural youth] are imitating the big-city culture but that they lack anything in the way of education to let them understand it' (SA 2647.119c). These are negations of propredications, as found also in such expressions as *nágaku ná* 'if it is [cutting it] long', *nágaku da to* 'when it is [cutting it] long', *nágaku de mo* 'even if it's [cutting it] long', etc.

Similar in meaning are N_1 wa *óroka/motíron fde* N_2 'N₂ to say nothing of N₁' as in: ... *gunsyuu ga hodoo wa óroka, syadoo ippai ni ahúrete iru* 'the crowds flood the street, to say nothing of the sidewalks' (Gd 1969/9.107b). By adnominalization S + *kotó wa* can be used in these expressions, and S *kotó wa óroka* 'not only S but' will sometimes be equivalent to S *dokoró ka* (see p. 930). Another expression of this sort is N wa *tó-mo-kaku fde* 'be the N as it may' as in *Rikutu wa tó-mo-kaku, ...* 'Theory aside' or 'Whatever the theory/reason'.

To say '(DOES/IS) not only ... but also (DOES/IS)' you can adnominalize a sentence to the postadnominal *bákari* (or *daké*) + *dé* {*wa*} *náku*{*te*}; examples will be found in KKK 3.202. An additional example: *Sosite hónsyo wa, táda omosirói hanasí o narabeta daké de náku, soré-ra o toosite, amarí ni sizen o hanárete simatta gendai-búnmei e no hitótu no híhan*(-) *o katatte irú no de aru* 'So this book not only has lined up merely interesting stories, but through them tells a (specific) criticism directed at modern civilization which has removed itself too far from nature' (SA 2679.105d).

To express 'not only N₁ but also N₂' you can say N_1 *bákari/daké de* {*wa*} *náku*{*te*} N_2 *mo*—or N_2 *dé mo*, as in these examples: *Gyoomu-tókoo suru hitó daké de náku zyunsui ni asobi no hitó mo húete iru* 'It's not just people going abroad on business, those [going] for pure pleasure are increasing in number, too' (SA 2664.97—*asobi no* is adnominalized propredication for something like *asobi ni tokoo suru* 'goes abroad to enjoy oneself'); *Tokoró-ga, sooba wa kai bákari de náku, uri mo nákereba seiritu sinai* 'But to make a market you have to have buying as well as selling' (SA 2666.17e—*kai* and *uri* are nouns derived from transitive verb infinitives); *Sáuna bákari de wa náku, hutuu no o-húro de mo, atu-sugirú no wa ikemasén* 'Not only the sauna but even ordinary baths should not be [ones that are] too hot' (SA 2668.106b). In place of *daké/bákari de náku*{*te*} you may find *daké/bákari* [*da*] *ka*, a rhetorical question 'is it just ...?!' used to mean 'not just'; sometimes this is followed by *gyaku ni* 'but on the contrary': *Motíron seihú-setu o urazukéru kakusyoo wa ima-no-tokoro ná bákari ka, gyaku ni íkutu ka no hansyoo mo ageru kotó ga dekíru* 'Of course not only is there lack of evidence to substantiate the government's theory but on the contrary a number of pieces of counter-evidence even can be offered' (SA 2673.131c); *X mo wakaránai bákari ka Y mo yóku wakaránai daroo* 'Not only is X unclear, but Y isn't very well understood, either'. For *daké ka* you will also find *nómi ka* (examples in Terasé 168). In place of ... *daké de náku*{*te*} you may see the literary cliché ... *nómi-nárazu* (preceded by a minor juncture).

These devices can be used not only after simple nouns but also after a variety of other constructions: *Kikai-teki ni* [*surú no*] *daké de náku, nínzyoo o kámi site kudasai* 'Don't just do it mechanically, but add a touch of human feeling'; *Nihón e* | *korárete kara* | *daké de náku* || *o-kuni ni irassyáru tokí mo* | *onazí désu ka* 'Is it the same not only since you are here in Japan but also when you are in your country?' (SA 2647.126).

Sometimes the expression will be anticipated by an adverb; an example of *tán ni ... daké de náku* 'not just merely ... but' will be found in SA 2674.92d. All the expressions with ... *náku*{*te*} are sentence-connecting conversions from sentences ending in ... *nái*:

lya, tán ni hukyoo ga sinka site itta daké de wa náí 'No, it isn't just that the depression was merely deepening' (SA 2673.44c).

Very similar to daké de/zya náí is ... tó bákari kagiránai 'it is not just limited to ...' (cf. p. 1009); and ... ni kagirazu (cf. § 14.6.4) means 'not only ... but' (= daké de náku): Bóku(¯) ni kagirazu, dāre d^uatte sóo desu kedo 'Not just me, but everyone is like that' (Tk 3.49b).

In place of dé {wa} náku{te} in these expressions you can also use the more literary dé {wa} nási {ni}. See § 15.6 for (S/N) dókoro zya náí 'it is unthinkable (out of the question)', (S/N) dókoro {da} ka 'far from being; anything but', and (S/N) bákari {da} ka 'not only (S/N) but'.

A somewhat literary equivalent of de^[r] nákute mo 'even if it isn't' is { | } nárazu tó mo, and that is used to mean 'others beside (in addition to) ...' synonymous with daké de náku: Kore dé wa A senseí nárazu to mo ... to iu kotó ni nari-sóo da 'Now it appears to be the case that others besides Dr. A are saying ...' (SA 2664.27c).

Though normally you expect some sort of noun expression in front of the copula dá or its negative de/zya náí, sometimes an ellipsis (of something like sóo 'that way') leaves the copula standing alone: Kozima senseí no tamé ni?^(v)—Zya náí n desu 'For Dr Kojima?—No' (SA 2685.44c).

8.2. ANSWERING NEGATIVE QUESTIONS

When a question is put negatively, the speaker of standard Japanese usually replies to the FORM of the question rather than the CONTENT. Accordingly, the answers to Banana wa náí ka 'Don't we have any bananas?' (= 'Do we lack bananas?') are Háí [or Ée or Nín] banana wa náí 'No, we haven't' (= 'Yes, we lack them') and lie [or Íya] banana wa áru 'Yes, we have' (= 'No, we don't lack them'). In place of Háí and lie people often use the more explicit Sóo da 'That's correct' and Sóo zya náí (in western Japan more often Tigau) 'That's mistaken'; or, they repeat the predicate: Náí 'Yes, we haven't', Áru 'No, we have'. But if the Japanese negative is just a formal device—as in the rhetorical question S zya náí ka (§ 15.16) and the invitational V-[y]oo zya náí ka as well as other invitations that are put negatively just to be polite (Kore o yónde kudasaimasén ka or Yomimasén ka 'Won't you kindly read this?')—the underlying CONTENT is answered: Háí 'Yes (I'm in agreement, I'm willing)'; lie 'No', or Tyót-to 'Well ... (I am doubtful or unwilling)', or Iya desu 'I don't want to'.

Here is a dialog (SA 2671.50a) which nicely brings out the form-answering nature of Japanese 'yes':

—Anáta, o-sake wa? '[What about] you and liquor?'

—Zenzen, oboénakatta desu 'I've never indulged'.

—Kore kará mo oboéru tumori wa náí desu ka? 'You have no intention of indulging in the future, either?'

—Ée. Sake wa oboénai tumori ná n desu 'That's right. I intend not to indulge in liquor'.

In the northern Ryūkyūs the use of 'yes' and 'no' follows the English pattern of responding to the content rather than the form; see Martin 1970.139. According to Zhs 6.16 this is true also of Kyūshū speech.

8.3. MULTIPLE NEGATIVES

Multiple negatives cancel each other out. It is not uncommon for a Japanese to indulge in what strikes the foreigner as a game of ping-pong by piling up negations within complex

strings of embedded sentences, as in *Dóo ni mo si-kata ga náí baai ga náí de mo náí ga, kessite íi monó de wa náí* 'It isn't the case that there are never situations when there's just nothing can be done (= To be sure it sometimes happens that you are up against it), but it certainly isn't ever very pleasant'. An ODD number of negatives lets the import of the sentence as a whole remain negative, an EVEN number shifts it to the affirmative; but in either case the device has attenuated the assertiveness of the speaker much as can be done by the oblique negative devices of English, as in sentences like 'It is not unwise to avoid running out of unambiguous questions'. Cf. *V-(a)nai wáke ni [wa] ikanai* 'it is impossible not to = must' (§13.2), *V-(a)zu ni {wa} irarenai* (p. 520), *V-(a)záru o énai* (p. 896), and expressions of obligation such as *V-(a)nákereba naránai* (p. 559); *V-rú yori + hoka [wa], sika, si-kata ga náí* (p. 386). See also the examples of negatives with *kotó ni* in §14.1.1.

Examples of multiple negatives: *Sore o, Nihón ni mo moti-kondá no de wa náí ka* ⁽¹⁾ *mo kangaerénai kotó wa náí* 'There is no reason for it not to be thought that they might not have been brought into Japan, too' (Ōno 1966.199)—read with juncture before or after *tó mo*; *Kono yóo na kangae-káta wa, ... nádo ni mo ukagaenai wáke de wa arimasén ga, ...* 'There is no reason not to (= We can of course) study this sort of thinking in ... and other works, but ...' (Tsjimura 101); *Sono ten, tasyoo mono-tarinái(⁻) to ienáku wa náí ga, ...* 'With respect to that (point), it isn't that it can't be said to be to some extent unsatisfactory, but ...' (SA 2677.112c)—*mono-tarinái(⁻)* 'is inadequate' is a lexical negative, an adjective derived from the negative *tarinai* of the intransitive verb *tariru* 'suffices'; *Tokoró-ga || túmi ga | náku mo | náí no | sá* 'But they are NOT exactly innocent (of wrongdoing)' (Fn 200b—reference is to the preceding *túmi mo náí sá* *simin o odokasu* 'threatening innocent civilians').

Frequently a double negative is made by negativizing a direct nominalization of the negative (cf. §14.6, §15.16) with a form like *V-(a)nái zya/de náí* or, with focus, *V-(a)nái de mo/wa náí*: ... *seikoo sinái de mo | náí* 'We may succeed all right ...'; *Noosán-butu no | háiki(⁻) wa || gaikoku ni || réi ga | náí de wa | náí* 'The discard of agricultural products is not without precedent in foreign countries' (SA 2689.145d); *Minná wa hu-to damátte, káre o míru de mo náku, mínai de mo náku, seki⁽¹⁾ no yamu máde mátte yaru* 'Everyone suddenly stops talking and, without quite looking at him nor quite looking away from him, they wait for the coughing to stop' (SA 2659.69a); ... *náni yara ikamesii kanzi ga sinái de mo náí ga ...* 'you don't entirely lack the feeling of something solemn, but ...' (SA 2663.134).

For *nái* itself, and for *A-kú⁽¹⁾ náí* and *N de/zyá⁽²⁾ náí*, a more straightforward double negative can be made in the form *náku náí* as in these examples: *Sízuka zya náku náí n da ga* 'It's quiet all right, but ...'; *Hanasi-táku náku náí kedo* 'I do want to talk, but ...'; *Yomi-yásuku náku náí n da ga* 'It's easy enough to read, but ...'. Cf. *V-(a)nákú wa náí = V-(a)nai kotó wa náí*, §14.1.1.

Focus can be applied: ... *ippan no dókusya(⁻) ni tótte tasyoo wakari-níkúí ten mo náku wa náí* 'There ARE points that for the general reader are more or less hard to understand' (SA 2655.123b); ... *tókusyu(⁻) no kusuri ya syóti wa, satei de mitomerarenai kotó mo náí de wa náí, sikási, ...* 'special medicines and treatments do not go totally unrecognized in the assessments; however, ...' (SA 2660.54c); *Maré(⁻) ní wa, || sono yóo na | réi mo || náku wa | náí no de áru⁽²⁾* 'On rare occasions we come across an example of that sort' (SA 2662.107b).

In principle, this sort of multiple negation is recursive and could be reapplied any number of times with or without minor variations: *Náku wa náí zya náí; Náku wa náí*

kotó wa náí; Náí kotó wa náku wa náí; Náí kotó wa náí zya náí. These all mean something like 'It isn't that it isn't that there isn't any' = 'There really aren't any to speak of'. And one step further: Náku wa náí kotó wa náí zya náí; Náí kotó wa náí kotó wa náí. These say 'It isn't that it isn't that it ISN'T that there isn't any' = 'There really ARE some'.

But, as with the literal translations, what is grammatical is not necessarily comfortable; you will meet such sentences rarely, if ever. Notice, however, that sentences like Sukúnáku náku wa náí contain only two negatives ('it isn't that it isn't little' = 'it isn't very much, there aren't very many') since the first word is not a negative but a simple adjective infinitive.

Some sentences will contain lexical or embedded negatives and/or interrogatives that will add an earlier ping to the ping-pong game of the double negative found at the end: ... mósi ka sitára misugi-yósugi(¯) no zyoyuu-kágyoo yori, mono-káki no hoo ga yuuboo zya náí ka to omowaséni de mo náí '... it almost makes one wonder whether writing might not be more promising than a career as an actress for a livelihood' (SA 2685.104b).

8.4. NEGATING THE PREDICATE

Our several kinds of nuclear sentences are made negative according to the pattern illustrated below:

	AFFIRMATIVE	NEGATIVE
VERBAL	Yobu.	Yobanai '(He) doesn't/won't call (him)'.
VERB-NOMINAL	Kenkyuu suru.	Kenkyuu sinai '(He) doesn't/won't study (it)'.
ADJECTIVAL	Ookii.	Óokiku náí 'It isn't big'.
ADJ.-NOMINAL	Sízuka da.	Sízuka de/zya náí 'It isn't quiet'.
NOMINAL	Hón da.	Hón de/zya náí 'It isn't a book'. ¹

Verb forms divide into two groups (or "conjugations"): CONSONANT verbs attach the negative suffix in the shape -ana-i and VOWEL verbs attach it in the shape -na-i. From this we see that our nuclear verbal sentences contain a suffix -ú for consonant verbs, -rú for vowel verbs; that is the IMPERFECT finite ending (in contrast with the PERFECT -tá of § 11), which we have taken as a convenient starting point. We can list subtypes of verb by shape, showing how the imperfect is made negative:

CONSONANT VERBS

kák-u 'writes'	kak-ána-i
kag-u 'smells it'	kag-ana-i
kas-u 'lends it'	kas-ana-i
kát-u 'wins'	kat-ána-i
kár-u 'mows it'	kar-ána-i
ká-u ² 'raises animals'	kaw-ána-i

1. Or in western Japan: Hón to tigau/ty'au 'It differs from being a book'. In central and southern Japan this will often be /tigoo/ and /tyoo/, as is true in general for the dialect pronunciation of -a'u, whether from an earlier -a[k]u as in aka'u > akoo 'being red' or from an earlier -a[p]u as in wara'u > waroo 'laughs'. In standard Japanese the same development is found in the hortative-tentative ending -oo < -a'u < -a[m]u; cf. daroo < ní-te arámu.

2. Pronounced /koo/ in some dialects. Historically, the development is káp-u > káw-u > ká-u (> kóo in western Japan). The gerund (§9.2) is kát-te in eastern Japan, ká'u-te /kóote/ in western Japan.

yob-u 'calls it'	yob-ana-i
yóm-u 'reads it'	yom-ána-i
sin-u ³ 'dies'	sin-ana-i
VOWEL VERBS	
mí-ru 'looks at it'	mí-na-i
okí-ru 'arises'	okí-na-i
ne-ru 'lies, sleeps'	ne-na-i
tabé-ru 'eats'	tabé-na-i
IRREGULAR VOWEL VERBS ⁴	
su-ru 'does'	si-na-i
kú-ru 'comes'	kó-na-i

Negatives made from tonic verbs are tonic, with the accent one syllable earlier than that of ordinary adjectives in the imperfect (cf. *sukánai* 'does not like' with *sukunái* 'are few'). Negatives from atonic verbs are atonic before a basic juncture but have an accent on *-ná-* in the imperfect before a particle or before *désu*, when these are attached without juncture.

All verbs make regular negatives except for *áru*, which substitutes *nái* where we would expect to find **aránai*.⁵ For special problems of the negative shapes in further conversions, see the later sections. In Kansai speech, and in written Japanese, *-(a)nai* optionally abbreviates to *-(a)n*, sometimes spelled *-(a)nu* and occasionally so pronounced; the form corresponding to *sinai* 'does not', however, is not **sin* or **sinu* but irregularly *sen/senu*.⁶ You will sometimes run across these forms in print: *Tokoró-ga, ll henzí o ll yokosán no desu l yó* 'But they sent me no reply' (SA 2660-48a—speaking is Ichikawa Fusae, born in Aichi prefecture 1893); *Bóku(-) wa benkai sén desu. Táda iwan kotó o kakáretara komáru* 'I don't make excuses. It's just that it is embarrassing to have things written as if I had said them when I haven't' (SA 2652.44a—speaking is TV producer Hosono Kunihiko, born in Kyōto 1934). And you may find *sén de kudasái* where you expect *sinái de kudasái* 'don't do it'.⁷

It has been observed (Y 170-1) that writers tend to differentiate the casually abbreviated *-(a)n* from the more formal *-(a)nu*, using kana NU for the latter and N for the former. In written Japanese the *-(a)nu* version of the negative is particularly common with adnominalized negatives (as in *iranu monó* 'an unneeded thing', cf. §13.5: 2h). In Literary Japanese *-(a)nu* is used only as an attributive, and the literary infinitive *-(a)zu* (or extensions with the auxiliary *ár-*) serves as the predicative; but *-(a)záru* is also found for the attributive (see §8.6).⁸ A typical written example using *-(a)nu* for the attributive but *-(a)nai* for the predi-

3. Certain Kantō dialects regularize *sin-* to *sim-* or even to *sig-* (with velar nasal only); see Kgg 82.111-2, Zhs 1.296 n. 3.

4. But *si-* and *ki-* are regularized in many dialects of eastern Japan (Zhs 2.18). In Chiba you will hear *kinai* for *kónai* (Miyara 154). For *suru* certain dialects (e.g. Aichi, Zhs 3.458) use *seru*, a contraction of *si[-i] [w]óru*, not to be confused with the literary perfect-resultative *séri/séru*, which is an abbreviation of *si[-i] ár-i-u*, §9.6. For the Tōkyō usage *kó ya sinai = kí ya/wa sinai*, see §5.1.

5. But *aránai* is (quite rarely) found in print; Y 179 cites a 1909 example ... *Honma ni úso DE wa ARÁNAI to iú no zya ná*. For *aránu*, see p. 374.

6. But *sin[u]* does turn up in certain dialects: *sin ka = senu ka* (Inokuchi 335). The forms *senai = sinai* and *sénkereba = sinákereba* (etc.) are Edo-period relics (Y 179). And *sanai* occurs in Aomori.

7. The oldest examples showing *V-(a)nai* rather than *V-(a)nu/-a)zu* are from the 16th century (Y 200).

8. The set phrase *siranu zon-zénu* 'complete ignorance' is directly nominalized and predicated: *~ dé, ~ to bákari de, ~ dá kara, ~ no ittenbari(-)*, etc.

cative is this: Gaikóo-ken o motánu Okinawa wa Amerika to koosyoo suru kotó mo dekinái 'Okinawa, lacking control over her foreign relations, can not negotiate with America' (SA 2664.17d).

In negative verb forms ...ranai is optionally pronounced ...nnai in very relaxed speech, so that Wakaránai comes out Wakánnai 'I dunno'. This sometimes is reported in print: Hitóri zya kuénee [= kuénai] kara, kázoku zénbu de hatarakanákya nánnee [= hatarakanákereba naránai] 'The whole family has to work since they can't eat with just one member [working]' (SA 2679.47c). You may also hear ...nnai for ...rinai or ...renai: Osiete kunnái de né = Osiete kurenái de [su] né 'They don't [show =] help me, you see' (SA 2680.47). But ...nno is an optional variant of ...rú no, especially common in ...ténno for ...-te irú no, §9.2.4.(1), as in Náni itté n no ka sappári wakánnai 'I dunno whatcher sayin' at all'.

Further conjugation of the negative is like that of adjectives: the INFINITIVE is -(a)naku with the Kansai variant -(a)na'u pronounced -(a)noo, though it is often replaced by the literary infinitive -(a)zu (§9.5); the GERUND is -(a)nákute with the Kansai variant -(a)na'ute pronounced -(a)noote, but -(a)nái de is often used instead (§9.2); the PRO-VISIONAL is -(a)nákereba with abbreviated variants -(a)nákerya and -(a)nákya, but in Kansai -(a)néba, -(a)nya, and -(a)na are heard and -(a)nkéreba is also reported (Y 174); the PERFECT is -(a)nákatta, the CONDITIONAL -(a)nákattara, and the REPRESENTATIVE -(a)nákattari, but you will sometimes find these forms reduced to -(á)nkatta, -(á)nkattara, and -(á)nkattari (said to be dialect variants by MKZ "dialect and Meiji usage" by Y 174) as in this example: ... to omótt' oránkatta keredo mo ... 'I didn't think that ... but ...' (SA 2653.42d—equivalent to omótte oránakatta/inákatta keredo mo). And a number of dialects (e.g. east and central Kinki area, Zhs 4.22) use -(a)nánda, -(a)nándara, -(a)nándari for -(a)nákatta, -(a)nákattara, and -(a)nákattari, respectively.⁹ Some examples of these forms: ... sukósi mo hosi-gári wa nasaimasénanda [= nasaimasén desita] 'hadn't the least desire for it' (Fn 53a); Wakare-kkiri de kao mínandara [= mínakattara], yappári osímu desyoo né 'It's really too bad to have split up so I don't even see him (any more)' (SA 2657.44c—a Kansai actress speaking); ... konna myóo na katati ni naránanda desyoo [= naránakatta desyoo] 'things would not have got into such a curious shape' (SA 2663.22c—speaking is critic Nakano Yoshio, evidently from Kansai). The forms such as -(a)nanda are also found in eastern Shikoku and in part of the Chūgoku area (Okayama and east); in the western parts of Shikoku and west from Okayama in the Chūgoku area, the corresponding forms are -(a)zatta etc. though the -z- shifts to -d- or -r- in Yamaguchi so that we find -(a)datta or -(a)ratta there and it drops altogether in Kagawa, where the forms are -(a)aatta etc. (Zhs 5.15, 19, 21). These forms derive from a contraction of -(a)zu ár-, the negative infinitive (§8.5) + the auxiliary 'be'.

Adjectival sentences are made negative by putting the adjective into the infinitive -kú (§9.1) and adding the negative adjective náí; between -kú and náí you may put wá, mó, or sáe to apply nuclear focus, corresponding to the affirmative forms -kú wa/mo/sae áru (§5). One reason for treating -ku náí as something fundamentally different from a shortening of -kú wa náí (as has often been suggested) is that in modern Japanese the form *-ku áru does not normally occur unfocused. Exceptionally we find such sentences as óoku áru 'has lots'

9. Similar forms are reported (Y 206) as early Meiji literary usages: V-(a)mandare[-do]; V-(a)ndara = V-(a)mandara. Collado's 1632 grammar has an example of agenandari to mo 'if he had not raised it'.

where *áru* is functioning as nucleus and *óoku* is a quantity noun derived from an adjective infinitive, here used adverbially. More telling examples are *A-ku áreba* = *A-kereba* (p. 316) and *A-ku ari-tái* (p. 355). Notice also that *-í wa suru* does not, in modern Japanese, regress to **-i (o) suru*.

The form *yokanai*, cited by Mio 363, seems to be *yók' 'a náí*, a contraction of *yók[u w]a náí*. Cf. ... *omosirok'a náí ná* 'it wasn't any fun' (Tk 4.311a). The vowel may lengthen in the contracted form: ... *tyót-to yówak'aa náí desu ka né* ... 'I wonder if it isn't a bit weak' (Tk 4.209b). For more examples, see p. 322. This is not to be confused with the *Kyūshū* adjective imperfect ending *-ka* as in *yó-ka* = *yóí*, *ná-ka* = *náí*; the *Kyūshū* formation probably comes from a contraction of *A-k[u] á[ri]*.

Nominal sentences are made negative by using *zya + náí*; *zya*¹⁰ is historically an abbreviation from *dé wa*, and alongside *zya náí* you will occasionally find simply *de náí*—as in *Kyoosan-too d'átte Márukusu, Réenin no sínzya de náí desu ka* [= ... *sínzya zya arimasén ka* §22.1] 'Aren't the Communists themselves believers in Marx and Lenin?' (SA 2671.19a)—but the form with *zya* is so common as to constitute a new pattern.¹¹ At least one *Tōkyō* speaker has suggested that his current abbreviation of *dé wa náí*—with subdued nuclear focus—is *zyáa náí* in contrast with *zya náí* = *de náí*, with no nuclear focus felt. (N *dé mo náí* also occurs, of course, with the nucleus highlighted.) But not all speakers will lengthen the vowel in the contraction of *dé wa*; our statement can be improved by putting it this way: *zyá₁* = (for some speakers) *zyáa* = *dé wa*, in all uses of *dé wa* including *dé wa náí*; *zyá₂* = *dé* in *dé náí*. For those speakers who do not lengthen the vowel a sentence like *Kore zya náí* is ambiguous, for it can be equivalent either to *Kore dé wa náí* 'It ISN'T this' parallel to *Kore dé wa áru* 'It IS this' or to *Kore de náí* 'It isn't this (= THIS)' parallel to *Kore de áru* = *Kore dá* 'It's this'. The expression *kotó zya náí* optionally contracts to *kóttya náí* as in *Káre ga dóo si-yoo to sitta kóttya náí* 'It's none of my business (= I couldn't care less) what he does'; see §14.1.

A few nominals that are conversions from other sentences, while not necessarily lacking the *zya/de náí* form, often substitute either *ní wa/mo náí* or just *náí*: e.g., the evidential *-soo da* → *-soo mo náí*, *-soo ní wa/mo náí* or *-soo dé wa/mo náí* (§20); cf. the uses of *hazu* (§13.2.7). Notice the synchronic evidence that *V-i-soo ní wa/mo náí* provides for the historical origin of the copula from *ní-te á[r-i]*. On the optional ellipsis in *go-zón-zi {de} náí* and a few other honorific verbal nouns, see §6.2.

The negative of the literary copula *nári* < *ní (wa/mo) ári* is *nárazu* = *ní (wa/mo) árazu* as in ... *ware ní mo árazu inú ni ká-su no de áru* 'I am no longer myself but turn into a

10. A Kansai variant *yá* sometimes appears in the popular press: *N ya náí* = *N zya náí*, *N ya n[ái] ka* = *N zya náí ka*. Both *yá* and *zyá* are also dialect variants of *dá* itself (cf. remarks on pp. 934, 938), and they find their way into print fairly often: *N yá/zyá* is equivalent to *N dá*, whether sentence-final or followed by *tó*, *kará*, *gá*, *? sí*, etc. (§17), or by *né*, *ná*, *? yó*, *ká*, etc. (§15). Do not confuse these two dialect uses of *yá* (for *zyá* and *dá*) with the question particle *yá* (§15.6a) or the noun-conjoining use of that particle (§2.8), nor with the *yá* that is a variant of the focus particle *wá* (§2.3.4). Some dialects (e.g. *Niigata*) use *da náí* instead of *zya náí*, but this is not to be taken as the affirmative *dá*, for it is a contraction *d'a náí* < *dé [w]a náí*. These figures can not be automatically applied to spoken Japanese, since what is pronounced *zya náí* may get written either as *de náí* or as *dé wa náí*. *N ya n* = *N zya náí* is also reported (*Hōgengaku-kōza* 3.180).

11. In written Japanese (KKK 25.92) *N dé wa náí* is about eight times as frequent as *N de náí* when predicative; but when adnominalized *N de náí* *N* has the same frequency as *N dé wa náí*. In non-final position, *N dé wa náku* is twice as frequent as *N de náku*.

dog' (SA 2659.135b); cf. *nómi-nárazu = daké zya náku{te}* 'not only'. The attributive (= adnominal) form is *narazáru = ní (wa/mo) arazáru* but *naránu = ní (wa/mo) aránu* is often used instead. Do not confuse this with N *ní (mo/wa) nárazu ni = N ní (mo/wa) naránaí de* 'not becoming N'.

Verbal, adjectival, and nominal sentences alike become ADJECTIVAL SENTENCES once they are made negative, and further conversions are applied as they would be applied to nuclear adjectival sentences. But the underlying sentence that has been negativized carries with it the original adjuncts, intact with their markings: *A ga B o yobu* → *A ga B o yobanaí*. In view of the natural desire to emphasize a negation—in order to contrast it with the contrary affirmation—some part of the build-up is usually subdued with the particle *wá*: *A wa B o yobanaí* or *B wa A ga yobanaí* (with the order usually shifted so that the element with less emphasis comes earlier) or even *A wa B wa yobanaí*, in which we can not be sure what is subject and what is object.

The REFERENCE of the negation usually includes the immediate adjuncts to the predicate. In *Motíron kuruma de kónai kyaku mo áru* 'Of course there are also guests who do not come by car' (SA 2659.131c) the implication is that the guests arrive somehow other than by car; cf. *Kónai kyaku ga áru* 'There are unarrived¹² guests' or 'There are guests who will not come'.

Mio (134 ff) observes that *náku* itself (the infinitive of the negative conversion of *áru*), *-ku náku* (infinitive of the negativized adjective), and *de/zya náku* (infinitive of the negativized copula) often occur when we would expect the gerund. There is another device to avoid conjoining the gerund of a negativized adjective with another adjective in an adnominalized adjectival phrase: independent adnominalization, viz. *A₁-ku náí A₂-i N* rather than *A₁-ku náku{te} A₂-i N*. Thus (Mio 135) a young lady faced with the compliment *Ánta wa naru-hodo wakákute utukusii hitó da wa* 'You are, I see, a young and beautiful girl' would perhaps choose the denial *Wákaku náí minikúí hitó da wa* 'No, I am an ugly girl and not young'; and to deny *O-níisan wa otoko-rásikute yuukan na katá né* 'Your brother is a manly and brave person, isn't he?' the form might be *Otoko-rásiku mo náí hikyóo na hitó né* 'He's an unmanly, cowardly person'. Mio also observes that there are a number of quasi-idiomatic uses of *náku* that have led to derived adverbs, such as these: *ma-mó-naku = hodó-náku* 'before long',¹³ *nan-to-náku* 'somehow or other', *sikata-náku* (or *sikata-nási ni*) 'reluctantly', *nukeme-náku* 'shrewdly', *kuma-náku* 'in every nook and corner', *nibé-mo-naku* 'bluntly', *kú-mo-naku* 'with no difficulty', *átokata-mo-náku* 'without a trace'; *titai-náku* 'without delay, forthwith', *manben-náku* 'uniformly, thoroughly' (*manben* being a bound noun—originally a Chinese binom); etc. It is not always clear that such cases need be treated as derived adverbs rather than as syntactic constructions: *saigén [mo] náku* 'without limit'; *kotowári(-) mo náku = kotowári(-) nási ni* 'without notice/permission'; *kurabe-yoo mo náku bon'yoo na ...* 'the incredibly mediocre ...' (SA 2670.110c—followed by names); *suki*

12. If you wonder why this is *kónai* rather than *kónakatta* or *kíte inai*, see §11 on negative imperfections that answer questions put in the perfect.

13. *Ma-mó-naku* seems to be a predicable adverb, to judge from this adnominalized example: ... *gakusei ga Kootí-si de gesyuku-séikatu o suru yóo ni nátte ma-mó-naku no kotó de aru* 'It (is an event that) happened shortly after a student had taken up boarding-house life in Kōchi city' (Shibata 1961.183). From the example *áisatu suru MAMONAKU*, ... 'shortly after saying hello' (Shibata 1961.62), we might think *ma-mó-naku* was a kind of time noun; but the example is perhaps to be read *áisatu | suru ma mo náku*, an adverbialization of *áisatu | suru ma mo náí* 'there isn't even an interval at the saying of hello' (see next footnote). An alternative explanation is ellipsis: *áisatu suru [to] || ma-mó-naku*.

náku naranda 'lined up close with no gaps (= close together)', kitan náku 'frankly' (cf. kitan no náí íken 'a frank opinion'). In most of the examples that I have examined, the accent is of no help in deciding, for the first noun is either atonic (mondai | náku → /mondaináku/ 'with no problems/difficulty') or oxytonic (yasumi^[1] náku → /yasumináku/ 'with no respite'). But /wákenaku/ ← wáke | náku 'with no difficulty, easily' seems to show a reduced PHRASAL accent, and that is also true of the other paradigmatic forms: /wákenai/ ← wáke | náí. For 'without omission' both /morénaku/ = moré-náku and /morenáku/ = more^[1] [|] náku are reported (NHK). MKZ lists kuma-náí (← kumá [ga] | náí), sikata-náí (← si-kata [ga] | náí), and nibé-mo-nai, but not *ma-mó-nai (= ma mo náí). Moreover the kumá of kuma-náku can serve as epitheme (i.e. be modified):¹⁴ Monó o nokóru kuma(-)náku zibun no monó ni suru tó wa ... 'What is meant by obtaining things for oneself with no nook or cranny unexplored' (Ōno 1966.173) [*sic*, not nokósu]; ... sóto wa, móo, toppúri to, nokóru kuma(-)náku kurete ita '... outside it was now completely dark everywhere' (Kb 90a). The expression dányzo no betu náku 'without differentiation by sex = regardless of sex' (SA 2679.37b) also has a modified noun before náku, as does ... hotóndo gíron no yóti(¯) náku, ... 'with virtually no room for discussion' (Tk 4.212a). The accent of otí(-)naku 'without omission' would seem to be preserved from the underlying phrase otí ga | náku || with the derived noun otí 'omission (etc.)' coming from the intransitive verb infinitive óti 'falling (etc.)'. Unless the following example is a blend or a mistake of some sort, the -náku seems to preserve its adjectival nature: ... sikata-náku náku, sassokú, ... 'with no reluctance, right away ...' (SA 2642.54d).

Mio (135-6) cites examples where a phrase-final *dé wa/mo náí* can only be interpreted as ... *nákute* 'is not and' since the polite or honorific stylization at the end of the complex sentence means the negative can not be taken as a separate sentence, as it could if it were *arimasén* or *gozaimasén*. Similar cases with the literary predicative *nási* at the end of a nonfinal phrase are not to be misinterpreted as an abbreviation of *nái si*, even when that would seem to be acceptable in some of the examples (Mio 136-7).

Hayashi 172 reminds us that there are several polite phrases where *náku* means something like *nái yóo* [ni] (o-negai simásu) '(I request that) it not happen': Go-sinpai náku 'Don't worry', Go-enryo náku 'Don't stand on ceremony', O-kamai náku 'Don't go to any trouble', BJ 2.326-7 compares the use of *Dóo-zo yorosiku* (o-negai simásu) 'Please treat me with favor'.

Like most other adjectivals, including the desideratives (§ 7), verbal negatives can underlie a derived abstract noun, made by adding the suffix *-sa* as in this example: *ziko no tikaará(¯) no oyobana-sa* 'the inadequacy of one's own strength'; see § 14.7. On the insertion of the suffix *-sa* in the formation of excessive (*-sugiru*) and evidentials (*-soo*) from verbal negatives, see § 9.1.9 and § 20 respectively.

The polite negatives are discussed in § 22.1: *N de/zya arimasén* or *N de/zya náí desu*, *A-ku arimasén* or *A-ku náí desu*, *V-i-masén* or *V-(a)nái desu*, etc.

In the dialects of western Japan (notably Ōsaka and Kyōto) some of the negative forms in common use are the result of contractions from a phrase *V-i wa senu*, corresponding in form to the standard *V-i wa sinai*, a negativization of the subdued nucleus. Taking a hint from Maeda 1961.20 we can see how the forms for the negative of *áru* 'exists' (correspond-

14. As can the *ma* of *ma mo náí*: ... *mé o hanásu ma mo náí háya-sa de kumi-ageru* 'they assemble them with a speed that does not allow you to take your eyes away' (SA 2680.85).

ing in usage to standard *nái* or *arimasén*) have developed by a series of changes from a literary model:

(1) model	ari wa senu 'does not exist'	
(2) delabialization and epenthesis	ari (y)a senu	
(3) deapicalization ("swallowing") of sibilant	ari (y)a henu	
(4) nasal assimilation of final high vowel	ari (y)a hen	
(5) desyllabification of i	aryahen	
(6) dispalatalization of r	arahen	KYŌTO FORM ^{14a}
(7) assimilation of 2d vowel to last vowel	arehen	ŌSAKA FORM

An alternative series would assume that the Ōsaka form is the result of mutual vowel assimilation and crasis (*ia* > *ee* > *e*), but the changes postulated above will better account for these forms (Maeda 1961.30):

si wa senu 'does not do' > *siyahen* (Kyōto), *siehen* (Ōsaka).

ori wa senu 'does not stay' > *oriyahen* (Kyōto), *oriehen* (Ōsaka).

In these verbs, and also *miyahen* 'does not see' (Zhs 4.16), Kyōto has stopped at Stage 4 in the series of changes and Ōsaka has gone directly to Stage 7.

Notice that the Ōsaka form *kakehen* (Zhs 4.20) does not correspond to the Tōkyō negative potential *kakénai/kakemasén* 'can't write' but to *kakánai/kakimasén* 'doesn't write'—by way of the model *káki wa senu*, as shown by the corresponding Kyōto form *kakahen*. The negative potential in western Japan is made by prefixing *yo*[o] < *yó*[k]u 'well, easily' to the plain negative (§4.4): 'can't write' is said as *yo(o) kakehen* in Ōsaka, as *yo[o] kakahen* in Kyōto.

In popular writings the various negative forms here described turn up as quotations from Kansai speakers: ... *kyuusyoku dekihen no ya* [= *dekínai no da*] 'can't find a job' (SA 2672.137e—we might have expected *dekehen*, since the verb *déki-* is *deke-* in many of these dialects); *Máda, ii kotó mo, warúi koto náhi mo site* 'hen no ni ... [= *site inái no ni*] 'Even though we are not even doing anything, good or bad, ...' (SA 2672.137b).

As the last example shows, V-te 'hen based on the model V-te *i wa senu* corresponds to V-te *inai/imasén* of the standard language. But V-te 'han *náa* is an assimilated version of V-te 'haru *náa* < V-te *i-[na]háru*, equivalent to standard V-te *irassyáru* (§6.4a): *Yó'u obóete* 'han *náa* 'You have a good memory!' (Tk 4.72a—Ōsaka whiskey mogul Torii).

8.5. THE NEGATIVE PRECOPULAR NOUN: V-(A)ZU (= THE LITERARY NEGATIVE INFINITIVE)

Literary Japanese has a negative verb form that ends in *-(a)zu*. This is the negative infinitive, but it is also used (as is the infinitive *ári*) in most of the predicative positions where we would expect a finite form;¹⁵ and it combines with the auxiliary *ár-* to make

14a. A form *arahin* is also reported (Inokuchi 269); this may reflect a variant *sinu* = *senu*. Cf. *sin ka* = *sen[u] ka* (ld. 271), *kin ka* = *kon[u] ka* (= *kónai ka*) (ld. 280).

15. Sentence-final examples: *Nusúmi wa suré-do, hídoō(¯) wa sezu* [= *sinai*] 'Though I may steal, I commit no atrocities' (SA 2642.104d); *Keizaigákú-sya, kanarazú-simó kanemóti narazu* [= *dé (wa) nái*] 'An economist is not necessarily a rich man' (Tsuji-mura 8); *rokugatu nizyuu siti-niti* "Rikkóho sezu" to happyoo sita Suzuki-si 'Mr. Suzuki who announced "I will not be a candidate" on June 27th' (SA 2687.141—picture caption).

various other forms: -(a)zu ár- > -(a)z[u] ár- = -(a)zár-. As borrowed into the standard colloquial language, the form is best treated as a regularly derived precopular noun (§13.8) of a special subtype. This form can underlie a nominal sentence (when followed by the copula dá) to mean 'does not, gets along without doing': Hitókoto mo wakárazu desu 'I fail to understand a word'; maru-de yaku-dátazu na no yó 'I'm totally useless (unhelpful)' (Ariyoshi 32); Iti-dó mo yakú ni tátazu desu 'It isn't effective even once'; Motíron saidai no kari-te wa zentai no yonzip-paasénto o símete iru Amerika de ári, Nihón wa háruka ni oyobazu de áru ga, dáí ní-i de aru (roku-paasénto ˉkyóó) 'Of course the largest borrower [of Euro-dollars] is America which takes up to 40 percent of the total; Japan is far from equalling that but is in second place (over 6 percent)' (SA 2677.52c). But it is usually followed by the copula infinitive ní—a literary touch where we would expect the gerund dé—to mean 'does not do and/but (instead)' or 'instead of doing' or 'without doing'; it is possible to draw a distinction between coordinate and subordinate conjoining by using Tábezu de neta to mean 'I did not eat, I slept' and Tábezu ni neta 'I slept without eating = I went to bed hungry'. The ní is optionally omissible (cf. §9.1.12, §14.6); that is unusual for a precopular or an adjectival noun (though yóó and mítai are similar) except for those that are also adverbs. In this use, the V-(a)zu forms are more often written than spoken; speakers prefer the more relaxed V-(a)nái de or V-(a)nákute to carry the same meaning, that of a negative gerund. But in Kansai speech V-(a)zu is still used for V-(a)naku[te] = V-(a)nái de as in: Áme mo húrazu kaze mo hukán[u] 'It does not rain, nor does the wind blow' (= Áme mo huránai de kaze mo hukánai); Áme to kaze ga hidókute, kawara ní wa dáre mo izu, kawá wa aré ni areta 'The rain and wind were so terrible there was no one along the riverbed, and the river raged and raged' (SA 2663.48a). For such dialects, we will say that V-(a)zu is an alternant way of making the negative infinitive, the other way being V-(a)naku, in these dialects usually rendered as V-(a)na'u = V-(a)noo. (And the use of the infinitive for the gerund is more general; see p. 395.) In standard Japanese, too, the V-(a)zu [ni] form will sometimes be preferred to the more colloquial negative gerunds, especially in stereotyped adverbial expressions such as osímazu [ni] (kane o tukau) '(spends money) unstintingly, generously', and that in the following sentence: "Ée, íi benkyoo ni narimásita" to Siodá-kun(ˉ) wa WARUBÍREZU NI iu "'Yes, it was a good lesson to me", says young Shioda undaunted (= with good grace)' (SA 2669.61d).

These negative forms can be made from every verb but áru; árazu does not occur except in written Japanese. There we even find a form for the copula, based on ní áru, in Sá ní árazu 'It is not the case. That is not it' (= Sóo zya nái)¹⁶ and in the expression ... ni árazu site (músiro ... de áru) as in Hito wa pán nomi nite ikíru monó ni árazu site, músiro ... 'Man does not live by bread alone, but rather is ...'; the form sometimes contracts to nárazu just as ní ári contracts to nári. In literary Japanese V-(a)zu site is often used where the colloquial would have V-(a)zu ni or V-(a)nái de; in otherwise colloquial writings you will run across such expressions as these: takúmazu site 'easily, with no great effort'; ki-sézu site (... suru) '(does) by chance, unexpectedly; chances to do'; Zyúu-nen tátazu site ... 'In less than ten years ...' (SA 2661.104a); Kore o hwássyo to iwazu site, nání o hwássyo to iú ka 'If this is not to be called fascism, then what IS to be called fascism?!' (SA 2663.18e).

16. An example occurs in SA 2679.116c. The expression pops up as a spoken cliché in Kore ga sá ní árazu da 'THIS it is not' (Okitsu 1.298).

Notice the irregularities of kúru and suru:

Kúru → Kónai → Kózu

Suru → Sinai → Sezu

Similar to suru are bound verbal nouns in -su[ru] and -zuru/-ziru: ryaku-sú[ru] → ryaku-sézu 'not abbreviating' (Cf. ryaku-sánai/-sínai 'does not abbreviate'), oo-zúru/-zúru(¯) → oo-zézu(¯) as in N ni oo-zézu(¯) ni 'not in accord with N'. But you may run across semi-colloquialized forms in -zizu (and -sizu?) or -sazu: yooi ni sin-zízu(¯) 'does not easily trust/believe' (SA 2674.94c); zoku-sázu 'not belonging' (SA 2680.101b). And sizu (= sezu) itself turns up in downtown Tōkyō speech: ... bisyoo sizu ní wa irarenai 'can't help smiling' (Fn 459a).¹⁷

Sentences with V-(a)zu dá are a bit stiff in any form other than adverbial (with or without ni); but in quasi-quotations and clichés you can find various forms of the copula, e.g. the gerund in ... oya^[r] no kokoro^[r] ko sirazu dé, '... what with "son not knowing father's heart" ...' (SA 2658.135d). And you will hear V₁-(a)zu V₂-(a)zu in various forms: Nómazu kúwazu da (→ da kara, da to, nara, dattara, etc.) 'goes without drinking or eating'. In place of V-(a)zu dé mo/wa you may hear V-(a)zu {ni} ité mo: Nómazu kúwazu ni ité mo 'Even going without drinking or eating'. All the following are possible: V-(a)zu ni ité mo, V-(a)zu ité mo, V-(a)zu dé mo, V-(a)zu sité mo, as well as V-(a)zu tó {mo} for which see §21.1.(9). The V₁-(a)zu V₂-(a)zu da sentence can be adnominalized: Nómazu kúwazu no hazu da 'He must be going without drinking or eating'. But these expressions are often reduced to a lexical derivative: nómazu kúwazu → nomazu-kúwazu no ryokoo 'a trip without sustenance'. Similar are dézu-írazu (ni nátta) 'accounts being squared; moderation', nakazu-tobazu (de iru) '(neither crying nor flying =) being inactive', atarazu-sawarazu no hanasí = atari sawari no nái hanasí 'harmless and inoffensive remarks', iwazu-katarazu (no mokkei 'a tacit agreement', no uti 'tacitly'), mízu-sirazu (no otokó) 'completely unknown (man)', though the accentual clues are less obvious. But the phrasing of some examples forces us to treat them as idioms: ómezu oku-sézu 'without flinching or faltering = fearlessly' is said with a minor juncture between the two words. Other examples include úmazu tayúmazu 'tirelessly', túkazu hanárezu 'neither too close nor too far apart', and oya-sírazu ko-sírazu '(a case of) everyone for himself'.

A single -(a)zu dá sentence can sometimes be adnominalized: Ittekí ni mizu mo nómazu no zyootai ga is-syúukan tuzuitára sinde simau 'If a condition of not drinking a drop of water should continue for a week you would die'; Issui mo sezu no hazu da 'He is unlikely to have slept a wink'. But nezu-nó-bán 'watch, vigil' is usually treated as a lexical item. A few place names contain V-azu no N: Nakazu-no-Taki, Sinobazu-no-Iké, ...

An expression often heard is N ní mo kakawárazu(¯) (or, with direct nominalization §14.6, S ní mo kakawárazu(¯)) 'in spite of, regardless of (its being)'. The literary expression V-(a)záru o énai, which might be regarded as an abbreviation of V-(a)zu [ni] áru [no] o énai (direct nominalization being the rule in Literary Japanese), means 'cannot help doing' and is equivalent to the colloquial V-(a)nákereba naránai and synonyms (§9.3): ... tasyoo no "usirometá-sa" wa kan-zesarú o énai '... can not help feeling more or less "guilty"' (SA 2665.30a). Another way to say the same thing is V-(a)zu ní {wa} orarénai/irarenai 'can't exist without doing': Kono éiga(¯) o míta hitó wa, ningen ni túite, hanzai ni túite, sosite sikéi(¯) ni túite hukáku kangáezu ni wa irarenái daroo 'A person who has seen this

17. Yoshida cites examples of sizu ni from Meiji and early Taishō days which indicate a wider usage (Y 176). Sizu is said to date from Edo times; cf. Gekkan-Bumpō 1/8.64 (1969).

film will surely be bound to think deeply about human beings, about crime, and about capital punishment' (SA 2647.112b). Cf. V-(a)zu ní wa inai 'does not fail to (do); can not help but (do)' as in ... murá⁽¹⁾ no hitóbito wa kíi no kán ni utarezu ní wa inákatta 'the village folk could not help being struck by an odd feeling' (KKK 3.120) and examples below. An example of V-(a)zu ní wa okanai 'is bound to do' will be found in §9.2.4.(3), p. 530. I presume that these several expressions could be said with -(a)nái de wa in place of V-(a)zu ní wa, but I lack examples. For V-(a)zu tó {mo} = V-(a)nákú to mo = V-(a)nákute mo, see §21.1.(9).

The expressions with V-(a)zu ni, like the equivalent expressions with V-(a)nái de, are subject to the several sentence-linking interpretations of the gerund (§9.2). Thus while the sentence Yumé o mízu ni nemutta would likely be taken as 'I slept without dreaming' (the dreamlessness continuing through the sleep) we can not exclude such an interpretation as 'After not dreaming I slept [perhaps with dreams]', though it would require considerable context to make that interpretation plausible. But Sinbun o mízu ni térebi o míta can be taken either as 'I watched the television while not reading the newspaper (as I often do)'—cf. Sinbun o mi-nágara térebi o míta 'I watched television while reading the paper'—or as 'I watched television instead of reading the newspaper' and even as '(After not =) Without reading the newspaper I went ahead and watched television [perhaps with no idea what the programs might be]'.

In written Japanese there are a number of set expressions with V-(a)zu, e.g. nani-goto ni yorazu 'with no basis, without foundation', waki-me mo hurazu [ni] 'without a side glance; wholeheartedly', N o tówazu(˘) 'irrespective/regardless of N, without distinction of N'.

The forms in V-(a)zu ni can be used in place of V-(a)nái de with certain auxiliaries, e.g. Hutuu kúbetu sarezu ni iru (= sarenái de iru) 'They are usually not distinguished from each other'. (But Wasurenái de kudasái 'Don't forget' will not be put as *Wasurezu ni kudasái.) It seems to be possible to apply focus. I lack an example of V-(a)zu ní mo, but an example of V-(a)zu ní wa 'unless' occurs in Ōno 1966.189: Soré-ra no zizyoo o hukáku ríkai(˘) sezu ní wa ... tadásiku kangáeru kotó ga dekinai daroo 'Unless we have a deep understanding of these considerations ... we will not be able to think correctly about ...'. Another example, with an Ōsaka flavor about it: Ano kaizyoo wa Suitá-si o tóorazu ni wa, ikén [= ikenái] no desu wá 'That site [of Expo 70] can't be gotten to without passing through Suita City' (SA 2670.21e). Here V-(a)zu ní wa is equivalent in meaning to V-(a)nai kotó ni wa or V-ru kotó nási ni wa (see §9.1, p. 396), as ways to state a negative condition that could be expressed less formally with V-(a)nái nara or V-(a)nákereba or its equivalents V-(a)nai to, V-(a)nai baai, etc. But other uses of V-(a)zu ni are equivalent to V-(a)nái de wa: ... kansin o yobi-okósazu ni wa inákatta = yobi-okosánai de wa inákatta '[Teika's popularity] did not fail to arouse interest [in his kana spelling]' (Ōno 1966.214); ... sezu ní wa [= sinái de wa] sumánakatta 'did not get by without doing it'; ... Edo wa, koré-ra Kyóo Oosaka no takái búnka búngaku o mukae-irezu ni wa seityoo o togéru kotó ga dekinakatta 'Edo could not have achieved its growth without welcoming in the high(er) culture and literature of these other places Kyōto and Ōsaka' (Ōno 1966.228).

Like other precopular nouns the -(a)zu da forms adnominalize with dá → nó, as in the cliché yarazu no áme 'a rain you don't send one off in = a rain that provides a welcome excuse for detaining a guest' (Okitsu 1.231). There are also some derived adjectival and/or precopular nouns, as in dotti-túkazu no táido 'a noncommittal attitude' and hazi-sírazu

na hitó 'a shameless person' from hazi o sirazu no (= siranu = siranai) hitó 'a person who knows no shame'; similar examples are on-sirazu (na hitó) 'ungrateful (person)' and seken-sirazu (no hitó) 'naive person'. In fact N-sirazu 'ignorant of N' from N o sirazu 'does not know N' is quite productive: manga-sirazu no otoná-táti ni 'to grownups ignorant of cartoons' (SA 2685.115d); keizai-sirazu no syúhu 'the housewife ignorant of economy'; There is an idiomatic usage ... wa/nára íza sirazu 'apart from ..., except for ...' as in: Sensoo ̄tyuu nára íza sirazu 'except during wartime', Hito wa íza sirazu watakusi wa '(I don't know about others but) for my part ...'.

On the other hand ̄tárazu (= tariná de 'not sufficing') attaches to numbers as a quasi-restrictive to form a precopular-noun phrase meaning 'less than; under': sen-en ̄tárazu no kane 'a sum of under a thousand yen', hitó-tuki ̄tárazu de 'in less than a month'; ... sánzíp-pun ̄tárazu de syokuzi o owatte sóto ni tobi-dási, ... 'finished eating in less than thirty minutes and dashed outside ...' (SA 2673.36c). (The antonym of ̄tárazu is the quasi-restrictive ̄ámari 'more than, over'.) And mukóo-mizu 'rash' (from mukóo o mízu 'not looking across') can be either adjectival or precopular (ná/nó). The V-(a)zu form sometimes enters into other derivations, e.g. kuwazu-gírai (na) 'hating without tasting = prejudiced' from kúwazu kirai da 'dislikes without tasting' and makezu-gírai, an illogical compound that means make-gírai 'hating to lose'; tuki-tárazu (no kodomo) 'premature (baby)', tarazu-gáti (na) 'unable to make ends meet', iwazu-mó-gana (no koto) 'better unsaid', tarazu-máe(̄) 'deficit', towazu-gátari 'volunteered remarks', wakarazu-ya 'a blockhead', narazu(-mono) 'a rogue, a no-goodnik', nezumi-írazu 'a cupboard', oyobazu-nágara(̄) 'inadequate though I am'. A number of the -(a)zu forms are perhaps well treated within the modern colloquial as derived adverbs: nokórazu 'all, entirely', táezu 'constantly', ai-kawarazu 'as usual', toriaezu 'immediately; for the time being; first', hakárazu {mo} 'by accident', habakárazu 'frankly, without reserve', sirazu-sirazu(̄) (also ~ ni, ~ no uti ni) 'unknowingly, unconsciously', wáre-sirazu(̄) 'unconsciously', omówazu(-sirazu) 'unintentionally', obóezu 'involuntarily; unwittingly', mizu-írazu (de/no) ['"unwatered" =] without outsiders, private(ly), with just family', itido-nárazu 'more than once, repeatedly', hi-nárazu (site) 'in a few days, shortly', hitokata-nárazu 'unusually, no little', kokoro-nárazu mo 'in spite of oneself, reluctantly', tokoro-kiráwazu(̄) 'irrespective of place, anywhere and everywhere', yamu-o-ézu 'inevitably', The accentuation of certain expressions forces us to treat them as adverbial idioms: sáidai(̄) morásazu 'to the smallest details; in full'. And kanarazu 'for sure' is generally assumed to come from ka[ri] nárazu < kari ni árazu 'not being temporary'. The noun sitatárazu 'lisp; one who lisps' [inadequate translation] comes from sitá ga tarazu 'the tongue is inadequate' and has been used as an adjectival noun: sitatárazu na hanasi-káta 'a lisp; way of talking'.

The idiom iwazu to sireta '(that is) clear without mentioning it' uses the subjective essive tó (cf. §21.7) instead of the objective essive ní (= copula infinitive): Sore wa móo, iwazu to sireta kotó de aru 'That is now too obvious to mention'.

For the sentence conversion V-azu - ̄zimai datta = V-anái de simatta 'ended up not V-ing' see §9.1.7. On the literary forms V-(a)zu-mi = V-(a)nákattari, see p. 571.

The form V-(á)zú-ba, with the nigored version of the focus particle wá, is sometimes written as an equivalent of V-(a)nái de wa or V-(a)nákute wa—and those can be used as equivalent to V-(a)nákereba 'unless' so that sézú-ba nárazu means sinákereba naránai 'must do it', as in this example: ... yamézú-ba náru ̄mái 'will surely have to resign' (Fn 114b) = yamenákereba naránai daroo. Another example will be found under -(á)zi to, §8.6. An /n/ is sometimes inserted: V-(a)zúnba. (This reflects an older pronunciation of -b-.)

With the same meaning, you will find the more colloquial *-(a)zu wa*, usually contracted to *-(a)z'aa*: ... *mikaesite yaraz'aa naránee* 'I'll hafta try to get ahead of him (= triumph over him)' (Fn 131a—spelled hiragana "za", katakana "a"); *Dáre d'átte omee* [= *omae*], *zyúu-nen ízyoo, yukue ga sirez'aa, sindá mo doozen dá* 'Anybody, you see, whose whereabouts are unknown for more than ten years is the same as [= might as well be] dead' (Fn 161a); *Tyokkúra, Áso san toko e kao o dásite, Ookame no henzi o site kóz'aa naránee* [= *kózu wa naránai = konákereba naránai*] 'I'll just have to go show up at Aso's and give an answer to Ōkame' (Fn 209b).

There are dialects in which *-azu* represents something other than a negative form. In *Shinshū* (= Shinano, part of Nagano prefecture) *ikazu* means *iku* 'goes'; the form comes, it is said (Tk 2.221a), from an ancient *iki-nasu* 'does the going' (cf. *iki-nasáru, iki-nasái*), made up of infinitive + *násu*, a literary equivalent of *suru* (cf. *iki mo/wa suru*, §5).

In the modern orthography there is a graphic confusion between the spelling of (*sóto ni*) *í-zu* 'goes out' and *DÉ-zu* 'does not go out' since the part given in capital letters in the romanized forms are written with the same Chinese character (SYUTU/[i]de-), as deplored in Tk 2.219b; of course, *izu* is a literary form (equivalent to modern *déru* in predicative position), but the negative of that is *ÍDE-zu*, so the complaint is justified. It would be better to write *Í-du* for 'goes out'; there is good morphophonemic reason to use the kana symbol for *du* (= "tu) in this form, since the infinitive is *íde*.

There appears to be considerable fluctuation in accentuating the *V-(a)zu* forms (cf. BJ 2.79 n. 2). I have normalized the forms cited in this book according to the patterns given in K: for tonic verbs the accent is the same as that of the infinitive (*wakári, wakáruzu; tábe, tábezu*) and there is no accent for the atonic verbs (*hatarakazu, tukawazu, irezu*, etc.). But an alternative accentuation pattern (favored by Hamako Chaplin) places the accent on the syllable before *-zu*, regardless of the tonicity of the verb: *wakarázu, tabézu, hatarakázu, tukawázu, irézu*. Thus with verbal nouns you may run across *sézu* as well as *sezu* (*kenkyuu sézu ni = kenkyuu sezu ni* 'without researching') though after a tonic verbal noun the accent will usually be lost in any event, so you will probably hear only *annái sezu ni* 'without guiding one'.

8.6. OTHER NEGATIVE FORMS BORROWED FROM THE LITERARY LANGUAGE

We have seen that *V-(a)zu* is the literary form of the negative verb infinitive and that, like *ári* (and derivatives), it is often used in predicative positions where we would expect a finite form. In attributive (= adnominal) positions it is common to find *V-(a)nu*, which in the colloquial can also be used predicatively; this is usually pronounced *-(a)n* and is often regarded as a mere abbreviation of *V-(a)nai*: *iwan[u] kotó = iwanai kotó* 'what is unsaid', *Soo iwan[u] = Soo iwanai* 'I don't/won't say that'. But you will also find the attributive form *V-(a)záru*, a contraction of *V-(a)z[u] áru*, as in *manekarezáru kyaku* 'uninvited guests', *motazáru kuni* 'have-not countries' (versus *motéru kuni* 'have countries' with the literary perfect-resultative form of *mótu*), *irazáru kotó o itta* 'said something uncalled-for' (Kb 278b), *konomazáru sensoo* 'the disliked (= unpopular) war' (SA 2676.110d), *Sirarezáru Okinawa* 'Unknown Okinawa' (title of a TV program), *sirarezáru sentoraru-híit'ingu ...* 'Unfamiliar central heating ...' (SA 2659.118b); other examples will be found in KKK 3.247. (Cf. also remarks on *tarazáru*, p. 383.)

Similar contractions will yield various other forms, such as V-(a)záreba from V-(a)z[u] áreba as in the saying Katarazáreba uréi nási 'If you don't talk you'll have no grief = Silence is golden' (SA 2666.85b). There is also the literary negative hortative V-(a)zarán < V-(a)zarámu < V-(a)z[u] arámu, which is equivalent to V-rú ṽmái 'not about to', or to -(a)nai yóo ni 'so as not to' or to V-(á)zi 'intending not to': Kikazarán to sité mo rinsitu no hanasi-góe ga mimí ni túite hanarénu 'Despite efforts not to listen, voices from the next room persistently reach one's ears' (KKK 3.247).

Below are listed a few other negative forms borrowed from the literary language; you will seldom hear these but you may run across them in print.

-*kárazu* < -k[u] árazu, adjective negative infinitive—also used for imperfect predicative (§ 13.8a): nagakárazu mizikakárazu no tasuki 'an obi-tie that is neither too long nor too short'. Asikárazu is such a form from a literary adjective a-si- (resembling in structure wáruku náku) and has the meaning 'not taking it badly/amiss' = 'being understanding': Dóo-ka asikárazu o-yurusi kudasái 'Please understand and forgive me'. And the adverb sukunakárazu 'in no small measure/number' is from a construction that parallels sukúnáku náku 'not being little/few'.

-*karazáru* < -k[u] arazáru, attributive form of -kárazu: ... syuusyu si-u ṽbekarazáru zyootai ... 'a situation out of control' (Fn 26a—si-u = si-úru 'can do', literary predicative).

-*karánu* < -k[u] aránu, adjective imperfect negative attributive (§ 13.8a): ... tookaránu utí(ṽ) ni 'in the not-too-distant future' (SA 2689.43a); ... kono hón zitai, hitótu no tiisakaránu tokutyoo o mótte irú no de ... 'this book itself, having one far-from-small feature ...' (SA 2660.118e). The word kesikarán[u] 'scandalous, outrageous' is used both as attributive (kesikarán koodoo 'scandalous conduct') and as predicative (koodoo ga kesikarán 'conduct is scandalous'); it comes from a shortening of kesiku ár-i, formed on the literary adjective KE-si- 'suspect'. Cf. the anomalously formed adnoun muri-karánu, § 13.5.(2h).

-*(á)zi to (1)* 'not wanting to, so as not to; let's not' = V-rú ṽmái to, -(a)nai yóo ni (§ 12.2); (2) 'thinking it/one will not' = V-(a)nái daroo. The resulting forms are optionally atonic when made on atonic bases; Hamako Chaplin uses the atonic version: makézi(ṽ), okurézi(ṽ), ... (1) ... makézi(ṽ) to odori-dásita 'started dancing to keep up with the others' (SA 2660.136d); ... maketé wa narázi to ... 'in never-say-die manner; unwilling to face defeat; not to be bested'; ... okure torázi to ... (= okure o toránai yoo ni, okure o tóru ṽmái to) 'in order not to be outdone (left behind)' (SA 2659.56c); ... pápa no asinamí ni okurézi(ṽ) to, tyóko-tyoko to issyo ni hasíru no da 'trying not to fall behind papá's pace I would trot right along with him' (SA 2650.58c); Sénsyu-tati wa kánko no kóe ni okurarete, katázu-ba [= katánai de wa = katánakereba, p. 380] ikite kaerázi to iu iki de déte kíte 'ru wáke desu kara, otíru to nakú desu yó 'The athletes, sent off by the cheering voices, appear with a spirit of "I shall not return alive unless I am victorious", so they weep when they lose' (Tk 2.309b). (2) Káku-te wa narázi to kangáeta syuu-séihu wa ... 'The state government which thought that this would not do ...' (SA 2659.111a—here naránai means ikenai 'is unsatisfactory, won't do').

-*rú ṽmázi* = -rú ṽbekárazu 'should not, ought not' (predicative): Kara-tégata yurúsu ṽmázi 'Empty promises should not be forgiven' (SA 2660.122a—heading); Kátute wa "Áa yurúsu ṽmázi genbaku ó" ga yuumei dáta 'At one time [the protest song] "Ah we can't allow it—the atom bomb" was well-known' (SA 2664.42a).

-*ru ṽmázi-ki* = -ru ṽbekarazáru 'should not, ought not' (attributive): Kyóosi to site hanásu ṽmáziki kotó made hanásite simatta 'I ended up saying things I shouldn't say as an

instructor'; Su' máziki monó wa miya-zukae 'Court service (= government office) is something to be avoided'. In modern Japanese the expression aru-máziki 'unbecoming, unlikely' (also modernized to aru-mazii, MKZ) is an adnoun (§13.5); it derives from áru 'mázi(-ki) 'ought not to exist'. Examples: ... kore o syukke ni aru-máziki syógyoo(¯) [= okanai] to kan-zita '[he] felt this to be an act unbecoming to [or unlikely from] a bonze' (SA 2650.92d); Gunzin ni aru-máziki hurumái ... 'conduct unbecoming a military man' (SA 2642.104d).

In place of the expected literary negatives of áru 'exists', based on árazu, the modern colloquial náí (a suppletive form where we expect *aránai) is often given the literary adjective endings -ki (attributive) and -si (predicative): Tádasi, kore ni túite wa o-togame nási de aru 'But, with respect to this they are without blame' (SA 2672.135c). Cf. §13.8a. The literary perfect nakárikeri is sometimes used as a jocular substitute for náí (or nákatá?): Geinin ni hetá mo zyoozú mo nakárikeri, ... 'I don't care whether the artist is good or bad, ...' (Kb 290a). There is even a quasi-literary causative made from a contraction of nák[u] ar-asiméru (cf. §4.1) > nakasiméru 'eliminates, obviates, removes': Soo iu tyósya no raitomotíihu o gokai no yóti(¯) nakarasiméru tamé ni, ... 'In order to eliminate room for misunderstanding of this leit-motif of the author, ...' (SA 2673.94c)—gokai nō^[1] is adnominalized propredication, so the underlying structure is ... raitomotíihu o gokai suru yóti(¯) [o] nakarasiméru

The literary copula, as we have observed elsewhere, is made by attaching the auxiliary ár- 'be' to either ní (the objective essive) or tó (the subjective essive); like ár-, these forms use the infinitive for most of the functions where we expect a predicative form, so that sentences are usually cited as N ári, N nári, N tári—the latter two being contractions of N ní^[1] ári and N tó^[1] ári. The uncontracted forms of the copulas N ní ... ári (objective) and N tó ... ári appear when focus is applied (§5); the negative forms are N ní ... árazu¹⁸ (contracting to N nárazu when unfocused) and N tó ... árazu (contracting to N tarázu when unfocused), using the literary negative infinitive as a predicative. But for the negative of N ári we find N nási (rather than N árazu) and in Heian times nási sometimes replaced árazu in the uncontracted forms of the copulas, too: N ní/tó (...) nási (Satō 1.102).

When the copulas are adnominalized, the following forms may appear:

COLLOQUIAL

N₂ de áru N₁ }
 N₂ no N₁ }
 N₂ de/zya náí N₁

LITERARY

N₂ náru N₁
 N₂ naránu N₁ [usual form]
 N₂ narazáru N₁ [less common form]¹⁹
 N₂ táru N₁
 (*N₂ taránu N₁) [not used]
 N₂ tarazáru N₁ [usual form]
 (See also tarasiméru, p. 750)

18. As in Zibun ga tukútte, áq to iwasete yaroo to iu kotó ga, náki NI si mo ÁRAZU [da] 'There's a bit of making it up oneself to impress others' (Tanigawa 104), using a familiar cliché based on direct nominalization of the literary attributive form of ná-, roughly giving the same meaning as náí wáke de mo náí 'it isn't exactly the case that there is none'. Another example will be found on p. 502.

19. And sometimes, after a pure noun, written uncontracted as ní^[1] arazáru: eigá-zin ni arazáru zyoséi-táti 'women who are not movie personalities' (KKK 25.74a).

The usual translation of A *naránu* B is 'not an A but a B' or 'a B rather than an A': Kore wa, tetugákú-sya *naránu* kagákú-sya no syutyoo to sité wa kánari daitán na monó to iu 'béki de aroo 'This surely must be a rather daring thing as a claim by a scientist (who is no philosopher =) rather than a philosopher' (SA 2676.98c); Káno-zyo, kyooiku-máma *naránu* patinko-máma 'She is not a school-pushing momma but a pinball-pushing momma' (SA 2689.124b). Although *naránu* should lose its accent after a tonic noun, a minor juncture is often inserted before the word: kyooiku-máma { | } *naránu*. And some speakers treat the word as if it were a restrictive, with dominant accent: kyooiku-máma *naránu* Cf. (ˉ) *nárade-wa*, §2.3.3.

8.7. FURTHER REMARKS ON NEGATION

A few verbs characteristically appear only in the negative, yet display the affirmative in making a rhetorical question that IMPLIES the negative (cf. Mikami 1963a.35). For example, *tamaranai* 'can't be borne = is unbearable' will yield *tamarú* (*món*) ka 'how can it be borne?!' as in Hoka no hitó ni kawarete *tamarú* ka to, mé o hikarásu kankoodán-in 'A member of a tourist group, eyes sparkling as if to say how can I stand it if I have the thing bought (before me) by someone else' (SA 2660.37b). (Cf. also the vaudeville refrain Tamatta *món* zya nái 'I can't STAND it!') And *kamawánai* 'it makes no difference' will yield *kamáu* (*món*) ka 'how can it make any difference?!' (A newish usage is *kamáu* 'it DOES make a difference'.)²⁰ This provides one of several criteria to diagnose certain -(a)nai forms as pure ADJECTIVES, though they are derived from verbal negatives—as indeed the accentuation indicates for the tonic examples:²¹

ikenai 'can't do = won't do, is unsatisfactory', **ikerú* (*món*) ka;
kudaranai, *kudannai* 'is worthless, trivial, absurd', **kudarú* (*món*) ka;
mono-tarinái(ˉ) 'is inadequate', *[mono-]tarirú (*món*) ka;
nie-kiránai 'is half-cooked; is irresolute', **nie-kíru* (*món*) ka (cf. §9.1.10);
yari-kirénai 'is unbearable', **yari-kiréru* (*món*) ka (cf. §9.1.10);
tumaránai, *tumánnai* 'is poor; stupid', **tumáru* (*món*) ka;
sumánai 'is obliged', **súmu* (*món*) ka.

The asterisked forms will be found but only with other meanings of the underlying verbs. The last two examples are susceptible to verbalization (*tumarana-gáru*, *sumana-gáru*) and that is another reason for classifying them as adjectives. An example of *sumana-gáru*: *Káre-ra wa sono-bá*(ˉ) *o sáréba*, *ténka kókka o rón-zite*(ˉ), *Tyúugoku ni, Sóren ni sumana-gáru* 'Once they leave THAT situation they will talk global politics and feel obliged (= soft) toward China and toward the Soviet Union' (SA 2655.28c). From *tamaranai* there is derived an adverb (§9.1.11) *tamaranaku* 'intolerably, irresistably'.

In place of *ikenai* 'it won't do' (from 'it can't go') the ordinary negative *ikanai* 'it won't go' is widely used—even by some Tōkyōites, apparently; and it often appears as *ikan*: *Sono sekinin o kangáenakya ikan to omóu n da keredo mo ...* 'I think we must consider the responsibility for that, but ...' (SA 2660.45b—dietwoman Ichikawa Fusae, born in Aichi

20. The expression *ari-énai* 'is impossible' is the negative of the literary *ari-úru/-ú* 'is possible, can exist'; the rhetorical question is *ari-éru/-úru món* ka 'can it be possible = surely it can't be possible'. (The colloquialized *ari-éru* is less common than the proper literary version.)

21. The verbal origin is also evidenced by the variant in -(a)nu that exists for each, and by the stylizations permitted: ... *tumarimasén né* 'It is stupid ... isn't it' (SA 2671.49a).

prefecture in 1893); *Nízyuu gó-sai ni náru made sake mo onná mo ikan zo*, to iwarete ... 'I was told [by my father] that liquor and women were forbidden until I reached the age of 25 ...' (SA 2659.51a—Nomura Manzō, born in Tōkyō in 1890). The Kansai variant *akan* apparently is the result of assimilation of the first vowel of *ikan* to the second. Maeda 1965 accepts Ōtsuki's explanation that *akan* is a truncation of *rati* [ga] *akanu* 'makes no headway', but skeptical Yamanaka 1970 seems to have reached a conclusion similar to mine.²² Maeda says that in Ōsaka *akan* dates from the 1850s and appears also in the forms *akahen*, *akehen*, *akimahen* (an example appears in Tk 3.290a), *akasimahen*, *akesimahen*; he mentions modern "affirmative" formations in questions: *aku ka akan ka*, *aku mon ka*, *aku ka i*. A few examples of *akan*: *Motto onna-rasyuu sēna akan yo* 'You've got to be more lady-like' (SA 2665.112a—*sēna* = *sēn*[y]a = *senēba* = *sinákereba*); *Yoozin sen[u] to akan* 'We've got to be careful'; *Íki no nagái geinin to náru tamé ni motto benkyo[o] sēna akan* 'To become longlasting artists we've got to work harder' (SA 2665.114b); *Moo sukósi asobána akan* 'You've got to stay (and enjoy yourself) a little longer'. The adjectival noun *damé* is a common synonym for *ikenai/ikan(ai)/akan*; the antonym is *ii* = *yói* in one of its meanings 'satisfactory', for which the elegant synonym *yorosii* is available.

Alongside *takumánai* 'artless, unadorned, natural' we find an adverbialization: *takúmazu site sibai no dekíru* ... 'can do a play naturally' (SA 2670.114b; *-azu site* = *-azu ni*). On the predicate *ge-sénai* 'can not understand', see p. 307 (§4.4).

We observed earlier that the focus marker *síka*(⁻) '(not) except for = only' requires a negative. There are also a number of ADVERBS (and adverbialized adjectival nouns) which often or always anticipate a semantic negative (see §13.7 and cf. Hayashi 138–40): *roku ni*,²³ *roku-roku*, *roku-suppo* '(not) adequately, properly' (+ verbal only); *nakanaka* '(not) for a long time' (+ durative verb); *syaku-zen to* '(not) satisfactorily explained'—as in ... *syaku-zen to nomi-komenai tokoró ga áru* 'there are points that remain quite unexplained' (Fn 233b); *anagati* '(not) necessarily', *kanarazú-sí-mo* '(not) inevitably'; *métta ni* '(not) frequently (= seldom)' (+ verbal); *manzara* '(not) altogether/wholly'; *betudan*, *betu ni* '(not) particularly, especially'; *ten-de*, *maru-de* '(not) at all'; *kaimoku* '(not) at all'; *mappira* '(not) at all'; *túi-zo* '(not) at all, ever'; *kessite* '(not) ever'; *konrín-zai* '(not) under any circumstances'; *dan-zite* 'absolutely (not)'; *zettai ni* 'absolutely (not)', *tote-mo* '(not) at all', *tootei* '(not) at all, by any possibility' (these three are now also used with affirmative sentences as intensives); *Yómoya* 'surely (not)' and *másaka* '(not) on any account' anticipate a negative and (often) a tentative, either jointly as *V-(a)nái daróo* or *V-rú mái*, or separately as in *V-[y]oo to omowánakatta* 'I didn't think it would ...'; *S hazu da* will serve as "tentative"—*Másaka, anna kotó wa dekinai hazu da* 'Surely such a thing can't be done' (Kindaichi 1966.91). (The expressions *yómoya ni hikasareru* and *yomoya-yómoya ni hikasareru* 'is deluded by a vain hope' are idiomatic.)

Other adverbs often followed by a negative include *hotóndo* and *mázu*, which (with negative) mean 'hardly', and *a[n]mari* '(not) overly, too, too much', as in Hayashi's examples: *Koko dé wa hanzai-ziken ga hotóndo okoránai* 'Hardly any crimes occur here'; *Kore nára mázu wáruku nái desyoo* 'This wouldn't be half bad'; *Soo iu kotó wa mázu náí né*

22. We may be wrong. Miyara 1954.45 says the Nagoya equivalent of *akan* is *datikan* or *datyakan*, coming from *rati-akanu*.

23. And *roku na N* also requires a negative: *roku na kotó o sinai* 'doesn't do a proper (or sufficient) job'. There is also *roku dé mo náí* 'is useless' and a noun *roku-de-nasi* 'a good-for-nothing', derived from *roku de nási* 'is unsatisfactory' with the literary predicative *nási* = *nái*. Thus *roku* is an adjectival noun.

'There's hardly any of that sort of thing (happening)'. Hayashi reminds us, too, that the three expressions *soo*, *sore-hodo*, and *sonna ni* '(not) so, so much, very' often anticipate a negative, as in his examples: *Soo homerarénaí hanasí da* 'It isn't very flattering'; *Sen-en nára sore-hodo tákaku náí desyoo* 'A thousand yen isn't all that expensive'; *Sonna ni suteta monó de mo náí* 'It isn't so terribly rejected'. Also the numeral 'one', highlighted or not, frequently anticipates a negative: *hitótu* [mo] '(not) [even] one', *hitóri* [mo] '(not) [even] one person', *ippikí* [mo] '(not) [even] one animal', etc. Similar are *sukósi mo* or *ti[t]tó mo* '(not) even a little', *náni mo* '(not) anything'—also '(not) particularly', *dáre mo* '(not) anyone', *dótira mo* '(not) either one', *dóko mo* '(not) anywhere', *dóo-mo* '(not) at all', etc.; all of these except *ti[t]tó mo* and *dóo-mo* regularly lose their accent when followed by a negative (see p. 52). There is also *yumé-ni-mo* 'even in a dream = (not) by the wildest imagination', often followed by *omowánakatta* 'I didn't think' or *siranai* 'I don't know' ('I haven't the faintest idea', 'I haven't the foggiest notion').

Some expressions anticipate a negative so strongly that the negative itself is often left unsaid: *Nakanaka!* 'Not for a long time yet!'; *Tyót-to ...* 'I'm a bit doubtful'; *lie, iie—soo iu wáke zya* {*arimasén*} 'No, no—that's not the way it is (or: what I mean)'; ... *kóoka wa sappári* {*naí*} '(but) there was not the least effect' (SA 2793.31c).

The "negative" anticipated by the adverbial expressions mentioned above is a semantic category that here includes words that mean 'few' or 'rare': ... *hotóndo tigai ga sukunái* 'the differences are quite few' (Kindaichi In Ōno 1967.15); *Nihón de wa, hotóndo kono syúhoo(-) o tukau hitó ga maré(-) dá ga, ...* 'In Japan people using this method are quite scarce ...' (SA). The negative can be implied by proredication or expressions of refusal: *Mappira da yó* 'Not for the world'; *Mappira go-men dá* 'I flatly refuse'.

Japanese often like to put a comment in a negative way, as Hayashi observes; this device of expressing an affirmative by negation of the contrary (as in "not un-"), known to grammarians as *litotes* (Greek for "understatement"), is not unknown in other languages. Common examples are *sukúnáku náí* 'is/are not little/few = is quite a lot, are quite a few'; *mezurásiku náí* 'is not rare = is fairly common'; *óoku náí* 'is/are not much = is little, are few'; *métta ni náí* 'is not profuse = is rare' and *métta ni* followed by various negative predicates—*métta ni warai-gao o misénaí* 'seldom shows a smiling face' (SA 2661.120b). Among the devices used for this purpose are sentence adnominalizations such as *S hoo de wa náí* 'none too (much) S, not over(ly) S', *S hazu ga náí* 'there is no reason to think that S', and *S wáke ga náí* 'there is no sense in S' or 'it is impossible for/that S', as in these examples from Hayashi 139-41: *Karada mo amari tuyói hoo de wa náí si ...* 'I'm none too sturdy, so ...'; *Seiseki wa yuusyuu na hoo de wa náikatta* 'My grades were none too outstanding'; *Nezumi ga néko ni katéru hazu ga náí* 'There is no reason to think that a rat can get the better of a dog'; *Hitóri de mit'atte, omosirói wáke ga náí* 'I can't enjoy seeing it all alone'. Notice also the expressions *V-té mo* (or *V-rú yori hoka*) *si-kata ga náí* and *V-rú* [*yori*] *sika/hoka náí* 'cannot but V'. English 'If had (but) known ...' often comes out in Japanese as *Siranákatta kara* 'Because I didn't know', with opposite polarization on the conclusion.

A number of adjectives contain an etymological suffix *-na-* which is merely intensive in meaning; although its relationship to the negative is not obvious, observe the undesirable nature of the qualities expressed:²⁴ *abunái* 'is dangerous', *gigotinái* 'is clumsy', *hasitanái*

24. There are quite a number of expressions where *naí* is vacuously used, merely for emphasis, e.g. *messoo mo náí* = *messoo na* 'absurd', *?suteki mo náku* = *suteki ni* 'splendidly'; cf. Y 193.

'is vulgar', hugainái 'is pluckless', okkanái 'is dreaded/dreadful', setunái 'is painful',^{24a} sukunái 'is little/scant, are few'. Sewasinái means the same thing as sewasíi 'is fidgety'.

Other adjectives can be shown to include a built-in etymological negative -ná-: adokenái 'is innocent', aénái 'is tragic, sad' (aénaku mo 'tragically enough'), akkenái 'is unsatisfying', azikinái 'is wearisome', hakanái 'is inconstant', ? kitanái 'is dirty' (perhaps from kata[ti] nái 'untidy' cf. kata-zukéru §3.13), kokoromoto-nái 'is apprehensive; is unreliable', menboku-nái 'is ashamed', mittomo-nái 'is indecent', mottai-nái 'is impious', nasake-nái 'is pitiful', siganái 'is miserable, poor, worthless' (thought to be from saga nái 'lacks omen'), omoigake-nái 'is unexpected' (omoigake- is a bound noun), ? osanái 'is juvenile', ? sugenái 'is curt', sokke-nái 'is curt', syozai-nái 'is bored', tayori-nái 'is forlorn', yaruse-nái 'is cheerless', yogi-nái 'is unavoidable'. But the modern speaker is conscious of the negative element only in the obvious cases (those here transcribed with hyphens). Darasi-nái 'is slovenly' occurs also as darasi no nái 'lacking *darashi*', the bound noun being an inversion of sidara, an obsolete word meaning 'situation, plight, etc.': cf. the adjectival noun hu-sídara 'slovenly' (also used as an abstract noun 'slovenliness'). And moosi-bun {no} nái 'is faultless, ideal' is a phrase, as the accents tell us; so also ími {no} nái 'meaningless', but kuttaku {no} nái 'carefree' provides no accentual evidence. Probably we should treat taemá {no} nái 'is unceasing' as a phrase, though the accent cancellation keeps this from being obvious; and the omission of nó ← gá is apparently obligatory in the adverbial form taemá náku 'unceasingly'. Wáke ná⁽ⁱ⁾ 'is easy, simple' and wáke náku 'easily' are usually pronounced as syntactic reductions.

When an imperfect negative precedes utí(-) 'interval' the meaning is '(during) the time while ... has not yet happened' or 'before ... happens', as in these examples: Okyakusan ga kónai utí(-) ni, kodomo ni góhan o tabesásete simaimasyóo 'I guess I'll finish feeding the children before the guests get here' (BJ 2.282); ... mendóo ni naránu utí(-) ni háyaku ... 'early on [while it has still not become =] before it gets to be a nuisance' (SA 2673.42c); Soo naránai utí(-) ni, ... 'Before it comes to that ...' (SA 2673.28c); Anmari matánai utí(-) ni básu ga kíta (= Mátu hodó mo náku básu ga kíta) 'The bus came before I had waited very long = I didn't wait long before the bus came'; Saménee utí(-) ni háyaku kúi née (= Saménai utí ni háyaku kúi ná yó) 'Eat it quickly before it gets cold' (Kb 154a).

Alfonso 602 says it is best to use ní after utí(-) in such expressions whenever the final verb is affirmative, but to replace ní by wá whenever the final verb is negative, giving the examples: Wasurénai utí(-) ni yatte kudasái 'Do it before you forget'; Áme ga yamanai utí(-) wa kaerimasén 'I won't leave till the rain stops'. A well-known example of the last type is the proverb Níkkoo o mínai utí(-) wa, kékkoo to iú na 'Don't say kékkō (splendid) till you've seen Níkkō!'.

But V-(a)nai utí(-) can occur in other contexts besides the adverbializations represented by ní or by ɸníɸ wa above. For example: Nán de ore no kaisya ga, teikei no naiyoo mo kimaranai uti KARA Hwóodo ni kabu o motasénakute naránai no ka 'Why must my company let Ford start having stock before the details of the cooperation are decided?' (SA 2664.122c). In place of utí(-) some other reference to an interval of time will occasionally appear: Ún, sore wa syoosetu-ka ni naránai ZÍBUN(-) kara, bóku(-) no seikaku ni arimásu né 'Yeah, that's been part of my character since before I became a novelist' (Tk 4.285a).

The meaning of V-(a)nai utí(-) ni is very close to that of V-ru máe ni 'before ... it

24a. But MKZ⁵ says this is a contraction from setu ná[r]i 'is [cutting =] keen, fervent; is trying'.

happens', which often turns out to be no different in import from V-(a)nai máe ni/kara 'before ... doesn't happen': kónai utí ni = kúru máe ni = kónai máe ni/kara 'before one comes'. In place of V-(a)nai utí(-)/máe ni, some speakers will use V-(a)nai saki or V-(a)nu saki (+ ni/kara); such expressions have been in use since Heian days (Y 191-2): Ikanai saki kara káeru kotó bákari kangáete iru 'I think only of coming back (before I even go =) when I haven't even gone yet'. Compare these expressions with V-ru máde 'until it happens' and V-ru máde ni [wa] 'by the time that it happens', as in these examples: Káre ga kúru made mátte kudasái 'Please wait till he comes'; Tugí no dénsya(-) ga déru made iti-zíkan matánakereba naránai 'We'll have to wait an hour before the next train leaves'; Anó-hito ga kúru made ni wa deki-agarimásu 'It will be ready by the time he gets here'; Sikí no hazimaru máde ni wa sánzíp-pun ízyoo áru 'There is more than half an hour before the ceremony begins'. Compare sinanai utí(-) ni = sinu máde ni (wa) '(at some point in time) before dying' = íkite iru utí(-) ni 'while (still) alive'.

According to Kuno (1973.154), V-ru máe ni is the form to use if you know the event is going to happen; thus in speaking of the past you can not use V-anai utí(-) ni (...-ta) if the event is known to have happened. Sinanai utí ni 'before one dies' will be used only if the 'one' is still alive when spoken about.

But it is sometimes possible, Kuno tells us, to use V-anai utí(-) KARA (...-ta) in sentences where V-anai utí(-) NI would be inappropriate.

In addition to utí(-) there are a few other postadnominals that are often preceded by a negative, e.g. mamá (de) '(in the original and unchanged state)': ... naoránai mamá de taiin [sita] 'was discharged from the hospital uncured' (SA 2679.138b).

8.8. LEXICAL NEGATIVES

In addition to syntactic negatives—the various forms of the sentence conversions we have discussed in earlier sections, together with such words as damé = ikenai 'no good'—there are a number of individual lexical items that have a negative meaning built in. Some of these words are obvious reductions from negative sentences, e.g. compounds of the type N [ga] náí 'lacks N' → N-náí 'N-lacking'. Others are the result of attaching a negative prefix either to a free word or to a bound morpheme.

In English we have a number of negative prefixes, notably 'un-, in-, a(n)-, non-' and the looser 'not-, no-'; there is also the suffix '-less'. Japanese has borrowed a set of negative prefixes from Chinese; they are mostly attached to words of Chinese origin, but occasionally to native Japanese words—or even to English words. Here are the prefixes, listed with a few examples to illustrate some of the kinds of free words they can be attached to and the word classes that result:

PREFIX AND MEANING	ATTACHES TO	RESULT	EXAMPLE
hi- 'not being, non-' (cf. § 13.5a)	N	N	hi-sentóoin 'a noncombatant' from sentóo-in 'combatant'
	N	AN	hi-zyóosiki 'senseless' from zyoosiki 'good sense'
	AN	AN	hi-kagakuteki 'unscientific' from kagaku-teki 'scientific'
	N	PcN	hi-sénsai 'undamaged by the war' from sensai 'war damage'

	(N/)VNT	PcN	hi-kóokai 'private, closed' from kookai 'open(ing) to the public'
			hi-tóosei 'uncontrolled' from toosei 'control(ling)'
hu- 'not' (cf. § 13.5a): 'not doing'	(N/)VN	N	hu-sánsei 'disapproval' from sansei 'approving'
			hu-góokaku 'disqualification' from gookaku 'qualifying'
			hu-syóoti 'noncompliance' from syooti 'complying'
	N < VI inf	N	hu-bárai 'nonpayment' from harái 'payment < pay'
			hu-wátari 'nonpayment' from watari 'transferral < be transferred'
	(N/)VN	N/AN	hu-kétudan 'indecision; indecisive' from ketudan 'deciding'
	VI inf	N/AN	hu-yúkitodoki 'negligence; negligent' from yuki-todóki 'attend to details'
			hú-nare 'inexperience(d)' from náre 'become familiar (with)'
'not being; un-, in-'	N	AN	hu-táme 'disadvantageous' from tamé 'advantage'
	AN	AN	hu-tásika 'uncertain' from tásika 'certain'
			hu-seikaku 'inaccurate' from seikaku 'accurate'
'lacking; -less'	N	N	hu-zinboo 'unpopularity' from zinboo 'popularity'
	N(/VN)	N	hu-sin'yoo 'distrust' from sin'yoo 'trust'
	N < VT inf	N	hu-kókoroe 'imprudence' from kokoróe 'knowledge < know'
	N	N/AN	hu-hón'i 'reluctance; reluctant' from hón'i 'will'
	N	(?N/)AN	hu-kisóku 'irregular(ity?)' from kisóku 'rule, regulation'
			hu-ninki 'unpopular(ity)' from ninki 'popularity'
	N < VI inf	PcN/N	hu-túriai 'unbalance(d)' from turi-ái 'balance'
'bad; mis-'	N	N/AN	hu-mímoti 'misconduct; profligate' from mimoti 'conduct'
			hu-dóotoku 'unvirtue; unvirtuous' from dootoku 'virtue'
			hu-kéizai 'poor economy; uneconom- ical' from kéizai 'economy'

	N/AN	N/AN	hu-kénkoo 'ill health; unhealthy' from kenkoo 'health; healthy' hu-bénkyoo 'want of application; inattentive' from benkyoo 'diligence; diligent' (also VN 'study')
bu- ₁ (= hu-)	AN	AN	bu-tyóohoo 'impolite; awkward; unaccustomed (to tobacco/liquor)' from tyoohoo 'convenient' bu-kíyoo 'clumsy' from kíyoo 'adroit'
bu- ₂ (= mu-)	N	AN	bu-áísoo 'unsociable' from aisóo(¯) 'sociability' bu-áísatu 'uncivil, impolite' from áísatu 'greetings, civilities' bú-kímí(¯) 'weird, uncanny' from kímí 'feeling'
mu- 'lacking, un-' (see § 13.8; § 13.5a)	N	PcN	mu-hízuke 'undated' from hizuke 'date; dating' mu-zyóoken 'unconditional' from zyookén(¯) 'condition'
	N(VN)	PcN	mu-syózoku 'unattached' from syozoku 'belonging'
	N < VT inf	PcN	mu-tódoke 'without notice/leave' from todoké 'notification' < todóke 'notify'
	N	AN	mu-ími 'meaningless' from ími 'meaning' mu-kyóoiku 'uneducated' from kyooiku 'education'
	N < VI inf	AN	mu-kángae 'thoughtless' from kangáe 'thought' < kangáe 'think'
mi- 'not yet ...-en' [Object of VNT becomes subject of PcN.]	VNT	PcN	mi-háitoo 'undistributed' from haitoo 'distributing' mi-káiketu 'unsolved' from kaiketu 'solving'
	VNT/(VNI)	PcN	mi-kánsei 'incomplete' from kansei 'completing; becoming complete'
	VNI	PcN	mi-húkúin 'undemobilized' from hukuin 'getting demobilized'
	N	PcN	mi-séinen 'underage, minor' from seinen 'an adult'

In addition there is the new prefix *noo-* 'no-' taken from English as in the sports terms *noo-purée* 'no play', *noo-géemu* 'no game', *noo-hítto* 'no hits', *nóo-ran* 'no runs', *noo-táimu* 'no time', *noo-káunto* 'no count', *noo-sáido* 'no side', *noo-siido* 'unseeded (team)',

noo-sutéppu 'no step', and noo-tátti 'untouched', as well as these more general terms: noo-sutókkingu 'stockingless', noo-nékutai 'no necktie = open-necked', noo-bura 'bra-less' (SA 2813.73), noo-sumókingu 'no smoking', noo-kánkei 'no interest' (SA 2678.46b), noo-kátto 'uncut, uncensored (film)', and noo-kómento 'no comment'. These all appear to be precopular nouns. Other English negative prefixes will be found in non-sutóppu 'nonstop', non-puro 'non-pro(fessional)', non-hwíkusyón 'nonfiction', and an-báransu 'unbalance; imbalance'.

Mikami 1963a.34 notes that some Japanese lexical negatives lack ready affirmative antonyms: hu-kéiki 'depressed', hu-an 'uneasy', bú-zama 'unshapely, unsightly', etc. These remind us of such English lexical negatives as 'uncouth, inane, unkempt, anonymous' etc. There are also pairs which differ in that the affirmative has a suffix (-teki) lacking in the negative: zyoosiki-teki 'sensible' but hi-zyóosiki 'unsensible', kisoku-teki 'regular' but hu-kísóku 'irregular', keizai-teki 'economical' but hu-kéizai 'uneconomical', etc.

9 ADVERBIALIZATIONS

I have chosen the term adverbialization to cover a general category of five groups of processes that can be applied to a nuclear or expanded sentence, corresponding to the morphological categories of INFINITIVE (see also §20, §5), GERUND, PROVISIONAL, CONDITIONAL, and REPRESENTATIVE. Each of these categories will enter into many further conversions and participate in larger and more involved structures. I am assuming a stage between those larger structures and the underlying sentences that are here “adverbialized”. In many instances the need for that stage is obvious; in others (particularly for the infinitive and the gerund) it could be argued that the intermediate stage is needed only for the purpose of putting the proper surface shape on the sentence, i.e. providing the appropriate morphological endings. I have chosen an overall view that I believe is easier on the reader, if harder on the linguist; and I prefer not to argue here the reasons for the integrated treatment of each category discussed.

9.1. THE INFINITIVE

The infinitive has the shape \dot{i} for consonant verbs, abbreviated to zero for vowel verbs (with \dot{s} for *suru* and \dot{k} for *kuru*—the imperfects have assimilated the first vowel to the second); adjectives take the shape $\dot{-ku}^1$ [after removing the $\dot{-i}$ which is the imperfect ending of our nuclear sentence corresponding to the verbal $\dot{-(r)u}$]; and the copula *dá* has the special shape \dot{n} in most cases, but in the colloquial \dot{de} —identical with the gerund—before $\dot{wá}/\dot{mó}/\dot{sáe}$ in the nuclear-focus conversions with $\dot{ár-}$ (§5), and when attaching $\dot{-su}$ (= $\dot{-másu}$) in the polite stylization of §22.

The foreigner sometimes fails to recognize a monosyllabic verb infinitive; the following list may prove helpful.² The forms on the left are tonic, those on the right atonic. But “atonic” inflected forms actually have a basic accent on the final syllable, heard only when a particle is attached, so you must be prepared to hear both columns accentuated in the

1. But in Kansai the *k* drops to leave only $\dot{-u}$ with appropriate vowel crasis: $\dot{o}oki\text{-}ku = \dot{o}oki[k]u = \dot{o}oki'u / \dot{o}okyuu/$, $\dot{r}ási\text{-}ku = \dot{r}ási[k]u = \dot{r}ási'u / \dot{r}ásyuu/$, $\dot{w}áru\text{-}ku = \dot{w}áru[k]u = \dot{w}áru'u / \dot{w}áruu/$, $\dot{s}íro\text{-}ku = \dot{s}íro[k]u = \dot{s}íro'u / \dot{s}íroo/$, $\dot{t}áka\text{-}ku = \dot{t}áka[k]u = \dot{t}áka'u / \dot{t}ákoo/$, $\dot{y}ówa\text{-}ku = \dot{y}ówa[k]u = \dot{y}ó[w]oo = \dot{y}óoo/$. $\dot{N}áku$ is $\dot{n}á'u / \dot{n}óo/$ and $\dot{o}okiku \dot{n}áku$ is $\dot{o}oki'u \dot{n}á'u / \dot{o}okyuu \dot{n}óo/$, $\dot{i}ki\text{-}taku \dot{n}áku$ is $\dot{i}ki\text{-}ta'u \dot{n}á'u / \dot{i}kitoo \dot{n}óo/$. The long $\dot{o}o/$ is often shortened: $\dot{a}ka[k]u = \dot{a}ka'u / \dot{a}koo/ \rightarrow \dot{a}ko \dot{n}áru$ ‘becomes red’ (Zhs 4.16). An example of $\dot{o}o'u / \dot{o}o[o]/ < \dot{o}o[k]u$: $\dot{D}ekéru [= \dot{d}ekíru]$ to, $\dot{s}oko \dot{e} \dot{h}ataraki \dot{n}i \dot{i}ku \dot{m}ón \dot{m}o \dot{o}o \dot{n}áru \dot{d}esyoo$ ‘When it is done, there will turn out to be quite a few who will go there to work, too’ (SA 2686.50c—the mayor of Asuka village, Nara). The long adjectives that end in $\dot{-si}$ are treated differently by some speakers: in *Kyōto* $\dot{y}orosi[k]u$ is pronounced both $\dot{y}orosyuu$ and $\dot{y}orosii$ (identical with the imperfect); examples will be found in Zhs 4.211, 215 ($\dot{y}orosii \dot{n}i = \dot{y}orosiku$), 241 ($\dot{u}tukusii \dot{s}ite = \dot{u}tukusiku \dot{s}ite$), and 254 (shortened to $\dot{y}orosi$). Another example: *Kimono no konomi mo, yayakósi' narimásita náa* ‘Preferences in clothing have grown complicated, too, haven't they’ (Tk 4.58a). (Is this a special instance of the widespread merger of the syllable \dot{syu} with \dot{si} ?) The Kansai infinitives are quite old; forms such as $\dot{m}izika[k]u$ can be found in texts as early as 1020 AD (Kokugogaku jiten 1053a). On the use of the $\dot{-u}$ forms with $\dot{gozaimásu}$ in the standard language, see §22.2. It should be noted that in the *Chūgoku* area a few short adjectives have incorporated the imperfect ending $\dot{-i}$ into the stem: $\dot{k}ói\text{-}(i/ku)$ ‘saturated’ < $\dot{k}ó\text{-}$, $\dot{s}ui\text{-}(i/ku)$ ‘sour’ < $\dot{s}u\text{-}$; $\dot{o}i\text{-}(i/ku)$ ‘many’ < $\dot{o}o\text{-}$, $\dot{t}oi\text{-}(i/ku)$ ‘distant’ < $\dot{t}oo\text{-}$ (Shin Nihongo-kōza 3.213). The stem $\dot{y}ó\text{-}$ ‘good’ is $\dot{é}/\dot{y}ó\text{-}$; $\dot{y}ói = \dot{i}$ ‘is good’ is usually $\dot{é}e < \dot{é}\text{-}$. The stem $\dot{n}á\text{-}$ ‘be lacking’ is $\dot{n}é/\dot{n}á\text{-}$; the infinitive is $\dot{n}é < \dot{n}é\text{-}ku < \dot{n}ái\text{-}ku$, or $\dot{n}óo < \dot{n}á\text{-}[k]u$; and the imperfect is $\dot{n}ái$, often pronounced $\dot{n}éé$ (ibid.).

2. In addition to $\dot{w}á$, $\dot{y}á$ (= $\dot{w}á$), and $\dot{m}ó$, the monosyllabic command-markers $\dot{r}ó$, $\dot{y}ó$, \dot{i} (= $\dot{y}ó$), and

same way: from hearing *kí wa/mo sinai* you cannot tell whether the intended meaning is 'does not come' or 'does not wear'. And when used before a juncture the final accent drops so that a phrase-final ... *kí* can mean either 'comes and' or 'wears and'. Thus the only time there would be a difference between the tonic and atonic monosyllabic infinitives is when they enter into certain derivations: there are speakers who make a distinction between *ki-tái* (*ki-tákatta*) 'wants (wanted) to come' and *ki-tai* (*ki-takátta*) 'wants (wanted) to wear', between *ki-táku náí* 'does not want to come' and *ki-taku náí* 'does not want to wear'. The infinitives listed below result from the crasis (i.e. amalgamation) of the stem vowel with the infinitive ending *-í* which has a basic accent of its own: *kí* < *kí-í*, *ki* (= *kí*) < *ki-í*; *dé* < *dé-í*, *ne* (= *né*) < *ne-í*. The verb stems themselves are basically either tonic (*kí* 'come') or atonic (*ki* 'wear'). On the accentuation of these forms and on the irregularities of some of the other forms of 'come' and 'do' (such as the imperfects *kúru* and *suru*) see Martin 1967.

TONIC MONOSYLLABIC
INFINITIVES

dé 'emerge'
é 'get'
hé 'pass'
hí 'get dry'
í₁ 'shoot (arrow)*'

de 'turnout etc.*'

("-ki = -gi 'wear')

ne (*ga tarinai*) '(lacks) sleep'

ni (*ga tarinai*) '(lacks enough) cooking'

*But modern speakers often treat this verb as a consonant type, with the infinitive *iri* (and the negative *iranai*).

*The atonic accentuation is irregular; the irregularity is true also of Kyōto, but Kagoshima has the historically authentic accentuation, corresponding to Tōkyō tonic *dé*.

In western Japan monosyllabic verb infinitives are often lengthened; thus in Ōsaka *Mii-to mo an no ya = Mí-ta[k]u mo áru no da* 'I do want to see it' (Zhs 4.201—the length is verified by Footnote 1). This presumably gives evidence of an old juncture before the desiderative *-tá-* (cf. §7); it is unclear whether the length itself is to be attributed to the general secondary lengthening of monosyllabic words that is common in western Japan or whether it is an uncontracted relic of the infinitive ending *-í*. In any event it is to be distinguished from the emphatic particle *í = yó* used in plain commands: *mí i = mí {ro}* yo 'Look!', *ne í = ne {ró}* yo 'Sleep!' On contractions of verbal infinitive + *ya = wa* (such as *Kamáya sinai = Kamái wa sinai* 'It makes NO difference'), see §5.1.

ná = na[sái] can attach to these infinitives. Do not confuse *mi-ná* (= *mi-nasái*) 'look!' with *miná* 'everyone', *si-ná* (= *si-nasái*) 'dol!' with *sina* 'goods'; *i ró* 'stay!' with *iró* 'color', *ki ró* 'wear!' with *kiro* 'kilo', *si ró* 'dol!' with *siro* 'castle' or *siro* 'white'.

The negative infinitive is made by adding the usual adjectival infinitive ending -ku to the appropriate negative adjectivals:

Yobu.	→	Yobanai.	→	Yobanaku ...
Ookíi.	→	Óokiku náí.	→	Óokiku náku ...
Hón da.	→	Hón zya náí.	→	Hón zya náku ...

But the use of the verb negative infinitive is rather limited: it occurs mainly (in the colloquial, only?) in two constructions:

(1) *V-(a)náku wa náí* is another way of saying *V-(a)nai kotó wa náí* 'it never happens that one doesn't = one always does' or 'it isn't that one doesn't = one does do', § 14.1.1; *V-(a)náku mo náí* 'it never even happens that one doesn't' or 'it isn't exactly that one doesn't'—as in ... *soodan ni noranáku mo náí ...* 'I may accept the offer' (Fn 27a). (Apparently *V-(a)náku wa/mo áru* are unusual.) An example: *Kore máde ígai(⁻) ni sukúnákatta kono syú no "hansen-hwóoku" ga toozyoo sitá no mo, zidai-zyóokyoo no hitótu no arawaré to ienáku wa náí* '(There is no reason we can't call it =) We can well call it one of the manifestations of the state of the times that this sort of "antiwar folk[song]", surprisingly rare till now, has appeared on the scene' (SA 2649.100d).

(2) *V-(a)naku náru/suru* 'gets/makes it so it doesn't happen' is an application to the negativized sentence of the mutative conversion of §9.1.11, for which the affirmative parallel works only with adjectivals (*A-ku náru/suru*) and nominals (*N ni náru/suru*); for verbals you have to use a nominalized circumlocution *V-ru yóo ni náru/suru*. Thus the sentence ... *totu-zen, kóe ga dénaku nátte simatta* 'suddenly she lost her voice' (SA 2657.64c) might be followed by ... *yat-tó^l kóe ga déru yóo ni nátta* '... she finally found her voice'. And *V-(a)naku náru/suru* can also be replaced by *V-(a)nai yóo ni náru/suru*.

The limited use of the *V-(a)naku* form is the reason that the form was missed entirely in earlier studies, such as Martin 1952 based on Bloch, where the negative precopular noun that is also the LITERARY negative infinitive *V-(a)zu* (§8.5) was mistaken for the unnoticed colloquial negative infinitive.

The infinitive is sometimes used as an equivalent of the gerund 'is/does and ...' in its several meanings (see p. 479):

(1) '... and then' (TEMPORAL SEQUENCE): *Mótoko wa tatami.no heyá e turete ikare, hara-óbi o tóku kotó o mei-ziraréru(⁻)* 'Motoko is taken into the mat-floored room and (then) ordered to undo her waistband' (Ig 1962.95); *Yagaté^l sono natú mo súgi áki ni nátta* 'Before long summer was over and it became autumn' (Ig 1962.98); ... *mokuzen ni okóri, sakari, ogori, yabúre, horóbite(⁻) sáttá(⁻) Héike itimon no únmei ...* 'the fate of the Taira family which before one's eyes rose, flourished, indulged itself, was defeated and perished' (Ōno 1966.215).

(2) '... and so' (CONSEQUENCE): *Kawara ní wa isí ga óoku, aruki-nikúí* 'There are so many stones on the riverbed that it is hard to walk' (Ig 1962.98); *Syoozi-gami wa kánari húruku, yogorete iru* 'The shoji paper is rather old and (hence) soiled' (Ig 1962.95); *Sakari o súgita Háruko wa kodomo mo náku hitóri rusú-i site iru* 'Haruko, past her prime, has no children and so she looks after the house alone' (Ig 1962.94); *Kúmó ga hikúku, yuudati dé mo ki-sóo datta* 'The clouds were so low it looked as if we were perhaps in for a shower' (Fn 407b); *Sono syoozi ni tiisái aná ga aite i, gaikoo [= sóto no hikarí] ga sasi-itte iru* 'There is a small hole in the shoji so that the outside light penetrates' (Ig 1962.92).

(3) '...-ing' (MANNER): ... *kotosi wa kono sinsei no de-asi ga reinen ni náku hayái*

'this year these applications are off to an earlier start than [we have] in ordinary years' (SA 2663.26a). (For A-ku, see §9.1.11.)

(4) '... and/but' (CONTRAST): *Áni wa isya ni nári, ootoó wa bungákú-sya ni nátta* 'The older brother became a physician and the younger became a literary scholar'; *Koo sita Kurémurin o meguru ryuusetu wa, náni ka ni tükete okori-yásuku, sosite itu mo ryuusetu ni owatte kíta* 'Such rumors centering on the Kremlin are apt to arise at the least little thing, but then they have always ended up as (groundless) rumors' (SA 2673.130c)—this might be regarded as Type (1) above.

(5) '... and yet (even so)' (CONCESSION): *Utukúsiku mo kanasii(-) zyozí-si 'a beautiful yet sad epic'* (SA 2680.114a)—it is unusual to find focus when the infinitive is used as if a gerund.

(6) '...-ing = if/when' (CONDITION): Examples lacking.

(7) 'by ...-ing' (INSTRUMENT): *... sára ni tóosi(-) o si zyuyoo o tukuri-dasanai to hukyoo ni nátte simau* 'You end up with a depression if you don't start creating demand by investing new capital' (SA 2674.44a).

(8) '... and in proof thereof' (WITNESS, EXEMPLIFICATION): Examples lacking.

(9) '... and also (moreover)' (SIMPLE CONJOINING): *Yamá ga tákaku, mizu ga kiyói* 'Its mountains are tall and its waters pure'; *Kessyoku mo yóku, syokúyoku(-) mo áru* '[He?] has a good color and an appetite' (Ig 1962.92); *Koko máde wa tati-iru hitó mo náku, kaze mo oyobanákatá* 'Here there were no intruders, nor was it reached by the wind' (Ig 1962.93); *Kíyoku tadasii seizi* 'politics that is clean and proper'; *Karuku tiisái kagamí o moo hitótu watasita* 'She gave him a lighter and smaller one [mirror]' (Kawabata: *Suigetsu*); *Táda, mósi, káre ga itte itára, keikaku wa moo sukósi timitu ni nári, sumúuzu ni yattá daróo to itte okimasyóo* 'I'll just say that if he had been away the project would have become more exact and have gone smoother' (SA 2677.150d).

Notice also the semiliterary use of the infinitive for the gerund in phrasal postpositions such as *ni atari = ni atatte* 'toward' or 'in event of', §9.7.

Sometimes the infinitive is used to join clauses within a larger clause marked by the gerund, as in this example of a manner gerund: *Migi-te ni haná o móti, hidari-te ni óke o ságe, kosi ni hóoki(-) o sásite, arúite iku* 'He walks away with flowers in his right hand, bucket hanging from his left, and broom stuck in his belt' (Hayashi 86). But sometimes a gerund will turn up within a clause that is joined with other clauses by the infinitive, as in this example of a consequential (= causal) gerund: *Booen no síya ga akarúkute, hyooteki ga yóku mie, zyusin ga karuku, siká-mo handoo ga sukunái* 'The field of the telescopic [gunsight] is bright so that the target is easy to see, the [gun] barrel is light, and in addition there is little recoil' (SA 2685.99c).

The use of the infinitive for the gerund is more common in literary and written styles, but it is also heard in certain clichés common to everyday speech (*tokí ni yori hito ni yotté wa* 'depending on the time and the person', for example) and in slightly stiff colloquial speech such as often used by older men:³ *Yo-húkási si benkyoo sité mo damé da* 'It will do you no good to stay up till all hours studying'; *Áme de géemu ga tyuusi ni nári, zannén desita* 'The game was called off because of rain, what a pity!'

3. According to Kuno 1973.195 V-te V cannot be used when two simultaneous actions or states are involved, and V-i V will be used instead: *yóku asobi (*asonde) yóku benkyoo suru* 'plays hard and works hard'. The two verbs in V-te V must both be voluntary (self-controllable) or both be involuntary, according to Kuno.

Nominal sentences usually replace the colloquial copula *dá* by *de áru* (literary *nári* = *ní* ... *ári*), so that *de ári* is used where we expect to find the infinitive in use for the gerund (= *dé* or *de átte*): *Syúhu de ari, tíisa na kodomo no hahaoya de áru watakusi ni tótte, ...* 'For me who am a housewife and am the mother of small child(ren) ...' (SA 2688.146); *Watasi no tamé de mo ári, háha no tamé de mo átta no de wa náí ka to omóu n desu ga ...* 'I wonder whether it wasn't both good for me and good for my mother ...' (R); *Sikási káre-ra wa, sugúreta búnga de ari goraku de áru éiga(¯) o hitóri de mo óoku no hitó ni mise-tái to dóryoku(¯) site kíta daké de áru* 'But they have only endeavored to show to as many people as possible films that are outstanding culture and are entertainment (at the same time)' (SA 2679.116d); ... *óohi wa, otto de ári teki [= katákí] de áru óo ni, mata aimasyóo, tó nikkóri hohoénde rooyá ni modótte yuku* '... the queen, smiling "See you later" to the king who is her husband and is her enemy, goes back to the dungeon' (SA 2665.110b). Thus it is rare to find the simple infinitive *ní* used for the gerund *dé* 'it is and', except with the negative precopular noun V-(a)zu ni §9.6. Ig 42, however, suggests two examples: *Sore ga munén-sa ni [= de] wakáyome(¯) wa sato e káetta kiri modótte kónai* 'With that as a resentment, the bride returned to her village and would not return'; *Káno-zyo wa ... hóho daké ga momoiro ni [= de], sikási ...* 'Just her cheeks were pink, but ...'. And apparently the following expressions are infinitive adverbializations of the copula, since *sité* cannot be comfortably added in a way that would make them eligible as mutative conversions with ellipsis (§9.1.11-12): *Sono syooko ni, ...* 'As evidence for that, ...'; *Kore/Sore tó wa betu ni, ...* 'Quite apart from this/that ...'; *Kóndo no sin-káisyá to wa betu ni, Arasuka-sekiyu-káihatú to iu kaisyá ga áru n desu* 'Separate from this new company there is a company called Alaskan Oil Exploitation' (SA 2666.21d).

The use of *ní* to mean 'as' is perhaps best treated as the copula infinitive: *Uti wa okyakusámá ni gaizin no katá ga óói n de, asupárágasu, burókkórii nádo no seiyoo-yásai ga yóku demásu* 'As customers we have mostly foreigners, so lots of foreign vegetables like asparagus and broccoli are out for sale' (SA 2679.114e); *Hawaii-gúntoo no hitótu ni Maui-sima ga áru* 'As one of [= Among] the Hawaiian Islands there is the island of Maui' (SA 2689.79—also *Maui-zima/-too*). Then there are such idioms as *tó ni mo káku ni mo = tó-mo-kaku [mo] = tó-mo-are káku-mo-are* 'whether it be that way or this way, both that way and this way' (also said as *ká ni mo kákú ni mo*) and *ká ni kákú ni = dóo mo kóo mo* 'somehow or other'; cf. *to-kaku* 'thus and so = what with one thing and another', not to be confused with *tokaku* 'rabbit horns = something absurd, impossible to exist' (with which it is sometimes associated by false etymology). Compare also the use of *ní* to link nouns in a list (§2.8).

Sometimes *ní wa* will be found in uses similar to *dé wa* as an equivalent of *nára* in stating a condition, e.g. in *-(a)nái kotó ni wa* 'in the event that one does not' (more or less the same as *-ru kotó nási ni wa* 'in the lack of the event that one does' = 'unless', see §14.6—end remarks) as in this example: *Koko de náni ka té o útte okanai kotó ni wa áto de símatu ga tukánaku náru ni tigai náí no da* 'If we don't take some step at this point surely the matter won't get settled later' (KKK 3.139). Similar is *V-(a)zu ní wa* 'unless', p. 379 (§8.5). Notice also *V-rú/-tá kara ni wa* 'now that ...' (§17.1).

When connecting sentences the verb negative *V-(a)nákute* is normally replaced by *V-(a)nái de* (§9.2) and *V-(a)naku* is replaced by *V-(a)zu ni* (§8.5), but *nái*, the negative suppletive of *áru*, is treated in the same way as the adjectives: *O-kane ga náku (= nákute) komáru* 'I am embarrassed for money': cf. *V-ru máde mo náku* 'there is no need to' (as in

iu máde mo náku 'needless to say') and X dake/bákari de náku 'not only X (but)', both of which can have nákute or nási ni (§ 13.9) instead of náku. The resultative conversion V-te áru has the negative V-te nái and for that the sentence-connecting forms V-te náku{-te} are used. And the form náí de (for nákute) as a connective is known throughout eastern Japan, though it is not usual in Tōkyō. On the use of the infinitive of the adjective negative (A-ku náku) and of náku see the remarks at the end of § 8.4.

The verbal infinitives have a number of uses not shared with their adjectival and nominal counterparts; conversely (§ 9.1.11) there are a number of uses of the adjectival and nominal infinitives not shared with the verbal infinitives. The infinitive is the usual form in which a verb enters into a derivational compound; e.g. -i-mono, -i-kata, -i-miti, -i-yoo (ga náí), and numerous verb + verb compounds.⁴ The verbal infinitive is the form on which polite stylization is based: -i-másu (§ 22.1). And there are many DERIVED NOUNS made from verbal infinitives; the shape is identical except that as a rule the accent (if any) moves to the last syllable: yasúmi 'to rest' → yasumí 'vacation'; Iki mo kaerí mo dénsya da 'Both the going and the returning (the trip out and the trip back) are by electric train'. But all derived nouns from COMPOUND verb infinitives are atonic—for both younger and older speakers: yobidasi 'summons' from yobi-dási 'to summon', norikae 'transfer' from nori-kae or (younger speakers) nori-káe 'to transfer'. A few of the derived nouns are irregularly accentuated (see § 14.5). There is at least one derived noun made from a bound verbal noun (the Chinese loanmorph satu) + the infinitive si (= sí) from the auxiliary si-: the noun is sassi 'conjecture' as in sassi ga túku 'perceives', sassi ga yói 'is perceptive'—cf. sas-súru(ˉ) 'surmises' with the infinitive sás-si(ˉ). There is also kanzi 'feeling' from kan-zi, the infinitive of kan-ziru 'feels'. Verbal infinitives underlie a few DERIVED ADVERBS, apparently WITHOUT the accent shift: túmari 'after all; in short' [accent irregular], nóbe 'in toto; altogether', toriwake (= toriwakete) 'especially', yori-yori '(coming together) from time to time' (an uncommon adverb from the iterated vi. inf. 'congregate'), ... The adverb hiki-tuzuki 'continuing' would appear to be directly derived from a noun hikitzuzuki 'continuation; sequel' (MKZ⁵ 931a), in turn derived from the compound verb infinitive hiki-tuzúki = hiki-tuzúite 'continuing'. (See also the adverbs derived from phrases with náku, cited at the end of § 8.4.) In ari-no-mamá 'as it is, undisguised' we probably have a derived noun *arí from ári 'existing', as the accentuation would indicate, but there seems to be no other evidence for the noun; the noun-like uses of ári are either the infinitive itself or direct nominalizations of the infinitive used in place of the literary predicative form.

There are also a few relics of nouns derived by the deverbative suffix -a:⁵ horá 'cave' from hór- 'dig', nawá 'rope' from nów- 'twist, twine', and possibly matá 'crotch, fork' from mát- 'await', tuká 'hilt' from túk(e)- 'attach', utá 'song' from út- 'strike; perform', oyá 'parent' from óy(i)- 'grow old', murá 'village' from múr(e)- [= mura-gár-] 'gather'

4. But in some cases the accentuation suggests derivation by way of a noun derived from the infinitive. Thus the suffix -(k)kura—an abbreviation of kurabe 'competition' the derived noun from the infinitive kurabe 'competing'—is preaccentuated when attached to a tonic infinitive as in kaké-(k)kura 'running race', nomi-(k)kura 'drinking bout', and tabé-(k)kura 'eating contest' but atonicizing when attached to an atonic infinitive as in osi-(k)kura 'a pushing contest'. Yet the derived nouns we would assume here are found in virtually no other uses.

5. But historically this may be a relic of the last phoneme of the base morpheme, if Ōno and Unger are correct in their views of Old Japanese morphophonemics.

[cf. *muré* 'crowd'], and *o-nara* 'flatulence' from *nar-* 'make noise'. And a few adverbs may be derived with this suffix, e.g. *séka-seka* 'fidgety, bustling' from *sék-* 'hasten'. The suffix is etymologically identical with the *-(a)-* of the negative, the voice conversions, and (in covert form since *-a-mu* > *-a-u* has now become *-oo*) the tentative-hortative forms. But of the two aboriginal verbal suffixes *-i* and *-a*, Japanese in its main-dialect line of development has opted overwhelmingly for the former as a source for derived nouns; in either case the accent of a tonic base moves to the suffix when the noun is derived.

Much rarer is the derivation of a noun from the adjective infinitive, perhaps because of the common suffixes *-sa* and *-mi* as well as use of the simple adjective base with no ending (the usual form in making compounds). But the following infinitive-derived nouns are attested: *tikáku* 'vicinity' (place noun), 'soon' (time noun)—from *tikáku* 'being near'; *háyaku* 'early (time)', as in *ása háyaku kara* 'from early in the morning', *háyaku kara siraretá ga* 'it was known early on but ...' (SA 2684.106d), and *háyaku ga ii* 'early would be better' (or is this elliptical?)—from *háyaku* 'being early';⁶ *osokú* 'late (time)', as in *osokú made* 'till late', *osokú ga ii* 'late would be better', *osokú ni denwa o site* 'phoning at a late hour', and *yóru osokú ni nátte* 'when it gets to be late at night' (cf. *osoku nátte* 'when it gets late')—from *osokú(-)* 'being late'; *tookú* 'distance, far off (place)', as in *tookú e iku* 'goes far off', *tookú o míru* 'looks into the distance', *tookú no uti(-)* 'distant house', *Yamabáto(-) ga tookú de naite iru* 'The turtledove is calling in the distance'—from *tookú(-)* 'being distant'; *kokú(-)* 'body, alcoholic strength', as in *kokú(-) ga áru* 'has body to it'—from *kóku* 'being saturated/dense/steeped'; *óoku* 'much, many', as in *óoku ga happyoo sareta* 'many have been published'—from *óoku* 'being much/many'. There are also a few examples of *N-hukáku* 'the depths of N' derived from *hukáku* 'being deep': *úmi no oku-hukáku kara* 'from the depths of the sea'; *hako no oku-hukáku o sagasita* 'searched the depths of the box'; *ie no oku-hukáku made nozoita* 'peered into the very depths of the house'; *úmi no soko-hukáku* 'the bottom depths of the sea'; ... But *hukáku* alone does not seem to occur as a noun. (Perhaps it is a quasi-restrictive *-hukáku*?)

Such derived nouns are somewhat more limited in distribution than other nouns—(**)óoku da* 'is much/many' would normally be replaced by the simple adjective *óói*—but they can not be treated as mere adjective infinitives (*osokú ni nátte* is unusual, for *osoku nátte* is what we expect of an adjective in this construction) nor even as derived adverbs, since—unlike adverbs—they occur with the markers *gá* and *ó*.⁷ If an *A-ku* occurs only with *kará* (and not with *gá/ó*) it can still be treated as an adverb, since adverbs of time will permit a temporal ablative (*sendatté kara* 'from a few days ago'); thus *húruku kara* 'from of old' does not establish *húruku* as a noun, and there is no **húruku ga*. A similar case is *syuusen gó(-) ma-mó-naku kara* 'from a short time after the end of the war'; it seems to be

6. Perhaps this accounts for *hayoo ni* 'early' in NE Hyōgo (Zhs 4.319) < *háya'u* < *háya[k]u*, used as a time noun; cf. *ása háyoo ni* (Tk 4.361), *háyaku ni* 'at an early time' (Kb 74a). However, it should be noted that *A-ku ni* forms are not uncommon in older literature as ordinary adverbials. The adverb *tóo ni* = *tokkú ni* 'long ago/since, already' is from the literary adverb *tóku* 'fast, early', the infinitive of an old adjective *tó-* 'early' probably identical with *tó-* 'sharp' (cf. *tóg-* 'sharpen'). Note also the use of *A-ku* {-ni} in mutative conversions (§9.1.11: p. 464)—reported for Kansai dialects and dialects of the northern Ryūkyūs. We still find ... *gótoku ni* as well as ... *gótoku = yóo* [ni]. These forms with *-ku* are much like precopular nouns; ... *gótoku da* (or *de aru*) = ... *yóo da*.

7. It follows that the adverb *soo* 'to such an extent' in ... *soo tookú made wa itte inái daroo* 'he can't have gone so very far away' (Ariyoshi 50) is modifying the phrase *tookú made*, in which the noun *tookú* has been adverbialized by the allative marker *made*.

acceptable to say Syuusen gō^[r](-) ma-mó-naku ga itiban hidói zidai dátta 'The most trying time was shortly after the end of the war', but perhaps an ellipsis is involved—[nō^[r] tokí], with the adverb adnominalized. (It is not entirely clear that we would be ill-advised to interpret háyaku and osokú too as derived adverbs of time, with the phrases marked by gá treated as elliptical.) There are a few derived adverbs ending in -ra-ku: nagáruku 'for a long time' from nága- 'be long', sibáruku 'for a while' (cf. siba-siba 'often'), For the regular derivation of adverbs from the adjective infinitive, see §9.1.11. Notice that the phrase kázu óoku 'many', normally spoken with minor juncture between the words (but treated by some speakers as a single word kazu-óoku), derives by ellipsis from kázu ga óoku 'the number being many' and is used only as an adverb; unlike óoku itself, the phrase cannot be marked with gá or ó, being merely the infinitive form of the phrase kázu [ga] óoi 'are many in number, are numerous'. However, the phrase is apparently a PREDICABLE adverb, since it can be adnominalized: ... kázu óoku no ízoku ga, kázu óoku no sísyá o kataru kotó ni yotte, ... 'depending on the numerous survivors telling of the numerous dead' (SA 2687.106b); Kázu óoku no náka kara táda ití-rei o ageru to, ... 'To cite just one example from many, ...' (SA 2672.138c—to be read with a major juncture before táda, minor junctures elsewhere). The antonym is kázu sukúnáku from kázu [ga] sukunái 'are few in number'; apparently this is never treated as a single word *kazu-sukúnáku.

A number of adjective bases also occur as pure nouns, notably the color words (áo 'blue' etc.—cf. §13.8); and some are used as precopular nouns, at least in limited expressions. But *tóo no mukasi* = *tooi mukasi* 'the distant past' is from *tó*-[k]u 'early' (cf. p. 803n).

But the adjectivals and nominals enter into a number of similar constructions and derivations with the raw base (i.e. with -i and dá respectively removed); one traditional view of Japanese grammar is to regard the verbal infinitive as the same sort of "raw base", i.e. the -(r)ú form with the ending removed (and the extra -i of the consonant base explained as a morphophonemic anomaly). This traditional view ignores the similarities between the verbal infinitive and the adjectival and nominal infinitives (A-kú and N ní) in nuclear focus (§5) and in noun derivations, as well as the literary and written use of both as equivalent to the respective gerunds in the meaning 'does/is and (so)'. But it brings out the similarities between the verbal infinitive and the adjectival base (as well as the nominal base, i.e. the noun itself), especially with respect to the attachment of -sugiru (the excessive §9.1.7), *nágará* (the concurrent-concessive §9.1.3), and *-sóo da* (the evidential §20).⁸

The adjective base can occur by itself as an exclamation: *Óo, kówa!* 'Oh, frightful!' (Fn 34a); *Óo, sámu!* 'Oh how cold it is!'; *Átu!* 'It's hot!'; *Áa, íta!* 'Ouch, it hurts!'. (Cf. the occurrence of the adjectival noun in similar exclamations and in AN₁ mo AN₂: *Kírei!* 'Pretty!', *Hadé mo hadé!* 'Ever so gaudy!'. See §13.5a.) This is apparently very common in Ōsaka, where even the desideratives will appear (Maeda 1961.171-4).

The constructions referred to as "infinitive + auxiliary verb" are considered not as verbal derivations to be listed in the dictionary but as converted sentences, since they can

8. The conjugational forms of Japanese adjectives can all be derived from a base + -ku or (especially in the Ryūkyūs) -sa + ár- 'be', as stated in Martin 1967 and 1968. But there are two dialects (Isen and Hetono) on Tokunoshima in the northern Ryūkyūs that attach the auxiliary ár- directly to the base. (H 1966.226, 229.) In Aomori -ku is appended to the imperfect (A-i ku), as if a postadnominal.

carry with them the appropriate adjuncts. If the infinitive is from a sentence that takes objects, the objects stay intact in the converted sentence. Other verb compounds not only are created less freely than the ones mentioned here, but determine their own adjuncts without any predictable relationship to the infinitives that went into them: the derived compounds are derived only from UNEXPANDED nuclear sentences.

In SHAPE, the verbal infinitive + auxiliary verb more closely resembles derived compounds (since the infinitive is pronounced in one accent phrase with the auxiliary) in contrast with the gerund + auxiliary (§9.2.4) which permits a juncture to intervene so that a tonic gerund retains its accent and a tonic auxiliary is merely reduced to secondary accent. That is why we write the infinitive with a hyphen, just as we do for compound verbs, and discuss the accent for both kinds together. Unlike gerund + auxiliary, the infinitive + auxiliary permits no insertions; apparent exceptions turn out to be lexical derivatives, e.g. *tóri-mo naósazu* 'namely, in other words' from what underlies *tori-naósazu* 'without grasping anew'. Cf. *hiki-mo kiránai*, *omói-mo yoranai*, *oyobí-mo tukanai*, *ái-mo kawarazu* (pp. 329, 441). The shapes of a few verb infinitives are (sometimes optionally) truncated and assimilated when serving as the first member of certain specific lexical compounds:

hiki 'pull': *hik-káku* 'scratches, claws', *hik-kómu* 'draws back', *hik-kósu* 'removes, moves house', *hip-patáku* 'thrashes, slaps', *hip-pazúsu* 'dodges, parries', *his-sáku* 'tears apart', *his-sagéru* 'carries in one's hand', *hit-tukámu* 'grasps', ...; *hin-mageru* 'bends', *hin-muku* 'peels' (Tk 4.246a), ...

húki 'blow': *huk-kakeru* 'challenges, provokes', *huk-kireru* '(wind) dies down, (boil) bursts; makes a breakthrough, becomes liberated', *huk-komu* = *huki-komu* 'blows in, inspires'.

káki 'scratch': *kap-parau* 'filches'.

noki 'move off': *nop-piki* 'avoidance'.

tuki 'thrust': *tuk-kakéru* 'slips on (sandals, etc.)', *tuk-kómu* 'plunges, thrusts in', *tup-páru* 'stretches', *tup-púsu* 'hops into bed', *tut-tátu* 'stands up straight'; *tun-noméru* 'falls forward'.

kíri 'cut': *kit-té(-)* 'stamp', *kip-pu* 'ticket', *kik-kake* 'chance, start, clue', *kis-sáki(-)* 'sword point'.

mori 'heap': *mok-kiri* 'a single helping (of food)'.

nori 'mount': *not-tóru* 'usurps, hijacks', *nok-kakáru* = *nori-kakáru* 'gets on (aboard)'.

wari 'divide': *wap-pu* 'allotment'.

tóri 'take': *tot-té* 'handle, knob', *tot-tuki* 'beginning', *tok-kakari* 'beginning', *tot-tuku* 'starts'; *tok-kumu* 'tackles, grapples with (a problem)', *tot-tukamaru* 'gets caught', ... Cf. *tot-timeru* 'takes a person to task' < *tori-simeru*.

búti 'strike': *buk-kir-u* 'hacks, chops' (whence *bukkirá-boo* 'brusque, uncouth'), *buk-komu* 'pounds/throws in', *but-tobasu* 'beats', *but-taosu* 'knocks down', *bup-panasu* 'releases', *bu[t]-tukeru* 'flings, strikes'; *but-toosi* 'continuous, nonstop', *but-tuzuke* 'continuous, nonstop', *but-tigai* 'a cross'; *bun-naguru* 'pummels'.

káti 'win': *kat-te* 'one's own way/convenience'.

sási 'point': *sap-piku* = *sasi-hiku* 'subtracts'.

osi 'push': *op-paziméru* = *osi-haziméru* 'begins'.

oi 'pursue': *ot-te* = *oi-te* 'pursuer', *ok-kakéru* = *oi-kakéru* 'runs after', *op-paráu* = *oi-haráu* 'routs', *ot-túku* = *oi-túku* 'approaches'; *ot-tóru* 'snatches'.

humi 'tread': *hun-máéru* 'treads'; *hun-gómu* = *humi-kómu* 'steps in, raids', *hun-zukéru* = *humi-tukéru* 'tramples, despises'; *hunzibáru* < *humi-sibáru* 'ties up, arrests', *hunbáru* = *humi-háru* 'stretches one's legs'.

More complex contractions are encountered in *uttyáru* < *uti-yáru* 'throws away, neglects' and *seŋt}túku(ˉ)* < *seki-tuku* 'urges, presses'. In *mot-ageru* = *moti-ageru* 'lifts' and *kak-ageru* < *kake-ageru* 'hoists, publishes' the infinitive vowel simply drops; cf. *mesyagaru* = *mesi-agaru* 'partakes'.

The infinitive *si* (= *sí*) 'doing' is the likely source of the particle *sí*, both in its colloquial use as a sentence connector 'and' or 'and so' (§ 17.5) and in its more literary use as an emphatic, e.g. when followed by *mó* (see p. 501, §9.2.2).⁹

Very occasionally you may run across an adnominalization of what appears to be a direct nominalization of an infinitive carrying its adjuncts intact: ... *ún o tanómi no syookyoku-sénpoo ga sihai-teki dáta ga* 'Dominant was a conservative strategy relying on good luck that ... but' (SA 2666.102b). The adnominalized copula *nó* here is propredicative for an underlying *suru* 'does': **tanómi suru* → *tanóm [i sur]u* = *tanómu* 'relies on'. For a similar case, see *-i-hazime no*, §9.7.1.(11), where *nó* represents an underlying *sita* 'did'. Notice how these examples support the notion that the infinitive is actually the basic form of the sentence, with the finite forms derived by way of auxiliary accretions and contraction.

9.1.1. Verbal infinitive + ní + verb.

When the verbal infinitive is followed by *ní* and then (with or without intervening material) some other verb—nearly always a verb of movement such as *iku* 'goes' or *kúru* 'comes'—the meaning is 'does (goes/comes) for the purpose of doing'. The larger sentence carries with it any adjuncts of the infinitive sentence (as well as any adjuncts that might go with the particular later verb): *A ga B o yobu* 'A calls B' goes into this construction as *A ga B o yobi* and the result is something like *A ga B o yobi ni (P e) iku* 'A goes (to P) to call B'. Examples: *Senséi o || karakái ni | kíta no ka | ná* 'I wonder if he had come to tease you?' (SA 2677.56d); *Náni si ni | kíta no* 'What have you come to do?' (SA 2677.56d).

The subject of the larger sentence has to be the same as that of the infinitive—you cannot go for the purpose of someone else's doing it; but by "same subject", of course, is meant the immediate subject of causation in the causative or of suffering in the passive, and not the subject of the simpler underlying sentence.¹⁰ In other words, we have a combined sentence *A ga iku* (etc.) + *A ga yobu*, with the subject shared and *ní* used to mark the linkage with purposive meaning. For each sentence with this construction there seems to be a synonymous sentence with *V₁-ru tamé ni V₂*, using an adverbialization of the post-adnominal *tamé* with *V₁* adnominalized to it (§ 13.2) but the semantically similar construction *V₁-rú no ni V₂* in general has a different (and quite restricted) selection for *V₂*. There seem to be few restrictions on the selection *V₁* except that it must have an animate

9. But in the emphatic meaning *sí ŋmo}* is derived from a variant of *só* 'that' (cf. *siká* 'so') by Saji 40.

10. This accounts for *Zyotyuu san ni/o monó o tóri ni yokósite kudasái* 'Send your maid to pick up the things' and *Uti(ˉ) no kodomo ni/o monó o todóke ni yaru* 'I'll send our boy to deliver the things'.

subject and must not be a possessive or quasi-possessive verb; there is no **ári ni iku* from *áru* 'exists, has', **wakári ni iku* 'goes in order to understand', **iri ni iku* from *ir-u* 'needs', or **déki ni iku* from *dekíru* 'is produced/can'. But we find *nári ni iku* 'goes to become', *súmi ni iku* 'goes to reside', *i ni iku* 'goes to stay/be'; passives and causatives (*sare/sase ni iku* 'goes to suffer/cause'); favors (*V-te age ni iku* 'goes to do for', *V-te morai ni iku* 'goes to have done for one')¹¹ and other gerund + auxiliary constructions (e.g. *V-te mí ni iku* 'goes to try doing', *V-te simai ni iku* 'goes to finish doing', *V-te oki ni iku* 'goes to do it for later'); *dé ni iku* 'goes to leave', and even *iki ni iku/kúru* 'goes/comes to go', *kí ni iku/kúru* 'goes/comes to come', and (rarely) *isógi ni iku* 'goes (in order) to hurry'. Moreover, *V₁* usually must represent a single action, not a habit or state, and thus there is no **V-te i ni iku* from *V-te iru*, despite the apparent acceptability of *i ni iku* 'goes to stay/be' and *súmi ni iku* 'goes to reside'. Emotions and involuntary actions are generally avoided for *V₁*, unless qualified by various modifiers.¹² *V₂* is typically a verb of movement, but a few other verbs and verb phrases can be used, provided they have human subjects.

Free verbal nouns, such as *benkyoo* *fo* *suru* 'studies', freely drop the infinitive *si*: *benkyoo fo fo* *si* *ni kúru* 'comes to study', *sigoto fo fo* *si* *ni iku* 'goes to work'. Looking at it another way, we can say that verbal nouns are nominals (*benkyoo da* 'it is study') that happen to share this construction with verbals: *benkyoo dá* → *benkyoo ní* [infinitive of the copula] + (*ni*) *iku* with the copula infinitive and the particle *ní* collapsing into one /*ni*/. (This might provide a good argument for treating the *ni* of *ni iku* as copula infinitive rather than particle. Cf. also *nó ni fwa*, § 14.2.2.) The optional omission of *fo* *si* is permitted even when the verbal noun carries an object with it: ... "gogatu-kákumei" *o* *l* *kansatu ni* [*l*] *kíte*, ... 'came to see the "May revolution", and ...' (SA 2678.92b). But it is always possible instead to turn the object into an adnominal modifier of the verbal noun, as would be obligatory if the verbal noun were marked by *ó*: "gogatu-kákumei" *no kansatu o si ni* Thus the objectival genitive in the following example: *Hootimin-rúuto no bakugeki ni yuku* || T-28 [T'íi || nízyuu || hati] || *sentoobakugeki-ki* ... 'The T-28 fighter-bombers that leave for bombing (of) the Ho Chi Minh trail ...' (SA 2673.23a)—cf., later in the same text, *Hootimin-rúuto e no bakugeki de áru* 'It is bombing aimed at the Ho Chi Minh trail'.

But not all instances of *N o si ni V* will permit the dropping of *o si*: *Sensei o si ni iku* 'goes to be a teacher', *dóryoku* (°) *o si ni iku* 'goes to make an effort', *toránpu o si ni iku* 'goes to play cards' (despite *ténisu ni iku* 'goes to play tennis'), and *?bínboo o si ni iku* 'goes to live a poor life' apparently require the full form. Yet the following will permit the ellipsis: *sewá* [*o si*] *ni iku* 'goes to take care of matters', *tetuya* [*o si*] *ni iku* 'goes to stay up all night', *kusyoo* [*o si*] *ni iku* 'goes to smile with pain'. It is not clear what factors enter into this optional ellipsis; perhaps the susceptibility of nouns to verbalization by *suru* has led to some sort of continuum, with several kinds of "verbal nouns", "quasi-VNs", and "pseudo-VNs" that require marking in the lexicon. Or perhaps we should distinguish more than one kind of *suru*; notice that *yaru* is a synonym of *suru* in some, but not all, of its occurrences. See § 14.3.

11. As in *Sore kara* | *is-syúukan* || *tyuusya o útte* | *morai ni* | *kayotta* 'After that for a week I went to get injections' (SA 2679.124c).

12. But death is subject at times to decision: *Minna* ^[k] || *ii* | *seinen désita* | *né*. || *Iyóiyó* || *sini ni iku* to *iu wake des'aa* | *né* [= *desu wa* ^[k] | *né*] 'They were all fine young men, weren't they. And one after another they [go to die =] went to their deaths' (Tk 2.95b).

Although nothing can separate the infinitive from ní, the second verb may carry with it a full array of adjuncts which need not be displaced to the beginning of the larger sentence; an example can be constructed with a fair amount of matter between V₁-i ni and V₂: Tanaka ga tyúumon(⁻) o tóri ni tomodati to misé ni kuruma de isóide ása rokú-zi ni itta 'Tanaka hurriedly went at six o'clock in the morning by car with a friend to pick up the order'. Here is an adnominalized example with the subject subdued (gá → nó, §13.1.6) following V₁-i ni: Koko wa || mizu o nómi ni || umá no | kayou [|] miti désu 'This is the path by which the horses go to drink water'. The following example separates the traversal object from the motion verb: Tooi miti o || [káno-zyo to/ni |] ái ni | kíta | otokó o ... 'a man who had come a long road to see her ...' (Ōno 1966.168).

It is indicated in the chart in §5.5 that the "purpose" expressed by V-i ni can take a variety of restrictives and focus particles, as in these examples (for most of which I am indebted to Shozo Kurokawa): Káre wa || sóto e wa | nómi ni WA | ikanái ga, || uti de || yóku | nómu 'He doesn't go out drinking but he does a lot of drinking at home'; Ano matí e || hoogén(⁻) o | tyóosa [si] ni WA | itta ga, || súnda [|] kotó^(o) wa | náí 'I have been to that town to investigate the dialect but I have never lived there'; Kinóo wa | isogásikute || hiru-góhan o || tábe ni MO | ikanákatta 'I was so busy yesterday I never even went to have lunch'; Asoko wa [|] iti-dó^(o) || kenbutu [si] ní MO | itta 'I went there to sightsee once, too'; Sóhu wa || magó^(o) no kao o mí ni | kónai 'The grandfather never comes even to look at his grandson's face'; Wázawaza || kenbutu [si] ní SAE | kúru n da kara, || ano otokó wa || kawarimono dá^(o) yó 'He must be some kind of a nut, going to all the trouble of coming here to see things'; Káre wa || Yamada san ni ái ni SURA | ikanai 'He never goes even to see Mr Yamada'; Anna ni [|] náka ga | yói no ni, || sukedati [si] ní SURA | kónakatta 'Though on such good terms, he didn't come even to lend assistance'; Ano résutoran e wa || tokidoki || Isé-ebi(⁻) o | tábe ni SIKA | yoranai 'That restaurant I only drop into occasionally for lobster'; Tanaka kyóozyu(⁻) wa || kono sigoto ni | tyokusetu kankei wa náku, || tokidoki || zyogen [si] ní SIKA | kónai 'Professor Tanaka has no direct involvement in this work and only comes occasionally to offer advice'—despite the English translation, I take the tyokusetu as an adverb (= tyokusetu ni) rather than as ellipsis for tyokusetu [no] kankei, though the latter interpretation may be possible; Káre wa || sóto e || nómi ni KOSO | ikanái ga, || uti dé wa || kánari | nómu rasií 'He doesn't precisely go out to drink, but I understand he does a lot of drinking at home'; Tanaka san wa || máiasa(⁻) || sanpo [si] ní KOSO | ikú ga, || sore rígai wa || hotóndo || sóto e || déte | kónai | hitó da 'Mr Tanaka does go for a walk every morning, to be precise (about it), but other than that he's a person who hardly ever comes outdoors'; Kono hón o || wázawaza || kai ní MADE | ikanai 'I won't go out of my way to buy THIS book'; Yamada san no tokoró e || kono mondai o | tóogi [si] ni MADE | iku tumori wa náí 'I have no intention to go all the way to Mr Yamada's to discuss this question'; ... zyunrei [si] ní MADE | kite, ... 'actually coming on a pilgrimage' (Endō 225); Watasi wa || yasumí ni wa || oyógi ni NÁDO | iku 'On my holidays I go swimming and things'; Tuuti [si] ní NÁNKA | kónai 'They don't come to give us notice or anything'; Hikoo-zyoo e || mukae ní NÁNTE | itte mo, || zikan no [|] róohi(⁻) da 'It's a waste of time to go to the airport to meet him and all that'; Kono seihin o || senden [si] ní NÁNTE | iku hituyoo wa || zenzen náí 'There's absolutely no need to go advertise this product and all'; Mokuteki no tamé ni nara || soori-dáizin ni | ái ni D'ÁTTE (DÉ MO) | iku 'I will go even to see the Prime Minister if it's in the interest of my objective'; Kyóo wa || isogásii no de, || sukí na | sanpo ní D'ÁTTE (DÉ MO) | ikanai 'I am busy today so I won't even go to enjoy my (usual) walk'; Sono hón

o || kasite kurerú no nara, || kimi no uti(¯) máde || tóri ni D'ÁTTE (DÉ MO) | iku 'If you will lend me that book I will even come to your house to pick it up'; Syokuzi ní DÉ MO | déta no daroo ka 'Perhaps he had gone out for a meal or something' (SM 2793.138c); Hisasiburi ni || nómi ni DÉ MO | ikanái ka 'How about going for a drink or something after all this while?'; Ik-kágetu -gúrai | kyuuka o tótte || ryokoo ní DÉ MO | iku yó 'I'll take a month's leave and go on a trip or something'; Titi no tokoró e wa || tama ni || kao o míse ni -GÚRAI | iku 'I go to my father's place every now and then just to show my face'; Ano sensei no | koogi(¯) wa || tama ni || tyookoo [si] ní -GÚRAI wa | kimáshu kedo 'I come every so often just to attend that teacher's lectures'; Asobi ní -GÚRAI || kite mo || yosa-sóo na | monó da 'It would seem all right to come at least for a visit' (Hozaka 340); Káre wa || hima da to, || watasi no tokoró e || kudaranai kotó o | hanási ni | BAKARI kúru 'Whenever he has a spare moment he comes to my place just to talk drive!'; Káre wa || watasi no tokoró e | zyama [si] ni BAKARI kúru 'He comes to my place just to bother me'; O-tagai ni mazúi no de, || ái ni DAKÉ wa | ikanákatta 'I just didn't go to see him because it was inconvenient for both of us'; Ano tihóo no | hoogén(¯) wa || tyóosa [si] ni DAKÉ [wa] itta 'The dialect of that area (is something that) I went just to investigate'.

The example Syuukin ní nara || kónai de | né 'Don't come if it's to collect money' (KKK 25.79a) shows that the purpose expression can be proppredicated; it should be possible to say Syuukin ní [kúru no] desu ka 'Is it to collect money (that you are coming)?'. We observed in §8.1 that the purpose phrase can be denied with dé {wa} náku{te}, as in Yasúmi ni de wa náku hón o yómi ni káetta n desu 'I went home not to rest but to do some reading'.

Since V-i ni iku (etc.) means the same thing as V-ru [|] tamé ni iku 'goes for the purpose of doing', it is possible to think of the shorter expression as an abbreviation of the latter. Such an explanation becomes all the more attractive when we see how it reinforces the argument that V-rú is itself an abbreviation of V-í | surú, an abbreviation that is obligatory in modern spoken Japanese but optional in the written language of as late as the Meiji period and is rejected in all varieties of Japanese when nuclear focus is applied (V-í wa | surú etc.). What we are suggesting is to derive the purposive expression and the unfocused imperfect as follows:^{12a}

V-í [suru tamé] ni ...	= V-i ni ...
V-[í su](r)ú ...	= V-(r)ú ...

All cases of V-i ni ... can be replaced by V-ru tamé ni ... but not by another purpose expression V-rú no ni ... (§ 14.2.2) for that expression can not be followed by a verb of motion and thus is virtually in complementary distribution with V-i ni

The following examples contain verbs of motion other than iku and kúru: Sore o mí ni káeru/modóru 'returns to see it'; Mádo o síme ni déru 'goes out to close a window'; Tomodati ni ái ni de-muku/dekakeru 'goes out to see a friend'; Mizu o nómi ni hai-deru 'creeps out to drink water'; Tomodati ni ái ni omomúku 'goes out to see a friend'; Todomati ni ái ni yoru 'drops in to see a friend'; Tábe ni háiru 'enters to eat'; Tasúke ni kake-yoru 'runs up to help'; Sagasi ni arúku 'walks to look for it'; Tóri ni noboru 'climbs up to get it'; Tóri ni osi-yoséru 'rushes to get it'; Tóri ni mukau 'heads to get it'; Tóri ni atumáru/muragáru 'cluster around to get it'; Tóri ni tátu 'stands up (leaves) to get it'; Naki ni nigéru 'runs away to cry'. And this example shows that kao o dásu

12a. But these derivations are historically suspect, for examples of V-i ni iku/kúru, as well as of V-(r)ú, occur in the earliest texts. On the Tōkyō cancellation of the accent of the infinitive ending -í in these expressions, see p. 413n.

'shows up' can be treated as a motion verb: *Íma || daigaku ní wa, || itte orarénaí n desu ka. ||*
—Séki wa | náí n desu ga, || tokidoki || kao wa dásite | imásu, || sigeki o úke ni 'Aren't you now
going to the university?—I'm not registered, but I sometimes show up—to get stimulation'
 (Tk 2.130a).

Some of the nonhuman-agent verbs that are excluded for V_1 (or V_2): *nugéru* 'it slips off', *hazimaru* 'it starts', *tokéru* 'it melts', *simáru* 'it closes' *sasáru* 'it sticks in one's throat', *waku* 'it boils', *zaratuku* 'it gets rough on the surface', *aku* 'it opens', *tir-u* 'they fall and scatter', *hazureru* 'it disconnects', *tuzuku* 'it continues', *suku* 'it empties', *itámu* 'it spoils', *ururu* 'it sells', *usuréru*($\bar{\quad}$) or *usurágu*($\bar{\quad}$) 'it gets faint', *súmu* 'it finishes', Also excluded are verbs that are habitual or stative in meaning (*kokorogakéru* 'endeavours', *nozómu*($\bar{\quad}$) 'expects', *omoi-agaru* 'is highhanded', *hazíru* 'feels shame', *kan-ziru* 'feels', *súku* 'likes', *zurukéru*($\bar{\quad}$) 'shirks', *netámu* 'envies', *akogareru* 'yearns', *iyasimu*($\bar{\quad}$) 'loathes', ...), verbs which denote an involuntary action (*nori-okuréru* 'is late boarding', *mi-sokonau* 'mistakes', *nori-sugósu* 'rides beyond one's stop', ...) or which strongly suggest an accidental happening (*ki-awaseru* 'happens to come', *moti-awaseru* 'happens to possess', *nori-awaséru* 'happen to ride together', *dekásu* 'happens to do', *komi-ageru* 'suddenly feels', *omoi-tuku* 'comes to one's mind', *ki-zúku* 'comes to one's attention', ...).

A number of sentences that imply generally undesirable results are semantically odd unless we attach some kind of qualification such as *yóo na monó da* 'it is as if ...' at the end, as in *Odoróki ni iku (yóo na monó da) '(it is like) going in order to be surprised'*.
 Examples: *Menkurai ni ... '... to be embarrassed'*; *Akire ni ... '... to give it up'*; *Kanasi-gári ni ... '... to grieve'*; *Tamerái ni ... '... to hesitate'*; *Tamari-káne ni ... '... to become impatient'*; *Sikén ni óti ni ... '... to fail the exam'*.

We have stated that certain verbs are categorically rejected as the infinitive in these expressions. But there are others that are semantically incongruent, e.g. *óki ni iku* 'goes in order to arise', *umare ni iku* 'goes in order to be born'; to make sense, such verbs must be given an extended meaning, as in *Atarasíi zoyoyuu to site umare ni Háriúddo e iku* 'goes to Hollywood to be born as a new actress'. And a number of verbs will seem peculiar without amplification: *túki ni iku* 'goes to arrive' is odd by itself but less so in *Sán-zi ni Tookyoo ni túki ni ití-zi ni éki e iku* 'goes to the station at one o'clock in order to get to Tōkyō at three' (the welter of different ní-markings can be slightly reduced by saying *Tookyoo e*), though the expression would normally be corrected to *túku tame^(y)/yóo ni* 'so as to arrive'. Thus the following sentences are perhaps acceptable as they stand, but will suffer from any pruning of adjuncts: *Sán-zi máe ni gakkoo no máe o súgi ni iku* 'goes so that one can pass the school before three o'clock'; *Tanaka wa gógo koko ni kí ni gózen*($\bar{\quad}$) *-tyuu ni kaisya e itta* 'Tanaka went to the office in the morning so that he can come here in the afternoon'; *Tookyoo e iki ni hikoo-zoyoo e iku* 'goes to an airport to go to Tōkyō'; *Bútai e dé ni iku* 'goes to appear on the stage'; (?) *Tanaka ga rusú no aida káre no utí ni i ni iku* 'goes to stay at Tanaka's home while he is away'; (?) *Hito o tasúke ni hasigo o tatéru* 'puts a ladder up to rescue a person'; (?) *Heyá o soozí si ni isu o ugokásu* 'moves a chair in order to sweep the room'; (?) *Daigakúin e susumi ni Amerika e iku* 'goes to America to enter a graduate school'.

The foreign student should be prepared to see this construction made on the monosyllabic infinitives listed earlier: *dé ni* '(goes to) emerge (etc.)', *é ni* '... to get', *í ni* '... to shoot, to cast metal', *i ni* 'to stay', *kí ni* '... to come', *ki ni* '... to wear', *mí ni* '... to look/see', *ne ni* '... to sleep', *ni ni* '... to cook', *si ni* '... to do'. Since *hí* 'get dry' and *ni* 'resemble' are

involuntary, they will not appear in this form; I am not sure about hé 'pass'.

As the Japanese writing system fails to indicate the accent or to space the words, a foreign student might interpret such a written string as ... tyottominiwa, soregawakarimasen (Shibata 2966.90) as *Tyót-to mí ni wa ... and wonder how the infinitive mí 'look/see' can here be interpreted with following ni; *'For the purpose of looking does not understand that' seems out of the question. But tyotto-mi happens to be a compound noun, derived from the adverb + the verb infinitive, and the correct interpretation is ... tyotto-mi ní wa, sore ga wakarimasén '(at a brief look =) at first glance, that would not be clear'.

In §22.1 we find that the infinitive never stylizes (*-i-mási) so that we do not expect to find *V-i-mási ni Cf. Mikami 1963a.27, where it is noted that V-ru kará ni (and V-ru kará ni wa?) lack stylization so that you find V-i-másu kara 'because V' but not *V-i-másu kara ni 'just because V' or (?) *V-i-másu kara [ni] wa 'now that V, as long as V anyway', §17.1.

In the northern Ryūkyūs (see Martin 1970) the infinitive + gá is used for this purposive construction: Yumyji ga qyikhyúm = Yómi ni iku 'He goes to read'. But the imperfect adnominal + gá + ní/tó + ní is used with the same meaning: Yumyun ga nyi n qyidyám OR Yumyun ga tu n qyidyám = Yómi ni itta 'He went to read'. This suggests the possibility that we are faced with a contraction from ... ga tamé ni/to. (The double ní represented by ga NYI N remains a problem.) In some main-island dialects ní drops its initial nasal, and both N [n]i and V-i [n]i are reported (e.g. in Aichi Zhs 3.468, Ōsaka Zhs 4.227, etc.); cf. §2.2. Thus the following forms of the purposive expression (reported in Zhs 6.15 n. 2) can perhaps be derived from V-i ga ni: V-i ga i iku (Kyūshū), V-i ge i iku (E. Kyūshū), V-i gya i iku (W. Kyūshū), V-i ke iku (S. Kyūshū).

We have said that the second verb in these expressions is nearly always a verb of movement. A special type, however, is V-i ni kakáru (or VN ni kakáru) 'sets about (to do), undertakes (to do)' or 'starts to do': Háha ga | kodomo no hukú o | nugáse ni | kakáru 'The mother starts undressing the child'; Páat'ii wa || yamá o | lóri ni | kakáta 'The party began to go down hill' (Ig 1962.80); Soko de, || watasi yamemásu || to || zihyoo o | pón to | dásu. || Kaisya wa || hiki-tóme ni | kakáru 'So then I up and send my resignation "I quit". The company sets to dissuading me' (SA 2681.27e); Génan wa || odáyaka ni | warai, || "Táre" || to | ii, || tugi no | dangan o || túme ni | kakáru 'The servant puts on an amiable smile, says "Who goes there?", and loads the next shot' (SA 2685.99c—táre = dáre); Rágosu de || sirábe ni | kakáta | tokoró^[1], ... 'When I set about inquiring in Lagos ...' (SA 2673.68c);¹³ ... uri-túke ni | kakáru 'they begin to push their sales' (SA 2678.94a); Kookiti mo | súgu || yoohuku o | núgi ni | kakáta 'Kōkichi himself at once set to taking off his clothes' (Fn 154b); Dé, || Hámake wa, || súgu || soozu ni | kakáta 'Then Hamako at once set to sweeping up' (Fn 248a); Oba-san wa || hogáraka ni | soo itte warai, || kúupon o || íso-iso to | kírí ni | kakáta 'The lady said that with a cheery smile and set to clipping the coupons lightheartedly' (SA); ... tó || tazúne ni | kakáru 'He starts inquiring ...' (SA 2659.69c); ... sibári ni | kakáru 'sets about tying [him] up'; Háruko wa || sóro-soro || yuuhan no sitaku ni | kakáru | kóro da 'It is time for Haruko to set herself to getting dinner

13. The accentuation shows that sirábe is the infinitive 'inquiring' rather than the infinitive-derived noun sirabé 'inquiry' (§14.5).

ready' (lg 1962.91); ... nakiotosi ni kakátte mo | míta ga, ... '... she even tried undertaking persuasion by tears but ...' (SA 2649.105d—nakiotosi is a noun derived from a presumed infinitive naki-otósi 'felling by crying' from a compound verb that does not seem to be used independently).

Cf. V-i-kakaru, §9.1.10 (3a), of which this might be regarded as some sort of prototype or extension. Compare also ... uri ni dasárete iru 'they have been put on sale' (SA 2671.111e) in which the noun uri derived from the infinitive 'selling' is functioning as a VN.

9.1.1a. Verbal iteration with infinitive + ní.

A verb can be made more vivid or emphatic by putting it into an iterative pattern: V_1 -í ni (wa/mo) | V_1 -ru. *Isógu* means 'hurries' but *isógi ni isógu* means 'hurries and hurries' or 'puts on the speed'; *nómu* means 'drinks' but *nómi ni nómu* means 'drinks and drinks' or 'really puts away the liquid'; *áme ga húru* means 'rains' but *áme ga húri ni húru* means 'rains cats and dogs' or 'pours down'; *naku* means 'cries' but *nakí ni naku* means 'cries and cries' or 'cries one's heart out'.

Adjuncts are put before the infinitive: *Kore ga || atarí ni | atatta* 'This was a great hit' (SA 2685.139b); ... *kawá wa || aré ni | areta* 'the river raged and raged' (SA 2663.48a). The iteration (V_1 -ru) can take no adjunct whatsoever, being separable from the infinitive + ní only by the minor juncture and the focus particles *wá* or *mó*, which function here as they do in the nuclear focus of §5: *nómi ni wa nómu ga* 'does drink a lot, all right' is similar to *nómi wa surú ga* 'does drink, all right but' and *nómi ni mo nómu* 'even/also drinks a lot' is similar to *nómi ni mo suru* 'even/also drinks'.

The only examples I have found with a verbal noun indicate the pattern VN [sí] ni | VN [o] suru: *Soko de || kenkyuu ni | kenkyuu o site míta | kekka ...* 'Thereupon as a result of study upon study it was discovered that ...' (SA 2659.71b); ... *kúroo ni | kúroo site* 'struggling and struggling' (SA 2684.118c).

There seem to be no clear restrictions on further conversions of the resulting sentence, but the colloquial flavor of the expression discourages bookish touches or involved embeddings: the vivid utterance, after all, is apt to be short.¹⁴ There are numerous examples of adnominalization: ... *motúré ni | motúreta(-) | ito o ...* 'a terribly tangled yarn' (Fn 307b); *Kangáe ni | kangáeta | ziken desu | yó* 'It's a case I've pondered and pondered over' (SA 2656.46a); *Máti ni | mátta | bakánsu ga | kúru to ...* 'When the long-awaited vacation came ...' (SA 2654.118a); *Sémakute | kakuitu-teki na [|] kooei-apáato kara no || máti ni | mátta | dassyutu de áru* 'It is a long-awaited escape from the narrow and (drably) uniform government apartments' (SA 2659.118a); *Húzita | Tosio no kyakuhon ga, || yat-tó deki-agatta; || Bóku-táti || sutáhu ga || máti ni | mátta || dá | ik-koo de áru* 'Toshio Fujita's script is finally done; It is the first draft that we of the staff have been waiting and waiting for' (SA 2652.64c).

Perhaps a lack of vividness accounts for the failure of some verbs to appear in this form. There appears to be some reluctance to apply the iteration to vowel bases, though I have examples for *kangáeru* 'ponders', *kokoromíru* 'tries', *aséru* 'fades', *nobíru* 'stretches', *yogoreru* 'gets dirty', and *yureru* 'sways': *Tyót-to oki e déru to, ganken na tukurí no bóoto mo yuré ni yureta* 'The least venture out from shore and even the sturdily built

14. Though vivid and colloquial, the form is not new; Kinoshita (20) cites an example from the early Heian period.

boats would pitch and roll' (SA 2666.84b). Possessive and quasi-possessive verbs are (as so often) excluded: there is no *ári ni áru, *wakári ni wakáru, *iri ni iru, *déki ni dekiru.

Although not made on gerund-auxiliary conversions (such as *nónde simai ni simau), the forms are possible for many of the infinitive-auxiliary conversions (of §9.1.10), such as nomi-tuzuké ni nomi-tuzuketa 'really kept on drinking', and even multiple auxiliaries: nomi-tuzuke-súgi ni nomi-tuzuke-súgita 'really overdid the continual drinking', nomi-tuzuke-sugi-sáse ni nomi-tuzuke-sugi-sáseta 'really made him overdo the continual drinking', etc. But, for no obvious reason, speakers reject many such forms; if the preceding examples are accepted, why should a speaker reject nomi-sugi ni nomi-sugita 'really overdid the drinking'?

Once made, the iteration is free to enter into auxiliary conversions: ... kaségi ni | kasegi-makutte ita 'was earning money hand over fist' (SA 2664.103b); ... kono suisoo wall kóri ni | kótte ite ... 'this [fish] tank is quite elaborate, and ...' (SA 2677.61a).

The function of ní in this expression is unclear. It could be regarded as the enumerative 'and', or as an extension of 'to (= in addition)'; or perhaps it is to be taken directly as the essive, here used to adverbialize the verb to its iterated form. Similar expressions are V₁-ru ni [wa/mo] V₁-ru (§14.6.6) and S₁ kotó wa S₁ kedo/ga (§14.1). The adverb yóri-ni-yotte¹⁵ 'of all things to choose (from)' is derived from the gerund of yóri ni yóru 'chooses and chooses'; yóru is a synonym of erábu 'chooses'.

There are a very few expressions of the type hita-V₁-i ni V₁-ru 'steadily Vs': hita-naki ni naku 'weeps steadily'; hita-osí(-) ni osu 'pushes steadily, presses on'; hita["]-hásiri(-) ni hasíru 'runs hard'; hita["]-kákusi(-) ni kakúsu 'is very secretive'. Cf. hita-muki na (ningen) '(a person) single-minded, earnest', hitásura(-) 'earnestly; solely', hitá to (yori-sóu) '(nestles) close', hittári/pittári, There are also a few expressions of the type oo-V₁-i ni | V₁-ru 'greatly Vs': oo-yure ni | yurete iru 'is shaken with a great shock' (SA 2665.127a); oo-ábare ni labareru 'rages furiously'; oo-átari ni | atattá kara ... 'it was a great hit' (Tk 3.70a). These could be interpreted as containing a noun derived from the infinitive, intensified by the prefixed oo- 'large', with the ní marking cause or pseudo-agent. (Cf. §13.9.) Certain verbs will enter into such expressions with some specific intensifier prefixed to the infinitive: beta-bore ni horeru 'falls madly in love' (-bore = 'hore); hira-áyamari ni ayamátte, ... 'profuse in apologies' (Fn 84a).

9.1.1b. Iterated verbal infinitives.

The verb infinitive can be iterated (repeated) to make an adverbialization of the sentence it serves to predicate; the result is a single phonological word, usually treated as a simple phrase reduction with the juncture suppressed (yobí | yobí → yobi-yobi, yómi | yómi → yómi-yomi),¹⁶ as in these examples: Naki-naki hanásita 'He spoke through tears'; Miti o kiki-kiki itta 'We inquired the route as we went along'; ... atamá o | káki-kaki, ...

15. Hirayama gives these two accentual options. MKZ³ accentuates the expression as a phrase: yóri ni yótte.

16. But there may be speakers who treat all such iterations as atonic: nomi-nomi rather than nómi-nomi 'drinking'. Not all seeming examples are to be treated as iterated infinitives: the precopular noun togire-tógire 'choppy, intermittent, interrupted, broken' is a reduplication of a noun 'break' derived from the intransitive infinitive togíre 'become broken' (from to- 'path' + "kíre 'get cut'). And there are derived adverbs, such as tuké-tuke '(speak/scold) harshly'. Baby talk hái-hai 'crawling' is a free verbal noun: hái-hai o suru = háu 'crawls'.

'scratching his head (he said) ...' (SA 2793.96d); ... hiya-áse o | káki-káki, ... 'breaking into a cold sweat' (SA 2637.56c); Enpitu o náme-name hude o hakonde imásu 'He is writing while nibbling on his pencil'; O-kási o | tábe-tabe | arúite imásu 'He is walking while eating candy'; Huhei o ii-ii sigoto o site imásu 'While working he keeps complaining'; Kangáe-kangae | arúite imásu 'He is walking lost in thought'; Hanási o suru | tokí mo || kangáe-kangae, || atamá o || kaki-musiru yóo ni site | domori-nágará | kataru 'Even when telling a story he gets deep in thought and stammers it out as if scratching his head the while' (SA 2663.109e); ... sore o koráe-korae, ... ganbari-nuita 'I suffered and suffered that, ... and stood firm to the end' (SA 2672.98c); ... Zyóo wa kurikáesi-kurikaesi(ⁿ) kono syú no situmon ni kotáenakereba naránakatta si ... 'Joe had to answer this sort of question over and over again and ...' (SA 2679.38); Kúne-kune sita méiro o suna o humi-humi tadótte ikú no de aru 'We grope our way along the twisting labyrinth, treading the sand' (SA 2678.94c).

In all such cases the iteration can be replaced by V-i-ⁿnágara (the concurrent, §9.1.3): Naki-nagara hanásita. And the concurrent can be applied to a sentence that has already embedded the iteration: Sake o nómi-nomi | kangae-nágará || arúite itta 'He walked along punctuating his thoughts with sips from his bottle'.

The expression ii-ii suru 'keeps saying' (atonic, despite Kenkyusha) is a lexical item, a verbal noun—and a bound one, at that, since you can not insert ó before suru, nor can focus particles (wa/mo) be inserted. The elegant adverb yori-yori '(coming together) from time to time' (SA 2685.130b) is derived from the iterated infinitive of an intransitive verb 'congregate'.

Monosyllabic vowel bases lengthen the vowel of the infinitive: Syakkin sii-sii yat-to^[j] seikatu site 'ru 'I am barely staying alive by borrowing money (repeatedly)'; Zikan o ki ni sii-sii uti e isóida 'I hurried home full of worries about the time'; ... káno-zyo no kao o mii-mii kiita '... he asked, looking at her face' (Kb 256a). But there are very few such bases and most of them fail to occur in this construction, though it may be possible to use these: yumí o ii-ii 'shooting one's bow repeatedly', uti o dée-dee 'leaving the house repeatedly'. The long vowel would appear to be the preservation of the infinitive ending -í, which has otherwise vanished after a basic vowel, rather than an example of the secondary lengthening of ALL monosyllables—other than particles and endings—that is widespread in western Japan and parts of the Ryūkyūs, on which see Martin 1970.

A more elaborate structure lets the auxiliary suru pick up an iteration of infinitivized sentences that conjoin a subdued gerund: V₁-té wa | V₂-i, || V₁-té wa | V₂-i | suru 'keeps V₁-ing and V₂-ing, V₁-ing and V₂-ing'. Examples: Káite wa | sikuzíri || káite wa | sikuzíri | suru 'I keep writing exams and failing, writing and failing'; O-tya no ha o || tótte wa | ire, || tótte wa | ire | simásita 'We kept picking the tea leaves and putting them in, picking them and putting them in'; Kodomo wa || háitte wa | dé, || háitte wa | dé | suru 'The child keeps coming in and going out, coming in and going out'; ... ókite wa | ne, || ókite wa | ne | suru 'gets up and goes to bed, time after time'; ... tábete wa | nómi, || tábete wa | nómi | suru 'keeps eating and drinking, eating and drinking'; Zí o || káite wa | kesi || káite wa | kesi | simásita 'I kept writing the character and erasing it, writing it and erasing it'; Kánkoku nádo mo, || tairiku ni | ironna mǐnzoku ga || okótte wa | horóbi(ⁿ) || okótte wa | horóbi(ⁿ) | site orimásu ga ... 'And Korea, for example, too, had various peoples rise and fall, rise and fall on the continent ...' (Tanigawa 65); Masú o || tutté wa | nigási, || tutté wa | nigási |

si-nagara || kawá zútai ni || bokuzyoo o || yukkúri to | sanpo suru 'We stroll slowly down the pasture along the river catching trout and releasing them, catching them and releasing them' (SA 2671.93c). Alfonso 788 has additional examples.

The two verbs usually bear contrasting meanings (cf. Mikami 1963a.9). This example aptly switches the verbs in the second part: Sakénde wa | ryoote o hiroge, || hirogeté wa | sakébi site iru [|] utí(-) ni, || anol idai ná [|] kingu wa || nízyuu | go-póndo, || iti-méetoru | to iu kotó ni | nátte simai, watasi wa || mé o | mi-hatta 'While exclaiming and spreading my arms, spreading my arms and exclaiming, that mighty king salmon became all of 25 pounds and a meter long and my eyes grew wide' (SA 2669.91b).

The following example puts the object marker *ó* directly after the last infinitive where we would expect the auxiliary, but that is a result of an optional ellipsis: Iwá^[1] no kasirá ni | táti, || suidoo ni mukatte || nágete wa | hiki, || nágete wa | hiki | {surú no} o | kuri-kaesite iru to ... 'Standing at the tip of the rock we would aim toward the channel and repeat our casting and reeling, casting and reeling, whereupon ...' (SA 2666.85b). This seems to be a usage favored by Kaikō Takeshi who wrote the above and also the following: Rúa^[1] o || aói || kagayáku | úmi ni || nágete wa | hiki, || nágete wa | hiki | o | kurikáesu(-) ga, || tóotoo | kyóo wa, || ip-piki^[1] mo turenákatta 'I repeated over and over the casting of my lure into the sparkling blue sea and reeling it back, the casting and reeling, but finally this was the day I was unable to catch a single fish' (SA 2680.103c).

A similar structure differentiates the iterated infinitives not with gerunds but with other modifications: ... atira e tobi || kotira e tobi | site ita kotori ga || kí no eda e | modótte kíta yoo ni, ... 'like a bird returning to the branch of a tree after flying this way and that way' (Y 551); ... sono aida || hitóri heri, || hutarí^[1] heri [|] site, ... 'meanwhile their number shrank, first by one, then by two, ...' (SA 2793.96b).

Yet another form of verbal iteration is V_1 -í mo V_1 -tári 'actually going so far as to (do such a thing)', followed by some unlikely or outrageous action: Núgi mo | núidari, || mappádaka ni | nátta 'He actually stripped right down to the skin!'; Tennóo ni | tegami o káku nádo to wa || mukasi wa || omói-mo-yoranu | kotó datta no ni || ano syoosetu-ka wa || káki mo | káitari || tennóo ni || nagái tegami | káita | sóo da 'Writing a letter to the Emperor would have been unthinkable in the old days, but that novelist took pen in hand and actually wrote a long letter to the Emperor, they say'.

Often what follows is a SPECIFIC (and surprising) QUANTITY and the meaning is 'actually keeps doing it to the point where the specific quantity is reached': Tábe mo | tábetari || góhan o || zip-pai mo | tábeta 'I ate and ate, and ate up ten bowls of rice!'; Korosí mo | korositári || sén-nín(-) mo | korosita 'They killed and killed—killing a thousand people!'; Káki mo | káitari || hyaku-péizi mo | káita 'I wrote and wrote till I had a hundred whole pages written!'; Taizi sita nezumi ga || kyuu-sén | gohyap-piki— || tóri mo | tóttari no | kono suuzi wa— || ... nezumi-sootoo-daisákusen no | kekka de áru 'Rats caught 9500—this figure that was reached catching them is the result of a rat extermination campaign that ...' (SA 2656.152a).

This is a representative conversion made on the simpler pattern V_1 -í mo V_1 -ru 'does V_1 to an inordinate extent, unusually much' as in this example: Dási mo | dásita ga, || tóri mo | tóttá 'They really poured the money out, and he really raked it in' (Kb 210a).

A short set of words derived from iterated verb infinitives fall into several groups by grammar:

(1) vni. / ? adv.

aki-áki 'growing weary'
 kori-kóri/-góri 'learning to one's sorrow'
 músi-musi 'being muggy, steamy'
 ózi-ozí 'fearfully, timorously'
 súbé-sube 'growing smooth, sleek'
 úne-une 'undulating'

(2) adverb

kawari-gáwari 'in turns'
 kasane-gásane 'repeatedly; wholeheartedly'
 nakí-nakí(⁻) 'in tears'
 oi-ói(⁻) 'gradually, by and by'

(3) subjective adverb—with optional ¹tó

ari-ári 'vividly'
 hare-báre 'unclouded; cheerfully'
 hie-bíe 'cold'
 hore-bóre 'fondly'
 iki-íki 'vivid'

kare-gare 'about to wither'
 nobi-nóbi₁ 'feeling relieved'
 simi-zími 'thoroughly'
 úki-úki 'lighthearted, jaunty'

(4) precopular noun

nobi-nobi₂ 'with delay after delay'
 kire-gire 'tattered'
 tiri-ziri 'separate(ly), scattered'
 tae-dáe(⁻) 'exhausted, faint'
 tobi-tóbi(⁻) 'sporadic, desultory'
 sure-sure 'skimming, barely'
 omoi-ómói 'according to taste'
 hanare-bánare 'separate(ly)'
 tigire-tigire 'in pieces'
 wakare-wákare 'separate(ly)'

(5) adjective -si-

nare-naré-si- 'intimate'

Notice that ¹tíbi-tíbi {to} and ¹tíbirí-tíbirí 'bit by bit' are not derived directly from a verb infinitive; the only verb available is ¹tíbiru(⁻) 'waste away' and that is a vowel verb with rather different meaning.

9.1.2. Verbal infinitive + -¹sídai (da).

A verbal infinitive can attach -¹sídai (da) to mean '(it is) as soon as'; the resulting nominal sentence is normally used as a direct adverbial that is equivalent to the more colloquial V-ru ¹tó (§ 17.2) or V-tára {súgu}. Adjuncts of the verbal sentence are preserved intact:¹⁷ Oosaka e tuki-sídai zimú-syo e mairimásu 'I will come to your office as soon as I arrive in Ōsaka'; Sina o uketori-sídai kane o watasimásu 'I will pay the money on receipt of the goods'; Tuuti ga ari-sídai ... 'On being notified ...'. The subject need not be the same in the two sentences that are combined: Koonin ga tuki-sídai watakusi ga syuppatu simásu 'I will leave as soon as my replacement arrives'.

Negatives and desideratives are automatically excluded, because such sentences are adjectival in form, though ultimately based on verbal sentences. Passives and causatives permit the form: sare-sídai, sase-sídai, saserare-sídai.

As often happens, after a verbal noun the infinitive ¹si drops optionally (though for some speakers less commonly): tootyaku [si-]sídai 'upon arrival'. Since -¹sídai is also used as a quasi-restrictive with the meaning 'depending on' as in gakkoo -sídai 'depending on the school' (see § 2.4), this can lead to ambiguity: /tootyakusídai/ can mean not only 'upon arrival' but also 'depending on the arrival'. The ambiguity is always resolved, however, if the verbal noun is tonic, since a minor juncture will intervene between it and the

17. But ari-sídai, deki-sídai, morae-sídai and a few other forms are also used as directly adverbialized nouns taking adnominal modification with N nó (rather than the subject N gá): you can say either Kikái(⁻) ga ari-sídai 'Upon having the first opportunity' or Kikái(⁻) no ari-sídai 'On the first opportunity', and similar are o-kane ga/no deki-sídai and o-kane ga/no morae-sídai.

auxiliary even when the auxiliary is dropped: *káisyaku* | [si-]sídai 'upon explanation' will have a secondary accent on *sídai* and a primary accent on *káisyaku*; *káisyaku* $\bar{}$ sídai 'depending on the explanation' will constitute a single accent phrase with the accent on the first syllable of *sídai*. The automatic suppression of the minor juncture between an atonic verbal noun and the following auxiliary *suru* (whether expressed or ellipted) is what leads to the ambiguity of the phrase with *tootyaku*. A similar problem usually arises when there is a noun derived from a verb infinitive, and in such cases the ambiguity is unresolvable: /*yasumisídai*/ can mean either 'depending on the vacation' (from the noun *yasumi* + $\bar{}$ sídai) or 'as soon as one rests' (from the infinitive *yasumi* + $\bar{}$ sídai). The presence of adjuncts will often help to clear the ambiguity: in colloquial Japanese, at least, *Otóosan ga kaeri-sídai* can mean only 'As soon as father comes home' but *Otóosan no kaeri-sídai*¹⁸ will sound the same as *Otóosan no kaeri* $\bar{}$ sídai and carry the additional meaning of 'Depending on father's return'. Compare the somewhat similar problem with $\bar{}$ gati da (§9.1.5).

9.1.3. *The concurrent-concessive (nágara)*.

You can adverbialize a sentence by applying a conversion we will call the concurrent-concessive, sometimes highlighting it with *mó*, to represent the meanings 'while' (CONCURRENT) or 'although' (CONCESSIVE). The meaning is limited to 'although' with non-durative verbals such as *áru* 'exists' (stative) or *sinu* 'dies' (punctual) and with adjectival and nominal sentences; the meaning 'while' (roughly equivalent to *V-ru dóozii*($\bar{}$) *ni* 'at the same time as V') is usual for durative verbals, but the concessive meaning is also possible, though Mikami (1963a.15) says that meaning is largely limited to stative verbs. Almost any sentence can follow to complete the new and larger sentence but the subject (as in §9.1.1) must remain the same. Sometimes the concurrent is equivalent to a gerund of MANNER: in some contexts *aruki-nágara* 'while walking' may simply mean *arúite* 'on foot'.

The forms of the concurrent-concessive are made by attaching $\bar{}$ nágara to the infinitive of a verbal sentence: *V-i-nágara* for tonic verbs, *V-i-nagará* for atonic verbs. The concessive of the nominal sentence is made by following the noun with $\bar{}$ nágara (as if a quasi-restrictive). The adjectival sentence will put ($\bar{}$)nágara after the imperfect *A-i*, rather like the conjunctivalizations of §17:¹⁹ *Tiisái* ($\bar{}$)nágara^[i] *tikará*($\bar{}$) *ga áru* 'He may be small, but he is strong'; *Hosói* ($\bar{}$)nágara^[i] *tuyói kí da* 'It is a tree that is strong though slender'; "*Semái* ($\bar{}$)nágara *mo tanosii wá-ga ya*" 'Home sweet home'. I have been unable to elicit or find a desiderative **V-i-tai* ($\bar{}$)nágara; instead you can expect *V-i-tákute mo*, or the like. On negatives, *V-(a)nai* ($\bar{}$)nágara {*mo*}, see below.

The accentuation of concurrent-concessive forms fluctuates. According to K, tonic verbs attach the ending as $\bar{}$ nágara, so that *yómi* 'read' becomes *yomi-nágara*, but atonic verbs attach the ending as $\bar{}$ nagará so that *nakí* [*mo*] 'cry [even]'—the infinitive of an atonic verb being itself basically oxytonic—becomes *naki-nagará* [*mo*]; you will recall, however, that oxytonic words lose their final accent when not followed by a particle or

18. Which, like *ari-sídai* and other forms mentioned in the preceding footnote, is a directly adverbialized noun taking adnominal modification with *N nó* and not open to other adjuncts. Thus you can say *Otóosan ga uti*($\bar{}$) *e kaeri-sídai* but not **Otóosan no uti*($\bar{}$) *e kaeri-sídai* in the meaning 'As soon as father returned home'.

19. Apparently two kinds of phrasing are possible: *tiisái* $\bar{}$ nágara /*tiisainágara*/ and *tiisái* *nágara* /*tiisainágara*/. I would not be surprised if a third were also in use: *tiisái* | *nágara* /*tiisái* *nágara*/.

some form of the copula,²⁰ so that we hear the oxytonic forms as unaccented (naki-nágara) most of the time. After a noun, \bar{n} ágára is optionally prototonic or oxytonic: kore nágara [mo] or kore nágara [mo] 'although it be this' (kore dá); onná nágara [mo] or onná nágara [mo] 'though a woman' (onná da); sitúrei nágara [mo] or sitúrei nágara [mo] 'though it is rude' (sitúrei da). (Martin 1952 n. 13 cites an observation that current usage favors V-i- \bar{n} ágara for ALL verbs, including the verbs which are atonic. This is the accentuation Hamako Chaplin uses.)

The following sentences illustrate the CONCESSIVE meaning with stative verb phrases: *Sensoo wa iyá da to itte i-nágara mo, tokí ga tátu ni turete túyoku hantai suru kimoti wa ókite kónai* 'While I keep saying I hate the war, with the passage of time no feeling of strong opposition arises within me' (KKK 3.130); *Sikási kono syoosetu wa "watasi" o syuzínkoo to si-nágara, "watasi" wa sukósi mo kakárete inai* 'But though this novel takes Me for its protagonist, there isn't the least thing written about Me' (KKK 3.130); *Wareware wa minná sitte i-nágara, kessite hureté wa naránai tabúu ga áru* 'There are taboos that we mustn't mention though all of us know about them' (SA 2679.45b); ... *kanzen-kóyoo-hataraku ísi to nóoryoku(̄) o moti-nágara hatarakenai monó no sonzai sinai zyootai—no zitugen o neratte ita* '... was aiming at the realization of full employment—the state where there exists no one with the desire and ability to work who cannot work' (KKK 3.129).

And these sentences illustrate the CONCURRENT meaning (with non-stative verbs): *Saakasugoya o de-nágara, watasi wa káre ni itta* 'I told him while leaving the circus booth' (Ig 1962.97); *Kamí o tokasi-nágara, Tuneo wa onná no hito no kao o nusumi-mita* 'While combing his hair, Tsuneo stole a look at the woman's face' (Ig 1962.97); ... *syoonén-tati wa yúra-yúra to búranko ni yure-nagara tokui-sóo(̄) ni té o hutte waratte iru* 'the boys, up and down and back and forth in the swings, are waving their hands and laughing triumphantly'. There is a jocular term *nágara-zoku* 'those who can't concentrate on what they are doing without a secondary activity to pay attention to (such as radio or TV while studying, or reading while eating)'.

In theory \bar{n} ágára can be followed by mó in either the concessive or the concurrent meaning, but it is difficult to find authentic examples of \bar{n} ágára mo with the meaning 'also/even while'. This sentence has been suggested: *Rázio(̄) o kiki-nágara mo hón o yomi-nágara mo góhan o tabéru* 'I eat both while listening to the radio and while reading'. But it is possible to give the concessive interpretation 'I eat though listening to the radio and though reading' (simple parataxis of the two concessives) or even, if unlikely, 'I eat though reading in spite of the radio'—with second concessive built on a phrase that has embedded the first concessive so as to modify hón o yómi 'reading'. A somewhat more natural example for the concurrent: *Miti o aruki-nágara mo rekóodo o kiki-nágara mo káno-zyo no kotó o kangae-tuzuketa* 'I continued thinking about her both while walking the street and while listening to records'. But this, too, shades into the concessive 'Though I walk the street, though I listen to records = Whether walking the street or listening to records ...'.

The following sentences provide examples of the concurrent followed by various focus markers, restrictives, etc.: *Zyuudai na mondai dá kara, ll sasuga ni ll sake o nomi-nágara WA* *katarenákatta* 'It is a serious matter, so that I could hardly tell it over drinks'; *Nakiwameki-nágara SAE* *l hanasánakereba, ll reisei ni l soodan dékita no ni ...* 'I wish we could have dis-

20. But ní, exceptionally, cancels the oxytonic accent: *i-nágara ni site*, cf. *i-nágara mo*. This is similar to the accentuation of V- \bar{n} i (iku etc., §9.1.1), a Tōkyō anomaly not found in a number of the Tōkyō-type dialects, which have the regular accentuation (V- \bar{n} i ni iku) as expected.

cussed things calmly without all the wailing and shouting ...'; Matutani sensei wa || térebi wa | motiron, || sibaí ya éiga(¯) o | mi-nágará SURA || Nihon-go [no] ákusento no | hénka ni || kiki-mimi o tátete | irú n desu | yó; || are zya || tanosiménai desyoo ni ... 'Dr Matsutani keeps his ears alert to changes in Japanese accent not only while watching television but even while seeing plays and movies; I don't see how he can enjoy what he sees, that way', Ore wa || rázio(¯) o [|] kiki-nagará SIKA | benkyoo dekinai n da 'I can study only while listening to the radio'; Kinkyuu-mondai wa || nagóyaka ni | sake dé mo | nomi-nágará KOSO | sú beki na n da 'Urgent matters ought to be discussed precisely while amiably drinking wine or something'; Húró ni | hairi-nágará MADE || benkyoo sinákut'atte | ii desyoo 'Surely you don't have to study even while taking your bath?'; Warai-nagará NÁDO de wa, || kura sikatté mo, || kóoka ga || náí desyoo 'If it's [done] while laughing and all, however much you scold there'll be no effect'; Warai-nagará NÁNKA | hanasénai | mondai ná n desu 'It's a matter that can't be talked about while laughing or the like'; Taisetu na mondai désu kara, || mazime ni | hanasi-aimasyóo. || Nomi-nágará NÁNTE || iyá desu | yó 'It is an important question, so let us discuss it seriously. I don't want it to be over drinks and all that'; Sonna sigoto nára || térebi o | mi-nágará D^(A)ATTE (or: D^(E)MO) | dekíru 'That sort of a job I can do even while watching television'; Íp-pai | yari-nagará D^(E)MO | go-soodan simasyóo ka 'Shall we discuss it while having a drink or something?'; Éki made || issyo ni | aruki-nágará [|] -GÚRAI SIKA | o-hanasi suru zikan ga arimasén 'I lack the time to tell you beyond (what I can tell you) while walking to the station together'; Aitu wa | benkyoo-ka de, || tabe-nágará | BÁKARI de | náku, || húró no | náka de mo || hón o | hanasánai no da | sóo da 'They say he's quite a book worm and won't put aside his books not only while eating but even in the bath'; Aruki-nágará | DAKÉ de mo | ii kara, || hanasi-tái 'I want to talk (to you) even if it's just while walking'.

These examples of V-i-nagará dé mo seem to combine the concessive 'even' meaning (expressed by dé mo) with the concurrent 'while': Tukai-nagará dé mo zyuuden dekíru ... 'You can charge the batteries (even) while using it ...' (SA 2637.13); Dékite | míru to, || kore-kurai nára || sibaí yari-nagará dé mo | yatte ikeru to iu wáke de, ... 'Accomplishing that, it seemed possible to go on [with my schooling] even while performing in plays this much' (Tk 2.271a).

The concurrent phrase can be (pro)predicated—Nomi-nágará desu ka 'You mean while having a drink?'—and dá can go through its usual conversions: Nomi-nágará nara (or: da to) kiraku ni hanaséru 'We can talk at our ease while having a drink'; Tabako o nomi-nágará de/zya nákereba benkyoo dekinai 'I can't study without smoking (at the same time)'; etc.

Negativized verbal sentences are made concessive either with V-(a)nai -nagará(¯) {mo} or with the literary-and-Kansai form -(a)nu (¯)nagará {mo}. The latter is more common, perhaps because the nagará concessive sounds a bit old-fashioned, being more often seen in print than heard in speech. Here are some examples of negativized sentences made concessive:²¹ Mimi wa | kikoenu nagára || husi wa | sorowanu nagara, || ookiku kuti o hiráite, | takáraka ni | utatte irú no de aru 'Though his ear is poor and he can't carry a tune, there he is, mouth wide open, singing loudly' (KKK 3.130); ... sékkyóo(¯) o || yóku wa | wakaránu nagara mo || kiite | kanpuku site ita 'while he didn't understand the sermon very well he listened and admired it'; ... dekinai -nagará mo ... 'though unable' (R).

21. I have marked the accent as heard on the sentences when recorded.

The following are perhaps best considered as idiomatic, i.e. as derived adverbs (and/or precopular nouns):

oyobazu-nágara(¯) 'inadequate though I am'

umare-nágara(¯) [ni] 'by nature'

yoso-nágara(¯) 'indirectly, casually'²²

námida-nágara [ni] 'in tears'

kage-nágara(¯) 'in secret, secretly'

sa-nágara(¯) [ni] 'just, exactly (like)'

mukasi-nágara(¯) '(just) as of old'

ítumo-nágara '(now) as always'

biryoku-nágara 'in my own small way'

iki-nágara 'while still alive'

omoi-nágara 'despite my intentions'

i-nagara [ni site] 'from one's armchair, without stirring'²³

wáre-nágara(¯) = zibun nágara(¯) 'even oneself': Wáre-nágara(¯) bikkúri sitá n desu

'Even I was startled' (SA 2649.48a).

Perhaps also such sentence-introducers as:

Habakari-nágara(¯) 'Perhaps I shouldn't say so but ...'

Zannen-nágara(¯), Ikan-nágara(¯) 'I regret to say it but ...'

Iyaiya-nágara(¯) 'Reluctantly enough ...'

Tuide-nágara(¯) 'Incidentally ...'

Sen'etu-nágara(¯) 'If I may presume ...'

Sikasi-nágara 'Nevertheless ...'—'generally taken to be sika 'so' + si (emphatic particle) + nagara'' according to Ishigaki Kenji 197.

The first three of these (at least) can occur after a theme, as in the examples of KKK 3.131, as well as at the very beginning of a sentence.

Nominal sentences, as we have observed, put ¯nágara after the noun. This can be done for virtually any pure noun when it is modified by an adjective, as in Wakái onná ¯nágara 'Though a young woman'—and for some nouns without an adjective, as in Onná ¯nágara 'Though a woman'; for adjectival nouns, as in Taihen sízuka ¯nágara 'While very quiet' and Hu-ántei ¯nágara 'Though insecure'; and for precopular nouns, as in Kyónen kara byooki nágara ... 'Though ill since last year ...' and Mu-tókuten ¯nágara ánda(¯) ní-hon 'No score, two hits'. A few adverbs and adverbializations of quantity nouns can be marked with the concessive: Sukósi ¯nágara^[1] wakátta 'I understood it although just a little'.

It is possible to make the concessive form on N de áru, with the uncontracted copula presenting the auxiliary áru as the form on which to attach the concessive marker: Zyósi de I ari-nágara || dânsi ni I hitteki suru ... 'Though [she be] a woman, she equals a man ...' (Ôno 1966.206); Seinen ya syoonen de ari-nágara, séisin ga rooka site simatta hitó ga

22. But with yosógoto there is no need for the idiomatic treatment: ... yosógoto(¯) ¯nágara sinpai ni náru 'It is a worry even though not one's own affair' (SA 2649.103c). Cf. ... hitogoto ¯nágara sinpai desu keredo mo 'it's worrying about other people's problems, but ...' (Tk 3.28b).

23. But adjuncts are carried by iru in this example: Túmari gakusei wa hituyoo to o áreba Áiowa no inaka ni i-nagara ni site, Nyuu-Yóoku no arúi-wa Róndon no, arúi-wa Zyunéebu no tosyó-kan no hón no hituyoo na peezi dake, kópii o tótte okutte morau kotó ga dekíru 'It means that a student while staying in the Iowa countryside, if it be necessary can have copies sent him of just the pages he needs from books in the libraries of New York, or London, or Geneva' (CK 985.366).

húeta 'There has been an increase in the number of people who have grown all old in spirit while still young or in the prime of life' (SA 2678.117b). I have found one example of N de i-nagara, with the elusive N de iru (p. 519): Nakimúsi de i-nagara^[1] odoke-mono dátta to iu hanasí mo kiiita 'I also heard that he had been a jokester even while a crybaby' (SA 2679.39d). Negativized nominals apparently do not take the concessive: *N de/zya náí (¯)nágara.

With nominals and adjectivals (including adjectival nouns and precopular nouns) the concessive sounds somewhat formal; more colloquial devices are available, notably N dé mo or N d'átte, A-kute mo or A-kut'atte. The expression N mo sáru kotó^[1] ¯nágara^[1] is a semi-literary cliché meaning 'N is all very well but' as in Syóobai mo sáru koto nagara 'Business is business, of course, but ...' and Sore mo sáru koto nagara 'Be that as it may'. Toozen no kotó ¯nágara means 'naturally enough'.

Henderson (182) observes that when nágara follows a nonsingular noun or number (cf. §2.7) the appropriate translation is 'all' (or 'both'): go-nin ¯nágara 'all five (persons)', húuhu ¯nágara 'both man and wife', ...

Verbal nouns will predicate with the auxiliary suru, ringing the concurrent-concessive conversion on that verb: Kenkyuu si-nagara 'While doing research'. We also expect VN ¯nágara to occur, derived from VN dá with the copula substituting for suru by proredication (§3.10), or from the noun qua noun ('while it is VN' = VN ná no ni). But, like other pure nouns, the verbal noun will usually require some modification, typically adjectival in nature: Mizikái ryokoo ¯nágara^[1] kityoo na keiken o sita 'Though a short trip, it provided a valuable experience' is acceptable, but *Amerika é no ryokoo ¯nágara 'Though a trip to America ...' probably is not.

We have mentioned that pure nouns (including free verbal nouns) can be followed directly by ¯nágara but usually require some kind of adjectival modification. Yet there seem to be no special restrictions on N₁ wa N₁ ¯nágara as in Kane wa kane ¯nágara^[1] hito no kane zya tukaenai 'Money may be money but you can't spend it if it's other people's money'; Kenkyuu wa kenkyuu ¯nágara^[1] ... 'It may be research, all right, but ...'; etc.

Apparently the nágara conversion can be applied to conjoined sentences, as we would expect: tatami ni suwatte térebi o mi-nágara 'while watching television seated on the matted floor'. But (assuming the correctness of our translation) the meaning of the following sentence requires us to recognize an ellipsis of nagara after the first infinitive: Ootoó no tomodati no náka ni wa, rázio(¯) dé wa zyázu o kiki[-nagara], térebi de wa yakyuu o mi-nágara syukudai o suru ko ga irú no da to iu 'Among my younger brother's friends, he says, there are those who do their homework while listening to jazz on the radio or [while] watching baseball on television' (ISJ 6.8.276, 6.9.277).

In some varieties of speech (old-fashioned Tōkyō?), you will find ¯nágara ní {mo} used to mean 'but (at the same time); and yet': Soo iwarete, Kookiti wa kusuguttái (¯)nágara^[1] ni manzara dé mo náí kimoti dátta 'Told this, Kōkichi felt tickled but not altogether displeased'. You will also find V-tá (¯)nágara^[1] ní mo used as equivalent to V-te i-nagara mo: ... kumótta (¯)nágara^[1] ní mo akarui sóra ni kamáwazu, ... 'in disregard of the sky, bright though cloudy' (Kb 57b).

In Kōchi and other parts of Shikoku (Doi 205) and in Ōsaka (Makimura 357) the concurrent is V-i-mótte, incorporating the gerund mótte 'holding'. This occurs also in Kyōto and in Yamaguchi (Kobayashi UM 75-24, 207:135n144, 54n37). In the northern Ryūkyūs (Martin 1970.131b) the infinitive adds a suffix -syrya, for which the expected Tōkyō cognate would

be *-sira (or possibly *-sura) if it existed. In Okinawa nagara seems limited to the concessive meaning. For the concurrent, the forms used end in -[a]ganaa or -[a]gacii; there are also forms ending in -aginaa (= -i-tutu) and -agiyun (= -i-tutu ári, -te iru 'is doing'). These forms are attached to verb base alternants ultimately derived from the infinitive V-i; the -i itself drops, but leaves a few traces in the form of altered consonants for certain types of bases. In the southern Ryūkyūs (Yaeyama) the form used for the concurrent is V-i-tanaa. Other dialect forms are V-i-si [na], -sima, -sama; see p. 421.

According to Ishigaki Kenji (87) the element nágará was originally ná (= nó) + kará, and the earliest meanings were 'as (it is/will); following, conforming, according'; the concurrent meaning developed in late Nara times (206) and the adversative meaning is attested from early Heian times (198). Phrases consisting of number + nagara first appear in Genji (209). In the Nara period nágará occurred only after a noun or after a verb infinitive; in the Heian period there appeared such forms as A-nágará, AN-nágará, V-(a)zu nágará and Adv nágará (185 ff), but A-ki nágará and V-ru nágará (189 ff) were uncommon and somewhat exceptional (192). In literature from the twelfth to the sixteenth centuries nágará is found followed by the particles wá, yá, zó, dáni, námu (emphatic), kóso, and ní, as well as by essive or copular forms such as nó, ní, tó, nári (212-3).

9.1.4. Verbal infinitive + -tútu.

A literary (or pseudo-literary) equivalent of the verbal concurrent is made by attaching the infinitive to -tútu (or, with vowel unvoicing, 'tutu): Hón o yomi-tútu = Hón o yomi-nágará 'While reading the book'. When this expression is followed by the auxiliary áru, it becomes a literary equivalent for V-te iru in the meaning 'is doing': Hón o yomi-tútu áru = Hón o yónde iru 'I am reading the book'; Kenkyuu si-tútu áru 'I am doing research'. Since V-te iru can be interpreted in more than one way, V-i-tútu áru is a useful paraphrase to make the continuative or progressive meaning unambiguous. Perhaps this is why it has been observed that V-i-tútu is "lately increasing in use for the progressive" (Kōgo-bumpō no mondai-ten 225). But neither part of the literary expression can be negative.

Although V-i-tútu commonly has the concurrent meaning of V-i-nágará, we find examples, perhaps under the influence of the more colloquial forms, where the concessive meaning is clear; in such cases, mó can follow: ... hoogen-teki sái o moti-tútu mo, ... 'while possessing dialectal differences' (Kotoba no uchū 1967/1.13a); Kore ni tái-site Óobei(-) no kekka wa, túne ni ittei no sá(-) o moti-tútu, sore ni heikoo site narabú no de áru 'The results with respect to this in Europe and America, while always having a certain difference, line up in conformity with that' (KKK 3.71); Ízyoo, kagiráreta suuzi de zentai no keikoo o osu kiken o zyuubún siri-tútu, kono hookoku o mitometa 'While knowing full well the danger of judging overall trends from limited figures, we have taken cognisance of this report found above' (KKK 3.72); Míte wa warúi to omoi-tútu mo, watakusi no mé wa hitori-de ni, hirakáreta nikki no peezi ni sosogaréru(-) 'Though knowing I shouldn't look, my eye spontaneously rivets on the pages of the open diary' (KKK 3.72).

The following examples (from KKK 3.70-1) illustrate the concurrent meaning: Hukéi no hutan o karuku si-tútu zissai-syákai ni háyaku sitéi o okuri-dásu to iu nengén(-) tansyuku no yookyuu kara itté mo, ... 'Even speaking from the [point of view of the] demand to curtail the term [of study] so as to send the young earlier into the real world while lightening the load of their elders, ...'; Sikási, sekai-héiwa ni sekinin áru sikoku-gáisoo wa, kono sékái no zyuudai na kíro ni tátte kokusai-tyóosei ni zenryoku o tukúsu

de aróo si, wareware wa sekai-héiwa no tame, sono seikoo o kitai si-tútu kóngo(¯) no keika o mimamori-tái no de aru 'However, the foreign ministers of the four nations bearing responsibility for world peace, standing at an important crossroad for this world, will surely bend every effort toward an international settlement, and we want to watch the future developments while hoping for their success'.

Here are examples (from KKK 3.71) of V-i-⁽ⁱ⁾tútu áru: Ippóo Marai-rénpoo o hazime tikáku ni wa zyuúrai ⁽ⁱ⁾izyoo ni kome-búsoku ni nayami-tútu áru tíiki ga sukúnáku ná 'Beginning with the Malay Peninsula, for one, there are no few areas in the vicinity that are suffering from a shortage of rice greater than they have been used to'; Inaka no hitó-tati wa káre-ra no hurúi kará ga kudámete yuki-tútu áru kotó o kan-zite iru 'The country people feel that their old shell is being cracked'; Áru monó⁽ⁱ⁾ wa seikatu-súizyun ga téika(¯) si, tósi ni nooson ni huhei ga okótte iru to ii, áru monó⁽ⁱ⁾ wa kokumin-séikatu wa hizyoo ni antei si koozyoo si-tútu áru to iu 'Some say the living standards are declining and discontent is arising in town and village; some say the people's livelihood is quite stabilized and is improving'. (Ig 41 has additional examples.) In the following example *sáe* separates V-i-⁽ⁱ⁾tútu from áru: (Koo site hoogén wa mukasi no mamá⁽ⁱ⁾ iki-tuzukete imásu.) Iki-tuzukete iru dókoro ka, hoogén ga atarásiku umare-tútu *sáe* áru no desu '(Thus dialects go on living just as they have done from long ago.) Go on living?—why, dialects are even [now] being newly born' (Shibata 1965.39).

The suffix -⁽ⁱ⁾tútu comes from a reduplication of the old auxiliary -t(é)- which was attached to the infinitive to form a perfect as in haná ga sak-i tú⁽ⁱ⁾ [ru kotó] '[the fact that] flowers have bloomed' (§9.5); that auxiliary is the source of the gerund V-(i)-té and, ultimately, of the modern perfect V-(i)-tá. Apparently the distributive particle ⁽ⁱ⁾zútu is unrelated, for its etymology is said to be a reduplication of the general counter -tu (as in hitó-tu) with typical compound nigori when the resulting form is attached to a noun.

9.1.5. Verbal infinitive + ⁽ⁱ⁾gati dá.

A verbal infinitive can attach -⁽ⁱ⁾gati to make a nominal sentence, always atonic, with the meaning 'tends to do (usually something bad)' or 'is likely (apt, prone) to do': Kumori-gati dá 'It is tending to be cloudy'; Soo iu kotó wa ari-gati dá 'Such things happen all too often'; Kettén(¯) ga ari-gati dá 'They are apt to have flaws in them'. Under adnominalization the resulting nominal sentence is usually treated as an ADJECTIVAL NOUN (i.e. dá becomes ná rather than nó): Hito o keibetu si-gati na hitó da 'He is a person who tends to despise others'; ... ⁽ⁱ⁾dáre ⁽ⁱ⁾dé mo ari-gati na ayamátí(¯) 'a mishap that might happen to anyone' (SA 2669.105c). But you will sometimes find the expression treated as a precopular noun (with dá becoming nó): Kumori-gati no (= na) hí da 'It is a day that tends to be cloudy'.

There would seem to be no special restrictions on the verbal infinitive chosen, except that the meaning of the input sentence should be interpretable as an undesired event. Causatives, passives, and infinitive or gerund + auxiliary will generally be accepted as inputs: nomisugi-gati dá 'tends to overdrink', nomisugisaserare-gati dá 'tends to let people get one to overdrink', etc. Examples: Nihon-zín wa, || hizyoo ni ryuukoo o ou | keihaku na mínzoku to | káisyaku | sare-gati désu ga, ... 'The Japanese are very apt to be interpreted as a fickle people who pursue fads, but ...' (Tanigawa 182); Isogásii | tokí ni wa, || túi || osokú made | sigoto o sase-gati de, || sumánai to | omótte | imásu 'When we are busy we are apt to make you work till all hours, I'm sorry to say'; Isogásiku | náru to || osokú made | sigoto o saserare-gati da 'If we get busy you are likely to get made to work till all hours'.

Verbal nouns follow the regular pattern, as shown by *hito o keibetu si-gati dá* 'tends to despise others' in the example given above. But -gati, like -sídai (§9.1.2), is also attached to some nouns derivationally, so that the pattern VN-gati dá is also available: *sippai-gati dá* = *sippai si-gati dá* 'is apt to fail'. The adjectival nouns *enryo-gati* 'modest, diffident' and *husoku-gati* 'needy' are derived from verbal nouns in a similar way. In the case of *byooki-gati dá* 'is apt to be sick' and *rusu-gati dá* 'is apt to be away from home' (= *rúsu si-gati dá*—note the accent), we might say that the nouns are functioning as verbal nouns since we find both *byooki o suru* 'suffers an illness' and *rúsu o suru* 'absents oneself from home'; a similar example is *benpi-gati no hitó* (SA 2650.97c) = *benpi si-gati no/na hitó* 'persons prone to constipation'. But there are a few examples of other nouns that are not normally used with *suru*, e.g. *huhei-gati dá* = *huhei o ii-gati dá* 'is apt to complain' (there is no **huhei o suru*), *hikaeme-gati dá* 'is apt to be reserved' (apparently *hikae-mé(̄)* is a precopular noun, followed by adnominal *nó* and adverbial *ní* as in *hikae-mé(̄) ní suru* 'behaves modestly').

The suffix -gati is derived from the infinitive of the intransitive infinitive *kát-i* 'winning'; the voicing of the initial velar might be ascribed to the compounding process, but more likely results from a reduction of the particle *ní*: *V-i n[i] kat-i > V-ingat-i > V-igati*. The meaning would seem to have developed from something like '(a bad situation) winning out'. Somewhat similar, but without the common implication of a 'bad' situation, is one of the meanings of the facilitative *-i-yasúi* (or *-i-íi*) 'is apt/likely to do', §9.1.8. Some speakers question whether the 'bad' implication is inherent in this construction. But it seems to be possible to give such an interpretation to each example found: ... *ketuboo si-gati na mizu ...* 'water that is (= was) apt to be scarce' (SA 2670.44d); *Ryootei no Kyoorjóori to iéba, TÁISOO NI NARI-GATI NO monó o kosikáké no kiraku-sa de yukkúri aziwaérú si, dobin-musi, yaki-mátutake (tómo(̄) ni zíka) nádo no ippin mo áru* '[At this restaurant] you can, with the comfort of sitting in chairs, try out in a leisurely way those things that are apt to be [overly] MUCH FUSSED OVER in the Kyôto cuisine of the traditional Japanese restaurant, and they even have such à-la-carte dishes as "steamed pot" and "broiled mushrooms" (both priced according to the season)' (SA 2650.98d); ... *sono hónrai no ísi o miusinai-gati ni náru kiken ga arimásu* 'there is the danger of getting so we tend to overlook the original intention' (R). In the following sentences the conversion is applied to a focused nucleus, though this is relatively uncommon: *Amái monó o l tábe sael si-gati nára, ll kit-tó^[t] musí-ba ga áru l yó* 'If you're apt to just eat sweet things, you're sure to have tooth decay!'; *Nete í wa l si-gati dá ga, ll hidói l byooki zya náí* 'I AM inclined to be asleep a lot but it isn't a severe illness'; (?) *Ate-zi o káki mo l si-gati de, ll sin'yoo dekinái* 'He's apt to write ateji (arbitrarily assigned characters), too, so you can't rely on him [for orthography].

9.1.6. Verbal infinitive + -tate dá.

A verbal infinitive can attach -tate to make a nominal sentence, always atonic, with the meaning 'has just done, is fresh from doing'. The sentence most commonly appears adnominalized and under adnominalization the output is treated as if a precopular noun or predicable adverb, in that *dá* becomes *nó*: *taki-tate no mesí* 'rice steaming hot from the pot'; *sori-tate no kao* 'a clean-shaven (freshly shaved) face'; *nuri-tate no penki* 'fresh paint'; *mogi-tate no rémon(̄)* 'a fresh-picked lemon'; *ki-tate no hitó* 'a newly arrived person'; *Nari-tate no o-sumoo-san ...* 'A newly established sumō wrestler ...' (Tk 3.15a); ... *nyuumon si-tate no hundosi-kátugi* 'a barely initiated new sumō wrestler' (SA 2666.23a);

... nyuusyá si-tate no wakái syáin(¯) 'young employees who have just joined the firm' (SA 2765.38a); Saikon si-tate no suu-kágetu no aida to iu monó wa, ... 'For a period of some months right after getting remarried ...' (Tk 2.104a); Are wa piano o narai-tate no kodomo dé mo hike-sóo na kyóku(¯) desyóo 'That is a piece that even a child could play who had just learned piano' (Tk 4.33b); ié o kai-tate no hitó 'a new homeowner'; ... gakkoo o de-tate no senséi ... 'a teacher fresh out of school' (Nagano 1966.153); daigaku o sotugyoo si-tate no hitó 'a person newly graduated from college'; Nihón ni ki-tate no kóro 'when I had just arrived in Japan'; gakkoo ni hairi-tate no kóro wa 'at the time when I had just entered school'.

The meaning would seem to preclude attachment of -tate to a stative verb; there is no *ari-tate or *i-tate ('fresh from staying'). Examples of -tate with causatives: Ryokan ni túku to "Soozi sase-tate no heyá ga arimásu kara, sotira e dóo-zo" to syúzin ga itta 'When we got to the inn the innkeeper said "I have a room that I have just had cleaned up; you may have it"'; (?) Kán(¯) o sase-tate no o-sake desu 'It is piping hot rice wine'. And examples with passives: ... syasin ga hatumei sare-tate no kóro wa ... 'at the time when the photograph had just been invented' (Tk 4.130b); Heitai ni torare-tate no kodomo ... 'A son just taken into the army ...'; Titi ni sinare-tate no kodomo ... 'A child still in mourning for his father ...'. Some of the suggested examples with verbal noun + sare-tate will be rejected, at least by certain speakers, in favor of the more straightforward active form si-tate: soozí [sare-tate →] si-tate no dóoro 'a fresh-swept corridor', ryóori [sare-tate →] si-tate no sakana 'a fish hot out of the oven'. But the form is quite possible with an adversative interpretation of the passive: Syoosyuu sare-tate no gakusei ... 'A newly drafted student ...'.

This conversion seems to be an old-fashioned turn of speech and it may be losing its productivity. Though typically heard in the affirmative and adnominalized, as above, other uses are possible. The expression can be made negative: ki-tate de/zya náí hitó 'people who are not newly arrived'. And it can be used predicatively: Ano penki wa nuri-tate desu ka 'Is that paint wet?'

We have observed that the form of the adnominalization marks V-i-tate as if it were either a predicable adverb or a precopular noun, and there are uses that might indicate it is both: ... oténtosama ga de-tate wa óokikute, dandán⁽¹⁾ tiisaku náru 'when the sun first comes up it is large, and gradually it grows smaller' (Tk 3.328-9)—this could have been said with de-tate ní wa. More examples of V-i-tate {ní} wa 'at the time when freshly ...': Íma wa kátte⁽¹⁾ náí kedo, koko e hikkosi-tate wa, kátte⁽¹⁾ tá no 'I'm not raising them now but I was raising them at the time I first moved here' (Tk 4.291a); ... sensoo kara kaeri-tate wa ... 'when fresh back from the war' (Tk 2.272a). It is also possible to say V-i-tate {ní} mo 'also/even at the time when freshly ...': Taki-tate mo umái ga sámete mo nakanaka ikeru 'It's good freshly cooked, too, but it's not bad cold, either'.

But rather than explain these forms as the result of a double grammar (adverb or precopular noun), we will find it simpler to say that the conversion is treated as a TIME NOUN. That will explain the following examples: Zyo-gákkoo ni hairi-tate ¯gúrai no tokí desita 'It was the period shortly after I had entered girls school' (Tk 3.327b); ... tyuugákkoo ni hairi-tate ¯góro no ozyóosan ga ... 'a young lady of about the age to have just entered junior high school' (K in Ōno 1967.19). And, upon inquiry, we find that V-i-tate ga/o are possible: Byoonin wa naori-tate ga taisetu da 'For a patient the point when he has just recovered is important'; Góhan no azi wa taki-tate ga íi 'Rice tastes best when

freshly boiled'; *Titi ga uti(¯) e kaeri-tate o neratte ...* 'Aiming at the time his father would be just arrived home ...'.

9.1.7. Other adverbial nominals from verbal infinitives.

In a number of other situations a verbal infinitive, carrying along its adjuncts intact, derives a nominal that is used as an adverb or as a precopular noun. (Cf. Ig 58, where such constructions are treated as "phrasal decompositions"; notice the similarity to the verbal-noun renominalizations in §14.4.) These conversions include:

(1) *V-i-zume (dá)* < -"tumé < túme vt. [= -i-tuzukeru (*bákari/daké*) 'keeps on doing']: *Iti-niti zyuú suwari-zume no zyootai de, karada ga taihen tukáreta* 'My body was quite weary from being kept sitting all day long'; *Máiniti(¯) zyuugo-zíkan, bentóo o kuti ni ireru aida mo katáppo ni zí o oi-zume no karoo de, káre wa mé ga akaku nátte ita* 'His eyes were red from the overwork of 15 hours a day, continually pursuing words from the corner of his eye even while putting his lunch in his mouth' (Ig 58); *Hitó-ban zyuú o-sake o nomi-zume dátta no de, tugí no hí ni wa atamá ga itáku nátta* 'I was up drinking rice wine all night long, so the next day I had a headache'.

(2) *V-i-doosi (dá)* < -"toosí < toosi vt. [= -i-zume]: (1) 'keeps on doing'; (2) 'the same thing happens over and over again (at different times or with different agents)': *Ása háyaku kara hataraki-doosi (= hataraki-zume) ná no de, taihen tukáreta* 'I was working steadily from early morning, so I am very tired'; ... *honto ni naite, hánketi o mé ni ate-doosi désita* 'was really crying, handkerchief constantly to the eyes' (Kb 395b); *Syúzin kara donarare-doosi de áru sínkei no hiróo(¯) no tamé ni ...* 'Because my nerves were weary from continually being yelled at by the boss ...' (Ig 58); *Hotyóo-ki o kake-doosi ná no de ...* 'Wearing a hearing aid ...' (Ig 58); *Konó-ko ga tabe-doosi dá* 'This child is eating all the time'; *Zut-to tati-doosi dátta* 'I stood all the way'. Cf. *Kenkyusha*, 'all through, throughout' with the examples *Tati-doosi de áru* 'stands (= keeps standing) all the time', *Syaberi-doosi ni syabéru* 'keeps talking; talks away'. Verbs referring to a change-of-state ('become, die, be born, heal, happen, ...') are limited to the second meaning.

(3) *V-i-zama {ni}* < (")samá = arísama(¯) [= V-ru to sugu or V-ru dóozi(¯) ni]: *Koo ii-zama, akaruku nátta zasiki o huri-múita* 'Saying this, he turned to the apartment which had lighted up' (Ig 58); *Suretigai-zama ni nusúnda* 'He swiped it in rushing past (me)'; *Kakenuke-zama ni usiro kara kiri-tuketa* 'He stabbed [someone] while running through'; *Usiro o hurimuki-zama, kataná de kiri-tuketa* 'Turning to the back, he stabbed with his sword'. These expressions are rather literary. But a number of the forms are used as lexical adverbs: *tuzuke-zama ni* 'consecutively',

(4) *V-i-sina ni* 'just as one does; just before doing': *Bíru o de-sina ni ...* 'On leaving the building ...' (Ig 58); *Ki-sina ni ...* 'On your way here ...'; *Ne-sina ni o-húro ni háitte ...* 'Take a bath at bedtime and ...' (SA 2663.110); *Hitóri no soonen no ryóosi wa wataší-táti no húne no yoko o toori-sina ni e-monó(¯) no ó o tukánde míseta ga ...* 'A young fisherman while passing by the side of our boat grabbed the tail of his catch to show us, and ...' (SA 2673.71b). In *Kagawa* the form contracts: *V-i-si[na] ni*. Dialect versions include *V-i-sima*, *V-i-sama*. In various dialects the form is used as the concurrent 'while V-ing' (= *V-i-nagara*). *V-i-sina ni* is said to be more common in *Kyōto* than in *Tōkyō*.

(5a) *V-i-gake {ni}* < -"kaké < káke vt. [similar to *V-ru tuide ni* 'coincidentally while doing'—but TIME is emphasized]: *Oki-gake ni denwa ga kakátte kúru* 'A phone call

comes just as I am getting up'; Uti o de-gake ni ... 'Just as I am leaving the house ...'; Toori-gake ni ... 'On one's way by ...'; Okaeri-gake ni ... 'On your way home ...'; ... gésuto wa de-gake ní wa áme ga hütte itá no da ... 'it was raining just as the guest was leaving' (Tsuji-mura 1967.52); Kaeri-gake, ... 'On the way home ...' (Fn 273a). An unexpected example of conjoined phrases: ... iki-gake TÓ KA kaeri-gake NI, kanarazu yotte kureta n desu 'he always dropped in, either going or on his way home' (Tk 4.119a). (This may indicate that the "essive" element in the underlying *tó* is still present. Or perhaps the two phrases have been directly nominalized.)

(5b) *V-i-kake dá* 'is half-done with' (see §9.1.10, 3): Sui-kake no tabako o otósu 'drops a half-smoked cigarette' (SA 2639.34c).

(6) *V-i-túide ni* 'coincidentally to doing' [= *V-ru tuide ni*—but emphasizes the relative unimportance]: Gakkoo e iki-túide ni ... 'On my way to school ...'; Uti e kaeri-túide ni ... 'On the way home ...'.

(7) *V-i-kkiri (dá)* < -q-kiri 'having just done it, that's all, and left things continuing in the resulting and undesirable state': Iti-nití zyuú suwari-kkiri desu 'He just sits all day long'; Ne-kkiri no byoonin désu 'He is a bed-ridden patient'; Senmu-syásyoo wa, neboo sita kisyá no sóba ni tuki-kkiri de, ... tó kenmei ni sewá o yaite kureta 'The conductor kept close beside the sleepy journalist and anxiously tended his wants, saying ...' (SA 2660.12c); Yamamura tyuúoo-syuzutyubú-tyoo mo "Ákasi-kun-tati ni makase-kkiri de, náhi mo siranákatta" to itte iru 'The head of Central Surgery, Yamamura, himself says "Having left it all up to Akashi and his group, I knew nothing"' (SA 2647.25e); Okyakusáma no go-syóotai no hoo ni kakari-kkiri de zibun no tokoró made wa té ga mawarimasén 'All tied up with invitations to our customers, we can't take care of [Expo reservations for] our own' (SA 2665.38e); Heyá ni hairi-kkiri de déte kónai 'He stays in the room and does not emerge'; (?) De-kkiri de háitte kónai 'He stays outside and does not come back in'. It will sometimes seem that *iki-kkiri dé* is the same as *itta kkiri de* 'gone for good', and you may want to equate *kumori-kkiri dé* with *kumotta kkiri de* 'clouded up', *makase-kkiri dé* with *makáseta kkiri de* 'leaving it to others', etc.; but *V-i-kkiri dé* carries a connotation that the resulting state is undesirable, and that connotation is not necessary to *V-ta [k]kiri de*. *V-ta [k]kiri da* describes an event contrary to expectations that happens AT a time (such as *yó-zi ni* 'at four o'clock') and can sometimes be paraphrased as *V-tá no ga o-simái dá* '... and (doing) that was the end of it', but *V-i-kkiri dá* is a continuing state that sets in FROM a time (*yó-zi kara* 'from four on'). More examples of -ta [k]kiri (de, dá, no): Káre wa, máhi(¯) no tamé neta kirí de, ... 'He was bed-ridden with paralysis and ...' (SA 2663.33a); Suru to, nán-nen ¯buri no taimen desu né.—Héi. Sinsai no tokí, wakáreta kkiri de gozaimásu 'Then how long since you've seen each other?—We separated at the time of the earthquake and have not seen each other since' (Fn 168a); ... káno-zyo wa tonari no kitin ni kakúreta kirí déte koyóo to sinákatta 'she stayed hidden away in the next-door kitchen and showed no signs of coming out' (SA 2670.92c); Itta kkiri káette kónai 'He hasn't been back since leaving', or: 'He's gone for good and won't be back'; Ása tábeta kkiri da kara onaka ga peko-peko dá yó 'I haven't eaten since breakfast, so I'm starved!'; Ip-piki^[1]tutta kkiri desu 'I only caught one fish', 'I caught one fish and that was it/all'. For *V-ru [k]kiri* = *V-ru daké*, see §2.3.3. (p. 78). Note also *V-ta mamá* (§13.2.6).

(8) *V-i-ppanasi dá* < -q-hanási 'does and leaves it (or stays) in that (usually bad) condition: Rázio(¯) ga koware-ppanasi desu 'The radio remains unrepaired'; Tosyó-kan

no hón o kari-ppanasi dá 'The library books are unreturned'; Tabe-ppanasi de katazukénai 'They eat and leave without tidying up after'; Mádo o ake-ppanasi de yasúmu 'He goes to bed with the windows wide open'; Watásí-táti wa zut-to uragirare-ppanasi, damasare-ppanasi dátta n desu 'We were left totally betrayed and deceived' (SA 2652.134d); Sore ná no ni, kiki-ppanasi, kotae-ppanasi de owari-gati na daihyoo-sítumon daké de katazúke, iinkai-síngi wa yarazu-zímai 'Despite that, taking care of just the representative questions that tend to end with asking and answering, it ended up with no committee business getting done'—for V-azu-zímai, see §9.1.7b; Oo-mísoka to Syoogatu no Sangániti(ⁿ), tamesí ni térebi o tuke-ppanasi ni site míta 'I tried leaving the TV turned on through the entire three days of the New Year celebration' (SA 2662.32a); Ukkári, hutokoro kara dásite, teeburu no ué e oki-ppanasi ni site káetta n da 'Absentmindedly he took it from his bosom and left it on the table when he departed' (Kb 209a); Karihworúnia no áru oziisan wa káado ga kíta no o íi kotó ni {site}, kázin ni naisyó de kore o sakaya ni azuke-ppanasi ni site nomi-tuzuke ... 'One old codger in California, taking advantage of the arrival of a [n unsolicited credit] card, left it at a bar to keep drinking on, unknown to his family, and ...' (SA 2660.26d—the ^[r] site toward the end is a literary touch for dé, see p. 615); ... Kamétakan san no zitaku no denwa wa nari-ppanasi [dá] 'Mr Kametaka's home phone was left ringing (unanswered)' (SA 2666.19b); Tásika ni, monomezurási-sa(ⁿ) kara simai-tósi no sengén(ⁿ) o si-ppanasi de náni mo gutai-teki na katudoo o site inai tósi ga óói náka de, Asahikawa no "katudoo" wa nakanaka iyoku-teki de áru 'In the midst of the proliferation of cities that proclaim themselves sister cities out of curiosity and then leave it at that and engage in no concrete activity, Asahikawa's "activity" is quite avid' (SA 2666.34a); Zensin-másui de teioo-sékkai sita kanzya o zyuuzikan ámari mo "kangó-hu mi-narai" ni makase-ppanasi ni sita kotó ga ... 'To have left to "nurse probation" for over ten hours a patient who had undergone a Caesarean with general anesthesia ...' (SA 2666.112b); Zyuusi kara zut-to kisei sare-ppanasi? 'You've been kept in training all the time since you were fourteen?' (SA 2671.46c—interviewing a boxer). In downtown Tōkyō speech, V-ta ppanasi is sometimes used for V-i-ppanasi: ... yuubé tori-konda ppanasi no noren, ... 'the lintel curtain still (taken) inside from the night before' (Kb 194b); ... sokai sita ppanasi ni nátte 'ru rasii '(he) seems to have remained [where he was] evacuated' (Tk 2.8b).

(9) *V-i-gátera {ni}* 'coincidentally to' [= V-ru tuide ni]: Asobi-gátera 'By way of amusement'; Kooen o sanpo si-gátera = Kooen o sanpo-gátera 'In the course of a stroll through the park'; Yoozi [o] si-gátera asobi ni iku = Yoozi-gátera asobi ni iku 'I will go for pleasure along with business'; Tuki o mi-gátera arúku 'I walk along looking at the moon'; Miokuri-gátera ni kógai(ⁿ) e déru to ... 'When I stepped outside to see him off ...' (SA 2666.83a); O-sake dé mo nomi-gátera, katuróide míte 'ru wáke na n desu kedo mo, ... 'It means you watch at your ease, while drinking rice wine or the like, and ...' (Tk 4.54b). This conversion can be used where V-i-^[r]dóosi is impossible, e.g. with mutative verbs.

(9a) *V-i-katágata* 'coincidentally to' [= V-i-gátera, V-ru tuide ni]: Magó^[r] no kao o mi-katágata, asobi ni iku tumori désu 'I intend to go and enjoy myself while getting a look at my grandson'; Tekitoo ni sore o soodan [si-]katágata, ... 'While giving that suitable discussion, ...'; ... no kotó mo ari-katágata mo^[r]tte 'combined with the fact that ...' (Kenkyusha). The word ^[r]katágata is also used as a quasi-restrictive after noun phrases: Sinnin no go-áisatu ^[r]katágata ... 'While offering one's congratulations on the new position ...'; Go-busata no o-wabi ^[r]katágata go-kinkyoo no o-ukagai máde 'While

apologizing for my long neglect in writing, I would like to inquire how you have been getting along'; Térebi o yusyutu suru to iu syooyoo \bar{t} katágata Nyuu-Yóoku e iku tumori désu 'I intend to go to New York partly for commercial purposes having to do with exporting television sets'; Nagusami \bar{t} katágata no syóobai desu kara, riéki wa hotóndo ate ni dekimasén 'It is a business largely for my amusement, so I can hardly look for profits'; Atasi mo née, niman-ryoo \bar{t} bákari no torihiki ga áru n de, hara-gónasi \bar{t} katágata dekakete kúru yó 'I myself have a 200 000 *ryō* deal to attend to, so I'm going out to take care of it while on my constitutional (stroll)' (Okitsu 1.401). And it is also used as a sentence-introducer, a kind of conjunction: Katágata go-ansin kudasái 'And (with this letter) please put your mind at rest for all is well' (MKZ); Daigaku de syakái-gaku o kenkyuu si, katágata sono tihóo no seikatu o míte ki-tái to omótte iru 'I'd like to go do research on sociology at a university and at the same time observe life in that area'.

(10) *V-i-gimi dá* < -"ki.mi 'seeming to ...; tending to ...': aseri-gimi dá 'seems impatient'; bukka ga sukósi agari-gimi dá 'prices are tending a shade higher'; sigoto ni oware-gimi dá 'appears pressed by work'; tokaku osare-gimi dá 'tends to get pushed'; o-sake ni yoi-gimi dá 'tends to get drunk'; ... Cf. yake-gimi dé 'half out of despair/desperation'.

(11) *V-i-hazime no* 'who has just begun doing [regularly]: Gítaa o hiki-hazime no kookóo-sei mo ita 'There were also high school students who had just begun playing (= had just taken up) the guitar' (SA 2664.41d); Kuruma o unten si-hazime no hitó 'a person who has just begun driving a car (= who has just learned how to drive)'. The *no* would appear to be an adnominalization of a propredicative copula, used to represent an underlying *sita* 'did': **hazime sita* → *hazime*†*si*†*ta* = *hazimeta* 'began'. Cf. p. 401 (end of §9.1.). The examples given above have epithematized agents, but the epitheme apparently need not be so limited: Huransu-go o narai-hazime no kóro ... 'At the time when I began studying French ...'; Tabe-hazime no hási, supúun; haki-hazime no kutúsitá(-) ... 'the chopsticks and spoon that one first ate with, the socks that one first wore ...' (SA 2672.125c).

(12) *V-i-hóodai da* 'as one desires': $\overset{(v)}{N} \overset{(v)}{d} \overset{(v)}{e}$ mo si-hóodai $\overset{(v)}{d} \overset{(v)}{o} \overset{(v)}{e} \overset{(v)}{d} \overset{(v)}{e}$ mo iki-hóodai da 'We do what we want and go where we like'; kui-hóodai ni kúu 'eats to one's content'; sen-en de bíiru wa nomi-hóodai 'for a thousand yen—all the beer you can drink' (CK 985.268); ... suki-hóodai na kotó o site ... 'doing everything he likes' (Tk 3.61b); are-hóodai 'left to the weeds, left dilapidated' (lexical entry in Kenkyusha); Syanai-kékkon mo óói n desu yó. Dansi-syókuin wa toku désu né, erabi-hóodai desu mono 'And there are many marriages within the staff, too! It's to the male employee's advantage, you see, because he has a wide-open choice!' (SA 2672.63b). This conversion normally adnominalizes as an adjectival noun, *V-i-hóodai na N*; but you will also come across *V-i-hóodai no N*. *Hóodai* is also used as a postadnominal after the desiderative: *tabe-tái hóodai* 'as much as one wants to eat'; *li-tai hóodai na kotó o itte iru hitóbito mo*, ... 'Even people who say all they want to say ...' (Y 297). And sometimes it is attached to a noun as a suffix: (*hito no*) *iinari-hóodai* 'at the beck and call (of others)'.

(13) *V-i-kágen da* 'in a state of being/doing': Kubi o utumukase-kágen ni = Utumuki-kágen ni 'with bowed head'; Zyuuni-gatú^(v) hazime no gógo no hi ga, moo sukósi aka-mi o óbite(-), nisi e katamuki-kágen ni kemutte iru tamé ni, ... 'Because the early December afternoon sun had taken on a bit more reddish cast and was growing dimmer as it sank into the west ...' (Kabashima 1965.38, quoting from the novelist

Kume Masao). *kagen* is a verbal noun meaning 'adjustment; degree; seasoning'—in origin a coordinate compound of antonyms *KA* 'addition' + *GEN* 'subtraction'. In addition to the usage listed here, *kagen* also occurs both as a postadnominal with the meaning 'chance, accident, (odds of the) moment' and, meaning 'extent (of the situation)', as a suffix of nouns derived from adjectives and adjectival nouns by the suffix *-sa* (§ 14.7), such as *atusa-kágen* 'the extent of the heat' and the following examples: ... *amasa-kágen no íi kotó* 'the way it was just the right sweetness' (SA 2664.110e); ... *yarikuti no akuratusa-kágen de wa, kessite zíngo ni otíru monó de wa náí* 'is by no means one to fall behind others when it comes to the unscrupulousness of his tricks' (SA 2678.114d); *Are ga mótte 'ru haná^[r] no wá no tyatisa-kágen* 'Oh the frailness of the wreaths they bear!' (SA); ... *nagái hata no peraperasa-kágen* 'Oh the flimsiness of the long flags ...!' (SA). Included are derived nouns from verb negatives that end in *-(a)na-sa* and these can apparently carry along their adjuncts, as seen in *Kenkyusha's* example *Káre no séken o siranasa-kágen ni wa odoróku* 'How little he knows about the world!'

Each of these types must be set up as a separate conversion to the extent that it is productive and carries with it the adjuncts of the infinitive. The productivity of the last few types is questionable, however. By way of contrast, notice that adjuncts (or at least, case-marked adjuncts) are NOT retained when infinitives add *-mono*, *-goto* (= "koto), etc., and that is the reason the resulting words are to be regarded as lexical derivatives despite the productivity of the particular suffixes; but see § 14.8 for *V-i-kata* and *V-i-yoo* (as in *Dóo si-yoo mo náí no wa zyotyuu dá* 'The one we don't know what to do about is the maid'), and § 14.7.

I have excluded *-i-giwa* '(on) the brink of doing' as in *kaeri-giwa ni* 'at one's departure (to return home)', *wakare-giwa ni* 'at the moment of leavetaking' and *simai-giwa ni* 'at the eleventh hour', because the formation is not built on the infinitive itself but on the noun derived from the infinitive, and the adjuncts must be adnominalized: **sikén ga/o owari-giwa* → *sikén NO owari-giwa ni* 'right before the examination ends'.²⁴ Each acceptable form is made on an infinitive-derived noun that is used elsewhere as a pure noun; but not every such noun will yield an acceptable form. The limitations are unclear: *ne-giwa ni íp-pai nómu* 'takes a drink at bedtime' is highly acceptable but **oki-giwa ni* 'right before getting out of bed' is rejected perhaps because there is no derived noun **oki* 'arising' made from the infinitive *óki*; *sini-giwa ni* 'on one's deathbed' is heard, but not **umare-giwa ni* 'right before/at birth' (= on one's birthbed?), despite the noun *umare* 'birth' derived from the infinitive *umare* 'being born'. Another example: *Bóku(¯) wa tíhusu o yatte, naori-giwa ni ...* 'I got typhus and upon recovering, ...' (Tk 2.291b).

The word *neiri-bana (ni)* '(in) the first stages of sleep' would seem to be a similar type, but apparently there is no derived noun **ne-iri* from the infinitive *ne-íri* 'falling asleep' (etc.) and I have been unable to find many other examples of *-i-bana* <"hana—except for *de-bana = de-hána(¯)* 'on the point of emerging' [= *de-giwa (K)*] also a pure noun 'the

24. Or so I thought till I came across this example: ... *káno-zyo ni wakare-giwa, ...* 'at the moment of parting from her' (Shibata 1961.186); *wakare-giwa* permits the same valences as *wakaréru* (N *ní/tó/kará*). N *nó* *wakare-giwa* is ambiguous; it could also be from N *ga wakaréru*. I am told that *kane o watasi-giwa ni* 'at the time of delivering the money' is also acceptable; yet **hito to wakare-giwa* is rejected in favor of *hito tó NO wakare-giwa* 'on parting from people'.

outset'; and Kenkyusha's example *káabu no magari-ppana o tatáku* 'hits a ball just when it curves around' probably contains a variant.

Other candidates for inclusion in this section are found in *oki-NUKE ni* 'as soon as one gets up' and *deai-GÁSIRA ni* 'upon sudden encounter'; the latter is a precopular noun (*deai-gásira no hitó* 'a person bumped into', *deai-gásira no/na kotó* 'sudden encounter').

The suffix *-hánbun* '(being) half in/for ...' attaches lexically to a few nouns and adjective bases as well as a number of verb infinitives, but the infinitives do not retain their adjuncts: *Karakai-hánbun* 'half teasing'; *Yakkami-hánbun no hihyoo* 'criticism half from jealousy' (SA 2661.29—MKZ lists *yakkámu = yatu-kámu* as a dialect equivalent of *netámu* 'envies'); *Asobi-hánbun* 'half for fun'; *Huzake-hánbun* 'half joking'; *Omosiro-hánbun* 'half for fun'; *Itazura-hánbun no kimoti kara ...* 'From a feeling half of tomfoolery' (SA 2652.119a); *inemuri-hánbun de ...* 'half-dozing' (Zhs 4.337); *okayaki-hánbun* 'half from jealousy'; *dooraku-hánbun* 'half for recreation'; ...

There are a few relics from the literary language that should be mentioned here. The idiom *Sá mo ari-nán* 'As well might be expected; As is (all too) natural; As is (only) appropriate' contains a reduction of *námu* (which we can perhaps regard as a contraction of *ní arámu*, equivalent to modern *daróo* 'probably is'),²⁵ a literary particle that is here attached to the infinitive to make a kind of tentative, so that the cliché would correspond to the modern analog *Sóo de mo áru daroo* 'It probably would be that way even/too': "Toráreta yó" tte ittára, "Sá mo ari-nán" to itte hohoénde 'másta ga né 'When they said "It's been taken", I put on a good face, saying "I might have known"' (Tk 4.266).

The literary *námu/nán* also attaches by way of the subjunctive *-a-* to make a kind of request similar to the colloquial *site hosíi* 'I want it to happen that': *Ika-námu* 'I want you/him to go', *Ikazara-námu* 'I want you/him not to go'. In the literary language *námu/nán* is also a particle of focus, much like literary *zó* 'indeed', used after nouns and adnominalized (= directly nominalized) sentences; *Terase 153b* gives an example where the *námu* focus is applied to the infinitive of *V-i* Auxiliary (*tóri namu oku = tótte sae oku*). These uses of *námu* were earliest attested as *námo*, perhaps indicating it contained the particle *mó*.

For the literary form *V-í-mi* (= *V-tári*), see p. 571.

The adverbialization *V-i-zyoo* occurs in the expression ... *tó wa ii-zyoo = ... tó wa iú* [|] *zyoo* 'although ...', equivalent to ... *tó wa ié-do {mo}*. For the use of the same morpheme ('item, provision') as a particle after *V-i sooróo* in the epistolary style, see §22.3. An example of *ii-zyoo*: *Sensyoku-bízyutu to wa ii-zyoo, Turumurá-zome wa máda, syoohin-káti ni síhái sarete iru utí wa, hontoo no neuti ní wa nátte inee [= inai]* 'Regardless of the arts of dyeing and weaving, as long as the Tsurumura-dyed is controlled by merchandise prices, it is of no real value' (Fn 221b).

Other conversions similar to those listed in this section are *V-te kure-te (ga náii)* '(there is no) one who will favor me' (§10) and *N ni nari-té* 'one who will become N' (§3.8a).

9.1.7a. Verbal infinitive + 'kko náii

A suffix 'kko₁ can be added to certain infinitives to derive a noun (usually a verbal noun): *A to B o torikaé-kko suru* 'swap (= exchange) A and B'; *kaké-kko = kaké-kkura*

25. But the orthodox etymology is a direct suffixation of the literary tentative *-(a)mu* to the old perfect auxiliary (*V-i-inú*).

(o suru) '(runs) a race'; ... Doyoo kara Nitiyoo no yuugata máde, katarí-kko(¯) suru ... 'engaging in story-telling and song-singing from Saturday through till Sunday evening' (SA 2664.41d); naré-kko ni náru 'gets used to, gets familiar (with)' [slang]; ...²⁶ For some speakers, the suffix is atonicizing after atonic infinitives: ate-kko (o suru) '(engages in) guessing'.

There is also a suffix -gókko that attaches to nouns or to verbal infinitives to make a derived noun 'the game of ...' or 'mutually doing': itati-gókko 'a pinch-each-other game; a vicious circle' (from itati 'weasel'); kisyá-gókko 'playing train'; ikusa-gókko 'playing soldiers' (ikusa 'battle'); ... hutarí de báa o détarí háttari site baatendaa-gókko o site iru utí ni yótte simai ... 'while two people are taking turns playing bartender, ducking in and out from behind the bar, they get drunk and ...' (SA 2664.81b). Ôtsuki assumes that the suffixes 'kko₁ and -gókko are both contracted from kura(be) 'competition'.

But another suffix 'kko₂ is apparently a shortening of kotó. Said to be largely confined to Tôkyô speech, the suffix occurs in a construction V-i-kko nái that is used in place of V-ru kotó wa nái or V-ru hazu ga nái 'there is no possibility (likelihood) that ...': Anó-ko || kaerí-kko || nái yó 'There is no possibility of her returning'; Sonna koto || ari-kko || nái 'There is no likelihood of such a thing happening'; Sonna kane, || oré-táti ni || haraé-kko || nái || kotó ga || wakátte 'te, || yookyuu site kúru n da kara ... 'They start demanding such sums [for bail] well knowing we can't possibly pay them, so ...' (SA 2666.99c); Konna giron o || iku tuzuketé mo, || yo-nó-naka wa || ikkoo || yóku || nari-kko || nái 'However much we continue this sort of discussion, the world won't get any better' (SA 2681.28b); Gakúmon wa || hazime kara || kirai, || e-kakí nánka ni || naré-kko || nái 'I hated schoolwork from the beginning, and there was no likelihood of my being able to become an artist or anything' (Tk 3.42a); Dóo || mit'atte || soori-dáizin ni wa || naré-kko || nái || táipu desu keredo molné 'However you look at it, he's hardly the type who could possibly become a prime minister' (Shiba 20). The suffix seems to be preaccentuated; thus kí-kko nái represents both 'is unlikely to come' (= kúru kotó wa nái) and 'is unlikely to wear' (= kiru kotó wa nái). But some speakers apparently treat the forms as atonic when made on atonic infinitives and differentiate kí-kko nái (= kirare-kko nái) 'is unlikely to wear' from kí-kko nái (= koraré-kko nái) 'is unlikely to come', and iki-kko nái 'is unlikely to go' from ikí-kko nái (= ikiraré-kko nái) 'is unlikely to live'. Both sí-kko(¯) nái (= suru kotó wa nái) and deki-kko nái (= dekiru kotó wa nái) are in use.

Some speakers suggest that the forms sound rather "child-like", but Alfonso 1193 reports that the use is "frequent not only in informal speech but also in rather polite speech" and gives examples with arimasén in place of nái. Another example with arimasén: Dai-kíbo ni || yarú n da kara, || nedan dé mo || kanaí-kko || arimasén || yó || né

26. The suffix appears as -ko after n: kawaribán-ko ni = kawari-ban(¯) ni 'taking turns, by turns'. Not to be confused is the noun suffix -kko 'child': hitorí-kko 'an only child' (also hitorí-go), Edo-kko 'a child of Edo (Yedo) = a Tokyoite', Naniwá-kko 'a child of Naniwa = a native Osakan', itazurá-kko 'a mischievous child, a prankster', sue-kko 'youngest child', sengó-kko 'a postwar child', sitamati-kko 'downtown Tokyoites' (Tk 3.211a), toti-kko 'the locals' (Tk 3.219); Hahaoyá-kko desu 'I'm my mother's boy = I resemble my mother' (R); bebiibuumú-kko 'a baby-boom child' (Nagano 1968.66); etc. There are dialects which use -ko, -kko, or -go (in the Ryūkyūs -kwa, -kkwa, -gwa, and even -ggwa) as a kind of diminutive suffix attached to many common nouns; the suffix is often heard, for example, in northern Honshū (H 1968.131). Perhaps this accounts for the word komori-kko = komóri 'nursemaid'.

'Since they do it on such a big scale, mind you, there's just no matching their prices, you see' (SA 2679.115b).

In place of the negative *nái* you will also find the rhetorical question *áru món ka*: *Wakarí-kko | áru | món ka* 'How could one understand it?!' (Tk 4.109b).

Although the typical pattern will insert nothing but juncture between *V-í-kko* and *nái*, it is possible to find examples of focus applied to the first element: *Soo iu baai, || táda de | dasí-kko WA | nái no | yó* 'In that case there's no likelihood they'll put it out free, mind you' (Fn 261b); *Kessite yóku | narí-kko WA | nái n da kara* 'For there's just no way it can improve' (Y 187—from Kb); *Hazime kpara || deki-kko MO | nái kotó^(c) o | siyoo to surú no wa || baka-rasii* 'It is foolish to try to do something that lacks any likelihood of being possible from the outset'.

9.1.7b. The literary negative infinitive *-(a)zu + -zímái*.

The expression *V-(a)zu-zímái* (<"simai) is made by attaching the infinitive *simai* 'finishing' to the literary negative infinitive; it is normally followed by the copula (often perfect, *dátta*) and is used as an equivalent of *V-(a)nái de simatta* 'ended up not V-ing': *Káre ni wa || awazu-zímái datta* 'I ended up not seeing him'; *Sore o || mizu-zímái desita* 'I ended up not seeing it'; *Soko é wa || issyo ni || ikazu-zímái datta* 'In the end we didn't go there together'; ... *kore mo || kookai sarezu-zímái desu* 'this [film] too ended up never shown publicly' (Tk 3.197a); *Sono totyuu dé mo, || watasi wa || senpan no kotó o || kikazu-zímái datta* 'Even in the midst of it, I ended up not hearing about the war crimes' (Ig 1959.57); *Tóotoo || watakusi ní wa || musumé^(c) no waga-mámá o | yuruséru hodó^(c) no | hakkiri sita [|] riyuu mo || miatarazu-zímái de atta* 'I ended up unable to find any clear reason to forgive the girl her wilfulness' (Y 555); *Soo suru to, || Nihon-ga ni rippa na ratai wa || arawarezu-zímái desu ka* 'So, do we end up with no splendid nudes appearing in paintings of the Japanese style?' (Tk 3.319b).

In place of *dátta* you may find *ni nátte simatta*: *Iti-dó wa | o-ai si-tai to [|] omoi-tuzukete ita hitó desita ga, || kyuú ni | naku-nararete, || tóotoo || awazu-zímái ni | nátte | simaimásita* 'He was a person that I kept thinking I would like to meet sometime, but he suddenly passed away, so that I ended up without the chance to meet him after all'.

And sometimes the imperfect *dá* will appear: *Tóotoo || awazu-zímái da kedo, || zúibun | tegami no toritugi bákari | tanónnda | náa* 'We end up not seeing each other, but there's been a lot of correspondence requested' (Y 555). The expressions can apparently also be used as precopular nouns with the adverbialization *ní*: *Watasi ní wa || wakarazu-zímái ni | owattá no da ga ...* 'I ended up not knowing about in the end, but ...' (Ig 1959.57). And adnominalization would appear possible: *senpan no kotó o kikazu-zímái no yóo datta* 'apparently ended up not hearing about the war crimes'—also ...-zímái datta yóo da/datta.

The example ... *kekkyokú^(c) || yarenai-zímái daroo | né* 'will finally end up unable to do it' (Tk 4.316a) probably results from a syntactic blend of *yarenái daroo* with *[yarezu]-zímái*. A similar blend will yield *-(a)n[u]-zímái*: *Syatyoo wa || tóotoo || yukue ga wakaran-zímái ka* 'Has the president of the company finally disappeared (without a trace)?' (Y 555).

9.1.8. Facilitatives and propensives.

Virtually any verbal sentence can be converted into an adjectival sentence, always tonic, that expresses a polarized concept which has two semantic ingredients: (1) 'it is easy/

difficult to do'—FACILITATIVE, and (2) 'it is likely/unlikely to happen'—PROPENSIVE. The "likelihood" meaning is similar to that of *-i-gati dá* (§9.1.5) but the propensive is not restricted to unpleasant events.

The forms themselves—which we can call FACILITATIVE-PROPENSIVES—are made by attaching auxiliary adjectives to the infinitive. For 'easy' or 'likely' you attach *-yasú-* or *-yó-* (in the imperfect *-yói* is usually pronounced *-ii*), which as free adjectives mean 'cheap' (or sometimes 'easy') and 'good' respectively. For 'difficult' or 'unlikely' you attach *-nikú-* (as a free adjective 'hateful') or *-zúra-* (the nigoried form of the free adjective *túra-* 'trying') or a literary synonym *-gáta-* (the nigoried form of the free adjective *kata-* 'hard').²⁷

In translating the "likelihood" meaning, such expressions as the following will prove helpful: 'is apt to do, is prone to do, is given to doing, often does, does a lot'; with the negatives 'is apt not to do, is prone not to do, is given to not doing, seldom does, little does'. Notice how the free adjective *yó-* in its infinitive form *yóku* means 'often' and 'much' as well as 'well, nicely' so that *Áme ga yóku húru* is susceptible to three interpretations: (1) = *Áme ga huri-yasúi* 'It rains often', (2) = *Áme ga takusán húru* 'It rains heavily', and (3) = *Áme ga húru no wa ii* 'It rains nicely = I am pleased that it rains'.²⁸ (The English word 'lots' means either 'often' or 'much' so that 'It rains lots' has the first two interpretations.)

The grammar of the facilitative sentences resembles that of the desideratives in that you can either leave the adjunct marking intact as in the underlying sentence OR you can mark both the subject and the direct object with *gá*. But if there is no "subjectification" of the direct object—or other adjunct (see below)—only the LIKELIHOOD meaning is usually understood:

Kodomo ga mizu o nómu 'The child drinks water'

→ (1) *Kodomo ga mizu o nomi-yasúi* 'The child is apt to drink water'.

→ (2) *Kodomo ga mizu ga nomi-yasúi* 'The child is apt to drink water'.

'It is easy for the child to drink water'.

But in larger structures you may run across a facilitative use for the first type (with adjuncts intact), too: *Kodomo ga mizu o/ga nomi-yasúi [= noméru] yóo ni zyaguti o hikúku sita* 'I lowered the faucet to make it easier for the children to get a drink of water'.

If the sentence contains no direct object or if it is put into the double-subject grammar of (2) above—with subjectification of the direct object—the facilitative-propensives, unlike the desideratives, will permit you to subjectify the locative adjuncts of PLACE and/or (less commonly) of TIME: [*Kodomo ga*] *ítu ga [mizu ga] nomi-yasúi ka* 'When is it easy [for the child] to drink [water]?' or 'When is it likely for him [the child] to drink [water]?' [*Kodomo ga*] *dóko ga [mizu ga] nomi-yasúi ka* 'Where is it easy [for the child] to drink [water]?' or 'Where is he [the child] likely to drink [water]?' *Nurúi o-yu ga [byoonin ga] nágaku i-yasúi* 'It is easy [for a sick person] to stay a long time in a warm bath' ← *Nurúi o-yu ni [byoonin ga] nágaku iru. Rokú-zi ga siranai* [= *yakusoku no nái*] *hitó ga anó-hito ni ai-yasúi* 'Six o'clock is an easy time for a person without an appointment to see him'.

27. The accentuation of *arigato*[o] 'thankful, thanks' from (?*)*ari-gáta*[k]u 'is difficult to have' is irregular for unknown reasons.

28. Dialects in western Japan (e.g. *Kōchi* in *Shikoku*) use *yoo* [<*yo*'u, the local reflex corresponding to *yóku*] + VERB NEGATIVE as a potential 'can not (do)'; see p. 304 (§4.4).

Since an allative of place can be subjectified, too, from the sentence *Kodomo ga dóko e ikú ka* 'Where does the child go [to]?' we will obtain either *Kodomo ga dóko e iki-yasúi ka* 'Where is the child likely to go?'—leaving all adjuncts intact—or, subjectifying the allative, *Kodomo ga dóko ga iki-yasúi ka* 'Where is it easy/likely for the child to go?' And from *Kodomo ga ítu kúru ka* 'When will the child come?' we can get either *Kodomo ga ítu ki-yasúi ka* 'When is the child likely to come?'—adjuncts intact—or, subjectifying the adjunct of time, *Kodomo ga ítu ga ki-yasúi ka* 'When will it be easy/likely for the child to come?' And it is possible, though unusual, to mark both time and place with *gá*: [*Kodomo ga*] *ítu ga asoko ga iki-yasúi ka* 'When will it be easy/likely [for the child] to go there?' Moreover the grammar says nothing to prevent us from combining this with other multiple subjects to generate multiparous monstrosities beyond the native speaker's wildest dreams: (!)*Dáre ga tonari ga kodomo ga rokú-zi ga gakkoo ga iki-yasúi ka* 'Whose neighbor's child is likely to go to school at six o'clock?'

With verbs of going and coming, PLACE + *gá* would seem to be ambiguous: *Dóko ga ki-yasúi ka* could be derived either from an allative *Dóko e ki-yasúi ka* 'What place is easy to come to?' or from an ablative *Dóko kara ki-yasúi ka* 'What place is easy to come from?' (but some speakers are uneasy with the ablative interpretation) or even from a traversal-accusative *Dóko o ki-yasúi ka* 'What place is easy to come/along/through/on?'—as well as the propensive 'likely' meaning for each. With other verbs the meaning of PLACE *gá* will usually be locative 'at' (*dóko de/ni*).

It is also possible to subjectify an INSTRUMENTAL adjunct: *Hási ga tabe-yasúi* 'It is easy to eat with chopsticks' ← *Hási de tabéru* '[We] eat with chopsticks'; *Sono náihu ga kodomo ga pán ga kiri-yasúi* (*kotó wa dáre de mo sitte iru*) '(Everyone knows) that knife is easy for a child to cut bread with' ← *Sono náihu de kodomo ga pán o kíru* 'With that knife a child cuts bread'. Apparently the subjectification is possible not only when *de* is used as a pure instrumental, but also when it has the causal meaning: *Dóno byooki ga sini-yasúi ka* 'What illness is easy to die from?' or 'What illness is one likely to die from?' ← *Dóno byooki de sini-yasúi ka* ← *Dóno byooki de sinú ka* 'What illness does/will one die from?'

Although it is not easy to find authentic examples, some of the other adjuncts are occasionally subjectified with facilitative-propensives. The following examples were elicited. RECIPROCAL: [*Káre ni tótte*] *sono aité ga tatakai-yasúi* 'That adversary is easy [for him] to fight with' ← *Káre ga sono aité to tatakau* 'He fights with that adversary'; [*Watasi ni tótte*] *káre ga hanasi-yasúi* 'He is easy [for me] to talk to' ← [*Watasi ga*] *káre to hanásu* '[I] talk with him'. DATIVE: *Sono onná ga otokó ni/ga hore-yasúi* (1) 'That woman is easy for men to fall in love with' ← *Sono onná ni otokó ga horeru* 'That woman men fall in love with', (2) 'That woman easily falls in love with men' ← *Sono onná ga otokó ni horeru* 'That woman falls in love with men'. But ABLATIVES seem a bit unnatural: (?)*Siritu-dáigaku ga zyosi-gákusei ni/(ga) sotugyoo si-yasúi* 'It is easy for women students to graduate from private colleges' ← *Siritu-dáigaku kara/o zyosi-gákusei ga sotugyoo suru*; *Háha ga kane ga morai-yasui* (1) (?) 'It is easy to get money from mother' ← *Háha kara/ni* [*watasi ga*] *kane o morau* '[I] get money from mother', (2) 'It is easy for mother to get money' ← *Háha ga* [*hito kara/ni*] *kane o morau* 'Mother gets money [from someone]'.

Attempts to elicit or find examples which subjectify other kinds of adjuncts have been unsuccessful. The subjectified adjunct is usually taken as underlying subject or object whenever possible; and the more adjuncts present in the surface sentence, the more hesitant speakers are to subjectify the other adjuncts.

The pure passive is unusual with the facilitative-propensive conversions only because it is not especially common to begin with; and it is often open to question whether a given case should not be reinterpreted as adversative, as in *gokai sare-yasúi kotobá* 'a word easily misunderstood'. But the following passive was not intended as adversative: *Soko de, koo sita án'i(¯) na miti ga erabare-yasúi* 'Then this sort of easy way is apt to be chosen' (SA 2684.137a). The adversative passive itself occurs quite freely: (*Senséi ga kodomo o sikaru* 'The teacher scolds the child' → *Kodomo ga senséi ni sikarareru* 'The child gets scolded by the teacher' → *Kodomo ga senséi ni sikarare-yasúi* 'It is easy/likely for the child to get scolded by the teacher'; (*Kodomo ga tomodati ni koko e koráreta* 'The child suffered from his friend coming here' → *Kodomo ga tomodati ni koko ga/e korare-yasúi* 'It is easy/likely for the child to suffer from having his friend come here').

Potentials occur; at least, derived potentials: *Kabe ga usúi no de tonari e hanasí ga kikoe-yasúi* 'The walls are thin, so what one says is apt to be audible to the neighbors'. But the expression [*suru kotó ga*] *deki-yasúi* 'it is easy/likely for one to be able to do it'—though possible²⁹—is often replaced by the simple facilitative-propensive (*si-yasúi*), and that is true for potentials in general—something that is likely to be able to happen is, after all, likely to happen.

Facilitative-propensives can be built on causatives: *sase-nikúi* 'it is difficult/unlikely to make/let one do it'. The forms themselves can be made negative: *nomi-yásuku náí* 'it isn't easy/likely for one to drink', *nomi-nikúku náí* 'it isn't hard/unlikely for one to drink', following the pattern usual to adjectives.

Since desideratives are not verbals but adjectivals built on verbals, you cannot make a facilitative directly from a desiderative without first putting the desiderative through verbalization (§7.2): *iku* 'goes' → *iki-tai* 'wants to go' → *iki-tagaru* 'wants to go' → *iki-tagari-yasúi* 'it is easy/likely for one to want to go'. You can build a facilitative-propensive on an excessive (§9.1.9) as in *yari-sugi-yasúi* 'it is easy/likely for one to overdo', and you can build an excessive on a facilitative as in *yari-yasu-sugíru* 'it is overly easy/likely for one to do'; it ought to be possible to do both, yet speakers will balk at (?*)*yari-sugi-yasu-sugíru* 'it is overly easy/likely for one to overdo'. Other attempts at exploiting recursion—most of questionable acceptability—are shown in the table at the end of this section.

It is possible to make a facilitative-propensive on an exalting sentence: *O-kaki ni nari-yasúi* 'It is easy/likely for you to write'; *O-kaki [ita]si-yasúi* 'It is easy/likely for me to write you'; *O-yomi ni nari-nikúi to omoímásu ga ...* 'I'm afraid it may be difficult for you to read, but ...'. But once constructed the adjective *kaki-yasúi* can not so readily be exalted with the prefix *ó-* as can simple adjectives: we find *o-yasúi* 'it's cheap' but not **o-kaki-yasúi*; yet *O-tukai-yásuu gozaimásu* 'It is easy to use' is acceptable. *Kaki-yásukute irassyáru* and *Kaki-yásukute o-ide ni náru* are possible, as is *O-kaki ni nari-yásukute irassyáru*, but **O-kaki-yásukute irassyáru* does not occur. Otherwise, the facilitative-propensives can take most conversions open to adjectivals in general, including *-yasu-sóoda* (§20), *-yásuku*, *-yásukute [wa/mo]*, etc. They can undergo nuclear focus: *si-yásuku wa/mo/sae áru*, etc. The converse, a facilitative made on a focus-marked nucleus, is less common but speakers will apparently accept *V-í wa/mo si-yasúi* and *V-í wa/mo si-nikúi*.

29. Hamako Chaplin rejects *deki-yasúi* and *V-(r)are-yasúi* in general, but she will accept *deki-nikúi* 'is unlikely to be possible' as in ... *deki-nikúi kotó o múri ni sité'ta* 'by sheer force [she] did things unlikely to be possible [for anyone]'; perhaps this should be treated as a derived lexical item. Another example: *Sitagatte(¯), goori-teki ni monó o syóri suru kotó ga deki-nikúi* 'Consequently, it is difficult to be able to handle things logically' (Tanigawa 194).

The form V-í sae si-nikúkereba is said to be unusual, though V-í sae si-yásukereba seems to be acceptable.

There are apparently no particular restrictions on what verbals can be converted to facilitative-propensives. The following have been found or elicited: *sini-yasúi* 'it is easy/likely for one to die', *ari-yasúi* 'it is easy/likely for one to have', *i-yasúi* 'it is easy/likely for one to stay', *oti-yasúi* 'it is easy/likely for one to fall', *haná ga saki-yasúi* 'it is easy/likely for flowers to bloom', *kumori-yasúi* 'it is easy/likely for it to be cloudy', *hi ga teri-yasúi* 'it is easy/likely for the sun to shine'.

Some of the forms have acquired special meanings and in those meanings they are perhaps best treated as derived adjectives: *mi-nikúi* can mean not only 'it is hard/unlikely for one to look at it' but also 'it is ugly', and *kiki-zurái* (or *kiki-nikúi*) means not only 'it is hard/unlikely for one to listen to it' but also 'it is unpleasant-sounding'. The expression [*kimono ga*] *ki-yasúi* means '[a garment] is comfortable (to wear)'.³⁰

The forms with *-ii* are more relaxed than those with *-yasúi*; and they yield interesting strings of like vowels: *si-ii* 'it is easy to do', *ki-ii* 'it is easy to come/wear', *sii-ii* 'it is easy to force', *ii-ii* 'it is easy to say', *i-ii* 'it is easy to stay', etc.^{30a}

Derived nouns can be made from facilitative-propensives by adding *-sa*, as usual for adjectives (§ 14.7): *wakari-yásu-sa* 'ease of understanding', *ii-nikú-sa* 'difficulty in saying'. But the adjuncts will normally go along only if adnominalized: *sono kotobá no wakari-yásu-sa* 'the difficulty of understanding (of) that word'.

Miscellaneous examples: *Ása ga oki-zurái* 'It is hard to get up in the morning'; ... *yáya* [to] *mo suru to, gokai ga syoo-zi-yasúi monó de aru* 'a misunderstanding is all too apt to arise' (CK 985.292); *Tenkin wa sararii-man ni tótte sake-gatái* 'It is hard for the salaried man to avoid job shifts' (SA 2674.113e). In the last example the direct subject of the facilitative (*tenkin ga*), which derives from the underlying object of the verb (*tenkin o sáke* 'avoid job shifts'), is subdued and thematized; the indirect subject is identical to the underlying subject of the verb (*sararii-man ga sáke* 'the salaried man avoid[s]') but here is converted to a dative of reference (*sararii-man ni tótte* 'taking it with reference to the salaried man')—not to be confused with the *ní* that marks the possessor in a possessive sentence.

The following list shows theoretical combinations of Causative, Desiderative (verbalized), Excessive, and Facilitative. (The sequences F D and F C are precluded by definition, since the facilitatives are adjectival and you can not make a causative or desiderative on an adjective form.)

C D E	-sase-tagari-sugi-	C D E F	-sase-tagari-sugi-yasu-
E C D	-sugi-sase-tagar-	E C D F	-sugi-sase-tagari-yasu-

9.1.9. *The excessive (-sugiru).*

You can attach *-sugiru* to the infinitive of most (probably all) verbals, to produce a new verbal, the EXCESSIVE form with the meaning 'overly' or 'all too (much, many, often)'. For an intransitive verb, the implication may be that a single subject overdoes the action or that too many subjects engage in the action; with an obviously plural subject a sentence can be ambiguous. There are some verbs (such as *sini-sugúru* 'too many of them are dying', *umare-sugiru* 'too many are being born', *araware-sugiru* 'too many are appearing', *okori-sugiru* 'too many are happening') that make sense only in the second meaning—unless an adverb is present to take the reference (as described just below); one can't "overdie". We find a similar problem of singular-or-plural for the representative *-tári* (§9.4). The domain of semantic reference usually includes predicate adjuncts, and the "excess" is sometimes to be taken as referring to an adverb: *Háyaku tuki-sugítá no da* 'He had arrived too early' (SA 2672.17c); *Aa, watasi wa amari ni háyaku umare-súgita* 'Ah, I was born too soon!' (SA 2678.139e—the adverb saves us from the farfetched interpretations 'I was born too often' and 'Too many of me were born'); ... *kootyoku-teki ni kangae-sugiru* ... 'is over-rigid in one's thinking' (R); ... *atarasii kyooiku ga, sukósi kanzi-kyooiku o karuku atukai-súgita to iu híhan(¯) wa* ... 'the complaint that the new education has treated education in Chinese characters a bit too lightly' (Kaneda in Ōno 1967.296); *Bóku(¯), ima máde nobiri benkyoo si-súgite ita* 'Up till now I had been studying at too leisurely a pace' (SA 2861.12b). The reference of the excessive can, in fact, be to any adjunct; *iki-sugúru* 'goes too far' usually refers to the allative or the traversal object—the place. When an object is present, the reference is usually to it: *Bíiru o nomi-sugita* usually means 'I drank too much beer' though other interpretations are possible: 'I did too much/frequent beer drinking', 'Too many drank beer', etc.

The dictionary translation of English 'too (much)' is *a[n]mari {ni}*, used as an adverbial adjunct. This is more common with the negative '(not) too' or with some (usually bad) consequence: *Anmari tabéru to (Anmari samúi to) byooki ni náru* 'When I eat too much (When it is too cold) I get sick'; *Anmari tábeta kara (Anmari tábeta kara) byooki ni nátta* 'After eating too much (Because I ate too much) I got sick'. The excessive verbals are in more general use; for emphasis an anticipatory *anmari* can be included in the sentence. For the ordinary 'too' + affirmative adjective, Japanese often use just the simple adjective—letting the situation take care of the implication; or, they use *tyót-to* 'a bit' with the connotation of 'overly'; or, they use the excessive of the adjectival sentence: *D'átte ookii {zya náí ka} = D'átte tyót-to ookii = D'átte ooki-sugiru* 'But it's too big'. Cf. ... *risoo to genzitu no sá(¯) ga ooki-sugiru* 'the gap between ideal and reality is too large' (SA 2673.50d). Another way to say 'overly' is *A-kute ikenai* 'it is so A it won't do = it is too A' (§9.2.2); *A-sugite ikenai* is also possible.

Excessive verbals are also produced by attaching *-sugiru* to virtually any adjective base including *ná-* 'lacking', which (as with the evidential *nasa-sóo da* §20) takes the special shape *nasa-* to yield *nasa-sugiru* 'is over-lacking' [jocular]—as in *Sararii-man ni nasa-sugirú no wa kane, ari-sugirú no wa mibáé(¯)* 'What the salary man lacks too much is money, what he has too much of is outward appearance' and *Zikaku ga nasa-sugirú kara da* 'It's because they are too unself-conscious' (Fn 200b). *Yó-* 'be good' (with colloquial imperfect *íi-* dialect *Ée*—alongside the more literary *Yói* 'It is good'), on the other hand, produces *Yo-sugiru* 'It is overly good' despite the irregular evidential *Yosa-sóo da* 'It appears to be good':

Onéesan wa, hito ga yo-sugiru yó 'You are just too nice a person[, Hamako]' (Fn 317a); Mikake ga yo-sugite komáru 'I am embarrassed because I look TOO good (= healthy)' (Tk 3.179b). The third³¹ of the monosyllabic adjective bases kó- 'saturated' has the excessive ko-sugiru; the evidential is either ko-sóo da or (less often) kosa-sóo da. We can also make excessives from the facilitative adjectivals: kotae-yasu-sugiru or (less commonly) kotae-yo-sugiru 'it is too easy to answer', [anmari] kotae-niku-sugiru 'it is too hard to answer', ari-gata-sugiru 'it is too difficult to bear = obliging'.

There seems to be some resistance to making an excessive on a negative, the preference being to negativize the excessive verbal: Nómu → Nomi-sugiru → Nomi-suginai 'He doesn't drink to excess'; Óoi → Oo-sugiru → Oo-suginai 'There are not too many'. But you occasionally run across sentences like these: Ano sensei ga yasumana[sa]-sugiru 'That teacher doesn't stay out of school as much as I would like'; Benkyoo si-sugiru gakusei mo ireba, benkyoo sina[sa]-sugiru gakusei mo iru 'There are students who study too much but there are also students who overly avoid studying'; Zibun o sirana[sa]-sugirú kara desu 'It's because they don't know enough about themselves'; Mi-no-hodó(¯) o sirana-sugita 'He was all too ignorant of his own limitations' (Y 188); Yo-nó-naka no kotó ni túite sirana-sugiru sensei ga óoi 'There are many teachers who are overly ignorant of society' (SA 2666.97d); Daitai kodomo no kotó o otona wa sirana-sugiru 'On the whole when it comes to children adults know too little about them' (SA 2677.55a). In these cases the negative optionally follows the pattern of the adjective ná-: -(a)na[sa] + -sugiru. A further negative can be made on the excessive-made-on-a-negative to deny an accusation or the like: Benkyoo sina[sa]-suginai! 'But I don't excessively avoid studying!'

Although some speakers will accept such forms as yari-ta-sugirú ka sira 'I wonder if I am being overeager to do it', you do not often make excessives out of desiderative adjectivals (*-ta-sugiru), though you can make desideratives out of excessives: Nomi-sugiru → Nomi-sugitai 'I want to drink too much' (negative → Nomi-sugitaku ná 'I don't want to drink too much'). But you can make an excessive on a desiderative verbal: Nomi-tagari-sugiru 'He is overly desirous of drinking'. And this can be turned into a desiderative adjective—Nomi-tagari-sugitaku ná 'He doesn't want to be overly desirous of drinking', though the forms are rejected by a few speakers.

It is possible to make an excessive out of a causative or a passive or even a passivized causative; you can also make a causative or passive out of an excessive verbal. It is possible to say both Nomase-sugiru 'overcauses one to drink = does too much drink-urging' and Nomisugi-saseru 'causes one to overdrink'. An example: Kodomo o/ni tabe-sugisaseté wa ikenai 'Don't let children overeat'.

Examples of the excessive made on the passive: Yóku sirarete imásu; sirare-súgite imásu 'It is well known; it is all too well known'; Séngo(¯) no syakka-nin wa hógó sare-súgite iru 'The postwar tenants have been overprotected' (SA 2670.40c). And on the passivized causative: ... ima-máde Nihon-zin ga roodoo saserare-súgite kíta 'up to now the Japanese have been too much made to work' (SA 2687.49c).

Most nominal sentences can not be turned into excessive verbals. Excepted are a fair number of adjectival nouns, such as hadé da 'it is gaudy' → hade-sugiru, sizuka da 'it is quiet' → sizuka-sugiru, and kawasóo da 'it is pitiful' → kawaiso(o)-sugiru; the limitations are apparently semantic. Examples include teinei-sugiru 'is overly polite' (= téinei ni

31. And last, since súi 'is sour' is normally replaced by suppái in the spoken language.

sugíru 'exceeds in politeness' since téinei is an abstract noun as well as an adjectival noun)³² and riaru-sugiru 'is overly real' as in this sentence: Syasin wa riaru-sugite, hitóbito ga mé o somuke-gati da 'The photograph is so excessively real(istic) that people are apt to avert their eyes' (SA 2724.25ab). Another example: Issyookenmei-sugirú kara ikenai 'It's no good, because you are too intent' (Tk 2.198b). Instead of adding -sugiru directly to the adjectival noun, you can let the copula revert to its uncontracted form de áru and make an excessive on the auxiliary áru; that, of course, is more common in writing than in speech: Amari ní mo tanraku-teki de setuna-teki de ari-sugiru 'It is entirely too short-circuited and momentary' (SA 2662.33c). Notice that in this example the auxiliary-with-excessive is intended to apply to both of the dé-marked adjectival nouns, but grammatically it is just as ambiguous as is the sentence resulting from the other option: ... tanraku-teki de setuna-teki-sugiru—where the excessive can apply either to the single adjectival noun or to the conjoined phrase. Evidentialized sentences [→ -(i)-sóo da] are a kind of adjectival noun but they do not produce excessive verbals: there is no *-i-soo-sugiru. Instead, you adverbialize the evidential sentence with the copula infinitive (→ -i-soo ni) and use it as a putative (§9.1.11) to complement the verbal sentence Miéru 'It appears', then turn this sentence into a verbal excessive: (*Naki-soo-sugiru →) Naki-soo ni mie-sugiru 'She overly looks in tears = Her weeping appearance is overdrawn'. Similar is the lack of *V-(r)u mitai-sugiru, for which V-(r)u mitai ni mie-sugiru might be substituted, though the normal conversion would be to V-i-sugíru yóo da. At least as denial in answer to a question, the adjectival-noun excessive will negativize: Hade-suginai 'You're wrong—it isn't too gaudy'. Cf. ni sugínai, §14.6.2.

Excessives can be built (1) on the mutative expressions with adjectival or nominal infinitive + náru/suru (§9.1.11) as in byooki ni nari-sugiru 'too many people are getting sick', nágaku nari-sugiru 'gets too long' or 'gets long too often' or 'too many get long' (cf. naga-sugiru yóo ni náru with similar meanings, §9.1.11), Gureepuhurúutu wa amari wadai ni nari-sugita '[The importation of] grapefruit has been the subject of entirely too much discussion' (SA 2649.125e); (2) on expressions of giving and receiving favors (§10) such as V-te age-sugíru 'too many are doing it for others' or 'does too much doing it for others'; and (3) on some other auxiliaries: V-te mi-sugiru, V-te i-sugíru,³³ V-te ari-sugiru (§9.2.4). The excessive expression, once made, can enter into a few such constructions itself, such as V-i-sugite áru 'is overdone' (e.g. Gozi ga kaki-sugite áru 'There are too many mis-written characters') in contrast with V-te ari-sugiru 'is done too much'; and V-i-sugite iru 'is being overdone, is overdone' in contrast with V-te i-sugíru 'is doing it too much, is too much done'. An example with subdued focus applied: Ningen wa sukósi íi-ki ni nari-sugite í wa sinái daroo ka 'Perhaps human beings are becoming a bit too conceited' (SA 2663.105e—the other interpretation, 'Perhaps too many human beings are becoming a bit conceited', is unlikely). There seems to be some hesitancy about forms like V-i-sugite simau, V-i-sugite míru, V-i-sugite ageru and V-i-sugite morau, but I have these examples:

32. But perhaps I misinterpret what is going on. In print, at least, you will find risoo-teki ni sugíru 'is overly ideal' (cf. rikoo-sugiru 'is too clever'); this could perhaps be explained as a direct nominalization of a nominal sentence, the affirmative version of S ni sugínai 'merely S' (§14.6.2).

33. Íma kangáete mimásu to, nán da ka, háha ni yori-kakátte i-súgita yóo na ki mo simásu 'When I think about it now, sometimes (mo) I get the feeling that I was too much dependent on my mother, somehow' (R). Kuno 1973.143 observes that we get V-i-sugite iru when (and only when) we would get V-te iru if the excessive were not applied; hutótte iru becomes hutori-sugite iru 'is too fat' rather than hutótte i-sugíru; and there will never be the possibility of A-sugite iru, only A-sugiru.

Sínsetu o si-súgite simau 'ends up being (or is just too damn) polite'; Sínsetu ni si-súgite agetá/morattá no de mata koráreta 'From (our giving/his receiving) too much cordial reception, we had him on our hands again'. Notice that the excessive normally goes on the V-te iru form of durative-stative verbs: arihurete i-sugíru 'is overly hackneyed'. But with the resultative V-te iru of other verbs the excessive will usually be applied to the verb: otituite iru 'is quiet', otituki-súgite iru 'is excessively quiet'.

There is a slight hesitancy by some to apply this conversion with subject-exaltation: o-kaki ni nari-sugiru, irassyari-sugiru, nasari-sugiru; and with object-exaltation: o-kaki si-sugíru, itasi-sugíru. But acceptable examples are easy to find: O-negai si-sugíru 'I'm asking too much'; Sonna koto itasi-sugimásitara [with polite stylization + conditional] o-yurusi kudasái 'Please forgive me if I do such things too much'. The verb áru is accepted (ari-sugiru 'there's too much of it, there are too many of them')³⁴ as is ir-u (iri-sugíru 'needs too much of it'—though tukai-sugíru 'uses too much of it' is more common in the appropriate situations). Dekíru in the meaning 'is produced' is accepted: Komúgi ga deki-sugite komátte irú no ga Kanada [dá] 'Suffering from overproduction of wheat is Canada' (SA 2664.101b). In the meaning 'can' dekiru is accepted in sentences like Deki-sugiru (kodomo mo imásu) '(There are children who) can do too much = (who are) too bright [said in envy]', but this is a derived meaning, as is that of hanaséru 'can talk, can be talked to = is understanding, sensible, agreeable' in hanase-sugiru hitó 'a person who is overly (all too) understanding'. Other potential-type meanings can be made excessive: kikoe-sugíru 'You can hear all too well/much' or 'All too many can hear/(or be heard)'; Mie-sugiru 'You can see too much' or 'Too many can see/(or be seen)'.

Excessives, once made, can take most conversions appropriate to a verbal, e.g. the concurrent-concessive (-sugi-nágara 'though overdoing'), which can here have only the concessive meaning, regardless of the underlying verb—and that would seem to indicate that the excessive is STATIVE in aspect.

Excessives are basically involuntary, so that you can not make a potential (*nomi-sugir[ar]eru 'can overdrink'); there is no negative potential, either (*nomi-sugir[ar]enai 'can't overdrink'). And instead of the adversative passive being made on the excessive, the excessive is made on the passive: Isya ga/wa kanzya ni sinare-súgita 'The doctor had too many patients die on him'; Onná ga/wa otto ni o-sake o nomare-sugite komátta 'The woman had a drunk husband on her hands'.

Excessives made on verb infinitives can be turned into commands and proposals, but these are nearly always negative: you will tell (or invite) people not to be excessive in their behavior, but you seldom want to tell them to overdo things. It is unusual to find even the negative commands and proposals for those excessive made on adjectives; Oso-suginái de kudasai 'Please don't be too slow/late' may be acceptable.

Apparently it is impossible to follow postadnominals (§ 13.2) with either -sugiru or (as we might at least expect) ni sugíru (§ 14.6.2), even when the postadnominal is an adjectival noun such as yóo or mítai.

34. Wareware ga Nihón no manga ni tyót-to human ná no wa, azi ga ari-sugirú n desu né, sén ya ná nka ni 'What disturbs us about Japanese cartoons is that there is too much ("flavor" =) expression, you see—in the linework and so on' (SA 2661.44c); ... amari supíido ga ari-sugite ... 'from having too much speed' (SA 2688.17); ... amari múudo ga ari-sugirú no de, ... 'there was too much "mood" so that ...' (SA 2680.111d).

Not all examples of V-i-sugiru are to be taken as excessives; the verb sugíru 'goes past, exceeds' (quasi-intransitive, the traversal object being a real or figurative place)³⁵ is free to form lexical compounds: Kéredo mo íma wa, sáke wa nobori-súgi, masú wa kudari-súgita 'But now the salmon have passed upstream and the trout have passed down(stream)' (SA 2664.82c). The excessive interpretation is always possible ('too many salmon have gone up and too many trout have gone down'), but here it would not render the meaning intended by the author. A similar example: toori-sugiru 'passes by' (or 'too many pass', or 'overdoes the passing').

In accentuation the excessives are like compound verbs: they are always tonic for younger speakers; for older speakers they are tonic only when made on ATONIC verbs but atonic when made on tonic verbs or on any adjectival noun or adjective, including the verb negative and desiderative. We have followed the conservative pattern in our markings; Hamako Chaplin usually follows the newer pattern, making all excessives tonic, and that is the pattern used in BJ.

On the recursiveness of the excessive with respect to the causative, the desiderative, and the facilitatives, see §9.1.8.

When focus is applied to an excessive, the appropriate auxiliary is always suru, since the excessive itself is a verbal even if it is made from an adjective or an adjectival noun: Tasyoo yásuku wa nátte irú ga, kinroo-séinen o taisyoo ni sita kooen ni sité wa isásaka taka-sugí wa sinái ka 'They [= Tickets] HAVE become a bit cheaper, but for a performance aimed at working-class youth aren't they (still) a bit too expensive?' (SA 2671.111d).

Derived nouns (§14.6) can be made from the infinitives V-i-sugi; like all nouns derived from compound-verb infinitives they will always be atonic. Kuno 1973.147 says these forms can be used as sentence conversions of the kind we have discussed in §9.1.7, but I am unable to authenticate usages of the type suggested by Kuno: (*)hón o yomi-sugi da meaning hón o yomi-sugiru or hón o yomi-sugite iru. Hamako Chaplin uses the V-i-sugi derivative only as a noun: hón no yomi-sugi 'the over-reading of books'. Perhaps Kuno's usage is a recent innovation; if it spreads, we will want to include it in §9.1.7. The restrictive ~sugí is derived from the infinitive of sugíru, which is súgi (cf. §14.5).

9.1.10. Verbal infinitive + auxiliary verb.

We have said that the infinitive is the form a verbal assumes in entering into a "compound verb"; each compound verb is a lexical item with a new grammar and meaning of its own, which are not predictable in whole from the two component verbs. Certain other forms are similar in a superficial way, in that each consists of an infinitive attached to one of a set of verbs (most of which occur as free nuclear sentences) and is pronounced together with the following verb as a single phonological word with the accent predictable in exactly the same way as a lexical compound. Yet these forms are to be treated differently because (1) they carry with them the grammar of the verbal from which the infinitive comes (e.g. the selection and marking of adjuncts); (2) the meanings are wholly predictable from the components; and (3) the formations are productive—some widely, some narrowly, but more productive than patterns found in compound lexical verbs. Below you will find a list of over forty auxiliary verbs which attach to infinitives; each of these can be regarded as a specific "sentence conversion", and the resulting forms need not be listed

35. Also intransitive (durative-stative like suguréru 'excels') in the usage N ni sugíru 'is more/better than N': Kore ni sugíru monó wa náí 'There's nothing to top this'. Cf. S ni sugínai (§14.6.2).

individually in the lexicon, although some of them are homonymous with lexical compounds which must be listed. It is not clear in every case whether we might not better treat the auxiliary construction as a set of lexical compounds, despite the grammar that is shared with the infinitive. A number of other forms are on the borderline, e.g. -yoseru as in *huki-yoseru* 'blows/drifts together', *kaki-yoseru* 'rakes together', *yobi-yoséru* 'calls together', *uti-yoseru* 'wash against the shore', *osi-yoséru* 'press upon' (but no **kaki-yoseru* 'writes all together', **nori-yoseru*, **atume-yoseru*, ...) and -togeru as in *si-/yari-/nasi-togéru* 'accomplishes' (but no **tukuri-togeru*, **tuki-togeru*, ...). For more examples of such cases, which call for further study, see Parker. Notice that I am treating as separate phenomena such things as V-i-ta-garu (§3.5a, §7), V-i-másu (§22.1), V-i-suguru (§9.1.9). See §9.5 for V-i-tú and §9.2 for the gerund (V-té) based upon it.

The list of auxiliaries groups the entries very roughly according to twelve semantic categories, for the most part corresponding to various notions of "aspect" in treatments of the verbal systems of other languages. The infinitive which enters into the conversions of this section can be causative or passive: *tukaware-dásu* 'starts to get used', *sase-tuzukeru* 'continues having it done'; *L-dópa wa 1967'nen kara Amerika de kono byooki ni tukaware-hazímeta* 'L-dopa began to be used for this disease in America from (= in) 1967' (SA 2663.33a). And the larger form that results from attaching the infinitive to the auxiliary can itself be turned into a causative or a passive: *si-tuzuke-saseru*, *si-tuzuke-rareru*. Since the voice conversions can operate independently on either the infinitive or the auxiliary, all the following possibilities are grammatical:

- | | |
|-------------------------------------|---|
| (1) <i>sare-tuzuké-ru</i> | (7) <i>sase-tuzuke-sasé-ru</i> |
| (2) <i>sare-tuzuke-raré-ru</i> | (8) <i>sase-tuzuke-sase-raré-ru</i> |
| (3) <i>sare-tuzuke-sasé-ru</i> | (9) <i>sase-rare-tuzuké-ru</i> |
| (4) <i>sare-tuzuke-sase-raré-ru</i> | (10) <i>sase-rare-tuzuke-raré-ru</i> |
| (5) <i>sase-tuzuké-ru</i> | (11) <i>sase-rare-tuzuke-sasé-ru</i> |
| (6) <i>sase-tuzuke-raré-ru</i> | (12) <i>sase-rare-tuzuke-sase-raré-ru</i> |

As an example of the last, and most involved, we can generate a 21-syllable phonological word: *Kangae-sase-rare-tuzuke-sase-rare-nákattara-ba* 'If I were not being forced (by A) to keep being forced (by B) to think about it'. Compare Okutsu's monster: *Kosikake-sase-rare-hazime-tagaránai rásikatta daroo ka néé* 'I wonder if it seemed that they did not want to start having people let them sit down' (Kgg 59.55).

After the list below there is a recapitulation with notes on the acceptability of voice conversions for infinitive and/or auxiliary. These notes (and the complex possibilities allowed above) are based on reactions elicited from native speakers; we should seek confirmation from spontaneous texts. The recapitulatory list also indicates the productivity of these auxiliary verbs according to an unpublished study by Zino Song of the University of Hawaii, who explored the possibilities of acceptable combinations with each of one hundred common verb infinitives; this is shown in the list as a productivity index (in percentage).

Other conversions (such as exaltation, desiderative, negative, nuclear focus, etc.) seem to be freely open to the forms that result from attaching the auxiliaries to the infinitives. It is unclear what restrictions there may be on (1) multiple auxiliaries (*si-ai-hazime-owari-kaneru* 'cannot finish starting to do it to each other' seems to be grammatical), (2) single or multiple auxiliaries from this list applied to single or multiple gerund-connected auxiliaries (§9.2.4 and §10), (3) single or multiple gerund-connected auxiliaries applied

to the single or multiple infinitive-attached auxiliaries, (4) combinations of the preceding two possibilities. Nor is it clear to what extent we can apply voice conversions independently to the component parts of such combinations.

The accent pattern of infinitive-attached auxiliary is the same as for a lexical compound verb. (But *-másu* and *-nasáru*, the source of *V-i-nasái*, are always tonic.) For younger speakers, all such verbs are TONIC; for older speakers, whom we usually follow in our examples, the words are tonic only if the first verb (the infinitive) is ATONIC, since our speakers retain differentiations that many of the younger speakers have lost: *tuke-hazimeru* 'begins attaching' (from *tukéru*) and *tuke-haziméru* 'begins pickling' (from *tukeru*) are both pronounced *tuke-haziméru* by the younger speakers; *iki-tuzukeru* 'continues living' (from *ikíru*) and *iki-tuzukéru* 'continues to go' (from *iku*) are both *iki-tuzukéru* for the younger speakers.³⁶ The rule followed by the older speakers has the interesting result that as the speaker attaches additional auxiliaries, the tonicity will shift back and forth: *suru, si-áu, siai-hazimeru, siaihazime-owáru, siaihazimeowari-kaneru, ...* (Notice how this accent patterning differs from that of such elements as the causative *-sase-*, the passive *-rare-*, the negative *-ana-*, and for some speakers the desiderative *V-i-ta-*; these will retain the tonicity of the verb to which they are attached.)

In general, the infinitive + auxiliary will enter into further conversions as a unit that is not subject to insertions or separation. In the following example the auxiliary would appear to be disengaged but the correct explanation seems to be that the free verb *owaru* 'ends' is appearing (in its negative form *owaranai*) as a semantic substitute for the expected *watari-owaránai*, a form that would be quite acceptable in the sentence: *Nihyakú-nin ga kawá o watattá ga, watari-owáru ka owaranai uti(-) ni kaihoo-sénsen no zyuugeki ga hazimatta* 'Two hundred men got across the river but they hardly got across before the [National] Liberation Front began firing' (SA 2679.39a). In an immediate reply to a question, however, the infinitive will sometimes be omitted, especially if the auxiliary makes sense as a verb itself (as just above), but sometimes in other cases, too; we even find the polite auxiliary *-másu*: *Kaerimasén ka?-[]masén yó!* 'Aren't you leaving? No!'

The transitivity of the free verb is not, in general, of relevance to its use as an auxiliary. But in some cases *yamu* 'it stops' is preferred to *yameru* 'stops it' when what ceases is an action beyond human control (see 8, 8a): *Áme ga huri-yanda* 'It has rained itself out'; *Kaze ga huki-yanda* 'The wind has stopped blowing'; *Áka-tyan ga naki-yánda* 'The baby has stopped crying'. Similarly, *tuzuku* 'it continues' is preferred to *tuzukeru* 'continues it' for the same verbs: *Áme ga huri-tuzuku* 'It continues to rain', *Kaze ga huki-tuzuku* 'The wind continues to blow'; yet speakers seem to reject ?**Naki-tuzúku* 'continues to weep' in favor of *Naki-tuzukéru*. Perhaps the forms with *-yamu* and *-tuzuku* should simply be listed as lexical items—alternatives (preferred alternatives, to be sure) to the regular formations made with *-yameru* and *-tuzukeru* that are grammatically available for these verbs,

36. In general, compound verbs are hyphenated in this book; if you see a hyphenated compound verb with the atonic pattern, you will know that the innovative version treats it as tonic. Certain older compounds, however, are treated as single lexical items and do not enjoy the tonic variant; these we write without the hyphen: *mitukeru* 'finds', *otituku* 'calms down', *mitomeru* 'recognizes', ... Cf. *uke-toru* 'receives', *tori-kumu* 'wrestles with', *moti-iru* 'uses', ...; these all have tonic versions in the innovative dialect. And although we would expect an atonic version, *kaerimíru* 'looks back' is always tonic; so also is *tukiáru* 'associates (with)'. (Except for *osóre-irimasu* we ignore the old-fashioned option of retaining the accent of a few infinitives, such as *omói-*, in certain set compounds.)

too. By way of contrast, notice that *Áme ga huri-hazimeta* (or *huri-dasita*) 'It started to rain' can not be replaced by **huri-hazimatta* (**huri-deta*), nor can *Is-syúukan huri-toosu* 'It rains for a whole week' be replaced by **huri-tooru*. The pair *kakéru* and *kakáru* seem to have slightly different meanings as auxiliaries: *sini-kakéru* 'is half dead', *sini-kakáru* 'faces death'. The pair *hatéru/hatásu* (34) show a different pattern of behavior: *-hateru* is attached to intransitive infinitives, *-hatasu* to transitives. What about *tukíru/tukúsu* (11)?

In older Japanese and in what LF calls "formal written Japanese", the infinitive is used in place of the gerund with most of the auxiliaries that call for the gerund in the colloquial: *si oku* = *site oku*; *si kitáru* = *site kúru*, the verb *kitáru* [*< kí itáru(-)*] 'come and reach' being a literary version of *kúru* 'comes'; etc. In older stages of Japanese the infinitive was separable from ALL auxiliaries at least by juncture (and very likely by *wá/mó*), so that the modern *kaki-naosu* 'rewrites' was at one time pronounced *káki | naósu* with the same phrasing as *káite | míru* 'tries reading'. The earlier phrasing is perhaps what accounts for certain now-idiomatic expressions such as *hikí-mo | kírazu* 'without interruption'—also *hikí-mo | kiránu* and *hikí-mo | kiránai* 'is uninterrupted' as in these examples: ... *kokudoo hatigoo-sen wa toráku ya danpú-káa ga hikí-mo kiránai* 'there is no break in the stream of trucks and dumpcars along Highway Eight' (SA 2659.141b); *Kaisóo-sya no rétu wa, hikí-mo kiránakatta* 'The line of funeral attendants stretched unbroken' (Fn 252a). The accentuation (*hikí mo* 'even tugging') tells us this is not a derived noun (*hiki mo* 'even the pull'). Cf. *hikkiri-nási* (*ni/da/no*) 'uninterrupted'.

In the phrase *mí mo siranai/siranákatta áka-no tanin* 'a complete and utter stranger' we find a somewhat more complicated structure, either to be interpreted as *mí mo {site} siranai* or as *mí[-te] mo siranai*—it is unclear which ellipsis is the likelier. In the phrase *ne mo yaranu itíya* 'a night that grants no sleep = a sleepless night' there is an adnominalization that comes from something like *ne o yaru* 'gives sleep' with the noun derived from the infinitive of *neru* (if it were the infinitive itself it would here carry an accent **né mo yaranu*): *Eigá-hwan ni tótte wa, ne mo yaranu tosí¹ no ake to nari-sóo de aru* 'For the movie fan [watching TV], it will be a New Year holiday that allows no sleep' (SA 2660.128b).

But *omói-mo yoranai/yoranu/yorazu* 'unexpected' is like *tóri-mo naósazu* (pp. 329, 400) in deriving from a compound verb *omói(-)yoru* 'thinks and approaches = hits upon an idea' that is now obsolete (Meikai kogo jiten 198b). A like case is *oyobí-mo tukanai* 'does not reach' (Fn 327a); *oyobi-túku* is attested in Shimmura 321d. The example *íi-mo owarazu* 'without even finishing one's say' (Aston 31) is a similar idiom. See also *ái-mo kawarazu* 'without the least change' (§5.5).

LIST OF INFINITIVE-ATTACHED AUXILIARY VERBS

I. RECIPROCAL

1. *-au* '(o-tagai ni ...) does back and forth, mutually; (issyo ni ...) does together (with another); happens to do [in this meaning lexical?]: *home-au* 'praise each other', *yari-áu* 'do to each other; [LEXICAL] quarrel', *oti-au* 'fall together', *suki-au* 'like each other'; *hore-áu* 'fall in love with each other', *tagai ni sizi si-áu* 'support each other', *hanasi o si-au* 'exchange conversation', *hanasi-au* 'discuss, consult'; *daki-áu* 'embrace each other' (but **kaka-áu* 'hold each other in the arms' is impossible); *o-tagai ni tegami o*

kaki-atta 'wrote letters to each other, corresponded'; ... go-rokunin no sinrigákú-sya ga sinrigákú-sya \bar{d} óosi de tagai ni hikén-sya ni nari-atte, ... 'five or six psychologists took turns among themselves as (experimental) subjects for each other' (Ōkubo in Ōno 1967.125); i-áu 'are staying together'; ari-au 'happens to be/have', ari-au kamí to hude o tótte ... 'taking the paper and pen that happened to be at hand' (Fn 478b); Cf. the quasi-adverb ái 'mutually' or 'together' (§ 13.7).

1a. -awaseru 'happens to do': toori-awaseru 'happens to pass by', nori-awaseru 'happens to ride in the same vehicle', ari-awaseru 'happens to be/have' (cf. ari-au), i-awaséru 'chances to be present', kiki-awaséru = toi-awaséru 'makes inquiry'; ki-awasete iru hitó 'people who happen to be here'; Sorézore no genba/genzyoo ni i-awáseta hitótati ... 'the people who happened to be at the various sites ...' (SA 2681.128d); Cf. the derived nouns ari-awase 'what is ready to hand', si-awase 'fortunate'.—Or are these all lexical? Cf. kui-awaseru 'eats two things together; dovetails', nui-awaseru 'sews together', maze-awaseru 'mixes together',

II. INCHOATIVE—or INCEPTIVE

2. -*hazimeru*, -*someru* [quasi-literary] 'begins, starts': (a) yomi-hazimeru 'starts to read', yobi-haziméru 'begins calling/inviting', ari-hazimeru 'begins to exist/have', owari-hazimeru 'starts to end', hazime-haziméru 'starts to begin it', mondai ni nari-hazimeru 'begins to become a problem'; ki-hazimete iru '(THEY) are beginning to arrive'; mie-hazimete iru 'are beginning to appear'; kyóomí o moti-hazimete 'started to have/take an interest in it and ...' (SA 2662.22d); kurasikku-rekóodo no ure-iki zengen no keikoo ga de-hazimete iru '... there are beginning to appear trends toward a slackening in the sale of classical records' (SA 2671.116c); Súde ni wá-ga kuni no mattan no sen'i-sangyoo ni wa eikyoo ga araware-hazimeta 'Already the effect has started appearing on the smaller textile industries of our country' (SA 2670.138d); Dé mo, sono kanoo-sei ga Nihón de mo déte ki-hazimete 'ru, to iu ki ga surú n desu yó 'But, you know, I get the feeling that the possibility is beginning to appear even in Japan' (SA 2793.43c). There are derived nouns (§ 14.5), such as kiki-hazime 'hearing for the first time; starting to hear' from kiki-hazime, the infinitive of verb + auxiliary; for a special use of V-i-hazime nó, see §9.1.7: p. 424. (b) ake-soméru 'starts to dawn', saki-soméru 'begins to bloom', omoi-soméru 'falls in love with', mi-someru 'sees for the first time, falls in love with at first sight', ?ii-soméru 'utters',

3. -*kakeru* 'begins; does halfway; looks to do, is ready to do': mi-kakeru 'begins to look' (as lexical compound 'catches sight of, sees'), hataraki-kakéru 'sets to work' (as lexical compound [aité ni ~] 'influences, acts on'), yomi-kakeru 'starts to read', ii-kakéru 'is about to say, starts to say', sizumi-kakéru 'starts to sink', naori-kakeru 'it starts to improve', hassya si-kakéru 'the train is about to pull out', hasiri-kakeru 'breaks into a run', sini-kakéru 'is half-dead', dasi-kakeru 'begins to put out (etc.)', hazime-kakéru 'is about to begin, starts to begin', i-kakéru (ori-kakeru) 'is ready to stay', ki-kakeru 'is ready to come', kake-kakeru 'begins to hang it (etc.)', kuti-káketa(-) míki 'a half-rotted tree trunk', konsui ga okori-kakeru to 'when a coma is about to set in'; warai-kákete yameta 'started to laugh and then stopped' (Tk 2.102b); ... tote-mo damé daroo to akirame-kakete ita áru-hi no gógo 'one afternoon when I was half-resigned that it wouldn't work out at all ...' (SA 2665.104c); ... háikú(-) to iu monó ga wakari-kakete kíta n desu ga né, ... 'I gradually started to get an understanding of (this thing called) haiku, but, you know ...' (Tk 2.4b);

... hikátte ita mizu ga kuraku nari-kaketa tokí^[r] ... 'when the water, which had been sparkling, started to get dark ...' (SA 2664.83a); Gasorin ga ketuboo si-kákete iru 'We are running out of gas' (Kenkyusha); Senzi-tyuu, bússi ga kyúukutu ni nari-kaketa kóro, ... 'During wartime, when commodities started to get scarce, ...' (Shibata 1961.1); Táta mamá^[r], koohii o hanbun^[r] nomi-kakete, soo itta 'Standing right there, with his coffee half drunk, he said that' (Fn 241a). From this conversion by infinitive nominalization (cf. §9.1.7), we get expressions with *-kake dá*, usually adnominalized to *-kake nó*: *yari-kake no sigoto* 'half-done work', *tabe-kake no góhan* 'half-eaten food', *sui-kake no tabako* 'a half-smoked cigarette', *kaki-kake no hón* 'a half-written book', These expressions are always atonic; that is because derived nouns from compound infinitives are ALL atonic; see *-sasi dá* below and the cases in §9.1.5-7. Examples can be found that are not adnominalized. The verbal infinitive can carry with it build-up: *ozí-san ga koko de pén de tomodati ni kaki-kake no tegami* 'a half-written letter in pen here from uncle to a friend'. It can be negativized (...-kake zya náí NOUN), perfectivized (...-kake dátta N), It can be adnominalized to postadnominals (*sigoto o yari-kake no tokí/tokoró/hazu/etc.*), though it is easily replaced by the simpler adnominalization ...-kakeru/-kaketa + postadnominal.

3a. *-kakarú* 'is ready/about/going to do, almost does, starts to do': *sini-kakáru* 'faces death', *korosare-kakáru* 'is nearly killed', *taiyoo ga de-kakatte iru* 'the sun is starting to rise', *húne ga sizumi-kakátte iru* 'the boat is about to sink', *sigoto ga deki-kakatte iru* 'the work is nearly done', *hi ga kure-kakátta* 'the sun was about to set'; *ki-kakarú* 'is about to be here' (as lexical compound 'happens to come'); *oti-kakarú* 'is about to fall'; *koware-kakatta doogú-bako(̄)* 'a toolbox that had started to fall apart' (SA 2669.91b); *toko ni túita tokí nya [= ni wa] yó ga ake-kakátte ...* 'when I got to bed dawn was starting to break' (Tk 3.121a); The infinitives seem to be mostly from involuntary intransitive verbs. Cf. V-i/VN ni kakáru, pp. 406-7.

4. *-dasu*₁ 'begins, starts': *huri-dasu* 'starts to rain/snow'; *yobi-dásu* 'starts to call/invite' (as lexical compound 'calls someone out, pages, summons'—or is this a case of 40,-*dasu*₂?); *moe-dásu* 'catches fire', *dasi-dasu* 'begins to put out (etc.)', *i-dásu* 'starts to stay', *ari-dasu* 'starts to exist/have', *hazime-dásu* 'starts to begin it', *naki-dásu* 'bursts into tears'; ... *óyazi(̄) no kotó ga ki ni nari-dasita* 'I started worrying about my father' (SA 2659.118b); ... *yokuzitu kara yóku nari-dasita né* 'from the next day he started to get better' (Tk 4.4a); *Kono kangáe wa, hazime wa úmaku itte itá ga, dandán huzyuubún-sa o simesi-dásita(̄)* 'This idea went well at first, but gradually it began to show its inadequacy' (SA 2677.52a); An unusually large number of these expressions appear in SA 2671.44-5 (and subsequent installments of this introduction to economics), e.g.: *Seityoo wa niburi-dasu* 'The growth starts to weaken' (44a); ... *óoki na hénka ga araware-dasita* 'great changes started to appear' (44b); *Mázu dai-iti ni Amerika no zidoosya-gáisyá no kázu ga heri-dasita* 'First off, the number of automobile companies in America began to shrink' (44b). The lexical *mi-idasu* 'finds out, discovers' has the older (literary) version of the verb; cf. *midasi* 'headline, caption', derived noun presumably from infinitive *mi-dasi* 'starts to look', with the auxiliary.

III. COMPLETIVE

5. *-owaru, -oeru* 'finishes': *yomi-owaru* 'finishes reading', *aruki-owaru* 'finishes walking', *nori-owaru* 'THEY finish boarding', *hazime-owáru* 'finishes starting', ...; *owari-

owáru 'finishes ending', *ari-owaru 'finishes having/existing', ?*sini-owáru 'finishes dying', It seems to be more colloquial to use -owaru, but with transitive infinitives some speakers may prefer -oeru: Utusi-oeta yado-tyoo wa mata kesi-gomu de kesite tugí no o-kyaku tyoo ni mawasite ita rásiku, ... 'Apparently he would use a rubber eraser to erase the registry each time he had finished copying it out and then present it for the next guest to use ...' (SA 2665.117b).

6. *-ageru* 'finishes, does completely': yomi-ageru 'finishes reading', kaki-ageru 'finishes writing', arai-agéru 'finishes washing', si-agéru 'finishes, completes (doing)', tukuri-ageru 'completes (making)'; uri-agéru 'sells out', kiri-ageru 'finishes up' [or is this—like the meaning 'raises to a unit, revalues'—lexical?], ...; *ari-ageru 'finishes having/existing', *sini-ageru 'they die out',

7. *-kir-u* 'finishes, does completely (and stops)': tukare-kiru 'gets tired out', moe-kíru 'burns out', uri-kíru 'sells out',³⁷ kai-kíru 'buys up', yomi-kiru 'reads through', oyogi-kiru 'swims through (to the end)', sini-kíru 'they finish dying off; he ...', nori-kíru 'rides all the way through; weathers (a storm etc.)'; yogore-kitta yúbune 'a filthy bathtub' (SA 2672.23d); tukaikonasi-kitta ... sake-zao 'a thoroughly mastered salmon rod' (SA 2669.91b); ... máiniti(¯) no seikatu ni taikutu si-kítte iru 'is thoroughly bored with everyday life' (SA 2684.120a); Bóku(¯) wa saká o nobori-kíri, ... 'I climbed the slope, and ...' (CK 985.371); Áse o dasi-kitte, dasi-kitte, turai, turai 'You sweat and sweat; it's tough, it's tough' (SA 2671.47a); Tákano-san wa Naitingéeru ni sinsui si-kítte iru 'Miss Takano is a great admirer of Florence Nightingale' (SA 2679.63b); Rago-su-wánnai o ittári kítari site iru watasi-búne ga kyaku ga nákute akubi site itá no de iti-nítí kari-kíru kotó to sita 'The ferry boat that goes back and forth inside the bay of Lagos was ("yawning" =) idle for lack of passengers so we decided to rent it for one whole day' (SA 2673.71a); Yó ga máda ake-kiranu gózen yó-zi sugi kara, ... 'From (something) after four in the morning when it had not yet fully dawned ...' (SA 2686.38a). Chaplin rejects (*)Áme ga huri-kitte sóra ga kirei da 'The rain stopped and the sky is clear'. Cf. also 31a. A lexical compound: mi-kiru 'abandons; sells as clearance'. Is komari-kiru 'is greatly embarrassed' (= komari-hateru/-nuku) also lexical?

8. *-yameru* 'stops, ceases abruptly': kaki-yameru 'stops writing', ...; *ari-yameru 'stops having/existing', *sini-yaméru 'stops dying', *owari-yameru 'stops ending',

8a. *-yamu* 'stops' (with some involuntary verbs): kaze ga huki-yanda 'the wind has abated', áme ga huri-yanda 'it has rained itself out'; Sibáruku site naki-yánda tokí ni ... 'After a while when he [the old man] had stopped crying ...' (SA 2660.50b).

9. *-sasu* 'stops in the midst of doing': si-sásu 'leaves work unfinished', yomi-sasu 'leaves it half-read', kaki-sasu 'leaves it half-written', kiki-sásu 'leaves without hearing everything', kui-/tabe-sasu 'stops eating (in the midst of a meal)', ...; *ari-sasu, *sini-sasu, *owari-sasu. From this conversion, by infinitive nominalization (as with *-kakeru* above, cf. §9.1.7) we get expressions with *-sasi dá*, usually adverbialized to the gerund *-sasi de*: (ii-sásu →) ii-sasi dé 'in the midst of one's words'. The verbal infinitive can carry along its adjuncts (watasi ga káre ni sore o ii-sasi dé). It can be negativized (ii-sasi zya nákute) or perfectivized (ii-sasi dátta). It can be adnominalized (kaki-sasi no tegami) and followed by

37. But this is usually treated as lexical, perhaps because of the intransitive derivative uri-kiréru 'it sells out'; cf. suri-kiru 'rubs it out = spends it all' (and, lexically, 'cuts by rubbing') and suri-kireru 'it wears out' as in suri-kireta rekóodo 'a well-worn record' (Endō 158).

postadnominals (tegami o kaki-sasi no tokí/tokoró/hazu/ etc.). From moe-sasi 'half burning' there is a derived noun 'match end' or '(burned) stub' as in ... sono [= mátti no] moesasí o asimótó e suteta 'he dropped the [match]butt at his feet' (SA 2689.43b).

The auxiliary *-sasú* should not be confused with the abbreviated form of the causative *-asas[e-r]u/-sas[e-r]u* (§4.1). The forms will always sound different for consonant verbs (yomi-sasu 'leaves it half-read', yomasásu = yomasaséru 'has him read it'), but vowel verbs will produce shapes that are identical except, in some cases, for accent. Thus akesasu can only be the shortening of akesaseru 'has him open it', since 'leaves it half-open' would require an accent ake-sásu both for younger speakers (who treat ALL compounds verbs as tonic) and for the older ones (who treat as tonic those compounds based on ATONIC infinitives); but the word /tabesásu/ will be unambiguous only from the lips of an older speaker, for whom it represents the shortening of tabesaséru 'has him eat' since he will pronounce tabe-sasu 'stops eating' atonic, unlike the younger generation who will say tabe-sásu.

10. *-toosu* 'finishes with doing, is through with; carries through to completion, does all the way through (an object, a time, etc.)': hanasi-toosu 'is through talking', aruki-toosu 'is through walking', yari-tóosu 'does it all the way', is-syúukan huri-toosu 'keeps raining for a whole week', ...?; *ari-toosu, *sini-tóosu, *owari-tóosu, ...

11. *-tukusu* 'does thoroughly; does all kinds of': asobi-tukúsu 'tries all pleasures', kaki-tukusu 'writes thoroughly; writes all sorts of things', kiki-tukúsu 'hears all sorts of things; listens thoroughly'; yomi-tukusu, tukai-tukúsu, tabe-tukusu, (oyá ni) tukusi-tukusu, ...; *ari-tukusu, *moti-tukusu, ?*sini-tukúsu, ...; Puréeyaa to site, naga-nen, ookésutora ni syozoku site ita daké ni, ookésutora no daidokoro no naizyoo máde siri-tukúsite simatta 'Just from having belonged to the orchestra for many years as a player he has ended up knowing all sorts of things right down to the orchestra's kitchen secrets' (SA 2666.105e); Sukósi no ma ni átari wa kuraku nari-tukusita 'In a short while the place got all dark' (Kb 59b); Sin'yuu de áru kara, o-tagai ni móo ii-tái kotó wa ii-tukúsite iru 'We are good friends, so by this time we have talked out everything we have to say to one another' (Tk 3.31); Yukí to turara ni uzumore-tukúsite Takayama no matí no sógata ga ... 'The appearance of the town of Takayama all buried in snow and icicles ...' (SA 2794.70c); Yositaroo wa mi mo kokóro mo Mitiyo ni honroo sare-tukúsite ita 'Yoshitaro, body and soul, was made a complete fool of by Mitiyo' (SA 2793.105c); Géndai no supóotu wa, samázama(¯) na monó ni riyoo sare-tukusárete iru 'Modern sports have been exploited for all sorts of purposes' (SA 2671.36b). But uri-tukúsu 'sells out' may be lexical ('exhausts by selling'): Ása no zyúu-zi kara uri-hazímete, sóo, sán-zi ¯góro ni wa uri-tukúsite simau né 'I start selling at ten in the morning, yes, and around three I'm all sold out, you see' (SA 2664.101c).

IV. INTENSIVE

12. *-tateru* 'does vigorously and with concentration': kaki-tateru 'writes it up fully', kaki-tateru₁ 'scratches vigorously' [cf. the lexical compound kaki-tateru₂ 'stirs it all up, poles it'], sawagi-tateru 'makes a big fuss', ii-tatéru 'states, declares, asserts', hanasi-tateru 'talks ?away/up', kemuri o tate-tateru 'raises smoke vigorously', ...; *ari-tateru, *sini-tatéru, *owari-tatéru, *hazime-tatéru, Cf. *-tate dá* (§9.1.6).

13. *-makuru* 'does intently': kaki-makuru 'throws oneself into writing it', kiri-makuru 'cuts furiously', tuki-makúru 'pokes/thrusts wildly', áraši ga huki-makutte iru

'a storm is raging', *zyúu o uti-makuru* 'fires his rifle wildly'; ... *sigoto de oi-makuráre*, ... 'insistently pressed with all one's work' (SA 2661.100c)—also *sigoto ni oi-makuráre* 'relentlessly driven by work' (SA 2680.24); ... *uri-makútte irú no ga búutu* 'boots are selling like hotcakes' (SA 2660.155b); *Syóowa(-) yónzyuu yo-nen wa manga ga abare-makútta tosi datta* '1969 was a year of rampaging cartoons' (SA 2661.100a); *Suizenzi ga tokú(-) no máati o utai-makúru* 'They sing out the marches that are [Kiyoko] Suizenji's favorites' (SA 2660.129d); ...; **ari-makuru*, **sini-makúru*, A common usage is *V₁-te V₁-te V₁-makuru*, e.g. *Káite káite kaki-makuru* 'writes and writes and writes away'; ... *kekón-siki de wa hómete hómete home-makurú no ga étikétto* ... 'At a wedding ceremony it is etiquette to praise to the skies ...' (CK 985.391). Cf. *siri o makutte* 'rolling up one's skirts = assuming a defiant attitude'.

14. *-kyoo-ziru* 'enjoys (oneself) doing': *warai-kyoo-zíru* 'has a good laugh', *hanasi-kyoo-ziru* 'enjoys a pleasant talk', *asobi-kyoo-zíru* 'has a nice visit/game', *nomi-kyoo-ziru* 'enjoys a drink', *utai-kyoo-zíru* 'amuses oneself singing'. But *uti-kyoozírú* in ... *seken-bánasi ni uti-kyóozite ita* 'were having a good time gossiping' (SA 2669.27d) contains the intensive prefix *uti-* derived from the infinitive *úti* 'hitting'.

V. CONTINUATIVE

15. *-tuzukeru* 'continues': *yomi-tuzukeru* 'goes on reading', *i-tuzukéru* 'continues staying, stays on', *ari-tuzukeru* 'continues existing/having', *sini-tuzukéru* 'they continue dying', *tuzuke-tuzukéru* 'continues continuing it', *owari-tuzukeru* 'continues ending', *hazime-tuzukéru* 'continues beginning it'; ... *zyuuyoo na kínoo(-) o moti-tuzukete iru* 'is continuing to have an important function' (Nakane 148); *ryóosya -tomo sutáa de ari-tuzukeru kotó* 'for both of them to go on being stars' (SA 2668.103b); *Dóno-yóo de átta ka, dóno-yóo de ari-tuzuketá ka* 'How was it, and how did it continue to be?' (SA 2679.103e); ...; *...-tuzukeru, ...?

15a. *-tuzuku* 'continues'—with certain involuntary verbs only; see p. 440. An example with both *ári-* and *de ári-*: *Sáreba to itte wareware ni kankin sareru kotó o itóu kokóro no ari-tuzuku kágiri, "keimú-syó(-)" to iu gó mo máta(-) itowasii monó de ari-tuzukú daroo* 'And yet as long as we continue to have hearts that loathe being locked up the word "keimusho" 'prison' too [as well as *kangoku* 'jail'] will probably continue to be loathsome' (Maeda 1962.105—discussing euphemisms).

VI. HABITUATIVE

16. *-tukeru* 'accustoms oneself to doing': *yobi-tukéru* 'accustoms oneself to calling/inviting' [as lexical compound 'calls up, summons'], *tabe-tukete iru* 'is used to eating', *aruki-tuketa miti* 'a path familiar to one's feet', *si-túketa sigoto* 'familiar work', *o-kane ga ari-tukete iru* (better: *o-kane o moti-tukete iru*) 'is used to having money', ...; (?)*sini-tukéru*, ...; ?*...-tukeru, ...; *mi-tukenai kao* 'an unfamiliar face' (= *mi-narenai kao*); *Míni bákari o mise-tukerarete kíta mé ni wa íssyu iyoo na húukei de mo áru* 'It [= the maxi] is indeed a strange scene for the eye that has grown used to being shown mini [-garments] only' (SA 2666.100a—notice the location of the passive; we would have expected *miserare-tukete*). But *kime-tukéru* 'reprimands' is lexical. From this conversion, by infinitive nominalization (as with *-kakeru* and *-sasú* above, cf. §9.1.7) we get expressions with *-tuke dá*, usually adnominalized to *-tuke nó*: *iki-tuke no baa* 'a bar one is used to going to', *kai-tuke no misé* 'the shop one usually buys at', *kakari-tuke no isya* 'my usual doctor' (from *isya ni kakáru* 'consults a doctor'),

17. *-nareru* 'becomes accustomed to': *ii-naréru* 'gets used to saying', *kaki-nareru* 'gets used to writing', *yomi-nareru* 'gets used to reading', *kiki-naréru* 'gets used to hearing', *tabe-nareru* 'gets used to eating', ...; *tukai-narénai zyúu* 'a gun that one is not used to (using)'; **ari-nareru* 'gets used to having/existing', (?)*sini-naréru* 'gets used to dying', ...; ?**...-nareru* ...

18. *-nara[wa]su* 'does as a habit, makes it a practice to do, always does': *yobi-narawásu* 'always calls/invites', *aruki-narawasita miti dá kara* 'since it's a road I'm accustomed to walking', *bungo o yomi-narawasu* 'makes it a practice to read literary Japanese', ...; **ari-narawasu* 'always has/exists', **sini-narawásu* 'always dies; they always die', ...

19. *-mawaru* 'goes around doing, does at different places': *asobi-mawáru* 'goes around enjoying oneself', *tobi-mawáru* 'flies around', *aruki-mawaru* 'walks around', *kake-mawaru* 'runs around'; *moti-mawaru* 'goes around holding', ...; **ari-mawaru*, **i-mawáru*, **sini-mawáru*, [Physical movement need not be involved.] Cf. *mawari-mawatte* 'after many vicissitudes'—a derived adverb, for it would be tonic (**mawari-mawátte*) if it were the gerund of *mawaru* + the auxiliary *-mawaru*.

20. *-aruku* 'goes around doing [not necessarily afoot]': *nomi-aruku* 'goes around drinking', *tabe-aruku* 'goes around eating all the time', *ii-arúku* 'goes around saying, keeps saying', *asobi-arúku* 'goes around enjoying oneself', *N o uri-arúku* 'goes around selling N', *moti-aruku* 'goes around holding = carries with one', ...; **aruki-aruku* 'goes around walking', **hanasi-aruku* 'goes around talking', The following example is perhaps lexical: ... *Bánkoku no matí o nosi-aruite itta* 'he strode all over Bangkok' (SA 2669.62a).

VII. ITERATIVE

21. *-kaesu* 'repeats (the doing of)': *yobi-káesu* 'calls him again' [as lexical compound 'calls back'], *yomi-kaesu* 'reads over again, repeats the passage', *kuri-kaesu* 'rewinds' [as lexical compound 'repeats'], *mi-kaesu* 'looks at it again', *kiki-káesu* 'hears it again', *morai-káesu* 'receives it again', ...; **nori-káesu* 'rides it over again', **ki-kaesu* 'comes again', **ari-kaesu*, **i-káesu*, **sini-káesu*, The infinitive must be TRANSITIVE; what is repeated is the same action with IDENTICAL subject and object. Hence **nomi-kaesu* 'drinks the identical thing over again' strikes the native speaker as impossible. But it is not clear why **kimono o ki-káesu* 'puts the garment on again' is rejected. Nor is it clear why *okuri-káesu* 'sends back' and *buti-kaesu* 'hits back' apparently occur only as lexical compounds.

22. *-kaeru* 'redoes DIFFERENTLY': *ki-káeru* 'changes clothes', ^{47a}*nori-káeru* 'changes vehicles'; *yomi-kaeru* 'rereads' (= *yomi-naosu*), *kaki-kaeru* 'rewrites' (= *kaki-naosu*), ...; *naosi-kaeru* 'reimproves', *hazime-káeru* 'begins anew', ...; **ari-kaeru*, ?**i-káeru*, ?**sini-káeru*, But the mutative *ni* in ... *atarasii kuruma ni kai-káeru* 'trades one's car in on a new one' shows that *kai-káeru* is lexical; 're-buys' would require *kuruma o*. And *akire-káeru* is a synonym of *akire-hatéru* 'is thoroughly dumbfounded/disgusted'.

23. *-naosu* 'redoes DIFFERENTLY AND BETTER, does over (better)': *yomi-naosu* 'rereads (correctly this time)', *mi-naosu* 'gets a better look at', *sini-naosu* 'does a better job of dying the second time around', *naosi-naosu* 'reimproves it', *kimono o sitate-naosu* 'alters a garment', *tate-naosu* 'rebuilds', *kazoe-naosu* 'recounts', *kangae-naosu* 'reconsiders', *morai-naosu* 'receives it again' (= *morai-kaesu*), *suwari-naosu* 'reseats oneself', *tobi-naosu* 'flies/jumps again', *de-naosu* 'comes/goes (= calls) again; makes a fresh start'; ? *ki-naosu* 'comes again', ...; **ari-naosu*, **i-naosu*, **-tagari-naosu*, ...; *Áa, yappári nízyuu go-nen to iú no wa nágakatta n da ná to omoi-naosita* 'I revised my ideas, thinking "Ah, after all,

47a. Now usually lexicalized as *kigáeru*; cf. *Nihongo-kyōiku* 28.23 (1975).

twenty-five years has been a long time, hasn't it?'' (SA 2670.43c); Mata nobotté 'tte, ori-naosanákuttya naránai n desu 'You gotta climb back up and come down again [= make a new, and better, descent]' (Tk 4.44a); Kaséi-hu san wa iki o nómi, roogan-kyoo o kákete moo iti-dó nagame-naosita 'The housekeeper swallowed her breath and put on her specs to take a better look' (SA 2671.136c). Cf. the lexical compound muki-naóru 'turns around, faces about'.

VIII. EFFECTIVE

24. *-ooseru* 'manages to do, succeeds in doing': nige-ooseru 'effects one's escape', yari-ooséru 'manages to accomplish (despite difficult circumstances)', si-ooséru 'accomplishes', kaki-ooseru 'gets it written', This is somewhat literary. Notice that the equivalent literary-style form *-oosu* seems to be used as a synonym of *-owaru* (6 above).

25. *-eru* [written style and dialect], *-u(ru)* [literary] 'can do' = potential (§4.4) or *-ru kotó ga dekiru* (§14.1.3). Pseudo-literary usage is *-i-uru* (predicative as well as attributive), but the negative is *-i-enai*. This seems to be the preferred modern written usage: deki-uru kágiri 'as much as possible' (Y 509); ... to iu kotó mo kangae-uru kotó desu ga, ... 'even such a thing as ... is thinkable, but' (Shibata in Ōno 1967.74); Bunka-zinruigaku ga tetugaku ni kawari-úru kágaku da to suréba, ... 'If cultural anthropology is considered to be a science capable of replacing philosophy, ...' (SA 2676.98d); Káre nara ari-úru kotó da 'It's something that might happen to HIM, all right' (SA 2686.26d); sake-enai zítai 'an unavoidable situation' (Kgg 81.1a); Dóru ga sekai-túuka tari-úru [< to ari-úru] wáke 'Why (it is that) the dollar can be a world currency' (SA 2676.44a). But the literary predicative appears in ... syuusyuu si-ú 'bekarazáru zyootai ... 'a situation out of control' (Fn 26a) and in ... onná no kyád'ii nádo wa kangae-u 'béku mo arimasén kara, ... 'a female caddy being the farthest thing from one's mind, ...' (Tsukagoshi 76). On *ari-e-* and *de ari-e-*, see §4.4. See also §4.4 for pleonastic *V-i-e-rare-*; K 1966.136-7 cites from modern writers examples of *deki-enai*, *deki-uru*, and even *deki-e-rareru*. An example made on a passive: Soo iu zyuukuseiki-teki na kangae-káta de wa, atarasii "sekái-si" wa koosei sare-énai 'With such 19th-centuryish thinking, a new "world history" can not be constructed' (Tanigawa 142). On the accent, see p. 303.

25a. *-atau* [modern literary] 'can do': see *-atawazu* (31b).

26. *-tariru* 'does it enough' (especially common in the negative *-tarinai* 'does it insufficiently'): yomi-tariru 'reads enough', ne-tarinai 'doesn't get enough sleep', miti-tariru 'gets full enough', ...; *ari-tariru, ?*sini-tariru [not even with plural subject?],

IX. INEFFECTIVE

27. *-aguneru* [semi-literary and ?dialect], *-agumu* [literary] '(1) wearies of doing; (2) does unsuccessfully, with no result': sagasi-agunéru 'tires of looking for it', mati-aguneru 'wearies of waiting', moti-aguneru 'tires of holding', ...; ? ...; ?*...-aguneru,

28. *-ayamaru*, *-matigau* (?= -tigaeru) 'mis(takenly) does': mi-ayamaru 'fails to see, mistakes', kaki-ayamaru 'miswrites', ii-ayamaru 'misstates', ami-ayamaru 'misweaves', nui-ayamaru 'missews',

29. *-sokonau*; *-sokoneru* [variant]; *-son-ziru* [semi-literary] 'misdoes (accidentally)'; (= *-sobireru*) 'fails to do, unsuccessfully does/attempts': yomi-sokonau 'misreads; fails to read', oki-sokonáu 'mislays; fails to put', ii-sokonáu 'missays, makes a tongueslip', obore-sokonáu 'nearly drowns', yookoo si-sokonáu 'misses one's chance to go abroad', kooen o

kiki-sokonáu 'misses (hearing) a lecture', mondai o toki-sokonau 'fails to solve the problem', ate-sokonáu 'guesses wrong'; sini-sokonáu 'attempts suicide' (the derived noun that means 'would-be suicide' or 'damn old man' shows idiosyncratic—pejorative?—nigori: sini-zokonai); Sono tamé ni atasya [= watasi wa] homerare-sokonatta 'For that reason I failed to get praised' (Tk 2.222a); ... ; *ari-sokonau,

30. *-tigaeru* 'does it wrong; does to the wrong (object)': yomi-tigaeru 'reads the wrong book; erroneously reads', tori-tigaeru 'mistakenly takes, takes the wrong one, mistakes', kusuri o nomi-tigaeru 'takes the wrong medicine' [and NOT 'makes the mistake of taking medicine'], iki-tigáeru 'goes to the wrong place', suwari-tigáeru 'sits in the wrong seat', X o Y ni kiki-tigáeru 'mishears X as Y (Y for X)', ...; *ari-tigaeru, *sini-tigáeru,

31. *-kaneru* [semi-literary] (1) 'can not do' = negative potential: Oosaka-kokusai-kúukoo no tikáku ni súmu nízyuu hatí-nin wa, túi ni tamari-kánete, kuni o aite-dótte sosyoo o okósita 'Twenty-eight persons living near the Ōsaka International Airport, finally unable to stand it [the noise], have brought suit against the government' (SA 2678.64a). (2) 'hesitates to do, finds it difficult to do' (in this meaning often negativized 'does not hesitate to do'): dónna kotó de mo si-kanéni 'would stop at nothing', íma ni mo naguri-kanenai 'is about to hit me any minute', ari-kaneru 'is hard to have, is unlikely to have', ari-kanenai 'is hard not to have, is likely to have', ...; ?*...-kaneru, Sansom 221 suggests this may be related to the Old Japanese V-i kate-nu 'cannot' from an auxiliary V-i kat(e)- 'can'.

31a. *-kirenai* 'it is too much for one to do, cannot': íkura hómete mo home-kirenai 'cannot speak too highly of him, is beyond praise'; hitóri de tabe-kirenai hodó no gotisoo 'a feat too substantial for one person'; kui-kirenai hodó no pán 'more bread than one can eat'; iti-nítí de wa mi-kirenai 'can't see them all in one day' (cf. mi-kiru 'abandons etc.'—lexical, 7 above); Sono hón wa kyóo zyyuu ní wa yomi-kirenai 'I can hardly get through the book today'; Kono sitú ni hyakú-nin wa hairi-kirenai 'This room won't hold a hundred people'; Kore wa watasi ní wa tabe-kirenai 'This is more than I can eat'; Tukai-kirénai hodó^[1] kane ga áru 'I have more money than I can spend'; Dóo⁽²⁾ sité mo, bóku(¯) wa akirame-kirenai 'I just can't get over it' (Tk 4.295a); San-kái^[1] ittá kedo mi-kirenákatta 'I went three times [to the Louvre] but I couldn't see it all' (Tk 2.192b); ... túmari syúzin no áni daké de wa hutan si-kirénai no de ... 'after all my husband's older brother alone can hardly take on all the burden, so ...' (SA 2681.112b); Kotowari-kirenai hodó^[1] sigoto ga áru 'I've got so many jobs (offered me) that I can't get them all turned down' (SA 2671.28e); Írai, dai-rén'ai, syoo-rén'ai, zúbun nasátta yóo desu né.—Hái, kazoe-kiremasén 'You seem to have had a good many love affairs in the past, big ones and little ones.—Yes, I lose count of them' (SA 2685.46a); ... zyoyóo-sya ga káabu o magari-kírezu ... dentyuu ni ... butukarímásita 'a passenger car failed to negotiate a curve and hit a telephone pole' (R). Contrast the auxiliary in Iti-zíkan de wa yari-kirénai 'I will not be able to do it in an hour' with the derived quasi-adjective in Koo átukute wa yarikirénai 'It is terribly hot' (Cf. p. 480). Is there also an auxiliary *-kireru* as an intransitive counterpart to *-kiru* (7) 'does thoroughly (to the end)' or are we to regard *uri-kiréru* 'it sells (= gets sold) out' as lexical? In any event, *uri-kirénai* will have two meanings: (1) 'can not sell it', (2) 'does not get sold out'. And the following example presumably belongs to the second type: ... máda hakkoo si-kirénai ... búbun 'parts that are not yet fully fermented' (SA 2674.93b).

31b. *-atawazu* [literary] 'cannot', negative of *-atau* (25a)—as an auxiliary only

the negative was used until Meiji times, when the affirmative was introduced (to the dismay of the grammarians) as a translation of the English 'can'.

32. *-sugosu* 'does it beyond the fixed limit; spends time in doing': *ne-sugósu* 'oversleeps (beyond the time one is supposed to wake up—regardless of when one went to bed)' [cf. *ne-sugíru*, with the excessive §9.1.9, 'sleeps too much, sleeps too many hours'], *nori-sugósu* 'misses one's stop, rides past one's station' [cf. *nori-sugíru* 'does too much riding; too many ride'], *?tabe-sugosu* 'eats more than one is supposed to' [cf. *tabe-sugíru* 'overeats, eats too much'], ...; *?*...-sugosu*, ...

33. *-okureru* 'is too late to do; misses doing by being too late; is slow (delayed, tardy) in doing': *kisyá ni nori-okuréru* 'is too late to catch the train, misses the train', *tori-okureru* 'is too late to pick it up', *hanasi-okureru* 'is too late to talk', *ii-okuréru* 'misses one's chance to say it', *hazime-okuréru* 'is too late to start', *owari-okuréru* 'is too late to end', *yomi-okureru* 'is too late to read it', *mi-okureru* 'is too late to see it', *kiki-okuréru* 'is too late to hear it', *kie-okúreta kirí* 'the fog which was slow to lift' (SA 2671.92a), ...; **iki-okuréru*, **ki-okureru* 'is too late to come', *?*ai-okureru* 'is too late to meet', **mati-okureru* 'is too late to wait for', **okure-okuréru* 'is too late to be late', ...

X. DEPLETIVE

34. *VI-hateru*, *VT-hatasu* 'is finally reduced to': (1) *aki-hateru* 'grows sick of', *tuki-hateru* 'is exhausted, used up', *sini-hatéru* 'dies, dies out', *kuti-hatéru*(⁻) 'rots/rusts away', *oi-hateru* 'weakens with age', *nari-hateru* 'is reduced to (being)', *kawari-hatéru* 'undergoes a complete change', *akire-hatéru* (also *akire-káéru*) 'is thoroughly dumbfounded/disgusted', ...; **ari-hateru*, **hataraki-hatéru*, **umare-hatéru*, **itami-hateru*, Is *komari-hateru* 'is greatly embarrassed' (= *komari-kiru/-nuku*) lexical? (2) (*magókoru o*) *tukusi-hatasu* 'exhausts (one's sincerity)', (*sinkei o*) *tukai-hatasu* 'exhausts one's nerves', *o-kane o tukai-hatasu* 'spends all one's money', ...

35. *-akiru* 'wearies of doing': *mi-akiru* 'wearies of seeing', *kiki-akíru* 'is tired of hearing', *tabe-akiru* 'is tired of eating', *si-akíru* 'is tired of doing', *asobi-akíru* 'wearies of playing', *hiki-akíru* 'is tired of playing (a stringed instrument)', *ki-akíru* 'is tired of wearing', *ki-akiru* 'is tired of coming', *ne-akíru* 'has had more than enough sleep', *yomi-akiru* 'is tired of reading', *aki-akiru* [*jocular*] 'wearies of getting weary', ...; **ari-akiru*, ...

36. *-nokosu* 'skips/omits doing (of some but not all)': *tabe-nokosu* 'leaves some uneaten', *nomi-nokosu* 'leaves some undrunk', *iki-nokósu* 'leaves some places ungone to', *?suwari-nokósu* 'leaves some seats unsat in', *ii-nokósita kotó* 'something left unsaid/omitted', *yari-nokósita sigoto* 'work left undone', *hitó-maku o mi-nokosu* 'leaves the theater without seeing one (= the last) act' (*Kenkyusha*); ...; **ari-nokosu*, **i-nokósu*, ...

37. *-sobireru* 'misses the chance to do, fails to do': *ii-sobiréru* 'misses saying, hesitates to say (and hence does not say)', *ne-sobiréru* 'fails to get any sleep'; *Kitá*(⁻) *no kuni ni kaeri-sobireta kogamo ga ití-wa máda oyóide ite ...* 'A single teal that had missed leaving for the northern country was still swimming (there) ...' (Tk 3.21); ...; **ari-sobireru*, ...

38. *-siburu*, *-osimu*: 'begrudges doing, is reluctant to do': *dasi-siburu* 'is reluctant to pay', *ii-sibúru* 'hesitates to say', *uri-sibúru* 'is willing to sell', ...; **ari-siburu*, ...

XI. INGRESSIVE

39. *-komu*, *?-ireru*: 'does in(ward)': *nozoki-kómu* 'peeks in', *buti-komu* 'throws in',

osi-kómu 'pushes in', moti-komu 'brings in' (lexical 'complains to'), nori-kómu 'rides in(to)', suwari-kómu 'sits down', hairi-komu 'slips in(to a room etc.)', hore-kómu 'falls in love', oboe-komu 'memorizes', (nání ka o) kangae-komu 'is deep in thought (about something)', mizu no náka e hoori-kómu 'throws it into the water', yoohuku o ki-kónde iru 'is bundled up in one's clothes', nomi-komu 'drinks in, swallows up', okuri-kómu 'sends in', tume-komu 'crams/crowds/packs in', tataki-komu 'hammers/drives in'; tobi-kónde kíta 'came flying [= rushing] in'; akuseru-pédaru o humi-kómu 'steps on the gas (pedal)'; ... byooin ni okuri-komaréru 'gets sent to a hospital' (SA 2670.32e); ... sai-aku no zyootai ni oti-komí, ... 'falling into the worst possible conditions' (SA 2668.118c); ... nímotu o heyá ni hakobi-komaséru to ... 'when we had our luggage brought into the room' (SA 2664.82c); ... kane ga korogari-kónde kúru 'money comes rolling in'; ... kodomo nádo ni reigi-sáhoo o osie-kómu kotó ... 'instilling etiquette in, say, children ...' (Kotoba no yurai 82); Watasi wa damari-kondá ga, óoi-ni human de átta 'I sank [re-lapsed/fell] into silence but I was greatly dissatisfied' (SA 2674.42c); ...; *ari-komu; *aruki-komu 'walks in', But mi-komu 'expects; estimates; trusts' and kime-kómu 'takes (it) for granted, pretends, feigns', are lexical. And -ireru (kaki-ireru 'writes in', nori-iréru 'rides/drives it in', ...) is probably better treated as forming lexical compounds; the outputs are all transitive. In mari o ke-komu 'kicks a ball in' we would appear to have a shortening from the infinitive kéri 'kick', but in literary Japanese this verb belongs to a vowel conjugation, so that the infinitive is ké and it is likely that ke-komu was inherited intact; we can contrast keru-tuzukeru 'keeps kicking' etc. At first glance this would seem to be an argument against treating -komu as an active auxiliary, but it turns out that the regular formation keru-komu is also used and perhaps is more colloquial. So we can list ke-komu as a lexical item but feel free to make up keru-komu as we need it.

XII. EGRESSIVE

40. -saru, -dasu₂ 'does out/away': tobi-dasu₂ 'flies out' (cf. tobi-dasu₁ 'starts to fly'), nori-dásu 'drives out', ? aruki-dasu 'walks out', moti-dásu 'takes out': nige-saru/-dasu 'escapes', hasiri-saru 'runs away', aruki-saru 'walks away',

After completing the study above, I came across a number of additional verbs that perhaps should be treated as auxiliaries; these are listed below, with question marks before those on which I have doubts.

?41. *-hagureru* 'mis-does': *nori-hagureru* 'misses (boarding) a vehicle'.

?42. *-isogu* 'rushes to do, anxiously/eagerly does': *Uri-isóide són o sita* 'I was so anxious to sell I took a loss'; *Sihon-ka wa tukuri-isoide iru*; *syoohi-sya wa kai-isóide iru*; *kodomo wa seityoo o isóide iru*; *otona wa, túmari rooka o isóide iru* 'The capitalists are rushing to produce; the consumers are rushing to buy; the children are rushing to grow up; the grownups are rushing their old age' (SA 2658.53d).

?42a. *-aseru* 'assiduously does': *uri-aseru* 'pushes the sale of'; ...

43. *-konasu* 'manages to do, masters the doing of': *Tetugaku no hón o yomi-konasu*

'digests a book on philosophy'; *umá o nori-konasu* 'gets a horse under control', *genan o tukai-konásu* 'manages one's servants, has one's servants well trained (to serve)'; ...; ... *isyoo mo ki-konasénakatta káre-ra wa ...* 'they who had not been able to get their costumes on properly' (SA 2654.59b); *Koo iu seisaku o omóu yóo ni yari-konásu tamé ni wa, mázu káre zísín ga taiken o mótu hituyoo ga áru to kangáeta* 'In order to carry out such policies the way he wanted he thought it necessary first of all for him himself to possess supreme power' (SA 2680.18d).

?44. *-kuraberu* 'does competitively': *hóra o huki-kuraberu* 'sees who can brag the most'.

?45. *-kutabireru* 'wearies of doing' (cf. *-tukareru*): *mati-kutabireru* 'wearies of waiting', *naki-kutabireru* 'wearies of crying', But *arúite kutabireru* 'wearies of walking' = 'wears oneself out by walking' (instrumental gerund).

?46. *-magireru* 'mis-does': *yomi-magire-yasúí* 'is easy to misread'.

?47. *-mayou, -madou* 'is mistaken in doing': *dótti to mo kime-mayótta* 'both made the wrong decision' or 'made the wrong decision both ways' (?).

?48. *-nogasu* 'neglects to do': *mi-nogasu* 'overlooks, misses, lets it escape one's eye'.

49. *-nuku* (1) 'does it all the way'; (2) 'achieves' (= *si-togéru*): (1) *tataikai-núku* 'fights it out', *iki-nuku* 'lives through; (?) survives', *gógo o odori-núku* 'dances away the afternoon', *kangae-nuku* 'thinks it over/through, reflects', *komari-nuku* 'is thoroughly embarrassed' (= *komari-hateru/-kiru*), *kúroo si-núku* 'goes through all hardships = "goes through the wringer"' ; *kumori-núita sóra* 'the clouded-over sky' (Kb 124b—a bit strange?); ... *dooraku o si-núite kíta ...* 'had exhausted every amusement' (SA 2676.92c); ... *gáman ni gáman si-núite ...* 'bearing up heroically' (Ariyoshi 43). (2) *sútó o yari-núita* 'carried out a strike' (SA 2664.17b); ... *to iu kotó o sirabe-núite iru kotó datta* 'it was well established that ...' (SA 2663.48c). I find it difficult to draw the distinction between the two meanings as given by MKZ. The following example (with further auxiliary conversion V-i-éru) presumably represents the second meaning: ... *Okinawa no nebari-zuyóí minsyuu wa, sono dentoo géinoo(¯) o horobí(¯) kara mamori-nuki-éta no de áru ga ...* 'the persistent people of Okinawa have been able to preserve from extinction their traditions and arts ... [= have been able to achieve the protection from extinction of ...]' (SA 2674.94a).

49a. *-oru*: see *-yoru* (56).

?50. *-otosu* 'neglects to do, omits doing': *kanzin no [= na] kotó o ii-otósu* 'neglects to say the essential'.

51. [ŌSAKA] *-sarasu* (for monosyllabic verbs also *-saru*), *-ku[s]saru* = *-ya[a]garu* (54) —deprecates the verb. The origin of these pejorative auxiliaries is unknown (Maeda 1961.197),³⁸ cf. (§9.2.4) *ketukáru* = *iru/óru* 'is, stays' and V-te *ketukáru* = V-te *iru/óru*—for the speaker's actions also V-te *komasu* (Maeda 1961.198), for which there are also V-taru and V-tageru, abbreviations of V-te *yaru/ageru*, used in an extension of the "favor" meaning. Maeda 1965.162 says *-kusaru* is "stronger than *-yagaru*, weaker than *-ketukaru*"

38. Maeda 1965 suggests that *-sarasu* may be derived from *hazi o sarasu* 'exposes one's shame'. Makimura 201a says that *-ku[s]saru* is from *kusáru* 'putrefies'. Maeda 1965.225b observes that *sarasu* is used for *suru*: *Náni sarasu* 'What the hell are you doing?'; *Bikkúri sarasite ketukaru* 'I've had the living daylight scared out of me'. For the auxiliary use he cites these examples: *Sore, mi-sarase* 'Take a look at that, will you!'; *Ítu made naki-sarásu nen* (= *naki-yagaru no*) 'How long do you intend to keep up this god-awful weeping?!'

and gives these examples: *Náni nukasi-kusaru*, *Náni site* ‘-kusaru ‘What the shit are you doing?!’; *Háyo iki-kusarán ka* ‘Can’t you get this damn car going any faster?’ More examples (including one of *-kusan na = -kusaru na*) are cited from modern fiction in Y 505-7.

52. *-tukareru* ‘wears oneself out doing; is tired of doing’ (cf. *-kutabireru*): *syaberitukareru* ‘wearies of chatting’, *mati-tukareru* ‘tires of waiting’, *aruki-tukareru* ‘is tired of walking’, *hataraki-tukareru* ‘is worn out from working’,

53. *-wasureru* ‘forgets to do’: *dentoo o kesi-wasúreta* ‘forgot to put out the light’, *simai-wasúrete áme ni nureta* ‘got wet from forgetting to close up against the rain’, *dasi-wasureta hagaki* ‘a post card I forgot to mail’; ... *hando-buréeki o modosi-wasurete itá ga*, ... ‘I had forgotten to release the hand brake, but ...’ (SA 2684.23b);

54. *-ya[a]garu*—deprecates the verb (the deprecation in English will usually land on a noun): *Náni o si-yagáru* ‘What the hell are you doing?’ (Kb 20a); *Baka ni syagátte* [= *si-yagátte*] ... ‘Treatin’ me like a damn fool ...’; *Náni itte* ‘-yagán da i [= *i-yagáru no da ne*] ‘What the hell are you talking about?’ (KKK 25.74a); *Ano kakáa mo kawatte* ‘-yagaru náa [= *i-yagaru náa*] ‘Gee that woman’s weird!’ (Okitsu 1.161); *Oré-táti o uragiri-yagatte* ... ‘The bastards stabbing us in the back ...’ (SA 2651.23b); *Tóotoo taihúu ni nari-yagattá ka* ‘Are we in for a damn typhoon after all?’ (SA 2662.11); ... *báka ni tikará(˘) ga ari-yagaru* ‘she’s got a hell of a lot of strength’ (Tk 2.53a); *Nán da. Damasi-yagatta ná* ‘What—they’ve duped us!’ (SA 2674.129c). But this auxiliary, said (Y 489,504) to be from *V-i-agaru* (cf. *-ageru*), seems not to follow the usual accentuation patterns for auxiliaries; MKZ implies the accentuation *hanási-yagaru*, *ake-yagaru* with atonic infinitive yielding atonic forms and tonic infinitives retaining their accents—as if *yagaru* were an atonic verb attached syntactically with late dropping of juncture. The appendix to K (p. 32) gives *miyágaru* and *miyáagaru* as the appropriate forms for *mí-* ‘look/see’. (In this book we cite the forms with the regular auxiliary-type accentuation.) In the following examples the first vowel of the auxiliary is lengthened: *Ná, náni o iyaagáru* (= *ii-yagáru*) ‘Wh-, what the hell are you saying?!’ (Kb 159a)—cf. *syaagáru = si-yagáru*; *Íi kotó o iyaagáru* ‘I’m glad to hear you say that’ (Kb 105b); *Tikusyoo, dóko e iki-yaagátta* ‘Damn, where the hell’s he gone?’ (Kb 203b); *Tumaránai kotó o itte yokei na sinpai o sase-yaagáru* ‘They’re causing too damn much worry saying such stupid things’ (Kb 157a). This is not limited to Tōkyō speech; cf. Tk 3.59a where a Hiroshima-born speaker uses it together with verb forms of the *V-i-yoru* type. More examples (including one of *-yagan ne = -yagaru ne*) will be found in Y 501-4.

55. *-yaranu*—apparently quite limited, the only examples I have found are with *saméru*: *Toso-kibun mo same-yaranu to iú no ni*, ... ‘Although barely sobered up, it is said, from the New Year spirit ...’ (SA 2661.127a); *Toso-kibun mo same-yaranu uti ni* ... ‘While the effects of the New Year’s wine have not yet worn off ...’ = ‘Before the holiday spirit wears off ...’ (SA 2665.9); *Same-yaranu konpyuutáa-netu* ‘The still smoldering computer fever’ (SA 2654.140). MKZ^S 433a carries *same-yaranu* as a lexical entry. Under *(-)-yaranu* MKZ^S 1124b (= MKZ 856b) lists *hare-yaranu*, presumably ‘not quite fully unclouded’.

56. [DIALECT] *-yoru*: This is from *V-i* [*w*]óru, a widely used dialect form that is (according to Zhs 4.161) equivalent to the simple *V-ru* of standard Japanese or to the *V-i-ya[a]garu* auxiliary that deprecates the verb. It is popular in West Central Kinki (Kōbe, Hyōgo), where *Yukí ga huri-yoru* is used as the progressive ‘It is snowing (now)’ and *Yukí ga húttoru* (< *hútte óru*) is used as a resultative ‘Snow is on the ground’ (Zhs 4.22)—both

expressed in Tōkyō by Yuki ga hütte iru. Cf. Doi (240) who tells us that the two meanings of -te iru (progressive vs. perfect-resultative) are formally distinguished in western Honshū, in Kyūshū, and in Shikoku, the distinction being made by exploiting the historical aspectuality of the gerund (as built on the infinitive). Kōchi speakers distinguish huriyuu < huri-yo[r]u < huri-oru < hūri wōru 'it is snowing/raining' from hutyyuu < hutyo[r]u < huri-te oru < hūri-té wōru 'it has snowed/rained'. Cf. Shibata 1958.29 who gives the Kōchi forms yomyuu (< yōmi ōru) 'is reading' and yondyyuu (< yōnde ōru) 'has read'. This distinction is maintained in similar fashion throughout the Ryūkyūs. The forms are sometimes spelled with V-i-oru, disregarding the intruded -y-: Koitu 'a erái kotó yari-ōru ná to omōtta né 'This fellow's doing a fine thing, I thought to myself' (Tk 4.181a); Bōku(-) mo né, ittai dōo si-ōtta n yaroo [= sitá no daroo] to omōtte ita 'I myself wondered what on earth would have happened to them' (Tk 4.183a). (These examples are from an Okayama-born speaker who had lived in Ōsaka and in China.)

9.1.11. Conversions of adjectival and nominal infinitives.

A number of infinitive conversions are open only to adjectives (A-kú) and nouns (N ní). We will consider these under seven categories: (1/2) intransitive/transitive mutative; (3) subject-adverbial; (4) nuclear-adverbial (= derived adverb); (5) evaluative; (6) transitive putative; (7) intransitive putative.

9.1.11.(1/2). *Intransitive/transitive mutative.* One common conversion is with náru/suru₁ and means 'becomes/makes-it-into'. This intransitive/transitive MUTATIVE³⁹ functions for nonverbs as something of an analog to the verbal passive/causative categories of VOICE (§4);⁴⁰ it is also possible to take a verbal and adnominalize it to the postadnominal adjectival noun yōo and use that in this conversion: V-ru yōo ni náru/suru 'gets (makes it) so that it does' (see §13.2.4). The patterns for the mutatives can be seen in the following examples:

Hayái 'It is early/fast'.	→	Háyaku náru 'It gets to be early/fast'.
		Háyaku suru 'They make it early/fast'.
Senseí da 'He is a teacher'.	→	Senseí ni náru 'He becomes a teacher'.
		Senseí ni suru 'They make him a teacher'.
Byooki da 'He is ill'.	→	Byooki ni náru 'He gets ill'.
		Byooki ni suru 'It makes him ill'.
Génki da 'He is well'.	→	Génki ni náru 'He gets well'.
		Génki ni suru 'It makes him well'.

Many adjectival nouns will permit this conversion—e.g. Kírei ni náru 'It becomes pretty/clean', Kírei ni suru 'Makes it pretty/clean'—but it is not clear whether all will do so. One informant accepted Sízuka ni náru 'It becomes quiet' but rejected *Sízuka ni suru 'They make it quiet' on the grounds that quiet is something you can't control; yet other informants accept the sentence Matí o sízuka ni siyoo 'Let's make our town quiet', but

39. Similar phenomena in other languages are sometimes referred to as "translative" (as in the name of one of the Finnish case markers) or as "factive" (or "factive").

40. But it is possible to convert N ni náru and A-ku náru into causatives: múki ni naraséru 'makes one serious', koohuku ni naraséru 'makes one happy', heitai ni naraséru 'lets one's child become a soldier', nemuku naraséru 'lets one get sleepy'. And both passive and causative conversions can be applied to N ni suru (→N ni sareru/saseru) and A-ku suru (→A-ku sareru/saseru). An example of A-ku saseru: ... bakuretū-ryoku o óókiku saseru tamé no monó de, ... 'it is for the purpose of enhancing the explosive force' (NKD 8.394d).

only as rather artificial “*commercialese*”. In rapid speech the vowel of *ní* often drops before a dental sound (d, t, n); it is optional in ... n[i] náru: *Iyá n[i] náttayau yó* ‘I’m getting disgusted, I tell you’.

The translation of *náru* may be ‘becomes, grows (into), comes to be, gets (to be), begins/starts (to be) ...’: *Sukáato wa dóno-kurai(¯) nágaku narimásu ka* ‘[Now that long skirts are coming into style] how long will skirts get?’ (SA 2688.100). Notice that ‘get’ also sometimes translates the causative and favor-receipt conversions and enjoys many other uses in English.

A number of idiomatic turns are extensions of the mutative conversions, such as *urimono ni suru* ‘makes it one’s merchandise = sells’ in *Sumáato o urimono ni suru Nikkoo no kokusái-sen* ‘JAL international routes which sell (on) chic ...’ (SA 2660.40) and *monó ni suru* ‘makes it one’s thing’ > *mono-ni-suru* ‘secures, masters’ in *Eigo o mono-ni-suru ni wa óoku tokusyo suru hoka ni miti ga náí* ‘The only way to master English is by extensive reading’. *Kuti ni suru* ‘tastes; mentions’ can be taken as a similar instance, provided we first give *kuti* ‘mouth’ a more abstract meaning. Here too belongs *N o tanosímí(¯) ni suru* ‘sets one’s hopes on, aims at, expects, looks forward to’; cf. *N o tanosímí(¯) to suru* ‘delights in, takes pleasure in’. Also *N o ate ni site iru* ‘is counting on N’; *N [or: S nó] o kú ni site* ‘taking N [or: that S] to heart’; *N wa betu ni site* ‘apart from N’—as in *Sukí de tanosímu hitó wa betu ni site ...* ‘Leaving aside those who indulge in it because they like it ...’ (SA 2679.119e); ...

Idiomatic examples with *náru* include these: *Soo iu éiga(¯) bákari tukútte, kane ni narimásu ka* ‘Can you make money filming that sort of movie only?’ (SA 2671.113d); ... *báka ni naránai syuunyuu dá* ‘is revenue not to be laughed at’ (SA 2668.87a)—also tightened into a compound *baka-ni-naránai*, cf. *hito o báka ni suru* or *baka-ni-suru* ‘makes fun of people’; ... *Namari-kóogai wa katuzi ni nátte, oo-sáwagi ni náru ga ...* ‘Lead pollution hits the press and becomes a big issue but ...’ (SA 2689.140d)—*katuzi* means ‘movable type’. The noun *okizari* is apparently limited to the idioms (*P ni*) *A o okizari ni suru* ‘leaves/deserts A (in P)’ and (*P ni*) *A ga okizari ni náru/sareru* ‘A gets left/deserted (in P)’; focus can intrude. Notice also the rather tight-knit idioms *ki ni náru* ‘feels uneasy; takes a mind to’ and *ki ni suru* ‘minds, worries about’; these can be split by focus: *Yappári ki ní wa náru n da náa* ‘It IS a worry, after all’ (R). But *yoko ni náru* ‘lies down’ and *yoko ni suru* ‘lays it down’ are idiomatic only in a loose sense of the term. *Mú ni suru* ‘brings it to naught’ and *mú ni náru* ‘comes to naught’ can be reduced to the lexical *mu-ni-suru* and *mu-ni-náru*; cf. *náku náru* and *naku-náru*, *náku suru* and *naku-su[ru]* (p. 457). The expression *zyama ni náru* ‘gets in the way; becomes burdensome; becomes a burden’ is the mutative conversion of *zyama dá*; *zyama* is an abstract noun ‘hindrance’, an adjectival noun ‘burdensome’, and a transitive verbal noun ‘bothers’. The expression *ganzigáramí/e ni náru* ‘gets all tied up’ (SA 2664.36c) is from *ganzigáramí/e ni sibáru* ‘ties up into a *ganjigarami*’ and few speakers realize that the (now idiom-bound) noun *ganjigarami* is from *ganzi-karami* ‘coiling up like a *gán-zi* = *gán-syo(¯)* “wild-goose-writing” = “letter”—from a message tied to the foot of a wild goose and sent out by Sū Wǔ of the former Hàn dynasty when a captive of the Xiōngnǔ’. *O-zyán ni náru* ‘comes to naught’ comes from *zyán* ‘(sound of Yedo fire-alarm gong)’.

The expression *go-tisoo ni náru* ‘gets treated to, is entertained with’ is transitive: *o-kási/hirumesi o go-tisoo ni nátte* ‘being treated to sweets/lunch’. This is merely polite—like some contemporary uses of *itadaku*, originally a humble or object-exalting verb—and

should not be confused with similar forms produced by the subject-exaltation conversion, such as *o-morai ni náru*, *go-soodan ni náru*, etc. The subject-exaltation form is *go-tisoo ni o-nari ni náru* or *go-tisoo ni naranéru*.

Even with unidiomatic examples, the mutative meaning of pure noun + *ni suru* has at least two nuances: (1) 'makes (converts, turns) it into N', (2) 'decides on N'. Thus *Heitai ni simásu ka* could be interpreted either as 'Will you make [someone] into a soldier?' or 'Will you decide on soldiers [to be, to buy as a toy, to give something to, to entertain—or, even, to make someone into]?' The second meaning can be explained as propredication (or verb ellipsis) in the underlying essive-marked sentence 'makes it so that it is a matter of [doing ...]'. It is the second meaning that is intended in ordering food or drink: *Bíiru ni simasyóo ka* 'Shall we have beer [for our drink]?' (But, faced with a surplus of malt and barley, you might use that sentence to mean 'Shall we turn it into beer?') This selectional or decision-taking nuance of the transitive mutative conversion will account for the following example: *Hihyoo wa kansei sité kara ni simásu keredo mo ...* 'I will reserve judgment until it [= the new building] is finished, but ...' (SA 2669.46c). If the *ni* were not present, *simásu* would be the predicating auxiliary for the verbal noun *hihyoo*, i.e. 'I will judge after it is finished', but the presence of *ni* obliges us to take the mutative interpretation, so that the verbal noun is to be regarded as a thematized (and subdued) object. An example of the meaning 'turns it into N': *Watasi wa isya désu ga, betu ni anóko o isya ni siyoo tó wa kangáete imasén* 'I am a doctor, but I am not particularly thinking of turning him [my son] into a doctor' (SA 2676.30c).

As shown by *Omosiróku náku nátta* 'It got to be uninteresting', mutatives sometimes are made on the negativizations of adjectival sentences, and occasionally on the negativizations of adjectival nouns and of pure nouns: *Kantan zya náku nátta* 'It got to be so it was no longer simple'; *Byooki zya náku nátta* 'He got to be no longer ill'; *Syatyoo zya náku nátta* 'He came to be no longer head of the firm'; *Otokó wa onná no teki de náku náru* 'The male will stop being the enemy of the female' (SA 2680.41d); "*Katyoo*" *de náku náru to ...* 'When you stop being a "section head" ...' (SA 2668.25e); *Sore wa móo gakumon-teki [na] tatibá de náku náru* 'That becomes no longer a scientific attitude = That ceases to be a scientific attitude any longer' (SA 2671.19e); ... *ingo o ingo de náku si ...* 'makes jargon cease to be jargon and ...' (Shibata 1966.47). The negative conversion of *áru*, the adjective *nái* 'is nonexistent, lacking', will permit the mutative conversions: *Náku nátta* 'It became nonexistent', *Náku sita* 'They made it nonexistent' ('They got rid of it'). With loss of accent, these two expressions underly the derived verbs *naku-naru* 'gets lost' or 'dies' (with the subject-exalting form *o-nakunari ni náru*) and *naku-suru* [uncolloquial] = *nakusu* 'loses' (also, more colloquially, *naku-nasu*, Tk 3.38a). (This may be a special case of the conservative rule for verb-compound accentuation—reverse the tonicity of the first member—but it persists with the younger speakers independently of that rule.)

The adjectival which results from negativizing a verb can be used with *náru*—as in *Tabénaku náru* = *Tabénai yóo ni náru* 'He gets so he doesn't eat' (cf. *Tabéru yóo ni náru* 'He gets so he eats'), *inaku náttiyatta* '(a person who was with one) has disappeared' (Tk 2.236a), and *Wakái hitó ga boosi o kaburánaku nátte, boosi o kabútte iru kotó ga tyuunen no sirusi mitai ni iwarete kíta* 'With young people starting to not wear hats, the wearing of hats has come to be said to be like a badge of middle age' (SA 2820.81). Included are negatives from causatives—*Kosasénaku nátta* 'We got so we didn't let him

come'; from adversative passives—O-kane o nusumarénaku nátta 'We got so we weren't robbed'; from all potentials—Hairénaku nátta 'It got so we couldn't enter'⁴¹—and from miéru 'can see' and kikoeru 'can hear'; and for at least some speakers the negatives from pure passives—Yobarenaku náru 'He gets so he isn't called/invited'. Yet many examples with suru are rejected (*Tabénaku suru/saseru 'It makes one so one doesn't eat' → Tabénaí yóo ni suru/saseru), though others—only/all those involving voice conversions?—seem acceptable: Ikasenaku sita 'We made it so they didn't let him/us go'; Hairénaku sita 'We made it so they couldn't enter'; Bóku(¯) ni náhi mo miénaku surú no ka 'Do you intend to have me see nothing?' (Kawabata: Suigetsu). Desiderative adjectivals from verbals, and their negativizations, can be used with náru (Iki-taku nátta 'I got so I wanted to go' or 'I began to want to go', Iki-taku náku nátta 'I got so I didn't want to go')—including desideratives based on causatives and the like (as in Kosase-táku nátta 'I got so I wanted to have him come'), but they are not ordinarily used with suru except in English-flavored translation style: (*)Iki-taku náku sita = Iki-taku náí yóo ni sita/saseta [free variation] or, better yet, simply Iki-taku náku saseta 'It made me so I didn't want to go'. And the facilitatives (§9.1.8) freely occur in these forms: V-i-yásuku, -yóku, -níkuku, -gátaku, -zúroku + náru/suru. An example: Tó-ni-kaku, syúzyutu tte monó wa, mukasi to tigatte yari-yóku nátta 'Anyway, operations have become easier to perform than they used to be' (Tk 2.4b).

In the following examples the mutative is applied to negativized verbal sentences: Yagaté, tubuyáku kóe wa sinaku nátta 'By and by the murmuring voice grew silent' (lg 1962.79); Korétika wa móo zit-tó site irarenaku nátta 'Korechika got so he couldn't stay still any longer' (lg 1962.79); Mótoko wa sore ga onná no monó de áru kotó o utagawanaku nátta 'Motoko came not to doubt that it was a [the?] woman's' (lg 1962.79); Kono tamé ni yagaté Seiiki wa hóoki sarenákereba naránaku nátta 'For this reason by and by it got so that Seiiki had to be abandoned' (lg 1962.79); Syuppatu wa myootyoo máde enki sarerú yori sikata ga náku nátta 'It got so there was no alternative to the departure's being postponed [or: to our having our departure postponed] till tomorrow morning' (lg 1962.79); ... bungo o tukawanaku nátte kíta 'literary Japanese gradually fell into disuse' (Ōno 1966.234); DDT no o-kage de, sono sirami wa ip-piki mo inaku nátta 'Thanks to DDT every last one of those [typhus-spreading] lice disappeared' (SA 2684.45a); Iyakú-hin(¯) no gótoki wa, súde ni háyaku kara uri-túkete, mukasi nára hayazini suru hitó ga, íma wa sinanaku nátte iru 'People who would have died prematurely in the old days are beginning not to die as a result of having drugs urged upon them early on' (SA).

Negatives can be built on the mutative conversions (A-ku náru/suru → A-ku naránai/sinai)—and even Tabénaku naránai is said as a denial of Tabénaku náru. The mutative conversions will also convert into desideratives A-ku nari-tái/si-tai, representatives A-ku náttari/sitári,⁴² passives (Káre wa túma ni byooki ni naráreta 'He suffered his wife's

41. Examples of potentials: ... sono tokí ni wa ningen ga suménaku náru to iu sétu(¯) mo áru 'there is also the theory that at that time it will get so that people can't live [in Japan]' (SA 2689.140a); Zíga kakénaku náreba, toozen no kotó nágara yoménaku mo náru 'If people get so they can't write a character it is only to be expected that they will also get so they can't read it, either' (Kaneda in Ōno 1967.298); Omóu mamá na kotó wa dekinaku náru 'They get so they can't do just as they want' (Ōno 1966.33).

42. For example: ... sono gen'in o, hánnin no izyoo-séikaku no séi ni sitári térebi ya masukomi no eikyoo no séi ni sitári suru 'The causes for that they either attribute to morbid characteristics of the criminal or attribute to the influence of television and mass communications' (SA 2647.113a).

getting sick', *Yóku mondai ni sarerú no wa ...* 'What is often called in question ...'), causatives (*Kígyoo ni zyuyoo na kotó wa, yaru ki ni naraséru kotó desu* 'The important thing for an enterprise is to get people in the mood to engage in it'—SA 2668.47c); and potentials *A-ku naréru*—but not *A-ku sareru* as potential, for that is always expressed with *A-ku dekiru* as in *Yásuku [suru kotó ga] dekimásu ka* 'Can you make it cheaper?'. Exaltation can be applied to either the underlying sentence or to *náru/suru*, or to both: *O-isogasiku náru*, *Isogasiku o-nari ni náru* (or *Isogasiku nararéru*), *O-isogasiku o-nari ni náru* 'You become busy'; *O-isogasiku suru*, *Isogasiku nasáru*, *O-isogasiku nasáru* 'You make it busy'. Examples: *Watasi no vóo na wakái isya wa o-taku no o-ko-san o o-génki ni suru/itasu kotó wa dekimasén* 'A young doctor like me can not restore your child to health'; *O-kaeri ni nari-táku o-sase itásu(¿) tamé ni ...* 'In order for me to make it so you want to return home ...'.

Nuclear focus can be applied to the mutative verb: *A-kú [or N ní] nári wa/mo/sáe suru*, *A-ku [or N ní] sí wa/mo/sae suru*. Since the opposite application (to the underlying sentence) would produce a verbal—*A-kú [or N dé] wa/mo/sae áru*—the result would be available to the mutative conversions only if first adnominalized to *yóo*: *A-kú [or N dé] wa/mo/sae áru yóo ni náru/suru*. Examples: *Kono kágu wa iti-nen tukatte iru utí(¿) ni, tasyoo kitanáku nári WA sitá ga, máda-mada tukaeru* 'This piece of furniture did get a bit dirty during a year of use, but it can still serve for a good long while'; *Ano tihóo wa, huyú ni náreba tasyoo sámuku nári MO surú ga, yuki ga húru kotó wa mázu náí to itte íi* 'In that area it does indeed get a bit cold when it becomes winter, but you can say there's almost never any snow that falls'; *Sore mo kokoroyóku nári SAE suréba ...* 'If it just become cheerful ...' (Kb 75b.4); *Múri ni tanomaréreba, mótto kibísiku sí MO simásu ga, sore wa watasi no hón'i de wa arimasén* 'If forcefully requested, I will indeed make it stricter, but that is not my desire'; *Sono sukáato wa mizíkáku sí SAE suréba, gaisyutu ní mo hakemásu* 'If I just make that skirt shorter, I can wear it also for stepping out'; *Konna kízi wa óbi ni WA surú ga, haori ní WA sinai* 'This sort of material will make an obi (belt) but not a haori (coat)'; *Konna kízi wa, óbi ni MO surú ga, kóoto ni MO dekiru* 'This material both will make an obi and can also be turned into a coat'; *Sinsei na kókki o syátu ya kússon ni SAE suru íma no wakái monó ni wa akireru* 'I am shocked at the young people now who will even turn the nation's sacred flag into undershirts and cushions'.

It is also possible to apply focus, restriction, etc., within the mutative itself: *A-kú [or N ní] wa/mo/sae náru*, *A-kú [or N ní] wa/mo/sae suru*. Examples: *Sén no wáihu ga máda íkite 'ta yó. Móo byooki ní WA nátte 'ta ga né* 'My former wife was still alive, you see. She HAD already become ill, of course' (Tk 3.36a); *Sensei ni WA hazimete nátta hitó de aru* 'He is a person who has just now for the first time become a teacher' (Zhs 1.145 n.2)—notice the intervening adverb; *Tasyoo yásuku WA nátte irú ga, kinroo-séinen o taisyoo ni sita kooen ni sité wa isásaka taka-sugí wa sinái ka* 'They [= the tickets] have become a bit cheaper, but for a performance aimed at working-class youth aren't they (still) a bit too expensive?' (SA 2671.111d); *'Ittai dóo surya [= suréba] íi n da'* to *donari-táku MO náru* 'You get so you want to shout "What in the world should one do?!"' (SA 2678.16a); ... *dokú ni MO kusuri ní MO naránai kanzi [dá]* 'it gives me the feeling it's neither ('poison nor medicine' =) harmful nor helpful' (SA 2668.116e)—an adnominalization of the structure *dokú ni mo [nákereba] kusuri ní mo naránai*; *Tóotoo zyunsabú-tyoo ni MO nárazu ni, hira-zyúnsa de tóositimatta [= tóosite simattá] kedo mo, keisatu no náka de mo yuumei na otokó desita* 'Finally instead of actually becoming the head of the patrol

section he wound up as an ordinary patrolman, yet he was one of the most famous men on the police force' (Tk 3.10).

Below are examples illustrating various combinations that result from applying markers of focus, restriction, etc.

... *ní DE MO náru*: Byooki ní DE MO náreba ... 'If I should get ill or anything ...';

... biyóo-si ni DE MO nari-tái to iú n da kara ... 'He says that he wants to become a beautician or something, so ...' (SA 2658.130a); ... háru ni DE MO narimásita 'it got to be spring and all' (Kb 139a); Isihara-san no yóo na íken dattara, anáta wa syuugi-in ni déte dáizin ni DE MO nátte nóoryoku o hakki sita hóo ga íi n zya náí ka 'With views like yours, Mr Ishihara, wouldn't you have done better to run for the lower house and become a cabinet minister or the like, demonstrating your competence?' (from an interview); Kono tegata ga hu-wátari ni DE MO náttara, toosan-gáisya ga zokusyutu site, sore kóso pánikku 'If these checks should happen to be dishonored or anything, bankrupt companies would appear one after another, and precisely THAT would be a panic' (SA 2679.30c); Maa, iyóiyó kitoku ní DE MO náttara, itte kure 'Well, you can (wait and) go when he gets really critical, say' (SA 2793.98b).

... *ní MADE náru*: Edo-zídai ni katuyaku o sita ríkisi(⁻) de, óozeki ni MADE nátta to iu taihen na hitó da 'He was a sumó wrestler active in the Edo period and a figure so formidable he got to be a champion' (Okitsu 1.152); ... "Yoaké^(?) no koohíi" to iu kási ga, hitótu no syakai-teki ryuukoo ní MADE nátta '... the lyrics of "Coffee at Dawn" even became a social fad' (SA 2654.58b); Gá, íma no káre-ra wa, áete yakuza-teki ní MADE nátte, yowayowasíi seizyun-sa no náka ni otíru no o kirau 'But those of today [= the student activists] dare to turn even hoodlumish and hate to fall into frail purity' (SA 2687.116d); Dá ga, koo sita kotó ga (hónsyó ni wa soko máde kakárete inái ga) kaisya nottori ni Haabaado-dáigaku no sikín ga riyoo sareru to iu genzyoo ní MADE nátta no de aru 'But things have even reached the point where (though it is not touched upon in this book) the Harvard University endowment funds are used to take over companies' (SA 2673.96b); ... Sánbyaku támari ni MADE nátta kaiin ga ... 'The membership, which had grown all the way up to more than three hundred ...' (Kb 31a); ... síhai suru yóo ni MADE nátta ... 'actually came into control of ...' (Fn 70a).

... *ní DAKÉ WA náru*: Soko de, hahaoya^(?) ní DAKÉ WA náru wáke da ga, kono hahaoya wa Amerika no tizin(⁻) no ié ni kodomó-táti o azúkete oite, dokusin-zyósei no yóo ni hooroo-séikatu o tanosímu "huuten-máma" na no de aru 'Therefore she means to BE-COME exactly (neither more nor less than) a mother, but this mother is a "hobo mother" who leaves her children in the home of an American acquaintance so as to enjoy a Bohemian life like a single woman' (SA 2664.92a).

... *ní SIKA náru*: ... kíte kara máda hitó-tuki támari ni SIKA nátte inákatta '... it was still not more than a month since she had arrived' (Ig 68); ... sono tokí kara, anáta, zyuugó-nen ni SIKA narimasén '... it's no more than fifteen years, you know, since then' (Kb 130-1); Betonamu e kaku-héiki o tukau nádo to iu kotó o Amerika ga yaréba, kyodai na mainasu ní SIKA naránai ... 'If America engages in using nuclear weapons in Vietnam, it will only become a disadvantage to her ...' (Tanigawa 27)—the é suggests that tukau implies 'introduces into'.

... *ní SAE náru*: ... Okinawa-hóogen no siyoo ní SAE náru ga ... 'even gets to using Okinawan dialect' (SA 2793.95d); Nán da ka Sindérrera ni nátta yóo^(?) na kibun ni SAE nari-kaketa 'I started to get even into a feeling as if I had somehow become Cinderella' (SA 2674.122c).

... *ní SAE suru*: ... sakuhiñ o hu-kánoo ni SAE siyoo to suru '... it is about to make the work [= composition] actually impossible' (SA 2674.92d).

... *ní SURA náru*: ... tokí ni wa reikoku ní SURA naránakereba naránu kotó ga áru '... at times it happens that you have to become even callous' (SA 2688.45d).

... *ní NÁNZO/NÁZO (= NÁDO) náru*: Sore wa, móo, sore-daké no neuti no áru monó desitara sore-kkiri ní NÁNZO náru wáke ga arimasén 'If it were something of that much value there'd be no reason for it now to come to an end and all' (Kb 134a); Dá kara, hontoo no geizyutu-ka de áru nara-ba, tengu ní NÁZO narénai wáke desu 'So if you are a true artist, you can not become a braggart or anything' (Tk 4.93).

The new sentence that results from the mutative conversion can be made imperative (A-ku náre, A-ku si ró; N ni náre, N ni si ró), as in ... ore no desí ni náre 'become my disciple' (Kb 114a), or hortative (A-ku naróo/siyoo to omóu, N ni naróo/siyoo to omóu). For a special use of *ni si ró* or *ni sé yo* to mean 'though, whether'—the equivalent of *dé mo*, *V-té mo*, *A-kuté mo* or *d'átte*, *V-t'átte*, *A-kút'atte*—see pp. 893, 962.

The new sentence can be adnominalized, with extrusion and epithematization of included adjuncts: *Syáin(¯) sén-nín(¯) o taisyoo ni sita tyoosa-kékka ni yoru to ...* 'According to the results of a study that took a thousand employees as subjects ...' (SA 2668.25c); on the problem posed by *-kékka*, see p. 134 (§2.4). See also §13.1.2.(6).

As remarked earlier, a verbal sentence can be converted to a mutative only after being first adnominalized to the postadnominal *yóo* (which then has the grammar of an adjectival noun): *Tabéru yóo ni náru/suru*. This device is also available for adjectivals and nominals: *Tabénai yóo ni náru* is more or less equivalent to *Tabénaku náru*, and *Yásui yóo ni suru* is much the same as *Yásuku suru*. Sometimes VERB + *yóo ni suru* can be replaced by a simple causative (*saseru* etc., §4.1) but the meaning is usually somewhat different, the longer expression implying 'gets him/it so that he/it does (or will do)'. Notice that in the quotation of commands (§16.1, §21) we may wish to consider that a command form of *suru* has obligatorily dropped: *V-ru yoo {ni} {si} ró {to} iu* 'tells one to do it'. The application of *yóo* + MUTATIVE to the adjective excessive, as in *naga-sugiru yóo ni náru* 'gets to be too long = gets so it is too long; gets so it is long too often; gets so too many are long', is virtually equivalent to much of the meaning obtained by applying the EXCESSIVE to a MUTATIVE made on an adjective: *nágaku nari-sugiru* 'does too much lengthening = gets too long; gets long too often; too many get long'.⁴³ Similar remarks will obtain for *yari-tai yóo ni náru* 'gets so one wants to do it' and *yari-taku náru* 'comes to want to do it', for *yari-yásui yóo ni náru* 'gets so it is easy/likely for one to do it' and *yari-yásuku náru* 'comes to be easy/likely for one to do it', etc.

See also the expressions ... *kotó ni náru/suru* described in §14.1.2, and contrast the expressions ... *tó^[u] náru/suru* described in §21.4. Notice also *kotó-ni-suru* [literary] 'treats as different' and [**kotó ni náru >*] *koto-náru* 'differs'. Semantically weak uses of *N ni náru* (virtually equivalent to *N dá*) are described in §6.1; here are additional examples: *Amerika e kíte kara nán-nen ni narimásu ka* 'How many years is it that you have been in America?'; *Atorie(¯) o tukútte kara, móo zyúu-nen ni náru* 'It is now ten years since I built my art studio' (SA 2670.156); *Nigatú ni náru íma mo ...* 'Now that it is February ...' (SA 2666.108b—the issue is dated 20 Feb 1970). Compare the use of *ni sité* as a

43. An example of the excessive applied to a mutative conversion of an adjectival noun: *Yo-nó-naka ga hukuzatu ni nari-sugita séi daroo ka* 'I wonder if it's because society has grown too complicated' (SA 2688.29e).

synonym of *dé* (mentioned below) and *áto ni nátte* = *áto de* 'later on'. And notice the frequent use of *náru* without a subject: *Áki ni nátta* 'It has become autumn', *Heikemonogátari ni náru to* 'When we come to the Tale of the Taira Clan', etc.

In addition to *náru/suru* there are other verbs of change-of-state which are similar in their behavior: *hanasí o kore ni kagíru* 'limits the discussion to [being] this', *tití ni kawatte* 'in place of my father', *kimono o akaku* (or: *makká ni*) *someru* 'dyes the garment red', etc. The number of these mutative verbs may be much larger than would seem likely at first thought; V 110 quotes a single sentence from Hino Ashihei that contains three examples: *Basyoo no hirói ha o HÓSOKU SÁITE, sono sên'i o hazime HUTATÚ NI NAI-AWASE, sore o árata ni WARAZI NI KÚNDA* 'I split the broad banana leaf INTO NARROW (STRIPS) and PLAITING its fibers first INTO TWO [BRAIDS], then WOVE them (= the braids) INTO SANDALS'. More examples from V 110: *kamí o nágaku hayásite* 'growing one's hair long'; *mizíkáku katta kamí* 'hair cut short'; *utukúsiku ki-kazátta hitó-tati* 'people dressed up to look beautiful'; *hó[h]o ga akaku hotétte kúru* 'the cheeks flush red'; *mé ga pattíri to haná no yóo ni óokiku síroku hiráita* 'the eyes brightly opened [to become] large and white like blossoms'; *dandān^[1] tooku hedatari-hazimeta* 'began to drift gradually off (so as to be distant = into the distance'.

The following examples would seem to belong here, too: *Amerika o réi ni tótte (míru to) ...* 'Taking America as/for an example ...'; *... kurói | kamí o | nágaku | tarási, ...* 'letting her black hair hang down long' (SA 2650.104a); *Miti tó no sakái ni úeta mómi-no-ki ga, óokiku sodátte ita* 'The fir trees planted at the boundary with the road had grown big' (Ig 1962.75); *Úmi mo, sóra mo, siratyáketa iró de dadappíroku hirogatte ita* 'Both sea and sky, of a brownish cast, were spread out in a vast expanse' (Ig 1962.75); *Masúnaga wa tegami o konagona ni yabúita* 'Masunaga tore the letter to shreds' (Ig 1962.76); *Zí o hutóku káita* 'I wrote the character(s) thick'; *Yamá ga tákaku sobiete iru* 'The mountains rise tall'; *Ha o síroku migaita* 'I brushed my teeth white'; *Óokiku seityoo suru to ...* 'When one grows big ...'; *Minami no hoo no yózóra ga kásai(¯) no hónoo de orenzi-iro ni akarúnde ita* 'The night sky to the south had turned a bright orange from the flames of the fire' (Ig 1962.78); *Káre ga || káno-zyo o || syóonin ni | tanónda* 'He asked (for) her to be a witness'; *Tatóeba rakuyóo-zyu wa mukasi ni kurabete táda no go-paasénto ni hette simatte ita* 'Deciduous trees, for example, had dwindled to a mere five percent of their former number' (SA 2659.111a); *Kuti o || he-nó-zi ni | magete, ...* 'Bending his mouth into a shape like hiragana HE (i.e. turned down at both ends), ...' (SA 2687.139a); *... o-zóokin o | kírei ni | aratte ...* 'washing the mop out (clean)' (SA 2672.60c); *... san ¯bun no ití ni | hette simatta* 'shrank to a third' (SA 2688.26a); *Gá, ooyoso no tokoro^[1] tugi no sán-syu ni wakaréru* 'But roughly speaking they divide into the following three types' (SA 2673.112a); *... siti-nin no kyásuto no utí(¯) no ití-in(¯) ni erabáreta* 'got selected as (or: to be) one of the seven-person cast' (SA 2677.172); *Nihón^[1] no ryuugákú-sei ga Péntágon ni heitai ni toráreta kotó mo áru sóo desu* 'They say there have even been instances where Japanese exchange students got drafted as soldiers by the Pentagon'; *... hutokoro kara yottú ni tatanda te-hukí o dásite ...* 'taking out of his bosom a hand-towel folded (into four =) double' (Kb 317b); *... káre no, nukeru yóo ni sirói hádá ga, kogane-iro ni hi ni yaketa* 'his skin [that had been] so white it seemed about to shed was now burned copper by the sun' (Fn 451a). The verb *modóru* has two meanings: as 'returns, goes back' (= *káer-u*) it is a motion verb (PLACE e/ni ...), but as

'reverts (to), resumes (being)' it is a mutative verb that will take the adjunct N ní 'being N' but not N é/ní 'to N'.

Verbal nouns can also be mutative, as in *káre o katyoo ni suisen/ninmei suru* 'recommends/appoints him to be [come] section head' and these examples: *Betonamu-sénsoo wa, "Indosina-sénsoo" ni kakudai sitá no de aru* 'The Vietnam War has expanded into an "Indochina War"' (SA 2679.18bc); ... *kanzi o Tooyoo-kánzi daké ni seigen surú no wa ...* 'to limit the characters to just the Tōyō Kanji' (Kaneda in Ōno 1967.271); ... *"kokusai-mōndai"* ni made hatten site simatta 'it ended up developing all the way into an "international problem"' (SA 2672.145a). Because *rúsu* has two grammars—*Dáre ga rúsu desu ka?* 'Who is away from his post?' and *Dóko ga rúsu desu ka?* 'What post is unattended?'—the transitive mutative conversion *utí() o rúsu ni suru* 'leaves the house unattended (i.e. with no one in it)' is possible: *Utí() o rúsu ni sita syúzin da* 'The master left the house with no one there to look after things'.

The quotational *tó* is sometimes used to emphasize the mutation (V-ru *yóo ni TO utúru* 'shifts so as to ...'); an example will be found in §21.1.(5a). In the literary language N ni *sité* is used as a stylistic variant of (N ní-te >) N *dé* 'its being N' (the essive gerund): see remarks on this in §9.1. But not all cases of ni *sité* are to be so interpreted. In *nyoo ni sité wa naga-sugi, ...* 'It is too long to quote, and ...' (Maeda 1962.83) contains the putative conversion ('considered to be a quotation'), and in the following example there is an extended use of the mutative: *Íma ni site [= íma ni nátte, ≠ íma de] omóeba, ano tokí o sakái ni site hutarí no aida ní wa bímyoo na mizo ga horare-hazimetá no da* 'Thought of from the viewpoint of today, that time became a turning-point when a subtle gulf began to be dug between them' (Fn). The first phrase means 'If we let the time be the present', and the second part contains a transitive mutative 'letting that time be a boundary'. Another extended use of the mutative will be found in expressions like *watási-táti ni sureba* '(if you make it us [who view the matter] = as far as WE are concerned, from OUR point of view, as WE see it'—cf. *watási-táti ni tótte [wa]* 'for/to us'. See §21.4 for N ni/to *sité wa* '(considered) as N' and for S ni/to *sité mo* 'even if/though, allowing/granted that'—the equivalent of N *dé mo*, V-*té mo*, A-*kute mo*—with N \nexists *dá* ni *sité mo* obligatorily dropping the *dá*, in contrast with N \nexists *dá* to *sité mo*. Notice also *Pikáso ni sit'átte (= ni sité mo = dé mo)* 'for Picasso too' (Tk 3.260a). On A-ku *site = A-kute* in written Japanese and also in Kyūshū speech, see p. 488.

The adverbs *kóo/koo*⁴⁴ 'this way', *sóo/soo* 'that way', *áa/aa* 'that way', and *dóo* 'what way, how' can be DIRECTLY followed by *náru* or *suru*: *Soo nátta* 'It got to be like that' and *Soo sita* 'I made it like that' where we would expect **Sóo NI nátta/sita* from the predicable adverb in *Sóo da*. (It is helpful to recall that *kóo* comes from *ka-ú = ka-[k]ú* with the same etymological suffix -ku as the adjective infinitive.) *Sonna ni suru* has two interpretations, 'does in such a way' or 'makes it be such'.

You will find that *suru* has somewhat wider uses than *náru*; in addition to its function in the transitive mutative conversion, *suru* also serves as a generalized (or "pro-") verb and as an auxiliary that underlies the finite verb forms as explained in §5, as well as the predictor for verbal nouns. In the colloquial language *náru* is largely limited to the intransitive mutative conversion but it also occurs in V-(a)*nákereba naránai* (p. 559); and notice the use of ... ni *náru* to mean 'comprises' in contrast with ... *kara náru* 'consists of': A ga X Y Z

44. On the accent of these words see p. 1067n7.

kara náru 'A consists of X Y Z' = X Y Z ga A ni náru 'X Y Z comprise A'. In the literary language many of the forms of náru fall together with those of the contracted copula $n[i] \acute{a}r = n\acute{a}r$. The syntax differentiates the two when focus is applied (see p. 555) and also when sentence-final, where $n\acute{a}r$ - 'become' will be in its predicative form (like other verbs) which happens to coincide with its attributive form náru, but the copula will replace the expected form with its infinitive $n\acute{a}ri = n[i] \acute{a}ri$.

Sometimes it will be unclear whether suru is to be interpreted as mutative or as pro-verbal; this leads to the following ambiguities:

- Issyo ni simasyóo ka 'Shall I put them together?' (mutative)
 'Shall we do it together?' (adverbial + pro-verbal)
 Betu ni simasyóo ka 'Shall I separate them?' (mutative)
 'Shall we do it separately?' (adverbial + pro-verbal)

Ambiguities with náru are much less likely. In their mutative uses, náru and suru do not normally occur unless the infinitive is present somewhere earlier in the sentence; but ellipsis is possible in replies to questions and the like: Are wa mondai ni náru?—Narimásu yó 'Is that a problem?—It is indeed' (SA 2663.20a); ... are wa moto-dóori(⁻) ní wa narimasén ka.—Náru to omoimásu né '... won't it go back to the way it was?—I think it will, you know' (Tk 2.83b); ... kénzi to iu sigoto ga osorósiku narimasén ka née?—Narimásu né '... doesn't the job of public prosecutor get to be horrible?—It does, yes' (SA 2650.44a); Sono genba o mítara, sikei-haisi-rónsya ni náru n zya náí ka ná.—Bóku(⁻) wa naránakatta né 'Seeing the actual scene (of an execution), wouldn't one become an advocate of abolishing capital punishment?—Well, I didn't become one' (SA 2650.44d); Bóku(⁻) tyúugaku ití-nen da kedo, mei-tántei ni nari-tái. Dóo sitára naréru? 'I'm in my first year of junior high school and I want to become a famous detective. How can I become one?' (SA 2677.57b); ... gesyuku ni oita nímotu no azukáři^[1] [no] syookó-nin(⁻) ga náí no de, watasi ga [sore ni] nátta '... as there was no one to sign for the luggage she had left in the boarding house, I became it' (Endō 148). In the following example, the nátte begins a new paragraph in the original text: Tenzyoo no gokuraku wa tizyoo no monó ni nátta no de aru. ¶ Nátte, kono teitáruku de aru. Huhei human no kóe o kikanu hí wa náí 'The heavenly paradise has become an earthly thing. ¶ Having become it, this is the situation. Not a day goes by that we don't hear the voices of grumbling and discontent' (SA 2672.128b).

Provided no restrictive or focus particle intervenes, the infinitive and the mutative verb will be separated by minor juncture, as is usual for auxiliaries. This use of minor, rather than major, juncture will sometimes help disambiguate the mutative from other conversions below; but different prosodic reductions or reinforcements will often obscure the picture, so that you can not rely upon the juncture as a cue.⁴⁵

Speakers of northern Ryūkyū dialects use forms that correspond to A-ku NI [mo] náru in free variation with the expected A-ku náru, but the ní is apparently not used with the TRANSITIVE mutative (*A-ku NI mo suru); see Martin 1970. In Kansai dialects, too, an optional ní occurs after A-ku in the mutative conversions, apparently both intransitive and transitive: A-ku {ni} náru/suru—see Doi 271-2.

45. Moreover, for reasons of emphasis the subject will sometimes appear directly before the auxiliary: Sono toki^[1] dóo iu roozin(⁻) ni zibun ga nátte irú ka, ... 'What kind of old person would she herself have become by that time ...' (Ariyoshi 295).

In §3.8 we spoke of the MUTATIVE-LOCATIVE as a contraction of the static-locative *ní* with the mutativized copula *ní* (in effect, the essive) into a single *ní* meaning 'into, onto' and the like. This is one way to account for the *ní* which marks the new location of something relocated by a verb expressing change of position: *teeburu no ué ni oku* 'puts it on the table', *dénsya(-) ni noru* 'boards the train', etc. Normally the *ní*-marked adjunct will be either a place noun or some other noun thought of as a location, but occasionally you will find the infinitive of an adjectival noun or an adjective (AN *ní* or A-ku) used in a similar way: *tikáku oku* 'puts it near', *tákaku ageru* 'lifts it high', etc. These cases can be regarded as the simple transitive mutative ('puts it so that it is near, lifts it so that it is high' etc.), an explanation somewhat more difficult for the place nouns: 'puts it so that it is [on] the table' etc.

As is true for the mutatives in general, a direct object will usually come BEFORE the *ní*-marked phrase: *sore o teeburu no ué ni oku* 'puts that on the table', *zyoogyaku o dénsya(-) ni noseru* 'takes the passengers aboard the train'. But the opposite order is possible: *teeburu no ué ni sore o oku, dénsya(-) ni zyoogyaku o noseru*.

There are a wide variety of verbs that express a change of position, including some you might not readily think of: ... *senséi ga, séito o kootei ni atúmete* ... 'the teacher gathered the pupils into the schoolyard and ...' (Shibata 1961.210); *Kono zí o kokuban ni káite kudasái* 'Write this character on the blackboard'; *Tiká ni tosyó-kan o tukútta* 'They built a library (so it would be) underground'. For certain examples, it is necessary to assume an ellipsis of *sité* (§9.1.12): ... *mákura o tákaku [site] neru wáke ni wa ikanai* 'can not sleep [with one's pillow high =] in peace' (Fn 368b).

An unusual type is the CORELATIONAL MUTATIVE, which has the pattern A ga B o X ni mótu 'A has B as his/her X'; the X must be a CORELATIONAL noun—one that implies an opposite number, such as 'father (::child), husband (::wife), friend (::friend)'. An example was given on p. 42 (under *ní* 15); more examples: ... *Zyerárudo* ... o *koibito ni mótte iru* 'has Gerard for/as a lover' (SA 2681.108c); *Huziwará Syúnzei/Tosínari o tití ni mótta Téika(-)/Sadaie ga* ... 'Teika who had Fujiwara Shunzei as his father' (Ōno 1966.140); ... *sákka(-) o otóosan ni mótta musumé wa* ... 'a girl who had a writer for her father' (SA 2639.45b). The *ní* in these expressions would seem to mean something like *tó sité* 'as'. But we can not explain the structure as an optional ellipsis of *ní* {*sité*} since you can not say *... o *koibito ni site mótu*. It seems to be unacceptable to permute the adjuncts,⁴⁶ so that *yuuméi-zin o yuuzin ni mótu* 'has a celebrity for a friend' can not be said as **yuuzin ni yuuméi-zin o mótu* 'has for a friend a celebrity', but it is possible to focus either or both of the adjuncts and to conjoin two such expressions with a shared adjunct: *Sakenómí o/wa syúzin ni wa moti-táku náí* 'I don't want to have a drunkard for a husband'; *Osyáberi na onná wa tomodati ní wa [mótte mo] kamawánai kedo túma ni wa moti-táku náí* '(To have) for a friend is all right but I don't want to have a chatterbox of a woman for a wife'; *Osyáberi na onná wa, tomodati ní mo [moti-táku nákereba] túma ni mo moti-táku náí* 'I don't want to have a chatterbox of a woman for a friend or for a wife, either'; *Asanéboo mo [syúzin ni wa moti-táku nákereba] sakenómí*

46. In the TRANSITIVE mutative. In the intransitive, the subject can be delayed (thereby thematizing the mutative): ... *sore no tyóonán ni, watakusi ga umaremásita ga* ... 'his oldest son was what I was born to be' (R).

mo syúzin ni wa moti-táku náí 'I don't want to have either a slugabed or a drunkard for a husband'.

The sentence Káno-zyo wa yuumei na gakusya no musumé ni umareta can be given three interpretations: (1) as a correlational mutative, 'She was born (as) the daughter of a famous scholar'; (2) as a pure passive, 'She was given birth by the daughter of a famous scholar'; or, (3) as a passive-derived intransitive (§4.5), 'She was born to the daughter of a famous scholar'.

9.1.11.(3). *Subject-adverbial*. The SUBJECT-ADVERBIAL conversion is confined to adjectivals and adjectival nouns. The infinitive is used as an adverbial adjunct that refers to the state of the subject, and any verb may follow, including the pro-verb suru 'does (it)':

Hayái 'He is early/fast'. → Háyaku suru 'They do it early/fast'.

Génki da 'He is healthy/vigorous'. → Génki ni suru 'He does it in good health (vigorously)'.⁴⁷

The difference between the mutative conversion and the subject-adverbial conversion is seen somewhat more clearly when the sentences are expanded with adjuncts:

A ga hayái 'A is fast' as object of transitive mutative with B ga for subject = B ga A o háyaku suru 'B speeds A up'.

A ga hayái 'A is fast' as subject-adverbial + A ga X o suru 'A does X' = A ga háyaku X o suru (or: A ga X o háyaku suru) 'A does X fast'.

With the subject-adverbial (and with the nuclear-adverbial—and most other conversions below), the order of the adjuncts is free to express relative emphasis. With the mutative conversions it is uncommon—though not unacceptable—for the infinitive to precede either the subject or the object, which retain free order relative to each other: A ga hirune o nágaku suru and Hirune o A ga nágaku suru can both mean 'A prolongs his nap' (MUTATIVE) as well as (= Nágaku A ga hirune o suru, Nágaku hirune o A ga suru) 'A naps for a long time' (NUCLEAR-ADVERBIAL, below). Here is an example of the adjectival infinitive (in the EVALUATIVE conversion, below) before the immediate subject (= underlying object) of the potential of kau 'buys': Soko de én kiriage no rieki-túmari YÁSUKU monó ga kaeru—sosite, sore ni motozúku anteika-kóoka wa kánari óoku no hitó ni amanéku eikyoo suru 'The advantage of raising the exchange value of the yen—viz., (that) things can be bought cheaper—and the stabilization effect based on that will extensively affect a considerable number of people' (SA 2679.25c). And N₂ ni N₁ ga náru 'N₁ becomes N₂' is acceptable: Sono kaitoo ni, Nihón no sararii-man ga nátta 'The president of that group—a Japanese salary worker has become it' (SA 2671.62a—*sic*, kaitoo = kaityoo); cf. Mio 328.

It is not entirely clear that adjuncts are carried with the infinitive in the subject-adverbial conversion, but the subject of the resulting sentence is identical with that of the infinitive, so that it would seem best derived (as here) from a reduction of two identical subjects. Not all cases of the subject-adverbial conversion are ambiguous; it is the only interpretation possible for the examples (from V 115) Ume no haná ga síroku hikátte iru 'The plum blossoms are shining white' (= Haná ga sirói 'The blossoms are white') and ... tukí ga utukúsiku kagayáite iru 'the moon is gleaming beautifully' (= Tukí ga utukúsii

47. But the antonym of génki is not an adjectival noun, so that Byooki ni suru can only be interpreted as 'It makes him sick' (as a precopular noun) or as 'They turn it into an illness' (as a pure abstract noun), and not as 'He does it in ill health (unvigorously)'.

'The moon is beautiful'). Similar examples are *Nisi no sóra ga kin-iro ni hikátte iru* 'The western sky is shining golden' (Ig 1962.74) and perhaps *Kono syussan wa karuku súnnda* 'This birth of a baby ended (up) light [= easy]' (Ig 1962.75).

9.1.11.(4). *Nuclear-adverbial (= derived adverb)*. The infinitives of at least some adjectives and adjectival nouns can be used as adverbial adjuncts with reference to the MANNER in which the action expressed by the verbal is carried out, independently from the state of the subject or object. (Observe the necessity to set up a class of ADVERBS, §13.7, some of which can not be predicated and hence can not be derived from a real nominal sentence.) In addition to the meanings 'They make it [so that it is] early/fast' (transitive mutative, with object complement) and 'They do it [and they are] early/fast' (subject-adverbial, with subject complement), *Háyaku suru* can also mean 'They do it [and the action itself is] early/fast = They do it quickly' (nuclear-adverbial, with nuclear complement). The following example will show the contrast:

Watasi ga benkyoo o háyaku suru

- (1) 'I speed up the studying' ← *Benkyoo ga hayái* 'The study is early/fast'.
- (2) 'I study early' ← *Watasi ga hayái* 'I am early/fast'.
- (3) 'I study quickly' ← *Hayái* 'It is early/fast'.

In this example, it might be thought that the second semantic interpretation (subject-adverbial) could perhaps be stretched to include the third interpretation (nuclear-adverbial), but there are other examples which will bring home the difficulty of trying to pin the reference of the infinitive down to either the subject or the object:

Watasi ga benkyoo o yóku suru

- (1) 'I make the study [so it is] good = I improve my studying' ← *Benkyoo ga yói* 'The study is good'.
- (2) 'I study [and I am good =] well' ← *Watasi ga yói* 'I am good (at it)'.⁴⁸
- (3) 'I study often/lots' ← 'It is [enough to be] good'.

What we seem to have in the third case (the nuclear-adverbial) is an adverb that is lexically derived from the infinitive—and is identical with it in pronunciation; each such DERIVED ADVERB, while superficially distinguished in no way from the infinitive, should probably be listed separately in the lexicon, in order to show that the nuclear-adverbial interpretation is possible for such sentences. Sentence adverbials—such as *ígai(¯) ní mo* 'unexpectedly enough' and *ún-yoku* 'luckily'—can be treated as an extension of the nuclear adverbialization.

If the view taken here is correct, it should be possible to generate a sentence like [*Ása*] *háyaku* || [*watasi ga*] *háyaku* | *benkyoo o háyaku sita* '[I] quickly speeded up the studying early [in the morning]', reducible by optional ellipsis to *Háyaku* || *háyaku* | *háyaku sita*—with any one of the *háyaku*'s interpretable (in theory, at least) as any one of the English adverbs (including the one hiding in the verb 'speed'). An additional interpretation would be iteration ("fast—fast-fast!").

Examples derived from adjectives: *nágaku* 'for a long time'; *atarásiku* 'newly, recently, freshly, anew'; *hagésiku* 'fiercely'; [mono-]*súgoku* 'dreadfully = very'; *yasasiku* 'easily, simply' (cf. 'gently', subject-adverbial); *karuku* 'lightly; easily'—*Gomi* no *ryóo ni mi-atta syookyaku-zyoo o tukuróo to sureba zyusigó-oku no kane wa karuku kakáru* 'To build

48. A semantic extension leads to the idiomatic meaning 'is proficient at N' as in *búnsyoo o yóku suru* 'is a proficient writer'. (Grammatically this might also be interpreted as 'improves the sentences'.)

an incinerator adequate for the quantity of trash will easily require fourteen or fifteen hundred million [yen] in money' (SA 2668.30a); *kuwásiku* 'in detail; precisely'—*Motto kuwásiku iéba ...* 'To put the matter more precisely ...' seems to belong here rather than with the mutative, as does also *óokiku* in *Nobi-ritu wa óokiku otíru* 'The growth rate falls in a big way' (SA 2671.45d); *itizirúsiku* 'remarkably'—... *kikái(=)* *ga itizirúsiku húeta kotó ...* 'that opportunities have remarkably increased in number' (K 1966.176).

Examples derived from adjectival nouns: *génki ni* 'vigorously'; *kírei ni* 'neatly, nicely'; *hizyoo ni* 'extraordinarily = exceedingly'; *yáke ni* 'desperately = horribly, terribly'—*Yáke ni átukatta* 'It was dreadfully hot'; *seikaku ni [iéba]* 'exactly [speaking]'.

Negatives occur with all three interpretations, though there may be some restrictions as nuclear-adverbials that should be explored: *Utukúsiku náku káita* 'He wrote unbeautifully'; *Kírei zya náku káita* 'He wrote unneatly'; *Sízuka zya náku syabéru* 'He talks unquietly'; *Omosíróku náku sugósita* 'He passed the time uninterestingly'. But some are rejected: **Génki zya náku* is replaced by *Genki-náku* in the sentence *Genki-náku sigoto o sita* 'He did his work unenergetically'. *Genki-náku* is the infinitive of *Genki-nái*, an adjective derived from *Génki [ga] nái* 'Energy is lacking = [One] lacks energy'. The opposite expression *Génki [ga] yói* will not reduce to an adjective; it can only undergo the normal juncture reduction to *Génki |yóku*, and there is no **genki-yóku*.

More examples of nuclear-adverbials (from V 118): *Hídoku nite iru* 'They are terribly alike'; *Tumetaku waratta* 'She smiled coolly'; *Sízuka ni husúmá(=)* *o akete ...* 'Opening the opaque sliding door quietly ...'; *Nikutai-teki ni yowátte ...* 'Weakening physically ...'; *Tóbi wa íe no ue o óokiku mawatte úmi no hoo e déte yuku rásikatta* 'The kite [bird] made a big circle above the house and seemed to be heading out to sea'. The examples given here are all single-word adverbs, but phrases sometimes occur: *Kono hí wa, sootyoo kara OTÓ MO NÁKU áme ga ótite itá ga, úmi wa sízuka datta* 'On this day rain was falling WITHOUT A SOUND (= silently) from early morning, but the sea was calm' (SA 2670.42d); the manner interpretation somehow seems better than the subject-adverbial interpretation, though the latter is conceivable, from something like 'the rain has no sound'. Notice that in *hukáku kan-ziru* 'feels it deeply' neither IT nor YOU are "deep"; the depth refers to the feeling itself. And in *híroku aruki-mawaru* 'walks around extensively' the limitation is on the act itself.

9.1.11.(5). *Evaluative*. The EVALUATIVE conversion blends a statement of evaluation (predicated by an adjective or an adjectival noun) with a sentence that uses the evaluated as direct object: *Tanin no kotó ga yói/warúi* 'Things about other people are good/bad' + *Tanin no kotó o iu* 'says things about other people' → *Tanin no kotó o yóku/wáruku iu* 'says good/bad things about others = speaks well/ill of others'.⁴⁹ The infinitive can be negativized: *Hi o omosíróku náku sugósita* 'I passed the days in dull fashion'; *Sore o tanósiku náku míta* 'I watched that without enjoyment'. Other examples are *Sore o utukúsiku káita* in the meaning 'I wrote it [so that it would be] beautiful' and *Sore o kírei ni káita* in the meaning 'I wrote it [so that it would be] neat'—somehow to be connected with *Sore ga utukusii* 'That is beautiful' and *Sore ga kírei da* 'That is neat' rather than with *Sono kotó ga utukusii* 'That act is beautiful' and *Sono kotó ga kírei da*

49. Presumably this underlies the following passivized example: *Káre hodo zainin tyuu wáruku iwareta syusyoo wa nái* 'No prime minister was so ill-spoken of while in office as was he' (SA 2668.40a).

'That act is neat' (which would indicate the nuclear-adverbial conversion). And *Sore ga yasúi* 'That is cheap' somehow underlies *Sore o yásuku kau* 'buys it cheap'.

9.1.11.(6). *Transitive putative*. The TRANSITIVE PUTATIVE results from putting together two sentences of the types shown below: *Sore ga arigatái/uresii/kanasii* 'That is obliging/pleasant/sad' + *Sore o omótta* 'I thought/felt that' → *Sore o/wa arigátaku/urésiku/kanasiku omótta* 'I thought that obliging/pleasant/sad'. The adjective need not be emotional: *Siken-móndai o yasasiku omótta* 'I thought the exam questions easy'. Instead of an adjective you may find an adjectival noun: *Sore o husigi ni kangáeru* 'I find that strange' (= *Sore ga husigi da to kangáeru*); *Sore o koohuku ni kan-zita* 'I felt that to be (fortunate =) a blessing'. And occasionally you will find a noun, especially if modified by an adjective, though it is more common to use *N no yóo ni*: *Hitóbito wa sore o yói kotó⁽ⁱ⁾ no yóo ni omóu* 'People feel that to be a good thing' (Ōno 1966.13); *Watasi no kotó o o-tétudai-san ṭgurai ni sika omótte inái n desu yó* 'They think of me as nothing more than a housemaid, I tell you' (SA 2671.130c).⁵⁰ In the following example the conversion is adnominalized to its epithematized object: *Kóndo hodo wakái onná-no-ko ga kírui de náku kan-zita tabí wa arimasén desita* 'I never had a trip on which I felt the young girls were so unpretty as this time' (SA 2688.100b); the immediately underlying sentence is *tabí o ... kan-zita* 'about the trip I felt that ...' but the deeper relationship between "trip" and "girls" is vague.

The transitive putative is largely limited to the verbs *omóu* 'thinks, feels' (and its synonyms), *kangáeru* 'thinks, figures, reckons', *kan-ziru* 'feels', and *míru* 'regards as, thinks of as'—as in *Sore o omosiróku míta* 'I thought that enjoyable' rather than (with the evaluative) 'I watched that with enjoyment', cf. *Kotira no seihin o omoku míta* 'They highly regarded our products'. But there are a few other verbs of similar meaning which can be used with the transitive putative: *Hón o taisetu ni atukau* 'We treat the book as valuable'; *Sore o wáruku tóru* '[One] takes that badly'; *Kore o réi ni tóreba ...* 'If we take this as an example ...'—perhaps this is a mutative, like *Onná o hitoziti ni tóru* 'I will take the woman as a hostage'; *Tóoyoo de wa yuuzyoo to iu monó o tákaku hyóoka(ṽ)* *suru* 'In the Orient friendship is something highly valued' (Maeda 1962.60); *Watakusi wa ningen no tié to iu monó o, mótto tákaku katte imásu* 'I (buy =) value human wisdom higher (than that)' (Tk 2.154a).

A transitive putative sentence such as *Haná o utukúsiku omóu* 'I think the flowers beautiful' is equivalent in meaning to a quotative sentence *Haná o utukusii to omóu* 'I think the flowers to be beautiful', which—in turn—can be taken as roughly the equivalent of *Haná ga utukusii to omóu* 'I think that the flowers are beautiful'. Cf. §21.1.

There are negatives: *Sore o/wa anmari arigátaku/urésiku/kanasiku/omosiróku náku omótta* 'I thought that none too obliging/pleasant/sad/interesting'. The Kansai infinitive (A-[k]u, p. 392n) is used with the humble verb *zon-zíru(ṽ)* (= *omóu*), and the verb itself is sometimes omitted: *Sore o arígatoo {zon-zimásu}* 'I appreciate that'.

9.1.11.(7). *Intransitive putative*. The INTRANSITIVE PUTATIVE results from the following process: *Sore ga A-i* (AN da, N [no yóo] da) → *Sore ga A-ku* (AN ni, N [no yóo] ni) + [*Sore ga*] *omowaréru* 'is thought, felt', *miéru* 'seems', *kikoeru* 'is heard',

50. But the noun *o-tétudai-san* becomes part of an adjectival-noun phrase by adding the restrictive *ṭgurai* [na ...].

omoéru 'can be thought/felt, is thought/felt; seems', miraréru 'is regarded as', nagameraréru 'is viewed as', kan-zirareru 'is felt (as)'⁵¹ Examples: Omosiróku miéta 'It seemed fun'; Myóo ni omowáreta 'It felt strange'; Kao ga nágaku miéru (= nagái to miéru) 'The face looks long'; Síngo ni wa hutari no musumé ga keihaku ni omóeta 'To Shingo the two girls appeared flippant' (Kawabata in V 113); Siráume ga anzu ka nani ka no haná ni miéta 'The white plum blossoms looked like apricot blossoms or something' (Kawabata in Vardul 119); Watasi wa hizyoo ni sore ga omosirói booken-teki na sigoto ni omowáreta 'To me that seemed extremely interesting adventurous work' (Kikuchi Kan in V 119); ... seinen no gótoku [= no yóo ni] miéta ga ... 'he looked like a youth but ...' (Tk 2.295); Íma de wa, huyú ni de-kasegi ni ikanai to, yohodo namake-mónó(¯) ka byoonin ni miraréru, to iu hodo de-kasegi wa atarimae no kotó ni nátte iru 'At present, if you don't go out for work in the winter, it has got so that hiring out is the expected thing—so much so that if you don't hire out in the winter you are regarded as lazy or sick' (SA 2684.18e). There are negatives: Sore ga/wa anmari omosiróku náku omowáreta 'It was thought not overly amusing'.

Cf. -te miéru, §9.2.4.(8); ... (A-i, N da) to wakáru/kangaeraréru/omowaréru/omoéru, §21.1; N ni site wakáru/kangaéru/kangaeraréru/omóu/omowaréru, Notice that Otóosan ni miéru can be interpreted either as 'It looks like (or: looks to be) father' or 'It is visible to (can be seen by) father'.

Both of the last two conversions are usual only for adjectives or adjectival nouns; nouns will normally occur as *N no yóo ni*, though a few examples of simple *N ni* will be found above. Verbs can also appear if mediated by adnominalization to *yóo ni*: Sore wa Kótake no kekkon ni gen'in ga áru yóo ni omowaréru 'It appears that that has its roots in Kotake's marriage' (Ig 1962.92); the sore wa is a subdued thematization of a genitive, i.e. sore no [→ sono] gen'in. Or, the verb can be evidentialized (V-i-sóo da, §20): Áme ga | huri-sóo ni | omowaréru 'It appears to look like rain', Áme ga | huri-sóo ni | omóu 'I think it looks like rain'.

Although the negative of a verbal is by form an adjective, and hence susceptible to the conversions, it seems to be more common to use V-(a)nai yóo ni miéru etc. than to use V-(a)naku miéru (for which I have no example): ... amari nagái aida wa || tuzukanákatta | yóo ni | miéru 'It seems not to have continued for too long a time ...' (Ōno 1966.83)—but yóo here is needed in order to preserve the perfect.

In addition to the seven conversions described above, see also S kará ni [wa], §17.1.

9.1.12. Verb dropping.

The gerund form of some of the sentences made by the transitive mutative conversion of the preceding section (X o Y ni suru 'makes X into Y') can be used adverbially with an optional dropping of the gerund site. The resulting pattern X o Y ni [site] 'with X as Y' (or the like) is illustrated in these examples: Kore o kikkake ni [] seikoo sita 'This (was what) started me succeeding';⁵² Toodai no akari o táyori ni [] kookoo suru 'They navigate

51. The usually transitive kan-ziru 'feels' is sometimes used as equivalent to the passive (or spontaneous potential) kan-zirareru: Gaikoku no kyarameru wa, Nihon-zin ni wa situkkóku kan-zimásu né 'To Japanese, foreign caramels taste too strong' (Tk 4.194b)—note the marker NI.

52. Cf. Ano sóodoó ga kikkake de Noorin-syoo ni santi-haiki-séido o tukuráseta 'With that disturbance as excuse they had the Agriculture Ministry prepare a system for soil retirement' (SA 2689.145c); dé is the copula gerund.

by the light from the lighthouse'; Anó-hito o usiro-date ni [] ... 'With him for a backer ...; With his support ...'; Kore o kikái(⁻) ni [] ... 'Taking this opportunity ...'; Kane o mé-ate ni [] ... 'With money as one's object ...'; Musuko o oyá^[1] no kawari ni [] ... 'Letting son stand in for father ...'; Kono ten o sakái ni [] ... 'With this point as a boundary' (SA 2671.44b).⁵³ Many of these expressions are like the phrasal postpositions of §9.7: Sore o itóguti ni [] ... 'With that as a clue ...'; Sore o kawakírí(⁻) ni [] ... 'With that as a starter ...'.

We are forced to recognize the dropping of sité by the presence of the stranded direct object. If ní were simply the infinitive of the copula 'its being (a case of)' the nouns would be marked as subjects (X ga Y ni ...); compare the two examples cited in §9.1, Sore ga munén-sa ni ... 'With that as a resentment ...' and ... hó[h]o daké ga momoiro ni(, sikási ...) 'just her cheeks were pink(, but ...)', and the more common examples with the copula gerund, such as ziko ga gen'in de sinda hitó 'a person who died as the result of an accident'. Our ellipsis is not a fictive process introduced merely to explain away the anomaly of a direct object in the absence of a transitive verb, since the dropping is optional and sité can always be put back: Sénbe[i] o tumami ni {site} uisúkii no mizuwari o nomi-nágara ... 'While drinking whiskey-and-water with rice crackers to nibble on ...'. Since sité can NOT be added to Sore tó wa betu ni ... 'Quite apart from that ...' (p. 396), that expression must be an infinitive adverbialization of the copula. Cf. N wa [←o] betu ni/to site (pp. 456, 579).

A few examples (from KKK 3.141-2): ... sono akazi o koozitu ni [] ... 'with that deficit as a pretext'; ... meisin-bukái dozin o aité ni [] syóobai o site iru 'is doing business with superstitious natives as customers'; ... "12725" no bangoo o tegákari ni [] sóosa ⁂yuu no tokoró^[1] ... 'while investigating with the number "12725" as a clue'; ... kore o táne ni [] Seioo ṭgawa ni hutatabi yonkoku-káigi o hirakásete ... 'will use this as an excuse to force the Western European powers to reopen a Four Power Conference'.

More examples, from various sources: Sore o ii kotó^[1] ni [] ... 'Taking advantage of that = Finding it a good excuse ...' (Fn 229a); Koo sita zizyoo o haikei ni [], ... 'With this sort of situation as a background, ...' (SA 2664.122a); Aakú-too no densin-básira o usiro ni [], bóku(⁻) wa gunsyuu o nirami-tuketa 'With arc-light pole behind me, I glared at the crowd' (Tk 3.71a); Kono zyoookyoo o haikei ni [], roomazi-rónsya, kanamozi-rónsya wa óoi ni katudoo sita 'With this situation for a background the advocates of romanization and the advocates of kana engaged in great activity'; ... Gaburiéru wa byooki o riyuu ni [] gakkoo o kekkín sita 'Gabrielle stayed away from her school job, giving illness as the reason' (SA 2649.105c); Maṭi^[1] no hitó ga tizu o táyori ni [], áru ié o sagasite ita 'A person from the town was looking for a certain house, with a map to rely on' (Shibata 1961.71); ... káre ga sakunen zyuugatú no Pári kokusai-gitaa-konkúuru ití-i nyuusyoo o o-miyage ni [] sakígóro kikoku sita 'he recently returned to Japan with, as a memento of his travels, the winning of first prize in the Paris International Guitar Competition of October of last year' (SA 2679.119a); Soko de bóku(⁻) wa, sono Ameriká-zin no senséi ga han-tosí hodo site kikoku sityattá no o ii kotó^[1] ni [], yamete simattá no da keredo ... 'Then I took advantage (making a good thing) of that American teacher's going home after half a year, and quit' (CK 985.372); Undóo-in hutari ga ihan o kú ni [] zisatu 'Two party workers commit suicide, anxious over (election) irregularities' (SA 2663.126—a headline with ellipsis of final suru/sita after verbal noun, on which see

53. With sité intact: Sore ga haisen o sakái ni site itten si, ... 'That all changed with the war defeat (as the dividing line), and ...' (SA 2688.89c).

§28); Kōten sinsaku o tōwazu(¯) sēkai zyu no suiri-syōsetu o senmon ni [] hon'yaku site iru siriizu de, ... 'It is a series that specializes in translating mystery stories from all over the world, both classic and new works' (SA 2679.143a). In the last example, since ... o tōwazu(¯) 'not discriminating between ...' typically takes as its object a pair of contrasting semantic entities—either lexicalized (danzyo 'men and/or women') or conjoined as questions, we can assume that the direct conjoining at the beginning of the sentence represents something like Kōten [de aru ka] sinsaku [de aru ka] ... 'whether it be classics or be new works'. In ... kakioki o tate ni [], ... 'on the strength of his deathbed note' (Kb 176) we might prefer to assume ellipsis of the specific verb tōtte (< "taking it as a shield"), but site is also used.

In the following example (perhaps a blend with §9.1.13?) the ni is dropped along with site: Bakānsu ni haitta no o saiwai [], R-hūsai wa Kurisutian o saisyō wa Dōitu, tugi ni Itaria e to tabi-datāseta 'Taking advantage of the fact that vacation time had set in, M. and Mme R. sent Christian off traveling, first to Germany and then to Italy' (SA 2649.105c).

An example of N o A-ku [site] was given in §9.1.11: mākura o tākaku [site] neru 'sleeps with one's pillow high (= in peace)'. For an example of VN [site] irai 'since VN-ing', see §9.2.3.

A similar ellipsis occurs for the copula gerund de in Sore mo sono hazu [de], ... 'And that being only natural, ...' (SA 2680.116c) and in conjoined sentences of the type A ga X X [de], B ga Y dá; the final dá can drop also/instead, so that we also get both (1) A ga X [], B ga Y [] and (2) A ga X de, B ga Y []. In the same way, a final suru or sita will drop in certain styles, e.g. that of newspaper headlines. For omission of other forms of suru, see §14.1.3, §14.3, §21.4, §28. Here is an example of nuclear ellipsis (§28) that removes naru from an intransitive mutative conversion: Tookyō-to no tizi-kōho ni [naru], to iu hanasi ga aru yōo desu keredo mo 'There seems to be some talk about [your undertaking] candidacy for the Tōkyō governorship' (SA 2678.46b). And for a dropping of the subject-exalting (o-V-i) ni naru in its gerund form natte, see §10, p. 599.

Other places where the copula gerund is optional (but usually omitted) include the expression X wa motiron/ōroka/mōtōyori [de] Y 'Y to say nothing of X', as in: Kono hōn wa hihyō wa mōtōyori [], syokai suru kotō mo muzukasii(¯) 'This book is difficult to introduce, to say nothing of critically review' (SA 2679.103a).

Cf. N o hazime {to site}, p. 578 in §9.7; Sore wa tō-mo-kaku {to site} 'Be that as it may'; ...

9.1.13. Direct adverbialization of nominals.

Expressions of time and place often consist of a noun preceded by an adnominal expression: Sono tokī da 'It is that time', Nagai aida da 'It is a long interval (of time)', Tooi tokorō da 'It is a far-off place', etc. We expect these to adverbialize by converting the copula into its infinitive form ni. But sometimes, either optionally or obligatorily, the ni drops, leaving the underlying nominal sentence DIRECTLY ADVERBIALIZED. (Cf. direct nominalization, §14.6.)

It is usual to drop the temporal-locative ni with certain expressions of RELATIVE time (such as kinōo 'yesterday', kyōnen 'last year', etc.) but not with those of SPECIFIC time (yō-zi ni 'at four o'clock', gozyū-nen ni 'in [19]50', etc.), as pointed out in BJ 1.124. Notice that the time noun ima 'present (time)' splits into different meanings depending on the presence of the ni: (1) ima da → ima ni 'soon, presently, by and by';

(2) *íma da* (→ *íma ni*) → *íma* 'now, at present'—or, when followed by a quantity word and stripped of accent, '(some) more' (= *moo*) as in *ima sukósi* 'a little more' and *ima hitótu* 'one more'.⁵⁴ As Jordan notes, certain time expressions (e.g. those ending with *góro* 'about') optionally take the marker *ní*. The names of the seasons belong in this group, but they are more common without *ní*, as are the parts of the day: *háru* 'in spring', *natú* 'in summer', *áki* 'in autumn', *huyú* 'in winter'; *ása* 'in the morning', *hirú* 'during the day', *gógo* 'in the afternoon', *ban* 'in the evening'. Similar is *hazime* *ɸniɸ* wa 'at first, in the beginning'.

Expressions of duration are often directly adverbialized: *nagai aida* 'for a long time', *san-zíkan* [*gúrai*] 'for three hours'; *Koko* [or: *Kono*] *ni-sansyúukan áme ga náí* 'There has been no rain for the last few weeks'.

There are other kinds of optionally omitted *ní*. These are to be treated as words belonging to the class of adverbs as well as to some other class (usually that of adjectival noun or of precopular noun): *amari* *ɸniɸ* 'overly', *tyokusetu* *ɸniɸ* 'directly', *tugi-tugi* *ɸni/toɸ* 'one after another', ...; *Saiwai* *ɸniɸ kázoku wa miná genki desu* 'Happily, the whole family is well'. (*Saiwai* is an adverb, an adjectival noun, and also a pure abstract noun—as in *saiwai o inóru* 'prays for happiness'.) Sometimes there is a difference of meaning: as an adverb *zyúnzi* means 'gradually', but *zyúnzi ni* means 'consecutively'. Two ways to say 'comparatively' are optionally marked by *ní*, *wariai* *ɸniɸ* and *hikaku-teki* *ɸniɸ*: *hikaku-teki yooi ni zikkoo sareru* 'is accomplished comparatively easily'. See also ... *koó* *ɸniɸ* in §14.1, p. 843.

Certain adverbial expressions permit you to use either *ní* or *dé* (cf. Alfonso 305): *óogóe ni/de* 'loudly', *genki ni/de* 'vigorously'; *zyoodán ni/de* 'jokingly' (*ní* preferred), *buzi ní/dé* 'safely' (*ní* preferred);⁵⁵ *naisyó ni/de* 'secretly' (*dé* preferred); ... Ellipsis of something like *surú no* 'doing it' can leave these copula-marked adverbializations stranded directly before another copula (usually propredicative), as observed on p. 242 (§3.10).

There are a number of postadnominals that undergo direct adverbialization either obligatorily or (more often) optionally:
tokoro: *Genzai no tokoro*^[ɸ], ... 'At present, ...'; *Mókka no tokoro*^[ɸ], ... 'At the moment, ...'; *Kekkyoku*^[ɸ] *no tokoro*^[ɸ], ... 'In the last/final analysis, ...'; *Ooyoso no tokoro*^[ɸ], ... 'Roughly speaking, ...'; *Tumáru tokoro*^[ɸ], ... [oratorical] = *Tumari*, ... 'In short/brief/sum, ...'; *Anzen na tokoro*^[ɸ], ... 'To be on the safe side, ...'; *Sirábeta tokoro*^[ɸ], ... 'Upon inquiry/examination, ...' (SA 2672.29d); *Sas-súru tokoro*^[ɸ], ... 'Presumably, ...'; *Mattaku*^[ɸ] *no tokoro*^[ɸ], ... 'To tell the truth, ...'; *Zitú*^[ɸ] *Zissai no tokoro*^[ɸ], ... 'In reality, ...'; ... *syoozíkí na tokoro*^[ɸ] *komátte simatta* 'to be honest about it, I was most embarrassed' (SA 2673.143c); *Tábeta míta tokoro*^[ɸ], *úmakatta* 'When I sampled it, it was delicious'; *Káre-ra wa ikken sita tokoro*^[ɸ], *Betonamu seihú-gun to kawaranai* 'They are, at first glance, no different from the Vietnamese government forces' (SA 2672.23c); *Saisyo míta tokoro*^[ɸ] *yosasóo datta kedo ni-dó mé kara wa anmari íi to omowánakatta* 'When I first saw it [= the film] it seemed good but after the second time I decided it wasn't very good'; *Sassoku*^[ɸ] *tyóosa sita tokoro*^[ɸ],

54. The accentuation tells us that *ima-máde* 'up to now', *ima-mótte* 'as yet', and *ima-goro* 'about now' are lexical derivatives, obligatorily replacing their sources **ima made*, **ima motte*, and **ima góro*.

55. In written Japanese this is also directly adverbialized: ... *buzi doosen ni kyúuzyo sareta* 'were saved without harm by the same ship' (SA 2674.129c).

kono uéetóresu wa arubáito no tandái-sei to wakátta 'Upon a quick check, this waitress turned out to be a junior college student working on the side' (SA 2674.99d).⁵⁶

koto: Kyónen no kotó, ... '[It is a matter of] last year, ...'. Expressions such as nagái koto 'for a long time', hayái koto 'promptly', and isso no koto 'preferably, rather' are often treated as lexical adverbs (see § 14.1) as is súndé-no-kotó {ni/de} (§ 13.7).

toki: Watasi wa kore o kiita tokí, táisoo hará ga tátta 'When I heard this I got quite angry' (SA 2685.119b); Wánman no tokí, o-ori no kata' wa kono botan o osite kudasái 'When the bus is one-man operated, persons wishing to get off will please press this button' (sign in bus).

zibun(-): Sore de, kui-owatta zibun(-), hizagásira o idaki-nágara Mítomi ga tubuyáku 'Then when through eating, hands on knees, Mitomi mumbles' (Ig 37).

sái: O-ori no sái, otosímónó(-) wasuremono gozaimasén yóo go-tyúui kudasai 'Upon departure from vehicle, please see that you have not dropped anything nor left anything behind'.

uti(-): Wakái musumé-tati to asonde iru utí(-), Itíroo wa omosirói [ákúgi=] itazura o hakken sita 'While playing with the young girls, Ichiro discovered an amusing bit of mischief' (Ig 37); ... zisatú-sya wa 4635-nin ni nobotte iru. [Sono] utí(-) [ni] zyosei wa 2332'nin [de], ... 'suicides have risen to 4635 persons. Among them are 2332 women, and ...' (SA 2671.129b).

hoka: Tyúugoku no hoka, Nan'yoo no hoo ni mo ikaretá n desu né 'In addition to China, you also went to the South Seas, didn't you' (Tk 2.261a); Tozan no hoka, supóotu de wa dónna kotó o--? 'Aside from mountain climbing, what sort of thing in the way of sports (do you do)?' (Tk 3.178b).

tamé: ... Norio san no yukue ga wakaránai tamé, keisatu de sagasite imásu 'owing to the fact that Norio's whereabouts are unknown, the police are looking for him' (R).

kekka: Zitti-kénsyoo no kekka, hakkíri sita ketúron(-) ga déta 'As the result of an on-the-spot investigation, there emerged an obvious conclusion' (Ig 36).

Notice also (§ 13.2) ... yóo [ni], ... hate/sue/ageku [ni], ... baai [ni],

There are several other types, as the examples below illustrate:

(1) Omitting the temporal-locative marker: Tikái syóorai [ni], ... 'In the near future ...'; Bóku(-) wa sono ban [ni] inákatta kara, bóku(-) no bün dake nokósit' oite, minná de tábeta n da 'They all ate it leaving only a portion for me, since I wasn't there that evening' (Tk 1.22); Áru ban, otokó wa onná o utí(-) e sasotta 'One evening, a man invited a woman to his house' (Ig 36); Watasi no pátoron(-) wa watasi no túita hí, sigoto o setumei sita 'My patron explained the job to me [on] the day I arrived' (Endō 194); Yat-tó ni-zíkan -bákari tátta ima, Husae wa tobosii(-) yúuki o ubátte sore o tazúneta 'At last now that some two hours had passed, Fusae seized her feeble courage and inquired (about it)' (Ig 37).

(2) Omitting the copula gerund dé: Útta áto [de] ... 'After shooting ...' (SA 2685.99c); Tó omótta no mo tuka-no-ma [de], ... 'With that as but a passing thought, ...' (SA 2673.94b); ... nainái(-) [de] utomásiku omóu 'secretly dislikes' (SA 2685.130b); Syóobai -gara [de] Tyuu-Nánbei, Ahurika no minato de yóku kuruma ni norimásu 'By

56. The following are treated as lexical derivatives: kono-tokoró 'lately; for the present' (adverb), koko-n[o]-tokoro 'right here/now; lately' (noun/adverb), ima-n[o]-toko[ro] 'at present' (adverb), hayái-toko 'promptly' (adverb); sunde-no-tokoró {de} 'any moment (now/then), very nearly' (adverb).

the nature of my business I go by car a lot in the ports of Latin America and Africa' (SA 2664.98c). See also V-tá ga saigo [de], ... 'once V has happened that's it, ...' (§ 14.6, p. 900).

(3) Omitting kóo da 'is like this': Hayái hanasí ga [], ... 'To make a long story short ...' (cf. Mikami 1963.152); Mattakú^[1] no hanasí ga [], ... 'To tell the truth ...'.

(4) A further stripping of the preceding, by omitting gá: Hayái hanasí^[1] [], ... 'To make a long story short ...' (SA 2671.128c); Syoozíkí na hanasí^[1] [], ... 'To tell the truth ...'.

Mikami 1963.153 calls our attention to these three results of ellipsis: Tyóosa no kekka [to site] 'As a result of investigation', Syoozíkí [na tokoró [o iéba]] 'To tell the truth', Ikken [sita tokoró [de wa]] 'At first glance'.

9.2. THE GERUND

The gerund has the shape -kute (lively form -kutte) for adjectival sentences and dé (= literary níte) for nominal sentences. But in western Japan the ending -té is attached to the Kansai abbreviated infinitive -[k]u so that you get forms with the history ...akute > ...a'ute and ...okute > ...o'ute (both pronounced ...oote); ...ukute > ...u'ute (pronounced ...uute); and ...ikute > ...i'ute (pronounced ...yuute). Thus nóote is the Kansai form for nákute and yari-tóote is the form for yari-tákute. The velar stop in -[k]ute drops sporadically in various other areas, including Chiba (see Zhs). For an adjective gerund like uresi[k]ute, according to Maeda 1961.20, Kyōto has two pronunciations uresyuute and uresiite; Ōsaka takes the latter and shortens it to uresite.

Verb gerunds are more complicated. Vowel verbs simply add -té to the base (or, rather, to the infinitive which is the same in shape); consonant verbs add -té or -dé depending on the base type and undergo certain morphophonemic alternations (essentially, reductions from the infinitive):

IMPERFECT	GERUND	MEANING	NOTES
kák-u	kái-te	'write'	
kag-ú	kai-dé	'smell it'	
kas-ú	kasi-té	'lend'	But kai-té in some dialects. ⁵⁷
kát-u	kát-te	'win a victory'	Kansai: kóo-te
kár-u		'mow'	
ká-u ⁵⁸ = káw-u		'raise (animals)'	
kó-u ⁵⁹	kót-te	'beg; love'	kóo-te
kú-u	kút-te	'eat'	kúu-te
i-ú /yuú/	it-té, yut-té	'say'	yuu-té
yu-ú	yut-té	'dress hair'	yuu-té
yob-ú	yon-dé	'call'	But yoo-dé in some dialects.
yóm-u	yón-de	'read'	But yoo-de in some dialects. ⁶⁰
sin-ú	sin-dé	'die'	

57. E.g. Nagoya (haná[s]ite, Kgg 81.49a), Ishikawa (okó[s]ite, Zhs 3.95), Yamanashi (dá[s]ite, Zhs 2.424), N. E. Hyōgo (okó[s]ite > okeete, Zhs 3.307 n. 2). Forms such as tu[g]ide and o[k]ite can be found in texts as early as 830 AD (Kokugogaku jiten 1047a). Cf. the Kansai adjective infinitive -[k]u.

58, 59. In parts of central and southern Japan pronounced kóo (but nowadays usually káu and kóu in Kansai). In Aomori -w- verbs become -r- verbs.

60. E.g. Kōchi (H 1968.150); Kyūshū (H 1968.166); Ishikawa (nómi-te > nóode, Zhs 3.96).

(The basic final accent on the imperfect -ú and gerund -té forms of atonic bases will be heard only before a particle or the like; elsewhere it will be cancelled by an underlying juncture.)

The verb *ik-u* 'goes' is irregular; instead of the expected **ii-té*, the gerund is *it-té*, homonymous with the gerund of *i-ú* (pronounced *yuú*) 'says'—but the latter gerund is often pronounced *yut-té*, homonymous with the gerund of *yu-ú* 'dresses hair' (both *yu-té* in Kansai). In certain dialects (Tottori, Izumo, Oki—Zhs 3.307 n. 1; N. E. Hyōgo, Zhs 3.318) the verb 'go' preserves the literary form *yuki-té* > *iki-té*, differing from *iki-te* 'living' (a vowel verb) only by accent. Other k-verbs in these dialects apparently drop the velar: *kiit...* 'hear(ing)' (Zhs 3.308). And 'saying' is *it-té* (Zhs 3.306 n. 2). There are Kanto dialects that treat at least some other k-verbs as Tōkyō treats 'go', e.g. *arúki-te* > *arutte* 'walking' (Zhs 2.17)—as in *arutt'atte* = *arúit'atte* = *arúite mo* 'even walking' (Ibaragi, Zhs 2.47).

The literary gerund for the copula is made by attaching -té to the infinitive *ní* (= the objective essive), and modern *dé* is a reduction from *ní-te* in all its uses, including those treated as a particle in §2.2. In Literary Japanese the verb gerund is made by attaching -té with no changes in the infinitive, so that the literary forms corresponding to the ones given above are *káki-te*, *kagi-té*, *kasi-té*, *káti-te*, *kári-te*, *káhi-te*,⁶¹ *kóhi-te*, *kúhi-te*, *ihí-te*, *yuhí-te*, *yobí-te*, *yómi-te*, *sini-té*, and (for 'going') *yuki-té* > *iki-té*. There are dialects in the southern Ryūkyūs (Yaeyama and Yonaguni) which show a regular formation similar to that of the literary language.⁶² The gerund ending -te is palatalized to -tye or -ti in northern Kyūshū, according to Zhs 6.19; and palatalization of the ending (to -ci) is widespread in the Ryūkyūs, assimilating the syllable to the preceding /i/ of the infinitive on which the gerund was formed.

The Kansai versions of the -w- verbs (*ká-u* etc.) carry a certain literary prestige and you will sometimes run across them in print, especially if the preceding vowel is -o-: *kó-u* 'begs, loves' and *tó-u*([~]) 'asks' (both rather uncolloquial) are usually given the gerunds *kóote* and *tóoté*, respectively, instead of *kótte* and *tótté*.⁶³ And the same situation obtains for other forms based on the gerund, such as the perfect: ... *kokumin ni tóotá no daroo ka* 'will they ask the people of the nation?' More colloquial verbs are not so likely to be given the Kansai treatment in writing; in the following passage we find *simatta* not *simo(o)ta*, despite *notamóota* = *notamátta*: ... *kieta uisúkii ni túite wa*, "Moo tokkú-ni([~]) dóko ka e simi-kónde simattá 'róo yó'" to *notamóota* 'with respect to the vanished whiskey, he stated "It must have been soaked up some place long ago"' (SA 2670.107d). In colloquial Kansai speech (cf. Zhs 4.16) the long oo is often shortened, especially in polysyllabic verbs and you will sometimes see in print such forms as *morote* for *morote* = *moratte* 'getting',⁶⁴ *simota* for *simoota* = *simatta* 'finished', and *warota* for *waroota* = *waratta* 'laughed': *Soo omóte 'ru desu wá* 'That's what I think, you see' (SA 2684.103a)—< *omóote* = *omótte*.

61. The "h" represents the orthographic form of what was earlier pronounced [F] and still earlier [p], here the source of the modern intervocalic /w/ now heard only before /a/ as in *kawánai* 'does not raise'.

62. But these Ryūkyū gerunds appear to be derived from infinitive + *sité* rather than -té.

63. In Literary Japanese, forms that end in ...a-u and ...o-u are pronounced /...oo/.

64. For this verb, the forms are often further contracted to *moote*, *moota*, etc. (cf. Inokuchi 101).

Originally the gerund was itself the infinitive form of an auxiliary verb *t(é)-*, which underlies the literary perfect forms *túru* (attributive) and *tú* (predicative) as in *saki-túru haná* 'the flowers in bloom, the flowers which have bloomed' (= *saita haná* or *saite iru haná*) and *haná saki-tú* 'the flowers are in bloom, the flowers have bloomed' (= *haná ga saita* or *haná ga saite iru*). On the use of paired verbs in the (V-i-)tú form as an equivalent of modern *-tári*, see §9.5. The auxiliary verb *t(é)-* itself might be a development from some earlier **ti á(r)-*. In any event, once it was made, the literary gerund combined anew with *á(r)-* to produce the forms *-tára* or *-tára-ba*, the conditional and (with *-ba*) also the literary perfect hypothetical; *-táreba*, the literary perfect provisional; *-tá*, the perfect; *-táru*, the attributive literary perfect; and *-tári*, the modern representational and the predicative literary perfect.

In addition to forming the gerund, *-té* is apparently present in the particle *tó-te* (§21.3) and in the adverb *sá-te* (unless that is the quotative *té = tó?*); it also attaches to the literary adverb *káku* 'thus' to form *káku-te*. The older literary language had *V-(a)zu-te*, corresponding to modern *V-(a)nái de* or *V-(a)nákute*.

Martin 1967 (255 fn. 15) attempted to set up an ordered series of rules to convert the literary gerund into the modern standard forms, but it is easier to use a straightforward model that works by analogy, saying to yourself such things as "since *sakébu* ends in *-bu* like *yobu* and the gerund of *yobu* is *yondé* the gerund of *sakébu* must be *sakénde*". (On a different set of ordered rules that claims to explain the gerund, see also McCawley.)

The verb *sin-* 'die' forms a single-member class in standard Japanese; an interesting regularization apparently under way in downtown Tōkyō (according to Shibata 1965.34) treats the verb as *sim-*, thereby eliminating the class. In Fukushima the verb *sin-* is sometimes treated as *sig-* with a velar nasal (Zhs 1.296 n. 3); on this and *sim-*, see also Kgg 82.111-2. In Literary Japanese and in some of the modern dialects there is another verb in the same class with *sin-*, but it is somewhat similar both in form (*in-*) and in meaning ('go, go away; pass') so that we suspect a common origin for the two etyma.

The negative gerund for verbals appears in two forms. Typically *V-(a)ná-ku[t]te* (and *náku[t]te* for *áru*) is used before the particles *wá* and *mó* (but note remarks in §9.2.2) provided these are not followed by an auxiliary verb—see just below; but a clause-final 'does not and/but/so' is expressed either by that form or, more commonly, by *V-(a)ná-i de* (but *náku[t]te* for *áru* since *nái de* is normally used only before auxiliaries⁶⁵)—for which there is an older-generation abbreviation *-(á)n de*. (We assume this is the imperfect + the copula/essive gerund. The derivation is confirmed by the polite stylization often used when the final sentence is honorific: *-masén de* or *-masén desite*.⁶⁶ But it is questionable whether these are used before auxiliaries.) Examples: ... *sore o sirán de* 'without knowing that' (SA 2639.44b); ... *syúzyutu sen de mo* [= *sinákute mo*] *tasukátta* 'was saved without an operation' (Tk 4.3a); *Enryo sén de ii; tótt' oke yó* 'You needn't be shy;

65. Thus the negative corresponding to *A-kute* is *A-ku náku*, not **A-ku nái de*.

66. But Yoshida (215) is convinced that *-(a)nái de* comes from *-(a)nande*, for which there are Muromachi colloquial examples (Y 216) though *-(a)nái de* became the popular form in Edo times. Yoshida (211) assumes *-(a)nande* is the source of the twenty-odd examples of *-(i/e)-nade* in older literature. These are traditionally assumed to contain the literary perfect auxiliary (V-i-)nu[ru] + negative and gerund.

take it [= the overgenerous tip I am proffering]' (SA 2641.54a—*sén de = sinái de*); ... *hóteru nánka ni tomarán de, yasumono no yadoya e tomarú n desu* 'stayed at a cheap inn instead of staying at a hotel or the like' (Tk 4.35a). There is also a literary and/or dialect form *-(a)de* equivalent to *-(a)n de = -(a)nái de*; this is an oldish form, thought to be from *-(a)zu-te* (Satō 1.228), which you are unlikely to come across except in ... *nárade-wa* 'unique to ...', for which see §2.3.3. There is also a Kansai form *-(á)[na]i de* as in *yomá'i de* 'not reading', according to Zhs 4.16; similar forms are attested from the 16th century (Satō 1.235).^{66a} An example of this (baffling on first encounter) is ... *soko e té ga deide* [= *dé'i de = dénai de*] 'unable to afford it' (Tk 4.75b). Shikoku uses *sen duku ni* for *sinái de*, and Yaeyama has *san tuku ni* (Miyara 1930.149).

The replacement of the negative gerund *-(a)nákute* by the negative imperfect + the copula/essive gerund is to be distinguished from:

(1) *-(a)nái n[o] de* meaning both 'it is the one/fact/act of not ...', with its optionally omitted *n[ó]* as in *Mimí ni sinái [n] de wa náí ga ...* 'It isn't that I don't hear it, but ...', and 'as/since it is a fact that ...' with *n[ó]* apparently obligatory (§14.2.1); and from

(2) *-(a)nái de wa arimasén*, the negative of *-(a)nái desu* (an alternative to *-masén*, §22.1), i.e. the polite double negative of *-rú*.

With auxiliary verbs, only the *-(a)nái de* form is used: *Himitu o hanasánai de kureta* 'He did us the favor of not telling our secret'. And that is true even when the gerund is focused: ... *hanasánai de wa kurenákatta* 'did not do us the favor of not telling'. But you will also run across *-(a)zu ni*: *tukawazu ni oku = tukawanái de oku* 'leaves it unused', *tukawazu ní wa okanai = tukawanái de wa okanai* 'does not leave it unused'.

Another form that is interchangeable with *V-(a)nákute* and *V-(a)nái de* at the end of a clause is the literary negative infinitive (what we are calling the "negative precopular noun" for the colloquial): *V-(a)zu* with optional *ni* or direct adverbialization. 'He didn't become a doctor, he became a lawyer' could be said as *Isya ni narán[ai] de bengó-si ni nátta* or as *Isya ni nárazu [ni] bengó-si ni nátta*, though the latter is a bit stiff. However, the unacceptability of **Isya ni naránakute bengó-si ni nátta* indicates that the two colloquial forms for the negative gerund are not completely interchangeable as clause-final connectors. From the discussion and examples given in Alfonso (507 ff) it appears that the *V-(a)nákute* form is used primarily for CONSEQUENCE, as in *Kaban ni hairánakute utí(¯) ni oite kimásita* 'It wouldn't go in my briefcase so I left it at home' and *Básu ga kónakute arúite kimásita* 'The bus didn't come so I walked'. But the other meanings of the gerund—in so far as they occur with the negative—are expressed by *V-(a)nái de*. And Alfonso (509) says that *V-(a)zu ni* is an exact synonym of *V-(a)nái de*; thus it should not be used for *V-(a)nákute* 'not ..., consequently'. An example of the MANNER meaning of the gerund: *isogánai de káku = isogázu ni káku* 'writes unhastily'. And an example of a negative gerund of CONDITION: ... *Moo káeru món ka.—Kaeránai de, dóo surú no* 'Why should I go home any more?!—If you don't go home, what will you do?' (SA 2677.56a—a counselor is talking to a young would-be runaway).

Observe that negative gerunds—like all negatives—will enter into only those further constructions that are appropriate to ADJECTIVAL sentences. But the *V-(a)nái de* form will take auxiliary verbs in the same way as the affirmative *V-té* form. Remember that, though *V-(a)nái de* is equivalent to *V-(a)nákute*, you can not say **N ga náí de* 'not having N', for this must be said (in the standard language) as *N ga nákute*. And **A-ku náí de* will not be accepted for *A-ku nákute*; nor will speakers allow *N/AN de náí de* for *N/AN de nákute*.

66a. But Kansai *V-(a)-ide* cannot be historically a contraction of *V-(a)-nai de*, since *V-(a)nai* itself is an eastern form for *V-(a)nu*. The derivation must be $\langle -(a)nde \langle *-(a)ni-te \text{ or } \langle -(a)zu-te \langle *-(a)n[su]-te$. Cf. Hamada 1952.205, 211n15.

In Literary Japanese *sité*, the gerund of *surú* (that all-purpose dummy or pro-verb), can be used as a stylistic variant for *ní* and *ní-te* (= *dé*) as sentence-connectives; thus you will find *ní sité mo* used in the several meanings of *dé mo* and you may run across written sentences with *V-(a)naku sité* for *V-(a)nái de* (or *náku sité* for *nákute*) and with *V-(a)zu sité* for *V-(a)zu ní[-te]* and *A-kárazu sité* for *A-ku náku[te]*. (Cf. p. 488.) For example: *Kózin no seizitu nádo náni-hodo(-) no kotó de mo náí; ga, sore náku site kózin wa ikirarénu nómi-narazu, syákai mo máta(-), sore náku site sonritu si-énu de aróo* 'The honesty of an individual is nothing special; but not only could the individual not live without it but the society too would be unable to exist without it' (KKK 3.79).

It is easy to find at least three meanings for the gerund, and these are discussed in considerable detail below. But a number of other, less well known meanings must also be taken into account, so that nine are eventually mentioned in the following discussion:⁶⁷

- (1) temporal sequence: 'and then'
- (2) consequence: 'and so'
- (3) manner or appearance: '-ing; -like' (for which the concurrent form *V-i-nagara* 'while ...-ing' can often be substituted)
- (4) contrast: 'and/but'
- (5) concession: 'and yet, even so'
- (6) condition: '-ing = if/when'
- (7) instrument: 'by ...-ing'
- (8) witness or exemplification: 'and in proof thereof'
- (9) simple conjoining: 'and', ' ; '

The TEMPORAL meaning is clear when complicated directions are given, e.g. *Sono miti o hidari e itte, tuki-atátte, mi-gi e órete, massúgu o-ide nasái* 'Go to the left on that street, and when you get to the end of it, turn right and go straight ahead'. It is also clearly felt in sentences with some explicit reference to time in what follows, as in:

...-te ma-mó-naku, ...-te hodó-náku 'Shortly after ...-ing'.

...-te ma mo náí kóro wa 'A time shortly after ...-ing'.

...-te sibároku suréba 'A little while after ...-ing'.

...-te súgu datta 'It was right after ...-ing'.

...-te hazímete 'Not until ...-ing'.

...-te sore ga hazímete da 'It is the first one since ...-ing'.

...-te sore ga zyúu-nen buri da 'It has been ten years since ...-ing'.

Cf. *V-té kara*, §9.2.3. Examples: *Sigoto o hazímete ní-nen, káno-zyo wa yooyaku sigoto no ími o taitoku sita* 'Two years after we started the work she finally comprehended the meaning of what we were doing' (SA 2658.133a); *Kekkon site nízyuu go-nen, hazímete mótu mai-hóomu ...* 'A home of one's own that one acquires for the first time 25 years after getting married ...' (SA 2659.118a); *Titioya wa watasi ga umarete rok-kágetu de naku-narímásita* 'My father died six months after I was born' (SA 2689.53a)—both *umarete* and *dé* are examples ('I am born and then it is six months and then ...'); *... umarete hazímete no kaigai-séikatu* 'living abroad for the first time in his life' (SA 2669.61d); *umarete hazímete no taikin* 'the biggest sum (seen) in all my life' (SA 2642.56c); *Kírete is-syúukan ni narímásu* 'We've been [sold] out of them for a week' (SA 2831.37b); *Táppi*

67. Mio 103 lists four meanings for the gerund: simple sequence, cause or instrument, contrast, and simple conjunction.

e kíte tyoodo go-nen ni náru 'It is just five years since I came to (= that I have been here in) Tappi' (SA 2668.59a); ... gakusei ga Kooti-si de gesyuku-séikatu o suru yóo ni nátte ma-mó-naku no kotó de aru 'It happened shortly after a student had taken up boarding-house life in Kōchi city' (Shibata 1961.183). In written Japanese the gerund sité is sometimes optionally omitted after a verbal noun: Nyuusya [site] ni-kágetu ṡg(ṡ) no sigatú ni wa ... 'In April, two months after joining the company, ...' (SA 2670.26e); cf. §9.1.12.

There are other examples where the temporal sequence is implied by the logic of the situation: Suu-byoo tátte ... 'After a few seconds (elapse) ...'; Hón o karite yónda 'I borrowed a book and read it'; Dénsya(ṡ) wa éki ni háitte tomatta 'The train entered the station and stopped' (lg 1962.95); Ningen wa umarete sinu monó de áru 'Man lives and (then) dies'; Kabu no gensoku wa, yásuku katte tákaku uréba mookáru 'The principle of stocks is that you make money if you buy cheap and (then) sell dear' (SA 2684.48a)—notice that the provisionalization (-réba) is applied to the conjoined sentence as a unit. Here belong expressions with gerund + owari/o-simai dá '(does it) and that's the end of it': Dé mo íza owatta tokí wa, nódo ga kawáite 'masu kara, mizu ip-pai nónde owari 'But once I'm finished I'm thirsty, so I have a glass of water and that's it' (SA 2671.47a); Kore de o-simai desu 'We'll stop with this'.

We might wish to set up a subcategory of temporal sequence to cover purposive movements: Tosityo-kan e itte hón o karita 'I went to the library and borrowed (= to borrow) a book'—cf. Hón o kari ni tosyó-kan e itta; Mégane o kámete nagame-naósita 'She put on her glasses and had (= to have) a better look'. But this is perhaps a matter of translational equivalence, with loose reference making for smoother transition.

The CONSEQUENCE (or "cause-and-result") meaning sometimes carries quite a strong flavor of "because", equivalent to that of -rú/-tá kara (§ 17.1); the gerundized sentence can take a different subject from that of the sentence to which it is attached: Áme ga hútte [watási-táti ga] ikenákatta 'It rained so we couldn't go'; Kure kara Syoogató(ṡ) ni kámete yopparai ga óokute [= óói no de] komarimásu 'Over the New Year celebration period there are so many drunks it is a problem' (SA 2661.111a). The consequence meaning is present in such examples as Anmari yásukute (kantan de, tigatte ite) bikkúri surú desyoo 'It's so cheap (simple, different) that you'll probably be amazed' and Anmari zikan ga kakátte bikkúri surú desyoo 'You'll be surprised at how much time it takes' (BJ 2.189-B).

From the consequence meaning we are led into the following expressions:

(1) -te/-kúte/dé + ii 'it is nice that (it does/is) ...', 'It is nice and ...' (with English adjective): ... atarásikute ii monó 'a nice fresh one'; Nakanaka inase de ii wakamonó(ṡ) désita yó 'He was quite a nice dashing young man' (SA 2665.117e). With the verb gerund V-te yókatta often means 'I'm glad that ... does/did': Tasukátte yókatta 'I'm glad that I was saved' or 'Fortunately I was saved' (SA 2642.36c); ... kono dankai de kui-tomeru kotó ga dékíte yókatta 'it is good that [or: I am glad that] we have been able to stop it [= a case of juvenile delinquency] at this stage' (SA 2647.119c). Cf. Hayashi 88 who notes a gerund use where an emotional state results from the event and gives these examples: Minná ni áete yókatta 'I am glad I was able to see everyone'; O-tégami kudasátte, arigatoo gozaimásu 'Thank you for favoring me with a letter'; Gookaku nasátte o-medetoo 'Congratulations on passing your examination'.

(2) -te/-kúte/dé + tamaranai/naranai/yarikirénai/irarenai/yamanai/kanawánai 'does/is unbearably = intensely': Hébi ná(n)ka ga kówákute tamaranai 'I'm terribly frightened of snakes'; Tokidoki kázoku ni ai-tákute tamaranaku náru 'Sometimes I get terribly anxious to

see (=get terribly homesick for) my family' (SA 2688.40e); ... hará ga tátte naránai 'I get terribly angry' (SA 2640.105d); Hará ga hette naránai no de koohuku sitá no desu ... 'I surrendered, being terribly hungry' (SA 2647.88c); Kanásíkute naránai 'It's terribly sad'; ... kokóró ga ugóite naránakatta 'she was much perturbed' (Fn 410b); Kookiti wa, ki ga tátte kíte naránakatta 'Kōkichi started to get terribly excited' (Fn 108a); ... muné ga hazunde naránakatta 'he was terribly elated' (Fn 142a); Sore ga tabe-tákute naránai 'I'm dying to eat it'; ... hassoo wa dóo-mo kakuitu-teki de katá ni hamatte kíte iru yóo ni omóete naránai 'the expressions somehow seem terribly as though they were becoming standardized and stereotyped' (SA 2689.43a); Omoi-dasu tabí ni, watasi wa kuyásíkute naránakatta 'Every time I thought about it I was extremely vexed' (SA 2666.110e); ... sági ni kakátta yóo ni omóete narimasén 'it looks terribly as though I've been swindled' (SA 2670.115b); ... sinpai de narimasén '... is terribly worried' (SA 2661.110a); ... husigi de tamaranai yoosu dátta 'it was a terribly odd situation' (SA 2663.129b); ... no ga ki ni nátte naránai 'is terribly concerned that ...' (SA 2684.120b); ... hazime san-zíkan sanzíp-pun ni tukuráreta kono éiga(-) ga ... ni-zíkan zyuugó-hun ni oohabá(-) ni kátto sarete kookai sarerú no ga zannén de naránai 'It is most regrettable that this film was initially made to be three hours and thirty minutes (in length) is being shown drastically cut to two hours and fifteen minutes ...' (SA 2672.118b); Tokoró-ga hitóbito wa ziyúu na seikatu o motómete yamanai 'But people constantly seek a free, creative life' (SA 2671.28a); ... o negátte yamimasén 'I DO hope that/for ...'; Rippa na gakusya wa ákú-made kenkyuu site yamanai 'A fine scholar pursues his research to the end'; Sono zíken o tuikyuu site yamanu kénzi wa ... 'The prosecutor, unrelenting in his investigation of that case ...' (SA); ... túne ni hu-ántei o motómete yamanu séisin ni tótte wa ... 'for a spirit that is always seeking instability' (KKK 3.38). Sometimes the translation is better with 'can't help doing/being' or the like: Míte | irarenákatta 'I couldn't (stand to) look'; Kinodókú de | naránakatta 'I couldn't forbear expressing my concern (sympathy)' (Kenkyusha); Dóo-mo | soo omowárete | naránai 'I can't help thinking that way'; ... mótto taisetú na monó ga áru yóo ni omóete naránai 'I can't help feeling there is something more important' (Ōno 1966.35); Nakete naránai 'I can't help crying'. An extension of this will be found in A-kúte ikenai 'is so A it won't do = is too A' (roughly equivalent to A-sugíru): Omókute ikemasén 'It's too heavy'; Sírókute ikenai 'It is too white' or 'Too white will not do = Don't make it too white'; Hará ga ítákute ikenai 'I have such a stomachache I can't work'. (For more examples, see Alfonso 478; Hayashi 134; Ig 24; KKK 44.194-5; Parker 119-28, 170.) Cf. -té wa naránai, p. 498.

In addition to the expected negatives, there is also V-(a)zu ní wa irarenai or V-(a)nái de wa irarenai 'can't help ...-ing' and V-(a)nái de irareru 'can stand it without ...-ing; can get by without ...-ing'; for these, see §9.2.4.(1).

These superficially "negative" forms are not normally converted to the affirmative as a rhetorical question (*-te náru món ka can not be made from -te naránai); nor can -te wa naránai and -(a)nákereba naránai be phrased as rhetorical questions. On the other hand -té mo kamawánai 'it doesn't matter if you do it' can be rhetorically questioned -té mo kamáu món ka 'does it matter ...?!' = 'surely it doesn't matter!'. In other meanings, tamaru món ka and (N ni or A-ku +) náru món ka are both possible, as is irareru món ka; cf. §8.7.⁶⁸

68. But I have elicited Yúurei nánga ga kówákute tamaru món ka 'What is there to be terribly afraid of about ghosts?! = Who's (I'm not) afraid of ghosts!' ... Observe the difference between Samu-ke ga site naránai 'I feel awfully chilly' and Kánki ga site wa naránai (= ikenai/damé) 'Cold weather is no good'.

(3) (-tē/)-kúte/dé + taihen da or sikata/s[i]yoo ga náí 'it is terribly (= ever so) ...': Muzukásíkute taihen da 'It is ever so difficult' (= Taihen muzukasii(-)), or—with looser connection—'It is difficult and so it is terrible = It is terrible that it is (so) difficult'; Kore ga husigi de siyoo ga náí 'This is terribly odd' (Tk 4.225ab); Nízyuu há-sai no otokó o tukamaete, bóoya to iwareta kotó ga kuyásíkute sikata ga nákatta 'It was quite miserable for a 28-year-old man to be called "Sonny"! (SA 2642.55c); Koko no tókó wa zidóo-sya(-) ga supíido dásu kara né, abunákutte syoo ga náí n da 'In this place the cars put on the speed so it's terribly dangerous' (Tk 3.32a). Alfonso 478 has an example with a verb gerund (kabi ga háete 'gets moldy') + sikata ga náí, as does Hayashi 134 (hará ga tátte 'gets angry') but the examples offered involve verbal idioms that function as semantic attributes, as in the following instances, too: Hazime no utí(-) wa syaku ni sawatte siyoo ga nákatta keredo ... 'At first I was terribly vexed but ...' (SA 2662.105d); ... utí(-) no yoosu ga dóo-mo ki-ni-nátte syoo ga náí '... felt terribly uneasy about the appearance of the family group' (SA 2662.120a); ... Itigóroo no hanasí 'buri wa aware-ppóku kikoete sikata ga nákatta 'the way Ichigoro was talking sounded terribly plaintive' (Fn 160b); ... bóku(-) wa dóo-mo kokkei o kan-zityatte syoo ga náí n da yó 'I somehow find it terribly funny, I tell you' (Tk 3.34a). These expressions can not be rephrased as rhetorical questions: *-kute s[i]yoo ga áru món ka. I am unsure about Áme ga hütte taihen dáttá 'It rained terribly' (= Taihen áme ga hütte) or—looser connection—'It rained and so it was terrible = We had an awful time with the rain'; is the first interpretation valid? Cf. V-té mo sikata ga náí 'There is nothing can be done about it[s happening]'.

Notice that the "intensive" predicate follows the gerund DIRECTLY; apparently we are not allowed to apply focus to the gerund: *urésíkute wa/mo tamaranai. That is in contrast with the separability of gerund + auxiliary in §9.2.4. However, there is one quasi-idiomatic example that highlights paired gerunds: ité mo tátte mo irarenai '(can't stand it whether staying or departing =) is terribly restless'. (Do some speakers lexicalize this to ite-mo-tátte-mo as Kenkyusha's accentuation would lead us to believe?)

Sometimes the causal element is made explicit: Nihón de kootuu-zíko ga gen'in de sinda Huroorensu-Howáito yósi 'Miss Florence White who died in Japan as the result of a traffic accident'. Notice that Nihón de modifies sinda^{da} and the gerundized sentence 'a traffic accident being the cause' is embedded as a separate adverbial modifier.

In various social forms, the causal meaning is clear: O-matase site dóo-mo sumimasén desita 'Excuse me for keeping you waiting'. And similarly Anáta ga kíte kurete hontoo ni yókatta 'It was very nice of you to come'. Sometimes the causal or temporal element is weak: Natú ga kíte kaki no haná ga itimen ni tiri-hirogátte iru 'Summer is here and persimmon flowers are scattered all over the ground'; Nízis-sai ni nátté káre mo yohodo zibun o mi-tumeru yóo ni nátté iru 'Now that he is twenty he is taking a closer look at himself'. And sometimes the reference is loose (compare loose reference with focus §5.4): Anmari goori-teki-sugite, waka-dósiyori ga óói 'From being overly rational, there are many who are old before their years' (SA 2665.102e)—it is unclear whether the gerund might conceivably be taken to refer to óói, but here it would seem to refer to some phrase like wákákute mo tosiyóri [da] that underlies the noun waka-dósiyori.

Hayashi 89 provides good examples to illustrate the meaning 'consequently': Asi-áto kara míte, kore wa, inú daroo 'From the appearance of the tracks, it must be a dog'; Ízyoo, mittú no ten kara kangáete, koo kimemásita 'In consideration of the above three

points, we have decided as follows'; *Dóo-mo, tyoosi ga wárukute, sippai bákari sita* 'I wasn't feeling at all well and made one mistake after another'. Often the temporal and the causal meanings shade into each other: *Sono tegami o yónde omówazu námida o nagásita* 'I read the letter and (then?/so?) could not help shedding tears'; *Sono otokó wa watasi o míte itimókusan ni nige-dasita* 'The man saw me and (then?/so?) started to run away at full speed'.

Sometimes the gerundized sentence expresses an INSTRUMENTAL method (cf. *N dé* 'with [using] N'): *Kisyoo-zyóohoo o atúmete tenkí-zu o tukuróo* 'Let's collect weather information and (that way—using it) make a weather map'; *Yóoba wa husigi na zyumon o tonáete haná o isí ni sita* 'The witch murmured a magic spell and (thereby) changed the flower into a stone'; *Hiru-yásumi no sánzíp-pun o syabétte sugósu* 'I spend the half-hour lunch break chattering'; *Akanboo o utatte nekasita* 'I put the baby to sleep by singing'; *Kimi o nokósite wareware wa mi-garu ni syuppatu suru* 'By leaving you here we will start with a lighter load'; *Zísyo o hiite sirabe-nasái* 'Look it up in the dictionary' (Hayashi 87); *Ukemoti no tíiki ni tyuuzai si, zitaku kara tyokusetu tokui-saki o hoomon site sigoto o suru* 'He [the salesman] lives in his assigned territory, and does his job by directly visiting customers from his own home' (SA 2679.36b); *Mata, sono apáato no urínusi(-) ga, anátá-gáta(-) o damásite uri-túketa to suréba ...* 'Further, if you consider that you were sold by the owner of the apartment having deceived you, ...' (SA 2687.119e).

Even when a temporal interpretation looks likely, it does not always turn out to be appropriate: *Sono tosí ni wa Torusútói ga naku-natte Naitingéeru ga naku-natta* 'In that year [1901] Tolstoy died and Nightingale died'. (Tolstoy's death was on the 20th of November, and Florence Nightingale died on the 13th of August.)

In many instances the gerund simply links two sentences with very little—or very vague—connection. When the gerund merely links two unrelated attributes the meaning is 'and (also)': ... *ano toomei de tuyóí kóe wa wasurerarenai* 'I can not forget that clear strong voice' (SA 2664.42c); *Arasuka no huyú wa nágakute kurai* 'Alaska's winters are long and dark' (SA 2687.122a); *Syuzínkoo no Hamasima wa, áru ryokóo-sya ni tutoméru súnao de heibon na sararii-man de aru* 'Hamashima, the hero, is a meek and ordinary salaried man employed by a certain travel agency' (SA 2684.120a); *Mázuku nátte tákaku narimásita* 'They have grown poor in flavor and have become expensive' (SA 2689.55b).

Sometimes the connection is one of CONTRAST: *Musuko wa doobutú-en e [itte] musumé wa syokubutú-en e itta* 'My son went to the zoo and my daughter [went] to the botanical garden'; *Káre wa gakkoo o sátte(-) watasi wa gakkoo ni todómatta* 'He left school and I stayed there'. Here belong expressions of the type 'not ... but rather ...': *Dénsya(-) de kónai de [or: kónakute] kuruma de yatte kíta* 'He came by taxi (rather than =) not by train'; *Kyóo zya nákute asítá na n desu* 'It's tomorrow, not today'; *Yóku miru to, sore wa hito dé wa nákute, tunó¹⁾ no háeta oní de atta* 'On close examination, it was not a human being but a devil with horns' (Hayashi 89); *Inú wa, dóo sitá no ka, syúzin no hoo e wa ikanái de, kyaku no hoo ni, suri-yotte itta* 'For some reason the dog did not go toward his master but edged up to the visitor' (Hayashi 89).

And in some instances we might regard the gerunds as having a dropped *mó* with CONCESSIVE meaning (cf. the optional omission of *mó* in expressions of permission, -té mo ii, §9.2.2): ... *yónde mikka to kakaránaí* 'it wouldn't take three days to read it' (SA 2657.120b); ... *sore ni nite ite tigau monó* 'things that resemble it but differ from it'; *Úmaku itte, gobu-gobu desyóo* 'If all goes well it's 50-50 = It's even odds at best'

(Hayashi 89); Yókute, sán-tén to iu tokoró ka 'Is it a matter of three points at best?' (Hayashi 89); Húrukute atarasii téema de aru 'It is an old yet new theme' (SA 2792.28e); Uwayaku ni tatetúite sikararenákatta 'I was insubordinate to the boss but was not scolded'; Káre wa abunai to kizúite tyúutyó sinákatta 'He noticed it was dangerous but did not hesitate'; Ee-gumi Bii-gumi awásete gozyúu-nin ni mitánai 'Even if Classes A and B are combined there will still be under fifty people'; Watasi nára ittyúuya nezu káite go-mai mo dekinai 'In my case, even if I wrote all day and all night without sleeping I couldn't get five pages done'; Daigakú-sei de átte hizyoo ni hi-zyóosiki na no de komáru 'It is distressing that, being a college student, he is yet so lacking in common sense'; Anna muzukasii(¯) kotó o syabéte máda zyuuís-sai da 'He talks on such difficult topics and yet he is only eleven years old'; Katta hón wa sukósi mo yomárete inái de Marúzen kara sára ni sán-satu todóita 'With the books already bought still totally unread, three more arrived from Maruzen'.

In a number of examples that seem to convey the CONCESSIVE meaning, the addition of mó is decidedly unusual: Káre ni itta tokoró de, damé daroo 'I bet it won't do any good for you to tell him'; Kimi ga tazúnete itta tokoró de, káre ni áu hazu wa áru ¯mái 'You might go call on him but you're unlikely to see him' (cf. § 13.2.2).

Sometimes the gerund, while interpretable as "manner", seems to set up a CONDITION: Ái o káite ningen wa ikíru kotó ga dekinai 'Lacking love man cannot live' (Ōno 1966.77); Arúite ll sánzip-pun ¯gúrai kakáru 'If you walk it takes thirty minutes'. Compare the uses of the focused gerund -té wa/mo §9.2.2. Here belong such examples as yónde tanosii hón 'a book that is pleasant to read' (= yómu to tanosii, yónde wa tanosii 'if/when you read it it is pleasant'), kiite kanasii hanási 'a sad tale to hear', hanásite omosirói hitó 'a person that (it) is fun to talk to', nónde oisii monó 'something delicious to drink', etc. The condition will sometimes function like a thematization: Sékkusu o tanosinde náni ga warúi 'What's the matter with enjoying sex?' (SA 2687.43ab); Zibun ga zibun no kodomo sikatte náni/dóko ga warúi [ka] 'What's wrong with scolding one's own child?'

And in Mimí de kiite wakáru 'They are understood upon hearing them with your ears' (Ōno 1966.231) the interpretation could be instrumental-manner, temporal sequence, causal consequence, or condition; was the intention of the writer specific or was it vague enough to cover the range of these interpretations?^{68a}

Hayashi 88 points out that the gerund is sometimes used to link a subject situation with an objective statement offered in proof or WITNESS: Kono heyá wa zitú ni átukute, ítu mo sanzyúu-do ¯ízyoo áru 'This room is really hot—always over 30 degrees [centigrade]'; Yamamoto san wa seizitu na hitó de, hiki-úketa kotó wa kanarazu yari-togemásu 'Mr Y is a reliable man who is sure to accomplish whatever he undertakes' (note the English use of adnominalization for the same purpose); Kono hen wa tóoyoo ití no koogyoo-títái to iwarete ite mi-watasu kágiri koozyóo(¯) no entotu desú 'This area is said to be the prime industrial belt of the Orient—there are chimneys as far as the eye can see'.

In the MANNER meaning, the phrase is often a lone verb gerund, such as isóide 'hastily', but the verb can carry adverbs and other adjuncts of the usual sort: ... áme ni nurete káeru 'returns wet by the rain'; ... kippu o tótte táte iru 'stands holding his ticket'; ... té o tazusáete(¯) Supéin e ittá n desu 'they went to Spain together (hand-in-hand)' (Tk 2.325a); Hutari wa té o tori-atte neta 'The two slept hand in hand' (Ig 1962.95); Sono sibahu o hunde Húkuko ga yatte kúru 'Hukuko approaches, stepping on the lawn'

68a. Perhaps this is best taken as an OBSERVATIONAL CONDITION (p. 557), like Ano hasi o watatte tugí no yotu-kado ni ookii gasorin-sutándo ga arimásu yó 'You go over that bridge and (you'll find) there's a big gasoline station at the next intersection' (BJ 1.367).

(Ig 1962.97); Yóku sutékki o tazusáete(¯) sanpo sita monó da 'I often used to take walks with stick in hand'; Hízí o tuite e-hón o míta 'I looked at the picture book leaning my elbow on the desk'; Hará o yozitte/kakaete waratta 'I split my sides laughing'; Hibana o tirasite tatakatta 'They fought with sparks flying (= furiously)'; Tásiro-si wa masúmasu netú o kómete katarú no de aru 'Mr Tashiro talks on with increasing enthusiasm' (SA 2689.140c). More examples of a lone gerund used for manner (quoted from V 120-1): Mukási búke(¯) no musumé-tati wa, ittan yome-ittá nara-ba, ÍKITE hutatabi oyá no ié ni káeru kotó wa yurusarénakatta 'In former days the daughters of samurai, once married, were not allowed to return again to the parent's house [while] ALIVE' (Ishikawa Tatsuzo); Syuuiti wa DAMÁTTE sono sakura no wakági o kítta 'Shūichi SILENTLY cut the cherry sapling' (Kawabata). On the iteration of the gerund in V₁-te V₁-te V₁-i-makuru as in hanásite hanásite hanasi-makuru 'talks a blue streak', see §9.1.10.

Occasionally a nominal sentence can be used in the gerund form (N dé) to express manner: Sore ga, Ginza ¯átari o tuke-mátuge de arúite 'ru zyosei ga, konó-goro(¯) íkura mo iru 'But, lately there are ever so many women strolling around the Ginza in false eye-lashes' (Tk 2.103a). Is this due to a propredication that represents tuke-mátuge o túkete 'putting on false eyelashes'?

From these various uses of the gerund it is easy to understand the development of the phrasal postpositions (§9.7) such as ... ni túite/tukimásite 'dealing with, about' etc. For most of the phrasal postpositions, focus can not be applied on the phrase before the gerund (*N ní mo/wa túite → N ni túite mo/wa), and that is one reason for according them a special treatment separate from that of an ordinary verb gerund such as that in kodomo ní (mo/wa) hanásite 'speaking to the child'. The gerunds used in phrasal postpositions would seem to be following the same path that earlier led the essive gerund ní-te (now dé) into the particle dé with its diverse meanings that include location, instrument, manner, and cause. Since it is possible to paraphrase Siken-bénkyoo de isogásikatta 'I have been busy with exam study' as Siken no benkyoo o site isogásikatta 'I have been busy studying for the exams' it seems unnecessary to set up a "causal particle" dé rather than assign the meaning to the gerund of the copula; this is true, perhaps to a lesser extent, of the instrumental use also. Similar cases are ... ni/to site, ... o site, ... o motte site, ... kara site, etc.; see the remarks on site earlier in this section. For some of the phrasal postpositions (as indicated in §9.7) other paradigmatic forms will occur, as well as the gerund: Káre wa dáre NI TAI-SÚRU yori, Hídeko NI TÁI-SITE waga-mámá datta 'He was more willful toward Hideko than toward anyone else' (Ig 1962.96).

The gerund being timeless and moodless, it takes from the final predicate the tense or mood required by the translation: Utí(¯) e káette góhan o tábete neta 'I went home, ate, and went to bed'; ... neyoo 'I guess I'll go home, eat, and go to bed'; ... netá daroo 'He probably went home, ate, and went to bed'; ... nete kudasái 'Go home, eat, and go to bed'; etc. Even with major—and exaggerated—juncture, the final tense and mood are carried through the gerundized sentence.

But such categories as negative, desiderative, excessive, passive, causative, and auxiliary conversions are quite another matter. These may be applied independently before gerundization to either sentence (or to each); or, they may be applied to the whole AFTER gerundization and conjoining. As a result, such sentences are potentially ambiguous, though a major juncture will often signal independent conversions. Certain expressions that consist

of gerund + verb tend to be treated as a unit, with the conversions applied to the verb but intended to refer to the entire unit, e.g. turete kúru passivized in this example: ... koo iu ko wa kono kyánpu e musúu(¯) ni turete korárete sinde ittá ga ... 'children of this sort in untold numbers were brought to this camp and died off one after another' (SA 2674.89c). In a sentence like Tomodati ga kíte koraréna-katta 'My friend came so [I] couldn't come' only one interpretation would make sense. On the other hand, it seems obvious that the desiderative is intended to carry back through to the beginning of the following sentence: Syoosen-gákkoo o sotugyoo site, zen-sékai no úmi o kóokai(¯) site, zen-sékai no hitóbito to naka-yóku si-tai to, tiisa-na muné o todorokásete ita 'My little heart was pounding with the desire to graduate from merchant marine school, sail the seven seas, and make friends with people all over the world' (SA 2650.58a).

Although the passive and the causative can carry back through earlier gerunds, it is common to repeat the voice conversion for each phrase: Miyamoto san wa koko kara Koozimati-syo ni renkoo SARETE syasin o TORÁRETA áto, tézyoo(¯) o KAKERÁRETE, keibi-sya de Ayase-syo ni gosoo SARETA 'Mr Miyamoto was taken from here to the Kōjimachi police station and photographed, after which he was handcuffed and escorted by police car to the Ayase station' (SA 2650.122d).

Mikami 1963a.36-7 suggests that the usual pattern is for the NEGATIVE not to carry back through the earlier gerunds: Kí o míte, mori o mínai kara, komáru 'He sees the trees and does not see the forest, so it's a problem'. Where the negative does carry through, the phrase is often a rather tight idiom: Hito míte hoo o tokánai kara, komáru 'He doesn't "look at people and then preach his doctrine"' (= choose his words according to his audience), so it's a problem'. But if the sentence is recast as Hito o mínai de hoo o tóku kara komáru 'He preaches his doctrine without looking at people so it's a problem' no possibility of ambiguity arises.

Mikami says there are three interpretations for Káre ni átte, sore o tutaénákatta kara (1) = Káre ni átta; sore o tutaénákatta 'I met him and didn't tell him that'; (2) = Káre ni awánákatta; sore o (kansetu ni) tutáeta 'I didn't tell him that face to face (doing it indirectly, instead)'; (3) = Káre ni ái mo sezu, tutáé mo sinákatta 'I didn't meet him and (I didn't) tell him(, either)'. The difference between the last two lies in the interpretation of the gerund as (2) INSTRUMENTAL or as (3) CONJOINING; in both, the negative carries back through the gerund. What differentiates the first interpretation from the second is the more limited domain that the negative enjoys, and the variability of domain constitutes a fundamental ambiguity with the negative conversion, as Mikami points out: Tyokusetu ní wa tutaénákatta can mean either 'I didn't tell him DIRECTLY (though I did tell him)' or 'I didn't TELL HIM DIRECTLY (or any other way)'. Cf. p. 373 (§8). A similar example is Té o tunaide arukánai, which can mean (1) 'We join hands and do not walk', (2) 'We don't walk HAND-IN-HAND (but we DO walk)', (3) 'We don't WALK HAND-IN-HAND (in fact, we don't walk at all)'; arukánai will normally be preceded by a major juncture in the first meaning, by a minor juncture in the other meanings. Nagano (1966.92) gives the example Aratte irenákatta desyoo which can mean either 'I guess you didn't put them in washed (= you put them in unwashed)' or 'I guess you washed them and/but then didn't put them in'.

The gerund of suru (cf. p. 479) has a number of uses one would hardly expect from those of the rest of the paradigm, including these:

(1) *Sité* is equivalent to *dé* 'as' in such expressions as *hutarí site* 'as a couple', *sannín site* 'as a threesome', *húuhu site* '(as) husband and wife', *kyóodai site* 'as brothers (and sisters)'. This seems to be limited to a very few expressions in the colloquial; these should be listed in the dictionary.⁶⁹

(2) *Sité* adds light emphasis to the particle *kará* in some of its uses: *namae kara site* 'from the name'; [*sore*] *dá kara site* 'because it is that; therefore' (Tk 2.206a); *Káigi e no zyúnbi kara site, kiwámete nonbíri sita monó datta* 'From the viewpoint of preparing for the talks, they [= the Americans] had been very dilatory' (SA 2637.119b). Perhaps this should be derived by way of ... *ni sité*^[1] 'making it into' or 'treating it as' (§9.1.11); cf. ... *ni sité mo = dé mo* 'even (treating it as =) being'.

(2a) In ... *issyun ni site wáka-sa o ubawaréru* 'gets robbed of one's youth in an instant' (SA 2639.34a) the use would appear similar to the preceding; *sité* could be omitted. A like example is the adverb *éte(-)* [*site*] 'often, frequently' (= *yóku*) or 'apt/prone/liable to' (= *yáya* [to] *mo sureba* 'at the drop of a hat').

(3) The sequence ... *o sité*^[1] is an old-fashioned or literary way to make explicit the underlying subject of a causativized verb. In more colloquial usage this is marked by *ní* (or sometimes by *ó*—see §4.1): *Watakusi o site iwasi memásita nara-ba ... = Watakusi ni iwaserú nara ...* 'If you ask me ...'. And the sequence ... *ni sité*^[1] is sometimes used for the same function.

(4) In addition to other uses ('making it into, treating it as, as') and the use mentioned just above (to mark the underlying subject of a causativized verb), the sequence ... *ni sité*^[1] is used in Literary Japanese to mean just 'being', equivalent to *ní-te* = modern *dé*; the corresponding negative form is ... *ni árazu site*. (See remarks in §9.1.11.) An example: *Náni ka ii-soo ni site [= ii-soo de], nakanaka ii-dasanai* 'He seems to want to say something but he finds it hard to begin'. The conjunction *so[o]-site* means '(it's being) thus' as well as '(happening) and then', and in that meaning there is a literary equivalent *siká site* 'thus'; cf. *sikási* 'but', which looks to be the infinitive *siká si*; *sikasi-nágara* 'though being thus' is probably a later formation (adverb + concurrent-concessive, see §9.1.3).

(4a) The expressions *N ni sité kara ga/mo/sae* are used to mean *N dé sae mo* 'even (being) N', §2.2 (*kará* 8). In downtown Tōkyō, *N ni sité ga* is used in the same way (without *kará*): *Gén ni Yamázaki no utí(-) no zyotyuu ni sité ga sóo datta* 'As a matter of fact even the maid at the Yamazakis' was like that' (Kb 259a). In the example *Hukóo ni site atasi wa iti-dó mo kiita kotó ga ná n desu ga, ...* 'Unfortunately I have never once heard him, but ...' (Tk 3.31a) we find *AN ni sité* used in place of *AN ní mo*; notice that neither **hukóo ni* nor **hukóo de* are acceptable here—nor is **hukóo ni wa*.

(5) The literary sequence *V-(a)zu site* (§9.5) is equivalent to *V-(a)zu ni* or just *V-(a)zu* when a negative sentence is loosely conjoined; the colloquial equivalent is *V-(a)nái de*, in dialects sometimes *-(a)nde* or *-(a)de*, and the latter form turns up in written Japanese especially in certain clichés such as ... *nárade-wa = de nákute wa* or *de nákereba* 'unless it be; except for' as we have observed earlier (§2.3.3).

69. In this usage *sité* is attached (like *dé*) as a particle with no juncture and that is what accounts for the accentuation of *hutarí site*. In all other uses, *sité* is preceded by an underlying juncture which will cancel a preceding final accent (before itself disappearing)—and that accounts for the accentuation of *kore o site* (not **kore ó site*).

(6) N dé [wa] náku sité^[2] is sometimes written as an equivalent of N dé [wa] nákute 'it is not (and/but)' as in this example: ... gen'ei ni mukatte hanasi-kakete irú no de wa náku site, ... 'It is not a matter of addressing a phantom but ...' (Maeda 1962.55). And N náku site is sometimes written for N [ga] nákute 'without N': sore náku site 'without that' (KKK 3.79).

(7) On sité mo = dé mo, see remarks at the end of §9.2.2 and compare sí mo = dé mo in certain clichés (p. 501). Cf. ni sité mo §9.1.11; ni si ro, ni sé yo (§16.1)—all equivalents of dé mo 'even being'.

In written Japanese, you will discover that sité sometimes substitutes for -té in the following forms:

A-ku sité = A-kúte
 V-(a)zu sité = V-(á)nakute, V-(a)nái de
 AN ni sité = AN ní-te = AN dé
 AN to sité = AN tó/dé

Examples of A-ku sité = A-kúte (not to be confused with the mutative 'making it into A'): ... wákaku site sinda mumei no sizin ... 'an obscure poet who died young' (SA 2672.101d); ... sore náku site wa ningen sonzai ga kangaerárenú sékái de aru kara, ... 'since it is a world in which you can not think of human existence if that does not exist' (SA 2676.97d); cf. sore [o] naku-sité wa 'if one loses that'. In Kyūshū speech A-[k]u site is still in colloquial use for A-kúte (Zhs 6.16 n. 5, also 23). It has been suggested that the lively Tōkyō variant A-kútte came into being from a shortening of A-ku sité (Zhs 2.17), and some speakers have expressed a feeling that A-kúte itself has the same origin; but examples of A-kúte can be found from as early as the Man'yō-shū.

The gerund of mótu 'has, holds' also enjoys a number of special uses.^{69a} In the semi-literary language, and thus occasionally in modern written Japanese, N o mótte means something like N o tukatte or N o moti-ite 'using N'; it functions as an equivalent of the INSTRUMENTAL dé 'by means of, with'. (Compare moti-iru = tukau 'uses', a compound verb that contains the infinitive of mótu.) In the following example ... o mótte is followed by sité, but we might assume some sort of ellipsis, perhaps {sore o (setumei)}: ... kono Nihon-zin no seikoo wa zyúkyoo nómi o mótte [] sité wa, setumei si-énai 'We can not explain this tendency of the Japanese [by explaining it with] Confucianism alone' (KKK 3.190). But the expression N o mótte sité mo seems to be used more generally, to mean something like N no réi o tótte mo 'Even if we take the example of N' or just N dé mo 'even N' as in Dai-gákusya o mótte sité mo setumei dekinai mondai da 'It is a problem that even a great scholar could not explain'. (An example will be found in Tk 4.161a.)

The CAUSAL dé 'owing to, because of' can also be replaced by ... o mótte in the semi-literary language: kore o mótte mireba 'in view of this fact, such being the case'. A more colloquial usage will retain dé [] and add mótte purely for emphasis: Sore de mótte ... (or still more colloquially Soi de mótte ...) 'For that reason'; syakkín de {motte} komáru 'is troubled because of the debt'. This is possible also for the INSTRUMENTAL dé: enpitu de {mótte} káku 'writes in/with pencil'; Nihon-go de {mótte} hanásu 'speaks in Japanese'; Dóno hóteru mo utukusii syoomei ni terasáre, samázama(¯) na syukóo(¯) de motte kazari-taterárete ita 'Every hotel was illuminated with beautiful lighting and decorated up with all sorts of devices' (SA 2659.131a). And it is possible for other uses

69a. And in these uses mótte can be shortened to móte. The short form is also used as prefix in a number of compound verbs, such as mote-asobu 'plays' and mote-násu(¯) 'entertains'.

of *dé*, as well: *Gúnsoo de motte Hwírípin ni itte ita* 'He had gone to the Philippines as a sergeant' (Morishige 128, who attributes this somewhat literary usage to a blend of *dé* + *o mótte*). In fact (cf. Terase 133) it appears to be possible to add *mótte* after MOST uses of *dé*, as a colloquial emphasizer: informants find quite acceptable such phrases as *dénsya*([~]) *de mótte iku* 'goes by train' and *hutarí de motte kíta* 'they came as a couple'. Examples with the locative-marker *dé*: *Kono-aidá né, Gion no toorí de motte, hyokkúri, Yosuke ni átta n da* 'The other day on an avenue in Gion I bumped into Yosuke' (Fn 161a); *Zúsi de motte ...* 'In Zushi' (Tk 4.151b). Other examples of *de mótte*: ... *zyúugo de motte hito to kekkon site simai ...* 'ending up married to someone at the age of fifteen' (R); *Óyazi ga naku-narimásita kara, hotóndo, hahaoya, hitóri de motte, ee, syóobai o site ótta yóo na wáke de ..., désu kara ...* 'My father died, so my mother almost single-handed, uh, carried on the business, and ... consequently ...' (R). None of the uses of *de mótte* will permit the addition of focus (**de mótte wa/mo, *dé wa/mo mótte*). It has been suggested that *mótte* can be added to *S n[o] de* in the causal meaning: (?) *Kirai na món ~bákari tugí kara tugí ni susumeretá n de motte, komáttiyatta n desu tte* 'They said they were embarrassed from being urged to do one unpleasant thing after another'. *Mótte* is attached to an adverb purely for emphasis in *Hanahada(-)mótte kesikarán* 'it is most outrageous!' and in *mázu(-) motte* = *mázu* 'first of all', *mattaku(-)mótte* 'indeed, truly' (Tk 3.273), *máe(-)motte* 'beforehand' (= *máe kara*), and *ima-mótte* 'still' (= *íma de mo, íma sae, íma ya*).

The copula/essive gerund *dé* also has a few special uses, e.g. in the expression *N₁ wa N₁ de* (see p. 244, §3.10). A noun or adjectival noun followed by *dé* + *iru/óru/irassyáru/o-ide* usually means 'remains/stays ...' as in this example: ... *bóku*([~]) *wa toobun hurii de i-tai* 'I want to remain free(lance) for the time being' (SA 2666.105e). More examples will be found on p. 519, §9.2.4.(1). It is unclear whether we should regard the copula *dé* in such sentences as representing MANNER or SIMPLE CONJOINING or some new meaning of the gerund. The animate concord of *iru* vs. *áru* that is usual for modern standard Japanese (but not for older stages nor for all dialects) will not normally hold for the copula, which is *de áru* (→ *dá*) for animate and inanimate alike, though with exaltation we find *de irassyáru* for animates. That is why we must treat *sore de ite* 'and yet' as an idiom, since it is used in sentences where it would be difficult to assume an animate subject, e.g.: *Yomi-yasúí, kanketu na búnsyoo—sore de ite zusit-to omoi naiyoo* 'Easy-to-read, concise sentences—and yet heavily laden with content' (SA 2647.101a—from a book review).

In §2.2 we observed that a number of the "particle"-like uses of *dé* can be treated as the gerund of the copula (or of the essive), that being the ultimate origin of ALL uses of *dé*. Accordingly, we can say that the subject of the following sentence is marked by the gerund of the copula ('it being oneself'): *Zibun de iú no mo | nán désu ga, | máa ...* 'I shouldn't say so myself, but, well, ...' (SA 2679.119c). This explanation is particularly attractive in view of such sentences as ... *onná wa ZIBUN DE ZIBUN GA, dóo ní mo naránaku nátte simau* 'a woman ends up getting herself into a dreadful fix' (Fn 331b); the two phrases can be reversed (*zibun ga zibun de*). The same explanation would apply to the other examples of exclusive agent (cf. §2.2, *dé* 9) and to *Atasya atasi de* [= *Watasi wa watasi de*] ... 'For my part, I ...' (Tk 4.35b) and similar expressions discussed in §3.10.

In some cases treatment as the copula is more obvious if we assume propredication. Thus the difference between *N máde de* 'being all the way to N' and *N máde ni* 'at a point before reaching N' is the propredicative copula gerund versus the time-locative marker *ni*

(in origin the essive itself, or copula infinitive); cf. Alfonso 326-7. In Hyaku-pézi made de yameta 'I stopped after [reading] 100 pages' the copula gerund represents yónde 'reading'; in Sinzyuku máde de káeru 'I'll be back when I've been to Shinjuku' the gerund represents itté 'going'. O-híru made ni site kudasái means 'Do it by noon [= at some time before noon]';⁷⁰ O-híru made de yamete kudasái means 'Do it till noon and then stop', with the copula gerund propredicating sité 'doing'—compare O-híru made site kudasái 'Do it till noon', O-híru made sinái de kudasái 'Don't do it before noon'.⁷¹

The gerund átte (< ári-te) 'existing; having' sometimes appears directly after a noun through ellipsis of gá, and N [ga] átte often translates as 'with': Sono kai [ga] átte ... 'With that success ...' (SA 2659.110b); Kokorozásu tokoró [ga] átte ... 'With an aim in view ...' (SA 2674.113c). The antonymous expression is N [ga] nási [ni/de] 'without N'. Like other gerunds átte can occur as a stranded cause in a propredicative sentence: Sen'yaku ga átte [] da 'It's that I have a prior engagement'. With ellipsis of the copula: Hoka ni sen'yaku ga átte [da] ka, káre wa kesseki sita 'He was absent, perhaps with some previous engagement' (Mikami 1963.85). On N {ga} átte no ... 'with; ONLY with', see §9.2.1; and observe that the antonymous meaning is expressed by N {ga} nási no ... 'without': ... kurezitto-káado nási no seikatu ... 'living without credit cards' (SA 2660.26d); ... térebi nási no seikatu wa kangaerarénaí 'life without television is inconceivable' (Kotoba no yurai 194a). Observe also the use of átte as an equivalent of ní in S daké ni/átte, §13.2. See p. 1002 (§21) for N to átte; see p. 581 for N ni átte.

You will sometimes come across N de átte written where you would expect dé as the gerund of the copula; what has been gerundized is the formal (uncontracted) copula de áru: ... iwayuru "Kyooiku-kánzi" de atte, ... 'are among the so-called "Education characters" and (so) ...' (K 1966.54); Yo-nín wa izure mo, hito ˉnami ˉízyoo ni tuyói zíga no motí-nusi de atte, kessite dakyoo nádo sinai 'Each of the four is the possessor of a stronger ego than the average man and never makes compromises' (SA 2681.108a).

A few nouns and adverbs are derived from gerunds. The ADVERBS include the sentence adverbs hazímete 'for the first time' (differently accentuated from hazimete^[1] 'beginning it'), másite (MKZ has másite(ˉ)) 'much more/less' (from atonic masite^[1] 'increasing'), sitagatte 'consequently' (for younger speakers sitagátte—and this is also used for sitagatté^[1] 'complying'), hatásite 'sure enough', káette 'on the contrary, rather', kiwámete 'extremely', itatte 'extremely', wákete [mo] 'above all', toriwakete 'especially', toritatete 'in particular', zu{ba}-núkete 'exceptionally', sóo-zite(ˉ) 'in general', tutómete 'bending every effort', magete 'forcibly', síite 'forcibly', hiíte-wa 'and by extension, furthermore, moreover' (also—with irregular accentuation—hiíte-wa), otte 'later on', {koto-}aratámete 'again, anew', awásete 'altogether', konónde 'with pleasure, by choice; often', kuwáete(ˉ) 'additionally', tuzukete 'next, to continue', sémete 'at least', táete '(not) at all; (hardly) ever', medátte 'markedly, conspicuously', sugúrete 'surpassingly',

70. Under a mutative interpretation this could be taken as 'Make it [so that it is] till noon', with ni being the copula infinitive in a propredicative use: o-híru made da = o-híru made surú no da 'does it till noon'.

71. But in print you will sometimes see TIME máde [ni] with omission of ní; only the aspect of the verb (or other context) will make it clear that the intention is máde ni 'by' rather than unelliptical máde 'until'. Cf. Nagano 1970.215-23.

kánete 'previously' (from áto o kané^[r] 'combining with the later'—cf. kanégáne(–) 'often before'), tuide (also—with irregular accentuation—túide) 'next'⁷² (cf. the noun tuide 'occasion; order' and the noun tugí 'next' from the infinitive tugí^[r]), hirugáette (kangáéru to) 'turning (to reflect)'—hirugáette kangáéru ni 'on reflection', símete 'in toto, totaling it', sadámete 'definitely', iká ni site = dóo site 'why, how come', káku site = koo sité 'thus', siká site = so[o] sité 'then, so', etc. (See § 13.7.)

There are also the many single-gerund statements of manner, as mentioned earlier: waratte^[r] 'laughing(ly)', isóide 'rushing = hastily', yorokónde 'rejoicing = gladly', iradátte 'impatiently', awatete^[r] 'in bewilderment', ayamátte 'by mistake, in error', amánzite 'contentedly', kasanete^[r] 'repeatedly', kozótte 'forming a body = all together', íkite 'alive' (as in íkite wa kaerénai 'can not return alive'), narande 'abreast, in a row', arasótte 'scrambling, rushing, competitively', yotte(-)takatte^[r] 'in a crowd'; ísiki site 'consciously'; We might include certain cases of N dé or VN dé, e.g. kootai de suru 'does it taking turns = take turns doing it'.

The etymology is not always obvious: kessite '(not) on any account' is from kes-suru 'decides' (with the bound verbal noun KETU, borrowed from Chinese), béssite 'especially' is the gerund of an apparently defective *bes-súru (from BETU), [osi]-nábeta 'in general' is probably contracted from narabete 'lining them up', áete 'daringly' may well be from the gerund of the potential of áw- 'meet', and karóozite 'barely' is to be identified with káráku site 'making it harsh' (presumably by way of kará'u site); áituide 'successively' comes from a literary compound verb (with dephrasal accent) ái-tugu 'succeeds'. The phrase kátete kuwaete 'in addition', usually said with no juncture, combines the gerund of an obsolete verb káte- 'mixes it' (= máze-) with the gerund of kuwaéru(–) 'adds'.

The NOUNS derived from gerunds are fewer in number: súbete 'all' from súbe- 'control', tuide 'convenience, order' from tug- 'succeed' (cf. the adverb túide(–) 'next' and the noun tugí 'next' from the infinitive tugí^[r]),

9.2.1. The predicated gerund.

Colloquially, the gerund can be used in a nominal sentence with the meaning 'It is because ...': Áme ga hútte desu 'It is because it is raining'; Zikan ga nákute desu 'It's that (= because) I have no time'. We can perhaps regard this as a propredicative shortening from something like Áme ga hútte [sóo (na n)] desu 'It is raining and so things are that way', Zikan ga nákute [sóo (na n)] desu 'I have no time and so things are that way'. Compare Óokikute íi desu 'It's nice and big' = 'It's nice because it's big'. Ellipsis of the copula will account for expressions of the type ...-té [da] ka 'perhaps [it's] because' as in dóo site ka 'for some reason or other' (SA 2672.99b) and Hoka ni sen'yaku ga átte ka, káre wa kesseki sita 'He was absent, having a prior engagement perhaps' (Mikami 1963.85). See § 15.6. Here in a single citation are two examples of gerund + copula left by propredication: Heitai to site, zyúu o mótte desu ka to kasanete tazunéru to, sóo desu, heitai to sité desu, to kotáeta 'When repeatedly asked 'Is it [that you were] carrying guns as a soldier?' they would answer 'Yes, it was as a soldier [that I was ...]' (SA 2647.89a). Another nice example: Sumoo ni nátta no wa, hito ni susumerareté desu ka 'Was your

72. In Sore ni túide(–) 'Next/Secondly after that' the atonic version can be taken as the verb gerund, but the tonic version (does it occur?) would have to be an adverb, leaving a problem in explaining the ni.

becoming a sumō wrestler the result of people urging you?’ (Tk 3.15a). The following exchange includes three examples, the first two (identical) being converted to V-té na no [da] ka ‘is it (the case that it is) that/because V’: Aa iu hantai o surú no wa, kuni no tamé o omótte na no ka, zínruí zentai no tamé o omótte na no ka.—Zibun no tamé o omótte desyoo ‘Is that sort of opposition the result of thinking of the good of the country or of thinking of the good of all mankind?—It’s from thinking of one’s own good, I’d say’ (Tk 2.144a).

There are dialects in Hyōgo that use -té zya (= -té da) and -té ka as a polite stylization for the ends of sentences (Zhs 4.289 n. 1). According to Yoshida (261) -té desu and -té nó are often used to end a sentence politely in the dialects of the area stretching from Kōbe to Hiroshima; his three examples are questions. On an earlier Ōsaka usage of -té ya (= -té da) and -té ya omahén (= -té zya náí) to end a sentence with medium politeness, see Maeda 1961.29-31, 227.

A number of adnominalized gerunds would be expected to derive by way of -té da; but many are cliché-like in nature and lack the nuclear form (-té da), e.g. some of the phrasal postpositions (§9.7): Hito ni yotté no tigai wa áru ga ... ‘There are differences dependent on the person, to be sure, but ...’; Bangóo ni sitagátte no hairetu ... ‘Arrangement in accordance with number ...’; Gokai ni motozúite no hándán wa ... ‘A judgment based on misunderstanding ...’; Réi o ageté no setumei ... ‘An explanation citing an example ...’; Sensoo ni túite no kízi ... ‘An article about the war ...’ (but the nuclear sentence can be used—Sensoo ni túite da ‘It is about the war’); Ití-zi kara ní-zi ni kákete no kúrasu ... ‘The class from one to two o’clock ...’; “Hará” o tukatté no kan’yóo-ku ... ‘An idiom using the word “belly” ...’; Syóowa(¯) sánzyuu yo-nen no sangiin-sénkyo o megutte no senkyo-sikin-móndai de aru ‘It is the election-funds problem connected with (centering/revolving around) the election of 1959’; Kore wa náni mo ore ni kagitte no kotó de wa náí ‘This is in no wise limited to me’ (SA 2659.35b).

In addition, there are those with kekka, such as kangáete no kekka ‘(as) a result of thinking’, asobi-súgite no kekka ‘(as) a result of playing/loafing too much’, yókudo o tutikawárete no kekka ‘(as) a result of cultivating rich soil’, and special cases like warúkuti/warúguti o itté no tátari ‘retribution for saying ill of people’; these can perhaps all be regarded as deriving from ...té da in the meaning ‘because’. The other cases, however, will require some different explanation; perhaps an ultimate derivation from -te iru. (Cf. V-te iru ← V-ta, §9.2.4; VN site iru → VN ¯tyuu da, §14.4.)

A special meaning attaches to *N fga+átte no* (with the gerund of áru ‘exists’)—‘ONLY if there exists’, as in these examples: Oyá ga átte no anáta desu yó ‘Where would you be without your father?’; Syoohí-sya átte no seisán-sya desu ‘Producers can not exist without consumers’ (SA 2684.65ab); Siki-sya wa ookésutora átte no siki-sya desu ‘You can’t be a conductor without an orchestra (to conduct)’ (SA 2795.114a); Sore wa kígyoo(¯) no sonritu ga átte no hanasí desu né ‘That enters the picture only with the existence of an enterprise’ (SA 2681.26d); ... okyakusámá^{l)} átte no syóobai na n da kara ... ‘since it is a business that can exist only if there are customers (= that depends on customers for its very existence)’ (Tk 2.190b); Tamasima nádo wa Kurásiki átte no Tamasima de, ... ‘When it comes to the likes of Tamashima, why Tamashima would be nothing if it weren’t for Kurashiki and ...’ (SA 2658.135b—arguing over the location of a new rail station); Toonan-Ázia no kónniti no Nihón o kizúita no mo, Nihon-zín no kóko no dóryoku(¯) ga átte no kotó desu ‘The building of today’s [Little] Japan in Southeast Asia is something

done only (= done after all) through the efforts of individual Japanese' (SA 2660.38); Kane átte no tanosímí(¯) désu 'It is an amusement that takes money'. The gerund átte 'existing' need not include the meaning 'ONLY', of course; it is possible to adnominalize sákúi átte 'on purpose, intentionally'. With ellipsis of the copula {dá} we find átte nominalized before ká in this sentence: Sono tamé mo átte ka, sen-en no raisu-káree o suisyoo sitári, itiman-en mo suru syokuzi o suru ningen ní wa hará ga tatte naránai 'Maybe that's ONE reason [...mo] why I get terribly angry with human beings who recommend thousand-yen rice curry and have meals that cost as much as ten-thousand yen' (SA 2640.105d).

The following are miscellaneous examples of predicated gerunds that have been adnominalized: Taikin o mótte no ryokóo-sya wa tyúui! 'Travelers carrying large sums of money—caution!'; Umare-túite no oo-usótuki ... 'A born prevaricator'; Iki-wakáreté no wága-ko ga kóisikute ... 'Longing for our child that we are separated from for life'; Tádasi, ása sití-zí kara yóru zyuuití-zí ¯góro made hataraité no syuunyuu dá 'But it is an income (that results) from working from seven in the morning till eleven at night' (SA 2672.137c); Áse-mizu tarásite (= nagásite) no kinróo-sya de nákereba, kane no arigatá-mí(¯) ga wakaránai 'Only the toiler who has dripped sweat appreciates the welcomeness of money'; Sasimí o tábete no tyúudoku ... 'Food-poisoning from eating raw fish'; Zyúuri o arúite no hiroo ... 'Weariness from walking a distance of ten rí'; Nónde no ué de (= Nónda ué de) ... 'Under the influence of drink ...'; Toráete no kansatu ... 'Investigation upon capture ...'; Utí(¯) e káette no kotó ni siyoo 'Let's do it after we return home'; Tábete no ué de benkyoo simasyóo (= Tábeta ué de benkyoo simasyóo) 'Let's study after we eat'; Ano toki^[1] Indo e itta NHK no lida anáunsaa ga káette kíte no hanasí ni, ... 'According to what NHK announcer lida said after returning from being in India at that time ...' (Tk 3.74b); Nanázyúu-en wa koohii ga háitte no nedan ná n de, kami-kóppu wa génka ga tatta no yó-en [da] 'Seventy yen is the price with coffee in it, and the paper cup has an original cost price of only four yen' (SA 2674.99d); Kore wa rekisi-teki ni itté no hanasí desu ga ... 'This is speaking historically but ...' (Fukuda in Ōno 1967.225); Pán o haitatu sité no kaerí desita 'I was on my way back from delivering bread' (SA 2676.127c)—cf. § 13.2; Atama-kin daké^[1] harátte, nokorí wa tanosinde no o-kaeri ni 'Pay only a down payment, and the rest after you return from enjoying [the trip]' (SA 2673.26); Genba tikáku de yoosetu no sigoto o sité no kaerí datta n desu 'I was on my way back from doing a welding job near the site [of the accident]' (SA 2676.126c); Tookyoo Asakusa no áru syoogákkoo no kootei ni zénkoo(¯) no zídoo ga atumátte no tyoorei de áru 'It is the morning ceremony after all the children have gathered in the court yard of a certain elementary school in Asakusa, Tōkyō' (Shibata 1961.212); ... sindé no notí(¯) ... 'after he died' (=sinda notí(¯)); ... ánta sitté no tóori, ... 'as you know' (Tk 4.314a); Kenka sité no ríkon(¯) ... 'A divorce (that results) from quarreling ...'; Kuruma ni notté no soodan ... 'A talk in the car ...'; Nihón ni ité no seikatu ... 'Life in Japan ...'; ... kyodai-kíkái o tukatté no buturigákú-sya no kenkyuu ¯buri ... 'the research style of physicists using the big machines' (SA 2676.97c); Ozi-san kara kane o moratté no (= moratta ué de no) ryyuugaku ... 'Study abroad financed by money received from his uncle ...'; ... bóodai na syakkín o kaketé no keiei ná no da kara, ... 'because it is a business [that operates by] employing large sums of borrowed money' (SA 2671.107d); Náihu o tukatté no tatakai ... 'A fight using knives ...'; Kodomo o tureté no sanpo ... 'A walk accompanied by the children ...' (and, for some speakers, Kodomo o tureté no okáasan ... 'A mother accompanied by her

children'); Anáta no kimoti o osi-hakátte no syóri ... 'Treatment taking your feelings into consideration ...'; Hón o yónde no benkyoo daké de wa nāni mo wakarānai 'We understand nothing by just reading books'; ... to iú no mo, koo iu mi-toosi ni tátte no hatugen désu '(his) saying that ... is an assertion based on this sort of outlook'; Kore wa zibun de míte kíte no hanasí da 'This is a story based on my observations'; Íkka sorótte no o-syoogatú ... 'New Year's day with all the family gathered together'; Syokuzi o sité no hanasí ni siyoo 'Let's talk about it after we've eaten'; Sono hón o yónde no kansoo ... 'Impressions from having read that book ...'; Genbaku ni átte no byooki ... 'Illness from being exposed [áú] to the atomic blast ...'; Kázi ni átte no hukóo ... 'Misfortune as a result of having [áú] a fire ...'; Sensoo ga hazimatté no nisannén-kan to iu monó wa ... 'For some two or three years after the war began ...'; ... aité^[J] no tatibá ni tátte no háiryó ... 'consideration from the standpoint of the other person' (Tsukagoshi 175).

These sentences illustrate most of the meanings of the gerund, and many can be interpreted in more than one way. Sake o nónde no kenka may mean 'a quarrel AFTER drinking', 'a quarrel BECAUSE of drinking', or 'a quarrel WHILE drinking'. And Áme ga hütte no deki^gotó datta can mean 'It was an incident that occurred BECAUSE OF the rain', 'It was an incident that occurred IN the rain', or 'It was an incident that occurred AFTER the rain'. The particular noun that follows will often leave only one of the meanings appropriate: gakkoo e itté no benkyoo is probably to be interpreted as 'studying by going to school' (INSTRUMENTAL) and gakkoo e itté no mikká-kan as 'the three days at the school' (TEMPORAL SEQUENCE). See also tó site^[J] nó^[J] (§21.4).

When the gerund is adnominalized to a verbal noun, the immediately underlying predication (V-té da) often represents suru or site iru. While kodomo o tureté no sanpo 'a walk accompanied by the children' would seem to come immediately from sanpo ga kodomo o tureté da 'the walk is accompanied by the children', the implication of that sentence is sanpo surú no ga kodomo o tureté da 'the taking of the walk is accompanied by the children'; it might be better to skip the intermediate stage and derive the first sentence directly from kodomo o turete suru sanpo 'a walk that one does accompanied by the children', a sentence that can be taken back to kodomo o turete sanpo (o) suru 'takes a walk accompanied by the children'. This is true in general for the phrasal postpositions of §9.7: Tokidoki gésuto o mukaeté no tyuusyók⁺ú⁺kai ga hirakaréru 'They sometimes hold a luncheon to welcome a guest' (SA 2658.62); Kuni o ageté no kangei ... 'A welcome from the entire nation ...'; Anó-hito o sásite no warú⁺kuti/warú⁺guti o itta 'He spoke abuse about that person'.

The predicated gerund can be compared with predications of the alternative (-tári da/no), the negative provisional (-nákereba da/no), and the various "adverbial nominals" made from verbal infinitives (§9.1.2-7). These are for the most part adverbializations that function as PREDICABLE ADVERBS.

9.2.1a. Sentence-final gerunds.

When a gerund occurs at the end of a sentence, we usually assume that it represents a fragment of a larger sentence with some sort of ellipsis implied: Tyót-to mátte [kudasái] 'Wait a minute', Dóo-mo osoku nátte [sumimasén] '(I'm sorry that) I'm late', etc.

There is another sentence-final use of the gerund, as a substitute for the perfect or imperfect in asking questions: Karúizawa ni irásita kotó ga átte? [= áru ka?] 'Have you ever been in Karuizawa?' This usage is said to be exclusive to women; it includes a special

adjective gerund with the ending *-kátte*: *Omosírókatte?* 'Is it interesting?' (= *Omosirói ka*); cf. *Omosírókatta tté* 'Did you say it was interesting?' The ending is an abbreviation of *-kú átte* (Mio 131); cf. *-kút'atte* = *-kúte mo*, p. 938.

You may, however, hear sentence-final gerunds in both questions and (often followed by *yó* or *né*) answers spoken by men as well as women: *Kane ga átte?—Átte yó* 'Got money?—Sure!'

In particular, the copula gerund *dé* turns up sentence-final in the speech of certain people as a stylistic option; it is unclear whether this is to be regarded as idiosyncratic, as old-fashioned, or as dialect;⁷³ note the remarks in §9.2.1 on *-té ya/zya/ka* and *-té desu*. Examples: *Omosirói món de, sikási ...* 'It's interesting, but ...' (Kb 218b); *Sóo na n de. 'That's the way it is'* (Kb 214b, 219a); *Dóo-site de? 'Why is it?'* (Kb 273a); *Dé, áeta n de, sono musuko san ni? 'Well, did you get to see him—the son?'* (Kb 297b); *Dónata?—Hée, watakusi de. Yosizawa de ... 'Who is it?—Oh, it's me. (It's me,) Yoshizawa'* (Kb). It might be argued that this use of *dé* is a way to avoid stylization; you need not choose between *de gozaimásu* and *de arimásu* (with its reduction to *désu*), and yet you have not given your sentence the rude sound of *dá*. But the final *dé* can be followed by *né* [e]: *Íya, sore wa zyoodán de né* 'Oh, that's a joke, see' (SA 2680.48d—speaking is Shinoyama Kishin, born in Tōkyō in 1940; other examples occur in the same interview); *Dóo-mo née, onná wa kanzoo-teki ná n de née ... 'Indeed, my dears, women ARE emotional, aren't they!'* (SA 2678.139c; Kansai writer Satō Aiko); *Senséi wa hyooron-ka dé né. Sore wa ... 'You're a critic, professor, aren't you. That ...'* (SA 2671.20c). For that reason, at one time I thought the sentence-final *dé* was an abbreviation of *dé[su]*, perhaps by way of the Kansai swallowing of the *s* which produces *déh née* and *dén née* out of *désu née*. But there are examples with the polite gerund *désite* (cf. Y 463): *Kore wa hizyoo ni arigatái kóttosite [= kotó desite] né* 'This is an extremely welcome event, you see' (Tk 3.42a); *Íya, menkai to iu kotó wa hitótu no sigoto désite né* 'Seeing people is part of the job, you know' (Tk 4.16b); *Agaranái n de?—Hée, bu-tyóohoo desite. 'You won't have one? No, thank you, I don't smoke'* (Kb 221a). Moreover, there are examples of sentence-final use of verb gerunds, such as the following, with polite stylization: *Tokidoki, bootyoo-nin ga hungai simásite né* 'Sometimes the listeners [= Diet visitors] get indignant, you know' (Tk 4.17b); *Óyazi(¯) wa bóku(¯) ga itútu no tokí ni sinzyaimásite* 'My father died when I was five' (SA 2680.46b); *... dénsya(¯) ni noroo to omoimásite. 'I thought I would take a streetcar ...'* (Kb 219b). Jordan (BJ 2.148.4) says "In conversation, a gerund ending in suspensive intonation or a gerund + *née* often occurs in sentence-final position, when the speaker is about to say more that is coordinate with what has just been said ('...') or when the speaker assumes that the listener understands something coordinate without his continuing ('... you know the rest')."

For more examples of sentence-final gerund see Y 259-60. Do not confuse the sentence-final copula gerund *dé* with the Kansai sentence-final particle *dé*, equivalent to *zé* or *zó*, as in this example: *Watasi wa ore ya náí de [= ore zya náí zé] to kotáeta ga, osóraku sore wa watasi dátta ka mo sirenu* 'I answered "It's not me!" but likely it was me, perhaps' (Endō 81).

73. According to Yoshida (398) the use of sentence-final *dé* is a characteristic of Meiji novels that lends a gentle touch to conversation; he says it became popular with lecturers and rakugo (comic patter) performers around the end of the shogunate and is still alive.

9.2.2. *Gerund focus.*

The gerund can be subdued (with *wá*) or highlighted (with *mó*) in much the same way as a nuclear adjunct or as the nucleus itself. There are optional contractions of *-té wa to -tyá[a]* and of *-dé wa to -zyá[a]*; thus the subdued adjective gerund may appear as *-kú[t]te wa* or *-kú[t]tya[a]*, and the copula gerund as *dé wa* or *zyá[a]*. The lengthened form of the contractions is emphatic; compare the treatment, by some speakers at least, of *zyá náí = dé náí* where we expect simple infinitive + negative (corresponding to *-kú náí* for the adjective) and *zyáá náí = dé wa náí* where we expect subdued infinitive + negative (corresponding to *-kú wa náí* for the adjective), §8.4.

A common meaning of the subdued gerund is similar to that of the imperfect + *tó* (§17.2) 'when(ever) it happens, if it happens that':⁷⁴ *Uti(⁻) e káette wa (= káeru to ítu mo) yoohuku o ki-kaéru* 'When I get home I change clothes'; *Kono yonhyakuman-en zya nán to sité mo tarimasén* 'If it's this (= With this) four million yen it's hardly enough'; *Akanboo no ne-súgata o, tokidoki, nozoki ni kíte wa níko-niko suru* 'Sometimes I smile when I come to peep at the baby asleep' (KKK 3.189); *Hén na monó o tábete wa byooki ni náru* 'I keep eating strange things and getting sick'; *Gakkoo e kíte wa benkyoo surú ga uti(⁻) e káette wa asobu* 'Once at school I study but when I get home I play'; *Heyá wa attackáute mo íi keredo sámukute wa damé desu* 'It's all right if the room is warm but no good if it's cold'; *Syasin o míte wa naku* 'I cry every time I look at the photograph'; *Mukasi kara, samázama(⁻) no tango ga tugí-tugi ni arawárete wa kiete itta* 'From antiquity all sorts of words have appeared and then disappeared one after another' (Ōno 1966.15); *Tábete wa ne, neté wa tabéru = Kúttya ne, netya kúu* 'I sleep and eat, eat and sleep = All I do is eat and sleep'; *Osoku náru made, odotté wa hanási, hanásite wa odotta* 'Until all hours we danced and talked, we talked and danced' (SA 2650.105a); *"Tukútte wa kowási, kowási wa tukútta" bándó wa sootoo no kázu ni noboru* 'There is quite a rise in the number of [jazz] bands that are "put together and broken up, broken up and put together"' (SA 2685.117e). The last three examples are similar to the iterative construction in §9.1.1b.

Sometimes the condition expressed by *-té wa* is like a thematization: *Sindé wa súbete o-simai désu* 'When you die, it is the end of everything = Death is the end of all' (SA 2642). This interpretation accounts for sentences where the 'if' seems to mean 'perchance' (*mán'iti ... -tára*): *Bóku(⁻) wa, káno-zyo ni kegá ga átte wa taihen [da] to oi-káketa* 'I pursued her thinking it would be terrible if she were to have a mishap' (SA 2650.61c); *Soko e úttya sinu yó* 'Move it [the *go*-piece] there and you'll lose it' (Kotoba no yurai 43); *... móto e modóru yóo na kotó ga átte wa taihen da ...* 'If it goes back to the way it was it will be terrible' (KKK 3.28, 189). This interpretation, too, seems to be appropriate for *N ni yotté wa* 'depending on the particular N' = *áru N wa* 'some Ns (but not others) and for *Ippóo de wa ... tahóo de wa ...* 'On the one hand ... and on the other ...'.

Sometimes the focus is applied merely to play up a following negative, as in this example: *Hyoogén(⁻) wa aimai dá si, dóko no daigaku mo kuti ni dásite wa ii-tagaránai ga, naisinsyo-zyúusi wa "geba-táisaku" no hitótu de mo áru* 'The expressions are vague and none of the universities wants to come right out and say it, but weighting the confidential

74. The example *Áme ga hütte wa hurimásu ga ...* 'It IS "raining" all right but ...' (Henderson 293) strikes most informants as strange, and Henderson writes that it is more common to say this as *húru ni wa hurimásu ga (= húru kotó wa hurimásu ga, §14.1)*.

school report [in deciding admissions] is also one measure that can be taken against student militance' (SA 2663.28b).

The usual meaning of the highlighted gerund is 'even if/though': *Áme ga hütte (hütte ite) mo iku* 'I am going even if it rains (even if it is raining)'; *Osókute mo kíte kudasái* 'Please come even if it's late'; *Watasi dé mo (Watasi ní de mo) dekiru* 'Even I can do it'; *Sikási, Ameyoko no hitó-tati wa, kekkyokú^[1], syóonin de átte mo keiei-sya de wa nákatta no desu* 'But though the people of [the postwar black market area known as] Ameyokotyoo may have been merchants they were not, after all, managers' (SA 2671.41d); *Aratámete kimi ni kikasarenái de mo, sore-kurai sitte irú ga né, ...* 'Even if I am not told anything in particular by you I know that much, you see ...'. Sometimes an idiomatic translation is called for: *kitte mo kirénai kankei* 'an inseparable (indissoluble) relationship'; *Ningen wa || nágakute mo | hyaku-nen ṡgúrai sika | séimei ga | nái* 'Man can only live to a hundred at most (at the longest)' (MJW); *Kenkyúu-in wa minná⁽²⁾, sémákute mo roku-zýoo ṡgúrai no kositu o mótte iru* 'The researchers all have individual offices of about six-mat size at the skimpiest' (SA 2661.28a); *Háyakute mo kúgatu ...* 'September at the earliest'; ... *negátte mo nái mooside dátta* 'It was a most desirable (or: the best possible) proposition' (SA 2664.122c).

The highlighted gerund can be used to show a concession that is a contrast: ... *usúkute mo tuyói gooban ga ...* 'plywood that is thin YET strong' (SA 2650.98b). In written Japanese you may find *-kú mo {átte}* used instead of *-kúte mo*: *Kono ai-rásiKU MO nikúi háto o dóo yatte byooin kara toozakéru ka* 'How will they keep these cute but abominable pigeons away from the hospital?' (SA 2649.126c). (In NW Kantō dialects *-kú mo ii* is used for standard *-kúte mo ii*, according to Zhs 2.22).

The condition expressed by the highlighted gerund may be HYPOTHETICAL, REAL, or UNEXPECTED: *Tatóe(-) kimi ga tyuukoku sité mo, yamenái daroo* 'Even if you cautioned him, he wouldn't stop'; *Tároo wa kaisya e itté mo sigoto ga té ni tukánakatta* 'Though Tarō went to the office, he could not concentrate on his work'; *Káre wa iká naru kónnan ni sooguu sité mo hikan sitári syookyoku-teki ni náttari sinai* 'Whatever the difficulties, he never gets pessimistic or negative'.

But sometimes the meaning is similar to that of *-té wa = -ru tó^[1]* 'when, if': *Kono kotó wa Yooróppa no rekisi o míte mo akíraka de aru* 'This (fact) is clearly seen from (looking at) the history of Europe' (Shibata 1965.183). The expression ... *kotó o míte mo* sometimes translates as 'just because': *Nihón ga Amerika o osáe, bookei no tóppu ni tátte iru kotó o míte mo, Nihon-zín ga kirawarete iru hazu ga nái zya nái desu ka* 'Surely there is no reason for Japanese to be disliked just because (we see that) Japan has pushed America back to become tops in trade' (SA 2660.39a).

And in paired expressions the meaning is 'whether ... or': *átte mo nákute mo* 'whether there are any or not', *aketé mo kureté mo* 'day and night, all the time (= aké-kure)', *koko dé mo soko dé mo* 'either/whether here or there'; *Neté mo sámete mo kodomo no kotó ga wasurerarenai* 'Asleep or awake I can not forget about my child'. The translation may be smoother with 'both ... and ...': ... *migi o muité mo hidari o muité mo Bei-gun no kíti bákari da* '... both to the right and to the left there's nothing but American military bases' (SA 2654.12).

A nice balance can be achieved by adding a highlighted gerund to something to which subdued focus has been applied: *Syóosyoo no híhan(-) WA átte MO* 'Though there IS a bit of criticism ...' (SA 2665.114e); *Tasyoo no hantai WA átte MO* 'Despite a certain

amount of opposition ...' (SA 2686.50b); Ríron(⁻) ⁿzyoo no mondai WA sá-te oité^(t) MO, ... '(Leaving) theoretical questions aside ...' (Kgg 81.59b); Naisen o tuzuketé WA ité MO, ... 'Though they ARE continuing their civil war ...' (SA 2688.39d); [Samúi desu né.] Keito no kutúsitá(⁻) ní-mai kasanete haité WA ité MO, máda así ga tumetai '[My it's cold.] Even with two pairs of wool stockings one on top of the other, my feet are still cold' (SA 2662.45a). Cf. Tó WA itté MO = Tó WA ie(-do MO) 'Be that as it may' and Sikási, sóo WA itté MO ... 'But even so ...' (§21.1).

For a lively equivalent of -té mo see § 15.11 (-t'átte). The expression Dé mo (or D'átte) is a common sentence opener, especially in women's speech; a perceptive foreigner has suggested that the apt translation is often 'I'm about to say something stupid but ...'. On dé mo (and d'átte) as a quasi-particle, see §2.11. See §21.1.(9) for somewhat formal equivalents of the highlighted gerund: A-i tó mo or A-ku tó mo = A-kúte mo, N tó mo = N dé mo, V-ru tó mo = V-té mo. And note the negatives V-(a)nákú tó mo or V-(a)zu tó mo = V-(a)nákute mo = V-(a)nái de mo.

Gerund + wá/mó leads to the following constructions that are of special interest as translation problems:⁷⁵

-té {mo} + íi, kamawánai, dai-zyóobu da 'may safely do';

-té wa + ikenai, naránai, damé da, komáru 'must not do' (cf. -te tamaranai/naránai 'does or is unbearably');

-(a)náku [t]te wa + ikenai, naránai, damé da, komáru 'must do' (§9.3)—equivalent to -(a)nákereba or -(a)nai to + naránai, ikenai, damé da, komáru;⁷⁶

-(a)náku [t]te {mo} + íi, kamawánai, daizyóobu da, kékkoo da, yorosii 'need not do';⁷⁷

-té mo/wa muda da 'there is no use doing' (as in Yatte míte mo/wa muda da 'There is no use trying').

The particle mó can drop: Itte íi = Itté mo íi 'You may go'; ... sáke ya masú o tutte yói to iu kyóka ... 'permission (saying it's all right) to fish for salmon and trout' (SA 2688.87c); Umi-taku náí hitó wa, umanákute íi zya náí ka 'Isn't it all right for a person who does not want to bear a child not to bear that child?' (SA 2792.45b). This may lead to ambiguity: Hárete íi can either mean 'It is nice and clear = It is nice because it has become clear' or (= Hárete mo íi) 'It is all right even if it is clear = I don't mind if it's clear'; Osókute íi 'It's nice and late' or 'It's all right for it to be late'; Nákute íi 'It's nice that there are none' or

75. Notice also V-i-tákute mo V-[rar]enai 'want to but can't = can't however much one wants to': Wasure-tákute mo wasurerarenai n desu 'Forget it though I will I can't forget it', O-kasi si-tákute mo dekinai n desu 'However much I want to lend it to you, I can't do it'.

76. These "obligational" sentences freely shorten to -(a)náku [t]tya as in Kaeránakuttya 'Gotta go home'; cf. Kaerának[er]tya = Kaeránakereba {naránai} with the same meaning, §9.3. Another example: Dame dame, tábet' okanakuttya 'No no, you've got to eat' (Ariyoshi 32). There is also V-(a)zu ní wa irarenai/orarénai or V-(a)nái de wa irarenai/orarénai 'can't help doing'; see §9.2 for examples. The affirmative V-té wa irarenai/orarénai means 'cannot stay doing, cannot rest with doing, cannot bear doing'. Both expressions are from the negative potential of V-te iru/óru §9.2.4.(1) with focus.

77. And there are dialects that prefer V-(á)n de mo, or even V-(á)de mo, for the negative concession, as in these two examples from the mayor of Asuka Village, Nara: Soo sinkéi-situ ni narán de mo íi 'There's no need to get so nervous' (SA 2686.48a); Soo iu hitó wa kite morawán de mo íi 'I'd just as soon we had no such people coming' (.48c). For standard examples of V-(a)nái de {mo} íi, see below.

'It is all right even if there are none'; O-tya ga tumetákute *ii* 'The tea is nice and cold' or 'It's OK (even) if the tea is cold'.

Foreigners are often puzzled by the fact that *ii desu*, which would seem to mean 'It's good', is used as a way of dismissing people, services, and offerings—'No, thank you' or 'Don't bother'. Notice that unless you have a specific noun reference (*kore ga ii* 'this is good', *ii monó* 'a good thing') *ii* is nearly always interpreted as [NEGATIVE + -té mo] *ii* 'it's all right [without ...-ing]' = 'no thank you; we can do without'. To say 'That'll be OK/fine' and the like you have to say something like (*Zya,*) *sore ni simásu* 'I'll take that (one)' or *Sore o itadakimásu*, *Sore o + tanómu* (or *tyoodái* or *kudasái* or *o-negai simásu*), or *Sore ni site kudasái*—or, if a verb is involved, *Soo site/nasátte kudasái* (or *itadakimásu*). *Íi desu* by itself usually means *Yorosii desu* 'That is satisfactory' or *Kékkoo desu* 'That is sufficient'.

A number of common expressions are made with ... ^[1] *tó itte yói hodo/kúrai* 'enough that you can say ...' in which *itte* represents *itté mo*: *kanarazu to itte ii hodo* 'so often that you could almost say always' (SA 2665.29b); *maiban(¯) to itte ii kúrai* 'to the extent of (almost) every night'; ... Compare the expression ... ^[1] *tó itté mo ii-sugi dé wa náí* 'It is no exaggeration to say that ...' (= ... ^[1] *tó iú no mo kagon dé wa náí*).

Although above we see that the *mó* can drop in the expressions with -té mo, our notation does not show that a similar dropping may also occur for *wá* in the expressions with -té wa; the dropping of *wá* is less common, but here are authentic examples: *Ippan-dókusya ga wasureté* ^[1] *[wa] ikenai kotó wa ...* 'Something that must not be forgotten by the general reader is ...' (CK 985.314); ... *koko de mi-nogasité* ^[1] *[wa] naránai kotó wa ...* 'what must not be overlooked here ...' (Tsuji-mura 106); *Nónde [wa] ikenai to sarete iru toti no mizu ...* 'local water that is considered unfit for drinking ...' (SA 2689.122d); *Nán de ore no kaisya ga, teikei no naiyoo mo kimaranaí utí(¯) kara Hwóodo ni kabu o motasénakute [wa] naránai no ka* 'Why must my company let Ford start having stock before the details of the cooperation are decided?' (SA 2664.122c).

Although *Kore/Sore de ii* 'This/That will be fine' is normally taken as an ellipsis of *Kore/Sore dé [mo] ii* 'It is all right for it to be this/that', and that is the way to understand *iti-nen ni iti-dó de ii kara* 'just once a year (at least)' (SA 2673.120d), occasionally the proper interpretation is as the ellipsis of *Kore/Sore dé [wa]*, equivalent to *Kore/Sore nára* 'If it be this/that': ... "Páat'ii da!" to *yobéba, sore de yókatta* '... if someone called "Party!" that's all it took [for them to put aside their books and be out the door]' (SA 2670.112c).

Ellipsis of *wá* may account for the expressions *V-(a)nái de yorosii/ii* and *V-(a)nákute ii* 'it would be just as well if you did NOT ...' = 'I'd rather you didn't', quite a different meaning from *V-(a)nákute mo ii* 'it's all right not to = you need not'. Cf. Hayashi 172.

In the following example *torárete náru monó ka* is a rhetorical question implying *torárete [wa] naránai* 'mustn't let him get taken': *Titioya wa, ko-moti no sanzyuu-ónna ni, seken-sírazu no miséi-nen no musuko o torárete náru monó ka to kangáeta* 'The father thought that he must not have his unsophisticated and immature son snatched away by a woman of thirty with a child of her own' (SA 2649.105c). MKZ gives as one meaning of *náru* 'is able to put up with' (*gáman dekíru*) with the example *Nigásite náru monó ka* 'We can't (= mustn't) let him escape'.

We have attempted to draw a difference of meaning between conditions stated with the highlighted gerund (-té mo) and those stated with the subdued gerund (-té wa), but we

may be overstating the situation. Alfonso 774-7 implies that the basic meaning is much the same for both, treating them as modifications of a normal unemphatic pattern with *-ru tó* (etc.); the highlighted form *-té mo* is an “indirect, mollified pattern” of the normal condition (*-ru tó* etc.) and the subdued form *-té wa* is a “direct, emphatic pattern”. Thus while *-té wa ikenai* ‘mustn’t’ is more common, we might also expect to run across *-té mo ikenai*, as well as *-ru tó ikenai*, but good text examples have not turned up.

As mentioned earlier, the negative gerund is sometimes *V-(a)nákute* and sometimes *V-(a)nái de*, but both forms are available for many uses. The forms presented in the constructions discussed just above are the usual ones, but you will also run across *V-(a)nái de* in most of the expressions for which *V-(a)nákute* has been listed; cf. Hayashi 171: *Orínai de mo ii* = *Orínakute mo ii* ‘We don’t have to get off’. Thus *Súgu okíru kara sinpai sinái de [mo] ii desyoo* ‘I’m getting up right away so you need not worry’ means ... *sinákute [mo] ii desyoo*, with the former perhaps more colloquial, especially when the *mó* is dropped; *sinákute ii* will usually be taken as ‘doesn’t and that’s nice’ where *sinái de ii* will be taken as ‘it’s all right not to do it’. *O-kane o okuranái de wa komáru/damé/ikenai* ‘You must send the money’ is much less common, however, than ... *okuranákute wa ...*; and there is considerable doubt whether (?)*okuranái de wa naránai* is ever used at all. Other examples of *V-(a)nái de mo* ‘even without doing’, equivalent to *V-(a)nákute mo*: *Kore o genpyoo sinái [= ii-arawasánai] de mo íkite ikú no ni sasitukae ga náí no nara, meimei wa huyoo de áru* ‘If there’s nothing to keep you from living along without expressing this, then there is no need to give it a name’ (Maeda 1962.95); *Sosite, baai ni yotté wa, kooatú-zai o siyoo sinái de mo ketuatu ga heizyoo ni náru kotó ga arimásu* ‘And, depending on the case, it sometimes happens that the blood pressure returns to normal without using a pressure-depressant drug’ (SA 2679.120b); *Ano né, benkyoo sinái de mo seiseki ga ii no wa kokugo dátta n desu kedo, áto wa suugaku tó ka rekisi* ‘Uh, the thing I got good grades in even without studying was Japanese, but the others [that I was good at] were mathematics and history’ (SA 2645.49b—speaking is Miss Yoshinaga Sayuri, born in Tōkyō in 1945; there is a final ellipsis of *dá* or *dátta*).

In all these expressions of permission, prohibition, obligation, and so on, adjectivals and nominals can appear with the appropriate gerunds (*A-kúte* and *N dé*) and meanings (‘be’ instead of ‘do’). Instead of *-té wa* or *-(a)nákute wa* you can freely use *-ru tó* or *-(a)nai tó* (§ 17.2), and other statements of “condition”; see also *-tá no de wa* (§ 14.2.1) and *-réba* (§ 9.3). The second element (the “conclusion”) may be *warúi*, *tumaránai*, *mazúi*, *úmaku náí*, *abunai*, or *múri da*, and the “negative” element can in some cases be expressed by an affirmative rhetorical question (*náru mon ka* = *naránai*, etc.). What we have is a (semantic) CONDITION followed by APPROVAL or DISAPPROVAL. Since the expressions are set formulas, it is often sufficient merely to state the condition, letting the listener supply the remainder for himself: ... *mendóo de mo zibun de yaranai to [] né* ‘... it’s a nuisance but I’ve got to do it myself’ (SA 2664.98a); *Sutorippaa ni nátte mo [] tte, anáta, karada ni zisin ga áru no né* ‘Your saying you could become a stripper must mean you have confidence in your body’ (SA 2666.45b—there is ellipsis of something like *nátte mo [ii to i]tte*; cf. § 15.11); ... *utawanai séito ga syóibun sareté wa [] to omói*, ... ‘thinking that it wouldn’t do for the students refusing to sing to be punished ...’ (SA 2677.159c).

The translation of *V-(a)nákute wa* and of *V-(a)nai tó* or *V-(a)nákereba* is often ‘unless’;

when you add a negative potential for the second part, the meaning is 'you can't unless' or 'one must ... if one is going to ...': *Kakumei o yarú nara té o yogosaná kute wa dekinai* 'If you are going to make a revolution you have to get your hands dirty [to be able to do it]' (SA 2678.26c).

In the following example there are two *-té wa* conditions in a row, the first embedded in the second: ... *siná kute wa nemutté wa ikenai* ... 'I must not sleep unless I [do] ...' (SA 2641.48a)—the full sentence is cited on p. 213.

A common way to express a suggestion or invitation is to use the subdued gerund (or the conditional) + *dóo/iká ga desu ka* 'how about it': *Koohii o nónde wa iká ga desu ka* 'How about drinking some coffee?'; *Asitá wa turi ni ittára dóo desu ka* 'How about going fishing tomorrow?' And, as in English, if the meaning is clear the verb is often omitted, especially when the object is quantified: *Koohii o íp-pai iká ga desu ka* 'How about [drinking] a cup of coffee?'

When used with adjuncts containing indeterminates (i.e. question words such as *dáre* 'who', *náni* 'what', *dóre* 'which one', *dótira/dótti* 'which of two, which way', *ítu* 'when', *íkura* 'how much', *íkutu* 'how many', *dóo* 'how' [literary *iká ni*], etc.) the highlighted gerund translates as 'ever may do/be': *dáre ga kíte mo* 'whoever may come', *náni ga átte mo* 'whatever there may be', *dóre ga watakusi nó de mo* 'whichever one may be mine', *dótira ga yásukute mo* 'whichever is cheaper', *dóno hón o yónde mo* 'whichever book you read', *dónna ni kónnan ga okótte mo* 'whatever difficulty may arise'; *Unten suru tokí ni wa íkura tyúui site mo tyúui si-sugíru kotó wa náí* 'You can not be too careful when you are driving a car'.

Compare the highlighted gerund of nominal sentences containing indeterminates: (*dáre da* 'who is it' →) *dáre de mo* 'whoever it is; anybody', (*nán da* 'what is it' →) *nán de mo* 'whatever it may be, whatever it is'. In these expressions the accent may be removed entirely or shifted to the copula gerund: *dáre de mo*, *dare de mo*^[1], or *dare dé mo*. For equivalent expressions with ... *tó itté (mo)*, see §21.1.(9a). And compare the simple highlighting of the interrogative words' (*dáre da* →) *dáre* → *dáre mo* 'everybody' or [with negative sentence] '(not) anybody, nobody', (*nán[i] da* →) *náni* → *náni mo* 'everything' or more commonly 'nothing', (*ítu da* →) *ítu* → *ítu mo* 'always' (with both affirmative and negative, since 'never' is *kessite*), (*dóo da* →) *dóo* → *dóo mo* 'ever so much, in every which way' or 'in no way'. A similar usage is that of the infinitive of *surú* (→ *si*) + *mó* after *dáre*: *dáre si mo* = *dáre de mo* 'anybody'; possibly the *si* in *ítu-sika* 'before you notice' is similar. Note also *orí-simo* 'just then', *kanarazú-simo* '(not) always, necessarily', *sá-simo* 'so much', *máda-simo* 'rather', *kore-simo* 'even this', *íma-simo* 'right now', There is a reason for treating *dáre si mo* as three "words": you also find *dáre ni si mo*, *dáre kara si mo*, and *dáre o si mo* (as in *Dáre o si mo urámu kotó wa náí* 'There is no need to reproach anyone'), though *dáre égaŕ si mo* obligatorily omits the *gá*. (But, by recycling, *dáre si mo ga* sometimes appears, though subject to the same opprobrium that greets *dáre mo ga* and *dáre de mo ga*. See p. 55.) *Dóre si mo* = *dóre de mo* 'any one of them' is similar, at least to the extent of permitting *dóre o si mo*.

Unexpected uses of *sité mo* (= *dé mo*) include *matá-site mo* (= *matá-mata*(⁻)) 'and yet again', Cf. *N ni sité mo* = *N dé mo* (§2.9), *S ni sité mo* (or *S ni sé yo* or *S ni si ro*) = *S-té mo* (§14.6): *Zitugyoo-ka ni sité mo yakunin ni sité mo, geizyutu tte iu monó ni yowái né* 'Both businessmen and bureaucrats (alike) are poor when it comes to the arts' (SA 2673.50c).

Although I am treating *sí* as the infinitive of *suru*,^[1] Japanese grammarians usually consider it an unanalyzed particle in literary Japanese, and *sí-mo* is treated as a pair of particles in sequence.⁷⁸ The use of *sí mo* is often an equivalent of *mó* or of *dé mo*; like them, *sí mo* can be used for focus of the nucleus in addition to other purposes, as can be seen from this rather complicated example: ... ore mo manzara *kanoo-sei náki ni si mo árazu* da to omótta n desu 'I felt that it was not beyond the realm of possibility for me even' (SA 2661.44b). A more colloquial version would be *kanoo-sei ga náí [no] de mo náí*; the original version was generated by the following processes:

- (1) literary adnominalization (*náki* N = *nái* N);
- (2) direct nominalization (*náki* [N] = *nái no* 'that there exists not');
- (3) literary copula in the negative (*nárazu* = *de náí*);
- (4) nuclear focus (*ní ... árazu* = *dé ... náí*);
- (5) use of *sí mo* for *mó* or *dé mo* (*ní si mo árazu* = *dé mo náí*, *dé de mo náí*).

Meikai kogo jiten lists *simo-arazu* as a "weak denial" equivalent of *wáke/nó de mo náí*; it also lists *simo-are* as equivalent to *koso-are* 'indeed (being)'.

In addition to *wá* and *mó*, the gerund can be followed by most other markers of focus and many of the restrictives, just as the infinitive can. In §9.2.4 you will find examples of the following markers used to separate gerund and auxiliary: *sáe*, *nádo*, *nánka*, *nánte*, (?)*gúrai*, *bákari*, *daké*, *dé mo*₁ = *d'átte*, *dé mo*₂, (?)*máde*. But apparently *sika*, *kóso*, *nómi*, and *súra* will attach to the verb gerund only when it is NOT in construction with an auxiliary, as in the following examples.

sika

VERBAL: *Anáta no go-sínsetu ni tayótte SIKÁ íkite ikenai* 'Only by relying on your kindness can I live on'.

ADJECTIVAL: *Mazúsikute SIKÁ siru kotó ga dekinai monó no hitótu ni, kane no tattósa ga áru* 'One of the things you realize only being destitute is the value of money'.

NOMINAL (unusual except with the more formal *dé*^[1]*átte sika*): *Nihon-zín de atte SIKÁ ríkai(-) dekinai ningen-kánkei da* 'It is a personal relationship that can be understood only if you are a Japanese'.

kóso

VERBAL: *Zitti ni keiken sité KOSO hazímete sitte iru to ierú no da* 'It is not until you have actual experience that you can be said to know it'; *Hóo wa daitásuu no hitó ni mamorárete KOSO hóo no káti ga áru* 'Law has the value of law precisely when it is [or: by being] observed by the majority of the people' (SA 2650.45a); *Hwiripín-zin no té de naosárete KOSO, káti ga áru n da* 'It is of value precisely by getting repaired by the hands of Filipinos' (Tk 4.97a); *Sizen no utukusii kankyoo ni asondé KOSO hontoo no ari-káta na no da* 'The true way things ought to be is precisely (when you are) enjoying yourself in surroundings where nature is beautiful' (SA 2680.112b—an alternant interpretation of the initial adnominalization yields 'the beautiful surroundings of nature').

ADJECTIVAL: *Taisyuu-syókudoo wa yásukute KOSO taisyuu-syókudoo to ierú no da* 'A plain restaurant can be called a plain restaurant precisely when it is cheap'; *Ánka de, sono ue hinsitu ga yókute KOSO, syóohin(-) to site neuti ga áru* 'It has value as merchandise precisely if it is inexpensive and of good quality'.

78. A different etymology is proposed by Saji 40, who would derive *sí* {*mo*} from a variant of *só* 'that' (cf. *siká* 'so').

ADJECTIVAL-NOMINAL: Hoyóo-ti wa sízuka de KOSO hoyoo ni náru no da 'A recuperation place is good for recuperation precisely by being quiet'; Heiwa dé [átte] KOSO ningen-rasíi seikatu ga dekíru no da 'Precisely by being peaceful can a properly human life be led'.

NOMINAL: Toranzisutaa-séihin wa yubisakí(¯) no kíyoo na Nihon-zín de KOSO dekíru monó de aroo 'Transistor products are something that can be produced precisely for being [= because we are] the Japanese who are nimble of finger'.

nómi

VERBAL: Genzitu o seikaku ni háaku(¯) sité NOMI [or KOSO—but not *DAKE] syóorai e no tadasíi sonáe o násu kotó ga dekíru 'Only by getting an accurate grasp of present reality can you make the proper preparation for the future'.

ADJECTIVAL: Mazúsikute NOMI siri-éru kínsen no tattó-sa de aru 'The value of money can be learned only by being destitute' (epithematic identification).

ADJECTIVAL-NOMINAL: Syokubá(¯) de anzen dé [átte] NOMI sigoto ní mo syuutyuu dekíru no da 'One can concentrate on the job itself only when the shop is safe'.

NOMINAL: Kinben na Nihon-zín de [atte] NOMI kokuhuku si-éta keizai-kíki de atta 'It was an economic crisis we were able to overcome only by virtue of being diligent Japanese'.

súra

VERBAL: Kookoo o sotugyoo sité SURA {mo} (=SAE {mo}) syokú(¯) ga náí no ni tyuuto-táigaku no kimi ni syokú(¯) nádo áru mon[o] ka 'When there are no jobs even after graduating from high school, you who are a dropout can hardly expect to have a job or anything'.

ADJECTIVAL: Tákakute SURA kau hitó ga óói syóohin(¯) dá kara, nedan ga sagáreba tobu yóo ni ureru ni tigai náí 'Since it is a product that will have many purchasers even being expensive, if we lower the price they will sell like hotcakes for sure'.

ADJECTIVAL-NOMINAL: Riron-teki ní wa zettai-ánzen de SURA zissai ní wa tabitabi zíko ga okíru no de aru kara, zikken ga hituyoo da 'Even being absolutely safe in theory sometimes accidents happen, so a trial run is necessary'.

NOMINAL: ... sanman-en no syakkín de SURA, mitomemasén desita 'They [= the court] did not recognize even a debt of ¥ 30 000 ...' (SA 2659.117c); Nyuu-d'íiru o suisin sita Ruuzubéruto de SURA, hontoo wa koo sita atarasíi keizái-gaku o ríkai(¯) sité wa inákatta 'Even Roosevelt who promoted the New Deal did not really understand this sort of new economics' (SA 2673.45b); Nihon-zín wa motíron, Kita-Tyoosén o sókoku to suru zainiti-tyoosenzín de SURA, kono kuni o otozuréru(¯) kotó wa kiwámete muzukasíi(¯) 'It is extremely difficult to visit this country [= North Korea] even for Japan-resident Koreans who recognize North Korea as their ancestral home, to say nothing of Japanese' (SA 2684.140a).

Apparently there are no examples of gerund + hodo, dókoro, kágiri, or yóri—not even by way of nominalization of the gerund. But -té ka is possible when the gerund is not in construction with an auxiliary: Yoko ni nátte ka séiza(¯) sité ka siranáí kedo íra-ira site mátte itá n desu tté 'I don't know whether he was lying down or sitting up straight but he says he was waiting impatiently'; koo iu kúuki o sitté ka sirazu dé ka, ... 'whether aware of this atmosphere or not' (Agawa, 1.230a).

In the following examples the gerund is followed by various focus markers and restrictives. See also the examples with gerund + auxiliary, p. 511.

sae

VERBAL: Kuusyuu de akaku nátta sóra o míte SAE, ano sitá ga Tookyoo ka to omóu

to muné ga átuku nátta monó da 'Even when I saw the sky turned red by the air raids, my breast would burn with the thought that underneath all that must be Tōkyō' (SA 2821.60cd); Keisatú-tyoo no tookei de míte SAE, syoonen no ómo na keihóo-han wa, yónzyuu yó-nen ṭgénzai de kono zyuunén-kan no saitei [da] 'Even as seen by police department statistics, major offenses by youths as of 1969 are at their lowest in the past ten years' (SA 2688.27d); Titi wa kono kabin o sawatté SAE okóru no ni, kowásita no da kara nán to iú ka wakaránai 'My father gets mad if I even touch this vase; I wonder what he will say now that I have broken it'; Káre wa utí(ṭ) ni ité SAE benkyoo site iru 'He studies even when he stays at home'; Mái-asa(ṭ) rokú-zi ni ókíte SAE nemúi no ni, yó-zi ni okíru nánte tootei dekinai 'When I'm sleepy even getting up at six o'clock every morning, I'll never be able to get up by any four o'clock!'

ADJECTIVAL: Mé ga wárukutte SAE ano kisyoo desu 'Even with his bad eyesight, that is just like him' (Kb 30b); Syátu ga áokute SAE hadé na no ni, akai syátu nádo tonde-mo-nái 'When even a shirt's being blue is flashy, red shirts are out of the question'; Móttö tikákute SAE ikanái no ni, sonna tooi tokoró e nádo iki-taku ná 'I won't go even when it's closer; I don't want to go to any place so far away'.

ADJECTIVAL-NOMINAL: Roodoo-zyóoken ga risoo-teki dé [atte] SAE, Amerika no roodoo-sya wa yori óoku o nozómi(ṭ), sutó o kuri-kaesite iru 'Even with working conditions ideal, America's workers hope for more and strike repeatedly'.

NOMINAL: Otona dé SAE ityoo o sokonáu kotó ga óói no desu kara, binkan na ákatyan no ityoo wa tyóttö sita izyoo ní mo súgu eikyoo sare, tatimati geri o okósite simaimásu 'Since even grownups often have a lot of stomach trouble, the sensitive stomach of the baby is quick to react to the slightest upset with immediate diarrhea' (SA); Nanázyuu naná-sai no kónniti de SAE mo, máda sono mi-gónasi to ki-zen to sita aruki-káta wa, káre ga umare-nagará^[1] no undoo-ka de áru kotó o simésite(ṭ) iru 'Even today when he is 77 years old, his carriage and resolute gait reveal that he is a born athlete' (KKK 3.55); ...yuu-síkáku no kangó-hu de SAE mo kin-zirárete(ṭ) iru kooi ná no da 'It is conduct that even qualified nurses are forbidden' (SA 2666.113); Ne-gaerí(ṭ) o útu no de SAE íki ga kiréru 'Even turning on your side you can't get your breath [because of the lack of oxygen at high altitude]' (SA 2671.112c)—this is equivalent to ... nō^[2] de [sae] mo but probably derives from a direct application of sáe to the copula gerund in its concessive meaning, as an equivalent of dé [mo]; another interpretation would be the instrumental use of the gerund or even the case marker dé that stems from the copula gerund: 'by turning on your side'.

máde

VERBAL [See also §9.2.3]: Kono hí made no káre wa, katei o kowásite MADE onná ni uti-komú nánte kangáeta kotó mo nákatte 'Until that day he had never once thought of anything like falling in love with a woman to the extent of breaking up his home' (SA 2793.98bc); Sore dake no kane o kákete MADE, náze nan-kóози no tonneru o horáneba naránai no ka 'Why is it that they must dig a tunnel difficult to engineer, going to the extent of spending all that money, even?' dake

REJECTED—except with phrasal postpositions: *Sono kawari zibun ni kati-mé no áru monó ni mukatté -DAKĒ*^[2] *bóoryoku(-)* *o huruu* 'Instead they display violence only toward those they themselves have the odds on' (SA 2685.118d).

bákari

VERBAL: *Míte BÁKARI de wa tumarání kara tetudawásete né* 'I get bored with just watching, so let me help'; *Edo -zídai o waratte BÁKARI wa irarenai* 'They can't just keep poking fun at the Edo period' (Fn 373b); *Táda móo, soo omótte BÁKARI káre wa arúita* 'But now he walked along just thinking of that' (Kb 251a); *Sikási, sono zitzuzyoo o hónsyo de sitte míru to, tote-mo yorokónde BÁKARI wa irarenai* 'But when we consider the situation as revealed in this book, we can not rest completely happy' (SA 2659.114e—this could be regarded as gerund + auxiliary, see p. 520).

ADJECTIVAL (rather literary): *Kono zyúu-nen hodó*^[3] *wa, mazúsikute BÁKARI ságita* 'I have passed these ten years in straight poverty'.

ADJECTIVAL-NOMINAL: *Bínboo de BÁKARI héta issyoo dátta* 'It was a life passed in straight poverty'.

NOMINAL: Examples lacking.

On *-té 't'atte = -té [i]t'atte = -té 'te mo = -té [i]té mo*, see §15.11.

79. The examples in Alfonso 761—*Isóide de mo ii kara ...* and *Hazímete de mo yóku dekimásita né*—are adverbs derived from gerunds.

9.2.3. Verbal gerund + kará

The gerund of a verbal sentence can be followed by kará; this forms a temporal ablative with the meaning 'after doing', 'after one does/did/will do'—with tense, mood, and the like determined by the final predicate in the new sentence, which may be verbal, adjectival, or nominal. When that sentence is imperfect, the translation is often 'has been (doing) since ...': Amerika ni kíte kara Bósuton ni súde imásu 'I have been living in Boston since coming to America'. (For the translational problem involved, compare Nigatú kara byooki dá 'I have been ill since February' with Nigatú kara byooki dátta 'I had been ill since February'.) Usually in these imperfect sentences, kará can be replaced by írai (cf. p. 210): Amerika ni kíte írai || Bósuton ni | súde imasu.⁸⁰

Sometimes V-té kara is followed by VN máde (also V-ru máde?) as in these examples: ... Taisyoo zyuusan-nen ni zyookyoo sité kara haisen máde no aida wa ... 'during the period after he came to the capital in 1924 until the war defeat' (SA 2689.107c); Sutánhwóodo wa, íru i nage-kondé kara siage máde, wázuka zippún-kan to iu kakki-teki na dorai-kuriiningú-ki o kaihatu sita 'Stanford developed a revolutionary dry-cleaning machine that takes only ten minutes from the time you throw the garments in until they are finished' (SA 2661.29c). Compare the delimitation of a temporal set by ... kará ... máde on p. 209. Notice that it is possible to find V-té máde 'until one has done': [Onná no hito no akogare wa, íma-nao kekkon ná no yó né.] Soo-site, kekkon sité made hatarakanákya naránai no wa sabisii tte iú no '[What women aspire to, even now, is marriage, you know.] And they say it is lonely to have to work up until they have got married!' (SA 2672.64a).

There is a lively pronunciation variant V-té kkará; compare sore kkará = sore kará, hazime kkará = hazime kará (Maeda 1962.209); nekkara = nékara(¯) '(not) at all' < né kara 'from the root'; and other examples on pp. 44-5.

We can consider here the use of the perfect (-tá, § 11) adnominalized to the nominal sentence áto da 'it is after(wards)' to create a new sentence used as a gerund ... V-ta áto de = V-ta sue ni 'after doing'. The expression V-té kara usually implies a logical (= causal?) or temporal sequence and often has the same subject as the new sentence: A ga X o sita + A ga Y o sita → A ga X o sité kara, Y o sita 'A, right after he did X, did Y'; A did X and then did Y'. The expression V-ta áto de 'after doing' implies nothing about sequence except to tell you that the act of the second sentence occurred at some point later in time than the act of the first; as with all such time expressions (V-ru máe ni, V-ru aida ni, V-ru utí(¯) ni, etc.) the subjects may be the same or different: A ga X o sita + B ga X/Y o sita → A ga X

80. But írai will be set off by a minor juncture except when this vanishes after cancelling the oxytonic accent on -té of gerunds made from atonic verb bases, as in sensoo ga owatte írai 'since the war ended'. You will also find noti fñi and ígo (wa) used in the same way: Sorézore | "kaisan" sité kara | ígo, || ... '(From the time) after they separately "dispersed" ...' (SA 2689.120d); Syuryoo-ki ga | owatte ígo wa || yatyoo no muré mo | nonki-sóo da 'Now that the hunting season is over the flocks of wild birds look lazy' (SA); Kooen ga súde | noti fñi || sawá-kai ga | hirakaremásita 'After the lecture was over they held a tea party'. The juncture shows that these expressions are similar to V-te | sugu 'right after doing' and V-te | ma-mó-naku 'soon after doing'. Cf. V-te || áto de 'did it, and then later ...', V-ta | áto de 'after [one] did it'. Ellipsis is permitted for the gerund in VN [site] | írai even when the adjuncts remain intact: Nihon-zyósei Ono Yóoko to kekkon [] írai, ... 'Since marrying the Japanese woman Ono Yóoko, ...' (SA 2665.134). Cf. ... seturitu [site] ma-mo-nái Nati-too to sessyoku sita káre wa ... 'he who had made contact with the Nazi party not long after its establishment' (SA 2674.104c).

o sita áto de B ga X/Y o sita 'B did X/Y after (later than) A did X'. We might consider V-té kara as tightly SUBORDINATING the first action to the second, V-ta áto de as loosely COORDINATING the two with a transitional epitheme; cf. the two kinds of tokí: (1) 'when', (2) 'on the occasion that', §13.2.3. Observe that with V-té kara, the subjects NEED not be the same: Káre ga itté kara [watási-tái ga] tabeyóo 'Let's eat when he goes'. Although V-té kara and V-ta áto [de] are loosely synonymous, the latter is more often used as the antonym of V-ru máe [ni] 'before', and is somewhat more insistent on the time element. Alfonso (596) suggests that it also has some sense of IMMEDIACY ('soon after'); thus it is more often used for a single specific occurrence (Sensoo ga owatta áto de Tookyoo e káetta 'After the war ended I returned to Tōkyō') than for the setting in of a continuing state of affairs (Sensoo ga owatté kara seikatu ga yóku nátta 'After the war ended, life improved').⁸¹

Do not be surprised to run across áto KARA, which means '(from) afterwards, (starting) after'; áto DE means 'later on, (at some time) after'. You will also find V-té kara ÁTO [DE] with a suggestion of lack of immediacy 'at a point some time after V': Kisida Kunio ga saikun naku-nasité kara áto, bóku() wa itte míte odoróityatta 'When I went to see Kunio Kishida after he had lost his wife, I was startled' (Tk 3.38a). I presume that V-té kara áto kara is possible, but I have no examples.

The ablativized gerund can be subdued or highlighted, V-té kara wa/mo: Hunsoo ga okótte kara wa, senséi-tati minná nígetyatte sirán-kaō 'After the strife arose, the teachers all fled and couldn't care less' (SA 2676.36b); Gakkoo ga Kamakurá() kara Oohuna ni iten sité kara wa, bóku() wa, máiniti, Syóotiku no Oohuna-satuéizyo() ni asobi ni itté ita 'After the school moved from Kamakura to Ōfuna I would go for fun to the Ōfuna movie studios of Shōchiku' (SA 2635.59d); Sono tiryoo o uke-hazimeté kara wa daibu yóku nátta 'Since beginning that treatment I am much improved'; Sonna kotó ga ni-dó hodo átte kara wa, Hideko no ié no béru ni, káre wa kikumimi o táteta 'After that sort of thing happening a couple of times, he kept his ear alert to the doorbell at Hideko's house' (lg 1962.93); Magó ga umareté kara mo ... dakaseté mo kurenai 'And after my grandson was born ... why she [the daughter-in-law] wouldn't even let me hold him' (SA 2663.112b); Byooki ga naótte kara mo, titihaha wa hutatabi Mótoko o konománakatta 'Even after the illness passed, the parents never liked Motoko again' (lg 1962.93); Heian ʔzidai ni háitte kara mo ... keibetu ni sarasareta 'Even in Heian times they were exposed to scorn ...' (Ōno 1966.219); Sotugyoo sité kara mo benkyoo o site 'másu ka 'Are you still studying, even now that you've graduated?' (SA 2645.49c); Kurisutian ga Maruséiyu ni káette kara mo hutarí wa hinpan ni átta 'After Christian had returned to Marseilles the two still saw each other frequently' (SA 2649.105c).

And, perhaps by proredication (?), forms of the copula can follow the ablativized gerund: Yogorete simatté kara de wa torikaesi ga tukánai ... 'Once polluted, it can't be restored ...' (SA 2688.22)—dé wa = nára, dá to; Tokugawa-bákuhu d'átte, soosóo-ki to antéi-ki ni háitte kara de wa, hituyoo to suru zinzai ga kawaru wáke desu 'Even the Tokugawa shogunate, once it had entered its initial period and its period of stability, saw a change in the talents it needed' (SA 2665.16d); Hihyoo wa kansei sité kara ni simásu keredo mo ... 'I will reserve judgment until it [the new building] is finished but ...' (SA 2669.46c); Tábeta kara ni siyoo 'Let's put it off till we've eaten'; ... hukuuu sité kara no

81. See the note at the end of this section (p. 510).

kotó ... '(is) a matter following the popularization ...' (KKK 3.76); Sore wa zimú-syo o déte kara no sigoto désu 'That is work to be done after leaving the office' (BJ 1.284); Mé ga wáruku nátta no wa ano hon'yaku o hazimeté kara ni tigai náí 'I'm sure it's since starting that translating (job) that my eyes have worsened'; Yameté kara zya nákute, yameru máe ni o-iwai o simasyóo 'Let's have our party before we quit, not after'.

Moreover, the ablativized gerund is like a time noun in that it can be used as subject or object: Háitte kara ga taisetú da 'What's important is after it's in'; Moratté kara o kangáete kudasaí '(1) 'Give some thought to what happens after we get it'. We could regard at least the latter as an ellipsis ... V-té kará [no kotó] o. But all this suggests that phrase-final V-té kara is a DIRECT ADVERBIALIZATION of a nominal (§9.1.13): we expect ... V-té kara NI, and that is precisely what we find in the dialect of Wakayama (Zhs 4.398 ff), though not in the standard language. Of interest in this connection is the observation in Ig 1962(1.27) that the anaphoric substitute for V-té kara is SORE kara 'after that'; the substitute for simple V-te is [Soo site >] Sosite, Site, or SORE de (often pronounced so'e de > soide). On the other hand, the substitutes for V-ru tó, V-rú ga, and V-rú kara, respectively, are [Soo] suru tó, [Dá] ga, and Dá kara. Elsewhere (§24) we assume ellipsis for the latter two: [Sóo/Sore] dá ga, [Sóo/Sore] dá kara. For the literary usage V-té kara ga = V-ta to sité mo 'even if, say' and for N ni sité [kara] ga = N ni sité mo/sae = N dé sae mo, see §2.2 (kará 8, gá 14–15) and p. 487.

The ablativized gerund can be followed by the following focus particles and restrictives—often set off by a minor juncture:

sáe; súra: Síndé kara SÁE/SÚRA uránde déte kúru 'Even after dying he keeps coming back (as a ghost) out of resentment'.

sika: Nihón e itté kara SIKA míru kotó ga dekinái 'You can only see that after you've got to Japan'.

kóso: Sotugyoo sité kara KOSO hontoo no seikatu ga hazimaru yó 'Real life begins AFTER graduating'.

nádo; náńka; náńte: Zyúu-zi o ságite kara NÁDO (/NÁńKA/NÁńTE) hito no utí(¯) ni denwa o suru monó zya náí 'It isn't proper to phone people's houses when ten o'clock is past and all'; Sigoto o yameté kara NÁńKA, koráreta mon[ó] zya náí 'I can't be coming here now that I've actually quit working here'.

daké: Nihón e l korárete kara l DAKÉ de naku, ll o-kuni ni irassyáru tokí(1) mo l onazi désu ka 'Is it the same not only since you are here in Japan but also when you are in your own country?' (SA 2647.126).

nómi: Usinatté kara NÓMI, monó no arigatámí(¯) ga hontoo ni wakáru no da 'You truly appreciate the value of things only when you have lost them'.

bákari: Syuukai no sirase ga kúru no wa, ítu mo owatté kara BÁKARI da kara, syusseki sita kotó ga náí 'The notice of the meeting always comes after it's over, so I have never attended'.

dé mo₁ = d'átte: Neté kara D'ÁTTE kamaimasén kara, kyuyoo nára, yonaká de mo o-dénwa negaimásu 'It doesn't make any difference even after I've gone to bed, if it is an urgent matter I want you to call me even in the middle of the night'.

dé mo₂: O-syokuzi o o-sumase ni nátte kara DE MO, o-asobi ni o-ide kudasaímasén ka 'Won't you come for a visit after you've finished you meal, say?'

gúrai: (?) Sikén ga owatté kara GÚRAI yukkúri sité mo íi desyoo 'After the exams are over at least, you can relax'.

máde: Sindé kara MÁDE ketitte 'yagaru 'The bastard is pinching his pennies even after his death!' (SA 2665.117d— 'yagaru = i-yagaru).

It is interesting to see that in Kyūshū the structure V-té kara is often used in sentences that would be said with the simple gerund V-té in other parts of Japan (Zhs 6.17 n. 7). The use of kará as merely a reinforcement of one of the meanings of the gerund is reminiscent of the somewhat similar use in Korean of the particle se (also used for the locative ablative 'from') to reinforce several of the meanings of the infinitive -e, including both temporal and causal sequence.

NOTE: Kuno 1973.167 has some interesting observations on "after" constructions. He says that the S₁-té kara S₂ structure requires that S₂ be an action or event that can be intentionally controlled or preplanned by the subject; S₁-ta áto NI S₂ means that "S₂ fills the vacuum left by S₁"—hence typically will refer to coming or going or to coming into existence or going out of existence, the opposite of S₁. Moreover, Kuno says the directly adverbialized S-ta áto neutralizes the distinctions that obtain for the three expressions S-té kara, S-ta áto de, and S-ta áto ni.

9.2.4. Verbal gerund + auxiliary verb.

A number of verbs are used as auxiliaries to verbal gerunds, making new verbal sentences:⁸² (1) iru (and synonyms óru, irassyáru, o-ide ni náru; ketukáru [vulgar]); (2) áru (and synonym gozaimásu; ketukáru [vulgar]; in one use, also o-ari ni náru, see p. 528); (3) oku; (4) simau; (5) iku; (6) kúru (and synonym máir-u); (7) míru (and go-ran ni náru); (8) miéru; (9) miséru (and o-mise ni náru, o-me ni kakéru, o-mise suru/itasu); (10) súmu; sumásu. Separate treatment is given in § 10 to auxiliaries of favor: (11) yaru/ageru; tukawasu, tuka[w]asaru; (12) kureru/kudasáru; (13) morau/itadaku. (On V-te yaru₂/yokósu and V-te yaru₃ see remarks on p. 354.)

In addition to the above, some consideration should be given also to: (14) kan-zirareru: ... sono tokí wa watasi no mé ni utúta tití wa ima-máde no tití to wa móo kawatte kan-zirareta 'the father that was then reflected in my eyes seemed different from my father up to that time' (V 114); (15) kikoéru: Kono "itosii" wa, "kawaii" yori mo, móto hukái násaké ga komótte kikoéru 'This word "itoshii" sounds filled with a feeling that is deeper than "kawaii"' (Ōno 1966.80).

It is possible to apply focus with wá or mó to the gerund in the auxiliary constructions: ... Magó ga umareté kara mo, ... dakaseté mo kurenai 'And after my grandson was born ... she [the daughter-in-law] wouldn't even let me hold him' (SA 2663.112b); Kono yóo ni, hoogén to syuudan-go tó wa nite iru tokoró mo arimásu ga, mata, iroiro no ten de tigatté mo imásu 'Thus regional dialects and social dialects have many similarities, yet in many respects they differ, too' (Shibata 1966.46); Yoaké máe. Hárete wa irú ga, átari wa máda usu-yami 'It is just before dawn. The sky is clear but the grounds are still dusky' (SA 2672.16c); ... móo || mótte wa | inai zidai, ... 'an era that no longer possesses ...' (SA 2673.114a).

And it seems to be possible also to mark the gerund with various other particles:

82. See also -te (etc.) + tamaranai, naránai, yarikirénai, irarenai, yamanai §9.2, p. 498. For V-te hosii see §10.

sáe: Háitte sáe | iréba || íi n desu 'Just so it's inside, that's OK'; Rón-zite(-) sáe | iréba || syooko wa naku-naru 'A bit of argument and the proof disappears' (SA 2637.103d); Anáta ga || hanásite sáe | kuréréba || tika rá ni || náreta ka mo | sirenái no ni ... 'If only you'd told me I might have been of some help to you'.

nádo: Watasi wa | betu ni || okótte nádo (|) inai 'I'm not especially mad or anything'; To iú no wa, || sono sitai wa || sukósi mo || Noda ni nité nádo | inákatta kara de aru 'That's because the corpse hadn't the slightest resemblance to Noda or anything'.

nánzo: Nakanaka, || soo itawátte nánzo | moraeru món zya | inái 'I'm highly unlikely to be shown such consideration' (TK 3.134b).

nánka: ... uti(-) no | kakiiré-doki(-) wa || natú da kara || yasúnde nánka | irarenai to iu kaisya ... 'companies that say their busy season is the summer so they can't be idle (on vacation) or the like ...' (SA 2637.38); Tittó-mo | mookátte nánka | imasén | yó 'I'm not making the least bit of profit, I tell you' (SA 2679.115d).

nánte: Kuti dé wa || soo iú kedo || sín-zite(-) nánte | inái wa | yó 'He says that all right but he hardly believes it!'

gúrai: Hanásite | moraú no wa || múri ka mo | siremasén kedo || kíte gúrai | moraerú ka mo sirenai 'It may be asking too much to have him speak but perhaps we can get him at least to come'.

bákari: Míte | bákari ite || sukósi mo tetudawánai 'He just keeps looking on and never helps the least bit'; Sonna ni asonde bákari | inái de || sukósi wa | benkyoo si-nasái 'Stop just fooling around and get a little studying done!' (KKK 3.202).

daké wa: Komedeé-Huranséézu wa || kiité mo | wakaránai kedo || míté (|) daké wa oki-tai 'I can't understand what they are saying in the Comédie Francaise but I want to just see them at least'.

máde: Símin o | kokatu saseté made || moraoó tó wa | omowánai 'It is not their intention to have the city residents actually (or completely) exhausted [of water supply]' (SA 2688.25b).

*dé mo*₁ = *d'átte*: Húne ga | inái no nara || oyóide dé mo (oyóide d'átte) | iki-tai kimoti désu 'If there is no boat available, then I'd like to get there even by swimming'.

But the gerund can not be separated from the following auxiliary by adjunct phrases; all sentence adjuncts must PRECEDE the gerund (cf. BJ 2.124). The gerund and the auxiliary are usually separated by minor juncture, but major juncture will sometimes appear when the gerund is focused or restricted. And the minor juncture often drops, especially when the auxiliary appears in a relatively short form.

It is also possible to apply focus to the auxiliary: Yatte mí mo | sinái de || híhan(-) (|) bákari suru 'He doesn't even try doing it, he just criticizes'. (Cf. Alfonso 1128: either *hataraité í sae suréba* or *hataraité sáe iréba* is acceptable.) You will find examples under each of the auxiliaries in the following sections. Occasionally focus is independently applied both to the gerund and to the auxiliary: ... kirawareté wa | simái wa | senú ka ... 'won't I end up being despised' (Fn 445b)—this sounds a bit strange. But in ... *syooryaku sareté wa | ité mo* || ... 'even though it IS omitted' (Morishige 248) the *-té mo* is applied to the entire structure *sareté wa i-*.

Either the auxiliary or the gerund, or both, can be negativized—with slightly different meanings: *site inai* 'is not doing it', *sinái de iru* 'is getting along without doing it, stays not doing it', *sinái de wa inai* 'is not getting along (staying) without doing it'; *site okanai* 'doesn't do it for later', *sinái de oku* 'lets it go without doing it', *sinái de wa okanai* 'doesn't

let it go without doing it'; The use of the gerund with the giving and receiving of favors (§10) is similar with respect to negativization and focus.

Subject exaltation can occur for either or (redundantly) both of the two parts of the expression: *o-kaki ni nátte iru* (*míru*, *oku*, *simau*); *káite irassyáru* (*go-ran ni náru*, *o-oki ni náru*, *o-simai ni náru*); *o-kaki ni nátte irassyáru* (*go-ran ni náru*, *o-oki ni náru*, *o-simai ni náru*). But, with the exception of *V-te iru*, object exaltation can (at most) occur only with the gerund: *o-kaki site míru* (*oku*, *simau*) but not **káite* (or *o-kaki site*) *haiken suru* (*o-oki suru*, *o-simai suru*). Exceptionally, you will hear *o-kaki site iru*, *káite óru*, and *o-kaki site óru*. Compare exaltation with favors, §10.

Kazama 88-9 prefers to place the exalting passive on the auxiliary, at least for *site* [*irareru* →] *oraréru* instead of *sarete iru/óru* and for *site okareru* instead of *sarete oku*. Yoshida (524) says the prevailing tendency is to put conversions such as exaltation on the gerund, leaving the auxiliary untouched; he (Y 531) treats *o-V-i ni nátte iru* and *V-te irareru* as more standard usages, but also observes *V-te oraréru* and *V-rarete iru*.

When you make an alternative question, you give first an affirmative version and then a negative version, from which the listener is to choose his answer; the negative question need not carry the adjuncts but can be stripped down to the nuclear sentence, the predicate. When you make an alternative question on an auxiliary conversion, it is not necessary to repeat the gerund; you can strip the negative repeat down to the auxiliary as a nucleus: *Mondai wa || hataraité irú ka | {hataraité} inái ka de, ...* 'The question is whether he is working or [is] not [working], and ...'. This appears to be true for all gerund-auxiliary conversions, and even for some of the infinitive-auxiliary conversions.

From the statistics on modern written Japanese in KKK 25.78b, it would appear that about half of all occurrences of the verb gerund are with an auxiliary, and well over half of those occurrences are with the auxiliary *iru* or its synonyms. A rough idea of the RELATIVE frequency of the principal auxiliaries can be had from the following table of percentages (derived from the raw figures in KKK 25):

All occurrences of V-te	1.0000
V-te + Auxiliary	.4819
<i>iru/óru/irassyáru</i>	.2934
<i>kúru/máir-u</i>	.0544
<i>iku</i>	.0309
<i>kureru/kudasáru</i>	.0260
<i>simau</i>	.0222
<i>míru</i>	.0204
<i>oku</i>	.0113
<i>morau/itadaku</i>	.0097
<i>áru/gozaimásu</i>	.0066
<i>yaru/ageru</i>	.0052
<i>miséru</i>	.0013

When a gerund is followed by a verb other than those listed above, the verb is not to be regarded as an auxiliary: *in kínzyo o arúite mawaru* 'walks around the vicinity' a gerund of manner ('walking') or instrument ('by walking') modifies the verb phrase

(kínzyo o) mawaru 'goes around (the vicinity)'. Cf. -mawaru as an auxiliary with the infinitive: aruki-mawaru 'walks around'. Similarly, we can interpret the structure V-te V in the following example as a conjoining of two full verbs, though the meaning borders on what we might expect of an auxiliary: Syanhái(¯) de sore o míta mumei no seinen ga hungai simásite, hitó-ban ni sán-gen no ryoorí-ya ni gasorin de hí o túkete arúita n desu ná 'In Shanghai an obscure youth saw that [unpatriotic extravagance by the Japanese military officers], got indignant, and went around setting fire with gasoline to three fancy restaurants in a single night'.

The accentuation of certain phrases tells us that we are dealing with recent reductions of gerund + verb: míte-toru 'grasps, takes in' has been reduced from míte tóru 'looks at and takes' and hence does not have the normal accent of a single verb (which would be *mitetóru). The following verbs derived from the gerund tótte 'grasping' + verb are treated by some speakers as "recent reductions" (the gerund prevailing) and by others (including Hamako Chaplin) as new tonic verbs: tótte-kúru from tótte kúru 'fetches'; tótte-káesu from tótte káesu 'retraces one's steps'; tótte-kúu from tótte kúu 'snatches and eats'—limited to idiomatic uses such as Totte-kúu to wa iwanai '(Don't be scared—I won't bite you!); tótte-tukéru from tótte tukéru 'grasps and attaches'—limited to idiomatic uses such as tótte-túketa yóo na ... 'affected, unnatural'. But there seems to be no prosodic reason to explain why dictionaries list tótte oku 'reserves' as a separate lexical item; the juncture in tótte lokimásita ga and the focus in tótte sae lokéba or tótte loki sae l suréba indicate a phrase. Other recent reductions include kútté-kakaru 'challenges, defies' (for Hamako Chaplin kutte-kakáru),

The expressions for 'brings' and 'takes' consist of the gerund mótte 'holding' + kúru/iku 'comes/goes'⁸³ or the exalting euphemisms máir-u, irassyáru, o-ide n[i] náru, miéru. But the gerund normally loses its accent: motte kúru, motte iku (or motte 'ku), motte máiru, motte irassyáru (or motte 'rassyáru), motte o-ide n[i] náru (or mott' o-ide n[i] náru), motte miéru. Cf. BJ 1.233. In other meanings, those that stress the "holding", the gerund will retain its accent: mótte kúru/iku means 'comes/goes holding it' or—with the auxiliary use of the motion verb—'gradually starts holding/having it' or the like; Kore o mótt[e] o-ide will usually be taken as 'Hold this' (= mótte ite kudasá*(i)*) but Kore o mott[e] o-ide can only be understood as 'Take/bring this' (= Motte itte/kíte kudasá*(i)*). The forms with the atonicized gerund are ignored by Japanese accent dictionaries except for "motte-kúru". The reason for listing it would appear to be because the accent often shifts back a syllable in the gerund motté kite and in forms derived from the gerund (such as the perfect motté kita), as a result of the unvoicing of the vowel i. In a similar way, the dictionaries list "yatte-kúru" 'comes around, shows up' as a lexical item because of the accent in forms such as yatté kite and yatté kita, while they often ignore yatte iku 'manages, gets along'. But all these gerunds can be put into a separate phrase with focus (permitting mótte to recover its accent), instead of letting the focus go on the phrase as a whole, though that is also possible:

mótte kí wa/mo sinai } motte wa/mo kónai (?)mótte wa/mo kí wa/mo sinai
 motte kí wa/mo sinai }

83. And a few other verbs of movement: both mótte káer-u 'returns with (= carrying)' and mótte arúku 'carries (while walking)' will usually be said with no accent on mótte; cf. motte arukéru kikái 'a portable machine'.

mótte ikí wa/mo sinai } motte ikí wa/mo sinai }	mótte wa/mo ikanai	(?)mótte wa/mo ikí wa/mo sinai
yatte ikí wa/mo sinai	yatté wa/mo ikanai	(?)yatté wa/mo ikí wa/mo sinai
hakonde kí wa/mo sinai	hakondé wa/mo kónai	(?)hakondé wa/mo kí wa/mo sinai
hakonde ikí wa/mo sinai	hakondé wa/mo ikanai	(?)hakondé wa/mo ikí wa/mo sinai

By way of contrast with motté kita and yatté kita,⁸⁴ notice that hakonde kíta does NOT become *hakondé kita but retains the basic underlying juncture that removes the underlying accent on the gerund (hakondé wa) and leaves the accent of 'came' only one place to flee—to the last syllable (kitá ka 'has he come?') where it is automatically suppressed unless a particle is attached before the juncture. But some speakers leave the accent on the unvoiced first vowel of kíta and that is the pattern generally followed in this book, though it is not the common Tōkyō practice.

The verb *nokeru* is used with very few gerunds and the gerund can not be focused by *wá/mó* to form a separate phrase; thus it seems proper to treat as lexical items *yatte-nokeru* 'manages to do, accomplishes' and *itte-nokeru* 'makes bold (presumes, ventures) to say, takes it upon oneself to say'. But I have also come across *katatte noketa* 'made bold to tell' (SA 2677.149), *kotáete noketa* 'ventured to answer' (Ariyoshi 162), and ... *nure-ba máde én-zite(ˉ) noketa* 'ventured to perform even the love scenes' (SA 2680.18b); perhaps the verb is used more widely than I had thought and *yatte/itte nokeru* should be treated as idiomatic phrases.

The verb *kakáru* sometimes occurs after a gerund with auxiliary-like meaning: *Kankyaku o || nónde | kakáru yóo ni | naránakereba, || bútai no | púro to wa | ienai* 'You can not be said to be a stage pro[fessional] unless you get so you can boldly take on (= face) the audience'. Cf. *V-i ni kakáru*, §9.1.1; *V-i-kakaru*, §9.1.10. Perhaps some instances of *V-te kakáru* are simply contractions of *V-te [i]-kakáru*: *Sore o, omae, úso ni mo huru-wárazi no yóo ni nage-dasite kakátta to iu kotó wa* 'To think, for no reason at all you started abandoning that as if it were an old straw sandal!' (Kb 288a); *Nán no kotó wa náí, hazime k kara, kotó o kowásite kakátta n da* 'It's just that from the beginning he set to ruining his health' (Kb 199a); *Yohodo hará o suete kakaráneba naránu zyuudái-zi da* 'It is an important matter that we must start strongly preparing ourselves for'; *Hazime kara aité o baka-ni-site kakáreba, makeru kotó wa náí desyoo* 'You'll never get defeated if you face your opponent with scorn'; ... *bunken sono-mónó o moo sukósi utagatte kakaránakereba naránai to omoimasu ga né* 'the document ... itself must be treated with a bit more suspicion, I think' (Tanigawa 103). *Kimete kakáru* means 'assumes, presumes, takes it for granted': *Ano kóro wa, Nihón ni wa kyuusekki-zídai wa nákatta monó da to kimete kakátte iru desyoo* 'At that time the presumption was that there had been no paleolithic era in Japan' (Tanigawa 94). If focus is to be applied, it will go on *kakáru*, but apparently even that is unusual.

9.2.4.(1). *-te [i]ru, -t[e] óru, -te [i]rassyáru, -t[e] o-ide n[i] náru*. The form *-te iru* shortens to *-te ru*; the perfect retains the underlying oxytonic accent of the gerund of an atonic verb *-té 'ta* (*sité 'ta* = site ita despite site 'ru = site iru), as do other forms beginning with /t/: *sité 'te, sité 'tara, sité 'tari* = site ite, site itára, site itári. (Normally the oxytonic

84. And also *itté kita* 'went and came (back) = is back (from an errand)' from *itte kíta*, rather than (*)*itte kitá*.

accent of the gerund of an atonic verb will be suppressed by the underlying juncture that separates the gerund from the auxiliary.) The form *-te óru* contracts to *-t' óru* (the perfect is *-t' ótta*);⁸⁵ do not confuse this with *tóru* 'takes' (*tótta* 'took') as the second component of a compound verb (*uke-toru* or—younger speakers—*uke-tóru* 'receives' but *úket' oru* = *úkete óru* 'I am getting'; *hiki-tótta* 'took back' but *hiit' ótta* 'I was pulling'), nor the passive *-t' oraréru* with *(-)toraréru* 'gets taken'. Also common are the contractions *-te rassýáru* for *-te irassyáru* and *-t' o-ide* for *-te o-ide (...)*, as in *Mótt' o-ide* 'Hold this!'⁸⁶

Optionally *-te 'rú no ...* shortens and assimilates the syllables to yield *-té n no ...*; and *-te 'rú no da* can be heard as *-té n no da*, *-te 'rú n da*, or even *-té n da*—by way of **-té n n[ó] da*, with automatic simplification *nnd* → *nd*—as in these examples: ... *taikutu da tté n de*, ... [= *taikutu dá to itte irú no de*] 'as he says it's boring' (Kb 38a.2); *Sukí tte iu wáke zya ná n da keredo mo, soo nátte n daroo ná* [= *soo nátte irú no daroo ná*] 'I'm not saying I like it, but I guess I'm getting so I do, you know' (SA).

The student should be wary of leaping to conclusions when he hears a gerund followed by something that sounds out of place by the rules of the grammar; first, he should ask himself whether what he is hearing may be a contraction of *-te [i]*-, as in these forms:

/teru/	-te 'ru	= -te iru
/tera[a]/	-te 'r'a[a]	= -te iru wa: Abura mo zúibun uite 'r'a 'There's a lot of oil on the surface too!' (SA 2676.92b); Aq, asoko o híhi ga arúite 'r'a! 'Oh, over there there's a baboon walking!' (SA 2676.106c). (The common Aomori ending <i>-tera</i> is this, according to Y 527.) Another example will be found on p. 921.
/terai/	-te 'r'a i	= -te iru wa yo: Wakátte 'r'a i 'I know all about that!' (Okitsu 1.337).
/ténne/ ⁸⁷	-té n né	= -te irú no [da] né: ... soo iu seisitu o mótte n né 'have that sort of nature, you see' (Tk 4.290a).
/ténno (de/ni)/	-té n no (de/ni)	= -te irú no (de/ni)
/teréba/	-te 'réba	= -te iréba
/térya[a]	-te 'ryá[a]	= -te iryá[a] = -te iréba: ... sore o yatté 'rya íi n da to iu kankaku ga ... 'a feeling that it will be all right to keep doing that ...' (SA 2655.39d).
/téya[a]/	-te í ya[a]	= -te í wa: Yuubé d'atte, ototói no ban d'atte, roku ni kottí wa neté yaa sinai 'Neither last night nor the night before did I get a good night's sleep' (Kb 167a).
/téta/	-té 'ta	= -te ita
/tété/	-té 'te	= -te ite: Ketítta kara, gyooretu ga dékityatte 'te, kantan ni norenákatta 'Because they were stingy [in building the monorail for Expo '70] even though we cued up it was hard to get aboard' (SA 2673.48c); Dóo-mo koo tamatuki-ya ní bakari nissan sité 'te mo komáru yó 'I'm rather embarrassed to come to the pool hall this way every day' (Y 520).

85. But the contraction is *-tyóru* (*-tyótta*) in certain dialects, e.g. in Shikoku.

86. For gerunds ending in *-de*, the standard abbreviations will be *-de 'ru*, *-de 'rassyáru*, *-d' óru*, *-d' o-ide*. If the gerund is negative there are standard abbreviations: *sinái de 'ru*, *sinái de 'rassyáru*, *sinái d' óru*, *sinái d' o-ide*.

87. But */ténka/* is a Kyōto contraction of *-te [kuren(u)] ka* 'won't you kindly ...' as in *Kasité 'n ka* '(won't you) lend it to me, please' (Inokuchi 270). And *-ten {ya}* is an Osaka equivalent of *-tā no {da}*, "feminine" according to Makimura 1956.461b. Cf. *-tā n ya*, p. 852n12.

- /tétya/ -té 'tya = -te itya = -te ité wa: Konna ni kónde 'tya, gozen-tyuu wa tote-mo míte moraenai ná 'When it's this crowded you can't get seen (by the doctor) all morning' (SA 2649.38); Kodomo no sewá ni nátte 'tya, bokéru daké sá 'If you have your children take care of you [when you reach the age of 65] you just go right into your dotage, I tell you' (SA 2672.148).
- /tétatte/₁ -té 't'atte = -te it'atte (= -te ité mo, §15.11): Konna mono ikura mótte 't'atte syoo ga náí wá 'However much of this sort of thing we might have it wouldn't help' (SA 2685.16b).
- /tétatte/₂ -té 'ta tte = -te ita tte: Aru-Kápóne náńka mo irerareté 'ta tte iu yuumei na tokoró da kedo, ... 'It is a famous place where they say even the likes of Al Capone were held ...' (SA 2673.122c).
- /tétara/ -té 'tara = -te itára
- /tétari/ -té 'tari = -te itári
- /tezu/ -te 'zu = -te izu
- /tenai/⁸⁸ -te 'nai = -te inai (negative of -te iru)
- /tenái/₁ -te náí (negative of -te áru)
- /tenáide/ -te 'náí de = -te inái de: Yokei na kotó itte 'náí de, yóoi o nasái 'Cut the chatter and get ready' (Y 520).
- /tetai/ -te '-tai = -te i-tai (desiderative)
- /temásu/ -te 'másu = -te imásu
- /tesase/ (...) -te 'sase = -te isase (causative)
- /terare/ (...) -te 'rare = -te irare (passive)
- /tesoo/ -te '-soo = -te i-soo (evidential)
- /tenagara/ -te '-nagara = -te i-nagara
- /tesúgi/ (...) -te '-súgi = -te i-súgi (excessive)
- /teyagar.../ -te '-yagar... = -te i-yagar... (§9.1.10, p. 454).
- /teyandee/ -te '-yandee = -te i-ya[garu] n da i: Tyeq, náńi itte '-yandee 'Tsk, what the hell are you saying?!' (Okitsu 1.58).
- /te nasáru/ -te '-nasáru = -te i-nasáru: Sikási, komátte '-nasáru náa, ... 'But you're in a fix, I see' (Fn 85b).
- /te nasái/ -te '-nasái = -te i-nasái: ... sízuka ni nete '-nasái 'Stay quietly in bed' (SA 2664.27).
- /te haru/ -te [i]-'haru = -te i-naharu/-nasaru—Ōsaka equivalents of -te imásu (see §6.4).
- /te hanná[a]/ -te [i]-'haru na[a]
- /taharu/ -t' [i]-'aharu = -te i-naharu/-nasaru: Yuut' 'aháru (Kyōto) = Itte iru (Inokuchi 254); Komátt' 'aharimásu sákai (Kyōto) = Komátte imásu kara (Inokuchi 98).
- /te ehen/ -te [i]ehen [*< ii wa senu*]—Ōsaka equivalent of -te inai (Maeda 1961.224).
- /téyo/ -té 'yo = -te í yo: Míte 'yo 'Watch (Keep watching)!'
—cf. Míte [kudasái] yó 'Look!'
- /teyo[o]/ -te 'yo[o] = -te iyoo: Notte 'yó ka 'Shall we get aboard?' (Y 520)—cf. Notte [kudasái] yó 'Get aboard!'; Míte 'yoo zya náí ka 'Let's watch, shall we'.

88. But /tenái/₂ before particles: site 'náí ka = site inái ka; cf. site náí ka.

/tero[i]/ -te 'ró [i] = -te i ró yo: Damátte kiite 'ró i 'Shut up and listen!' (Okitsu 1.171).

Certain uncontracted forms may also puzzle the student, especially when seen in print:

/tei/ -te i (infinitive): Zidai ga tigatte i, ningen ga tigatte iru 'The era differs, the man differs = Man is a creature of his era' (Y 519). There is an example of -te í de mo suru in Y 519.

/teii/ -te í i = -te í yo (imperative): Noite í i 'Out of my way!' (Y 519). Do not confuse with -te {mo} íi.

/teina/ -te i-na[sái]: Kore wa ... ánta mótte i-na 'You carry this' (Y 519).

/teinayo/ -te i-ná yo = -te i-nasái

With the appropriate verb bases, the initial t will be d in each of the forms above.

The verb *iru* means 'stays' or 'lives' or '(an animate) exists' and the subject is usually animate, though self-propelling inanimates are sometimes found: *Kuruma ga imásu* (= *kíte imásu*) 'The car is here'.

When preceded by a verbal gerund, *iru* may either be used in its basic meanings—as in *Inaka e itte, [nágaku soko ni] ita* 'I went to the country and stayed [there a long time]'—or it may be used in one of three derived meanings, as an auxiliary. The three auxiliary meanings of *V-te iru* are these:⁸⁹

(1) REPETITIVE: does (or will do) repeatedly, regularly, all the time.

(2) CONTINUATIVE: is (or will be) in the process of doing; is (will be) doing; stays (will stay) doing—as in *Nete i-nasái* 'Stay in bed!' (or '[When I come back] you be asleep!'), *Ugokánai de i-nasái* 'Stay motionless!', *Waratte i-nasái* 'Hold that smile!'.

(3) RESULTATIVE: is (or will be) in the state resulting from the action taking place and changing things; has the experience that results from doing. This is stative, and sometimes anticipated by *móo* 'already/now'.

The first meaning is equivalent to one of the meanings of the simple imperfect, for *V-rú* can mean either 'will do [one time]' or 'does (or will do) repeatedly, regularly, all the time'. Thus *Tosyó-kan de hón o yómu* means either 'I will read the book at the library' or 'I regularly read (or will read) books at the library' and the latter can be made more explicit by saying ... *yónde iru*—which, however, can be taken also in the other two ways. Contrast the perfect, which means only 'did' or 'has done' but not 'was regularly doing': *Tosyó-kan de hón o yónda* 'I read (= did read) the book at the library', *Tosyó-kan de hón o yónde ita* 'I regularly read (= would read) books at the library'—or, in the continuative interpretation, 'I was reading the book at the library'.

The continuative meaning can be paraphrased with the semi-literary *V-i-tútu áru*, and verbal nouns can substitute the form *VN -tyuu dá* for *VN site iru* (§ 14.4) as in *syukúsyá o kentiku -tyuu da = syukúsyá o kentiku site iru* 'they are building dormitories'. The resultative meaning is equivalent to one use of the literary perfect *V-éri/-éru* (< *V-í ári/-u* § 9.6): *Haná [ga] sakéri = Haná ga saite iru* 'The flowers are in bloom (= have blossomed)'. The translation sometimes brings out the experience possessed: *Kin-médaru o*

89. In standard Japanese *V-te óru* usually shows deference but in those dialects which use *óru* to mean *iru*, as the usual word, there is no special connotation to the expression. And in written Japanese you will sometimes see *V₁-te óri* *V₂-te iru* where you might think it more consistent to write *V₁-te i* *V₂-te iru*; that is due to a feeling that the infinitive *i* is awkwardly short (*Kokugo-bumpō no mondai-ten* 293a). *V-te irassyáru* and *V-te o-ide ni náru* are always to be interpreted as subject-exalting.

itútu mo moratte iru 'He has already received five gold medals = He is the recipient of five gold medals'.

Many dialects formally distinguish the progressive (= continuative) from the resultative; contractions of -te óru are used for the latter, and of -i óru for the former, as in the forms reported for these areas (Zhs 5.22):

	<i>Tottori</i>	<i>Okayama, Iwami</i>	<i>Hiroshima</i>	<i>Shimonoseki</i>	<i>(Kyūshū)</i> ⁹⁰
Progressive:	huryooru	huryoru	huryooru	huriyuru	huriyuru
Resultative:	hutturou	hutturou	hutturou	huttiyuru	hutturou

Both forms are hütte iru (or hütte óru) in the standard language. Cf. the remarks on V-i-yoru, pp. 454-5.

Some verbs will not normally allow the continuative meaning; these we call PUNCTUAL verbs: aku 'comes open', iku 'goes', kúru 'comes', káer-u 'returns', otíru 'falls', kowaréru 'it breaks', déru 'emerges', háir-u 'enters', náru 'becomes', hutóru 'gets fat', yaseru 'gets thin', haréru 'clears up', kumóru 'gets cloudy', tukaréru 'gets tired', sinu 'dies' (But some of these may be capable of semantic interpretation of a non-punctual sort.) Punctuality is a semantic feature that is incompatible with (precludes) one of the three interpretations of V-te iru, the continuative. Something that resembles the continuative meaning, however, can be expressed for punctual verbs by using V-te kúru/iku to indicate gradual onset or by using V-ru yóo ni náru 'gets so that it is', or by adnominalization to certain postadnominals (notably tokoró). From what has been said it follows that a sentence such as Kodomo ga gakkoo e itte iru will normally have only the resultative and repetitive meanings: 'The child has gone to (= is at) school' (= ... ikéri) or 'goes (will go) regularly to school' (= ... iku, ... iku monó da).⁹¹ The meaning of REPETITIVE is subject to at least two different interpretations: the same agent does the action repeatedly, or different agents do the action at least once each. Thus Utí(ˉ) o déte iru can not only be interpreted as 'He has left the house' (RESULTATIVE) and 'He leaves the house regularly' (REPETITIVE with single agent) but also as both 'They leave the house regularly' (REPETITIVE with more than one agent acting repeatedly) and 'They leave the house one after another' (REPETITIVE with more than one agent acting once). Sometimes the "punctuality" of a particular verb-being, as we have observed, semantic in nature—is suspended by the choice of a given noun as agent: Kemuri ga déte iru can be given a CONTINUATIVE interpretation 'Smoke is (keeps) coming out' as well as the other two interpretations.

Most verbs of movement will permit all three interpretations: yuubín-kyoku o tóotte iru can mean 'is—or will be—past the post office' (RESULTATIVE); 'they each pass—or will pass—the post office [once or all the time]' (REPETITIVE with more than one agent); 'passes—or will pass—the post office all the time' (REPETITIVE with single agent); or 'is—or will be—[in the midst of] passing the post office' (CONTINUATIVE). And miti o arúite iru can mean 'has got the walking of the streets done, is finished with one's walk through the streets [and so ...]' (RESULTATIVE), as well as 'is—or will be—out [walking] on the street' (CONTINUATIVE) and 'walk(s)—or will walk—the street regularly' or 'they walk—or will walk—the street one after another' (REPETITIVE).

90. Zhs 6.17 n.7.

91. But in some contexts the continuative interpretation 'The child is on his way to school' is also possible: gakkoo e itte iru tokoró 'just as he is on his way to school'. Cf. §3.12, BJ 2.204, K 1955.

It is important to be aware that all three interpretations (with plural subject, four or more) can apply to non-punctual verbs in the V-te iru form, and at least two interpretations can apply to punctual verbs. In addition, you should bear in mind the fact that the temporal reference may be either to a definite future or to an extended present: *Mátte imásu* means 'I will be waiting' probably more often than it means 'I am waiting'.⁹²

The following verbs do not take the V-te iru conversion in any meaning: *áru* (*átte iru* is from *áu*); *iru* 'stays' and its synonyms (**ite iru*, **ótte iru/óru*)—but colloquially you will hear *Moo sukósi ité 'te wa dóo* 'How 'bout stayin' a bit longer?' and *Fujiwara 66-7* says *ite iru* is a "favored expression in the Kinki dialect"; *ir-u* 'needs' (*itte iru* can only be from *iku* or *iu*—or be the literary equivalent of *háitte iru* 'is inside'). Potentials, including *dekíru*, sometimes are converted to V-te inai to express a meaning equivalent to V-(a)nai *zyootai ni iru/áru* 'is in the situation of not [being able to] ...': *Kono gakusei wa konna yasasii kanzi sáe kákete inai* 'This student can't write even such an easy character as this'; *Tokoró-ga kana-mózi(¯) wa tá no ten dé wa on'in-teki ni hizyoo ni ai-ná-gara, siká mo tóon wa hyoogén(¯) dékíte inai* 'But though the kana characters are phonologically very apt, nonetheless they are NOT able to express the tones'. Normally, however, you will not run across potentials with this conversion, and *dékíte iru* will usually be from the punctual verb 'gets produced, is readied'. But passives as PASSIVES (pure or adversative) are freely converted to V-te iru, as are causatives.

There are also V-te iru forms made on the NEGATIVE, V-(a)nái de iru. *Náni mo sinái de iru* means 'keeps doing nothing, stays idle, goes on doing nothing' or 'refrains from doing, resists doing'—as contrasted with *Náni mo site inái* 'is not doing anything' or 'is doing nothing'. An example: ... *tabe-tái monó o tabénai de iru kotó* 'to do without (to refrain from) eating the things one wants to eat' (SA 2645.103b). The negative can, of course, appear as V-(a)zu ni iru: *Dóo site wareware wa náni mo sezu ni irú no ka* 'Why is that we do (=go on doing) nothing?' (SA 2681.31b). An example built on a potential: ... *náze soo náru ka wa tukaménai de ita* '... they remained unable to grasp why it turns out like that' (SA 2651.21b). For such negatives the meaning may be 'has not yet done', especially when *máda* is present (*Máda yónde inai* 'I've not yet read it'); we have observed elsewhere that in reply to a perfect question (*Kimásita ka?* 'Has he arrived?') it is common to use the simple imperfect negative (*Kimasén* 'He hasn't' = *Máda kimasén* 'He hasn't arrived yet'), with the idea of 'not yet' (*Máda desu*). Double negatives may be possible as denials of a negative (*sinái de inai*), but I lack good examples.^{92a}

And one runs across sentences with NOUN (or ADJECTIVAL NOUN) + *de iru* (cf. Alfonso 187): *Sabisii kimoti de itára* ... 'When feeling lonely ...'; *Heiki de i-nagara* ... 'While staying unconcerned ...'; *Génki de orimásu* 'I'm feeling fine'; ... *atakusi mo máda-mada wakái kimoti de imásu* 'I still feel myself quite young' (Tk 2.134b); ... *gozyúu -íkutu made tassyá de ita hahaoya ga* ... 'my mother who stayed in good health up to the age of some fifty odd years' (R); *Sore kara o-tya o nónde, sibáruku mono-ómoi ni sizunda yóo na kakkoo de imásita* 'Then he drank his tea and remained for a while (in a posture) as if lost in thought' (Tk 3.7b); *Ándoo-ke no hoomu-dókutaa -mítai na tatibá de imásita*

92. Do some verbs have both punctual and non-punctual versions? For example, verbs of WEARING: *kiru* 'puts on' (punctual) vs. 'wears' (non-punctual)? Perhaps *uru* 'sells (= makes a sale)' vs. 'sells (= is in the sales business)'. Can punctuality be imputed to a larger number of verbs than we might think? Or, is it possible to suppress the punctuality for a large number of the punctual verbs—with the proper context, perhaps all of them? See §3.12.

92a. V-anái de iru is possible for some verbal expressions that will not permit V-te iru: V-ru kotó ga *dekinai de iru* 'I remain unable to V' lacks the corresponding form *V-ru kotó ga *dékíte iru*.

'I was in the position of a kind of "home doctor" for the Andō family' (SA 2656.26b); ... kōi-sita zyosei ní wa "O-tomodati de imasyōo" nānte, téi-yōku hurarete simattári ... 'ending up neatly brushed off by a woman he has fallen for with [her using] some such line as "Let's just be friends" ...' (SA 2668.116b); Nakimúsi de i-nagara odoke-mono dátta to iu hanasí mo kiita 'I also heard that he had been a jokester even while a crybaby' (SA 2679.39d)—cf. §9.1.3; Hyoogén(¯) no ziyūu—kono kantan de ite muzukasii(¯) mondai wa, ... 'Freedom of expression—this simple yet difficult matter, ...' (SA 2687.114d); Sínsetu na yōo de ite, ángai(¯) ni hu-sínsetu da 'They appear to be friendly and then turn out to be surprisingly unfriendly' (SA); Káre no kentiku wa kiwámete dokusoo-teki no yōo de ite, dóozii(¯) ni watásii-táti, tooyōo-zin no konpon-teki na muzyōo-kan o humáete iru 'His architecture continues to seem extremely original, yet at the same time it is based on the basic feeling of impermanence of us orientals' (SA 2645.46c)—there is an ellipsis that omits nó = de áru where the second comma signals the apposition; for dokusoo-teki NO (= NA) yōo, see p. 617 (§13.1). You will notice that the subject (as with V-te iru) is not always animate, especially in the form ... de ite '(though) being'. Perhaps some of these cases can be regarded either as pro-verbalizations (dé ← dá ← suru) or as ellipsis N dé [site] iru. Notice, too, that N de irassyáru and A-kute irassyáru occur as subject-exalting forms for nominal and adjectival predicates. It is uncommon to hear N de orimásu (instead you will find N de gozaimásu or just N désu), yet you will come across V-ru tumori/yotei de orimásu ga ... 'It is my intention/plan to ...' = 'I intend/plan to ...', and (in writing) even ... yotei ni site orimásu ga (Ōkubo in Ōno 1967.146). But I doubt you will ever encounter *S hazu de orimásu, though S hazu de irassyaimásu and S hazu de gozaimásu are both heard. Similarly I do not think that (?*)S yōo de orimásu will be found in standard speech, though both S yōo de gozaimásu and S yōo de irassyaimásu are possible: O-wakari ni naránai yōo de irassyaimásu kara, moo iti-dō moosiagemasyōo 'Since you appear not to understand, I will tell you again'.

The expression V-(a)nái de irareru/oraréru means 'can stand it without V-ing' or 'can get by without V-ing' as in ... sukōsi mo odorokánai de irareta 'was able to resist (get by without) being the least bit surprised' (CK 985.384). The expression V-te [or V-té wa] irarenai/orárenai means 'is unable to stand (or to stand by while) V-ing': ... sonna kotó wa itte irarenai 'can't stand to say such things' (SA 2669.62a); ... damátte míte orárezu 'unable to stand by watching silently' (SA 2669.99b); ... dáre mo ga mu-kánsin de wa irarenai yōo na "ningen" ni náru 'he becomes a "person" that it is impossible for anyone to be indifferent to' (SA 2679.103d). And V-(a)nái de [wa] irarenai/orárenai means 'can't help V-ing, can't help but V': Kyootuu na ookii ísi o mínai de wa irarenai 'We are bound to look at the great common purpose' (Y 214). In these expressions V-(a)zu ni will, of course, often replace V-(a)nái de: Kazue wa kokóro kara hot-to site iwazu ní wa irarenai no desita 'Kazue felt so relieved at what she heard that she could not resist telling it' (KKK 3.149, 172). Cf. gerund or negative gerund + irarenai 'does/is unbearably = intensely' (§9.2, pp. 480–1).

Under adnominalization V-te iru is sometimes replaced by V-ta with little—if any—difference in meaning: hutótte iru hitó = hutótta hitó 'a fat person', kane o mótte iru hitó = kane o mótta hitó 'a person who has money', kutú o haite iru kodomo = kutú o haita kodomo 'a child wearing shoes', etc. Alfonso 894 suggests that a meaning difference exists between such pairs as utí(¯) ni kíta hitó 'people who have been to our house (but may not be there now?)' and utí(¯) ni kíte iru hitó 'people who are at our house', but that

difference is not always felt. He also points out that certain expressions will not normally adnominalize with V-te iru, saying that *así ga sikkári site iru* 'has a firm step' will convert to *así ga sikkári sita hitó* 'a man with a firm step' rather than *sikkári site iru hitó*. Yet the latter version would appear to be quite acceptable. When either V-te iru or V-ta is possible, the former seems to emphasize the resultant state, the latter the change. It would be of interest to find out how the adnominalization works in those dialects which differentiate the progressive (= continuative) from the resultative. See also §3.12 for further discussion of this point.

The verb *sir-u* 'knows' usually appears as *sitte iru* in the affirmative but as *siranai* in the negative.⁹³ Yet both *sir-u* and *sitte inai* (as well as *siranái de iru*) also occur, though not in the common situations where you might expect them from the English translations: *Watakusi no SIRU kágiri ...* 'So far as I (know =) CAN TELL ...' (R); *Ningen ga náze hito o korosú no ka ... sono konpon-teki na riyuu ni túite, watási-táti wa máda náni mo SITTE INAI, to omowaréru kara de aru* 'Why does a human being kill another person—[if the question is asked] it is because it seems that we still REMAIN IGNORANT of the basic reasons for that' (SA 2647.112a). Cf. *Go-syúzin no uwaki o ókusan daké ga siranái de iru* 'The husband's philanderings are known to all but his wife'. We can contrast the usual forms of verbs with somewhat similar meanings: *wakáru, wakaránai—wakátte iru, wakátte inai*; *omóu, omowánai—omótte iru, omótte inai*. The verb *súmu* 'lives; resides' most commonly appears as *súnde iru* and *súnde inai*, though the forms *súmu* and *sumánai* also occur (e.g. as 'inhabits' or in embedded sentences); this may be a result of the etymology, which indicates a semantic development from 'settles (down)'. Are there other verbs with similar peculiarities?⁹⁴

Notice that there is nothing to prevent the continuative V-te iru from making a command. In English 'Be doing it' will often sound strange, so that a more natural translation can be achieved with 'Keep doing it' or, with negative gerund, 'Refrain from (Resist) doing it': *Míte ite kudasái*^(c) 'Keep looking' or 'Keep your eye on it'; *Kiite ite né* 'Keep your ears open'; *Damátte i-nasái*^(c) 'Keep quiet' = *Hanasánai de i-nasái* 'Refrain from speaking'; *Kore o yónde ite kudasái*^(c) 'Read this for a while (or: till I come back)'; *Mátte ite kudasái*^(c) 'Wait (for a while)', 'Stay here/there (waiting)'.

The causative, the passive (adversative or pure), and the potential can apply to the gerund or to the auxiliary—or, in theory, to both. Examples follow.

-(s)asete iru: *Zibun wa kantoku daké*^(c) *site zyosyu ni sigoto o sasete iru* 'I'm doing just the directing and having an assistant do the work'.

-te isaseru: *Hinketu o okósita monó ga áttara, sibáruku atamá o hikúku site zit-tó*^(c) *site isaseta hoo ga ii* 'If anyone feels suddenly anemic it would be advisable to have them remain still with their heads down for a while'.

-(s)asete isaseru: NOT USED?

93. This is also true of the humble synonym *zon-ziru*(⁻): *zón-zite*(⁻) *óru* 'I know' but *zon-zínai*(⁻) 'I don't know'.

94. Kuno 1973.140 says that *sir-u* 'knows' and *ai-súru* 'loves' (and their passives) require *-te iru* because they are not stative, unlike English 'know' (*I am knowing it → 'I know it') and 'love' (*I am loving you' → 'I love you'). *Súmu* 'lives' is apparently treated both ways. (In both Japanese and English these assignments to aspectual categories are sometimes overridden by other elements in the context.)

-*(s)aserarete iru*: Anó-hito wa, mukyuu de hatarakaserarete iru sóo da 'He says he is being worked without pay'.

-*te isaserareru*: Nagái aida sitazumi de zit-tó^[1] site isaserareta 'For a long time I was kept at the bottom (of society)'.

-*(r)arete iru*: (1) Pure passive: Aru-Kápóne nánka mo irerareté⁽¹⁾ 'ta tte iu yuumei na tokoró da kedo, ... 'It is a famous place where they say even the likes of Al Capone were held ...' (SA 2673.122c); ... hooritu de gimu-zukerárete iru zíko no repóoto o ... 'the accident report that is required by law' (Tsukagoshi 204). (2) Adversative passive: Mukígen ni kane o karirarete ité wa tamaranai 'I can't stand having money borrowed from me without term'. (3) Potential: Dóo ni ka máiniti⁽¹⁾ komé no góhan ga taberárete itá no wa, hazime no ni-sánnen daké de, áto wa, múgi ya imó de sae taberénaku náta 'We managed to be able to eat rice for only the first two or three years, and then afterwards it got so we couldn't even eat barley or sweet potatoes'; ... náze soo náru ka wa tukaménai de ita 'they remained unable to grasp why it turns out like that' (SA 2651.21b).

-*te irareru*: (1) Pure passive: Sitte iru hitó ni mite irareru to, yari-nikúí 'It is hard to do when being watched by someone I know'. (But this can be taken as adversative passive.) (2) Adversative passive: Tomodati ni osokú made asonde irarete komátta yó 'Having a friend stay visiting so late was an annoyance, I tell you'. (3) Potential: O-kane ga takusan^[1] áru kara asonde ité mo tábete irareru 'I've got lots of money so I can go on eating even if I take it easy'; Ítu made píiman o tukútte iraremásu ka née 'How much longer can we go on raising our bell peppers (with land prices soaring)?!' (SA 2686.37d).

-*(r)arete irareru*: NOT USED?

-*(s)asete irareru*: (1) Pure passive: ? (2) Adversative passive: ? (3) Potential: Ití-nen mo ní-nen mo táda de kuwásete irareru món ka 'How can I go on feeding you free for a whole year, for two whole years even?!'

-*(r)arete isaseru*: NOT USED?

Examples of V-te iru with focus, restriction, etc., applied to the *gerund*:⁹⁵ Undoo sinái de nete BAKARI ita mi ní wa, húró wa kotáeta 'His body, having done nothing but lie around without exercise, felt the hot bath's effect' (SA 2672.24a); Bóku⁽⁻⁾ wa móo ka ni ti o suwarete BAKARI ita 'I was constantly having my blood sucked by mosquitos' (SA 2816.38a); Ókite DAKÉ WA imásu ga, máda arukemasén 'I am on my feet, at least, but I still can't walk'; Dóo⁽¹⁾ ni ka kóo ni ka tábete⁽⁻⁾ GÚRAI WA imásu ga 'I'm somehow managing to keep eating at least' (not common); Kyoositu ni okéru kyoogaku bákari de náku, doositu ni sín-syoku o tómo⁽⁻⁾ ni sité SURA iru gakusei mo áru sóo da 'I understand there are students who are not just coeducational in the classroom but are even eating and sleeping together in the same room'; Watakusi wa kessite gengo-kátudoo no mondai o issyo ni site rón-zité NÁDO inai 'I am not arguing the question of language in action together [with the other matter] or anything' (Kgg 88.84b); Sono musumé wa ki ga kurútte DE MO irú no ka né 'She must be out of her mind or something' (Y 569); Íma wa, apaato-gúراسi o sité KOSO irú ga, kátute wa oogánemoti de koodai na ié-yásiki o mótte ita hitó da 'Now he is precisely living in an apartment, but at one time he had a lot of

95. There are written examples that seem a bit clumsy: Koko dé wa, móhaya kikái zítai mo gakusyuu suru monó to site kangaerárete SÁE MO irú no de aru 'Here the machine itself is already being even thought of as a thing that learns' (Kgg 81.134a).

money and vast real-estate holdings'. And, applied to the *conversion*: Kodomo ga benkyoo site í SAE suréba, okáasan wa yorokónde irú n desu 'If the child is just studying, his mother is happy'; Reikiti wa konna kotó o kangáeru to, Otowa [? O-tówa] ga áru kurói kage o hiite zibun ni tóo-zite(¯) í DE MO suru yóo de, nan-to-náku huan na kimoti ga suru 'Thinking about these things, Reikichi got a vaguely uncomfortable feeling as if [his wife] Otowa had cast a black shadow on him or something' (Y 519).

There are also examples of applying gerund and focus to the auxiliary, in order to place the entire expression in a larger sentence: Siyoo no denwa bákari kámete ité WA ikenai 'You mustn't keep making personal phone calls all the time'; Sigoto ga náí kara, yasúnde ité MO íi desu yó 'There's no work to be done, so you can go on idle'.

In the following example V-té kara is applied to the conversion: Asoko ni san-nen bákari súde ité kara, koko e uturímásita 'After living there for a period of three years, we moved here'.

The vulgar verb *ketukáru* is a pejorative or abusive substitute for *iru* or *óru*, and V-te *ketukáru* is used to mean V-te *iru*. In Ōsaka, V-te *komasu* is used as a pejorative version of V-te *iru* when referring to the speaker's own actions, and V-taru or V-tageru are used in a similar way (Maeda 1961.198-201), being abbreviations of V-te yaru and V-te ageru with a semantic extension of the "favor" meaning that is usual for those forms (§10). Cf. the remarks on V-i-ya[a]garu etc. in §9.1.10. Examples from modern fiction of V-te *ketukáru*, including V-te *ketukari-yagáru*, will be found in Y 539. The etymology of *ketukáru* is unknown; my guess is that it may be related to the old compound verb *ke-tuk(e)*- 'kick at, land a kick on', either by contamination with *áru* or by back formation to an intransitive, the semantic extension being not unknown elsewhere in the world ("What are you kids doing still kicking around here?", "I kicked around Kansas City till I was fifteen or sixteen, then ..."). Maeda 1965 thinks *ketukáru* is from *ketu*, a vulgar word for 'behind, arse' (adopted from the Chinese reading of a character *aná* 'hole'), by way of the notion 'sit on one's behind' = 'stay, be', but that is not the only etymology which has been suggested (see Y 539).

In modern Ōsaka the word is often pronounced *kekkáru* (Makimura 217b): *Nán[i o nu]kasite kekkáru nen* (= *Náni nukasite i-yagaru n da*) 'What the hell are you saying?'; *Náni site kekkáru nen* (*Náni o site i-yagaru n da*) 'What the hell are you doing?' But the older pronunciation is *ketukáru*: *Mátte ketukáre* (= *Mátte i-yagáre*) 'Don't move—wait there!' (Maeda 1965.177c); *Konna tókó ni ketukáta* 'What a position I'm in!' (Ibid.) And the *kekkáru* pronunciation is not limited to Ōsaka: ... *tobidasi-tákutte, úzu-uzu site kekkáru n da* 'they are itching to run away' (Fn 174a—the speaker would appear to be from the Tōkyō area).

According to Yoshida (546) the vulgar verb *uséru*(¯), used as an equivalent of the auxiliaries *iku* and *kúru*, is also sometimes used for (V-te) *iru*.

9.2.4.(2). *-te áru, -te gozaimásu*. The conversion V-te *áru* contracts to V-t'áru in Kansai speech but not in the standard language.⁹⁶ As a result you may be uncertain when you

96. Examples: ... *kore sá-úmake káit' aru zya náí no '... this one, isn't it—uh—well drawn?*' (Fn 372a); *Áa, mósi-mosi, koko ni kása ga wasuret' arimásu ga, anáta no kása to tigaimásu ka* 'Oh, say, there's an umbrella forgotten here; isn't it yours?' (Inokuchi 94—Kyōto).

encounter /sitaroo/ whether it represents sitá 'róo = sitá {da}róo 'probably did' or sit' aróo = sit{e} aróo 'it is probably done', but the latter expression is semiliterary for sit{e} áru daróo so that the contraction is unlikely to be heard in speech. A third possibility is site {y}aroo → sit{e}'aroo → sit'aroo 'I'll do it (for him)'; see §10. The ending -tatta can be a version of -te átta, of -te yatta, or (in Kushimoto or Wakayama) of -tyatta = -te simatta (Shibata 1961.157-8; cf. Y 232). But in Ōsaka (according to Maeda 1961.228) there is compensatory lengthening in the contracted form -táaru, and the lengthening is obligatory unless you choose the option of using the uncontracted form. Examples of both -táru and -táaru can be found in Y 517-8. There are also dialects which contract to -tyáru; according to Miyara (150) in Shikoku a distinction is made between sityaaru < site áru and sityaru < site yaru.

The conversion V-te áru is best known as a kind of roundabout passive that permits one to take the object of a transitive verb and turn it into the subject, as when Mádó o siméru '(Someone) closes the window' is converted into Mádó ga símete áru 'The window is closed', which differs in meaning from Mádó ga simátte iru 'The window is shut' (resultative of Mádó ga simáru 'The window shuts') in that the latter implies no agent while the former merely avoids mentioning the agent.⁹⁷ We will call this common use of VT-te áru the INTRANSITIVIZING RESULTATIVE. As we have seen in §3.2, the intransitivizing resultative can apply only to transitive verbs of ACTION; there is no *Tomodati ga mátte áru 'The friend is awaited' because mátu belongs to the verbs of EMOTION, and there is no *Kádo ga magatte áru 'The corner is turned' because magari is a verb of MOTION (= a quasi-intransitive verb). I have had difficulty eliciting examples for mótu (and Yamada 1968a rejects *mótte áru) and for tóru, but tótte áru can mean 'is reserved (taken)' or 'is removed (taken away)'; and hakonde áru 'is borne/brought' is an acceptable conversion from hakobu. The intransitive resultative can be applied to CAUSATIVES from action verbs only, and not to causatives from verbs of emotion or motion or causatives from intransitives in general, so that the following sentences are to be rejected: *Untén-syu ga (kádo o) magari sete áru 'The driver is made/allowed to turn (the corner)'; *Tori ga (sóra o) tobasete áru 'The bird is made to fly (the sky)'; *Kodomo ga suwarasete áru 'The child is made/allowed to sit down'. Pure passives will permit the POSSESSIVE RESULTATIVE (to be described below), so that you can convert Monó o nusúmu 'They steal things' into Monó ga nusumaréru 'Things get stolen' and then convert that into Monó ga nusumárete áru 'Things have been stolen'. Examples: Kakárete áru zízitu sono-mónó wa harénti nádo to iu monó de wa náí ga, búnsyoo ga íi 'The events written up are not in themselves of scandalous delight or anything, but the [sentences =] style is good' (SA 2685.98a); ... sono saikon-bánasi ya saikon no tomádó(í) ya boosai no tuioku nádo ga egakárete áru 'the story of his remarriage and the bewilderment of the new marriage and reminiscences of his late wife are all portrayed' (SA 2687.108d); ... zentai de zyuuíp-pen no sakuhi ga sippitú-zyun ni osamerárete áru 'a total of eleven works are collected in the order of their composition' (SA 2687.108c); ... séki ga sitei sarete átta 'the chairs were assigned ...' (Tk 4.208). You can also apply the possessive resultative to an adversative

97. And it is probably unknown who was responsible for the "storing" in the example Saiwai kyuumei-bóoto ni wa syokúryoo(í) ya mizu ga zyubún tunde átta 'Fortunately there was ample food and water stored on the lifeboat' (SA 2674.129c).

passive (Hito ga monó o nusumárete áru 'People have had their things stolen'); but you can not apply the intransitivizing resultative to an adversative passive even though it may contain an object: from Hito ga monó o nusumaréru 'People suffer from having things stolen' it is not possible to get *(Hito ga) monó ga nusumárete áru. Instead, (?)Hito no monó ga nusumárete áru 'People's things have been stolen' might be possible, but only as a possessive resultative made on a pure passive (the marking of monó ga is due to the passive, not the resultative); and even then it will be comfortable only if made negative or a rhetorical question. Apparently the subject of the intransitivizing resultative (which comes from the object of the underlying sentence) must be inanimate; cf. BJ 1.283. Some grammarians take a dim view of such forms as sarete áru; cf. Kōgo-bumpō no mondai-ten 292a, which accepts uete áru, uwatte iru, and uerarete iru for 'is planted' but suggests that forms such as uerarete áru "be avoided".

The intransitivizing resultative conversion can be applied to EXCESSIVES, provided they are built on a verb which would take the conversion in its own right; VT-i-sugite áru, VT-i-sugisasete áru, and VT-(s)ase-sugite áru are all quite acceptable, given the appropriate verb. And the excessive can be applied to the output of the conversion: Boo ga(o) magete ari-sugiru means much the same thing as Boo ga(o) mage-súgite áru 'The stick is too bent'. In theory, at least, it should be possible to create the sentence (?)Boo ga(o) mage-súgite ari-sugiru, perhaps with the meaning 'Too many sticks are overly bent'; but I have yet to run across an authentic example. Since the verbalization of desideratives (and other emotion words) with -gáru yields a verb of EMOTION, you will not find *V-i-ta-gátte áru, even if the underlying verb is itself a transitive verb of action.

The V-te áru conversions can be made negative (V-te nái) but the infinitive form V-te náku appears to be limited to use as a formal synonym of V-te nákute 'is not and ...'; the expected *V-te náku náru/suru does not occur. The conversions can be applied to a negativized verb: V-(a)nái de áru: Atena wa kakánai de átta 'The address was unwritten'; O-bentoo wa tabénai de átta 'The lunch went untouched'.

There are certain limitations on the intransitivizing resultative, once made. There is no *V-te ari-yasúi/-nikúí; instead you use V-te ari-gati da and its negative (or build V-te áru on the negative verb). And V-te ari-nágara (mo) will have only the concessive meaning 'although' regardless of the underlying verb. Are these limitations true also for the possessive resultative?

The second use of V-te áru can be called the POSSESSIVE RESULTATIVE to distinguish it from the STATIVE RESULTATIVE of V-te iru—with which it is, however, virtually synonymous in one of its meanings. There are three meanings, and each can be paraphrased: (1) ANTICIPATORY, like V-te oku ('gets it done for later')—but of more "stative" situations (Y 512); (2) EXPERIENTIAL, like V-ta kotó ga áru ('has once/even/indeed done'); and (3) SIMPLE RESULTATIVE, like V-te iru ('is in the continuing state resulting from doing'). The possessive resultative leaves the adjunct markings intact and it is not limited to transitive verbs.⁹⁸ The following examples illustrate each meaning with intransitive verbs.

98. Hayashi 127 suggests that V-te áru expresses an action that is completed "for some purpose" and is "closely connected with intention and preparation", hence (?) seldom used with the intransitive. It is interesting that KKK 25.12 found 15 instances of N o V-te áru and only two of N ga V-te áru; in written Japanese, at least, the possessive resultative would appear to be (given the intransitive gerunds)

(1) ANTICIPATORY: Bóku(¯) wa sakúban yóku nete áru kara (= nete óita kara) kyóo no tésuto wa sinpai náí 'I got a good sleep last night (to be ready) so I'm not worried about the test today'; Kore-dake asonde áreba (= asonde okéba), kon-gákki wa otituite benkyoo dekimásu yó 'Now that I've had a good holiday I should be able to concentrate on my studies this term'.

(2) EXPERIENTIAL: Níkkoo e wa iti-dó^[1] itte áru kara (= itta kotó ga áru kara), kóndo wa Hakone ni ikoo 'I've been to Nikkō so this time I want to go to Hakone'; Konna mondai tó wa máe ni tori-kunde áru kara (= tori-kunda kotó ga áru kara) heiki désu 'I have struggled with such questions before so it doesn't faze me'; Ano yamá wa iti-dó^[1] gakusei no kóro nobotte áru kara (= nobotta kotó ga áru kara) it⁽¹⁾u de⁽¹⁾ mo go-annai simásu yó 'I climbed that mountain when I was a student so I'll be happy to take you there any time'; Tyóotyoo(¯) ní wa iti-dó^[1] nátte áru kara (= nátta kotó ga áru kara) kóndo wa O-súzu no yakú o si-tai 'I have been Butterfly before, so now I would like to play the part of O-suzu'.

(3) SIMPLE RESULTATIVE: (?)Titi wa móo kono kaisya ni gozyúu-nen mo tutómete áru kara (= tutómete irú kara), hyaku-mán ⁽¹⁾gúrai no taisyók[ú]-kin(¯) wa moraerú daroo 'My father has worked for this company more than fifty years so he should get a retirement allowance of a million yen or so'.

It is not always obvious that a given instance belongs with one of the three meanings; some sentences may be ambiguous or vague in this respect: Koko máde kite áru kara, móo ikanákute mo ii 'Since they've come here, there's now no need for us to go'; Zyuubún ni nete arimásu ka 'Have you had enough sleep?'; Sokai sasete áru 'I had them [the children] evacuated (during the war, and they are still there)' (Kawabata: Saikai 89); (?) Nagái aida gakkoo e itte áru kara, nán de⁽¹⁾ mo sitte 'ru 'He's spent a lot of time going to school so there's nothing he doesn't know'. From /netenáikara/ you can not tell whether what is intended is nete 'nái kara (= nete inái kara) or nete náí kara, but without the particle the accent will differ: nete 'nai (= nete inai, cf. nete imasén), nete náí (cf. nete arimasén).

The same three meanings would seem to be possible for transitive verbs, but that is true only when the adjuncts—provided they are all expressed—are left intact. (In some of the examples I have cited objects with o/ga when it is also possible to make the intransitivizing resultative). Examples of transitives follow.

(1) ANTICIPATORY: Hurú tegami o/ga hozon site áru 'Old letters are kept'; Niwa no teiré o suru entei o yatótte áru 'A gardener is hired to take care of the garden'; Kodomo o yóku sikatte arimásu kara (= sikatte okimásita kara), dóo-ka kanben site yatte kudasái 'Since the child has already been scolded by me, please forgive him'; Arakazime nanmín(¯) o yosoo site mokuzoo no kyozyúu-too o tátete átta no da ga, ... 'Previously they had built some wooden shelters in anticipation of the refugees, ...' (SA 2686.43c).

(2) EXPERIENTIAL: (?)Hito o sinu hodo^[1] ái-site áru (= ái-sita kotó ga áru) hitó wa dóko ka tigau tokoró ga áru 'A person who has had the experience of deeply loving another person is somehow different'.

(3) SIMPLE RESULTATIVE: Kono zínzya ni wa dónata o/ga matútte(¯) arimásu ka 'Who is enshrined at this shrine?'; Koko wa hito ga hunde áru kara (= hunde irú kara),

over eight times as common as the intransitivizing resultative, though the latter is the only one which has received much attention in the textbooks. Y 516 discusses the growth of N o V-te áru and its replacement of N ga V-te áru.

hunde nái tokoró o arukimasyóo 'Since someone has already tramped in this snow, let's find some place to walk where the snow is fresh'; Arayúru kéesu o keisan site áru 'All [cases=] eventualities have been taken into account' (SA 2671.28d).

Causatives are readily acceptable: Sárako ni koosui o tukawasete átta 'Sarako was being allowed to use perfume' (Y 515); Móo zyotyuu ni kai ni ikasete arimásu kara, dóozo go-sinpai náku 'Don't worry, I've already sent the maid out to buy it'. But the passive is more difficult to elicit; the following examples are accepted by some speakers.

(1) *Adversative passive from intransitive verb*: Watasi wa máe ni móo ue no ko ni sinarete áru kara, kóndo no hukóo de wa amari óoki na dageki o ukemasén 'Having suffered the death of my oldest boy I am not so greatly shocked by this latest unhappiness'.

(2) *Adversative passive from transitive verb*: Hoorei ni yori, tatiiri o tomerarete áru 'Entrance is prohibited by ordinance' (MJW).

(3) *Pure passive*: Koré-ra no búnsyoo wa seikatu ni musubi-túite kakárete arimásu 'These sentences are written out of their daily lives'. Y 514 cites three examples of the pure passive from early 20th-century fiction; Y 515 gives a couple of more recent examples but suggests it is on the decline.

Forms made on the negative V-(a)nái de áru are uncommon and seem to be limited to the ANTICIPATORY meaning: 'leaves something undone (intentionally)': O-yasumi no tamé ni ano éiga(¯) wa máda minai de áru no yó 'I'm putting off seeing that movie till the holidays'.

The following examples illustrate stylization (with gozaimásu) and exaltation: Otóosama wa yóku sakúban o-yasumi ni nátte gozaimásu (o-ari ni narimásu, o-ari désu) kara kyóo wa o-génki desu 'Since your father rested well last night, he is fine today'; O-namae ga káite gozaimásu 'Your name is written'; O-namae o o-kaki site gozaimásu 'I have your name written'; Watasi wa sakúban yóku yasúnde gozaimásu kara, kyóo wa génki desu 'Since I rested well last night, I am fine today'.

The V-te áru conversions may be on the way out; Yoshida suggests they are losing ground in favor of V-te iru, though some dialects (such as Tsugaru) are said to use -te áru INSTEAD of -te iru (Y 516).

Some intransitive verbs will not permit the V-te áru conversion and others occur with it only uncommonly. Those which do not permit the conversion include áru itself (átte áru is from áru), i-ru 'stays', and ir-u 'needs' (none of which normally appear in the V-te iru form, either); and also the following verbs, all of which lack imperative, desiderative, and passive forms as well: kikoeru 'is heard', kómu 'gets crowded', miéru 'is seen', mitukaru 'is found', niru 'resembles', suku 'empties', tariru 'suffices', tigau 'differs', wakáru 'understands', Alfonso 904 says the V-te áru form does not occur with the following verbs, either: abareru 'rampages', abiru 'bathes in', agaru 'rises', akiraméru 'abandons (an idea)', amáru 'remains (in excess)', arasóu 'struggles', arawaréru 'appears', atukau 'treats, manages', hazimeru 'begins it', haku 'wears (on the feet/legs)', hanasikakeru 'addresses, speaks to', hikkósu 'moves (house)', kagír-u 'limits', kamáu 'matters', kan-ziru 'feels', nozómu(¯) 'hopes (for)', wasureru 'forgets'. And Yoshida 516 says V-te áru is now not used for arúku 'walks', oyógu 'swims', tobu 'flies', hataraku 'works', odoróku 'is startled', etc.

Verbs for which V-te áru is uncommon involve natural happenings largely outside human control: húru 'rains, snows', hiéru 'gets cold', hikáru 'shines', kareru 'withers', moeru 'burns', sásu 'shines', kooru 'freezes', haréru 'clears up', naóru 'recovers, gets

repaired', okóru 'occurs, happens', sodátu 'gets reared', hanaréru 'gets separated', nureru 'gets wet', haéru 'grows', nieru 'gets cooked', etc.

Apparently it is possible to ring the V-te áru conversions on most auxiliaries: with both intransitive and transitive verbs we find V-te míte áru, V-te óite áru (even oite óite áru), V-te agete áru, etc., but there seem to be doubts about ?V-te simatte áru, and *V-te ite áru is to be rejected.

Since both Mádó ga akete áru and Mádó o akete áru occur and since in an adnominal sentence the subject marker gá can be replaced by nó (§13.1.6), it is possible to construct an adnominalization that contains an adjunct optionally marked with any of three particles: mádo no/ga/o akete áru heyá 'a room whose windows have been opened'. A similar opportunity is presented by the desiderative: sibai no/ga/o mi-tái hitó 'the person who wants to see the play'.

The resultative, once made, will enter into most of the constructions open to áru 'exists' itself. From the uses of V-te áru it is easy to see how, by contraction, the expressions have led to the modern perfect V-tá, the conditional V-tára, and the representative V-tári. Notice that V-te áru n[o] desu can be further shortened to V-te ándesu.

One difference between the syntax of possession and that of the V-te áru conversions is in the marking of the "possessor":

Hito ni/ga(→ wa) N ga áru

Hito ni/*ga→ wa N ga VT-te áru

Hito ga(→ wa) N o VT-te áru

Hito ga(→ wa) N ga ... (§3.11)

Hito ga(→ wa) [? N ga] VI-te áru

That is, with TRANSITIVE ACTION verbs you have the option of converting the object (N ó) into the subject (N gá), but if that is done you must then either suppress the mention (but not the implication) of the underlying subject—i.e., you must omit Hito ga—or else convert it into a THEME with obligatory focus (typically subduing it with wá, though it may be highlighted with mó if the context calls for that). By looking at it in this way we can perhaps include the INTRANSITIVIZING RESULTATIVE as a special case of the POSSESSIVE RESULTATIVE, involving an optional subjectification of the object of transitive action verbs with the entailment of obligatory de-subjectification of the underlying subject into ní-marked possessor (but not gá-marked!) or into a focused theme.

The reason for this difference may be that Hito ga N ga áru is usually limited to INALIENABLE possession, while Hito ni N ga áru is used for ALIENABLE possession. Of course, Hito wa can be interpreted as either the subdued Hito ga or as a subdued thematization, and hence it is available for either interpretation. The resultative would seem to be getting treated as an "alienable" possession.

The possessive resultative, alone of the various V-te áru conversions, will permit subject exaltation, yielding V-te o-ari ni náru: Yóku sirábeta o-ari ni náru kara takusáñ o-yomi ni naréru desyoo 'Since you have got it thoroughly checked you should be able to read a great deal'.

In the following examples of V-te áru the focus or restriction, etc., is applied to the gerund: Náni ka káite WA áru ga, hakkíri wa yoménaí 'Something IS written but it can't be clearly read'; Náni mo siraseté WA náí ga, móo dáre ka ni kiite sitte 'rú desyoo 'Nothing has been reported, but you can probably find out by asking someone now'; Keiyakú-syó(¬)

ni káite MO áru si, kuti de setumei mo site moraimásita 'It is (both) written in the contract and I got an oral explanation, too'; Kamidana ni ageté KOSO náí ga, taisetu ni site imásu 'It isn't precisely put on the household altar, but we are taking good care of it'; Syokuryóo-hin(-) ga katte DAKÉ⁽²⁾ áru ga, syokuzi no yóoi wa site náí 'The groceries are bought at least, but the meal is not prepared'; Kisó ga osieté SAE áreba dokusyuu saseté mo ii desyoo 'If the fundamentals just be taught, you can let them study by themselves'. The following types are less common: (?)Róogo(-) no yóoi ga sité NÁDO/NÁNKA áttara, ima-goro kodomo no sewá ni nátte 'náí hazu da 'If provisions are made for old age and all, there is no need these days to become a burden on one's children'. I have been unable to elicit V-té (-)GÚRAI áru or V-té BÁKARI áru.

It is more usual to apply the particles of focus, restriction, etc., to the *conversion*: Zyúnbi site ári WA surú ga hu-zyúubun da 'The preparations are made but they are inadequate'; Tokí ni wa yóku káite ári MO surú ga, taitei no baai wa damé da 'It is sometimes well written but usually it's no good'; Zyuubún⁽¹⁾ zyúnbi site ári SAE suréba, sigoto sono-mónó ni wa anmari zikan ga kakaránai desyoo 'If preparations just be made adequately, the work itself shouldn't take too much time'. Miscellaneous examples: Zyúnbi ga site átte mo, sikén no ása wa sinpai de otitukanai 'Even though I've got myself prepared, I'm uneasy with anxiety about the morning of the exam'; Heyá⁽¹⁾ no náka ga konna ni kitanáku site átte wa okyakusan o o-toosi dekinai yó 'I can't show the guest in, with the room this filthy inside'.

9.2.4.(3). *-te oku, -t' oku*. Although oku is atonic, it acquires an accent AFTER THE GERUND OF AN ATONIC VERB in the forms -te óita, -te óite, -te óitara, -te óitari and their contractions -t' óita, -t' óite, -t' óitara, -t' óitari. In other forms, including the contracted versions, oku retains atonic patterns: -te oku, -te okéba, -te okanai (etc.) and -t' oku, -t' okéba, -t' okanai (etc.). (By way of contrast, notice V-té 'ta but V-te ita.) Verb gerunds ending in -de contract to -d' oku (nónd' oita = nónde oita); the negative gerund V-(a)nái de will also contract: sinái d' oku = sinái de oku 'leaves it undone', sinái d' oita = sinái de oita 'left it undone'. In Ōita (north Kyūshū) -te oku contracts to -tyoku (Shibata 1961.220); Y 548 has examples. This is true also of parts of Shikoku (Miyara 1954.150).

The verb oku means 'puts, places, sets (aside)'; as an auxiliary it is used to add one of the following meanings to the gerund:

(1) 'does it and puts it aside; does it so the result is on hand; gets it done'. This meaning approaches V-te simau. Examples: Hatí-zi made ni | (sono kane o |) atúmete oite kudasái 'Please have it (the money) collected [and on hand] by eight o'clock'; Teeburu o | yoyaku sit[e] óitara || dóo desyoo 'How about reserving a table?'; Asitá⁽¹⁾ sikén da kara || yóku || hón o | yónd' oitari, || tépu o | kiit' óitari sita (or: | sit' óita) | hoo ga | ii 'There's an exam tomorrow so we'd better get some reading done and get some tapes listened to'.

(2) 'does it and leaves it that way'; with negative gerund 'leaves things as they are without doing it'. This means approaches V-te iru/áru. Examples: To o símete oite kudasái 'Close the door and leave it shut'; Sono mamá ni | site óite kudasái 'Leave things alone; leave it as it is'; Hón o || akenái de | oki-nasái 'Don't open your books, leave them closed'; Kutú o || hakanái de | oité mo | ii 'Stay as you are—you don't have to put your shoes on'; Dénki o || túkete | okimasyoo ka 'Shall I put the lights on (and leave them on)?'; Dénki o ||

tukénaí de | okimasyóo ka 'Shall I leave the lights off (as they are)?'; Siyóo ka || sinái de | okóo ka 'Shall I do it or not?' (= Siyóo ka yameyóo ka). A negative gerund + [wa] + okanai means 'can't resist (refrain from) doing, is bound/sure to do': Tóku ni Yodogawa Nagáharu-si ga tótuzyo to site arawaréru síin wa, kankyaku no bakusyoo o yobazu ní wa okanái daroo 'Especially the scene where Mr Yodogawa Nagaharu suddenly appears is bound to call forth a burst of laughter from the audience, I think' (SA 2645.108a). Cf. the negative gerund + irarenai/orarénai 'can't help but do', p. 520. More examples: ... kakutoo o umazu ní wa okanai noomin ... 'farmers who just have to come to fisticuffs (who can't let it go without coming to blows)' (SA 2676.97b); Daizai-teki ni míte mo, dókusya(-) ni syókku o ataezu ni okanu sinkoku na hanasí da ga, ... 'From the point of view of subject matter, too, it is a serious story that is sure to give the reader a shock ...' (SA 2674.92d).

(3) 'does it and lets it go at that (for the time being), does it for now (as a makeshift or temporary arrangement), lets it go at doing; does once anyhow; does it once and for all; goes ahead/on and does it'. This meaning approaches V-te míru, V-te simau. Sometimes the expression will be anticipated by a prefatory Kari ni ... 'Temporarily' or 'For the time being'. Examples: Tó-ni-kaku || kiite óite kudasai 'Let him have a hearing at least'; Tatóeba || káre ga | seikoo sinai to site okoo 'Let's say he fails to succeed(, then ...?)'; Koo site oki-tái n desu 'I want it this way for now'; Zya, || ni-sen-en || agete okimasyóo ka 'Shall we, say, let it go at giving him two thousand yen?' or 'Shall we go ahead and give him two thousand yen?'; Awánai de | oitára || okóru ka | ná 'I wonder if he'll get angry if I don't go ahead and see him?'; Átte | okanái de || daizyóobu ka sira 'I wonder if I can get by without seeing him?'; Syokuzi o sit' óite wa || dóo 'How about going ahead and eating?'; Kusuri o nónd' oite | né 'Go on and take your medicine, now'; Itte okú ga ... 'Let me tell you now (once and for all), ...'.

(4) 'does it in advance (so that it will be ready), does it now (so it will be out of the way), does it first (so that other things can happen later); does it in preparation or anticipation; prepares, anticipates, readies (by doing); gets it done (now/first—so one is free for other things), gets'. This meaning approaches V-te iru/áru, V-te míru; it differs from Meaning (1) in emphasizing the resulting state. Examples: Káite oita | tegami o | te-watásita 'I handed over the letter that I had (earlier) written'; Kónban wa || yóku | nete oki-nasái 'Tonight get a good night's sleep (so you will be fresh for tomorrow)'; Kippu o | katte okimasyóo ka 'Shall I get the tickets now (for later use)?'; Denwa site óita hoo ga || íi zya náí desvoo ka 'Shouldn't we phone first?' or 'Shouldn't we be phoning (now)?'; Sirábet' oitara || háha ni mo | siraset' okanákutya ... 'When I've got it checked out I must let mother know too'; ... íma || hoosoo wa || rokuon site o-oki ni náru n desu ka 'are you (pre)recording your broadcasts now [instead of doing them live]?' (Tk 2.278a).

Tótte(-)oku is usually considered to be a derived compound verb with the meaning 'sets aside, reserves, keeps, holds, saves (in store)': Watasi no tamé ni || séki(-) o | tótte(-)oite | né 'Please save me a seat (for I am coming)'. But see the discussion on p. 513.

Gerunds of stative, punctual, and involuntary verbs are difficult to put into these meanings. Apparently áru 'is' and ir-u 'needs' never take the V-te oku form, so that átte oku will come from áu and itte oku can only be from iku 'goes' or iu 'says'. But examples of certain other verbs in question have been accepted by some speakers: isóide oku 'hurries now (so that one can take it easy later)', oyóide oku 'gets the swimming out of the way now (so as to avoid possible bad weather later)', utí(-) o déte oku 'gets out of the house now (so

that later ...)', *matí o tátte oku* 'goes ahead and leaves town', *arúite oku* 'lets it go at walking', *ótite oku* 'gets one's fall [e.g. by parachute] out of the way', *súnde oku* 'takes up residence (to avoid some consequence expected otherwise)', *sinde oku* 'dies once and for all', *ite oku* 'stays for the time being', Acceptable examples can be constructed for *nátte oku* 'becomes it now (so that later)', *kawatte oku* 'turns into it now', *sarete oku* 'gets/lets it be done to one now (so that later)', *site moratte oku* 'lets someone do it for one now',

Some emotion verbs seem to accept the V-te oku conversion: *nozónde oku* 'expects (for the time being)', *sitagatte oku* 'obeys (in anticipation)'; what about *yorokónde oku*, *ái-site oku*, *mátte oku*? *Omótte oku* 'thinks (for the time being)' and *wasurete oku* 'forgets (for now)' are acceptable.

Excessives can take the conversion, though it is hard to find examples: (?)*si-súgite oku* 'overdoes for now', *si-suginai de oku* 'lets it go at not overdoing', *si-sugite okanai* 'doesn't overdo for now', *si-suginai de okanai* 'doesn't let it go at not overdoing'. Moreover, the excessive can be applied to the conversion itself: *site oki-sugíru* 'all too often/much lets it go at doing it', (?)*site oki-suginai* 'does not too often/much let it go at doing it'. And that is true even when the conversion has itself been applied to an excessive: *si-súgite oki-sugíru* 'all too often overdoes it for the time being', *si-suginai de oki-sugíru* 'all too often doesn't overdo it for the time being', *si-súgite oki-suginai* 'doesn't overdo it for the time being too often', *si-suginai de oki-suginai* 'doesn't all too often leave it at not overdoing'.

The facilitative-propensive conversions can be applied to the V-te oku conversion: *site oki-yasúu* 'it is easy to let it go at doing' or 'tends to let it go at doing'. Also applicable is the (concurrent-)concessive: *keiyaku site oki-nagará {mo}* 'despite one's promise'. Examples of subject exaltation applied to gerund or to auxiliary are rare; Y 548 says this does not occur at the end of a sentence, but he offers a non-final example from Kawabata: *Okáasan no sinigao o míte o-oki ni náttara, kit-tó obóete irásita to omóu wá* 'I think [? you] must have remembered once [? you] gazed at mother's dead face'.

Causative, passive (pure or adversative), and potential can be applied either to the gerund or to the auxiliary, or—in theory—to both; but none of the forms are particularly common. All the following examples are the result of elicitation.

-(s)asete oku: *Nagái aida || matásete oita | kyaku to, || ture-dátte || sóto e | déta* 'I accompanied the guest out that I had kept waiting so long'; *Táoo kun wa || móo || kodomo zya náí kara || ziyúu ni || si-tai kotó o || sasete óitara | dóo desu ka* 'Taro is no longer a child, so why not let him freely do what he wants to?'

-te okaseru: *Zyotyuu ni || góhan no | sitaku o | site okasemásu kara ...* 'Don't worry, I'll leave the rice for the maid to prepare'.

? *-(s)asete okaseru*: ? *Ano kúrasu wa || senséi ga | irassyáru made || zyosyu ni | rensyuu o sasete okasemasyóo* 'Let's have that class drilled by the assistant until the teacher arrives'. This would be better with simple *okimasyóo*.

-(r)arete oku: *Konna yasasii sigoto nára || makasárete | oité mo, || dekirú. | zisin ga arimásu* 'If I am left entrusted with such an easy job I have confidence that I can do it'.

-te okareru: (1) Pure passive: *Hitóri de | oite okareta* 'I got put by myself'. (2) Adversative passive: *To o (|) ake-ppanasi ni site okarete, || doroboo ni hairáreta* 'We had the door left wide open and were visited by a thief'. (3) Potential = -te ok[ar]eru: *Konna tabemónó() wa || nágaku | hozon site ok[ar]eru* 'You can keep such food for a long time'.⁹⁹

99. Authentic examples: *Ítu made mo || kimi o || kono mamá ni | sité wa | okenai* 'I can't keep you

-(r)jarete okareru: Tumaránai | sigoto bákari | saserarete okaretá no de || sono kaisya o |yamete simatta 'I suffered from being left made to do dull work only, so I finally quit that company'.

-(r)jarete okaseru: Probably not used.

-(s)asete okareru: Nagái aida || o-tyakumi bákari sasete | okaretá no de || hará o | tátete simatta 'For a long time I was left allowed to pour tea [for the male employees] and nothing else so that I ended up angry'.

-(s)saserarete oku: ?Sigoto ga || dónna ni | tumaránakute mo, || toobun no aida wa, || mónku o | iwazu ni || nan^(t) de^(t) mo || "Hái || hái" || to || saserarete okimasyóo 'However dull the job may be, for the time being I will let it go at being made to say "Yes sir, yes sir" without a complaint'.

-te okaserareru: ?Byooin dé wa || is-syúukan ~bákari | nãni mo sezu ni, | zit-tó^[L] site okaserareta 'I was made to stay quiet for a week in the hospital not doing a thing'. This would be better with simple okareta.

Examples of V-te oku with focus, restrictives, etc., applied to the *gerund*: Go-íken o | ukagatté WA | okimásu ga, || go-íken ~dóori ni | suru tó wa || o-yakusoku dekimasén 'I am asking your opinion, to be sure, but I can't promise that I will act according to it'; Anó-hito ni || zizen ni || hitókoto | kotowátte SAE | okéba, || gózitu(-) no | gota-gota wa || okoránakatta ká^(t) mo sirenai 'If I had just given him a word of refusal in advance, perhaps the later trouble would never have arisen'; Sono || bakudai na yúusi ni | túite wa, || sitén-tyoo no | mimí ni | ireté SURA | okazu, || katte ni site simattá no da | sóo da 'They say he didn't even let the branch manager hear of that huge loan but used it for his own purposes'; Sonó-hito ni | átte | DAKÉ WA | okimásita 'I let it go with just seeing him'; Zat-tó^[L] yóoi | sité DAKÉ^[L] | okéba, || áto wa || sono ba ni nátte kara | dekiru 'If you just make rough preparations, the rest can be done on the spot'; Kamidana ni ageté KOSO | okaná ga, || taisetú ni site imásu 'I don't exactly keep it on the household altar, but I take good care of it'. I have been unable to elicit V-té BÁKARI oku, and the following two types are far from common: Hizyóo-zi no | yóoi o site ~GÚRAI || okená n desyoo ka 'Couldn't we do at least emergency preparations?'; Yuigon o káite NÁDO^(t) | oku hazu ga náí 'There's no need to write a will or anything'.

It is more usual to apply the particle of focus, restriction, etc. to the *conversion*: Iwarete | sigoto o site okí WA | surú ga, || zimu-teki de || sínsetu na | tokoró wa || zenzen náí n desu 'He does what he is told to do, but it's business-like and without a bit of kindness'; Seiketu ni site okí SAE | suréba, || sonna byooki ní wa | kakarimasén 'If you just keep yourself clean you won't catch that sort of disease'. Miscellaneous examples: Sara ya (|) tyawan o, || konna ni yogosite óite wa | damé da 'The saucers and cups mustn't be left so dirty'; Íma || tabe-táku | nákatara || nokósite | oité mo | íi desu | yó 'If you don't feel like eating now it's all right to leave it for later'; Yóku || sitaku o site óite kara, || hazimete kudasái 'When you are well prepared, please begin'; Huruí | monó wa || ataká-mí(-) ga | átte, || totte-mo íi n desu kedo, || anmari hurúí (|) monó^[L] | bákari | tótte | oitá n zya [= tótte oitá^(t) no de wa], || sínpo tte | monó ga || náí to | omóu n desu 'Old things have a warmth and

this way for ever' (SA 2793.105b); Káge e | mawatte || hikyóo na | kotó o | suru yóo na | yátu wa, || bóku(-) wa || yurusite okenai 'I can not forgive a scoundrel who scurries around in the shadows doing dastardly things' (Y 549).

are quite nice, all right, but if there is too much preserving of just the old things, there's nothing in the way of progress, it seems to me' (SA 2685.122d).

9.2.4.(4). *-te simau, -timau, -tyau.* The gerund-auxiliary expressions V-te/-de simau freely contract to V-timau/-zimau and V-tyau/-zyau. Notice that, while *nónde simau* 'ends up drinking (etc.)' contracts to *nónzimau* and *nónzyau*, when the gerund is negativized you find only *nománai de simau* 'ends up not drinking', which will not contract to **nománaizimau* or **nomanaizyau*, and the variant formation *nománakute simau* will not contract to **nománakutimau* or **nománakutyau*. In addition to these common contractions, in Y 556-7 you will find examples of Kyūshū -tumau/-zumau and of Kyōto-Ōsaka -te 'mau = -te [si]mau. (Notice that -te 'mota = -te simatta and -te 'mae = -te simae.) In Kushimoto (Wakayama prefecture) the contraction of V-te simau is V-tau (Shibata 1961.157-8), so that V-tatta is equivalent to Tōkyō V-tyatta.

The verb *simau* means 'puts (stores) away' or 'shuts up (completely)' and it may be used after a gerund in its basic meaning, which can be cued by careful phrasing: *Huyumono o || zénbu | aratte | [soré-ra o |] simatta* 'I washed the winter clothes and put them away'. But, especially with the juncture reduced, the final verb in such a sentence can also be taken as an auxiliary 'I finished washing all the winter clothes'.

In addition to two emotion-colored uses to be described later, there are at least three distinct auxiliary meanings for V-te *simau* (and the contractions):

(1) 'finishes doing' (the gerund can not be STATIVE or PUNCTUAL): *Túi ni || táiyoo ga | sizunde simatta* 'Finally the sun finished sinking'; *Yat-tó^[2] | kotowarí-zyoo o | káite simatta* 'Finally I finished writing the refusal'.

(2) 'does it completely, does all of it, does it all the way through' (the gerund can not be STATIVE): *Zénbu | naku-natte simatta* 'It all vanished' = 'We came to have none at all'; *O-kane o | otósite simatta* 'I lost all the money'; *Kono hón o || honto ni yónde | simattá nara || [or honto ni yónzyatta nara |] , sono súzi o || setumei | dekíru desyoo* 'If you have really read this book through you should be able to explain its plot'; *Yokutyoo, || syokuzi o suru tokí, || kotobá ga || zenzen tuu-zináí no ni || komari-hatete simatta* 'The next morning at breakfast time we were at a complete loss for being unable to understand the language' (SA 2656.62a); *Omae || sonna ni yose ga sukí nara || hanasi-ka ni náttimae* 'If you enjoy *yose* (theatrical storytelling) so much, go ahead and become a full-fledged professional storyteller' (R).

(3) 'ends/winds up by doing; gets around to doing; finally (at last) does, does at the end' (the gerund can not be STATIVE; the output will not permit the hortative or the imperative): *Tóotoo || zén [|] kootei o | larúite simatta* 'We finally wound up walking the whole way'; *Sonna zyoodán o | litte iru to, || hontoo ni | obáke ga | détyau | zó* 'You keep kidding like that and we'll end up with a ghost actually appearing!'; *Tabé-sugite || o-naka o kowásite simatta* 'I ended up with a bad stomach from being such a glutton'; *Tóotoo || aitu ni | látte simatta* 'I finally got around to seeing the bastard'; *Kónniti de wa || tukawanaku nátte | simattá keredo mo, || Heian zídai | nádo de wa || moosi-ageru | to iu ími de || "kikoyu" | ga || hizyoo ni óoku | tukawareta* 'Although it has ended up going out of use today, in Heian times at least "kikoyu" (= kikoeru) was used quite a lot in the meaning of telling a superior' (Ōno 1966.68). Notice that *ikíru* 'lives' is durative, not stative, so that you can

say Hyakú made [= Hyaku-sái made] íkityatta 'He ended up living to be a hundred'.

Sometimes V-tyatta is used just as a strong past, and that constitutes a *fourth* meaning: Ittyatta 'They're gone!'; Isya ga kíta | tokí ni wa || súde ni | sinde simatte ita 'When the doctor arrived he had already passed away'. But often V-te simatta (or V-timatta/-tyatta) show annoyance or displeasure at the sudden deterioration of a good situation or the frustration of one's expectations: Saihu o otósíte simatta 'I lost my purse; I WOULD go and lose my purse!' Compare the exclamation Simátta 'Dammit!'¹⁰⁰ Quite recently the V-tyau form has been spreading in Tōkyō to lend an implication of undesirability to the verb, something like V-rú/-tá kara iyá da 'does/did it so I am displeased', and that constitutes a *fifth* meaning: Nán dé mo nónzyau 'He'll drink any damn thing'; Dóo | nátyatte n daro [= nátte simatte irú no daroo] 'What the hell is happening?' (SA 2663.48b). In this usage even áru can occur: Kodomo ga átyau to | taihen da ná 'It's hell to have so damn many children!'; Yasumí da to | omóttara || sore ~dókoro zya | náku || sikén made | átyatta 'I thought it would be a day off but, far from that, we had to go and have a damn test!'; Átyatta kara ... 'We've got too damn many of them (so we're glad to be rid of this one)'.

There appear to be few, if any, restrictions on the verbs than can take V-te simau in either the fourth meaning (strong past) or the fifth meaning (displeasure); but stative verbs are not permitted in the first three meanings. Alfonso (464) reminds us that V-iowaru means 'finishes doing' with the simple idea of STOPPING, and no implication of completion or thoroughness: tabe-owatta means 'I finished eating (= what eating I was doing)' but tábete simatta can also (and usually will) mean 'I ate the food all up—or 'I ended up eating'.

It is not always clear just which of the meanings of V-te simau is intended: ... móo || sukkári || tukare-kitte simatte ... '(? ending up) completely exhausted now' (SA 2671.36d); Kutabátte simae 'Drop dead!'. The sentence Báka da | ná, || dóo site | tábetyawanakatta n da (SA 2666.110e) could be translated as 'How stupid, why didn't I EAT the darn thing?!' or 'How stupid, why didn't I eat the thing UP?' but the context (a frozen sweet that melted on the way home) suggests the former is more appropriate.

Alfonso 934 calls our attention to a pleonastic double application of the potential in the form TIME de V-ete simaeru 'can finish doing it in TIME' as in Iti-zíkan de yómete/kákete simaeru hodó kantan désu 'It is so simple you can read/write it in an hour. Perhaps this represents a rather loose connection 'you can do it and then/thus you can wind things up' or the like.

There are examples in print of subject exaltation applied to the conversion: Anáta to yat-tó^[L] kekkon dekíru to omóttara, anáta wa tatakai ni turete ikarete o-simai ni náru 'Just when I think I'll be able to marry you at last, you get dragged off to war' (Y 554). As a command, V-te o-simai is said to be soft, feminine, and old-fashioned (Y 554): Káesite o-simai yó 'Give it back, now!'

It is possible to apply the simau conversion to a negativized verb: Sikási || káre wa || sono zidóo-sya(¯) no | náka ni | nokótte ita || túbá no | kotó wa || iwanái de simatta 'But he

100. This is usually said to be from the perfect of simáru 'gets shut' as the accent would indicate. But Y 556 reminds us that Miyara (1954.82) thought it came from a shortening of Sippai site simatta. Simau itself is thought to be a variant of sumáu an [inferred?] old frequentative of súmu 'settles, ends' (cf. sumáu 'dwells').

ended up saying nothing about the spit that was left in the car' (Y 555); *Dáre ga || náni o || itta ka wa, || tóotoo || wakárazu ni simatta* 'He ended up completely at a loss as to who had said what' (Y 555). Compare V-(a)zu-zimai, §9.1.7b. It is also possible to negativize the auxiliary: *Minná ga káette simawanai uti(-) ni renraku site kudasáí* 'Get in touch (= Give us a call) before everyone has left'.

Causative, passive (pure or adversative), and potential can be applied either to the gerund or to the auxiliary, or—in theory—to both; but none of the forms are particularly common. Most of the following examples are the result of elicitation.

-(s)asete simau: *Óoki na | otó o (|) sasete, || akanboo no mé o | samasásete simatta* 'I finally got the baby to wake up by making a loud noise'.

-te simawaseru: *Syukudai o site simawaseté kara | asobi ni yaru kotó ni | simasyóo* 'When we have made them finish their homework let's send them to play'.

-(s)asete simawaseru (interpreted as a single causative?): *? Zyotyuu ni | soozu o sasete simawaseté kara, || kaimono ni | dekakéru tumori désu* 'After I have seen to it that the maid has swept up, I intend to go shopping'.

-(r)arete simau OR (less common) *-te simawareru*: (1) Pure passive: *Koosin-zyó(-) ni siraberárete simatta* [OR (?) *sirábete simawareta*] 'He has finished undergoing investigation by the private detective agency'; *Dá kara || séken [sic] no | taisei tte monó wa, || zyaanarizumu no | té de || tukurárete simau* 'Thus (the tide of) public opinion turns out to be created by the hands of the journalists' (Tk 2.151a). (2) Adversative passive: *O-kási o ootoo ni minná^[L] taberárete simatta* OR *tárete simawareta* 'I ended up getting my candy all eaten up by my little brother'; *Sot-to^[L] tabako o nónde iru tokoró o, áni ni mirárete simatta* 'I ended up getting seen secretly smoking by my older brother'. (3) Potential = *-r[ar]ete simau* OR (more common) *-te simaeru*: *Konna mizikái tegami nára gó-hun ~ínai ni káite simaeru* OR (?) *kákete simau* OR (PLEONASTIC) *kákete simaeru* 'Such a short letter I can finish writing within five minutes'.

-(r)arete simawareru: *?Sekkakú^[L] káita | tegami o || kodomo ni | yaburárete simawareta* 'I suffered by ending up suffering from having my carefully written letter torn up by the child'. This would be better with plain *simatta*.

-(r)arete simawaseru: Probably not used.

-(s)asete simawareru: *?Zibun de suru tumori dátta | tésuto o || Tanaka san ni || mudan de || gakuséi-táti ni sasete simawareta* 'I suffered from having Mr Tanaka have the students do the test that I was intending to do myself (= give the students the test that I was planning to take myself)'.

-(s)aserarete simau: *Dooryoo ga yasúnda no de, || (watakusi ga |) ni-ninmae no sigoto o saserarete simatta* 'As a colleague was on leave, I ended up being made to do the work of two'.

-te simawaserareru: *?Ni-ninmae no sigoto ná no ni, || gó-zi made ni || zénbu | hitóri de | site simawaserareta* 'Despite the fact that it was two men's work, I was made to finish it all up myself by five o'clock'.

Examples of focus, restriction, etc., applied to the *gerund*: *Yooyaku || saigo made || káite WA | simatta ga, || yómu ni | taénai || sippái-saku ni | nátte simatta* 'I finally DID finish writing it, but it wound up an unreadable failure'; *Tegami o káite SAE | simaéba, || kyóo wa || suru kotó ga | náí* 'If I finish just writing this letter, I will have nothing (more) to do

today'; Kono hón o || yónde SAE | simaéba, || asitá^[1] no síkén wa || daizyóobu da 'If I finish just reading this book, I won't have to worry about tomorrow's exam'; Káite KOSO | simawanái ga, || án wa || owari máde | dékite iru 'I've not finished exactly writing it, but the plan is worked out to the end'; Moo ití-mai | káite DAKÉ^[1] | simaéba, || kyóo no (|) sigoto wa | owari désu 'When I finish just writing one more page, today's work will be at an end'. I have been unable to elicit V-té ^[1]GÚRAI simau or V-té ^[1]BÁKARI simau, and V-té NÁDO simau is not common: Arigane o || zénbu | naku-sité NÁDO | simawanai uti() ni || tyokin si-nasái 'Before you end up maybe losing all the money you have, put it in the bank'.

It is more usual to apply particles of focus, restrictives, etc., to the *conversion*: Sigoto o || owari máde | site simái SAE | suréba, || áto wa || náni o | sité mo || kamaimasén 'If I just finish doing the job to the end, afterward it doesn't matter what I do'; ... káette || yugánde() | simái SAE | simasén ka '... don't you end up, on the contrary, all the more distorted?' (SA 2673.143b). Miscellaneous examples: Minná tukatte simatté wa | komáru 'If you use it all up there's a problem'; Minná^[1] tukatte simatté mo | ii | yó 'It's all right to use it all up, I tell you'; ... imootó ni | tikayóru | otokó wa || dare⁽¹⁾ de mo | korosite simai-kanénaí no de aru 'he has to kill off any man who approaches his little sister' (SA 2689.120a); Syukudai o site simatté kara | asobu kotó ni | suru 'When we finish our homework we'll have some fun'.

9.2.4.(5-6). *-te [i]ku; -te kúru (máiru)*. The notion of MOVEMENT in Japanese is represented by a pair of verbs with opposite deictic specifications: *iku* means 'goes/comes there (to you or them, to that place, to that time, from now on)' and *kúru* means 'comes here (to me or us, to this place, to this time, up to now)'.¹⁰¹ The straightforward meaning is usually appropriate when no other verb is present in the sentence or when the motion verb is preceded by a gerund of manner or movement: uti() e [arúite] kúru 'comes to our house [on foot]', éki made [kuruma ni notte] iku 'goes to the station (in a taxi)', wahuku o kite iku/kúru 'wears Japanese clothes (to the function there/here)'. With other verbal gerunds, V-te iku/kúru is often interpretable in three ways: the motion verb can be taken at face value, it can be taken as an auxiliary, or it can be taken as part of an errand. Any voluntary action can be the mission of an ERRAND, and errands are reported differently in English and in Japanese. The English speaker says that he 'goes and gets' or 'comes and gets' something, neglecting the obvious fact that the errand-runner then moves on; the Japanese speaker says that he 'gets and comes' or 'gets and goes', neglecting the obvious fact that the opposite movement must have happened before the action could take place. Thus Sinbun o katte kúru means 'I'll go and buy a newspaper', reporting a THITHER errand, and Sentaku-mono o tótte ittá ka means 'Did they come and get the laundry?', inquiring about a HITHER errand. The sentence Bóku() [ga] míte kúru (SA 2658.55b) is to be translated 'I'll go see'. And the sentence Heyá o soozí site ikimasyóo ka 'Shall I come clean your room (and then go)?' may be taken either as an errand or as a simple sequence of verb + verb with the translation 'Shall I clean your room before I go?' Where English says simply 'I've been to (the bank, the store, etc.)' Japanese usually will say ... e itte KÍTA 'I have come (= am back) from going to ...'. The ERRAND is a special extension of the basic meaning of the motion verb, and so it retains a certain independence that is

101. But *kúru* is used to mean *iku* 'come to you' in Toyama prefecture and in many parts of Kyūshū e.g. Kagoshima (H 1968.59), as well as Okinawa (Hokama 155). Apparently these dialects follow the English notion of deixis; I presume that *iku* is used where English would use 'go'.

lacking to auxiliary uses of *iku* and *kúru*. For example, the motion verb in errand-reports can be subjected to exaltation (V-te *irassyáru* etc.) since it retains its valence with the agent. When used with the extended, auxiliary meanings the verbs permit neither subject nor object exaltation; in *Koo sita ten o kangáete mairimásu to ...* 'When I come to think about such points ...' the verb *máir-u* is being used as an elegant synonym of *kúru* and marks the sentence as stylized at the honorific level. (Of course, in the unlikely event that the cogitation was some sort of errand, you might interpret the sentence as 'I went away to think about it and am now back with you'.)

Some straightforward (rather than auxiliary or errand) uses of the motion verb can be seen in the following examples:¹⁰² *Tanaka san kara denwa ga kakátte | kíta* 'A phone call came from Mr Tanaka'; *Náni mo kikoete kónai* 'I can't hear a thing'; *Utí(-) e káette iku* 'He goes home'; *Kaisya kara káette | kúru* 'He comes home from the office'; *Tábeta | ikimasyóo* 'Let's eat and (then) go = Let's eat before going'.

The two auxiliary meanings have to do with GRADUALNESS or with ONSET (beginning) of a continuing process. Examples with *kúru* are more easily come by than those with *iku*, so we will start with V-te *kúru*.

V-te kúru

(1) 'gradually comes on/in doing; becomes more so and more so, does it more and more': *Atatakái | heyá ni | oit' óita kara, || ringo ga itánde | kíta | yó* 'The apples have (gradually) spoiled because they were left in a warm room'; ... *hiyoo | bákari | kasánde(-) | kúru | zidai, || ...* '(in) a period when costs only are steadily mounting ...' (SA 2673.40b); *Zibun ga || iká ni | íkite | kíta ka o | hanásita* 'I told of how I had lived my life'; *Mizu ga súde | kúru to || soko ga miéte | kimásu. || -Nánni mo miéte | kónai | ná* 'When the water clears the bottom becomes visible.—Nothing is becoming visible at all'; *W-kun mo || dandán | soozóo-ryoku ga | yútaka ni | nátte | kúru* 'W too will acquire a richer and richer imagination' (lg 1962.74); ... *to iu húu ni | kangae-naosarete ki-tútu (|) áru no desu* 'is in the process of coming to be rethought along the lines of ...' (Tanigawa 140-1).

(2) 'begins, sets in, starts up, gets to be (doing); keeps on (persists in) doing; has been doing right along (from then on)': *Kyuu ni onaka ga itánde | kíta kara || isya ni itta* 'My stomach suddenly started hurting, so I went to the doctor'; *Natú ni wa || ása | yó-zi ni | náru to || sóra ga | siránde | kúru (= sirami-hazimeru)* 'in the summer the sky starts to lighten when it gets to be four in the morning'; *Nárete | kúru no mo || moo sugu desu | yó* 'You'll soon get used to it'; *Yukí ga || íma ni mo | hútte | ki-sóo da* 'It looks as though it will snow any minute now'; *Koo mite (|) kúru to ...* 'If we start viewing it like this = Thus thought of ...' (SA 2649.43e); ... *masúmasu | zizyoo wa || yayakósiku | nátte (|) kúru* '... things start getting more and more involved' (SA 2651.66c); *Sikási | né, || kore mo || kéizai no |*

102. And, by semantic extension, perhaps in these examples with the potential: *Zibun wa || máda || sono onná nákute mo || íkite yukeru* 'I can go on living without her' (Y 542); *Omae no yóo na, || kore kara || yo-nó-naka no | koohuku bákari | aziwátte ikeru | onná ga || ...* 'A woman like you who now can go on tasting nothing but the happiness of this world ...' (Y 542). See also *-te wa ikenai* 'must not' and *-(a)nakute wa ikenai* 'must' (p. 498). The subject-exalting euphemism *miéru* 'appears = comes' can be substituted for *kúru* in the straightforward uses, but not the errand or auxiliary situations: *Ákiko san ga káette miéte hontoo ni yókatta desu né* 'I am really glad that you have come back, Akiko'. Thus *motte/turete miéru* 'brings' are possible but **katte miéru* 'goes and buys it' is not. (The other euphemisms for *iku/kúru* can be used for errand or auxiliary situations as well as the straightforward uses.)

seityoo no tamé ni, || kokuhuku sarete { | } kíte | orimásu 'But this [= the seasonal slump in hotel occupancy] too is beginning to be conquered, thanks to the growth of the economy' (SA 2669.48d).

V-te iku

(1) 'gradually goes on/off doing; becomes more so and more so, does it more and more': Kaze wa || sidai ni || unarí o | masite ítta 'The wind gradually increased its roar' (Ig 21); Roohei wa sinazu || kiete iku nómi 'Old soldiers never die, they just fade away' (MacArthur); Sigoto wa || katazúite | ikanákatta 'The affair dragged on unsettled' (Ig 21); Mótoko wa || masúmasu || múkuti na | musumé ni | nátte (|) itta 'Motoko got to be a more and more reticent girl' (Ig 1962.73); Mótoko wa || otona ni nátte | ikú no ga, || nan-to-náku || urésiku | náí (|) kotó mo | náí 'Motoko found growing into an adult somehow not always too enjoyable' (Ig 1962.86); Itamí wa || yawaráide (|) itta 'The pain gradually eased' (SA 2642.36d); ... kin o | usinatte iku (|) Amerika wa ... 'America who is losing more and more (of her) gold' (SA 2885.24c).

(2) 'gets underway with, begins doing; will become/happen (from now on = kore kara [see Alfonso 458])': Sinde iku | heitai no kázu wa || ... 'The number of soldiers who will die (= go to their deaths)'; Horóbite() iku | mínzoku ... 'A dying race (= a race that will die out)'; Kore kara || nonbíri | benkyoo site ikóo ka to | omótte 'I'm thinking of taking it easier from now on' (SA 2671.46b)—the sentence-final gerund can be taken as ellipsis -te [iru] or as an equivalent of omóu (§9.2.1a); Kore kara || sámuku | nátte | ikú desyoo 'From now on it will get colder (and colder)'—Sámuku | nátte | kúru desyoo could be said with much the same meaning, but perhaps adding the idea 'We here in our area will be getting the cold'. An example with a negative gerund: Kono mamá de || huránai de | ittára ... 'I hope it keeps on not raining like this'.

Some sentences can be taken in either sense, ambiguously: Itu-goro kara kono tokei ga okurete kíta no ka sira means either 'I wonder how long this watch has been losing time?' or 'I wonder when this watch started losing time?'; Tabako o yameta totan ni || hutótte | kíta no | yó means either 'I've been gaining weight from the moment I gave up smoking' or 'I started to gain weight the moment I gave up smoking'. The difference seems slight, but it is apparently felt by the native speaker, so we must speak of two meanings for the auxiliary. Often, however, the distinction seems blurred, perhaps owing to the aspect of the gerundized verb: Kono syoosetu no | myuuzikaru-ka wa, || bóku() no || issyoo no sigoto no yóo ni | omóete (|) kíta 'The setting to music of this novel came/began to seem like my life work' (SA 2651.64b). Adverbial elements will sometimes help bring out the intended interpretation: Bóku() wa, || DANDÁN TO || íra-ira site | kúru | zibun o || osáeru | kotó ga | dekinaku | nátta 'Gradually growing impatient, I lost control of myself' (SA 2651.64b).

The initial vowel of iku freely drops after the gerund; the shortening sometimes turns up in print: ... déte | 'kanái n desu | yó 'they don't go out' (SA 2660.49c); ... yukkúri (|) tomatte || asondé 'tte | kure-tamae '... please stay a long time before you go' (Y 541); Aitu mo | kúru | tanbí ni || nánka | oite 'koo to (|) surú ga, || wasi wa || dan-zen, sonna monó wa || uke-toran to | tukkáesite yaru 'He tries to leave something every time he comes, but I flatly refuse to accept any such gifts and make him take them back' (Y 541); Karigane san wa | né, || kooban e (|) turerarete 'tta to | jú n desu | yó 'Mr Karigane, they say, was taken off to the police box' (Y 541); Áa, || dandán || ánta ga | tooku nátte 'ku 'Oh, you are gradually

getting farther and farther away' (Y 542); ... ittai | dóo site | yatte 'ku tumori ná n da 'just how do you intend to get along (in life)?' (Y 542); Hósikerya ||^(t)íkura de^(t) mo motte 'ke 'Take as much as you want' (Y 542); Hiki-sio de oki no motte 'karetá no mo || zúibun | átta ˉbé | náa 'There musta been a lot carried out to sea by the ebb tide, too' (SA 2670.107)—for átta ˉbé 'musta been', see p. 609.

After the gerund of an atonic verb the first syllable of certain forms of the auxiliary iku acquires an accent: site ítta, site ítte, site íttara, site íttari. When the shortened form is used, the accent will fall on the last syllable of the gerund (which has an underlying accent to begin with, though it is usually suppressed by underlying junctures): sité 'tta, sité 'tte, sité 'ttara, sité 'ttari. (The reductions of site + ita, ite, itára, and itári differ only in lacking the extra *t*: sité 'ta, sité 'te, sité 'tara, sité 'tari.) Other forms of V-te iku will have the expected accentuation, whether shortened or not: site [i]ku, site [i]kanai, site [i]kéba, site [i]koo, site [i]ke, etc. The perfect form of kodomo o turete iku 'takes along the child' will be kodomo o turete ítta or kodomo o tureté 'tta. The shortening of V-te [i]ku results in convergence with some forms of V-te kúru:

/hakondekimásu/	=	(1) hakonde kimásu (2) hakonde [i]kimásu
/hakondekiwa sinai/	=	(1) hakonde kí wa sinai (2) hakonde [i]kí wa sinai
/mottekimásu/	=	(1) motte kimásu (2) motte [i]kimásu
/mottekiwa sinai/	=	(1) motte kí wa sinai (2) motte [i]kí wa sinai

The final syllable of -te kúru, like other instances of the imperfect ending -ru, sometimes assimilates to a following *n*, as in this dialect example: Wasi ni íken si-hazimete kún no zya '[He] started giving me a piece of his mind [= criticism]' (Y 543).

In his study of iku and kúru Morita examined 4939 examples from modern fiction and found the following distribution:

iku	893	V-te iku	1162
kúru	872	V-te kúru	2012

From these figures we can conclude that V-te kúru is nearly twice as common as V-te iku, though iku and kúru as main verbs are of about the same frequency. A comparable ratio for V-te kúru vs. V-te iku (427 vs. 244) was found in the statistically wider study of KKK 25.78b.

An expression of bringing or taking is often treated as a unit, even though it is made up of a gerund (typically mo^(t)tte for things and turete for people, as the "taken") followed by iku/kúru. In ... gosót-to [= gossóri] motte ikareta 'got it all taken away from him' (SA 2684.50c), the passive is applied to the "taking" phrase as a whole. And in Isya mo turete ikenai 'We can't even take a doctor along with us' (SA 2680.115b) the potential is applied to the phrase as a whole. But in ... turerarete kíta súu-nin(ˉ) no wakamonó(ˉ) ... 'several young men who had (been brought=) come with him' (SA 2678.29a) the passive is applied to tureru before the gerund-auxiliary conversion.

Examples of focus, restriction, etc., applied to the *gerund*: Zyúurai no | akuhoo mo ||

aratamerárete WA | kíta ga, || zenmen-teki na kaisei ní wa || hodo-tóoi(⁻) 'We have begun to revise undesirable laws, but we are a long way from overall reform'; Tuyói | kaze ga húki, || hídoku | huri-dasité MO/SAE | kíta ga, || kéihoo(⁻) wa | déte | inái kara, || taihúu de wa | áru ⁻mái 'A strong wind is blowing and it has even started to pour down hard, but there is no alert out, so it must not be a typhoon'; Ano byoonin wa || zenkai ⁻dógoro ka, || hí-goto(⁻) ni || wáruku | náte SURA | iku yóo ni | miéru 'That patient, far from recovering, looks as though he were gradually getting even worse by the day'; Bukka wa || agaté KOSO ike, || sagáru kotó wa | zettai ni náí daroo 'Prices are precisely rising gradually and will simply never come down'—for (kóso) ike, see p. 556; Bukka ga, || kóngo(⁻), || sagátte NÁDO iku hazu ga | náí desyoo 'There's no likelihood that prices will come down or anything, from now on'; Moratté KOSO | itté mo, || kurete itta | tamesí ga | náí 'Although they have been precisely getting it, they have never been giving it'; Kiité KOSO | kíte mo, || osiete kureta kotó | ga náí 'Although they have been precisely inquiring, they have never told it'; Nihongo no kisó o || narátte DAKÉ^[2] | ikéba, || áto wa || Nihón e | itté kara || dóndon | rensyuu sureba || úmaku | narímásu | yó 'If you learn the fundamentals of Japanese, you can get good at it if you work steadily on the rest of it once you get to Japan'; Rúsu datta kara, || meisi o oité DAKÉ^[2] | kimásita 'He was out so I just left my calling card'. I have been unable to elicit examples of V-te ⁻GÚRAL iku/kúru; and even the following types are not common:¹⁰³ Asonde BÁKARI itte || tetudátte itta kotó wa | náí 'He goes along loafing and has never started helping'; Soto de | tábete BÁKARI | kíte, || utí(⁻) dé wa || tit-tó mo | syokuzi o sinai 'I always just eat out and never come home to eat'; Ano páat'ii ni || takisiido o | kité NÁDO iku | hituyoo wa | arimasén 'There is no need to wear a tuxedo or the like to that party'; Uti(⁻) no páat'ii ni | takisiido o | kité NÁDO | kúru | hituyoo wa | arimasén 'There is no need to wear a tuxedo or the like to our party'.

Examples of focus, etc., applied to the *auxiliary*: Harikeen-Zyéen wa || kon'yáhan karall yowamátte | ikí WA | surú ga, || máda-mada || keikai no hituyoo ga áru 'Hurricane Jane WILL be getting weaker from midnight on, tonight, but caution will be necessary for quite some time'; Kono ten ga || kairyoo sarete ikí SAE | sureba, || syóorai no | mitoosi wa || akaruku náru 'If this point just starts getting improved, the prospects for the future will brighten'; Nán-do | syóotai | sarete mo, || o-miyage hitótu | motte kí MO | sinákereba || áto de || reizyoo no íp-pon mo | káite | yokósi mo | sinai hitó da 'However often he gets invited he never even brings a single present nor does he even write a single thank-you note'; Ti o wáketa | kyóodai de | ari-nágara, || tagai ni || tazúnete ikí SÚRA | sinai zyootai da sóo da 'While they are blood brothers, I understand the situation is such that they don't even visit one another'; Tomatte ikí KOSO | sinái ga, || yonaká ⁻sugí made || asonde iku kotó wa || siba-siba áru 'I don't precisely spend the night but I do often visit till after midnight'; Zettai ni || múdan(⁻) de, || yosó ni | tomatte kí NÁDO | sinai hitó desu 'He never stays out elsewhere without permission'. (In the last two examples the 'go' and 'come' are perhaps better treated as full verbs rather than as auxiliaries.)

The humble verb *máir-u* is used as object-exaltation for both *iku* and *kúru*, and this extends to some of the auxiliary uses, as well; often *máir-u* is chosen merely to be polite,

103. And the motion verb is not used as auxiliary in most (perhaps all) of these examples. Would the first example be better translated 'He has always come and loafed and never come and helped'?

as we have seen elsewhere. *Máir-u* has an old-fashioned synonym *san-zíru*(⁻), and it too is sometimes used as an auxiliary; examples of *V-te san-zíru*(⁻) will be found in Y 545-6.

The verb *uséru*(⁻) 'disappears, gets lost; dies' is used as a vulgar equivalent of *iku* and *kúru*, and this usage extends to the auxiliaries; examples of *V-te uséru*(⁻) will be found in Y 546, where it is said that the verb sometimes also serves as the equivalent of (*V-te*) *iru*.

9.2.4.(7). *-te míru*; *-te go-ran*. The verb *míru* means 'looks at' or 'sees' and it can retain its basic meaning when following a gerund, as you sometimes tell from the juncture: *Hón o tótte* || *mimásita* 'I took the book and looked at it (or read in it)'. But, especially with the juncture reduced, the final verb may be taken as an auxiliary: 'I tried taking the book (to see what the result or effect would be, or to see what it would be like)'. As an auxiliary the verb *míru* means 'does it to see (what the effect or result will be)' or 'samples doing it, tries it to see (what one's reaction will be)'; sometimes the meaning is 'does it AND finds out' as in *Site míru to yasasíkatta* 'found it easy to do'. I have elsewhere (Martin 1970) called such expressions EXPLORATORY forms. Notice that the meaning is not 'tries TO do it = attempts it'; that is said by using the expression *V-[y]oo to suru* (§21.4). Examples of *V-te míru*: *Káre no | tatibá ni | túite | kiite míru* 'I will try asking about his position on the matter' or 'I will see if I can find out his position'; *Náni ga | háitte | irú ka | wakaránai no de || hako o akete míta* 'Not knowing what was inside, we opened the box to find out' or '... and found out'; *Zé-hi || iti-dó^[1] itte mi-tái to | lomótte imásu* 'I certainly hope I can go there and see (how things are) sometime'; *Kono || kago no tori no seikatu kara || tobi-dásite | mítara | dóo na no* 'Why don't you try flying away out of this life of a caged bird?'; *Ano kí no | tyoosyoó made || nobotte míta koto | áru?* 'Have you tried climbing up to the top of that tree?'; *Namazákana o | tábete | mítari || omosirói | keiken o sita* 'I had interesting experiences such as trying raw fish'; *Kagami^[1] míte | mí ro i (= mí ro yo)* 'Try looking in the mirror; Look in the mirror and see' (Y 550).¹⁰⁴ The gerund can be highlighted: *Omótte mo | mí yo* 'Give it a thought, anyway' (SA 2659.131b); *Kangáete mo | mí ro yo* 'Just give it a thought' (SA 2650.118e); ... *sono-go || sukósi || ki o túkete mo | mí, || sirábeta mo | mimásita tokoró^[1], ...* '... later I tried a bit both paying attention and checking, whereupon ...' (Tsumimura 67).

Verbs that are stative or involuntary are hard to put into the exploratory conversion as such, but if the sentence is used as a condition or the like the meaning seems to be attenuated and otherwise questionable sentences are quite acceptable. For example, *Haná ga saite míru* 'The flowers try blooming' would be unacceptable outside the personifying context of, say, a fairy story, but *Haná ga | saite mítara || ángai*(⁻) | *kírei de | nákatta* is perfectly all right in the meaning 'When they bloomed, they turned out to be surprisingly lacking in beauty'. Perhaps the reason for the acceptability is that the second part of the complex sentence implies the introduction of some source of reaction that is not there in the simplex—'when they bloom and WE LOOK at them'. The meaning of *V-te míreba* (or *V-te míru to*) is often something like 'when we consider that; seeing that, now (that); since', very similar to the meaning of sentence + *kará ni wa* ('just because' § 17.1); in these expressions the provisional form retains some of the literary "causal" meaning that is otherwise largely lost in the colloquial (cf. §9.3). There seem to be few if any restrictions on the kinds of verbs that can occur in such sentences: *Oyá ga | áttel*

104. In addition to the expected imperatives, there is a dialect form *V-te o-mi*, sometimes contracted to *V-t' o-mi*. Y 551 has examples of *kangáete o-mi* and *yónd' o-mi ya*.

míreba || anmari ziyúu ni wa | dekinai 'Having parents to be concerned about, I am not free to do as I like'; Kaze ga húite | míreba || (or: míru to ||) sono tatémóno no | túyo-sa ga | wakáru 'When the wind blows you see the strength of that building'; Áme ga | hútte | míreba || tuti no zyootai ga wakáru 'When it rains you find out the condition of the soil'; Tookyoo e túite | mítara || yakamásikute | tamaranákatte 'When I got to Tōkyō I found it terribly noisy'; Watasi ga || uti(-) e (|) káette | mítara || káre wa || sake o nónde || zyoo-kígen datta 'When I got home I found him in high spirits from drinking'; Sono hako o akete míru to || omosirói (|) monó ga | háitte ita 'When I opened the box I found something interesting inside'; Man'yōo-syuu no | zénbu ni watatte || ziturei o sirábeta | míru to, || ... baai ga óói 'Examination of actual examples from throughout the Man'yō-shū reveals many instances of ...' (Ōno 1966.160); Soo iwarete míru to, ... 'Now that (I have that said to me =) you mention it ...' (Shiba 30). If we take the "commands" in the following examples (from Mikami 1963a.75) as a colloquial device to link sentences, substituting for the provisional, it is not necessary to resort to Mikami's assumption of ellipsis, which is shown here: Kore ga úmaku it[ta to si]te | mí ro, || akazi ip-pén ni | kaisyoo dá | zé 'If this goes well we will be out of the red'; Iti-dō | simó de mo | óri[ta to si]te go-ran, || ao-áo to site ita (|) ha mo ... 'With just a single frost, the very leaves that were so green ...'.

The gerund can be passive (sarete míru 'tries having it done to oneself') or causative: Dono-gurai hanaséru ka || hanasásete | mítara || dóo desu ka 'How about trying to get him to talk to see how much he can talk?'. The passive is not commonly applied to the auxiliary míru (*site miraréru) but the causative can be applied (site misaséru 'gets someone to try doing' and even sasete misaséru 'gets someone to try getting someone to do'): Dono-gurai hanaséru ka || hanásite | misásetara || dóo desu ka 'How about having him try talking to see how much he can talk?'

It is possible to exalt the subject but not the object: Háyaku lossyátte | go-ran ni narimásita ka 'Did you try saying it fast?' but not *Háyaku | moosi-agete haiken simasyóo ka 'Shall I try saying it fast for you?' Haiken suru/itasu is used only for the literal meaning 'looks' or 'sees'; there is no object-exalting equivalent for the auxiliary, since there is no object involved in the auxiliary construction itself. Go-ran also appears alone as ellipsis for the command go-ran nasái (= mi-nasái or mí ro): Taeraréru | sámu-sa ka || dóo ka || súnde | go-ran 'Live there and see whether you can stand the weather or not'; Háyaku | itte go-ran 'Try saying it fast'; Kangáete | go-ran 'Give it some thought'.

The several meanings of V-te míru can perhaps be summarized as the normal uses of the gerund with an extended use of the verb míru to mean 'react': (1) 'does it and then/so takes a look' (literal meanings), (2) 'does it so as to react', (3) 'does it with a resulting reaction' (= 'and finds out').

Northern Ryūkyū speakers use a double exploratory form cognate to V-te míru míru 'does and looks and sees = tries doing', apparently with little or no difference in meaning from the simple exploratory (cf. Martin 1970); similar forms are found elsewhere in the Ryūkyūs, e.g. on Okinawa. And in view of Maeda's strictures about such pleonasm in standard Japanese, the double exploratory is perhaps more widespread than has been generally realized.

Causative, passive (both pure and adversative), and potential can be applied either to the gerund or to the auxiliary—or, in theory, to both.

-(s)asete míru: Sukósi || muzukasii ka mo | siremasén ga || tó-ni-kaku | kono sikén o ||

sasete míru kotó⁽¹⁾ ni |simasyóo 'It may be a bit difficult but anyway let's try giving this test'.

-*te misaséru* [little used]: Ryóori wa ||oisii monó o laziwátte | misasénakereba || zyoozú ni |naránai 'To get good at cooking you have to let people try tasting delicious things'.

-(*s*)asete *misaséru*: NOT USED?

-(*r*)arete *míru*: (1) Pure passive: NOT USED? (2) Adversative passive: Sigoto o || makasaréte | míte || hazímete || sono muzukási-sa ga | wakátta 'When I tried getting saddled with the job I realized for the first time its difficulty'; Oyá ni | sinarete míru to || sono | arigatá-mí(-) ga || yóku | wakáru 'When you experience the death of a parent you appreciate your indebtedness'. (3) Potential = -(*rar*)ete *míru*: NOT USED?

-*te miraréru*: (1) Pure passive: Nóoryoku o || tamésite | miráreta 'I had my ability tested'. (2) Adversative passive: Tegami o | akete miráreta 'I had someone try opening my letter (to my displeasure)' or 'I was discomfited by having my letter opened and looked at (or: to look at)'. (3) Potential: Siken-teki ní nara | site miraréru desyoo 'You could try doing it as an experiment, surely'.

-(*r*)arete *miraréru*: NOT USED—except when the passive is used for subject exaltation, as in Go-zibun de zikken o sarete miráretara || (= nasátte | go-ran ni náttara ||) itiban yorosii desyoo 'It would be best to do the experiment yourself'.

-(*s*)asete *miraréru*: LITTLE USED—except when the passive is used for subject exaltation, as in Siken-teki ni || gakusei ni | zikken o sasete miráretara || (= sasete go-ran ni náttara ||) ikága desu ka 'How about having the students do the experiment as a kind of examination?'

-(*r*)arete *misaséru*: NOT USED

-(*s*)aserarete *míru*: Hoka no hitó ga | hanásu no o | kiite ita tokí wa || yasasi-soo ni (|) omowáreta ga, || zibun de iwaserarete míte, || muzukasíi(-) (|) kotó ga | wakátta 'When I listened to the others talk it seemed to appear easy, but when I tried having myself be allowed to speak, I realized that it is difficult'.

Examples of V-*te míru* with focus, etc. applied to the *gerund*: Kiité WA | mimásu ga, || dónna | henzi ga | eraréru ka wa | wakari-kanemásu 'I will try asking but there's no telling what kind of reply can be had'; ... nakiotosi ni kakátte MO | míta ga, || ... 'she even tried undertaking persuasion by tears, but ...' (SA 2649.105d); Tegami o || ni-santuu yónde DAKÉ⁽¹⁾ | mireba, || sonó-hito no | nóoryoku no | téido(-) ga | wakáru | monó desu 'If you try just reading two or three of his letters you see the level of his ability'. I have been unable to elicit examples of V-té BÁKARI *míru*, and neither V-té (-)GÚRAI *míru* nor V-té NÁDO *míru* is common: Ítu made mo | hito o tanómazu [ni], || zibun no tegami wa || zibun de káite GÚRAI | mítara || dóo desu ka 'Instead of always asking others, how about trying to write your letters yourself?'; Zassi, || sinbun nádo o || yónde NÁDO⁽¹⁾ | míte mo, || íma no | Nihón no zyootai wa || soozoo dekinai hodo⁽¹⁾ | kawatte simatta rasii 'Even if you read the magazines and newspapers and all you can't imagine how conditions in Japan have completely changed, I understand'.

It is more usual to apply the particles of focus, restriction, etc., to the *auxiliary*: Iroiro na kotó o || site mí WA | surú ga, || nāni mo tuzukete siyoo tó wa | sinái n desu 'He tries doing all sorts of things, but he shows no inclination to do anything over a period of time'; Hima ga áreba || góruhu o | site mí MO | surú n da ga ... 'I sometimes try playing a

bit of golf when I have a free moment, but ...'; Site mí SAE | suréba || kantan da tte iu kotó ga | wakáru desyoo 'If you'd just try doing it, you'd see how easy it is'; Site mí ro to | iú nara, || site mí MO | surú ga, || muda daróo to | omoimásu 'If you tell me to try doing it, I'll try doing it, but I don't think it will be of any use'; Tó-ni-kaku || owari máde || site mí WA | surú ga, || ii | kekka ga eraréru to wa || omoénai n desu 'Anyway I'll try doing it to the end, but I can't believe any good result will be obtained'.

The temporal ablative can be applied to the gerundized auxiliary: Kiite míte kara, || sono rekóodo o | kau kotó ni | sitá n da 'After giving it a listen, I decided to buy the record'.

9.2.4.(8). *-te miéru*. The verb *miéru* 'it seems, it appears' can be used as an auxiliary after a verbal gerund: *tukárete miéru* 'looks tired', *yasete miéru* 'looks thin, appears to have lost weight'. These expressions are common in Nagoya.^{104a} Tōkyō speakers prefer *V-te iru* (or *V-ta*) *yóo ni miéru* (*tukárete yóo ni miéru*, *yasete yóo ni miéru*). Cf. also *tó miéru*, p.1008. Examples of the *V-te miéru* conversion: *Káre ni wa || mati^[f] no yoosu wa || sukkári | tigatte miéta* 'To him the town appeared completely changed' (Ig 11); *Koosen ni yotte || tigatte miéru kotó mo | áru ga, || ...* 'It sometimes looks different depending on the light, but ...' (Tk 3.235b); *Sikaru to || onna^[f] no kao ga || sákete [sic] | miéta* 'On being scolded the woman's face seemed to crack' (Ig 32); *... ítu-ni-náku || sizunde miéta* 'she appeared to be sunk in unaccustomed gloom' (Ig 32); *Wahuku ni náru to | káette || húkete | miéta* 'He looked all the older in Japanese clothes' (V 114); *Soo iu toki^[f], || Ayao no | sirói || hó[h]o ni wa || usui | sakura-iro ga sásite, || zibun ga kói-site iru | yóo ni || namaméite | miéta* 'At such times there was a light pink tint to Ayao's white cheeks and she looked fetchingly in love' (Ig 1962.98); *Suityuu ni ireta boo wa, || suimen no tokoró de || órete | miéru. || Kore wa || suityuu ni áru | boo no búbun ga || uki-agáte | miéru kara de aru* 'A stick that has been put in the water looks bent from the surface. This is because the part of the stick that is in the water appears to float up' (V 114); *... kono gínka wa || ... doodóo to || igen ni ahúrete, || Yósiko ni wa | miéta* 'these silver coins ... to Yoshiko seemed splendidly full of majesty ...' (Y 340).

Notice that the verb *miéru* can also mean 'appears' in the sense of 'shows up', i.e. 'comes', as a synonym of *arawaréru* or *kúru*. Sometimes this is the appropriate interpretation, e.g. in *Káette miéru* = *Káette kúru*. The sentence *Okyakusan ga naite miéta* is ambiguous; it can mean either 'The guest showed up crying [= in tears]' or 'The guest seemed to be crying'. In the sense of 'shows up' the subject can be exalted (*o-mie ni náru*) but the auxiliary will not undergo exaltation conversions.

Examples of focus, restriction, etc., applied to the *gerund*: *Zyúu-nen ~buri ni átta, | sonó-hito wa || tosí o tóru | dókoro ka, || wakagáette SURA/SAE | miéta* 'Met after ten years, he—rather than aging—appeared even to have been rejuvenated'; *Sínsi ~zen to | sité WA || miéru ga, || sínsi ~dókoro ka ...* 'He DOES seem gentlemanly, all right, but no gentleman he!'. I have been unable to elicit *V-té BAKARI miéru*, *V-té DAKÉ^[f] miéru*, or *V-té KOSO miéru*; and the following types are not common: *Hadaka zya náí n da kara, || suite ~GÚRAI | miét'atte || kamawánai desyoo!* 'Since I'm not (really) naked, it surely doesn't matter if it [= the garment] seems to be transparent!'; *Suketé NÁDO | miéru | íhuku wa || zettai ni kimasén* 'I absolutely won't wear clothes that appear to be transparent or anything!'—(here *sukeru* is apparently to be taken as a spontaneous potential (the sentence could be said with the intransitive *Suite* ...).

104a. But in Nagoya and Gifu *V-te miéru* is used as an equivalent of the subject-exalting *V-te irassyáru*. Cf. NKD 18.505a.

It is more usual to apply the particles of focus, restriction, etc., to the *auxiliary*: Sore o kiru to, || to⁽ⁱ⁾si o tōtte | mie WA | surú ga, || zyoohin na || sibúi | kimono da to omoimásu 'To be sure, I DO look older when I wear that, but I feel it is an elegant, austere kimono'; Sono kimono wa || hin ga ná si, || tosi-tōtte | mie MO | surú kara, || kawanai kotó ni | sitára || dóo desu ka 'That kimono lacks quality and you even look older in it, so why not decide against buying it?'; Anmari tosi-tōtte | mie SAE | sinákereba, || zimí na | kimono no hoo ga | sukí na n desu 'Just so I don't appear too old in it, I prefer a plain kimono'; Sono kimono wa, || tosi-tōtte | mie KOSO sure, || kessite hadé zya | arimasén | yó 'Though I may precisely look old in it, that kimono is not the least bit gaudy'—for (koso) suré, see §9.3; Hadé na | kimono o kit'átte, || wakagáette | mie NÁDO | simasén | yó 'She may wear a gaudy kimono but she doesn't seem restored to youth or anything'.

9.2.4.(9). *-te miséru*; *-te o-me ni kakéru*. The verb *miséru* means 'shows' or 'displays'; with a verbal gerund it can serve as an auxiliary with the meaning 'shows that one can (or will) do it, displays one's ability (or determination) to do it': Watasi ga || kono kí ni | nobotte miséru kara 'Just you see how I can climb up this tree'; Honto ni dekiru nara || site misé ro 'If you can really do it, show me!'; Watasi ga (|) ano onná o | warawaseite miséru 'I'll (show you I can) make that woman laugh (—just you watch)!'; Káre kara || nígete | miséru 'I'll get free of him, just you wait and see'; Tadasii (|) miti o || ayúnde | misemásu 'I'll show people I can lead a proper life'; Ono wa || soo itte || námida no | tamatta mé de || waratte miseta 'Ono put on a smile with his tear-filled eyes as he said that' (lg 22); Sugúreta | kankaku o mótta | hitó-tati o || tekitoo ni eránde | miséru kotó ga | nozomasii(¯) 'It is desirable to show that we can suitably select people of outstanding sensibility'; Tágutí wa || oogesa ni odoróite | miseta 'Taguchi put on exaggerated surprise' (lg 22); Go-tyúumon ¯dóori || nán de⁽ⁱ⁾ mo | nusúnde | miséru | yó 'You name it, they'll steal it'.

A more literal meaning seems to be present in some sentences: ... watasi no hoo ni || uínku site | miseta 'gave a wink in my direction' (SA 2679.39c); Tosi-gái(¯) mo (|) náku || seinen no yoo na || táido o | site miséru no ga, || káre no | kusé da 'He's always displaying a youthful attitude unbecoming his age'.

I have only a few examples of restrictives, focus particles, etc., applied to the *gerund*, and they are not common types: Káite DAKÉ⁽ⁱ⁾ | miséreba, || kuti de (|) setumei sinákute mo | wakáru 'If you (show you will) write it, at least, it will be clear without an oral explanation'; Kanzi no hitótu ya | hutatú káite ¯GÚRAI | misemásu | yó 'I'll show I can at least write one or two Chinese characters'; Syabette NÁDO | misénakute mo, || kimi ga || Eigo ga umái kotó wa || yóku | sitte 'ru | yó 'I well know you are proficient at English without your showing me you can talk it and all'. I have been unable to elicit V-té BÁKARI miséru or V-té KOSO miséru.

It is more usual to apply restrictives, focus particles, etc., to the *auxiliary*: Tézina o | site misé WA | surú ga, || tane-ákasi wa (|) sinai (= torikku wa | osiete kurenai) 'I'll show you (I can do) the trick, but I won't tell you how it is done'; Meiyuu dá kara || múri ni | tanomaréreba, || kyaku no zasikí de || odotte misé MO | siyoo ga, || bakudai na (|) syarei ga iru 'He is a famous actor so that, while upon persuasion he will even display his dancing privately in guests' rooms, it calls for a huge fee'; Doozyoo sita yoo na | kao o site misé KOSO/SAE/SURA/NÁDO | surú ga || hónsin(¯) kará de wa | náí 'He does precisely/even/even/perhaps show a sympathetic face, but that is not his true feelings'.

Notice that the auxiliary can be converted for both subject and object exaltation, since the meaning is such that it is in valence with the subject of the gerund: YOU show that YOU can do it, YOU do it and display YOUR doing of it. If the subject is exalted the formation may be regular (V-te o-mise ni náru, o-V-i ni nátte o-mise ni náru) or euphemistic (V-te o-me ni kakéru, o-V-i ni nátte o-me ni kakéru); if the object is exalted there are only the regular forms (V-te o-mise suru/itasu), and these are uncommon.

9.2.4.(10). *-te súmu; -te sumásu.* The verb *súmu* means 'comes to an end, terminates; settles'. From these basic meanings a number of others are extended, as when *sumimasén* is used to mean 'there is no end to [my rudeness or obligation] = excuse me; thank you'. Another extended meaning is 'gets by, makes do (with), gets off (with), settles (for)'—often under conditions of deprivation or hardship. Thus in Kenkyusha's examples *Bakkin de súnnda* 'I was let off with a fine' and *Sukósi no són de súnnda* 'He got off with a small loss' the idea is that the matter came to an end with some less-than-expected harm. Sometimes a negative is implicit: ... *hígai(¯) ga | sukúnákute || súmu hazu da ...* 'ought to get by with little damage' (SA 2647.87a); *kane ga sukúnákute | súmu* 'gets by with little money'; *kono mamá de | súmu* 'gets by as it is (with no change)'. Often the negative is explicit: *kegá o | sinái de (= kegá o sezu ni = kegá ga nákute) | súmu* 'escapes without injury'; *buzi ni súmu* 'comes off without mishap', ...

When used with the negative versions of the verbal gerund, V-(a)nái de or V-(a)zu ni, the verb creates an expression that means 'gets by without doing, manages to avoid doing' or 'needs not do', as in these examples: *Sore nára || wáza-waza | Oosaka máde | ikazu ni súmu* 'In that case you need not go all the way to Ōsaka' (Kenkyusha); *Soo suru to || ni-dó de kakenái de | súmu* 'It will save you going out again' (id.); *Siranákya | siranái de | súmu monó^(o) o sirasetá kara || mondai ga | óokiku | nátta n da* 'Because it was let known what might well have been left unknown, the problem grew bigger'.

Although before other auxiliaries the regular negative gerund V-(a)nákute is obligatorily replaced by the circumlocution V-(a)nái de, or its equivalent V-(a)zu ni, *súmu* seems to allow either form, as exemplified by the following sentences: *Wadai o kaeréba || huka-oi sinákute | súmu kara desu* 'It's because if you change the subject [often] you need not pursue it deeply' (Shibata 1965.27); *Móttó-mo || konna kotó o || sinákute | súmu | hoohoo mo áru* 'Of course there are ways to get by without doing such things' (SA 2688.45d); ... *zibun no káko no || sigoto ni sekinin o kan-zinákute | súmu ...* 'manages not to feel any responsibility for his past acts' (SA 2679.104b). An example with highlighting of the negative gerund: ... *ká o || tóku ni | mondai ni sinákute mo | súmu ...* 'gets along without making a special point over whether ...' (Kabashima 99).

You will also find V-(a)naku tó mo—and (?) V-(a)zu tó mo, §21.1.(9), used with *súmu*: *Sosite, || aité⁽ⁱ⁾ no hannoo o mi-nágara, || áru | bún wa || kanketu sinaku tó mo | súmu daróo si,* ... 'And, with an eye on the other party, some sentences will probably get by without being completed, and ...' (Shibata 1966.140-1).

But unlike other auxiliaries we have been discussing, *súmu* is not limited to VERBAL gerunds, for there is an adjective gerund in ... *súgu | kawáku no de || karúkute | súmu, || ...* 'it dries fast so you can get by with its being light in weight' (SA 2662.99a) and in ... *yakusya no nínzu [u] ga || sukúnákute | súmu* 'you can get by with a small cast' (SA 2688.109d); there is a gerundized adjectival(/precopular) noun in *Zairyóo wa || kiwámete || wázuka de | súmi, ...* 'They make do with very scant material, ...' (SA 2650.97d); and a

gerundized predication of a pure noun turns up in this text: Nihon-go to Eigo no tigai de, || Eigo wa || HITÓKOTO DE | sǔmu no ga, || Nihon-go da to nagái kotó⁽⁶⁾ ga | arimásu kara || háyaku | iwanákya | naránai 'With the differences between Japanese and English it sometimes happens that what can be said in one word in English is long[er] in Japanese so that you have to say it fast [to synchronize]' (SA 2664.36b). The nominal sentence can be negative, in the form N de nákute or N de nási ni: Nihón wa || náze || sóo de | nási ni | sǔnde | irú ka to iu to, ... 'The reason why Japan gets by without (being like) that ...' (Tanigawa 156). There are even examples where sǔmu follows a CONDITION, marked by the provisional: Nisen-en kara | itiman-en ˉtéido no | bakkin o haráeba | sǔmu kotó⁽⁶⁾ da ... 'You can get off by paying a fine ranging from ¥ 2000 to ¥ 10 000 ...' (SA 2665.126c); ... o-mótya o | hitótu | kaéba | sǔmu 'you can get away with (= cope by) buying a single toy' (SA 2793.46b); Íza to | náreba, || syáin-ryoo ga | aite imásu kara, || soko o tukaéba | sǔmu desyoo⁽⁶⁾ 'In a pinch the company employee dorm is open so we can make do with it, I figure' (SA 2671.41b); ... gekkyuu kara || gosen-en ˉzútu | hikarérya || súnzyau [= hikaréréba | sǔnde simau] 'You can manage it by having five thousand yen taken out of your salary every month' (SA 2668.110a).

It is not clear that we need treat sǔmu in any of these expressions as an auxiliary, but it should be observed that the verb seems to be "subjectless"—what 'ends up' is the situation. For that reason, sǔmu will not usually undergo exaltation conversions. Yet it is possible to have exaltation when you causativize sǔmu: Anáta ga/wa || okyakusan ni | soo nasaránai de || o-sumase ni naréru desyoo 'You will no doubt be able to let the guest out of doing so'. This is because the causative has a subject of its own, the instigator of the happening.

Sumaséru is not only the causative (= sǔm-ase-) of sǔmu,¹⁰⁵ it is also the POTENTIAL (= sumás-e-) of a transitive counterpart sumásu 'manages (it) with' as in hiyoo o rokusen-en de sumásu 'keeps the expenses down to ¥6000'.¹⁰⁶ The expression V-te sumásu means 'makes do with, gets along with' and V-(a)nái de sumásu or V-(a)zu ni sumásu means 'gets along without, does without' as in ... hirumesi o kúwazu ni sumásita 'would do without lunch' (Kenkyusha). The forms occur frequently in the potential 'can/can't do without' as in these examples: Gosen-en dé wa | sumasénai 'I won't be able to get along on ¥5000!'; ... hito o egúrazu ni wa | sumasénai | sottyoku-sa de ... 'with a cheeky outspokenness that (can't but =) is bound to lacerate' (SA 2659.69c); Go-men nasái to | ayamátte || sumaseraréru | mondai zya náí desyoo 'It's hardly a matter that you can dismiss with an apology of "Excuse me"'.

9.2.5. Auxiliary constraints and sequences.

Auxiliaries can generally be applied to the mutative conversions of §9.1.11: -ku nátte/ site iru, ... míru, ... oku, ... simau, ... yaru, ... morau, etc. There are minor restrictions; though A-ku (N ni) site áru is quite acceptable, ?A-ku (N ni) nátte áru is doubtful, at least for the standard language, and we should perhaps reject the proffered example (*)Móo

105. As in Keikan mo tyúui daké de sumásete kurerú ka mo siremasén ga, ... 'The police may let you off with just a warning, but ...' (Tsukagoshi 101a).

106. Some speakers use sumaséru for the transitive sumásu, as is taught in BJ 2, but the usage is not recognized by the lexicographers (e.g. MKZ^s). The last example below could be taken as the potential of transitive sumaséru.

senséi ni nátte áru kara seikatu wa sinpai wa náí 'Now that I've become a teacher I have no worry about my livelihood'. As noted earlier, the excessive can generally be applied to the auxiliary or to the underlying verb, and on occasion even to both. In addition to the cases noted individually in the preceding sections, the following all seem to be acceptable, though some (here given with examples) may require special circumstances: -te oki-sugúru; -i-sugite oku (Kai-súgite oku to ll hu-kéizai da 'If you buy too much ahead it's uneconomical'); -te simai-sugúru; -i-sugite simau; -te iki-sugúru; -i-sugite iku (?); -te ki-sugúru; -i-sugite kúru (O-yu ga átuku l nari-sugite (l) kúru 'The water is getting too hot!'); -te mie-sugúru; -i-súgite miéru (Yase-súgite l miéru 'Looks too thin'). The following will seem strange to most speakers, unless the excessive is made negative: -te mise-sugúru; -i-sugite miséru (?Nomi-sugite (l) miséru l zó 'I'll show you I can drink too much!'); -te yari-sugúru (age-sugúru, kure-sugúru, kudasari-sugúru); -i-sugite yaru (ageru, kureru, kudasáru—?Nomi-sugite yaru zó 'I'll drink too much for you, since you insist!'); -te morai-sugúru; -i-sugite morau (?Nomi-sugite morawanai zó 'I won't have you drinking too much on my account!').

We observed earlier that subject exaltation can generally be applied either to the sentence underlying the gerund or to the auxiliary, with certain restrictions for particular auxiliaries; but object exaltation is largely limited to the gerund (there is no *-te haiken suru despite -te go-ran ni náru). (Káite óru occurs alongside o-kaki site iru/óru, but óru is often used as a polite synonym of iru rather than as the "humble" equivalent; that accounts for the subject-exalting oraréru = irassyáru or o-ide ni náru in any of the uses of iru.)

Can further auxiliary conversions be reapplied to a sentence that already contains one? With the exception of reapplication of the SAME conversion (*-te ite iru etc.) there are few restrictions. And quite a few of the auxiliaries CAN be reapplied (once) to a sentence with the identical auxiliary; usually this is because there is more than one meaning, so that -te simatte simatta can mean 'got it done and over with dammit' or the like and -te oite oku can mean something like 'lets it go at doing it in anticipation', but -te míte míru may simply reinforce the meaning (Site míte miyóo ka 'Shall I try doing it—and see?') and the favor auxiliaries are recursive semantically since you can favor a person by doing a favor for someone else.

On p. 549 is a chart of the possible sequences of some of the more common auxiliaries.

Now the question arises: After having reapplied auxiliary conversion to a prior (different) auxiliary, can we continue the process until all different possibilities have been exhausted? E.g.:

- | | | | |
|-----|---|-----|---|
| (1) | -te ite míte iru
-te ite míte áru
-te ite míte oku
-te ite míte simau
-te ite míte yaru/morau | (3) | -te óite míte iru
-te óite míte áru
-te óite míte simau
-te óite míte yaru/morau
-te óite míte oku |

| (10) | -te simatte óite áru
-te simatte óite míru
-te simatte óite simau
-te simatte óite yaru/morau | | etc. etc. (through further cycles)? |

A few examples: *-te óite áru*: Sore-dake kai-kónde oite | áreba || nisán-niti wa | mótu desyoo 'If that much food has been bought you can live on it for a few days'. *-te óite míru*: Sibáruku || sono mamá ni site | óite | mitara || dóo ka sira 'Why don't we leave it as it is and see what happens?' *-te óite kureru*: Yuuzin ga | téhái site | óite kureta || gaidó-zyoo to | hutari de | né || ... 'With a lady guide that a friend had kindly arranged for, just the two of us ...' (SA). *-te ite míru*: Kono mamá || kono miti o | aruki-tuzukete {ite} miyóo ka sira 'I wonder if I should keep on walking this road like this to see'. *-te simatte áru*: Sore wa | móo || yattyatte áru koto ni | náru | náa 'They are already having that done, you know' (SA 2635.40e). *-te kite simau*: ... dandan ... || urésiku | náte kite simatta 'ended up gradually becoming happy' (CK 985.379); Soo iu kyooiku o || óyazi(-) ni || úkete | kityatta n desu 'That's the sort of education I ended up getting from my old man' (SA 2650.42c). *-te yatte kureru*: Uti(-) no kodomo ni | eigo o osiete yatte kudasai 'Please teach English to my child for me'. *-te yatte morau*: Sigoto no susumi-gúai o || míte yatte (l) itadaki-tai 'Please do him the favor of checking on how the work is going'. *-te moratte/itadaité áru*: (Daigaku kara moraeru yoo ni) || tetúzuki o | site itadaité áru no | desyoo ka 'Have arrangements been made for me (so that I can receive it from the University)?'; Íma, || O-kími san ni || kuruma o yonde moratte áru kara, || sore ni notte o-kaen nasái (= o-kaeri nasái) 'We've had a taxi called by O-kimi for you to go home in' (Y 512). *-te moratte yatte kureru*: Kónban wa | akirámete || omae ga hári o | útte moratte yatte kure 'Please let yourself receive

the favor of his treating you with acupuncture tonight'. *-te yatte simatte kíte áru*: Káite yatte | simatte | kíte | áru 'I have come to the point of finishing writing a letter for him' (KKK 23.36).

All auxiliary sentences can undergo the following conversions: concurrent-concessive (-i-nagara §9.1.3); *-i-⁻gati da* (§9.1.5—*Nete í wa si-gati dá ga, hidói byooki zya náí* 'I AM inclined to be in bed a lot, but it isn't a severe illness'); evidential (-i-sóo da §20); desiderative (-i-tai §7); representative (-tári §9.5); perfect (-tá §11); and negative—applied either to the underlying gerund or the auxiliary, or independently to both. Tentative (-rú daróo §12.1) can apply to all auxiliaries, but neither the hortative (-[y]oo §12.2) nor the imperative (-é §16.1) can apply to *-te áru*, for *áru* itself lacks the forms, so that whenever you see *-te aróo* or *aróo* you know that they are literary tentatives (§12.3) equivalent in meaning to (-te) *áru daroo*. For the purposive conversion (-i ni iku etc. §9.1.1) we find all auxiliaries except *iru* and *áru*; there is no **-te i/ári ni iku*, nor is there **ári ni iku* 'goes to exist/have/occur' despite the acceptability of *i ni iku* 'goes to stay (at a place)'. For *-té kara* (§9.2.3) we find all auxiliaries except *áru*; there is no **-te átte kara* despite the fact that in the meaning 'occurs' *átte kara* is possible (*soo iu kotó ga átte kara* 'after such a thing happening'). Causatives and the various passives seem to be possible for all auxiliaries except *áru*: there is no **-te araséru/araréru* just as there is no **araséru*, and *araréru* is limited to use as a subject-exalting form (equivalent to *o-ari ni náru* 'deigns to possess'). The conversion *-i-⁻tate da* (§9.1.6) occurs with *-te míru*, *-te yaru*, and *-te morau*, but not with *-te iru*, *-te oku*, and perhaps *-te simau* (unless the example *Nónde simai-tate da* 'is fresh from drinking' is acceptable). A more detailed check on acceptability of the various other conversions is needed.

You can apply FOCUS (such as highlighting with *mó* or subduing with *wá*) to any two parts of a sequence V + Aux (+ Aux + ...), including two parts both of which are auxiliaries. This seems to be true regardless of the length of the sequence, and independent of the choice of focus, which may be identical (... wa ... wa; ... mo ... mo) or opposite (... wa ... mo; ... mo ... wa). It is unclear whether the restriction to only two members of the longer sequences is a matter of grammaticality; perhaps the unacceptability is simply due to a feeling that the speaker is being unduly cranky or clumsy if he tries to apply focus to more than two spots. In any event, sentences such as the following should be acceptable, given the context or situation to call for the focus:

Káki wa/sae | site okí wa/mo | sinákatta. (← Káite okanákatatta.)

Káki sae | site óite | kuré mo | sinákatta. (← Káite óite kurenákatta.)

Hatarakí mo | site í sae | site kureréba ... (← Hataraitte ite kureréba ...)

But those with a repeat of *oku* are generally rejected:

*Káki wa/sae site okí wa/mo site óite kurenákatta.

*Káki mo site okanáí de oité wa kurenákatta.

(I have not given translations for these rather unusual sentences, since the interpretation of focus depends so heavily on context.)

It is more common to apply focus once, either to the auxiliary (V-te í sae suréba, V-te okí wa sinai, V-te, simai mo suru, etc.) or to the underlying sentence (V-í sae site iréba, V-í wa site oku, V-í mo site simawanai, etc.). Examples of this have been given under each of the auxiliaries individually.

9.3. CONDITIONS: THE PROVISIONAL, THE LITERARY
HYPOTHETICAL, AND THE CONDITIONAL; THE LITERARY CONCESSIVE

Japanese provides a number of devices to express CONDITIONS, both situational and temporal:

- (1) the gerund—often subdued or highlighted (-té wa/mo, §9.2.2);¹⁰⁷
- (2) various conjunctivalizations such as sentence + *tó* (§17.2), sentence + *nára* (§17.8), literary tentative + *gá* (§17.5) or + *tó* (§21.5), etc.;
- (3) nominalizations with *nó de* [wa/mo];¹⁰⁸
- (4) direct nominalizations with *ni* ^[1]itatté wa (itattára) or *ni* ^[1]sité mo (§14.6);
- (5) adnominalizations to various postadnominals (baai 'situation',¹⁰⁹ tokoró 'circumstance', kotó 'event', tokí 'time', etc.), which are usually adverbialized in one way or another, e.g. -(a)nai kotó ni wa (§14.1);¹¹⁰
- (6) *S hoo ga* (pp. 231-2);
- (7) special uses of the imperative (§16.1)—see also *V-te mí ro* and *V-te go-ran*, §9.2.4.(7).

For S_1 ka to omóu to S_2 'not only S_1 but also/even S_2 ' see §15.6.

A simple condition is often anticipated by an introductory adverb *mósi* [mo] 'say' or *tatóe*(⁻) 'suppose', the former most commonly anticipating -*tára* or -*ta baai* and the latter anticipating -*té mo*, though other combinations occur:

MÓSI: *MÓSI* || genzitu no seityoo-ritu ga | taka-sugiru TO, || ... 'If the actual growth rate is too high, ...' (SA 2674.45c); *MÓSI* || dekíru kotó NARA, || ... 'If (it is) possible ...'; ... *MÓSI* || hituyoo to ÁREBA || ... 'if it proves necessary' (Gd 1969/9.66b); *MÓSI* || sunpoo ga ooki-sugiru TOKÍ WA || hasami de | kireba | yói 'In the event that the measurements should be too large, you can cut it with scissors' (SA 2650.98b); *MÓSI* || soo'on no onryoo-sokutei o | site morai-tai TOKÍ, || ... 'In the event that you wish to have a volume measurement on the noise, ...' (SA 2687.119c); *MÓSI* || koo iu baai no tookei ga | séibi sarete ita TO | SITÁRA, || ... 'If statistics for such situations were made available ...' (SA 2685.16a); ... *MÓSI* || o-negai suru hakobi to nátta | SÁI NI WA, || yorosiku negai-tái no de arimásu '... in the event that sometime (it should develop that) I request it [= your opinion] of you, I hope you will kindly favor me' (Kaneda in Ōno 1967.303); ... *MÓSI* || náikaku ga | soo-zísyoku sita | BAAI NÍ WA, ... 'in the event the cabinet should all resign' (Tk 4.211a); *MÓSI* || kumiai ga, || mán'iti || kyóka o | site kurenai BAAI NÍ WA, || huhuku no moositate ga dekíru kotó ni | nátte imásu 'In the event that the [community] association should not grant permission, it is arranged so that an appeal (of dissatisfaction) can be made' (SA

107. For example, expressions with *Ippoo de wa ... tahoo de wa ...* 'On the one hand ... and on the other ...' (cf. §9.2.2).

108. For example, *Súgu* | keisatu o yondá no de wa, || Kénéd'i | giin no deisui ⁻huri ga || bárete simau 'If they had called the police right away Senator Kennedy's drunkenness would get exposed' (SA 2637.29b)

109. *Désu kara* || watasi wa || soo iu imi no (l) sinpai wa || nai to || kakusin simásu | né. || Átta baai wa .[= Áttara] || káite mo, || ii to | lomóu n desu 'So, you see, I firmly believe that there are no worries in that direction. If there were, I think it would be quite all right for you to write about them' (SA 2671.18e).

110. *Ningen ga inai kotó ni wa sankootai-sei no zitugen wa muzukasii daroo* 'Without [enough] human beings the realization of a three-shift [work] system will be difficult' (SA 2640.19c). With direct nominalization of a literary predicative: ... kotó ^[1]nási ni [wa] 'without doing; unless it happens that' (KKK 3.139). See also -(a)nai wáke ni wa ikanai 'it is impossible not to; one must', -ru wáke ni wa ikanai 'one can not (possibly); it is impossible to/that ...'.

2674.107d); MÓSI || kokkai ga || ii-kagen na kotó o sita | DANKAI NI ÓITÉ WA, || bóku(-) wa || hooritu zyoo no tetúzuki oltóru|zyunbi ga | áru 'In the event that (it reaches the stage where) the Diet should prove indecisive, I am prepared to take legal action' (SA 2663.18d); MÓSI || hito o hiki-korósita TO |SITÉ MO, || ... 'Even if, say, you should run over someone and kill him ...' (SA 2668.48a); MÓSI || roodoo-úndoo no | seikoo ni yotte, || tingu ya | syakai-hósyoo ga || ikkokú(-) dake^[1] || tákaku | nátta TO | SIYOO 'Let us assume, say, that the wages and social protection have risen for just one country as a result of the success of the labor movement' (SA 2664.45a)—note the use of a full-fledged putative to set up a condition; Dé || watasi no-| íma || kore o | syabétte | orimásu | hoosoo || MÓSI || háha ga | íkite ite | kiiTÉ MO || ... 'And the broadcast of my saying this right now, if my mother were alive to hear it, ...' (R); ... MÓSI || háha ga | íkite | orimásiTE MO || ... 'if my mother were alive' (R).

TATÓE(-): TATÓE(-) || soo iu kotó ga | okótTE MO, || ... 'If such a thing should happen ...' (Shibata in Ōno 1967.74); [Mitu-tyan, || sinpai sinákútte mo | íi | yó. ||] TATÓE(-) || keisatu ni tukamatÉ MO || kimi no kotó wa | zettai ni syaberánai kara '[You needn't worry, Mitsu.] For even if I were to get caught, I wouldn't say a word about you' (SA 2640.106); TATÓE(-) || sóo ni mo | SÉ YO, || ... 'Even if that were true, ...'; TATÓE(-) || sin-gizyutu no | doonyuu ni seikoo siTÉ MO, || ... 'Even if we succeed in the introduction of new technology ...' (SA 2684.137a); TATÓE(-) || daikin wa || geppu de siharawaréru TO WA | IÉ, || ... 'If the charges are to be paid in monthly instalments, then ...' (SA 2678.119a); Mata, || TATÓE(-) || sinbun o tukútta TO |SITÉ MO, || zyúu-nin no utí(-) || nán-nin ga | kizi o | kaku ka 'Moreover, even if they put together a (mock) newspaper, how many of every ten (children) writes an article?' (Ōno 1967.173); TATÓE(-) || hinpu no sá(-) ga | arÓO TO MO, || ... 'Even though there is a difference between rich and poor ...' (Nakane 154).

In addition to mósi and tatóe(-), there are a few other condition-anticipators, notably mán'iti 'perchance' and kari ni 'supposing, for example': MÁN'ITI || hito ga míta | BAAI DÉ MO, || ... 'Even if (other) people should chance to see it ...' (Tk 2.162b); KARI NI || soo iu monó ga || áto de | katuzi ni náTTE MO, || ... 'Even if such a thing should get into print later ...' (Tk 2.276b).

In this section we consider two important morphological categories of modern Japanese: the PROVISIONAL (-réba) and the CONDITIONAL (-tára). In order to account for certain clichés common to modern written Japanese we must notice where the literary language differs from the colloquial in its use of the provisional and also take into account a form we will call the LITERARY HYPOTHETICAL: V-ába, NEGATIVE V-(a)zu[n]ba, A-ku[n]ba. The meanings involved in the several categories are these:

- (1) 'if = provided (that)', expressing a PERQUISITE condition;
- (2) 'if = if perchance', a CONTINGENT condition;
- (3) 'whenever, every time that', a CONSEQUENTIAL condition (a GENERAL or ITERATIVE TEMPORAL condition);
- (4) 'when (in the past)', a PERFECT TEMPORAL condition;
- (5) 'when (in the future)', an IMPERFECT TEMPORAL condition;
- (6) 'because, since', a CAUSAL condition.

The following chart shows the usual differences between the literary and the colloquial languages in expressing these meanings:

	LITERARY	COLLOQUIAL
(1) 'provided that'	-réba	-réba, -rú ^[1] tó, (?) -té wa
(2) 'if perchance'	-ába	-tára [ba]

(3) 'whenever'	-réba	-réba, -rú ^[L] tó, -té wa
(4) 'when (in the past)'	-réba	-rú ^[L] tó
	-ába	-tára [ba]
(5) 'when (in the future)' ¹¹¹	-ába	-tára [ba]
(6) 'because, since'	-réba	-rú kara

One of the most common uses of the literary provisional, to express a causal condition, is not preserved by the colloquial language. But the 'because' meaning often carries over into the modern language when *kóso* 'precisely' is added: *V-réba koso* is roughly equivalent to *V-te irú kara koso/sá* and *V-(a)nákereba kóso* means much the same thing as *V-(a)nákatta kará koso/sá*. Thus the semi-literary expression *Sáreba koso* means 'For that very reason' (= *Sóo da kará koso*), coming from *Sáru* (< *Sá áru*) 'It is that way' (= *Sóo da*). Good examples are found in Mio 88 and 64: *Tabéru | hitó ga || áreba koso || utté mo | iru* 'I SELL them for the very good reason that there are people who will eat them'; *Sore wa || sadamátte iru; || sadamátte | iréba koso || hakkíri | ii-kirénai n da* 'That is decided; precisely BECAUSE it is decided I can't give you a straightforward statement'; *Íma no || midáreta yó^(r)(-) ni || irerarenákereba koso || hontoo ni || senséi no | ookii koto^(r) ga | wakarímásu* 'I appreciate your greatness, sir, precisely because you have been rejected by this corrupt world'. The entire sentence ending in *-réba koso* is directly predicated in this example: *Sore mo || Súgiko san to iu, || bóku⁽⁻⁾ no || tikara-dánomi no | hitó ga || áreba koso da to | omóu* 'I think that it is precisely because there is someone named Sugiko to lean upon me'. An example within an adnominalization: ... *otto o | lai-súreba koso || sékkusu o | kyozetu sezu ni | irarenai | hitozuma no sínri o || riarisutíkku ni | egáita | kono tyoohen-syóosetu ...* 'this novel which has realistically portrayed the psychology of a wife who must refuse her husband sex because she loves him' (SA 2676.99b).

The provisional in such sentences need not be limited to a verbal nucleus: *Itizirúsikereba koso hosigári mo surú n da* 'I COVET it just because it is so remarkable'. When the nucleus is nominal, the LITERARY provisional form of the copula (*náreba = ní [wa] áreba*) is used: *Anna námida mo || onná náreba koso || makoto-rásiku | nagaséru | monó ka to ...* 'Wondering whether she can cry such genuine tears precisely because she is a woman ...'. Rarely, this expression will include a literary perfect (to be explained below): *V-táreba [koso] = V-tá kara koso/sá; A-káttareba koso = A-kátta kara koso/sá*. Cf. Mio 121. An example: *Hito-itíbai⁽⁻⁾ no | dóryoku o | sitáreba koso || seikoo sitá no desu* 'We succeeded precisely because we put in special efforts'.

The SHAPES of the provisional and the conditional forms are confusing, since the colloquial copula borrows the literary hypothetical *náreba* as its provisional, usually shortening it to *nára*. When we apply focus to *kore nára[-ba]* 'if it be this' we get *kore dé wa/mo áreba*, for it is the equivalent of the literary provisional *kore náreba* (with the focus *kore ní wa/mo áreba*), though the latter also—and more commonly—has the meaning 'because it is this', equivalent to the colloquial *kore dá kara*.

Below you will find a chart that will be helpful in exploring the forms for various predicates. The simple form is explained in terms of the corresponding form under focus-

111. Despite the translation, I assume that *sureba* in the following sentence is a special case of the first meaning ('provided that') rather than a temporal: *Kansei sureba || sékai | saityoo to iu || Seikan-tónneru wa || ...* 'The Aomori-Hakodate Tunnel, which [it is said] will be the world's longest when/once it is completed (= upon completion) ...' (SA 2668.58). The literary hypothetical form would be *séba*; *sureba* is the provisional.

subduing in both literary and colloquial structures. (Note that we are talking only about corresponding FORMS, not about meanings.)

		LITERARY		COLLOQUIAL	
'exist'	PROV	áreba	= ári wa suréba	áreba	= ári wa suréba
	NEG PROV	{ aráneba arazáreba }	{ = ári wa senéba = ári wa sezáreba }	nákereba	{ = náku wa áreba (?ári wa sinákereba)

	HYPO	V-ba	= V wa séba		
	NEG HYPO	V-zu[n]ba	= V wa sézu[n]ba		

The forms for the copula must be carefully distinguished from the homonymous forms of *nár-* 'become':

náreba = nári wa suréba (literary and colloquial provisional 'become')

= ní wa áreba (literary provisional 'be')

náraba = nári wa séba (literary hypothetical 'become')

= nára[-ba] = dé wa áreba (colloquial provisional 'be')

Common clichés made with the hypothetical include *íwába*(⁻) 'so to speak' (= *itte míreba*), *náraba* 'if possible, preferably', *suki áraba* 'given an opening, at the least/first

112. The unfocused nuclear split -ku áreba for -kéreba occurs in written materials, perhaps as an ellipsis -ku [sae] áreba; see p. 316 (§5).

113. But bases of more than one syllable will replace the front vowel (i or e) with u. Thus (SA 2660.136d) we find *nagamúreba* = colloquial *nagaméreba* 'upon scrutiny'. The attributive (= adnominal) form is similar: *nagamúru kotó* = *nagaméru kotó*. Cf. §13.8a.

opportunity', *sinába* [morotomo] 'if death [then together]', *sikáraba* 'if so' (from *siká ári* 'it is so') = *sáraba* (from *sá ári* 'is so')—also used for 'farewell' (*sayoo nára*); *Isógaba maware* 'If in a hurry, take the long way around': *Yorába táizyu no káge* 'If you are going to lean, [choose] a large tree' (= 'If you must rely on someone, make it someone of influence'); *Hito o norówaba aná hutatú to yara de, ...* 'As they say, he who curses will get cursed, ...' (Okitsu 1.311); *Ugókaba koso útu zó* 'One move and I shoot!'; The negative hypothetical turns up in *sikarazúnba* 'if not so; otherwise; or else'. Sometimes V-(a)zu[n]-ba *naránai* (or the like) will appear where you expect V-(a)*nákereba naránai* 'must'; V-(a)zu[n]-ba is equivalent to V-(a)*nákute wa* or V-(a)*nái de wa* or V-(a)*nai tó* 'unless'. But in these expressions you will also find V-(a)zu wa (the literary negative infinitive, subdued) usually contracted to V-(a)z'aa, as in the example of *kóz'aa naránee = kónakereba naránai* 'must come' cited in §8.5. The adjective hypothetical A-ku[n]ba turns up in the sentence-introducer *áwa-yókuba* 'if things go well'—*awa-* is a bound noun of obscure etymology, perhaps derived from *áv-* 'meet'; here is another example of A-kú-ba = A-kéreba: *Mósi, || sensei ga | o-yorosikú-ba [= o-yorosikéreba], || kón'ya ni de mo, || o-ture simásu keredo ...* 'If you wish, I will accompany you this very night (but ...)' (Fn 378b).

And the colloquial copula provisional, as we have observed, is borrowed from the literary hypothetical *náraba*, and usually shortened to *nára*.¹¹⁴ But Yoshida (436), mindful of the differences in meaning, would derive *nára* by contraction from literary *nár[eb]a* rather than by apocoptation from *nára[ba]*; colloquial *nára ba* would thus presumably be considered a new formation. The literary language makes provisional and hypothetical forms on the perfect: the provisional is *-táreba*, borrowed into the colloquial when followed by *kóso* (as mentioned earlier), and the hypothetical is *-táraba*. The latter is usually taken to be the origin of the colloquial conditional *-tara[-ba]*; but Yoshida (225), mindful of the differences in meaning, derives colloquial *-tára* from *-táryaa*, a contraction of *-táreba*, thus presumably making colloquial *-tára ba* a new formation rather than a continuation of the literary *-táraba*. (See the corresponding etymology for *nára*, above.) For perfect provisionals V-i-s-éba (*áriseba*, *nakáriseba*), see p. 575.

Similar in form to the provisional is the literary CONCESSIVE: *áre[-do]*, *náre[-do]*, *A-kére[-do]*, *suré[-do]*, *C-é[-do]*, *V-ré[-do]*.¹¹⁵ Verbal negatives have the form *-(a)né[-do]*: *Búsi wa kuwáne-do taka-yóozi* 'For the warrior [it is important to maintain] a high toothpick though he does not eat = Appearances must be maintained despite poverty'. The *-do* can be highlighted with *mó*: *Barutó-kai [sic] wa || ténki [ga] seiroo | náre-do mo || nami [ga] | takakatta* 'The Baltic Sea was fair weather but heavy seas' (SA 2666.84b); *Kóe wa | suré-do mo || súgata wa | miénu | doori [da]* 'It's a case of hearing their voices but not seeing their [figures =] faces' (SA 2684.118e). The literary concessive expressions are roughly equivalent in meaning to the colloquial *-té mo* (or *-t'átte*) 'even if/though' or *-i-nagara [mo]* (§9.1.3); ... *tó wa ié[-do [mo]] = tó [wa] itté mo = tó wa ii-nagara* 'though one says that ...' is a way to thematize a concession: *Daigaku-byóoin to ié-do mo byooin wa byooin*

114. In parts of the northeast the hypothetical forms in *-aba* are still used where the standard language would use conditional forms in *-tara* (Zhs 1.21).

115. In the literary language it is considered obligatory for a sentence to end in the concessive form (always without *-do*) when it contains a *kóso*-marked adjunct: *Kore kóso kuyásikere* 'Precisely this is vexing'. Set phrases of this sort will turn up in the colloquial: *Katati kóso | tigae* (or: *lu kotó koso | tigae*) || *kangáe wa | onazi da* 'To be precise, the form differs (or: the way it is said differs) but the idea is the same'. This usage is still heard in Hachijō-jima and it turns up in set expressions in a number of other dialects (see *Kindaichi in Kōza-kokugo-shi* 1.156).

[da] 'it may be a "university hospital" but a hospital is a hospital' (SA 2685.62d); Tasyoo no tate-masi ga átta to wa (l) ^(t)ie, || tatémóno wa || tóozí no | mama ^(t)'Although there have been some additions the building remains much the same' (SA 2688.26a). Paired literary concessives will turn up in clichés such as máte-do {mo} kurasé-do {mo} 'though one waits, though one lives', as in these examples: Sikási, || máte-do | kurasé-do || kizyún-kyuu no | hoo mo | yóku | nárazu, ... 'But long though we wait the base pay itself gets no better, and ...' (SA 2660.153b); Tokoró-ga, || máte-do | kurasé-do, || S-kun wa | sutázio(⁻) ni | arawarénai 'But wait as we would, young S did not appear in the studio' (SA 2655.111a)—on the imperfect negative translated by the English past, see p. 603; ... máte-do mo | kurasé-do mo || tugunái(⁻) o | sinái n desu | né 'wait as we will they make no reparation' (SA 2681.45b). Another pair of literary concessives, highlighted: ... Káru to iu | inú wa, || turete arúku to || imó-ya no | máe ni | tati-domari, || HIKÉ-DO mo | OSÉ-DO mo | imó [o] kau | máde wa || ugokánu to iu | inú datta '... a dog named Karl was a dog that when walked would stop in front of a sweet-potato seller's and, whether you pulled or you pushed, not move till you bought a sweet potato' (SA 2663.102). The same pair without the highlighting: ... osé-do | hiké-do || boo wa || bíku to mo (l) sezu, ... 'push it or pull it, the rod wouldn't budge ...' (SA 2678.140ab). A different pair: Noruwée-seki no | kamotu-sen (l) ga tuuka sitá ga, || yobé-do | waméke-do, || dare mo kanpán(⁻) ni | arawarénakatta 'A freighter of Norwegian registry passed by, but call and yell as we would nobody appeared on deck' (SA 2673.71c). You will also find the literary concessive unpaired: Nusúmi wa | suré-do, || hído(⁻) wa | sezu 'Though I may steal [things], I commit no atrocities' (SA 2642.104d); notice the predicative use of the literary negative infinitive sezu. Another reading: Nusúmi wa suré-do ... 'Though I commit theft, ...'—with the verbal noun derived from the infinitive rather than nuclear focus.

We are following Japanese grammarians in treating A-káre, áre, and N de áre as imperatives (§ 16.1), even in their special uses that resemble the concessive, such as sínruí(⁻) de áre tízin(⁻) de áre 'whether it be a relative or an acquaintance' (SA 2665.36c) and nán to mo áre 'whatever (it) may be'. Other ways of stating concessions will be found in § 17.6 and § 21.5 (literary tentative + ga/to).

You may run across a provisional verb form made on the polite stylization -másu (§ 22.1), but according to Tsujimura 203 the form -máseba is "not standard" and the form -masúreba was never common, even in earlier periods.

The perfect hypothetical and concessive are sometimes used in modern written Japanese, as is the perfect attributive (= adnominal) form -táru; see § 9.5.

Hayashi 107-8 calls our attention to a usage that can be called the OBSERVATIONAL CONDITION, to be translated 'When ... (what was noticed was) ...' or 'Upon ...-ing I notice(d) that ...', as in his examples: Usiro o míru to, || Nakamurá-kun(⁻) ga || níko-niko waratte iru 'When I looked back I saw Nakamura smiling'—I assume the imperfect here is used as a narrative (or vivid) past; Ása | ókite | míru to, || sóra ga | hárete ita 'When I got up in the morning I found the sky clear'; Kaizyoo ni ittára, || máda || hitóri mo kíte | inákatta 'When I went to the meeting hall (I found that) there was no one there yet'; Zyon ga | arúite | itára, || saihu ga | ótite ita 'Walking along John noticed a purse lying on the ground'. Perhaps this is a similar example: Hitó-yama | koséball móo || Naganó-ken da 'One mountain beyond and you are in Nagano Prefecture' (SA 2684.62d).

Since there is more than one way to state a condition, it might seem possible to embed conditions within conditions without the nagging of a repeated form, but I have had difficulty eliciting examples.¹¹⁶ It is, of course, possible to make a condition out of variously formed complex sentences, e.g. gerund-conjoined as in ... yásuku katte || tákaku | uréba || mookáru 'You make money if you buy cheap and (then) sell dear' (SA 2684.48a). And in the following example the negative provisional is applied to a sentence which has earlier applied a favor conversion (§10) to infinitive-conjoined sentences: Kekkyokú,^[r] || seizi-ka ga || móttö || umái | séizi o yari, || kyooiku-ka ga | tyan-tō^[r] sita kyooiku o yatte kurenákereba, || kono zyootai wa || tuzukumásu | né 'After all, unless the politicians favor us by carrying on a more skillful politics and the educators by carrying on a proper education, these conditions will continue to exist, you know' (Tk 3.6a).

The ending -(r)éba optionally shortens to -(r)yá[a]¹¹⁷ and the ending -kéreba optionally shortens to -kérya[a] or further to -kyá[a]. A shape such as /kákya/ can represent an abbreviation of either káki wa or kákeba. Both -(á)nkerya[a] and -(á)nkya[a] are old-fashioned abbreviations of -(a)nákereba, by way of -(a)nákerya[a] and -(a)nákya[a]. In Kansai speech the form -(a)néba is used in place of -(a)nákereba; it contracts to -(á)nya, and sometimes further to -(á)na. In place of -(a)nai the traditional Kansai form is -(a)nu and that shortens to -(a)n, as we find in the polite negative -masén even for the standard language; corresponding to -(a)nai tō, another way to state a negative condition ('unless ...'), Kansai speech has -(a)n tō. In written Japanese you will often run across such Kansai-like forms as Kakáneba narán[u] = Kakánakereba naránai 'must write' and in the Kansai area you will hear such things as Kaerán[y]a corresponding to standard Kaerának[er]ya = Kaeránakereba '(I've) gotta go home' or the synonymous Kaerán to [ikan/akan] = Kaeránai to [ikenai]. The Kansai counterparts of sinai and sinák[er]ya = sinákereba are senu and senéba (or sénya or séna), respectively, but sezu-ba is sometimes used in place of senéba; cf. Ikazu-ba náru ~ mái = Ikanákereba naránai daroo 'I guess I must go'.

Expressions such as (sinákereba naránai =) sén[y]a narán will sometimes reduce further to sén narán or even, in rapid speech, sén nán. For some dialects it would be appropriate to set up an ending -(a)nna[ra]n; an Ōsaka example: dasán narán 'must send' (SA 2676.132d).

Examples of various contractions of provisional forms: Áa, || haná o | tukútt' okya | yókatta | náa 'Oh, I wish I had grown flowers!' (SA 2686.37c) = tukútte okéba yókatta; Sore de penisirin dé mo | tukayáa, || súgu | naóttimau 'Then if you use penicillin or something, it'll clear up right away' (Tk 4.2ab) = tukaéba, súgu naótte simau; Náni ka to | omóyaa, || tairyoo-gyákusatu no | kóttesu kara | ná 'The word "purge" is cleverly chosen because you wonder what it may be when what it refers to is mass slaughter' (Tk 2.160b) =

116. These may be examples: Kono syóobai e | háittara, || yositára, || watasi wa | syooti sinai 'If once in this business you should quit, I won't approve' (R); Móo, || watakusi ga | ikite ireba, || mósi, || ánta ga | kono syóobai [o] | yositára, || móo, || korosite simau ||—soko máde | iwaremásite || ... "'Now, so long as I am alive if you should quit this business, then I'll kill you"—I was even told that [by my mother]' (R).

117. Iéba 'if one says' shortens to iyá[a], ireba 'if one stays' or 'if one needs' to iryá[a], and ireba 'if one shoots (an arrow)' to irya[a]. Notice also V-te [i]yá[a] = iréba; V-te árya[a] = áreba; V-te mírya[a] = mireba; V-te morayá[a] = moraéba; V-te simayá[a] = simaéba, V-timayá[a] = V-timaéba = V-te simaéba, V-tyá[a] = V-tyaéba = V-te simaéba; V-te [i]kyá[a] = V-te ikéba; V-te kúrya[a] = kúreba; V-te kureryá[a] = kureréba; V-t'ókya[a], V-te okyá[a] = V-te okéba; ...

omóeba ... kotó desu kara ná; ... úso o | iyáa, || ... 'if he's telling a lie' (Kb 105b) = iéba; Nihón no || yaránya | narán | kadai wa ... 'The problems that Japan must handle ...' (SA 2679.46c) = yaranákereba naránai; ... yaranyáa, || iken ... 'must do' (SA 2689.147c) = yaranákereba ikenai; ... iron-na riákusyon o | kangáénya | ikan 'we have to think of the various reactions' (SA 2678.48b, Kanagawa-born Hatano Akira) = kangáénakereba (ikanai=) ikenai; Gensoku tó ka || kati-kan to ka, || sisin nári || mokuhyoo nári o, || sekinín-sya wa || simesánya ikan to omóu n desu 'Principles and values, directions and goals must be shown by the responsible people, I think' (SA 2678.48b, Id.) = simesánakereba (ikanai=) ikenai; ... sono máe ni | keikaku o || yóo | kikána | ikan 'one must carefully inquire into the plans in advance' (SA 2686.49a, the mayor of Nara's Asuka village) = yóku kikanákereba ikenai; ... sore ní wa || kane o kakéna | ikan 'for that one must spend money' (SA 2686.49b., Id.) = kakénakereba ikenai; ... séna | ikan 'must make it ...' (SA 2686.49-50, Id.) = sinákereba ikenai; ... sen to | lakan 'must do it' = sinai to ikenai; Só ya kara, || sake wa || kúuki no | léé i tókó de | tyozoo séna | ikán no desu | né 'So you have to store liquors in a place with good air, you see' (Tk 4.76a, Ōsaka speaker) = Sóo da kara, sake wa kúuki no | i | tokoró de tyozoo sinákereba naránai no desu né; ... yóozin | sénkerya | narán 'we must be careful' (Tk 3.17a—Niigata speaker) = yóozin sinákereba naránai.

9.3.1. The provisional: -réba.

Provisionals are freely made from virtually all sentences, including causatives, passives, desideratives, negatives, sentences containing exaltation, gerund + auxiliary, etc. The provisional negative translates as 'provided/if ... does/is not' or 'unless ... does/is'. This leads to the expressions of obligation V-(a)nákereba + naránai, ikenai, or damé da; there are synonyms V-(a)nákute wa + ikenai, naránai, or damé da (§9.2.2) and V-(a)zu ni orarénai (§9.6), all of which also mean 'must'.¹¹⁸ Just as V-(a)nákute wa ikenai is optionally shortened to V-(a)nákutya (§9.2.2), similarly V-(a)nákereba naránai can be shortened to V-(a)nákerya or V-(a)nákya—in Kansai also V-(a)nkya, V-(a)nya, V-(a)na: Kaerának[er]ya, Kaerán[k]ya, Kaerán[y]a 'Gotta go (home)'; Kotosi wa | mata, || atarasií | té o | kangáénakya 'This year again I gotta think up a new gimmick' (SA 2680.114e); ... go-ongáesi | sinákereba [naránai] tte | kimotí ga tuyói ... 'I have a strong feeling that I must repay my obligations ...' (SA 2670.113b)—tte represents tó iu.

The negative provisional can be (pro-)predicated and adnominalized to the noun zyookén(¯) with the meaning '(under) the condition that it not happen': Hutatabi || kono utí(¯) no (|) sikii o | matagánakereba | nó | zyookén(¯) de, || kóndo no (|) mondai wa || yat-tó yurúsíte moratta 'I was finally forgiven the recent affair, on the condition that I never cross the threshold of this house again'.

118. There are subtle differences between naránai and ikenai (or damé da); ikenai and damé are common ways to warn someone else not to do something, and sinákereba ikenai (or sinákute wa ikenai) will not mean 'I must do it' unless you are speaking of an obligation that is objectively expected of you as a regular thing. For a single act sinákereba ikenai will mean 'you (or he) must do it' and the corresponding form for 'I' will be sinákereba naránai. The forms V-(a)nákereba naránai (etc.) and V-(a)nákute wa naránai (etc.) are characteristic of eastern (Kantō) dialects and the western (Kansai) version is V-(a)néba narán[ui], but you will come across such blends as V-(a)nákereba narán[ui] and V-(a)néba naránai (Y 186); the forms in general became popular in written Japanese during the Meiji period. Our discussion centers on the verbal obligation forms, but there are similar forms for adjectives and nouns: Sinzyuku de nákereba naránai 'It has to be Shinjuku [for me to find it enjoyable etc.]' (R).

Each of these also occurs with the imperfect 'if (one does) ...' or the like, so the listener should be prepared to hear all the following forms:

V-rú n zya	= V-rú no de wa
V-tá n zya	= V-tá no de wa
A-í n zya	= A-í no de wa
A-kátta n zya	= A-kátta no de wa
N ná n zya	= N ná no de wa
N dátta n zya	= N dátta no de wa

An example: Sorya, rakugo o l sasimukai de kiitá n zya, ll omosíróku mo ll okásiku mo l náí 'But if you were to listen to vaudeville patter tête-à-tête it would be neither interesting nor comical' (Tk 3.145a).

Translation of the negative provisional—and synonyms *sinai tó* (§ 17.2), *sinai kotó ni wa* [usually + negative] (§ 14.1)—is often smoother with English 'unless' + affirmative (*sinákereba* 'provided one does not do = unless one does').

Either the provisional or the conditional—or *S-rú + tó* (but not *S-té wa!*)—can be used to express a wish: *O-kane o moraéba* (*morau tó*^[1], *morattára*) *íi no ni ...* 'If I get the money it will/would be nice, but ...' = 'I hope I get the money' or 'I wish I would get the money'. Examples: *Sosite ll hima o tukútte ll sono yóo na l yuuzin to issyo ni ll hakubutú-kan ya l bizyutú-kan o l míte l kúru to l íi* 'And then I hope to find time to go see museums and galleries with friends of that sort' (SA 2665.121a); *Moo sukósi l se ga takái to l íi* 'I wish I were a bit taller' (Hayashi 135); *Senséi ga l go-zaitaku da to l yói to l omóu* 'I hope the teacher is home' (*ibid.*). Sometimes a more literal translation is appropriate: *Tama ní wa, ll hitóri de l yatte míru to l yói no da* 'Every now and then it's good to try doing it alone' (*ibid.*).

Often only the condition is expressed, with the desirability implied: *O-kane o moraéba* (*morau tó*^[1], *morattára*) ... *né* 'If only I were to get the money, you see ...'. If the unfulfilled wish is pushed to the past, the conditional is required: *O-kane o morattára yókatta no ni ...* 'I wish I had got the money (but I didn't get it)'. Although the statement of approval that concludes the sentences, when expressed, is typically *íi* (= *yói*), occasionally an unusual synonym will turn up: *Dekíreba Tyuukintoo-kínmu keikén-sya* [or: *Tyuukintookinmu-keikénsya*] *de Arabia-go ga hanaséba bétaa [da]* 'If possible, it would be better [= we would prefer it] if he were someone with work experience in the Middle East and able to speak Arabic' (SA 2665.19e—from a job description). The condition is sometimes focused with *sáe*: *Kenkoo de ll súnao de sae l áreba l íi* 'All they have to be is healthy and obedient' (SA 2642.40)—from *kenkoo de súnao nára*, the provisionalization of *kenkoo de súnao da*, a gerund-conjoining of two adjectival nouns.

When the provisional (or the equivalents *-té wa* or *-ru tó*) means 'whenever' it can be followed by either the imperfect or the perfect in the later clause; but when followed by the imperfect the provisional is also sometimes used to mean 'when (in the future)', equivalent to *-tára*. Accordingly a sentence like *Áme ga húreba* (*hútte wa*, *húru to*) *YASÚMU* can mean either 'Whenever it rains we (always) rest' = *Áme ga húreba* (etc.) *yasúmu monó da*; or 'When/If it rains we will rest' = *Áme ga húttara yasúmu*, depending on whether the imperfect is taken to be iterative (habitual) in meaning or to refer to a single act in the future. But *Áme ga húreba YASÚNDA* can mean only 'Every time it would rain we would rest', more or less the equivalent of *Áme ga húreba yasúnda monó datta* 'We used to rest when it rained'. The only way you can say 'When it rained we rested (= stopped)' to refer

to a single time in the past is by using the conditional: *Áme ga HÚTTARA yasúnda*. Cf. KKK 23.234. (Exceptions to this description are those perfects that are made on the conjoined sentences explained in §9.3.2.)

Hayashi 135 describes a use of the provisional copula following a noun or a directly nominalized verbal or adjectival sentence, in which the condition ('if it be N_1 ') is immediately followed by a permissive conclusion 'it is satisfactory for it to be N_1 ': *Pán nara | pán de | ii si, || góhan nara | góhan de mo | ii* 'If it's bread, that's all right; and if it's rice, that's all right, too'; *Iyá nara | iyá de [mo] | ii* 'It doesn't have to be liked'; *Áru nara | áru de | yói si, || nái nara | nái de [mo] | yói* (or: *nái nara | nákute [mo] | yói*) 'If there is some, fine; if there isn't, fine'; *Káeru nara | káeru de [mo] | ii* 'You/We don't have to stay'; *Káetta nara | káetta de [mo] | ii* 'It doesn't matter if he's left'; *Kaeránakatta nara | kaeránakatta de [mo] | ii* 'It's all right if he didn't leave'; *Takái nara | takái de [mo] | ii si, || yasúi nara | yasúi de [mo] | ii* (or: ... *tákakute mo ii si, ... yásukute mo ii*) 'I don't care whether it is expensive or cheap'. When two such statements are put next to each other for contrast, either or both can be highlighted: ... *dé [mo] yói*. But if the first is highlighted, the second is likely to be highlighted also.

The provisional will sometimes set up a rhetorical question that immediately introduces an explanation: *Náze nara ... no dá kara* '(If we ask why) the reason is that ...'. A similar usage will introduce a highlighted potential: ... *tó^[1] iéba | ié mo | siyóo* [= *surú daroo*] *keredo || ...* 'It can, of course, probably be said that ... but' (Maeda 1962.79); *Motíron koko de || náze | warai ga | okótta ka, || bunseki suréba | bunseki mo dekiru* 'You can, of course, analyze why a laugh occurred here' (Maeda 1962.79). And this is very similar to expressions of the type N_1 nára N_1 (*dé*) and N_1 mo N_1 nára N_2 (...), for which see p. 245 (§3.10).

Expressions of the type V_1 -réba V_1 -tá de are a lively way to say *V-ta baai ga áreba/ áttara* 'if/when it happens that it has occurred', made by the gerund conversion of a direct nominalization (predicated) of an iterative construction 'if does V_1 then did V_1 ': [*Bootoo suréba || "Gaizin ga kattá kara" || tó | setumei sarete kíta. || Sagáreba | sagátta de, | mata || "Gaizin ga uttá kara" || to iú no wa || okásiku wa || nái ka* '{When prices soared it got explained with "It's because foreigners have been buying"'.] When they have had occasion to fall isn't it odd to say again "It's because foreigners have been selling"?' (SA 2679.28bc).

When the iterative construction is adnominalized to ... *monó da* it can be used to report a vivid reaction 'incredible though it seems, it actually did happen': *Hidói (l) gakkai ga | áreba | átta | monó da* 'There was never such a dreadful (scholarly) meeting!' (SA 2650.121a). The iterated verb need not be perfect; we also find V_1 -réba V_1 -ru *monó da*: *Kawaréba | kawaru monó de aru* 'He is much changed' (Fn 171a). Cf. the use of *tára* and *téba*, §21.2.

There are a number of sentence-opening clichés that are framed as provisional predicates, e.g. *gái-site iéba* 'generally speaking'. See §24 for examples.

9.3.2. Conjoining parallel sentences with the provisional.

One use of the provisional is to conjoin parallel sentences with corresponding adjuncts that are highlighted by *mó*: *Kaze mo húkeba || áme mo | húru* 'The wind blows and it rains, too'—cf. *Kaze ga húkeba || áme mo | húru* 'Whenever the wind blows it rains, too' (§5.4);

Sakana mo tóreba | ryóo mo suru 'We both fish and hunt'; Tyóosyo mo | áreba || kettén(¬) mo | (l) áru 'It has its merits and its faults' (Nagano 1966.164); O-kane mo nákereba | zikan mo náí 'I have neither the time nor the money'; Iroiro || soko ní wa || okasii kotó^(s) mo | áreba || kanasii kotó mo | átta 'All kinds of things happened there, both amusing things and sad' (Kb 13a); Eigo mo wakaránakereba || Huransu-go mo hanasánaí 'I understand no English nor do I speak French'; Íí | hanasí mo | mimí ní háireba || warúi | hanasí mo | kiita 'Good stories have come to my ears but I have also heard bad ones'. As the last example shows, the "corresponding" adjuncts correspond SEMANTICALLY but not always in grammatical form; here the condition contains the underlying intransitive sentence hanasí ga mimí ní háiru and the conclusion contains the underlying transitive sentence hanasí o kiita, with the subject of the former and the object of the latter in semantic correspondence.

When the adjuncts are grammatically as well as semantically correspondent AND when the verb is identical, the sentence can (optionally) be reduced: Watasi mo [| ikéba] || ootoo mó mo | iku 'Both my brother and I are going'; Tití kara mo [| moraéba] || háha kara mo | moratta 'I got some from both my father and my mother'; ... ue kará mo [| miráreba] || sita kará mo | miraréru ... 'it can be viewed both from above and from below' (Tk 4.156b); ... konó-goro(¬) wa || watasi nádo || kodomo no kóro ni wa || míta kotó mo [| nákereba] || kiita kotó mo | náí yóo na | inú ga | húete | kíta '... lately dogs have proliferated of a sort that had never been seen or heard of when WE were children' (SA 2663.103c).

Instead of the adjuncts, the nucleus of each predicate itself can take the highlighting: Hatarakí mo [suréba] asobí mo si-nasáí 'Both work and play!' Or, with verbal nouns: Sigoto mo [suréba] undoo mo si-nasáí 'Engage in both work and sports'. The conjoined sentence need not be verbal: Mizikáku mo [| áreba] || yásuku mo | áru 'It is both short and cheap'; ... gyóosya ni | tótte wa || ítaku mo [| nákereba] || káyuku mo | náí 'the dealers (neither hurt nor itch =) couldn't care less' (SA 2666.20b); Heyá wa || kirei de mo [| áreba] || sízuka de mo | áru 'The room is both clean and quiet'; Kore dé mo [| nákereba] || sore dé mo | náí 'It is neither this nor that'.

Adjectival nouns can be conjoined with adjectives: Naru-hodo || káre-ra no | káku | mózi wa || úmaku mo | nákereba || kirei de mo | náí 'To be sure, the characters they write are neither very good nor very neat' (SA 2659.134b); Mattaku⁽¹⁾ || hugai-náku mo | áreba || teizoku na kónzyoo de mo | áru 'He is both pusillanimous and has a vulgar nature' (Fn 12a) —this example is peculiar in using AN na N as if the entire phrase were an adjectival noun. But the reduction is possible only if the adjectival noun appears in the conclusion: Heyá wa || yásuku mo [| áreba] || kirei de mo | áru 'The room is both cheap and clean'—with or without the reduction; Heyá wa || kirei de mo | áreba || yásuku mo | áru 'The room is both clean and cheap'—ONLY with no reduction.¹²⁰

When unreduced, all such expressions are ambiguous: the sentence may be taken as

120. More examples with adjective and adjectival noun: Ano apáato wa || híroku mo [| áreba] || ánka de mo | áru kara, || kariyóo ka to | omótte imásu 'I am thinking of renting that apartment since it is both spacious and cheap'; Ano apáato wa || ánka de mo | áreba || híroku mo | áru kara || kariyóo ka to | omótte imásu 'I am thinking of renting that apartment since it is both cheap and spacious'; Ano apáato wa || híroku mo [| nákereba] || ánka de mo | náí kara, || damé desyoo 'That apartment would be no good because it is neither spacious nor cheap'; Ano apáato wa || ánka de mo | nákereba || híroku mo | náí kara, || damé desyoo 'That apartment would be no good because it is neither cheap nor spacious'.

tightly conjoined in this special sense (somewhat like that of Sentence + si § 17.3) or it may be taken as loosely conjoined in any of the several meanings of the provisional. The difference in interpretation will generally be slight. Sometimes an adverbial element is used to introduce the second part of the (unreduced) expression: *Norite o usinata umá mo | iréba, || HANTAI NI || umá o | usinata héi mo || ita* 'There were both horses that had lost their riders and, conversely, soldiers who had lost their horses' (Ig 1962.93).

Stative verbs also can sometimes be conjoined with adjectives, adjectival nouns, and precopular nouns; no reduction is permitted: *Watasi wa || kuuhuku dé mo | áreba || tukárete mo | iru* 'I am both hungry and tired'; *Watasi wa || tukárete mo | iréba || kuuhuku dé mo | áru* 'I am both tired and hungry'; *Kuuhuku dé mo | nákereba || tukárete mo | inai* 'I am neither hungry nor tired'; *Tukárete mo | inákereba || kuuhuku dé mo | náí* 'I am neither tired nor hungry'. But observe how the focus in these examples is applied within the gerund-auxiliary conversion (-te mo iru); probably we should reject both *... *tukárete í mo suru* and (?*) ... *tukáre mo site iru*, and even (*) ... *tukáre mo suru* seems odd in the context though it could perhaps be interpreted as '(I am both hungry) and I keep getting tired'.

The deciding factor in the acceptability of various conjoinings of this sort would seem to be semantic parallelism, and the focus can sometimes be applied to unparallel parts of the two sentences, as in the first of the following three examples: *Sono basyo wa || ténki ga | yóku mo | áreba || kootuu mo [|] bénri da* 'That place has both good weather and convenient transportation'; *Sono basyo wa || ténki ga | yóku mo | áreba || kootuu ga | bénri de mo | áru* 'That place both has good weather and (has) convenient transportation'; *Sono basyo wa || ténki mo | yókereba || kootuu mo [|] bénri da* 'That place is both good for its weather and convenient for its transportation'. But such sentences are unlikely to be reduced: *... *ténki ga yóku mo [áreba] kootuu mo bénri da*.

9.3.3. The conditional: -tára.

Sentences can make a conditional form that means 'if', 'when', or sometimes (as a substitute for -réba) 'whenever'. The possible meanings vary with the tense and aspect of the sentence to which the conditionalized sentence is attached, as follows:

S_1 -tára + S_2 -tá	'WHEN S_1 happened S_2 happened'
(S_1 -tára + S_2 -tá) + daroo	'probably WHEN S_1 happened S_2 happened'
S_1 -tára + (S_2 -tá daroo)	'IF S_1 happened S_2 probably happened'
S_1 -tára + S_2 -rú	(1) 'IF S_1 happens S_2 will happen'
	(2) 'WHEN S_1 happens S_2 will happen'
	(3) 'WHENEVER S_1 happens S_2 happens' (= S_1 -réba ...)
(S_1 -tára + S_2 -rú) + daroo	'probably (1), (2), (3) [above]'
S_1 -tára + (S_2 -rú daroo)	(1) 'IF S_1 happens S_2 will probably happen'
	(2) 'WHEN S_1 happens S_2 will probably happen'

.Notice that the order of application of TENTATIVE (§ 12.1)—before or after sentence conjoining—makes a difference in the meaning. This can be signalled by juncture: an underlying minor juncture may separate the tentative that is applied to the larger sentence: ... *hanásu | daroo* and *akerú [|] daroo* versus ... *hanásu daroo* and ... *akerú daroo*.

In contrast with the provisional 'if'—meaning 'provided that' and indicating a 50-50

likelihood—the conditional ‘if’ means ‘suppose that’ and implies doubt or unreality; thus, if the concluding sentence is to be in the past it must be put into the perfect tentative -tá {da}róo (§ 12.1): Sono hón o yóndara wakátta {da}róo ‘If I had read that book I would have understood’. Otherwise the meaning will be ‘when’: Sono hón o yóndara wakátta ‘When I read that book I understood’; To o akete mítara sóto wa akarui tukíyo datta ‘When I opened the door (to see) it was a bright moonlit night outside’. (But if the tentative is applied AFTER the two sentences are conjoined a wider range of meanings is possible, as shown above.) When the concluding sentence is imperfect tentative (-rú daróo), either the provisional or the conditional can be used; the likelihood of the conclusion differs accordingly: Sono hón o yóndara wakáru daróo ‘If I should read that book [as well I may not] I’ll understand’; Sono hón o yómeba wakáru daróo ‘If I read that book [and I may or may not] I’ll understand’ (= Sono hón o yómu to wakáru daróo).

Either the conditional or, less commonly, the provisional can be used in seeking and giving advice ‘it would be good/better to do what?’: Dóo sitára ii desyóo ka or Dóo suréba ii desyóo ka ‘What should I do?’; Migi no hoo e ittára ii desyóo or Migi no hoo e l ikéba (= iku to) ll ii desyóo ‘You should go to the right’. In giving advice, you can instead use the expression corresponding to English ‘had better’: V-ta hoo ga ii ‘the alternative of doing ... is better’ (§ 13.2) as in Migi no hoo e itta hoo ga ii desyóo ‘You had better go to the right’. This can also be used as a way of asking advice, or selecting between two alternative courses of action: Migi no hoo e l itta hoo ga ll ii desyoo ka ll (hidari no hoo e l itta hoo ga ll ii desyoo ka) ‘Would it be better to go to the right (or to the left)?’ Compare V-ru hoo ga ii ‘It is better to (do)’. Although there is little contrast in meaning between Sinu hoo ga ii ‘He’d be better off dying’ and Sinda hoo ga ii ‘He’d be better off dead’, the negative brings out a difference: Sinanai hoo ga ii ‘He’d better not die’, Sinanákatte hoo ga ii ‘He shouldn’t have died’. Cf. Sindá n zya nákereba ii desu ga ... ‘I hope he didn’t die’.

The conditional is used in obliquely inviting someone to do something, with the concluding sentence (ikága/dóo desu ka ‘how about it?’) often omitted, as in these examples from Mio 293: Hiza o lo-kuzusi ni náttara ‘Please sit comfortably’; Attakái (l) uti(⁻) ni l mesiagettára ‘Eat it while it is hot’. The concluding sentence may be ii zya nái ka ‘wouldn’t it be good (or all right)’ as in this translation of the English slogan ‘Let’s give peace a chance’: Sensoo o yamete l heiwa ni kárete l mítara ll ii zya nái ka (SA 2680.21a). The invitation can include the speaker himself: Kono hen de yametára [l dóo] ‘How about [our] stopping here?’

Vivid emphasis can be added to a description by using a conditional quotation followed by nái or arimasén or gozaimasén or ári wa sinai/simasén ‘there is none [so much so as what I quote]’: Uresii [to i]ttára l arimasén ‘It’s ever so delightful!’; Kowái [to i]ttára l nái ‘Most frightening!’; Muzukási-sa [to i]ttára l arimasén ‘Difficulty beyond compare!’; Kónnan na l kotó [to i]ttára l arimasén ‘Troublesome isn’t the word for it!’; Sono arísama(⁻) [to i]ttára l gozaimasén ‘What a sight!’; Hayái no l háyaku l nái no [to i]ttára l arimasén ‘You’ve never seen such speed!’ (See § 15.13); Okasii no l okásiku l nái no [to i]ttára l arimasén ‘It’s the funniest thing ever!’; Hazukasii ttára l ári ya [= wa] (l) sinai ‘I’m ever so embarrassed!’ (Morishige 144—also, with áryaa, Okitsu 1.500); Bakabakasii ttara áryaa sinee [= ári wa sinai] ‘How utterly stupid!’ (Okitsu 1.361); Éiga(⁻) ya l térebi no l ninki-sutáa ga, ll kozótte l bútai ni l hatu-syútuen {si(te)}, ll sono (l) nigiyaka-sa ttára l nákatte ‘All the stars of cinema and television appearing together for the first time on the stage, there’s never been such a flurry!’ (SA 2658.110e); Sono yomi-káta no l hetasa-kágen to l ittára l arimasén ‘You can not imagine the clumsiness with which they read!’

Somewhat surprisingly, a conditional sentence can be quoted (§21) in the form *-tára* to *omóu* 'I wish that ...' or 'I hope that ...' but this is perhaps best treated as a shortening of *-tára ii* (to *omóu*) '(I think that) it would be nice if ...': *Sore kara o-hanasi o tenkai site itadaketára* [] to *omóimásu* 'I'd like you to develop your discussion starting from that (question)' (Tanigawa 90). Here is an example with the quoted condition adnominalized—and, I presume, ellipsis implied before and after *tó*: ... *kono Kanada-hóosiki o | sankoo ni sitára* to *no líken mo | áru* '... there are some who suggest learning from this Canadian formula' (SA 2681.105c). For N_1 *ka* to *omóttara* N_2 *dáttara* as a device to express an unexpected identification, see p. 246 (§3.10).

The conditional is freely made from virtually all sentences, including causatives, passives, sentences containing exaltation, desideratives, negatives, gerund + auxiliary, etc. The form is made by attaching to verbals *-tára/-dára* (with shape adjustments identical with those of the gerund), to adjectivals *-káttara*, and to nominals *dáttara*. All of these forms are optionally extendable by *(-)ba*: *-tára (-)ba*, *-káttara (-)ba*, *dáttara (-)ba*. The extended forms, though historically respectable,¹²¹ are felt to be slangy, rough, or impolite in colloquial speech. Compare the copula provisional *nára-ba* and the particle sequence *ó ba* (§2.3). Notice that in *A-kéreba* and *V-(r)éba*, the *-ba* is not today an extension, but part of the ending, since *-kére* does not (today) freely occur except before */ba/* and we do not want to associate *-éba* with the imperative *-é* since that would not account for the attachment of the provisional ending to vowel verbs in the shape *-réba*.

It might be possible to say that the conditional is the perfect *-tá* (§11) + a particle or extension *ra* (occurring nowhere else), perhaps as an abbreviation of *-tá [no] nara*; compare the remarks in §9.4 and §17.9. One difference between a condition expressed by the provisional (*-réba*) and a condition expressed by the conditional (*-tára*) is that the setting-in or beginning of the provisionalized happening can be simultaneous with the setting-in of the conclusion, but the beginning of the conditionalized happening must always precede the start of the conclusion. Thus there is a semantic trace of the perfect still present in the conditional. This was noticed also by Kuno 1973.183, who tells us that in S_1 -*tara* S_2 " S_2 happens after S_1 is completed". He also observes that in reference to past events " S_2 normally represents an unexpected or surprising event ... [the opposite of S_1 -*te kara* S_2]" ; this is because S_1 and S_2 must have no "self-controllable time sequence".

9.4. THE REPRESENTATIVE: *-TÁRI*

A sentence of virtually any type can be turned into a form we will call the REPRESENTATIVE; it has also been called the ALTERNATIVE. The form refers either to representative (typical) happenings and conditions or to intermittent (repeated, alternating, distributed) happenings and conditions. The representative adverbialization is most often followed by the dummy verb *suru* to make a new sentence: *Háittari [détari] suru* 'They keep coming in [and going out]'. The subject of the several happenings may be a single person who is doing several things (*Káre ga X o sitári Y o sitári suru* 'He does X and Y')¹²²

121. Or are they? See the suggestion on p. 556 that colloquial *nára ba* and *-tára ba* are new formations. By "new" we mean "relatively new"; Yoshida (239) tells us that *-tara ba* is common in older Meiji literature.

122. Examples: *Iti-zíkan -gúrai || sauná-situ ni |détari |háittari (|) site, || áto wa || zut-tó^[1] (|) sóhwa de |nete irú n da* 'What I do is go in and out of the sauna room for about an hour and afterward stretch

or it may be several persons either all doing the several things or each doing something different: *Káre-ra ga X o sitári Y o sitári suru* 'They do X and Y every one of them' or 'They do various things, some doing X, some doing Y'.¹²³ Here is a clearcut example of the latter: *Sono utí(¯) ni, Bunroku ga byooki ni náttari, Bunroku no saikun ga sindári simásite né* 'Meanwhile, [Shishi] Bunroku got sick and his wife died, you see' (Tk 2.184b)—for the sentence-final gerund, see §9.2.1a.

According to NHK 1970.119, the structure V_1 -tári V_2 -tári suru is tending to be replaced by V_1 -tári V_2 -ru. I believe the following sentences may be examples of that: ... *syoogákkoo o | déte || zyookyuu [no] tyúugaku ni | susumu monó to, || koosyoo [= kootoo-syoogákkoo] e ittári, || sugu | zitugyoo ni túku | monó to no [] aida ni, ...* 'between those who, upon leaving primary school, advance into an upper middle school and those who go to higher primary school or go directly to work ...' (KKK 3.70); ... *tosí-gai mo náku || báka na | gakusei mítai na | kakkoo o sitári, || táido o site | miséru ga ...* 'at his age he still acts like a stupid schoolboy and displays [such] behavior ...' (id.); *Oyá ga ko o korositári, kodomo ga oyá o korosu* '(It sometimes happens that) parents kill their children and children kill their parents' (SA 2835.45a). In the following example the concurrent is applied to the resulting structure: *Dénsya(¯) ni | nottári, || sake o nomi-nágara || kangáete 'ru n desu ka* 'Do you do your thinking while riding on the train or drinking liquor (or the like)?' (SA 2653.43d). Here we would expect *Dénsya(¯) ni nottári, sake o nóndari si-nagara ...* . (The comma—as so often in Japanese texts—is misleadingly placed.) For the iterative structure V_1 -i mo V_1 -tári ... 'actually goes so far as to (do something unlikely or outrageous)' see §9.1.1b.

A single ...-tári + suru can sometimes be translated as 'often' or 'sometimes': *Sore o || koo káitári [] suru* 'It is sometimes written this way' (i.e. 'There are times when it is written this way' or 'There are those who write it this way'); *Onna-zure dá to, || toorisugité kara, || kao miawasetári | suru no* 'When it's a man and woman, after they've passed by [me in my maxi-coat] they sometimes exchange looks' (SA 2666.100e); *Réiton-san-tati to || kotobá ga | tuu-zináí de || komáttari | simasén desita ka. || —Nái desu | né* 'Haven't you been troubled at times for lack of a common language with Mr Layton and his group? —It hasn't happened' (SA 2664.37b)—the answer represents [*Komátta kotó ga*] náí 'I haven't been troubled'. And a single ...-tári + sinai can sometimes be translated as 'never': *Sikási || kono ryyuúgi o | hitóbito ni | kyoosei sitári wa | sinákatta* 'But he never forced this style on people' (Ōno 1966.214); *Ane mo || imootó o | ootoótó to [] itte, || imootó to | ittári wa [] sinai* '[In Heian times] the older sister calls her younger sister ootoótó [just as the older brother calls the younger brother] and never calls her imootó [as is the later practice]' (Ōno 1966.161). With a single ...-tári + question, the translation may be 'ever': *Dóo site | kámara o | moti-kondári | sitá no ka | wakaránai* 'I don't know why he ever carried a camera in [to the high-pressure oxygen tank where an electronic spark caused a fatal

out on a sofa for the rest of the time' (SA 2662.96e); *Mítari | kiitári (l) suru to, || are wa || táí-sita | kuni désu | né* 'From what I heard and saw [in West Germany], that's quite a country they have there, you know' (SA 2684.126d).

123. The generalization is that you can never repeat an identical S-tári (there is no *tábetari tábetari suru); a given predicate will recur only if modified by different elements in each occurrence (kore o tábetari sore o tábetari, kodomo ga tábetari háha ga tábetari, háyaku tábetari yukkúri tábetari, ...). Cf. BJ 2.142.

fire)' (SA 2647.26b). Even with more than one representative, 'sometimes' and 'never/ever' often make the best translations: Tuide-nágara(-), || tóozi | sitamati no katei dé wa || syúhu no | kotó o || "ókusan" | to [] yondári, || otokó-no-ko ya | onná-no-ko no | kotó o || "bootyan" dá no || "ozyóosan" da no to | yondári wa | sinákatta 'Incidentally, the downtown families of that period would never call a housewife "okusan" or boys and girls "bootyan" and "ozyóosan"' (Maeda 1962.21). There are times when 'some' or 'none' or 'any' is a good translation: Hatuon-hoo o káita | syómotu ga || nokótte | itári [] suru 'There are some [or: a few] books preserved that have written of the pronunciation [of the times]' (Ōno 1966.170). Notice the translation 'all' in the following passage: Minná, o-báka-san | née. || Sonna ni sawáidari site. || O-née-sama ga || bikkúri | nasáru wa | yó 'You children are absolutely the living end. Making all that noise. Big sister is surprised at you!' (KKK 3.70).

A sentence which juxtaposes a pair of "representative" single events plucked from the news of the day: Géndai wa || heiwa | heiwa to || kuti dé wa | tonae-nágara, || Nihon-too o huri-kazásita | gakusei ga || hikóo-ki o | nottótari, || hahaoya ga | kantan ni | lakanboo o (|) hineri-korositari | suru (|) yo-nó-naka desu 'The present-day world is one where they cry peace peace with their mouths while a student brandishing a samurai sword hijacks an airplane and a mother casually chokes her baby to death!' (SA 2678.138-9).

The sentence with ...-tári suru may be made to mean 'can do such things as ...' by adding kotó ga dekíru; and suru kotó ga freely drops (§ 14.2.3) so that you are left with sentences like Háittari déteri [[suru kotó] ga] dekíru 'They can (do such things as) enter and leave' and ... ziyúu ni || nóndari | tábetari [] | dekíru 'I'll be able to drink and eat freely [once I give up my boxing career]' (SA 2651.46c). The particle gá may be retained from the omitted suru kotó ga: ... tiisái [] | kodomo wa || zibun de || kitári | núidari [] ga | dekinai no de || ... 'since small children are unable to dress and undress by themselves ...'; see below. The verb suru, or dekíru (shortening of suru kotó ga dekíru), can be separated from the -tári form by the particles wá and mó; i.e., it is possible to focus the representativized sentence in a way similar to focus applied to the nuclear sentence: Tábetari | netári | suru daké/bákari desu ka? | ie, || benkyoo sitári mo [] | suru 'Do you just eat and sleep? No, I study, too'; Netári | ókitari wa [] | sinai 'I don't (just) go to bed and get up'.

You can attach mó to the second of a pair of representatives, or to both: Benkyoo o sitári || undoo o sitári mo (|) suru; Benkyoo o sitári mo || undoo o sitári mo (|) suru. Or the highlighting can be placed on the underlying nuclei (in our example, the verbal nouns): Benkyoo o sitári || undoo mo sitári (|) suru; Benkyoo mo sitári || undoo mo sitári (|) suru. (I have not given translations, since each such sentence is ambiguous in so many different ways.)

The auxiliary that picks up the representatives can be focused: Benkyoo o sitári, || undoo o sitári | sí wa (|) sinai 'I do not do such things as studying and exercising'; Benkyoo o sitári, || undoo o sitári sae | suréba || ... 'If you just do such things as studying and exercising ...'. It is possible to make various more complicated structures, but you will seldom run into such sentences.

Below are some results from the application of highlighting focus to various parts of the sentence Tegami o káitari hón o yóndari suru:

- (1) Tegami o káiki mo | sitári || hón o | yómi mo | sitári (|) suru.
- (2) Tegami mo káitari || hón mo | yóndari (|) suru.
- (3) Tegami o káiki mo || hón o | yómi mo | sitári (|) suru. [Unusual.]
- (4) *Tegami o káiki mo hón mo yóndari suru.

- (5) Tegami o káitari mo || hón o | yóndari mo | suru.
 (6) Tegami o káitari || hón mo | yóndari (l) suru.
 (7) Tegami mo káitari || hón o | yóndari (l) suru.
 (8) Tegami o káitari || hón o | yóndari mo (l) suru.
 (9) Tegami o káitari || hón o | yóndari | sí mo/wa | surú ga ...

It is possible also to have adverbial adjuncts for the dummy suru: Nihon-go de yóndari | káitari wa || itu mo | site iru 'We are always reading and writing in Japanese'; Tábetari | nóndari wa || koko dé wa [l] sinai 'We don't eat and drink here'.

Examples of -tári separated from suru by other focus and restrictive elements and the like: Súgoku | téretari NANKA site 'ru tokoro, || okasii 'It's funny how terribly shy I sometimes feel' (SA 2666.44b); ... kyuu ni | soo | yametári NANKA (i) suru to ... 'if you do things like suddenly quitting that way' (Kb 153a); ... dóo-yara || ima no | yo-nó-naka de wa, || minná || syóttuyuu || kenasitári | kenasaretári | BÁKARI site | irú no de, || homeraréru to | bikkúri site ... 'in this modern world with everyone barely getting along disparaging and being disparaged, to get praised is startling ...' (CK 985.391); Ziyúu ni | tábetari | nóndari SAE | dekíru yóo ni | naréba || kore -ízyoo no | nozomi(-) wa | arimasén 'If it can just get so I can freely eat and drink I won't have any higher aspirations'; Zetuboo no hate || zisatu o | hakáttari SURA | sita sóo da 'I hear he was in such despair he was even planning suicide'; ... kansyaku o | okósitari MADE | suru yóo ni | nátta 'got to the point where she would even sometimes fly into rages' (Fn 375a); Onná ni wa || otya-hákobi o | sitári || o-kyaku no annái o | sitári SIKA | dekinai to | omótte iru n desu ka 'Do you think women can only bring in tea and show the guests in and that sort of thing?'; Watakusi ní wa || nóndari | tábetari KOSO || zínsei no || óoki-na | tanosímí(-) da 'For me the greatest pleasure in life is precisely drinking and eating'; Neta kkiri desu kara || táttari | suwattári NADO wa | dekimasén 'He's become bedridden, so he can't get up or sit down or anything'; Tánin no warúguti o | ittári NANKA | suru yóo na | hitó zya | arimasén 'He's not the sort of person to speak ill of others or the like'; Oozé: no [l] hitó no | máe de | hanásitari NANTE | dekimasén 'I couldn't talk in front of a crowd of people or anything like that'; Zyoodán o | ittári || hito o | warawasetári DE MO | dekíru yóo na || kudáketa | hitó nara | ii n desu ga ... 'I hope he's an affable person of the sort that can tell jokes and get people to laughing, say'; Netári | okítari D'ÁTTE (or DÉ MO) | ii kara || íkite i-tai 'I want to stay alive even if it's just getting up and going to bed every day'; Zibun no heyá o | soozí sitári || zibun no íruí o | sentaku sitári -GÚRA | wa || zibun de (l) sinákereba || katei o motemasén | yó 'You can't expect to [be able to have a household =] get married if you don't clean your own room and wash your clothes and so on, yourself'; Kana o káitari | yóndari | BÁKARI de wa || yakú ni | tatánai desyoo 'Just learning to read and write kana won't be of much use, surely'; Denwa no bán o | sitári || otya o | hakondári | DAKÉ ga || onná no dekíru | sigoto zya náí desyoo 'Just answering the phone and bringing in the tea is not all the job that a woman can do, surely'. The last several examples have an omitted suru or a direct nominalization of the representative.

Examples of -tári WA: Kédo, || hontoo ni sugúreta | géinoo(-) to iu | monó wa, || kantan ni | sutaretári wa | sinai món desu 'But when artistry is truly superb, it must NOT be allowed ever simply to die out' (SA 2669.101c); ... wareware wa || "yuyusii" | tó | kiiité mo, || soko ni || tabúu no | ísiki o | lomoi-ukabetári wa (l) sinai '... we hear the word "yuyushii" without calling to mind any feeling of tabu to it or the like' (Ōno 1966.44). And examples of -tári MO: ... kinkyuu no baai ní wa || kuugun no hikóo-ki o | dooin site || hínan | sasete [l]

yattári mo (l) suru '... in an emergency they sometimes even mobilize Air Force planes to relieve them [= the starving animals in the Alaskan winter]' (SA 2663.50b); Moti-agerareta Íguti wa, || tana kara | Nihon-too o | mottai-bútte | orósi, || tokui-sóo ni | mísetari mo (l) sita 'Basking in the praise, Iguchi ostentatiously took a Japanese sword down from the shelf and showed it off, too [as well as showing off the other things]' (SA 2647.117c); Gaikoku no ryóori o || iroiro tábete | mítari mo | sitá keredo || Nihon-zín ni wa || Nihón^[1] no monó ga | itiban kuti ni áu yóo⁽¹⁾ desu 'I tried eating all sorts of foreign cooking, too, but apparently Japanese things are more to the taste of a Japanese'.
